PREFACE.

THE work here offered to the public is designed to supply several wants which have been deeply felt by those commencing the study of medicine and the affiliated sciences.

An acquaintance with the dead languages, or at least with Latin, was formerly, and in some parts of Europe is still, considered absolutely necessary for a graduate in medicine as well as in the other learned professions. Although in the United States a classical education is not made an indispensable condition for conferring a medical degree, yet, so long as the great majority of professional terms are in Latin, some knowledge of this language may be said to be absolutely requisite for the medical student. The fact that multitudes of our young men commence the study of medicine without any previous acquaintance with Latin or Greek renders it important that the elementary works intended for the use of students should be adapted to meet this exigency.

To meet the needs thus indicated of the medical student, it has been deemed necessary to furnish fuller explanations in regard to several subjects than has been usual in the preparation of medical dictionaries. One of the points to which especial attention has been given is the etymology of the various terms occurring in the Dictionary. The great importance of this feature of the work, in furnishing, as it generally does, a sure clue to the true signification of scientific terms, in limiting and fixing their meaning, thus guarding against looseness or vagueness of application, and last, and not least, in assisting the memory of the student, can scarcely be overestimated. It is admitted that terms occasionally occur of which it is difficult or impossible to give a satisfactory etymology. But these comparatively few instances (due either to the ignorance or carelessness of those who have undertaken to form such terms)

need not affect our estimate of the value of etymology in regard to the large majority of scientific words of which the derivation is clear and entirely satisfactory.

Another feature of the work is to give, whenever this is practicable, a literal translation of the various Latin phrases, sentences, etc., occurring in the Dictionary: as, *Extensor Digitorum Communis*, *Flexor Longus Digitorum Pedis*, *Motores Oculorum*, *Hydrargyrum cum Cretâ*, etc. The great utility of this to those who are just commencing the study of a new and difficult science will scarcely be called in question.

Another point to which especial attention has been given, and one which it is believed will prove of the highest practical utility, is the pronunciation of the various terms contained in the Dictionary. What correct spelling is to the writer, correct pronunciation is to the speaker. If either should be wholly neglected, the most perfect language would soon become a babel and fall into utter corruption. Every one who takes the trouble to reflect on the subject must be aware that if it were not for the constant effort or aim to conform our speech to a common standard, the language which we call English would in the course of a few years be spoken so differently in different parts of the world as to be with difficulty understood, and in two or three centuries it would, in all probability, become wholly unintelligible, except to those few who might happen to be familiar with the local dialect. He, therefore, who is willing to take the pains to speak correctly not only acquires an accomplishment which will raise him in the estimation of all educated men, but contributes his portion towards exalting and extending the incalculable blessings which language, the great vehicle of thought and knowledge, is capable of conferring on mankind.

There is, however, one peculiar difficulty connected with the pronunciation of the terms occurring in Medicine and the collateral sciences. A large number of them belong to the Latin language, and, unfortunately, there is no generally recognized standard for the pronunciation of the letters, more particularly the vowels, of that language. Formerly in the principal seats of learning in

England and the United States it was the usage to pronounce all Latin words with the English sounds of the vowels. For example, *a* when long (as the second *a* in *ama're*, *ama'bam*, *ama'tum*) had the sound of our *a* in *fate*, long *i* was pronounced as in *pine*, and so on. But lately many of the institutions of learning, both in this country and in England, have adopted a different system, or rather different systems, for there is considerable diversity among them, though they mostly agree in one respect, —namely, in pronouncing the vowels with the Italian sounds. Thus, *a* has the sound of our *a* in *father* or *far*, *e* is pronounced as in *fête* or *there*, *i* (and *y*) as *i* in *marine*, *o* nearly as in English, and *u* as in *rule* (or like *oo*). In regard to the pronunciation of certain consonants there is also great diversity: *c*, for example, according to some authorities, should always have one and the same sound (that of *k*) in whatever situation it may be, *g* should always be hard, and *v* should have the sound of our *w*.

As may readily be imagined, this diversity in the pronunciation of the Latin letters has had the effect of introducing great uncertainty and confusion into the pronunciation of scientific terms. The change in the sounds of the consonants (as cited above), not having been adopted to any great extent, has exerted a scarcely appreciable influence on the pronunciation of medical terms; but the introduction of the Continental or Italian sounds of the vowels has prevailed very extensively, so that in some sections of the United States a large majority of our physicians have adopted what is termed the "Continental" pronunciation.

Under existing circumstances, the editor has not felt justified in laying down any positive rules for the pronunciation of the vowels occurring in Latin terms; for he considers that the proper office of a lexicographer is not that of an autocrat, but simply of a recorder; in other words, it is his place to ascertain as far as possible and present, not the pronunciation he may prefer, but that which seems to be established by the usage of a majority of the best speakers. Nevertheless, it is beyond all reasonable doubt that it would be an immense gain to science if a uniform standard of pronunciation

could be established by some competent authority,—by a national convention of learned men, for example. The question need not be how the Latin language was pronounced by the ancient Romans, but simply how we ought to pronounce those Latin words which have become, so to speak, parts of our own language; and certainly this question need not be difficult to settle.

Among the uncertainties which beset the pronunciation of scientific terms, one important point—that of accent depending on *quantity**—can for the most part be readily ascertained. The principal rules for Latin accentuation are the following:

Rule I.—In trisyllables or polysyllables, if the penultima be long, the accent must fall upon it, as *Abdo'men*, *Duode'num*, *Vesicula'ris*.

Rule II.—If the penultima be short (in words of more than two syllables), the accent must fall on the antepenultima: as, *Aç'idum*, *Clem'atis*, *Chimaph'ila*, *Erythrox'ylon*, *Helleb'orus*, etc.

Rule III.—Dissyllables always take the accent on the penultima: as, *Co'ca*, *Li'quor*, *Mo'tor*, etc.

It may be observed that whenever the accent of a Latin word falls on the antepenultimate vowel followed immediately by a single consonant, the accent is usually placed after the consonant, and the vowel is made what in English we term "short." (See examples under Rule Second.) Accordingly, we pronounce *Abdominis*—*abdom'inis*, *Asafœtida*—*asafœt'ida*, etc., although in both of these instances the antepenultimate syllable is long in Latin.† The only important exception to this rule occurs in words having *u* for the

* The quantity is determined chiefly by the usage of the Latin poets, and certain recognized rules of derivation.

† It is very important to bear in mind the essential difference between a long vowel in English and a long vowel in Latin or Greek. In the former case the word "long" refers to the *quality* of the vowel, in the latter always to the *quantity*. The pronunciation of a long vowel in Latin or Greek is estimated to occupy just twice as much time as is spent in uttering a short vowel. In the present work, however, when the term "long" is employed in reference to the pronunciation of a word, it is to be understood in the English sense, if the contrary be not distinctly stated.

antepenultimate vowel, as *Alu'mina*, *Sulphu'ricus*, etc., in which case the accent should always be placed before the consonant, the vowel retaining its full or long sound.

As already intimated, the accent may be said to be the sole point in Latin pronunciation about which there is no dispute among the learned. It has, accordingly, come to be regarded as one of the essential tests by which a finished scholar may be known. For if the speaker should place the accent in a trisyllable or polysyllable on a short penultimate vowel, as *Aci'dum*, *Clema'tis*, *Chimaphi'la*, etc., he would betray great ignorance or want of taste. It would, if possible, be a still grosser fault to place the accent on the *ante*-penultima when the penultimate vowel is long. We sometimes hear *Archim'edes* (for *Archime'des*), and (rarely) *Pan'dora* (for *Pando'ra*).

Of such Latin words as were used by the ancients there is generally no difficulty in determining the accentuation. But the case is different with respect to Latin terms (consisting chiefly of botanical and other scientific names) of modern origin. Among these there are a number of which the etymology is obscure or uncertain and the accentuation is in consequence more or less doubtful. In such cases analogy is almost our only guide. As we find that such celebrated names as LUTHER, MILTON, etc., in their Latinized form, have the penultima long (though the *e* and the *o* in the original names are short), as *Luthe'rus*, *Milto'nus*, etc., so we pronounce such Latinized names as *Heuche'ra*, *Braye'ra*, with the penultimate accent, although HEUCHER and BRAYER, from which the preceding botanical names are derived, have the *ultima* (last syllable) short.

As the science of Botany has so many and such intimate relations with Medicine,—it being rare to find any natural order that has not furnished some useful article to the Materia Medica, while several have furnished various and most valuable contributions,—it has been deemed proper to give to the botanical articles in the Dictionary a fulness not usual in works of this class. It is hoped and believed that this feature will add greatly to the value of the present work, especially to that large and increasing class who are desirous not to restrict their studies to the narrowest possible limits con-

sistent with the name of practitioner, but to extend them to every branch of knowledge that can increase the usefulness or adorn the character of a PHYSICIAN. This very word (derived from φύσις, "nature"), it may be observed, owes its origin to the fact that the ancient physicians were generally distinguished by their extensive acquaintance with Nature in all her various aspects.

As the germ theory of disease has of late excited extraordinary interest among physiologists, it has been deemed proper to present the subject somewhat *in extenso*, from the pen of one (Dr. Morris Longstreth) who has for years given great attention to this question, and who, it is safe to say, has no superior in our country in this department of physiology. In regard to this subject the reader is referred to the article PATHOGENESIS in the Dictionary.

With respect to the *plan* of the Dictionary, it may be remarked that immediately after the term itself, if this is English, the Latin synonyme is usually inserted, then the etymology, both being enclosed in brackets. The French synonymes of important terms are commonly added, with their pronunciation. When the term commencing an article is Latin or Latinized Greek, it is marked with an asterisk: hence when the student sees a word thus marked he is to understand that this word is pure Latin, not merely a derivative from the Latin, although in some instances it may be pronounced as in English while retaining the exact Latin spelling. Thus, *hydrocele*, a Latinized Greek term, is usually pronounced in three syllables (*hy'dro-çēle*), not in four (*hy-dro-çe'le*), as would be proper according to the strict Latin pronunciation. In like manner *va'por*, a pure Latin word, having become fully anglicized, has an English pronunciation (vā'por), although Latin vowels, as before intimated, have usually not been marked, except short *i* (ĭ), there being in this case scarcely any difference between the English and the "Continental" pronunciation.

It remains for the editor to express his great obligations to several gentlemen who have assisted him in the preparation of the present work. His acknowledgments are pre-eminently due to Mr. William Jacobs, to whom the Dictionary owes all that is most

valuable in the department of Botany. To the distinguished pharmacist Prof. Joseph P. Remington the editor is deeply indebted for important advice and aid with respect to the pharmaceutical articles. His most cordial thanks are due to Dr. Albert P. Brubaker for many valuable suggestions, as well as for some important contributions to the pages of the Dictionary.

Among the various publications which he has had occasion to consult, justice requires that he should acknowledge his particular indebtedness to Dr. Quain's "Medical Dictionary," a work of rare merit, and to Littré's "Dictionnaire Médicale."

Nor can he omit the expression of his heart-felt obligations to the accomplished proof-reader, Mr. Joseph McCreery, to whose rare intelligence and conscientious fidelity the work owes no small share of the thoroughness and accuracy to which it may lay claim.

EXPLANATION OF SIGNS, ABBREVIATIONS, ETC.

ā, ē, ī, ō, ū, ȳ, are long, as in *fate, mete, pine, note, tube, fly.*

ă, ĕ, ĭ, ŏ, ŭ, ў, are short, as in *fat, met, pin, not, tub, mystic.*

å, ẽ, and o̊, are like ā, ē, and ō, except that the sound is less prolonged; e̊ like ê, but rather shorter.

a̤, e̤, are obscure, as in the final syllables of *America, writer*, etc. â sounds like *a* in *all.*

ä is to be sounded like *a* in *father;* ă denotes a shortened sound of ä. ä has the sound of *a* in *fat.*

ê is sounded like *e* in *met.* ê denotes a prolonged sound of ĕ. î sounds like *ee* in *seen.* ô is equivalent to ŏ. o͝o is sounded like *oo* in *good.*

Ç, ç, is to be sounded like *s* or *ss;* Ģ, ġ, like *j;* Ğ, ğ, = *g* hard; ṡ has the sound of *z.*

ċh is to be sounded like *k;* *ch* without any mark should be pronounced as in *chill* or *child.*

Ĭ is pronounced like *lli* in *million;* ñ is pronounced like *ni* in *minion;* ŏw sounds as in *now.*

N and M are used to represent the French nasal sound, somewhat resembling that of *ng* in *long.* R (small capital) implies that the *r* should be trilled; ü denotes the sound of the French *u;* U, that of the French *eu*, similar to the sound of *u* in the English word *fur.*

The mark ⌣ indicates that the vowels joined by it are to be pronounced almost as one syllable; as, fe-a͡vr′.

An asterisk (*) affixed to a word or phrase denotes that it is either Latin or Latinized Greek.

= signifies "equivalent to."

The heavy acute accent denotes a primary accent; the lighter, a secondary accent.

When a reference is made to some other part of the Dictionary, the word referred to is put in small capitals: hence, if small capitals are used, a reference is always implied.

ABBREVIATIONS.

Abl.	ablative.
Acc.	accusative.
Dat.	dative.
e.g. (*exem′pli gra′tia*)	for example.
F. or fem.	feminine.
Fr.	French.
Gen.	genitive.
Ger.	German.
Gr.	Greek.
i.e. (*id est*)	that is.
Lat.	Latin.
M. or masc.	masculine.
N. or neut.	neuter.
Nom.	nominative.
Ph. or Pharm.	Pharmacopœia.
Pl.	plural.
Pron.	pronunciation.
Sp.	Spanish.
U.S.	United States.
Voc.	vocative.

To render these explanations complete, a table of the Greek alphabet is subjoined.

Letter.	Name.	Power.	Letter.	Name.	Power.	Letter.	Name.	Power.
Α α	Alpha	a	Ι ι	Iōta	i	Ρ ρ	Rho	r
Β β ϐ	Beta	b	Κ κ	Kappa	k	Σ σ	Sigma	s
Γ γ	Gamma	g *hard*	Λ λ	Lambda	l	Τ τ	Tau	t
Δ δ	Delta	d	Μ μ	Mu	m	Υ υ	Upsīlon	u or y
Ε ε	Epsīlon	ĕ *short*	Ν ν	Nu	n	Φ ϕ	Phi	ph
Ζ ζ	Zeta	z	Ξ ξ	Xi	x	Χ χ	Chi	ch *hard*
Η η	Eta	ē *long*	Ο ο	Omĭcron	ŏ *short*	Ψ ψ	Psi	ps
Θ ϑ θ	Theta	th	Π π	Pi	p	Ω ω	Oměga	ō *long*

Remarks.—Γ followed immediately by another γ, by κ, or by χ, sounds like *n;* hence, *αγγεῖον*, a "vessel," should be rendered by *angeion* or *angĭon*, if Roman letters are used; *ἀγκύλος* ("bent"), by *ankylos* or *ancylos;* *ἄγχω* (to "choke"), by *ancho*, etc. Υ, though usually considered to be equivalent to *u*, is almost invariably rendered by *y* in Latin. See *ἀγκύλος*, above given. K is usually replaced in Latin by *c*, as *κυνάρα* or *κινάρα*, *cynara* or *cinara* (a kind of "artichoke"). As in Latin words of Greek derivation *y* is sounded like *i*, and not like *u*, so *c* should in such words be pronounced with its proper Latin sound,—always like *s* before *e*, *i*, and *y*.

Αι (in Greek) when changed into Latin becomes *æ;* and οι, *œ*; as *αἰθίοψ*, *æthiops*, *οἴδημα*, *œdema*, etc.

H is represented in Greek by ', called the "rough breathing" (*spir′itus as′per*), as in *ὑπό*, "under," *αἷμα*, "blood," etc. All Greek words beginning with a vowel have either the rough or the smooth breathing (*spir′itus le′nis*). Compare *αἰθίοψ*, "black," *αἰτία*, "cause," etc. The smooth breathing indicates simply the natural sound of the vowel.

PRONOUNCING

MEDICAL DICTIONARY.

A.

A — *ABDOMEN*

A (*a*), or *an* (*ἀν*) before a word beginning with a vowel or with *h*. A prefix in compound words of Greek derivation, having a negative or privative force: as, *a-tonic*, "without tone;" *a-cephalous*, "without a head;" *an-æsthetic*, "without perception or sensation;" *an-hydrous*, "without water." (See the above-cited words in their alphabetical places in the Dictionary.)

A is also a French preposition signifying "to" or "at," and forming a part of certain surgical and medical phrases, as, *à deux temps*, ä dŭh tŏN ("At two times"), a term applied to the operation of lithotomy, in which the calculus, from certain causes, cannot be immediately extracted, and is therefore let alone till during the suppurating stage, when extraction may be more easily effected.

AA. A contraction of the Greek word *ana* (*ἀνά*), signifying, literally, "up through" or "throughout;" sometimes equivalent to "OF EACH." Written in prescriptions after the names of several different medicines, to denote an equal quantity of each.

AAA. Abbreviation for AMALGAM.

Ab. A Latin particle signifying "from," "off," "away."

Ab-ac'tus Ven'ter,* or **Ven'ter Abac'tus.*** [From the Lat. *ab*, "from," and *a'go*, *ac'tum*, to "drive," to "force."] Literally, a "belly expelled" or emptied by forcible means. A term in Medical Jurisprudence for abortion induced by art.

Ab'a-cus.* [From the Gr. *ἄβαξ*, *ἄβακος*, a mathematical table on which lines and figures were drawn.] An old name for a table used for medicinal preparations.

Abalienation, ab-āl-yen-ā'shun. [Lat. **Abaliena'tio, o'nis;** from *ab*, "from," and *alie'no*, *aliena'tum*, to "estrange."] Formerly used for decay of the whole or part of the body; also, loss or failing of the senses or of the mental faculties.

Abanga, ăb-ăng'gą. The name of the fruit of a palm-tree growing in the island of St. Thomas (West Indies). The seeds are considered very useful in diseases of the chest.

A-bap-tis'ta* (the Lat. *terebel'la*, "borer," being understood), or **A-bap-tis'ton*** (*trep'anum* being understood). [From the Gr. *α*, priv., and *βαπτίζω*, to "plunge."] The name of a trepan guarded in such a manner as to prevent it from plunging into the substance of the brain. See TREPAN.

Ab-ar-tic-u-lā'tion. [Lat. **Abarticulatio, o'nis;** from *ab*, "from," and *articula'tio*, "articulation."] A kind of articulation admitting of free motion. See DIARTHROSIS.

Abattoir, ă'bă-twăR'. [From *abattre*, to "fell," to "cut down."] The French term for a slaughter-house. The French,[1] more than other nations, pay the greatest attention to their *abattoirs*, to place them in a suitable locality without the walls of the city, and to see that nothing is neglected that can promote perfect cleanliness and prevent the poisoning of the air from the putrefaction of the blood and other refuse matters necessarily found in such places.

Ab-bre'vĭ-āt-ed. [Lat. **Abbrevia'tus;** from *abbre'vio*, *abbrevia'tum*, to "shorten."] Shortened, as when the cup is shorter than the tube of the flower.

Ab-bre-vĭ-ā'tion. [Lat. **Abbrevia'tio, o'nis;** from the same.] A part of a word shortened by cutting off one or more of its latter syllables. Applied to many initial and medial letters, and contractions, of medical terms, which will be found in their alphabetical order.

Abcès. See ABSCESS.

Abdom. Abbreviation for ABDOMEN.

Ab-do'men,* gen. **Ab-dom'ĭ-nis.** [Commonly derived from the Lat. *ab'do*, to "hide;" but this etymology is questioned by Skeat and E. Littré.] The largest cavity of the body, the belly. It is separated from the thorax by the diaphragm. It is divided from above to below into three regions,—the epigastric, the umbilical (the central), and the hypogastric.

[1] See Sir Francis B. Head's very interesting account of the *Abattoir des Cochons*, in his "Faggot of French Sticks."

Ab-dom'ĭ-nal. [Lat. **Abdomina'lis**; from *abdo'men.*] Belonging to the abdomen; ventral.

Abdom'inal A-or'ta. That portion of the aorta situated below the diaphragm.

Abdom'inal Ap'o-neū-ro'sis. The conjoined tendons of the oblique and transverse muscles on the anterior portion of the abdomen. See APONEUROSIS.

Abdom'inal Gang'lia (găng'gle-ȧ). The semilunar ganglia:—so named from their situation.

Abdom'inal Ring. [Lat. **An'nulus Abdom'inis.**] The fancied ring-like opening on each side of the abdomen, external and superior to the *pubes.* Through it, in males, passes the spermatic cord. It is also called the INGUINAL RING.

Ab-dom-ĭ-na'lis.* [From the Lat. *abdo'men.*] Pertaining to the abdomen; abdominal; ventral. In the plural (*Abdomina'les*) it forms the name of an order of fishes having the ventral fins under the abdomen and behind the pectorals.

Ab-dom-ĭ-nos'co-pў. [Lat. **Abdominosco'pia**; from *abdo'men*, and the Gr. σκοπέω, to "observe."] The examination of the abdomen by percussion, inspection, measurement, or manual examination.

Ab-du'cent. [Lat. **Abdu'cens**; from *ab*, "from," and *du'co*, *duc'tum*, to "lead," to "draw."] Applied to muscles by which the members or limbs are drawn from the mesial line (or axis of the body); also to the sixth pair of nerves.

Ab-duc'tion. [Lat. **Abduc'tio**, *o'nis*; from the same.] That movement by which one part is moved from another, or from the axis of the body.

Ab-duc'tor, *o'ris.** [From the same.] Applied to a muscle which performs, or assists in performing, abduction.

Abelmoschus,* ȧ-bel-mos'kŭs. [From the Arab. *ab-el-mushk*; literally, the "father of musk."] Musk-seed; the specific name of the *Hibiscus abelmoschus.* The seeds of this plant, called *grana moschata* ("musk-seeds"), are employed in the East in forming the *Poudre de Chypre*, or *Cyprus powder*, used for flavoring coffee.

Ab-ĕp-ĭ-thўm'ĭ-a.* [From the Lat. *ab*, "from," "off," and the Gr. ἐπιθυμία, "desire." A faulty term (partly Latin and partly Greek) for paralysis of the solar plexus, cutting off communication between the nervous system and abdominal viscera, the supposed seat of the appetites and desires.

Ab-er'rant. [From the Lat. *aber'ro*, to "wander."] Deviating from the right way. In Botany, deviating from the ordinary structure.

Ab-er-rā'tion. [Lat. **Aberra'tio**, *o'nis*; from *ab*, "from," and *erro*, *erra'tum*, to "wander."] Applied to a disordered state of the intellect. Applied also to the rays of light when refracted by a lens or reflected by a mirror so that they do not converge into a focus. One form of aberration (the Aberration of Sphericity) is caused by the fact that a lens with spherical surfaces never brings the light to a perfect focus. Another kind, called Chromatic Aberration, or the Aberration of Refrangibility, is due to the fact that the different kinds of light are refracted differently, some more and some less than the others.

Ab-e-vac-u-ā'tion. [Lat. **Abevacua'tio**, *o'nis*; from *ab*, "from," and *evac'uo*, *evacua'tum*, to "empty out," to "empty."] A medical term usually applied to a partial or incomplete evacuation, but by some writers employed to denote an immoderate evacuation.

A'bĭ-ēs,* gen. **A-bi'ĕ-tis.** [Supposed by some to be from the Lat. *ab*, "from," and *e'o*, to "go," on account of the great height to which it goes or extends from the earth.] A genus of evergreen trees of the order *Coniferæ*, comprising the Hemlock Spruce (*Abies Canadensis*), the Silver Fir (*Abies pectinata*), and other species of fir.

A'bies Al'bȧ.* White Spruce. An ornamental evergreen tree, a native of New York, Vermont, and Canada. It has pale, glaucous leaves, and is one of the most beautiful trees of the genus.

A'bies Bal-sa'me-ȧ.* Balsam Fir. A fine ornamental evergreen tree, a native of the northern United States. Canada Balsam is obtained from it.

A'bies Can-ȧ-den'sis.* Hemlock Spruce. A large evergreen tree, a native of Canada and the northern United States. It is a handsome tree, and is planted for ornament. When young, it is the most graceful of the spruces. Its bark is used for tanning.

A'bies Excel'sa.* The Norway Fir or Spruce, which produces Burgundy pitch and a kind of frankincense. It is an ornamental tree, extensively planted in the United States, and is one of the most beautiful of the genus.

A'bies La'rix.* An old synonyme for the *Larix Europæa*, the tree which affords Venice turpentine.

A'bies Pec-tĭ-na'tȧ,* or **A'bies Pi'ce-ȧ.*** European Silver Fir. An evergreen tree, a native of Central Europe and Siberia; often planted for ornament. It is supposed to be the species to which Virgil gave the epithet *pulcherrima*, "most beautiful." (Eclogue vii., l. 65, 66.)

Ab-ĭ-et'ic. [Lat. **Abiet'icus**; from *a'bies.*] Belonging to the fir-tree.

Abietin, or **Abietine,** a-bī'ę-tin. [Lat. **Abieti'na**; from *a'bies.*] A resinous substance, also called the resin *Gamma*, or third in order, obtained from Strasbourg turpentine.

A-bi'ĕ-tis Re-sĭ'nȧ.* The resin of the fir-tree; the *Thus*, or common frankincense; spontaneously exuded by the *Abies.* See FRANKINCENSE.

Abietite, ȧ-bī'ę-tīt. [Lat. **Abieti'tes**; from *a'bies*, and the Gr. λίθος, a "stone."] A genus of fossil coniferous plants in the Wealden and Greensand formations.

Ab-ĭr-rĭ-tā'tion. [Lat. **Abirrita'tio**, *o'nis*; from *ab*, "from" or "away," and *irri'to*, *irrita'tum*, to "irritate;" denoting the passing "away" or absence of irritation or of vital irritability.] Diminished irritability in the various tissues, and so slightly distinct from ASTHENIA.

Ab-lac-tā'tion. [Lat. **Ablacta'tio**, *o'nis*; from *ab*, "from," "away," and *lac*, *lac'tis*, "milk." See LACTATION.] The weaning of a child. Some writers make a distinction between *ablactation* and *weaning.* By the former they mean the termi-

nation of the period of suckling as regards the mother; by the latter, the same period with reference to the child.

Ab-lā'tion. [Lat. **Abla'tio, o'nis;** from *au'fero, abla'tum* (from *ab*, "from," "away," and *fe'ro, la'tum*, to "carry," or "take"), to "take away."] The removing of any part by excision, extirpation, or amputation.

A-blep'sĭ-a.* [From the Gr. *α*, priv., and *βλέπω*, to "see."] Want of sight; blindness; ablepsy.

Ab'lu-ent. [Lat. **Ab'luens;** from *ab*, "from," "away," and *lu'o, lu'tum*, to "wash."] That which washes away or carries off impurities. See ABSTERGENT.

Ab-lu'tion. [Lat. **Ablu'tio, o'nis;** from the same.] The separation of extraneous matters by washing. Anciently, an internal washing by administering profuse libations of milk-whey.

Ab-nor'mal. [Lat. **Abnor'mis;** from *ab*, "from," and *nor'ma*, a "rule;" denoting a departure from the "rule," course, or custom of nature.] Contrary to the usual or natural structure; contrary to the natural condition.

Ab-o-ma'sum,* or **Ab-o-ma'sus.*** [From the Lat. *ab*, "from," and *oma'sum*, the "paunch."] The fourth stomach of the *Ruminantia*. From this part of calves, lambs, etc., *rennet* is prepared.

Ab-o-rĭg'ĭ-nal. [From the Lat. *ab*, "from," and *ori'go*, gen. *ori'ginis*, "origin," "beginning."] Primitive; relating to the aborigines. In Botany, indigenous, original in the strictest sense.

Aboriginis,* ab-o-rij'e-nīs. [More frequently used in the plural (*Aborigines*, ab-o-rij'e-nēz); from the Lat. *ab*, "from," and *ori'go*, the "beginning."] Native or original of a country; aboriginal.

A-bor'sus.* [From the Lat. *abo'rior, abor'tus*, to "miscarry."] A miscarriage in the first or early months. More properly ABORTUS, or ABORTION, which see.

A-bor'tĭ-cīde. [Lat. **Aborticid'ium;** from *abor'tus*, and *cæ'do*, to "kill."] The destroying of the fœtus *in utero*. See FŒTICIDE.

A-bor'tient. [Lat. **Abor'tiens;** from *abo'rior*, to "miscarry."] Miscarrying. Sometimes used synonymously with STERILIS. See STERILE.

A-bor'tion. [Lat. **Abor'tio, o'nis;** from *abo'rior, abor'tus*, to "miscarry."] The morbid expulsion of an immature fœtus; a miscarriage. In Botany, imperfect development or non-formation of some part.

Abor'tion, Crim'inal. Fœticide.

A-bor'tive. [Lat. **Aborti'vus;** from *abo'rior, abor'tus*, to "miscarry."] Causing abortion. Sometimes applied to treatment adopted for preventing further or complete development of disease. In Botany, imperfectly formed or rudimentary.

Abortus.* [From the same.] See ABORTION.

Aboulia.* See ABULIA.

A-bou-lo-ma'nĭ-a.* [From the Gr. *α*, priv., *βουλή*, "will," and *μανία*, "madness."] A mental disease of which the distinguishing characteristic is an entire absence, or else great deficiency, of the will-power.

Abrachia,* ab-rā-ki'a. [From the Gr. *α*, priv., and *βραχίων*, the "arm."] A sort of monstrosity consisting in the absence of arms.

Abranchia,* a-brank'e-a. [From the Gr. *α*, priv., and *βράγχια*, the "gills" or "respiratory organs."] Literally, having no organs of respiration. A name given by Cuvier to an order of *Anellidæ* having no external organs of respiration.

Abranchiata.* See ABRANCHIA.

A-brā'shion. [Lat. **Abra'sio, o'nis;** from *ab*, "from" or "off," and *ra'do, ra'sum*, to "scrape."] A term for the partial tearing off or fretting of the skin.

A-bro'ma Au-gus'tum.* A tree of the order *Sterculiaceæ*, a native of India. It bears beautiful purple flowers. Good cordage is made of its fibrous bark.

Abrotonum,* or **Abrotanum.*** See ARTEMISIA.

Ab-rot'o-num Mas.* Another name for ARTEMISIA ABROTONUM, which see.

Ab-rupt'. [Lat. **Abrupt'us;** from *ab*, "from," "off," and *rum'po, rup'tum*, to "break."] Suddenly terminating, as, for instance, *abruptly pinnate* is pinnate without an odd leaflet at the end,—applied to leaves and roots that seem broken off at their extremity.

Ab-rupt'ly A-cū'mĭ-nate. Suddenly narrowed to an acumination.

A'brus Prec-a-to'rĭ-us.* [From the Gr. *ἁβρός*, "delicate," "elegant," and the Lat. *preca'tor*, "one who prays," alluding to its use for rosaries.] Called also Wild Liquorice, Liquorice Bush, Red Bean, and other names. A small shrub growing in the West Indies, Central America, and Egypt, having beautiful scarlet seeds which are employed for rosaries, necklaces, etc. The roots and leaves contain mucilage, and are sometimes used as demulcents. See JEQUIRITY.

Abs. A Latin particle, having the same force as AB, which see.

Ab'sçess. [Lat. **Absces'sus;** from *abs*, "from," and *ce'do, ces'sum*, to "go;" because the matter "goes from" or separates itself from the rest of the body.] (Fr. *Abcès*, ăb'sā'.) A tumor or swelling (usually large and deep) containing pus.

Ab'scess, Met-a-stat'ic. [See METASTASIS.] An abscess occurring in a part remote from the primary seat of disease, supposed to be caused by the poisoning of the blood by pus, or by an embolus.

Abscess, Milk. See MASTODYNIA APOSTEMATOSA.

Ab-sçis'sa.* [From the Lat. *abscin'do, abscis'sum*, to "cut off."] The line forming the basis of measurement of *graphic* records, along which the *time* measurement is commonly made. See GRAPHIC METHOD.

Abscissa, Vox.* See VOX ABSCISSA.

Ab-sçis'sion. [Lat. **Abscis'sio, o'nis;** from *ab*, "from," "away," and *scin'do, scis'sum*, to "cut."] Applied to a fractured bone when a part of it is cut off and removed, or to the cutting

off of any soft part, as of a nerve, or the prepuce, etc.

Absconsio* (ab-skon'she-o), **o'nis.** [From the Lat. *abs*, "away," and *con'do*, to "hide."] A term formerly denoting the same as *Sinus;* an absconsion.

Abs. febr. = *Absen'te fe'bre.** "Fever being absent," or, in the absence of fever.

Ab-sin'thāte. [Lat. **Absin'thas, a'tis.**] A combination of absinthic acid with a base.

Ab-sĭnthe'. (Fr. pron. ăb'sănt'.) A liquor made from wormwood leaves steeped in brandy, or from a mixture of alcohol with the volatile oil of wormwood. It is used very extensively by the French. In excess, it causes *absinthism*, which is somewhat different from alcoholism, owing to the peculiar poisonous qualities of the oil of wormwood.

Ab-sin'thic. [Lat. **Absin'thicus;** from *absin'thium.*] Belonging to *Absinthium*:—applied to an acid obtained from it.

Ab-sin'thin. [Lat. **Absinthi'na.**] The bitter principle discovered in *Absinthium.*

Absinthism. See ABSINTHE.

Ab-sin'thĭ-um.* [Gr. *ἀψίνθιον.*] A name for wormwood. Also the Pharmacopœial name (U.S. 1870, 1880) for the leaves and tops of *Artemisia Absinthium.* Wormwood is a bitter tonic, which before the discovery of Peruvian bark was much used as a remedy in intermittents. It was once supposed to be anthelmintic; but it is little used now.

Absin'thium Com-mu'ne.* Another name for *Artemisia Absinthium*, or Wormwood.

Absin'thium Ma-rit'ĭ-mum.* Another name for *Artemisia maritima.*

Absin'thium Pon'tĭ-cum,* Absin'thium Ro-ma'num.* Other names for ARTEMISIA PONTICA, which see.

Absin'thium San-ton'ĭ-cum.* Another name for *Artemisia Santonica.*

Absin'thium Vul-ga're.* Another name for *Artemisia Absinthium.*

Ab'so-lute Al'co-hol. Alcohol as free from water as it can be obtained. See ALCOHOL.

Ab-sor'bent, *adj.* and *n.* [Lat. **Absor'bens;** from *ab*, "from," and *sor'beo, sorp'tum*, to "sip" or "suck."] Sucking up or absorbing. Applied to the lacteal and lymphatic vessels, and to the origins of vessels on the roots of plants. Also applied to medicines which neutralize acidity in the stomach and bowels, as magnesia, chalk, etc.

ABSOR'BENT SYS'TEM. A term used to denote *collectively* the vessels and glands which perform the function of absorption.

Ab-sorp'tion. [Lat. **Absorp'tio, o'nis;** from the same.] The sucking up of substances applied to the mouths of absorbent vessels. In Chemistry, the sucking up or imbibition of a gas or vapor by a liquid or solid.

Absorption, Cutaneous. See CUTANEOUS ABSORPTION.

Absorption, Interstitial. See INTERSTITIAL ABSORPTION.

Ab-ste'mĭ-ous. [Lat. **Abste'mius;** from *abs*, "from," and *teme'tum*, an old Latin word for "wine:" though some derive it from *abs*, "from," and *te'neo*, to "hold" or "keep," *n* being changed to *m*.] Strictly, abstaining from wine, but generally applied also to moderation in diet.

Ab-ster'ġent. [Lat. **Abster'gens, en'tis;** from *abster'geo, abster'sum*, to "cleanse."] Cleansing; abluent; abstersive. Applied to medicines which cleanse from foulness or sordes.

Ab'stĭ-nence. [Lat. **Abstinen'tia;** from *abs*, "from," and *te'neo*, to "hold" or "keep;" to "abstain."] The refraining from, or sparing use of, food, liquors, etc.

Ab'stract. [Lat. **Abstrac'tum;** from *abs*, "from," and *tra'ho, trac'tum*, to "draw."] See ABSTRACTUM.

Ab-strac'tion. [Lat. **Abstrac'tio, o'nis;** from *abs*, "from," "away," and *tra'ho, trac'tum*, to "draw."] The separation of an ingredient from a substance which contains it. Also that mental power by which one particular attribute of an object may be dwelt upon to the exclusion of others, that attribute being mentally *abstracted* or separated from the rest. Also that power of the mind by which the act of generalization is performed, by viewing only those general characteristics or qualities which are common to several different objects, and neglecting all such as are peculiar to individual objects: in other words, that intellectual operation by which we study qualities and attributes independently of the beings or substances which have those attributes or qualities. Applied also to the drawing of blood from a blood-vessel.

Ab-strac'tum.* "Abstract." The Pharmacopœial name (U.S. 1880) for a powdered preparation which has twice the strength of the drug or fluid extract from which it is made.

Abstrac'tum Ac-o-ni'ti.* "Abstract of Aconite." (U.S. 1880.) See ABSTRACTUM.

Abstrac'tum Bel-la-don'næ.* "Abstract of Belladonna." (U.S. 1880.)

Abstrac'tum Co-ni'i.* "Abstract of Conium." (U.S. 1880.)

☞ It should be observed that for the *medical properties and uses* of medicines, as a general rule, the inquirer is referred to the notice of the drug itself, not to the different preparations obtained from it. Thus, he is referred to *Aconitum, Belladonna, Conium*, etc., and not to the *abstract* or *extract* of Aconite, of Belladonna, or of Conium.

Abstrac'tum Dĭġ-ĭ-ta'lis.* "Abstract of Digitalis." The Pharmacopœial name (U.S. 1880) for a preparation made from the recently dried leaves of the *Digitalis purpurea.*

Abstrac'tum Hy-os-çy'a-mi.* "Abstract of Hyoscyamus." The Pharmacopœial name (U.S. 1880) for a preparation made from Hyoscyamus recently dried.

Abstrac'tum Ig-na'tiæ.* "Abstract of Ignatia." (U.S. 1880.)

Abstrac'tum Ja-la'pæ.* "Abstract of Jalap." (U.S. 1880.)

Abstrac'tum Nu'cis Vom'ĭ-çæ.* "Abstract of Nux Vomica." (U.S. 1880.)

Abstrac'tum Pod-o-phyl'li.* "Abstract of Podophyllum." (U.S. 1880.)

Abstrac'tum Sen'e-gæ.* "Abstract of Senega." (U.S. 1880.)

Abstrac'tum Va-le-rĭ-a'næ.* "Abstract of Valerian." (U.S. 1880.)

Ab'sus.* A species of Cassia, the seeds of which, being powdered and mixed with sugar, are used in Egypt as an application to the eyes in ophthalmia.

A-bu'lĭ-a.* [Gr. *ἀβουλία*, from *α*, priv., and *βουλή*, "will."] Absence or loss of will:—a symptom in certain forms of insanity.

A-bu'ta.* Another name for PAREIRA BRAVA, which see.

A-bu'tĭ-lon Av-ĭ-cen'næ.* Called also the Indian or yellow mallow. An herbaceous plant, of the natural order *Malvaceæ*. It is mucilaginous, and sometimes is used as a remedy for diarrhœa in cattle.

Abvacuation. See ABEVACUATION.

Acacia,* a-ka'she-a; gen. **Acaciæ**, a-ka'she-ē. [From the Gr. *ἀκή*, a "sharp point;" the name having been given on account of the prickles or thorns with which the tree abounds.] A genus of the Linnæan class *Polygamia*, natural order *Leguminosæ*. Also the Pharmacopœial name (U.S. 1870, 1880) for gum arabic, a gummy exudation from *Acacia Verek* and other species of *Acacia*. Acacia is used in medicine chiefly as a demulcent.

Acacia Arabica.* See ACACIA VERA.

Aca'ciæ A-rab'ĭ-çæ Gum'mi.* The Pharmacopœial name (Dub. Ph.) of gum arabic, obtained from *Acacia vera* and other species of *Acacia*.

Aca'cia Cat'e-chu.* The systematic name of the plant which affords catechu. The *Acacia Catechu* is a native of India.

Acacia Indica.* See TAMARINDUS INDICA.

Aca'cia Sen'e-gal'.* The same as ACACIA VEREK, which see.

Aca'cia Ve'ra.* [From the Lat. *ve'rus*, "true."] The "true acacia." The Egyptian thorn, or gum-arabic tree; called also *Acacia Arabica*. Also the expressed juice of the unripe pods of the *Acacia veravel*.

Aca'cia Ve'rek.* The name of a species of Acacia found near the river Senegal, in Western Africa; also in Eastern Africa.

Aca'cia Zey-lon'ĭ-ca.* A name for the *Hæmatoxylon Campechianum*, or Logwood.

Acajou, ä'kä'zhoo'. The French name of Mahogany. Also the ANACARDIUM OCCIDENTALE, which see.

Ac-a-le'phe.* [Gr. *ἀκαλήφη*.] The nettle. See URTICA.

Ac-a-le'phus.* [From the same.] Belonging to a nettle. In the neuter plural (*Acale'pha*), applied to a class of the *Radiata*, from the stinging pain felt on touching them.

A-cal'ў-çĭne. [Lat. **Acalyci'nus, Acal'ycis**; from the Gr. *α*, priv., and *κάλυξ*, a "calyx."] Having no calyx.

A-cal'ў-pha.* A genus of herbs or shrubs of the order *Euphorbiaceæ*, comprising over one hundred species, natives of many tropical and warm regions of Asia, Africa, and America.

Acal'ypha In'di-ca.* Cupameni. An annual herb, a native of India. Its roots and leaves are cathartic.

Acal'ypha Vir-gin'ĭ-ca.* Three-seeded Mercury. A homely weed, a native of the United States. It is said to be diuretic.

A-camp'sĭ-a.* [From the Gr. *α*, priv., and *κάμπτω*, to "bend."] An inflexible state of a joint. See ANKYLOSIS.

A-can'tha.* [Gr. *ἄκανθα*; from *ἀκή*, a "sharp point."] Applied formerly to the spine of the back, or rather of a vertebra, by the regular arrangement of the series of which the former is constituted. A thorn, spine, or prickle.

Acanthaceæ,* ak-an-tha'she-ē. The name of a natural order of exogenous plants, mostly natives of tropical regions, including the *Acanthus*, the *Ruellia*, and several plants cultivated for the beauty of their flowers.

A-can'thĭ,* the plural of ACAN'THUS, forming the Jussieuan name of a natural order, now ACANTHACEÆ, which see.

A-can'thĭne. [Lat. **Acan'thinus**; from the Gr. *ἄκανθα*, a "thorn."] Belonging to a thorn; thorny; prickly.

A-can'thĭ-um.* [From the same.] The specific or trivial name for the *Onopor'dium Acan'thium*.

A-can-tho-çeph'a-lous. [Lat. **Acanthoceph'alus**; from the Gr. *ἄκανθα*, a "thorn," and *κεφαλή*, the "head."] Having a spiny head. The Latin term in the neuter plural (*Acanthoceph'ala*) is applied to a family of the *Entozo'a parenchym'ata*.

Acanthodes. See ACANTHOID.

A-can'thoid. [Lat. **Acanthoi'des**; from the Gr. *ἄκανθα*, a "thorn," and *εἶδος*, a "form" or "resemblance."] Having the form of a thorn or spine; resembling a spine.

Acanthophorous, ak-an-thof'o-rŭs. [Lat. **Acanthoph'orus**; from the Gr. *ἄκανθα*, a "thorn," and *φέρω*, to "bear."] Beset with spines or coarse hairs.

A-can-tho-po'dĭ-ous. [Lat. **Acanthopo'dius**; from the Gr. *ἄκανθα*, a "thorn," and *πούς, ποδός*, a "foot."] Having spinous petioles.

A-can-thop-tę-rўg'ĭ-i.* [From the Gr. *ἄκανθα*, a "thorn," and *πτερύγιον*, a "little wing," a "fin."] The name of an order of fishes having spiny fins.

A-can'thu-lus.* [From the Gr. *ἄκανθα*, a "thorn."] An instrument for extracting thorns, or *spiculæ* of wood, bone, etc., from wounds.

A-can'thus.* [From the Gr. *ἄκανθα*, a "thorn."] A genus of the Linnæan class *Didynamia*, natural order *Acanthaceæ*.

Acan'thus Mol'lis.* The systematic name of a classical herbaceous plant noted for the form of its foliage, which served as the model of the ornate capital of the Corinthian column. It is a native of Europe.

A-car'dĭ-a.* [From the Gr. *α*, priv., and *καρδία*, the "heart."] The condition of a mon-

ster-fœtus, born without a heart, or, rather, deficient as to the whole thorax.

Acardiohæmia,* a-kar-de-o-he'me-ạ. [From the Gr. *a*, priv., *καρδία*, the "heart," and *αἷμα*, "blood."] A deficiency of blood in the heart.

A-car-dĭ-o-ner'vĭ-ạ.* [From the Gr. *a*, priv., *καρδία*, the "heart," and the Lat. *ner'vus*, a "nerve."] A deficiency of nervous action in the heart, evinced by the sounds being inaudible.

A-car-dĭ-o-tro'phĭ-ạ.* [From the Gr. *a*, priv., *καρδία*, the "heart," and *τροφή*, "nourishment."] Atrophy of the heart.

A-căr'ĭ-cīde (*i.e.*, "acarus-killer"). [From the Lat. *ac'arus*, and *cæ'do*, to "kill" or "destroy."] A remedy against *Acari*, especially the *Acarus Scabiei*.

Ac-ạ-ro-i'dēs,* or **Ac'a-roid.** [From the Lat. *ac'arus*, and the Gr. *εἶδος*, a "form" or "resemblance."] Resembling the *Acarus*.

A-car'pous. [Lat. **Acar'pus**; from the Gr. *a*, priv., and *καρπός*, "fruit."] Having no fruit.

Ac'ạ-rus,* plural **Ac'ạ-ri.** [From the Gr. *ακαρής*, that which cannot be cut on account of its smallness (from *a*, priv., and *κείρω*, to "cut").] A genus of minute insects infesting the skin.

Ac'arus Au-tum-na'lis.* The harvest-bug; the wheal-worm.

Ac'arus Do-mes'tĭ-cus.* The domestic tick, found on the human body.

Ac'arus Riç'ĭ-nus.* The dog-tick.

Ac'arus Sac'ċha-ri.* "Acarus of Sugar." An animalcule found in sugar, causing "grocer's itch."

Ac'arus Sca-bĭ-e'i.* "Acarus of Itch." The itch animalcule.

A-cat'ạ-lep-sy. [Lat. **Acatalep'sia**; from the Gr. *a*, priv., and *καταλαμβάνω*, to "apprehend."] Uncertainty in diagnosis, etc.

A-cat-ap'o-sis.* [From the Gr. *a*, priv., and *καταπίνω*, to "swallow."] Difficulty in swallowing. See DYSPHAGIA.

A-cau-lĕs'cent. [From the Gr. *a*, priv., and the Lat. *cau'lis*, a "stem."] Apparently stemless, the proper stem being subterranean or very short, as in most violets.

A-cau'lis.* [From the same.] Having no stem, or having a very short stem; acau'line.

Ac-çel-e-rā'tion. [See next article.] Increased rapidity of the pulse, respiration, etc.

Ac-çel-e-ra'tor, o'ris.* [From the Lat. *accel'ero, accelera'tum*, to "hasten."] Applied to a muscle of the penis (*Accelera'tor uri'næ*) whose action propels the urine; also named *Ejacula'tor sem'inis*, from its performing a similar office as to the semen.

Ac-çes'sion. [Lat. **Acces'sio, o'nis**; from *acce'do, acces'sum*, to "go to," to "approach," to "be added to."] The approach, or onset, of diseases, or of fits, paroxysms or exacerbations in fevers, etc.

Accessorii Willisii,* ak-ses-so're-i wil-lis'e-i. The "accessory nerves of Willis,"—so named from the discoverer. The superior respiratory nerves, a pair arising from the spinal cord and joining the *par vagum*.

Ac-çes'so-rў. [Lat. **Accesso'rius**; from the same.] Usually applied to muscular appendages that assist the action of larger muscles. In Botany, additional or supernumerary.

Ac'çĭ-dent. [Lat. **Ac'cidens**; from *ac'cido*, to "happen."] A familiar word used by the French as synonymous with *symptom*. Also a fortuitous event; a casualty. See ACCIDENTIA.

Ac-çĭ-den'tal. [Lat. **Accidenta'lis**; from the same.] Adventitious; happening unexpectedly. Applied by French and some English writers to textures resulting from morbid action.

Acciden'tal Col'ors. A series of optical phenomena, so named by Buffon, and now known by the name of Ocular Spectra. If the eye be steadily directed for some time to a white wafer upon a dark ground, and be then turned aside, a well-defined image of the wafer will be perceived, with the colors reversed: the wafer will appear dark, the ground white. This new appearance is termed the accidental color, or ocular spectrum, or complementary color. By using differently-colored wafers we obtain the following results:

Color of wafer.	*Color of spectrum.*
Black	White.
Red	Bluish-green.
Orange	Blue.
Yellow	Indigo.
Green	Violet with a little red.
Blue	Orange-red.
Indigo	Orange-yellow.
Violet	Bluish-green.

Darwin classes the Spectra under the two heads of *direct* and *reverse*,—the former depending on the permanence of the impression, the latter on exhaustion.

Accidentia,* ak-se-den'she-ạ. [From the Lat. *ac'cido*, to "happen," *ac'cidens*, "happening," "that which happens."] A chance or occurrence happening to one unexpectedly; an accident.

Ac-çip'ĭ-ter.* [From the Lat. *accip'io*, to "take."] A bird of prey. In the plural (*Accipitres*, ak-sip'e-trēz), applied to an order of birds, including the hawk, eagle, etc., called also *Rapa'ces*, and *Rapto'res*, from their rapacious or predatory character.

Ac-clī'mat-ed. [Lat. **Acclima'tus.**] (Fr. *acclimaté*, ȧ'kle'mȧ'tȧ'.) Thoroughly accustomed to a climate:—applied to persons or animals that migrate from their native country.

Ac-clī'mạ-tiz-ā'tion. [Lat. **Acclimatiza'tio, o'nis.**] The process or state of being acclimated.

Ac-clī'vis.* [From the Lat. *ad*, "to," and *cli'vus*, the "side of a hill."] "Sloping upwards." Applied to a muscle of the abdomen, from the oblique ascent of its fibres, the *Obli'quus inter'nus*.

Accouchement (Fr.), ȧ'koosh'mȯN'. [From *accoucher*, ȧ'koo'shȧ', to "put to bed," to "deliver."] The act of being delivered; delivery.

Accoucheur, ȧ'koo'shuR'. [From the same.] A man-midwife; an obstetrician.

Ac-cre'tion. [Lat. **Accre'tio, o'nis**; from *ad*, "to," and *cres'co, cre'tum*, to "grow."] The process by which nutrient particles are added to the various tissues. The adhering together of parts naturally separate, as the fingers, etc.

Ac-cum'bent. [Lat. **Accum'bens**; from *accum'bo*, to "recline" (as at meals).] Lying against anything.

Acephala.* See ACEPHALUS.

Acephalia,* as-e-fa'le-a. [From the Gr. *a*, priv., and *κεφαλή*, the "head."] A form of fœtal monstrosity, consisting in the want of the head.

Acephalobrachia,* a-sef'a-lo-bra-ki'a. [From the Gr. *a*, priv., *κεφαλή*, the "head," and *βραχίων*, the "arm."] A form of fœtal monstrosity, consisting in the absence of head and arms.

A-çeph'a-lo-bra-chi'ŭs.* [From the same.] A monster-fœtus, having neither head nor arms.

A-çeph'a-lo-car'dĭ-a.* [From the Gr. *a*, priv., *κεφαλή*, the "head," and *καρδία*, the "heart."] A form of monstrosity, consisting in the absence of head and heart.

A-çeph'a-lo-car'dĭ-us.* [From the same.] A monster-fœtus, without head and heart.

Acephalochirus,* or **Acephalocheirus,*** a-sef'a-lo-kī'rŭs. [From the Gr. *a*, priv., *κεφαλή*, the "head," and *χείρ*, the "hand."] A monster-fœtus, without head and hands.

Acephalocyst, a-sef'a-lo-sīst. [Lat. **Aceph'alocys'tis**; from the Gr. *a*, priv., *κεφαλή*, the "head," and *κύστις*, a "bladder."] The headless hydatid, formed like a bladder.

A-çeph'a-lo-gas'ter.* [From the Gr. *a*, priv., *κεφαλή*, the "head," and *γαστήρ*, the "stomach" or "belly."] A monster-fœtus, without head, chest, and upper part of the belly.

A-çeph'a-lo-gas'trĭ-a.* [From the same.] A form of monstrosity, consisting in the want of head, chest, and belly.

A-çeph'a-lo-po'dĭ-a.* [From the Gr. *a*, priv., *κεφαλή*, the "head," and *πούς, ποδός*, the "foot."] A form of monstrosity, consisting in the absence of head and feet.

A-çeph'a-lop'o-dus.* [From the same.] A monster-fœtus, without head and feet.

Acephalorachia,* a-sef'a-lo-ra'ke-a. [From the Gr. *a*, priv., *κεφαλή*, the "head," and *ράχις*, the "spine."] A form of monstrosity, consisting in the want of head and spinal column.

Acephalostoma.* See ACEPHALOSTOMUS.

A-çeph'a-lo-sto'mĭ-a.* [From the Gr. *a*, priv., *κεφαλή*, the "head," and *στόμα*, a "mouth."] A form of monstrosity, consisting in the want of a head, but with an aperture like a mouth.

A-çeph'a-los'to-mus,* or **A-çeph'a-los'to-ma.*** [From the same.] A monster-fœtus, without a head, but having an aperture like a mouth.

A-çeph'a-lo-tho-ra'cĭ-a.* [From the Gr. *a*, priv., *κεφαλή*, the "head," and *θώραξ*, the "chest."] A form of monstrosity, consisting in the want of head and chest.

A-çeph'a-lo-tho'rus.* [From the same.] A monster-fœtus, without head and chest.

A-çeph'a-lus.* [From the Gr. *a*, priv., and *κεφαλή*, the "head."] Without a head; aceph'alous. In the neuter plural (*Aceph'ala*), applied to a class of *Mollusca* having no appearance of a head.

A'çer.* (French, *Érable*, ā'rābl'.) A genus of trees of the Linnæan class *Octandria*, natural order *Sapindaceæ* or *Aceraceæ*. It comprises numerous species natives of Europe, the United States, etc. The *A'cer dasycar'pum* (Silver Maple) and the *A'cer saccharī'num* (Sugar Maple) are commonly planted as ornamental trees in cities and parks.

A'çer Sac-cha-rī'num.* The Sugar Maple, a handsome deciduous tree, a native of the Northern United States. A large quantity of sugar and syrup of excellent flavor is obtained from the sap of this tree, which also affords the wood called *Bird's-Eye Maple* and *Curled Maple*.

Aç'e-ra,* the plural of A'CER, a "maple-tree," forming the Jussieuan name of a natural order of plants. See ACERACEÆ.

Aceraceæ,* as-e-ra'she-ē, or **Aç-e-rin'e-æ.*** [From the Lat. *a'cer*, the "maple-tree."] A natural order of plants including the maple.

Aç'e-rāte. [Lat. **Ace'ras, a'tis.**] A combination of aceric acid with a salifiable base.

A-cęr'bĭ-tў. [Lat. **Acer'bitas, a'tis;** from *acer'bus*, "crude," "harsh."] Sourness, with harshness or bitterness.

A-cĕr'ic. [Lat. **Acer'icus**; from *a'cer*, the "maple-tree."] Pertaining to the *Acer*. Applied to an acid obtained from the juices of *A'cer campes'tre* and *A'cer pseu'do-plat'anus*.

Acerineæ.* See ACERACEÆ.

Aç'er-ōse. [From the Lat. *a'cus*, "a needle."] Needle-shaped, linear, stiff, and sharp, as the leaves of the pine. ☞ This word is not legitimately formed. It is evidently from *aç'eris*, the genitive of *acus*, "chaff," and cannot properly signify "needle-shaped."

A-cęr'vu-lus.* [Diminutive of the Lat. *acer'vus*, a "heap."] The collection of sand-like particles found in the pineal gland; an acer'vule.

A-cĕs'çent. [Lat. **Aces'cens**; from *aces'co*, to "grow sour."] Becoming sour.

A-ce'ta,* the plural of ACE'TUM, "vinegar." Applied in Pharmacy to preparations of vinegar.

Aç-e-tab'u-lĭ-form'. [From the Lat. *acetab'ulum*, and *for'ma*, a "form."] Saucer-shaped.

Aç-e-tab'u-lum.* [From the Lat. *ace'tum*, "vinegar."] A little cup used by the ancients for holding vinegar:—applied in Anatomy to the round cavity in the *os innominatum* which receives the head of the *os femoris*.

Aç'e-tal. A compound of aldehyde with ether, formed by the action of platinum black on the vapor of alcohol with the presence of oxygen. It is a colorless, very fluid liquid, having a peculiar odor suggesting that of Hungary wines.

Aç-e-ta'rĭ-um,* plural **Aç-e-ta'rĭ-a.** [From the Lat. *ace'tum*, "vinegar."] A salad made of roots or herbs mixed with oil, salt, and vinegar.

Aceta'rium Scor-bu'tĭ-cum.* A kind of pickle for scorbutic patients.

Aç'e-tāte. [Lat. **Ace'tas, a'tis.**] A salt formed by the union in definite proportions of

acetic acid with a base. The acetates are more or less soluble in water and alcohol, and are decomposed by sulphuric acid.

Acetate of Lead. See PLUMBI ACETAS.

A-cĕt'ic. [Lat. **Acet'icus**; from *ace'tum*, "vinegar."] Belonging to vinegar. Applied to an acid the product of acetous fermentation.

A-cet'ĭ-ca.* [From the same.] Pharmaceutical preparations of vinegar.

Acet'ic Aç'id. [Lat. **Aç'idum Acet'icum.**] The sour principle which exists in vinegar. It occurs ready-formed in several products of the vegetable kingdom; it is also generated during the spontaneous fermentation of many vegetable and animal juices. Two kinds are known in Pharmacy,—viz., *Aç'idum acet'icum dilu'tum*, "dilute acetic acid," or common distilled vinegar, with very minute portions of uncombined mucilage and extractive, and *Aç'idum acet'icum for'tius*, "strong acetic acid." This variety is obtained by distillation from wood, generally that of oak coppice deprived of its bark, and is then termed pyroligneous acid; also by decomposing the acetates by sulphuric acid; it is then termed radical vinegar; and when mixed with camphor and essential oils, it is called "Henry's Aromatic Essence of Vinegar," and Marseilles or Thieves' Vinegar, or *Vinaigre des Quatre Voleurs* (vē'nĕgR' dā kătR vo'lUR'). See GLACIAL ACID.

A-cet'ĭ-fĭ-ca'tion. [Lat. **Acetifica'tio, o'nis**; from *ace'tum*, and *fa'cio*, to "make."] The act or process of making vinegar, or the transformation of certain substances into acetic acid.

Aç'e-tīte. [Lat. **Ace'tis, i'tis**; from *ace'tum.*] An erroneous name for the salt of *acetous acid*, in distinction from that of *acetic acid*, given when these acids were supposed to be different. The proper term is ACETATE, which see.

Aç-e-tom'e-ter. [Lat. **Acetom'etrum**; from *ace'tum*, and the Gr. *μέτρον*, a "measure."] An instrument for ascertaining the strength of vinegar.

Aç'e-tōne. A substance found as an impurity associated with pyro-acetic spirit, or naphtha. An inflammable, colorless liquid, of an acrid taste and penetrating odor. Density, 0.792. It is anæsthetic, and is used in medicine.

Aç-e-to'sa.* [From the Lat. *a'ceo*, to "be sour."] The specific name of *Rumex acetosa.*

A-ce-to-sel'la.* [From the Lat. *aceto'sa.*] The former Pharmacopœial name (Lond. Ph. 1836) for the *Oxalis acetosella.*

A-ce'tous. [Lat. **Aceto'sus**; from *ace'tum.*] Pertaining to vinegar; resembling vinegar; acetic.

A-ce'tum.* [From the Lat. *a'ceo*, to "be sour."] Acetic or acetous acid in a very diluted state; common vinegar. The varieties of vinegar known in commerce are three:—wine vinegar, malt vinegar, and sugar vinegar. The strongest malt vinegar is termed *proof* vinegar, and is called by the manufacturer No. 24: it is estimated to contain 4.73 per cent. of real acetic acid. Vinegar is refrigerant and diuretic. It is also employed as an antiseptic. Acetum is also the Pharmacopœial name (U.S. 1870) for impure dilute acetic acid. See ACETIC ACID.

Ace'tum Lo-be'lĭ-æ.* "Vinegar of Lobelia." The Pharmacopœial name (U.S. 1880) for a 10 per cent. preparation made from Lobelia with diluted acetic acid.

Ace'tum O'pĭ-i.* "Vinegar of Opium." The Pharmacopœial name (U.S. 1880) for a 10 per cent. preparation made from Opium with diluted acetic acid.

Ace'tum San-guĭ-na'rĭ-æ.* "Vinegar of Sanguinaria." The Pharmacopœial name (U.S. 1880) for a 10 per cent. preparation made from Sanguinaria (Blood-Root) with diluted acetic acid.

Ace'tum Sçil'læ.* "Vinegar of Squill." The Pharmacopœial name (U.S. 1880) for a 10 per cent. preparation made from Squill with diluted acetic acid.

Aç'e-tўl. A hypothetical radical, produced by the abstraction of two atoms of oxygen from ethyl, by oxidating processes. It pervades a series of compounds including acetic acid, from which it derives its name.

Achænium,* a-kē'ne-ŭm; written also **Ache'nium**, plural **Achenia**, a-ke'ne-a. [From the Gr. *α*, priv., and *χαίνω*, to "open."] An akene. An indehiscent fruit, one-celled and one-seeded, dry, and having the integuments of the seed distinct from it.

Acheir,* a-kīr', or **Acheirus.*** See ACHIROUS.

Achillea,* ak-il-le'a. A genus of syngenesious plants. The *A. ager'atum* has properties similar to those of tansy. The *A. millefo'lium*, common yarrow or milfoil, is sometimes used in dyspepsia, flatulence, etc.; also in hemorrhage. It is a native of the United States and of Europe.

Achille'a Ptarmica* (tar'mĭ-ka). Sneezewort, an herb the root and flowers of which are used as a masticatory and sialagogue.

A-chil'lis Ten'do.* "Tendon of Achil'les." The strong tendon of the *gastrocne'mii*, or *gastrocne'mius* and *sola'us* muscles. It was so named because it was supposed that this part, not having been dipped by Thetis in the river Styx, remained vulnerable, and was fatally wounded by the arrow of Paris. Also called CHORDA MAGNA, or the "great sinew."

Achirous, a-kī'rŭs, or **A-chei'rous.** [Lat. **Achi'rus**, or **Achei'rus**; from the Gr. *α*, priv., and *χείρ*, the "hand."] Having no hands.

Achlamydeous, ak-la-mĭd'e-ŭs. [Lat. **Achlamyd'eus**; from the Gr. *α*, priv., and *χλαμύς*, a "short cloak."] Without calyx or corolla.

Achne,* ak'ne. [Gr. *ἀχνη.*] A shred of lint. Also a flake of mucus-like substance on the cornea.

Acholous, ak'o-lŭs. [Lat. **Ach'olus**; from the Gr. *α*, priv., and *χολή*, "bile."] Without bile; deficient in bile.

A'chor,* a'kor, plural **Ach'o-rēs.** [Gr. *ἀχώρ*, "scurf" or "dandruff."] A small pustule containing a straw-colored fluid, and forming scaly eruptions about the head of young children; a species of scald-head.

Achoristus,* ak-o-ris'tŭs. [From the Gr. *α*, priv., and *χωρίζω*, to "separate."] A sign or symptom which is inseparable from (or which invariably accompanies) a particular state of health or disease.

Aeh'ras.* A genus of trees of the natural order *Sapotaceæ*, natives of tropical America.

Ach'ras Mam-mo'sa,* or **Lu-cu'ma Mammo'sa.*** A tree a native of the West Indies. It bears a valuable fruit called *natural marmalade*, or vegetable egg.

Ach'ras Sa-po'ta.* A synonyme of the *Sapota Achras*, the fruit of which is the Sapodilla Plum. See SAPOTA ACHRAS.

Aeh'ro-a.* [From the Gr. *a*, priv., and *χρόα*, "color."] A colorless state of the skin, caused by the absence of the usual coloring-matter of the *rete mucosum*. Compare DYSCHROA.

Aeh'ro-mat'ic. [Lat. **Achromat'icus**; from the Gr. *a*, priv., and *χρῶμα*, "color."] That which is free from the colors of the solar spectrum. Lenses in which the prismatic aberration of light (caused by refraction) is corrected are termed *achromatic*.

A-ehro'ma-tism. [Lat. **Achromatis'mus**; from the same.] The correction of the aberration of light arising from refraction.

Aeh-ro'ma-top'si-a.* [From the Gr. *a*, priv., *χρῶμα*, "color," and *ὄψις*, "vision."] Inability to distinguish colors; achro'matopsy.

Achylosis,* ak-e-lo'sis. [From the Gr. *a*, priv., and *χυλός*, "juice," and hence "chyle."] Deficient chylification.

Achymosis,* ak-e-mo'sis. [From the Gr. *a*, priv., and *χυμός*, "chyme."] Deficient chymification.

Acia,* a'she-a. [From the Lat. *a'cus*, a "needle."] A word used by Celsus, supposed to mean the thread in a needle with which a suture is made to join the lips of a wound; also the suture itself.

A-cic'u-la,* plural **A-cic'u-læ.** [Diminutive of the Lat. *a'cus*, a "needle."] A little needle; an ac'icule. See SPICULA.

A-cic'u-lar. [Lat. **Acicula'ris**; from *acic'ula*.] Like a small needle; spicular; needle-shaped; more slender than acerose.

A-cic'u-la-ted. [Lat. **Acicula'tus.**] Having *aciculæ*. Marked by fine impressed lines, as if produced by the point of a needle.

Ac'id. [Lat. **Ac'idus, Ac'idum**; from *a'ceo*, to "be sour."] Sour; sharp to the taste, like vinegar. As a noun, it signifies a compound substance which unites in definite proportions with alkaline bases and has the property of turning vegetable blues to red. In most acids oxygen or hydrogen is the acidifying principle.

Ac'i-da,* the plural of ACIDUM, an acid.

Ac'i-dif'er-ous. [Lat. **Acidif'erus**; from *ac'idum*, an "acid," and *fe'ro*, to "bear."] Bearing or containing acid.

A-cid'i-fi'a-ble. [Lat. **Acidifiab'ilis**; from *ac'idus*, "sour," and *fi'o*, to "become."] Capable of becoming acid.

A-cid'i-fi-ca'tion. [Lat. **Acidifica'tio, o'nis.**] The act or process of forming, or impregnating with, acid. See next article.

A-cid'i-fy. [From the Lat. *ac'idus*, "sour," and *fa'cio*, to "make."] To make sour or acid; to convert into an acid.

A-cid'i-fy-ing. [Lat. **Acidif'icus**; from *ac'idus*, "sour," and *fa'cio*, to "make."] Making acid; converting into an acid.

Acid'ifying Prin'ci-ple. That which forms an acid.

Ac-id-im'e-ter. [Lat. **Acidim'etrum**; from *ac'idum*, an "acid," and the Gr. *μέτρον*, a "measure."] An instrument for measuring the strength of acids or the amount of free acid. See next article.

Ac-i-dim'e-try. [Lat. **Acidime'tria**; from *ac'idum*, an "acid," and the Gr. *μετρέω*, to "measure."] The process by which the strength of acids is measured, or by which the amount of uncombined or free acid is determined.

A-cid'i-ty. [Lat. **Acid'itas, a'tis**; from *ac'idus*, "sour."] The quality of sourness. See ACOR.

Acidometer. See ACIDIMETER.

A-cid'u-la-ted. [Lat. **Acidula'tus**; from *acid'ulus*, "slightly acid."] Slightly blended with acid.

A-cid'u-lous. [Lat. **Acid'ulus**; from the same.] Slightly acid; subacid.

Acid'ulous Water. Water impregnated or charged with carbonic acid:—commonly called soda water. It is used as a refrigerant in fever.

Ac'i-dum,* plural **Ac'i-da.** [The neuter form of the Lat. *ac'idus*, "sour."] An ACID, which see.

Ac'idum A-cet'i-cum.* "Acetic Acid." The Pharmacopœial name (U.S. 1870, 1880) for an aqueous liquid containing 36 per cent. of absolute acetic acid, having a specific gravity of about 1.047.

Ac'idum Acet'icum Di-lu'tum.* "Diluted Acetic Acid." The Pharmacopœial name (U.S. 1880) for a liquid consisting of seventeen parts of officinal acetic acid and eighty-three parts of distilled water.

Ac'idum Acet'icum Gla-ci-a'le.* "Glacial Acetic Acid." The Pharmacopœial name (U.S. 1880) for nearly or quite *absolute* acetic acid.

Ac'idum Ar-se-ni-o'sum.* "Arsenious Acid." The Pharmacopœial name (U.S. 1870, 1880) for sublimed arsenious acid in masses. See ARSENIC.

Ac'idum Ben-zo'i-cum.* "Benzoic Acid." The Pharmacopœial name (U.S. 1870, 1880) for an acid obtained from benzoin and other substances.

Ac'idum Bor'i-cum.* "Boric Acid" (formerly called Boracic Acid). The Pharmacopœial name (U.S. 1880) for an acid obtained from borax.

Ac'idum Car-bol'i-cum.* "Carbolic Acid," or Phenic Acid. The Pharmacopœial name (U.S. 1870, 1880) for a solid substance obtained from the products of the distillation of coal-tar between the temperatures of 300° and 400° Fahr. See CARBOLIC ACID.

Ac'idum Carbol'icum Cru'dum.* "Crude Carbolic Acid." The Pharmacopœial name (U.S. 1880) for an impure liquid obtained during the distillation of coal-tar.

Aç'idum Chrom'ĭ-cum.* "Chrom'ic Acid." The Pharmacopœial name (U.S. 1870, 1880) for a substance in deep-red needle-form crystals, deliquescent, and very soluble in water, forming an orange-yellow solution. See CHROMIC ACID.

Aç'idum Cit'rĭ-cum.* "Citric Acid." The Pharmacopœial name (U.S. 1880) for an acid obtained from the juice of lemons, limes, and other fruits. It is an excellent antiscorbutic.

Aç'idum Gal'lĭ-cum.* "Gallic Acid." The Pharmacopœial name (U.S. 1880) for an acid found in the gall-nut and other vegetable substances.

Aç'idum Hy-dro-brom'ĭ-cum Dĭ-lu'tum.* "Diluted Hydrobromic Acid." The Pharmacopœial name (U.S. 1880) for a 10 per cent. aqueous solution of absolute hydrobromic acid.

Aç'idum Hy-dro-ehlor'ĭ-cum.* "Hydrochloric Acid" (or Muriatic Acid). The Pharmacopœial name (U.S. 1880) for a 31.9 per cent. solution of absolute hydrochloric acid.

Aç'idum Hydrochlor'icum Dĭ-lu'tum.* "Diluted Hydrochloric Acid." The Pharmacopœial name (U.S. 1880) for a liquid consisting of six parts of officinal hydrochloric acid and thirteen parts of distilled water.

Aç'idum Hy-dro-cy-an'ĭ-cum Dĭ-lu'tum.* "Diluted Hydrocyanic Acid." The Pharmacopœial name (U.S. 1870, 1880) for prussic acid, a 2 per cent. hydroalcoholic solution of absolute hydrocyanic acid.

Aç'idum Lac'tĭ-cum.* "Lactic Acid." The Pharmacopœial name (U.S. 1870, 1880) for an aqueous liquid containing 75 per cent. of absolute lactic acid.

Aç'idum Ni'trĭ-cum.* "Nitric Acid." The Pharmacopœial name (U.S. 1880) for a 69.4 per cent. aqueous solution of absolute nitric acid.

Aç'idum Ni'tricum Dĭ-lu'tum.* "Diluted Nitric Acid." The Pharmacopœial name (U.S. 1880) for a liquid composed of one part of officinal nitric acid and six parts of distilled water.

Aç'idum Ni-tro-hy-dro-ehlor'ĭ-cum.* "Nitrohydrochloric Acid," or Nitromuriatic Acid. The Pharmacopœial name (U.S. 1880) for a liquid composed of four parts of officinal nitric acid and fifteen parts of officinal hydrochloric acid. It was formerly called *A'qua Re'gia* ("royal water"), it alone having the power to subdue or dissolve gold and platinum.

Aç'idum Nitrohydrochlor'icum Dĭ-lu'tum.* "Diluted Nitrohydrochloric Acid." The Pharmacopœial name (U.S. 1880) for a liquid composed of nineteen parts of officinal nitrohydrochloric acid and seventy-six parts of distilled water.

Aç'idum O-le'ĭ-cum.* "Oleic Acid." The Pharmacopœial name (U.S. 1880) for a yellowish oily liquid obtained from fatty bodies.

Aç'idum Phos-phor'ĭ-cum.* "Phosphoric Acid." The Pharmacopœial name (U.S. 1880) for a 50 per cent. aqueous solution of orthophosphoric acid.

Aç'idum Phosphor'icum Dĭ-lu'tum.* "Diluted Phosphoric Acid." The Pharmacopœial name (U.S. 1880) for a liquid consisting of twenty parts of officinal phosphoric acid and eighty parts of distilled water.

Aç'idum Sal-ĭ-çyl'ĭ-cum.* "Salicylic Acid." The Pharmacopœial name (U.S. 1880) for an acid originally obtained from the willow. It is now usually made from carbolic acid.

Aç'idum Sul-phu'rĭ-cum.* "Sulphuric Acid." The Pharmacopœial name (U.S. 1880) for a liquid composed of not less than 96 per cent. of absolute sulphuric acid.

Aç'idum Sulphu'ricum Ar-o-mat'ĭ-cum.* "Aromatic Sulphuric Acid." The Pharmacopœial name (U.S. 1880) for a preparation made with 20 per cent. of officinal sulphuric acid and rather more than 70 per cent. of alcohol mixed with tincture of ginger and oil of cinnamon.

Aç'idum Sulphu'ricum Dĭ-lu'tum.* "Diluted Sulphuric Acid." The Pharmacopœial name (U.S. 1880) for a liquid consisting of one part of officinal sulphuric acid and nine parts of distilled water.

Aç'idum Sul-phu-ro'sum.* "Sulphurous Acid." The Pharmacopœial name (U.S. 1880) for an aqueous liquid containing about 3.5 per cent of sulphurous acid gas.

Aç'idum Tan'nĭ-cum.* "Tannic Acid." Tannin. The Pharmacopœial name (U.S. 1880) for an astringent, uncrystallizable powder obtained from galls and other substances. See TANNIN.

Aç'idum Tar-tar'ĭ-cum.* "Tartaric Acid." The Pharmacopœial name (U.S. 1880) for an acid usually obtained from cream of tartar. It is found in many acid fruits.

Acies,* a'she-ēz or a'se-ēz. [From the Gr. *ἀκή*, a "sharp point."] Properly, keenness, or sharpness. In Botany, the edge of anything.

Aç-ĭ-naç'ĭ-form. [Lat. **Acinacifor'mis**; from *acin'aces*, a "scimitar."] In the form of a scimitar.

Aç'ine. The same as ACINUS, which see.

Aç-ĭ-ne'sĭ-a,* or **Ak-ĭ-ne'sĭ-a.*** [From the Gr. *a*, priv., and *κίνησις*, "motion."] Loss of motion in the whole or part of the body.

Aç'ĭ-ni.* The plural of ACINUS, which see.

A-cin'ĭ-form. [Lat. **Acinifor'mis**; from *ac'inus*, a "grape" or "grape-stone."] Having the appearance of a grape or grape-stone. See ACINUS.

Aç'ĭ-nōse, or **Aç'ĭ-nous.** [Lat. **Acino'sus**; from the same.] Having *acini*, or full of *acini*.

Aç'ĭ-nus,* or **Ac'ĭ-nos.*** Applied in the plural (*ac'ini*) to the small granulations composing the substance of the liver and other granular bodies. The term *acines*, or *acini*, is also used in Botany to denote the small drupes which form the fruit of the bramble, etc.

Aç-ĭ-pen'ser.* The sturgeon, a genus of fishes from which isinglass is prepared. See ICHTHYOCOLLA.

Ac'me. [Gr. *ἀκμή*, the "point," "top," "period of greatest vigor."] The highest degree, or height, of a disease; the crisis.

Ac'ne.* [Supposed to be derived from the Lat. *ac'me*, because it is apt to affect those who are in the

bloom of life.] A papular eruption, mostly occurring on the face, but sometimes extending to the neck, shoulders, or breast.

Ac'ne Rosa'cea* (ro-za'she-ạ). Pimples on the face; the conspicuous eruption, of a bright rosy hue, on the nose and contiguous parts of the face, in drunkards. Called also *Gut'ta Ro'sea*, or Rosy-drop.

Acœlius,* a-se'le-ŭs, or **A-çœ'lĭ-os.*** [From the Gr. *ἀ*, priv., and *κοιλία*, the "belly."] Having no belly; wasted to such a degree as to have this appearance.

A-col'o-ğў. [Lat. **Acolo'gia**; from the Gr. *ἄκος*, a "remedy," and *λόγος*, a "discourse."] The doctrine or science of remedies. By some the term is limited to the consideration of surgical and mechanical remedies.

A-con'dў-lous. [From the Gr. *ἀ*, priv., and *κόνδυλος*, a "joint."] Without joints.

Ac'o-nīte. The common name for *Aconitum Napellus*.

Aconitia,* ak-o-nish'e-ạ, or **A-con'ĭ-tin.** [Lat. **Aconiti'na**; from *aconi'tum*.] An alkaloid constituting the active principle of aconite. It is a powerful poison.

Ac-o-nit'ic Aç'id. An acid obtained from aconite.

Ac-o-ni'ti Fo'lĭ-ạ.* "Leaves of Aconite." The Pharmacopœial name (U.S. 1870) for the leaves of *Aconitum Napellus*.

Aconi'ti Ra'dix.* "Root of Aconite." The Pharmacopœial name (U.S. 1870) for the root of *Aconitum Napellus*.

Ac-o-ni'tum.* [From *Ac'onæ*, a place in Bithynia where it was common.] The Pharmacopœial name (U.S. 1880) for the tuberous root of *Aconitum Napellus*. In minute doses, aconite is a nervous and arterial sedative; in any considerable quantity, a powerful poison. The genus *Aconitum* comprises many species, natives of Asia and Europe, all poisonous.

Aconi'tum Fe'rox.* A poisonous plant, a native of Northern India. It is used to poison arrows with which tigers are shot.

Aconi'tum Na-pel'lus.* The systematic name of Aconite, an herbaceous plant of the natural order *Ranunculaceæ*.

Aconi'tum Un-cĭ-na'tum.* Wild Monkshood, a native of New York, Pennsylvania, Virginia, etc.

A'cor, o'ris.* [From the Lat. *a'ceo*, to "be sour."] Acidity, as in the stomach from indigestion.

A-co'rĭ-ạ.* [From the Gr. *ἀ*, priv., and *κορέω*, to "satisfy."] Insatiable hunger.

A-cor'mous. [Lat. **Acor'mus**; from the Gr. *ἀ*, priv., and *κόρμος*, the "trunk of a tree."] Having no stem.

A'corn. [Lat. **Glans**; Gr. *βάλανος*.] The nut of the genus *Quercus* (Oak). It is a unique fruit, which the fruit of no other genus of trees resembles.

Ac'o-rus.* [Gr. *ἄκορον*.] A Linnæan genus of the class *Hexandria*, order *Monogynia*, natural order *Araceæ*.

Ac'orus A-sĭ-at'ĭ-cus, Ac'orus Ve'rus.* Other names for *Acorus Calamus*.

Ac'orus Cal-ạ-mus.* The systematic name of the common sweet flag. It is a native of the United States. See preceding article.

Acotyledon,* a-kot-ĭ-le'don. [From the Gr. *ἀ*, priv., and *κοτυληδών,-όνος*, a "seed-lobe."] A plant having no seed-lobe; without a cotyledon. In the plural, applied to a division of the Jussieuan system. See next article.

Acotyledones,* a-kot-ĭ-le'do-nēz. [From the same.] Acotyledonous plants; plants whose seeds have no distinct cotyledons. The term is usually applied to what are more commonly named cryptogamic plants, such as ferns, mosses, lichens, etc., in which there are no seeds, properly so called, but which are propagated by spherical bodies called spores.

A-cot-ў-led'o-nous. [Lat. **Acotyledo'neus**, or **Acotyled'onus**; from the same.] Having no cotyledon or seed-lobe. See COTYLEDON.

Acoumeter, a-koo'me-ter or a-kŏw'me-ter. [Lat. **Acou'metrum**; from the Gr. *ἀκούω*, to "hear," and *μέτρον*, a "measure."] An instrument for estimating the extent of hearing,

Acouophonia,* a-koo-o-fo'ne-ạ. [From the Gr. *ἀκούω*, to "hear," and *φώνη*, a "voice" or "sound."] A mode of auscultation in which the observer places his ear on the chest and analyzes the sound produced by percussion.

A-cous'ma, a'tis.* [From the Gr. *ἀκούω*, to "hear."] A species of depraved hearing, in which sounds are imagined as if really heard.

Acoustic, a-koos'tik or a-kŏw'stik. [Lat. **Acous'ticus**; from the Gr. *ἀκουστής*, a "hearer."] Pertaining to sound, or to the sense of hearing. Anciently applied to remedies (called *acoustica medicamenta*) for deafness.

Acoustic Duct. See MEATUS AUDITORIUS.

Acous'tic Nerve. The auditory nerve, or *Portio mollis* of the seventh pair.

A-cous'tics. [Lat. **Acous'tica**; from the Gr. *ἀκούω*, to "hear."] The doctrine of the theory and principles of sound; the science of sound.

Ac-quiś'ĭ-tĭve-ness. [From the Lat. *acqui'ro, acquisi'tum*, to "acquire."] According to Phrenology, that faculty or propensity which impels to the acquisition of property.

Acræpalus,* a-krĕp'ạ-lŭs, or **A-cræp'a-los.*** [From the Gr. *ἀ*, priv., and *κραιπάλη*, "drunken or gluttonous excess."] Correcting the effects of excess in eating or drinking.

A-cra'nĭ-ạ.* [From the Gr. *ἀ*, priv., and *κρανίον*, the "cranium."] A species of defective development, consisting in partial or total absence of the cranium.

Acratia,* a-kra'te-ạ. [From the Gr. *ἀ*, priv., and *κράτος*, "strength."] Weakness; impotency.

Ac'rid. [From the Lat. *a'cer* or *a'cris*, "sharp."] (Fr. *âcre*, ăk'R.) A term applied to substances producing a disagreeable sense of irritation or burning on the tongue or in the fauces.

Ac'rĭ-mo-nў. [Lat. **Acrimo'nia**; from *a'cris*, "sharp," "acrid."] A sharp, acrid, corrosive quality, biting to the tongue.

Ac'rimony of the Hu'mors. A change supposed, by those theorists known as humorists, to take place in the fluids of the body, causing many diseases.

A-crin'ĭ-a.* [From the Gr. *α*, priv., and *κρίνω*, to "discern," to "secrete."] A diminution or total suppression of the secretions.

A-cri'sĭ-a.* [From the Gr. *α*, priv., and *κρίσις*, a "judgment."] A state of disease in which either there is no crisis, or no judgment or opinion can be formed.

Ac'rĭ-ta.* [From the Gr. *α*, priv., and *κρίνω*, to "discern," to "perceive," to "judge."] A subdivision of the *Radiata* of Cuvier, including animals which have no trace of any organs of perception or of any nervous system. It comprehends Polypi, Infusoria, and other animals of the very lowest type.

A-crit'ĭ-cal. [Lat. **Ac'ritus**; from the Gr. *α*, priv., and *κριτός*, "judged," from *κρίνω*, to "judge."] Having no regular crisis; not indicating or pointing to a crisis.

Ac-ro-bўs'tĭ-a.* [From the Gr. *ἄκρον*, "extremity," and *βύω*, to "stop up," to "cover."] The prepuce.

Ac'ro-ce-phal'ic. [From the Gr. *ἄκρον*, "extremity" or "top," and *κεφαλή*, the "head."] A term denoting heads having an unusual prominence at the top.

Ac'ro-dont. [Lat. **Ac'rodon**; from the Gr. *ἄκρον*, "extremity" or "summit," and *ὀδούς, ὀδόντος*, a "tooth."] A term applied by Owen to scaly *Saurii* having teeth ankylosed to the summit of the alveolar ridge.

Ac-ro-dўn'ĭ-a.* [From the Gr. *ἄκρον*, "extremity," and *ὀδύνη*, "pain."] Acute rheumatism of the extremities, head, hands, or feet.

Ac'ro-ġen. An acrogenous plant. See next article.

A-crog'e-nous. [Lat. **Acrog'enus**; from the Gr. *ἄκρον*, "summit," and *γένω*, to "be born."] Growing from their tops. The Latin term in the plural feminine (*Acrogenæ*, a-krŏj'e-nē, Eng. *Acrogens*) is the name of the first class of cryptogamous plants, which grow only at the apex or summit of the stem, and consist of woody and vascular tissue. This class includes the ferns.

Ac-ro-ma'nĭ-a.* [From the Gr. *ἄκρος*, "extreme," and *μανία*, "madness."] Confirmed or incurable madness.

A-cro'mĭ-al. [Lat. **Acromia'lis.**] Pertaining to the acromion.

A-cro'mĭ-on.* [From the Gr. *ἄκρον*, "extremity" or "summit," and *ὦμος*, the "shoulder."] The projecting process of the *scapula*.

Ac-rom-pha'lĭ-on,* **A-crom'pha-lon.*** **Ac-rom-pha'lĭ-um,*** **A-crom'pha-lum.*** [From the Gr. *ἄκρον*, "summit" or "point," and *ὀμφαλός*, the "navel."] The centre of the navel, to which the cord is attached in the fœtus.

Acronycal. The same as ACRONYCTOUS, which see.

Ac-ro-nўc'tous. [Lat. **Acronyc'tus**; from the Gr. *ἄκρον*, "extremity," and *νύξ, νυκτός*, "night."] A term applied to stars appearing at sunset and disappearing at sunrise (sunset and sunrise being the two "extremities of the night"), —in other words, to stars or planets when opposite the sun.

Ac'ro-spīre. [Lat. **Acrospi'ra**; from *ἄκρον*, "extremity," "end," and *σπεῖρα*, any thing wound round another.] A sprout or plumule from the end of seeds when germinating, especially the first leaf of a cereal grain.

A-crot'ic. [Lat. **Acrot'icus**; from the Gr. *ἄκρος*, "extreme," "outermost part."] Belonging to the external surface:—applied in the plural neuter (*Acrot'ica*) to an order of the class *Ecritica* in Good's classification.

Ac'ro-tĭšm. [Lat. **Acrotis'mus**; from the Gr. *α*, priv., and *κρότος*, the "pulse."] A defect of the pulse.

Ac-tæ'a.* [From the Gr. *ἀκτῆ*, "elder."] Baneberry. A genus of herbs of the natural order *Ranunculaceæ*.

Actæ'a Al'ba.* White Baneberry, an herbaceous plant, a native of the United States. Its root is cathartic.

Actæ'a Raç-e-mo'sa.* A synonyme for *Cimicifuga racemosa*, which see.

Actæ'a Spi-ca'ta, var. **ru'bra.*** Red Baneberry, a plant a native of the United States and of Europe. Its root is cathartic.

Ac-tin-ĭ-for'mis.* [From the Gr. *ἀκτίν* or *ἀκτίς*, a "ray."] Exhibiting the form or appearance of rays. The same as ACTINOIDES.

Ac'tin-ĭšm. [Lat. **Actinis'mus**; from the same.] That branch of Natural Philosophy which treats of the radiation of heat or light (Mayne); but more usually the *chemical* power of the sun's rays as distinguished from light or heat.

Ac-tĭ-noç'er-āte, Ac-tĭ-noç'er-ous. [Lat. **Actinocera'tus, Actinoç'erus**; from the Gr. *ἀκτίν*, a "ray," and *κέρας*, a "horn."] Having parts like radiated horns.

Ac'tin-oid. [Lat. **Actinoi'des**; from the Gr. *ἀκτίν*, a "ray," and *εἶδος*, a "form" or "resemblance."] Resembling rays, or a ray.

Actinoides.* See ACTINOID.

Ac-tin'o-lite. [Lat. **Actinol'ithus**; from the Gr. *ἀκτίν*, a "ray," and *λίθος*, a "stone."] A mineral composed of radiated crystals. It is a variety of hornblende.

Ac-tin-om'e-ter. [Lat. **Actinom'etrum**; from the Gr. *ἀκτίν*, a "ray," and *μέτρον*, a "measure."] An instrument for indicating the strength of the sun's rays.

Ac'tin-o-my-co'sis.* [From the Gr. *ἀκτίν*, a "ray," and *μύκης*, a "fungus."] A diseased growth having a radiated appearance.

Ac-tin-o-zo'um,* or **Ac-tin-o-zo'on,*** plural **Ac-tin-o-zo'a.** [From the Gr. *ἀκτίν*, a "ray," and *ζῶον*, an "animal."] The name of certain *Acephala Gastrica* having appendages, and often the *areæ* of the surface, radiated.

Ac'tion. [Lat. **Ac'tio**, *o'nis*; from *a'go, ac'tum*, to "do," to "act."] The exercise of an active power; a faculty of the body; agency, activity, operation, motion. Actions are divisible into several classes,—*chemical*, *organic*, and *phys-*

ical. It is a law of dynamics that action and reaction are equal.

Ac'tĭve. [Lat. **Acti'vus**; from the same.] Acting with energy:—applied to treatment of the sick, to certain medicines, and to surgical remedies.

Ac-tiv'ĭ-tў. [From the same.] Agility; the faculty of acting; the quality or state of that which is active.

Ac'tu-al Cau'te-rў. [From the Gr. *καίω*, to "burn," or *καυτήριον*, a "red-hot iron," a "branding-iron."] A red-hot iron, or fire, used by surgeons as a cautery, because it really *burns* away the part or surface to which it is applied, in contradistinction to caustic substances, termed *potential* cauteries, which produce a similar result without actual burning. Also called *Ignis actualis*, "actual fire." See CAUTERY.

A-cu'le-āte. [Lat. **Aculea'tus**; from *acu'leus*, a "prickle."] Having prickles; armed with prickles, as the rose.

A-cu'le-us.* [From the Lat. *a'cus*, a "needle."] A prickle arising from the bark or epidermis of any part of a plant, and which may be peeled off with the bark.

A-cu'mĭ-nāte. [Lat. **Acumina'tus**; from *acu'men*, *acu'minis*, a "point," "sharpness."] Taper-pointed; ending in a produced or extended tapering point.

A-cu-mĭ-nā'tion. [From the same.] An extended tapering acute point.

Ac-u-pres'sion. [Lat. **Acupres'sio**; from *a'cus*, a "needle," and *pre'mo*, *pres'sum*, to "press."] Dr. J. Y. Simpson's plan of securing against hemorrhage in wounds or operations, by inserting a needle through the skin below the divided vessel, and returning its point to the cutaneous surface again, the ends being left *out* to a sufficient extent.

Ac-u-punc'ture. [Lat. **Acupunctu'ra**; from *a'cus*, a "needle," and *pun'go*, *punc'tum*, to "prick."] A small puncture made with a needle. An operation which consists in puncturing a part with a very fine needle. It is much resorted to by the Chinese as a remedy for rheumatism.

A'cus Can-nu-la'ta.* A trocar; a canulated needle used in surgery.

A'cus In-ter-punc-to'rĭ-a.* A couching-needle, used in operating on the eye.

A'cus Oph-thăl'mĭ-ca.* A couching or ophthalmic needle.

A'cus Tri-que'tra.* A trocar; a three-cornered needle.

A-cūt-an'gu-lar, A-cūt-an'gu-lāte. [Lat. **Acutangula'ris, Acutangula'tus**; from *acu'tus*, "sharp," and *an'gulus*, a "corner."] Having sharp angles.

A-cūte'. [Lat. **Acu'tus**; from *ac'uo*, *acu'tum*, to "sharpen," to "point."] (Fr. *aigu*, ā'gü'.) Sharp-pointed; ending in a point or angle less than a right angle. Every angle less than 90° is acute. In Medicine, the term is applied to diseases having violent symptoms attended with danger, and terminating within a few days.

Ac-u-te-nac'u-lum.* [From the Lat. *a'cus*, a "needle," and *tenac'ulum*, a "handle."] A handle for a needle. Also called in French *Porte-aiguille*, PORT ā'gē'ē'.

A-çy'a-no-blep'sĭ-a.* [From the Gr. *α*, priv., *κύανος*, "blue," and *βλέπω*, to "look," to "see."] Defect of vision by which blue color cannot be distinguished.

Acyesis,* as-i-e'sis. [From the Gr. *α*, priv., and *κύησις*, "pregnancy."] Sterility in women.

Ad. A Latin preposition signifying "to," "at," "by," "towards," "near," "with," etc. In compound words the *d* is usually changed to correspond with the following letter. Thus, *ad* becomes *ac* before *c*, *al* before *l*, *ap* before *p*, etc.

Ad. or **Add.** = *Ad'de*, *adda'tur*,* etc. "Add," or "let there be added."

Ad Def. Animi = *Ad defectionem animi** (ad de-fek-she-o'nem an'e-mi). "To fainting."

Ad Deliquium* (de-lik'we-ŭm), or **Ad Deliq'uium An'imi.*** "To fainting." Used in directions for venesection.

Ad 2 Vic. = *Ad du'as vi'ces.** "At two times," or "at twice taking."

Ad Lib. = *Ad libi'tum.** "At pleasure."

A-dac'rў-a.* [From the Gr. *α*, priv., and *δάκρυον*, a "tear."] A deficiency of the lachrymal secretion.

Adæmonia,* a-de-mo'ne-a. [Perhaps from the Gr. *α*, priv., and *δαίμων*, "fortune," "happiness."] Literally, "unhappiness." Restless or unhappy thoughts; anxiety. More correctly, ADEMONIA, which see.

Ad'a-mant. [Lat. **Ad'amas**, gen. **Adaman'tis**; from the Gr. *α*, neg., and *δαμάω*, to "subdue."] Literally, "that which [on account of its hardness] cannot be subdued." Diamond, the hardest of all substances.

Ad-a-man'tĭne. [Lat. **Adaman'tinus**; from the preceding.] Having the hardness or lustre of adamant. Adamantine spar is a variety of corundum.

Adam's Apple. See POMUM ADAMI.

Ad-ap'ter. A tube used in Chemistry for increasing the length of the neck of a retort, or for connecting the retort with the receiver, where the orifice of the latter is not large enough to admit the beak of the retort.

Ad-de-pha'gĭ-a. [From the Gr. *ἄδην* or *ἄδδην*, "abundantly," and *φαγεῖν*, to "eat."] Voracious appetite, or *Bulimia*.

Ad'der's Tongue. A popular name for *Erythronium Americanum*.

Ad'dĭ-son's Dis-eaṡe'. *Melasma suprarenale*,—first described by Dr. Thomas Addison.

Ad-dĭ-ta-men'tum.* [From the Lat. *ad'do*, *ad'ditum*, to "add" or "adjoin."] A small suture sometimes found added to the lambdoid and squamous sutures.

Ad-du'cens.* [From the Lat. *ad*, "to," and *du'co*, to "lead," to "draw."] Drawing together; addu'cent.

Ad-duc'tion. [Lat. **Adduc'tio**, **o'nis**; from the same.] That movement by which one part, as a limb or a finger, is drawn to another, or to the mesial line.

Ad-duc'tor, o'ris.* [From the same.] A term applied to muscles that perform adduction. See ANTITHENAR.

A-del'phous. [From the Gr. *ἀδέλφος*, a "brother."] Joined in a fraternity:—applied to stamens.

A-de-mo'ni-a.* [From the Gr. *ἀδημονέω*, to "be in distress."] Anxiety; distress.

A'den,* gen. **Ad'e-nis.** [Gr. *ἀδήν*, a "gland."] A gland; a bubo.

Ad-en-ăl'gĭ-a.* [From the Gr. *ἀδήν*, a "gland," and *ἄλγος*, "pain."] Pain in a gland; ad'enalgy.

Ad'en-em-phrax'is.* [From the Gr. *ἀδήν*, a "gland," and *ἔμφραξις*, "obstruction."] Glandular obstruction.

A-de'nĭ-a.* A chronic affection characterized by great enlargement of the lymphatic glands. See HODGKIN'S DISEASE.

Ad-en'ĭ-form. [Lat. **Adenifor'mis**; from the Gr. *ἀδήν*, a "gland."] Formed like a gland; glandiform. See ADENOID.

Ad-en-i'tis, i*dis.* [From the Gr. *ἀδήν*, a "gland."] Inflammation of a gland; bubo.

A-den'o-çēle.* [From the Gr. *ἀδήν*, a "gland," and *κήλη*, a "tumor."] See ADENOMA.

Ad'en-o-dyn'ĭ-a.* [From the Gr. *ἀδήν*, a "gland," and *ὀδύνη*, "pain."] Pain in a gland. See ADENALGIA.

Ad-en-og'ra-phy. [Lat. **Adenogra'phia**; from the Gr. *ἀδήν*, a "gland," and *γράφω*, to "write."] A treatise or dissertation on the glandular system.

Ad'en-oid. [Lat. **Adenoi'des**; from the Gr. *ἀδήν*, a "gland," and *εἶδος*, a "form" or "resemblance."] Resembling a gland.

Ad-en-ol'o-gy. [Lat. **Adenolo'gia**; from the Gr. *ἀδήν*, a "gland," and *λόγος*, a "discourse."] The science which treats of glands or of the glandular system.

Ad-e-no'ma,* or **A-den'o-çēle.*** The swelling or morbid enlargement of a gland; a glandular tumor.

Ad'en-o-me-nin'ge-us.* [From the Gr. *ἀδήν*, a "gland," and *μῆνιγξ*, a "membrane."] A term applied to mucous or pituitous fever (*Febris adenomeningea*), because the membranes and follicular glands of the intestines were held to be the chief seat of the complaint.

Ad'en-on-co'sis,* or **Ad'en-on-ko'sis.*** [From the Gr. *ἀδήν*, a "gland," and *ὀγκόω*, to "puff up" or "swell."] Swelling of a gland.

Ad'en-o-ner'vous. The same as ADENONEUROSUS, which see.

Ad'en-o-neū-ro'sus.* [From the Gr. *ἀδήν*, a "gland," and *νεῦρον*, a "nerve."] A term applied to the plague (*Febris adenoneurosa*), because situated in the nerves and lymphatic glands of the axilla and groin; adenonerv'ous.

Ad'en-o-phăr-ŭn-gi'tis, i*dis.* [From the Gr. *ἀδήν*, a "gland," and *φάρυγξ*, the "pharynx."] Inflammation of the tonsils and pharynx.

Ad'en-oph-thăl'mĭ-a.* [From the Gr. *ἀδήν*, a "gland," and *ὀφθαλμός*, the "eye."] Inflammation of the Meibomian glands; adenoph'thalmy.

Ad'en-o-phȳ'ma.* [From the Gr. *ἀδήν*, a "gland," and *φῦμα*, a "tumor."] The swelling of a gland. When it occurs in the liver it is called *hepatophyma*.

Ad'en-o-scle-ro'sis.* [From the Gr. *ἀδήν*, a "gland," and *σκληρόω*, to "harden."] A hard, indolent swelling of a gland, not of a scirrhous character.

Ad'en-ōse. [Lat. **Adeno'sus**; from *a'den*, a "gland."] Having many glands; glandulous.

Ad-en-ot'o-mȳ. [Lat. **Adenoto'mia**; from the Gr. *ἀδήν*, a "gland," and *τέμνω*, to "cut."] Dissection of the glands.

Adephagia.* See ADDEPHAGIA.

A'deps,* gen. **Ad'ĭ-pis.** A Latin term, signifying fat, animal oil, lard. Also the Pharmacopœial name (U.S. 1870, 1880) for the prepared internal fat of the abdomen of *Sus scrofa*, purified by washing with water, melting, and straining. Lard is emollient. It is sometimes employed by itself as a liniment, but its chief use in pharmacy is as an ingredient of ointments, cerates, etc. See FAT.

A'deps An-ser-i'nus.* Goose-grease.

A'deps Ben-zo-ĭ-na'tus.* "Benzoinated Lard." The Pharmacopœial name (U.S. 1880) for a preparation made from lard and benzoin.

A'deps O-vil'lus.* Fat of the sheep; mutton-suet.

A'deps Præp'a-ra'tus.* Prepared lard.

A'deps Su-il'lus.* Hog's lard; *Axun'gia porci'na*. The same as LARDUM.

Ad-he'rence. [See ADHESION.] The intimate union of two bodies by their surfaces. In Botany, the consolidation of parts or organs which originally are distinct.

Ad-he'rent. In Botany, attached or growing fast to another different organ.

Ad-he'sion, or **Ad-he'rence.** [**Adhæ'sio, o'nis;** from *ad*, "to," and *hæ'reo, hæ'sum*, to "stick."] That property by which certain bodies attract others, or their particles adhere to each other:—one of the terminations of inflammation.

Ad-he'sive. [Lat. **Adhæsi'vus**; from the same.] Having the property of adhesion. See GLUTINOUS, VISCOUS.

Adhe'sive In-flam-mā'tion. [Lat. **Inflamma'tio Adhæsi'va.**] The process by which the sides of incised wounds, being brought into exact contact, unite without suppuration, constituting *union by the first intention*.

Adhe'sive Plas'ter. [Lat. **Emplas'trum Adhæsi'vum.**] The common name for the EMPLASTRUM RESINÆ, which see.

Ad-ĭ-an'tum.* [Gr. *ἀδίαντον*; from *α*, priv., and *διαίνω*, to "moisten:"—so named because less juicy than many other ferns, or because the leaves are not easily moistened.] A genus of ferns called maiden-hair, from which a syrup termed *capillaire* is prepared. See CAPILLAIRE.

A-dĭ'a-pho-re'sis.* [From the Gr. *α*, priv., and *διαφορέω*, to "perspire."] Deficient cutaneous perspiration. See ADIAPNEUSTIA.

A-dĭ-aph'o-rus.* [From the Gr. *α*, priv., and *διαφέρω*, to "differ."] Formerly applied to medi-

cines which did neither good nor harm; also to neutral salts; adiaph'orous.

A-di'ap-neŭs'tĭ-ą.* [From the Gr. *ἀ*, priv., and *διαπνέω*, to "breathe through," to "evaporate."] The absence, obstruction, or diminution of perspiration.

Adipocere, or **Adipocire,** ad'e-po-sēr'. [Lat. **Adipoce'ra**; from *a'deps, ad'ipis*, "fat," and *ce'ra*, "wax."] A peculiar substance like fat, or spermaceti, formed by the spontaneous conversion of the flesh of man or other animals when placed for a considerable period in moist situations or under water. Also called *Grave-Wax*.

Ad'ĭ-pōse. [Lat. **Adipo'sus**; from *a'deps, ad'ipis*, "fat."] Of the nature of fat; fatty.

Ad'ipose Ar'te-ries. The branches of the diaphragmatic, capsular, and renal arteries, because they supply the fat round the kidneys.

Ad'ipose Mem'brane, Ad'ipose Tis'sue. Cellular membrane with fat collected in its cells.

Ad-ĭ-po'sis.* [From the Lat. *a'deps.*] The growth of fatness or obesity.

A-dip'sĭ-ą.* [From the Gr. *ἀ*, priv., and *δίψα*, "thirst."] Absence of thirst. A genus of the order *Dysorexiæ*, class *Locales*, of Cullen's nosology.

A-dip'sous. [Lat. **Adip'sus** or **Adip'sos**; from the same.] Allaying thirst:—applied to medicines and fruits which so act.

Ad'jec-tĭve. [Lat. **Adjecti'vus**; from *adji̇́'io, adjec'tum*, to "add to."] A term applied to coloring-matters which require to be fixed through the addition of another substance, called a *mordant*.

Ad'ju-vant. [Lat. **Ad'juvans**; from *ad'juvo*, to "assist."] Assisting other remedies.

Ad-mix'ture. [Lat. **Admistu'ra**; from *ad*, "to" or "with," and *mis'ceo, mis'tum* or *mix'tum*, to "mix."] A mixing or blending of one substance with another.

Admov. = *Admo've,** "apply," or *Admovea'tur,** "let there be applied."

Adnata.* See TUNICA ADNATA.

Ad'nāte. [Lat. **Adna'tus**; from *ad*, "to," and *nas'cor, na'tus*, to "be born," to "grow."] In Botany, born adherent; growing fast to, or adherent laterally.

Ad-o-lĕs'cence. [Lat. **Adolescentia,** ad-o-lĕs-sen'she-ą; from *adoles'co*, to "grow," to "grow up to maturity."] Youth; the period between puberty and full development,—from fourteen or fifteen to about twenty-five in males, and from twelve or thirteen to twenty-one in females.

A-do'nis.* A genus of plants of the order *Ranunculaceæ*. It comprises several species natives of Europe, which are acrid and poisonous. Some of them are cultivated for ornament.

Ad-os-cu-lā'tion. [Lat. **Adoscula'tio, o'nis**; from *ad*, "to" or "towards," and *os'culor, oscula'tus*, to "kiss."] The impregnation of plants by the pollen coming in contact with the pistils; the joining or inserting of one part of the plant into another. Also the external contact of the genital organs of the opposite sexes in birds and fishes during impregnation, instead of the insertion of the organ of the male.

Ad Pon'dus Om'nĭ-um.* "To the weight of the whole." Used in prescriptions to indicate the proportion of some particular ingredient.

Adpressed. The same as APPRESSED.

Adraganthin. See TRAGACANTHIN.

Adscendent. See ASCENDING.

Adst. Fe'bre = *Adstan'te fe'bre.** "Fever being present," or when the fever is on.

Adsurgent. The same as ASSURGENT.

A-dŭlt'. [Lat. **Adul'tus**; from *ado'leo, adul'tum*, to "grow up."] A term applied to animals arrived at maturity; also sometimes applied to plants. See ÆTAS.

Ad-ŭl-ter-ā'tion. [Lat. **Adultera'tio, o'nis**; from *adul'tero, adultera'tum*, to "adulterate," to "counterfeit."] The corrupting of pure ingredients with others resembling them, but of inferior value. See FALSIFICATION.

A-dus'tion. [Lat. **Adus'tio, o'nis**; from *adu'ro, adus'tum*, to "burn," to "scorch."] A synonyme of cauterization; the application of the actual cautery to any part of the body. See AMBUSTIO.

Adventitia,* ad-ven-tĭsh'e-ą. A term for the middle coat of the blood-vessels.

Adventitious, ad-ven-tĭsh'ŭs. [Lat. **Adventi'tius**; from *adve'nio, adven'tum*, to "come to," to "come to accidentally."] That which is accidental or acquired, in opposition to what is natural or hereditary. In Botany, happening irregularly; out of the proper or usual place.

Adventitious Membrane. See FALSE MEMBRANE.

Ad-ven'tive. A term applied to foreign plants accidentally or sparingly spontaneous in a country, but hardly naturalized.—(GRAY.)

Ad-ver-sĭ-fo'lĭ-ate. [Lat. **Adversifo'lius**; from *adver'sus*, "against," and *fo'lium*, a "leaf."] Having leaves against or opposite to each other.

Ad-ў-na'mĭ-ą.* [From the Gr. *ἀ*, priv., and *δύναμις*, "power."] Loss or deficiency of vital power; adyn'amy.

Ad-ў-nam'ic. [Lat. **Adynam'icus**; from the same.] Pertaining to *adynamia*.

Æ-dœ'a-grą.* [From the Gr. *αἰδοῖα*, the "genitals," and *ἄγρα*, a "seizure."] Gout in the genitals.

Ædœitis (e-de-i'tis), *idis.** [From the Gr. *αἰδοῖα*, the "pudenda" or "genitals."] Inflammation of the pudenda.

Ædœodynia,* e-de-o-dĭn'e-ą. [From the Gr. *αἰδοῖα*, the "pudenda" or "genitals," and *ὀδύνη*, "pain."] Pain in the genital organs, from whatever cause.

Æ-dœ-o-gra'phĭ-ą.* [From the Gr. *αἰδοῖα*, the "genitals," and *γράφω*, to "write."] A description of the parts of generation.

Æ-dœ-o-lo'gĭ-ą.* [From the Gr. *αἰδοῖα*, the "genitals," and *λόγος*, a "discourse."] A treatise on the parts of generation, their structure and functions; also that branch of Anatomy or Physiology treating of the same.

Æ-dœ-op'sĭ-ą.* [From the Gr. *αἰδοῖα*, the "genitals," and *ὄψις*, "vision," "sight."] Essentially the same as ÆDŒOSCOPY, which see.

Æ-dœ-op-so'phĭ-ą,* or **Æ-dop-so'phĭ-ą.*** [From the Gr. *αἰδοῖα*, the "pudenda," and *ψοφέω*, to "make a noise."] The sound caused by the escape of wind from the womb *per vaginam*, or from the bladder *per urethram*, in females.

Æ-dœ-os'co-pў. [Lat. **Ædœosco'pia**; from the Gr. *αἰδοῖα*, the "pudenda," and *σκοπέω*, to "see."] Examination or inspection of the pudenda.

Æ-dœ-ot'o-mў. [Lat. **Ædœoto'mia**; from the Gr. *αἰδοῖα*, the "pudenda," and *τέμνω*, to "cut."] The anatomy or dissection of the parts of generation.

Æ-gag-ro-pi'lus.* [From the Gr. *αἴγαγρος*, the "wild goat," and *πῖλος*, "hair wrought into felt."] A concretion found in the stomach of goats, deer, cows, etc., composed of hair collected on the tongue of the animal in licking itself, and swallowed.

Ægilops (ĕj'ĭ-lops), **o'pis.*** [From the Gr. *αἴξ*, gen. *αἰγός*, a "goat," and *ὤψ*, the "eye."] A sinuous ulcer under the inner angle of the eye, so called from its resemblance to the *larmier* or infra-orbital glandular sac of goats: now considered to be only a stage of the *fistula lachrymalis*.

Æ'gle Mar'me-los.* The systematic name of an East Indian fruit-tree of the natural order *Rutaceæ* or *Aurantiaceæ*, called also *Bela Bel* and *Covolam*. The ripe fruit is delicious and aperient. The half-ripe fruit dried has been introduced into the British Pharmacopœia under the name of *Bela*. It is slightly astringent, and is said to be efficacious in diarrhœa and dysentery.

Ægobronchophony, ē-go-bron-kof'o-ne. [Lat. **Ægobronchopho'nia**; from the Gr. *αἴξ*, a "goat," and the Lat. *bronchopho'nia*.] The bleating and bronchial voice; the principal symptom in pleuro-pneumonia. See BRONCHOPHONY.

Æ-go'nĭ-ą* (a contraction of **Ægopho'nia**.) A minor degree of ægophony, or a resonance of voice intermediate between well-marked bronchophony and ægophony.

Ægophony, ē-gof'o-ne. [Lat. **Ægopho'nia**; from the Gr. *αἴξ*, gen. *αἰγός*, a "goat," and *φωνή*, the "voice."] In auscultation, a strong resonance of the voice, jerking and tremulous, like that of the goat or kid.

Æolipile, e-ol'e-pīl. [From the Lat. *Æ'olus*, the "god of the winds," and *pi'la*, a "ball."] Literally, "Æolus's ball." A hollow ball of metal with two orifices on opposite sides. If water be placed in such a ball and converted into steam, the escape of the latter reacting on the atmosphere may be made to communicate a rotary motion to the ball.

Æora,* e-o'ra. [From the Gr. *ἀωρέω*, to "raise into the air."] A species of gestation; swinging.

Æ-quĭ-lat'er-al, or **E-quĭ-lat'er-al.** [From the Lat. *æ'quus*, "equal," and *la'tus*, a "side."] Having equal sides. In Botany, equal-sided:—opposed to *oblique*.

Æquilibrium, e-kwĭ-lib'rĭ-ŭm, or **E-quĭ-lib'-rĭ-um.** [From the Lat. *æ'quus*, "equal," and *li'bro*, to "balance," to "weigh."] Literally, a "balancing of forces." That rest which occurs when many forces applied to the same body are equally opposed. In Medicine it signifies the harmonious action of the organs of the body.

Æ'quĭ-valved, or **E'quĭ-valved.** [Lat. **Æquival'vis**; from *æ'quus*, "equal," and *val'væ*, "folding doors."] Having equal valves:—applied in Botany to a dehiscent pericarp so formed.

A'er.* [From the Gr. *ἀήρ*, *ἀέρος*, "air," the "atmosphere."] The natural air we breathe; atmospheric air.

A'er Fix'us.* Fixed air, or carbonic acid gas.

Aerate, ā'er-āt. [See AER.] To impregnate with carbonic acid gas.

A'er-āt-ed. [Lat. **Aera'tus.**] A term applied to liquids impregnated with carbonic acid gas; also to bread so impregnated.

A-e'rĭ-al Aç'id. Carbonic acid gas.

Ae'rial Plants. Certain plants which can live by absorption from the atmosphere, without requiring their roots to be fixed to any soil. See AIR-PLANTS.

Aeriferous, ā-er-if'er-ŭs. [Lat. **Aer'ifer**; from *a'er*, "air," and *fe'ro*, to "bear," to "carry."] Air-bearing:—applied to the air-passages, the windpipe, bronchi, etc.

A'er-ĭ-fĭ-cā'tion. [Lat. **Aerifica'tio, o'nis**; from *a'er*, "air" or "gas," and *fa'cio*, to "make."] The converting of a body into gas.

A'er-ĭ-form. [Lat. **Aerifor'mis**; from *a'er*, "air" or "gas," and *for'ma*, "form."] Having the form of air or gas; gaseous.

A-er-o-dў-nam'ic. [Lat. **Aerodynam'icus**; from *a'er*, "air," and the Gr. *δύναμις*, "power."] Pertaining to the force of the air.

A-er-o-dў-nam'ics. [Lat. **Aerodynam'ica**; from the same.] The doctrine of the air and its properties while in motion.

A-er-og'ra-phў. [Lat. **Aerogra'phia**; from *a'er*, "air," and the Gr. *γράφω*, to "write."] A description of the air.

Aerolite, ā'er-o-līt, or **A'er-o-lĭth.** [From the Gr. *ἀήρ*, the "atmosphere," and *λίθος*, a "stone."] A meteoric stone which falls from the atmosphere:—also termed *Meteorite* and *Brontolith*. See METEORITE.

A-er-ol'o-ġў. [Lat. **Aerolo'gia**; from the Gr. *ἀήρ*, "air," and *λόγος*, a "discourse."] A treatise or consideration of the properties of air; the science of air.

A-er-om'e-ter. [Lat. **Aerom'etrum**; from the Gr. *ἀήρ*, "air," and *μέτρον*, a "measure."] An instrument for ascertaining the mean bulk of gases, or for measuring the density and expansibility of air and gases.

A-er-om'e-trў. [Lat. **Aerome'tria**; from the same.] The ascertaining of the physical properties of atmospheric air, their nature and history.

A-er-o-nau'tics. [From the Gr. *ἀήρ*, "air," and *ναυτής*, a "sailor."] The science or art of aerial navigation in a balloon. The aerial navigator is called an *ā'eronaut*.

A-er-o-pho'bĭ-a.* [From the Gr. *ἀήρ*, "air," and *φόβος*, "fear."] A dread of any current of air,—because in hydrophobia and some other diseases it induces a paroxysm; aëroph'oby.

Aerophyte, ā'er-o-phīt. [Lat. **Aeroph'ytum;** from the Gr. *ἀήρ*, "air," and *φυτόν*, a "plant."] A plant that lives in the air without being rooted in the earth. See AIR-PLANTS.

A-er-os'co-pў. [From the Gr. *ἀήρ*, "air," and *σκοπέω*, to "survey," to "examine."] The investigation of the air.

Ærose, ē'rōs. [Lat. **Æro'sus;** from *æs, æris*, "copper" or "brass."] Of the nature of copper; coppery.

A-er-o-stat'ic. [Lat. **Aerostat'icus;** from the Gr. *ἀήρ*, "air," and *στατική*, "the science of weights."] Pertaining to the science of the weight of air, or *Aërostatics*.

A-er-o-stat'ics. [Lat. **Aerostat'ica;** from the same.] The doctrine of air, its specific gravity, and its properties in a state of rest.

A-er-os-tā'tion. [Lat. **Aerosta'tio, o'nis;** from *a'er*, "air," and *sto, sta'tum*, to "stand."] Literally, "standing (or being suspended) in the air." The raising and supporting of heavy bodies by the buoyancy of heated air or light gases received into a spherical bag called a balloon.

Æ-ro'sus La'pis.* "Coppery Stone." A name given to *lapis calaminaris*, from the mistaken notion of its being a copper ore.

Æ-ru'gĭn-ous, or **Æ-ru-gĭn'e-ous.** [Lat. **Ærugino'sus;** from *æru'go, æru'ginis*.] Pertaining to copper-rust, or verdigris:—applied to a bluish-green color like verdigris, or like the leaves of some pine-trees.

Æ-ru'go,* gen. **Æ-ru'gin-is.** [A contraction of the Lat. *æ'ris rubi'go*, the "rust of copper." See Æs.] The rust of a metal, especially copper. It usually denotes the impure subacetate of copper. See VERDIGRIS.

Æs,* gen. **Æ'ris.** The Latin term for copper or brass.

Æs Co-rin'thĭ-um.* [From the Lat. *æs*, "brass," and *Corin'thius*, "belonging to Corinth."] A kind of brass produced, it is said, by an accidental mixture of metals at the burning of Corinth. It appears, however, from Pliny, to have been in use in Corinth long before the burning of that city.

Æs Us'tum.* [From the Lat. *æs*, "copper," and *us'tus*, "burnt;" (from *u'ro, us'tum*, to "burn").] "Burnt Copper." A preparation consisting of equal parts of copper and rough brimstone, laid in strata, with a small quantity of common salt sprinkled on each layer, and exposed to the fire until the brimstone is burned out. It has been called *Æs Ven'eris* (*Venus* being one of the ancient names for copper), *Æs crema'tum, Ci'nis æ'ris, Cro'cus Ven'eris*, etc.

Æs'cu-lin, or **Æs'cu-lĭne.** An alkaloid occurring in the bark of the *Æsculus Hippocastanum*, or horse-chestnut. It is supposed to be a febrifuge.

Æs'cu-lus Hip-po-cas'ta-num.* The systematic name of the horse-chestnut, an ornamental tree of the natural order *Sapindaceæ*. It is supposed to be a native of Asia. It bears large clusters of showy flowers, and its fruit is said to be poisonous.

Æstates,* ĕs-ta'tēz. [Nominative plural of *æs'tas*, "summer."] Heat-spots; freckles; sunburnings. See EPHELIS.

Æsthesia,* ĕs-the'si-a. [From the Gr. *αἰσθάνομαι*, to "perceive," to "feel."] Perception; feeling; sensibility.

Æs-the-sĭ-im'e-ter. [From the Gr. *αἴσθησις*, "perception," "sensation," and *μέτρον*, "measure."] An instrument designed to measure the minutest increase or diminution of sensibility in the sense of touch.

Æs-the-sĭ-od'ic, or **Æs-the-sod'ic.** [From the Gr. *αἴσθησις*, "sensation," and *ὁδός*, a "path."] A term applied to the gray matter of the spinal cord, regarded as the pathway of sensory impressions.

Æsthesis,* ĕs-the'sis. [See ÆSTHESIA.] Feeling or sensibility; also, sense or sensation.

Æs-thet'ic. [Lat. **Æsthet'icus;** from the Gr. *αἰσθάνομαι*, to "perceive," to "feel."] Pertaining to the understanding, or mental perception. The Latin term in the plural neuter (*Æsthet'ica*) forms the name of an order of the class *Neurotica* in Dr. Good's arrangement.

Æs-thet'ics. [Lat. **Æsthet'ica;** from the same.] Literally, the science of the sensations or perceptions. The science of the beautiful; the science which explains the cause of the pleasure or displeasure derived from the contemplation of the works of nature or art.

Æs'tĭ-val, or **Es'tĭ-val.** [From the Lat. *æs'tas*, "summer."] Of or pertaining to summer.

Æs-tĭ-vā'tion, or **Es-tĭ-vā'tion.** [Lat. **Æstiva'tio, o'nis;** from *æsti'vo, æstiva'tum*, to "spend the summer," to "retire for the summer season."] The mode in which the different parts of the flower are folded in the bud; prefloration.

Æs-tu-a'rĭ-um.* [From the Lat. *æs'tus*, "heat," "boiling water," the "tide."] Literally, a place where there is boiling or raging water: hence, an estuary (*i.e.*, an arm of the sea, or part of a river in which the tide rises). A stove for applying dry heat to all parts of the body at once; also a vapor-bath.

Æs'tus,* ĕs'tŭs. [See preceding article.] Heat, as well natural heat in intense degree, as that which is the effect of inflammatory disease.

Æs'tus Vo-lat'ĭ-cus.* "Flying Heat." The sudden flushing of the face; also *Stroph'ulus volat'icus*, or wild-fire rash of children.

Æ'tas,* gen. **Æ-ta'tis.** "Age." Different writers have designated different stages in the life of man; but perhaps the most usual division is into five periods, as follows:

1. INFANCY (*infan'tia*), generally considered to extend to about the seventh year, or to the second dentition. 2. CHILDHOOD (*pueri'tia*), extending from the seventh to the fourteenth or fifteenth year, the period of puberty. 3. ADOLESCENCE (*adolescen'tia*), or YOUTH, reaching in males from the age of about fifteen to twenty-five, in females, from thirteen to twenty-one. 4. ADULT AGE, or MANHOOD (*viril'itas* or *æ'tas viri'lis*, the "manly age"), extending from the close of adolescence to about the fiftieth year. 5. OLD AGE

(*senec'tus*), which comprehends the declining portion of life.

The Roman writers subdivided Manhood into different stages, such as Æ'TAS FIRMA'TA, the prime or full strength of man,—the age from thirty to thirty-five; Æ'TAS MATU'RA, the age of maturity or prudence,—the age of fifty.

Old age was variously subdivided, as Æ'TAS PROVECTA, advanced age; Æ'TAS INGRAVES'CENS, the age when the weight of years begins to be sensibly felt; Æ'TAS DECREP'ITA or CREP'ITA, decrepit age,—reckoned from the sixtieth year, and ending in death.

Æther. See ETHER.

Æ'ther.* "Ether." The Pharmacopœial name (U.S. 1880) for an inflammable liquid used as a solvent. It contains 74 per cent. of pure ethyl oxide, 26 per cent. of alcohol, and a little water. See ÆTHER FORTIOR.

Æ'ther A-cet'ĭ-cus.* "Acetic Ether." The Pharmacopœial name (U.S. 1880) for a colorless liquid, having a peculiar agreeable odor, and composed principally of acetate of ethyl.

Æ'ther For'tĭ-or.* "Stronger Ether." The Pharmacopœial name (U.S. 1880) for the purified ether used as an anæsthetic: it is composed of about 94 per cent. of ethyl oxide, and about 6 per cent. of alcohol, containing a little water.

Æ-the're-a.* [Neuter plural of *æthe'reus*, "ethereal."] A name formerly applied to preparations of ether. See ETHER.

Æ'thĭ-ops,* or **E'thĭ-ops.*** [From the Gr. *αἰθιοψ*, "black."] A name anciently given to several black powders.

Æ'thiops An-tĭ-mo-nĭ-a'lis.* A term applied to a compound of Æthiops mineral with the sulphuret of antimony.

Æ'thiops Mar'tial. An old name for the deutoxide of iron.

Æ'thiops Min'er-al. The black sulphuret of mercury (*Hydrar'gyri Sulphure'tum Ni'grum*). As an anthelmintic, it has been called *Poudre Vermifuge Mercurielle* (poodR vĔR'me'füzh' mĕR'kü're ĕl').

Æ'thiops per se* (pẹr sē). The name given by Boerhaave to the gray oxide formed by long agitation of mercury in a bottle half full of air.

Æ'thiops Veġ-e-tab'ĭ-lis.* A name given to a species of charcoal, prepared by burning the *Fucus vesiculosus* in the open air and reducing it to a black powder.

Æth'o-ġen. [From the Gr. *αἰθος*, "fire" or "light," and *γεννάω*, to "produce."] A compound of boron and nitrogen, which gives a brilliant phosphorescent light when heated before the blow-pipe.

Æ'thrĭ-o-scope, or **Æth'rĭ-scope.** [From the Gr. *ἀίρθα*, the "clear sky," and *σκοπέω*, to "observe."] An instrument invented by Sir John Leslie for indicating the power of the clouds in preventing radiation. It consists of the differential thermometer, having one of the balls excluded from the light and the other placed in a polished metallic cup. Exposed to a clear part of the sky, the heat radiated from it escapes rapidly, and the temperature falls; exposed to a cloud, the radiated heat is restored and there is no reduction of temperature.

Æ-thu'sa Cy-na'pĭ-um.* Lesser Hemlock, or Fool's Parsley, a plant of the order *Umbelliferæ*, possessing poisonous properties. It yields an alkaloid called *cyna'pia*.

Æ-tĭ-ol'o-ġy, or **E-tĭ-ol'o-ġy.** [Lat. **Æti-olo'gia**; from the Gr. *αἰτία*, "cause," and *λόγος*, a "discourse."] The science of the causes of disease.

Aetites,* a-e-ti'tēz. [From the Gr. *ἀετός*, an "eagle," *λίθος*, a "stone," being understood.] Eagle-stone, a clay-ironstone, hollow, and containing another substance within it of variable composition.

Af-fec'tion. [Lat. **Affec'tio, o'nis;** from *affi'cio, affec'tum*, to "affect," to "disturb."] Nearly synonymous with "disease," as inflammatory, nervous, or rheumatic affection, etc.

Af'fer-ens.* [From the Lat. *ad*, "to," and *fe'ro*, to "bring."] A term applied to the lymphatic vessels, or *vasa afferentia;* af'ferent.

Afferentia,* af-fer-en'she-ạ, plural neuter of AFFERENS, which see.

Af-fin'ĭ-tў. [Lat. **Affin'itas, a'tis;** from *ad*, "to," "on," and *fi'nis*, "boundary:" *affi'nis*, "on the boundary," "near," "connected with," "neighboring."] Literally, "connection by marriage." That kind of attraction by which different classes of substances combine to form *new* substances, as in the case of an alkali with an acid, forming a salt. As marriage unites persons of different or opposite sexes, so affinity unites substances of different and often opposite qualities,—*e.g.*, a supporter of combustion with a combustible, an alkali with an acid, etc. Affinity is sometimes used, but less appropriately, to denote attraction in a more general sense. See AFFINITY OF AGGREGATION.

In Botany, affinity signifies relationship; similarity of structure; resemblance in the principal parts of the structure; the *ensemble* of organic relations existing between two orders, genera, etc.

SINGLE OR SIMPLE AFFINITY is the power by which two elementary bodies combine.

ELEC'TIVE AFFINITY denotes the preference which one body manifests in combining with another rather than with a third or a fourth, etc.

DOUBLE ELECTIVE AFFINITY occurs when two compounds decompose each other and two new compounds are formed by an exchange of elements. Thus, when sulphate of zinc and carbonate of potassa are mixed, the sulphuric acid leaves the zinc and unites with the potassa, forming sulphate of potassa, while the carbonic acid combines with the zinc, producing carbonate of zinc.

QUIES'CENT AFFINITY is that which tends to maintain the elements of a compound in their present state, preventing decomposition.

DIVEL'LENT AFFINITY (from *divel'lo*, to "pull apart," to "separate") is that which tends to arrange the particles of a compound in a new form, producing decomposition. In mixing different compounds, if the sum total of the divellent be more powerful than that of the quiescent affinities, decomposition takes place.

DISPOSING AFFINITY is that which promotes the tendency of bodies to combine in a particular

way, by presenting to them a third substance which exerts a strong attraction to the compound they form: when the combination has been effected, the third substance may be withdrawn. Some writers call this tendency to unite the *affinity of intermedium*, or intermediate affinity. Berthollet styles it "reciprocal affinity."

Affin'ity of Ag-gre-gā'tion. A force by which two substances tend to combine and form an aggregate, without their properties being changed. Another term for the attraction of cohesion.

Affin'ity, Chem'i-cal, or **Affin'ity** proper. That property or attraction by which different elements unite with one another, forming new substances. See AFFINITY.

Affinity, Intermediate. See AFFINITY (DISPOSING).

Affin'ity, Vi'tal. That power which forms the solids and fluids from the common circulating fluids.

Af-fla'tus.* [From the Lat. *ad*, "to," "upon," and *flo, fla'tum*, to "blow."] A term applied to a species of erysipelas, as if blown upon by an unwholesome blast.

Af-flux'us.* [From the Lat. *ad*, "to," or "towards," and *flu'o, flux'um* or *fluc'tum*, to "flow."] Af'flux:—a name given in former times to a supposed reciprocal influence of terrestrial bodies: it was compared to the effect of a magnet on iron, and of amber on chaff. *Affluxus*, or afflux, is also used to denote the flow or determination of blood or other fluid of the body to a particular part.

Af-fu'sion. [Lat. **Affu'sio, o'nis;** from *ad*, "to," "upon," and *fun'do, fu'sum*, to "pour."] The pouring of water on a substance to cleanse it:—applied to the pouring on a patient, in certain fevers, of a liberal quantity of cold water; the cold affusion. To this head some writers refer LOTIONS, ASPERSIONS, SHOWER-BATHS, which will be noticed in their alphabetical places. See COLD AFFUSION.

Af'ter-Birth. The common English term for the placenta, cord, and membranes, or *secundines*.

Af'ter-Pains. Those pains, more or less severe, after expulsion of the after-birth, from the contractile efforts of the uterus to return to its normal condition.

Agalactatio.* See AGALACTIA.

Ag-a-lac'tĭ-a.* [From the Gr. *α*, priv., and *γάλα, γάλακτος*, "milk."] Deficiency of milk after childbirth.

A-gam'ĭ-cus.* [From the Gr. *α*, priv., and *γάμος*, "marriage."] A term sometimes applied, in Botany, to plants the sexual organs of which cannot be detected; cryptogamic.

Ag'a-mo-ġen'e-sis.* [From the Gr. *α*, priv., *γάμος*, "marriage" or "sexual union," and *γένω*, to "be born."] Reproduction without the union of the sexes.

Ag'a-mous. [See AGAMICUS.] Sexless:—a term applied to cryptogamous plants, from the notion that they possess no sexual characters.

A-găr'ĭ-cum.* [Said to be derived from *Aga'ria*, or *Ag'arum*, a region of Sarmatia where it was first discovered.] The Agaric, a species of mushroom.

A-găr'ĭ-cus.* [See preceding article.] The generic name of the Mushroom family, order *Fungi*, class *Cryptogamia*. The genus *Agaricus* is large and important, comprising about one thousand species, natives of all parts of the world. Many of the species are esculent, and others deleterious. Many of them are admired for the beauty of their form and color.

Agar'icus Cam-pes'tris.* The Linnæan name of the common eatable mushroom of Europe.

Agar'icus Chi-rur-go'rum.* "Surgeon's Agaric." See AGARICUS QUERCUS.

Agar'icus Min-er-a'lis.* "Mineral Agaric." The *mountain milk* or *meal* of the Germans; one of the purest of the native carbonates of lime, found in clefts of rocks, etc. It is named from its resemblance to an agaric in texture and color.

Agar'icus Quer'cus.* "Agaric of the Oak." *Bole'tus Ignia'rius*, or Touchwood, a fungus formerly used for arresting external hemorrhages.

Ag'ate. [From *Acha'tes*, a river of Sicily where agates, it is said, were first discovered.] A hard silicious stone, used by lapidaries for engraving seals, vases, and other objects of ornament. It is composed of chalcedony and quartz.

A-ga've A-mer-ĭ-ca'na.* The American Aloe, or Century Plant, a plant of the natural order *Amaryllidaceæ*. A fermented juice prepared from it, and called *Pulque*, is the favorite drink of the Mexicans. See PULQUE.

Aga've Cu-ben'sis.* A species of American aloe, the roots of which resemble the red sarsaparilla of the shops.

Age. See ÆTAS.

Agedoite. See ASPARAGIN.

Agenesia.* See AGENNESIA.

A-ġen'e-sis.* [From the Gr. *α*, priv., and *γεννάω*, to "beget," or *γένω*, to "be born."] A term applied to anomalies of organization consisting in the absence or imperfect development of parts.

Agennesia,* aj-ĕn-nee'se-a, or **A-ġen'nesis.*** [From the same.] Impotence; sterility.

A'gent. [Lat. **A'gens;** from *a'go*, to "act" or "do."] Any power or influence which produces an effect on the human body. Thus, we speak of a "morbific agent," that is,—something which causes disease. See REAGENT.

Agerasia,* aj-er-a'se-a. [From the Gr. *α*, priv., and *γῆρας*, "old age."] The non-appearance of the effects or infirmities of old age; a green old age.

A-ġer'a-tum.* [Gr. *ἀγήρατον*.] A genus of plants of the order *Compositæ*. The *Ageratum conyzoides*, a native of tropical America, is cultivated for ornament. See ACHILLEA.

Ageusia.* The same as AGEUSTIA, which see.

Ageustia,* a-gūs'te-a. [From the Gr. *α*, priv., and *γεῦσις*, "tasting."] Loss of taste. A genus of the order *Dysæsthesiæ*, class *Locales*, of Cullen's nosology.

Ag-glom'er-ate, or **Ag-glom'er-āt-ed.** [Lat. **Agglomera'tus**; from *agglom'ero, agglomera'tum* (from *ad*, "to," "on," and *glo'mus*, a "ball"), to "gather into a ball."] Gathered together:—applied to glands. In Botany, heaped up or gathered into a globular form, as the stamens of the magnolia or the male flowers of a pine-tree.

Ag-glu'tĭ-nant. [Lat. **Agglu'tinans**; from *ad*, "to," and *glu'tino, glutina'tum*, to "glue."] An external application of a gluey nature, which favors the healing of parts by keeping them together.

Ag-glu-tĭ-nā'tion. [Lat. **Agglutina'tio, o'nis**; from the same.] A gluing or joining together; also, the action of an agglutinant substance. See COLLESIS.

Agglutina'tion, Im-me'dĭ-ate. Union by the first intention.

Agglutina'tion, Me'dĭ-ate. The interposing of some substance between the lips of a wound, or between the flaps after amputation, as agaric, charpie, or lint, on which cerate is first spread.

Ag'gre-gāte, or **Ag'gre-gāt-ed.** [Lat. **Aggrega'tus**; from *ag'grego, aggrega'tum* (from *ad*, "to" or "together," and *grex, gre'gis*, a "herd," "flock," or "crowd"), to "crowd together," to "gather together."] A term applied to glands which are in clusters. See PEYER'S GLANDS. In general it signifies crowded, formed by a collection of several bodies. In Botany, the term is applied to several things collected together, as the akenes of a strawberry.

Ag'gregate. A body or mass made up of smaller bodies or masses. The smallest parts into which an aggregate can be divided without destroying its chemical properties are called *integrant parts*.

Ag-gre-gā'tion. [See AGGREGATE.] A collection of many individual particles, etc., into a cluster or mass. Also, a form of attraction, commonly called that of *cohesion*, by which the particles of bodies are *aggregated*.

Ag-ĭ-tā'tion. [Lat. **Agita'tio, o'nis**; from *ag'ito, agita'tum*, to "shake," to "agitate."] The act of putting into active or violent motion. Mental emotion from the violence of some prevailing passion.

Ag'lĭ-a.* [Gr. *ἀγλίη.*] A whitish speck on the cornea of the eye.

Ag-lo-bu'lĭ-a.* [Perhaps from the Lat. *a*, "away," and *glob'ulus*, a "globule."] Decrease or diminution in the quantity of blood-globules.

A-glos'sĭ-a.* [From the Gr. *α*, priv., and *γλῶσσα*, the "tongue."] A malformation in which the tongue is wanting.

A-glos-sos'to-ma.* [From the Lat. *aglossia* and the Gr. *στόμα*, a "mouth."] A mouth in which the tongue is wanting.

Ag-lu-tĭ'tion. [Lat. **Agluti'tio, o'nis**; from *a*, priv., and *glu'tio, gluti'tum*, to "swallow."] Inability to swallow. See DYSPHAGIA.

Ag-na'thĭ-a.* [From the Gr. *α*, priv., and *γνάθος*, a "jaw."] A monstrosity in which the jaw is wanting.

Ag-ni'na Mem-bra'na.* [From the Lat. *ag'nus*, a "lamb," and *membra'na*, a "membrane."] The name given to one of the membranes of the fœtus, on account of its tenderness. The same as the *amnion*.

Agni'na Tu'nĭ-ca.* [From the Lat. *ag'nus*, a "lamb," and *tu'nica*, a "coat."] The lamb's coat; the *amnion*.

Agnœa,* ag-nē'a. [From the Gr. *ἀγνοέω*, to "be ignorant."] The state of a patient who does not recognize persons or things.

Ag'nus Cas'tus.* The chaste tree, a species of *Vitex*, formerly celebrated as an antaphrodisiac. This name has also been given to *castor oil*, or the oil of *Ricinus communis*, from its effects upon the body and mind. See VITEX AGNUS-CASTUS.

A-gom-phi'a-sis.* [From the Lat. *a*, priv., and *gompho'sis*, the "insertion of the teeth in their sockets."] Looseness of the teeth.

A-go'nĭ-a.* [From the Gr. *α*, priv., and *γόνος*, "seed," "offspring."] Sterility, or barrenness.

Ag'o-nỹ. [From the Gr. *ἀγών*, a "contest," a "struggle."] The struggle with extreme pain:—often applied to the pain itself. Also the last struggle of life, closing in death.

Ag'o-ra-pho'bĭ-a.* [From the Gr. *ἀγορά*, a "market-place," and *φόβος*, "fear."] A peculiar form of mental disease, which consists in a morbid fear of being alone in any large place. It has also been termed **Ken-o-pho'bĭ-a.*** [From the Gr. *κενός*, "empty" (neuter *κενόν*, an "empty space"), and *φόβος*, "fear."] The fear of emptiness or of empty spaces.

A-gra'phĭ-a.* [From the Gr. *α*, priv., and *γράφω*, to "write."] A mental disease in which the patient finds it difficult or impossible to recall or arrange written characters so as to form a word or a sentence.

A-grĕs'tis.* [From the Lat. *a'ger, a'gri*, a "field."] "Pertaining to a field,"—a term forming the specific name of many plants.

A'grĭ-a.* [Gr. *ἀγρία*, the "holly."] Another name for the *Aquifolium*, or holly.

A'grĭ-a.* [From the Gr. *ἄγριος*, "wild," "untamable."] A pustular eruption, with redness and erosion:—so named from its intractability.

Ag-rĭ-am'pe-los.* [From the Gr. *ἄγριος*, "wild," and *ἄμπελος*, a "vine."] Another name for the *Bryonia alba*, or wild vine.

Ag'rĭ-mo-nỹ. [Lat. **Agrimo'nia.**] The *Agrimo'nia Eupato'ria*, a plant of the order *Rosaceæ*, used as an astringent and stomachic. It is a native of the United States.

Ag-rĭ-o-rig'a-num.* [From the Gr. *ἄγριος*, "wild," and *ὀρίγανον*, "marjoram."] The *Origa'num vulga're*, or wild marjoram.

Ag-rĭ-o-thỹm'ĭ-a.* [From the Gr. *ἄγριος*, "wild," and *θυμός*, "passion," "rage."] Furious insanity.

A-grip'pa.* [As if *Ægrippa*, from *ægrè partus*, "born with difficulty."] A term applied to children born with the feet foremost: hence the name of some celebrated Romans.

Ag-ros-tog'ra-phỹ. [Lat. **Agrostogra'phia**; from the Gr. *ἀγρωστις*, a kind of grass, and *γράφω*, to "write."] A treatise on grasses.

A-grȳp'nĭ-a.* [From the Gr. *a*, priv., and *ὕπνος*, "sleep."] Sleeplessness; watchfulness, or wakefulness.

A-grȳp-no-co'ma, *atis.* [From *ἀγρυπνος*, "sleepless," and *κῶμα*, "lethargy."] A lethargic state of wakefulness, with low muttering delirium. aptly expressed otherwise by the term *Coma-vigil.*

A'gūe. [Supposed to be derived from the Gothic *agis*, "trembling."] The common name for intermittent fever.

A'gue-Cake. [Lat. **Placen'ta Febri'lis.**] Enlargement of the spleen, the effect of protracted ague.

A'gue-Drop. A solution of arseniate of potash; Fowler's tasteless ague-drop, for which the *Liquor arsenicalis* is substituted. It is used as a remedy in intermittent fevers.

A'gue-Tree. Another name for sassafras, given on account of its virtues as a febrifuge.

A-ġyr'ta.* Formerly, a mountebank; a person who collected a crowd about him; a quack.

Ah-rī'zous. [Lat. **Ahri'zus**; from the Gr. *a*, priv., and *ῥίζα*, a "root."] A term applied to certain acotyledonous plants, because reproduced by *sporulæ*, without radicles, striking root from any part of their surface.

Aigu. See ACUTE.

Ai-lan'thus Glan-du-lo'sus.* [From *ailanto*, a native name.] Chinese Sumach, or Tree of Heaven, a tree of the natural order *Simarubaceæ*, a native of China. It has been extensively planted in the United States as a shade-tree; but it has lately become unpopular on account of the somewhat disagreeable odor of its flowers.

Aimant. See MAGNET.

Air. [Lat. **A'er, A'eris**; Gr. *ἀήρ*, from *ἄω*, to "breathe."] The natural air, or atmosphere; atmospheric air. When pure, it consists of about twenty parts (in the hundred) of oxygen and eighty of nitrogen; it contains also a small quantity of carbonic acid, the proportion of which varies greatly according to circumstances, being far larger in the air of a densely-peopled city than in the country. Air is not a chemical compound. The nitrogen and oxygen are not combined, but mixed. Air is eight hundred and thirteen times lighter than water.

Air-Bag, or **Air-Bladder.** See VESICA NATATORIA.

Air, Fixed. [Lat. **A'er Fix'us.**] Carbonic acid gas.

Air, In-flam'ma-ble. Hydrogen gas.

Air-Plants, or **Ep'ĭ-phytes.** Plants which derive all their food from the air and have no connection with the soil. They often grow on trees, but are not parasites, and they flourish as well on dead wood, stones, or fences. Lichens and mosses that grow on trees are air-plants, but this name is commonly applied only to larger tropical flowering plants. The orchid family comprises many beautiful examples of air-plants.

Air-Pump. A machine by which the air in a vessel may be withdrawn.

Air, Vi'tal (formerly called *dephlogisticated air*, *empyreal air*, etc.) is a term applied to oxygen gas, from its being indispensable to life.

Akene. See ACHÆNIUM.

Akinesia.* See ACINESIA.

Al. The Arabic article signifying "the," prefixed to many terms formerly in use; as, *al-chemy*, *al-kahest*, etc.

A'la,* plural **A'læ.** [Supposed to be a contraction of the Lat. *axil'la*, the "armpit."] (Fr. *Aile*, âl.) A wing:—applied, in Anatomy, to parts which resemble a wing, as *alæ nasi*, "wings of the nose," etc.; also to the armpit. In Botany, it is applied to the side-petals of papilionaceous flowers, and to any membranous expansion, such as occurs on the fruit of the maple.

Al-a-bas'ter. [Lat. **Alabastri'tes** and **Al-abas'ter**; Gr. *ἀλάβαστρος* and *ἀλάβαστρον.*] A species of white gypsum (sulphate of lime), used for ornamental purposes. The name is also sometimes applied to a form of carbonate of lime.

Al-a-bas'trum.* [From the same.] A flower-bud:—a term applied to the five green leaves forming the calyx of some flowers before the expansion of the bud.

A'læ Ma-jo'rēs.* "Larger Wings." Another term for the *labia externa* of the pudenda. See LABIA PUDENDI.

A'læ Mi-no'rēs.* "Lesser Wings." A term applied to the two small folds formed by the nymphæ.

A'læ Na'si.* "Wings of the Nose." The lateral or movable cartilaginous parts of the nose.

A'læ Ves-per-til-ĭ-o'nis.* "Bat's Wings." The broad ligaments situated between the uterus and the Fallopian tubes.

Alæformis.* See ALIFORM.

A-la'lĭ-a.* [From the Gr. *a*, priv., and *λαλέω*, to "speak."] A defect of articulation.

A-lan'tĭne. A starch-like powder obtained from the *Angelica archangelica.*

A'lar. [From *ala*, a "wing."] Situated in the forks of a stem.

A-la'rēs Ve'næ.* [See ALARIS.] The superficial veins at the bend of the arm.

A-la'rĭ-a Os'sa.* The lateral processes of the sphenoid bone.

A-la'ris,* plural **A-la'rēs** and **A-la'rĭ-a.** [From the Lat. *a'la*, a "wing."] Wing-like:—applied to the pterygoid processes of the sphenoid bone, to a ligament within the knee-joint, and to the inner veins of the bend of the arm.

A'late. [Lat. **Ala'tus**; from *a'la*, a "wing."] Winged, as certain stems, fruits, and leaf-stalks having side-membranes.

Al-bĕs'cent. [From the Lat. *al'bus*, "white."] Whitish or turning white.

Al'bĭ-cans,* neuter plural **Albicantia,** al-bekan'she-a. [From the Lat *al'bico*, to "grow white."] Applied (in the plural) to two small bodies on the base of the brain, the *corpora albicantia.*

Al-bĭ-cau'lis.* [From the Lat. *al'bus*, "white," and *cau'lis*, a "stem."] Having a white stem; albicau'line.

Al-bĭ-dac'tȳ-lus,* or **Al-bo-dac'tȳ-lus.*** [From the Lat. *al'bus*, "white," and the Gr.

δάκτυλος, a "finger."] Having white, digitated wings.

Al-bĭ-flo'rus.* [From the Lat. *al'bus*, "white," and *flos, flo'ris*, a "flower."] Having white flowers.

Al-bĭ-ner'vus.* [From the Lat. *al'bus*, "white," and *ner'vus*, a "nerve."] Having white nervures.

Al'bĭ-nism. [From the Lat. *al'bus*, "white."] A diseased state, in which the skin is of a uniform dull, milky-white color; the hair resembles bleached flax or silk; the iris is pink, and the retina and choroid, seen through the pupil, present another shade of the same color; the sight is weak, and strongest in the dark.

Al-bī'no. A term applied to an individual marked by the above characteristics. There is the *Ethiopian* variety, found among negroes, and the *European*, found among Europeans and other white nations. See LEUCOPATHIA.

Albino-Skin. See ALBINISM.

Al'bīte. [A contraction of the Lat. *al'bus*, "white," and the Gr. λίθος, a "stone."] Soda felspar, a silicate of alumina and soda, resembling felspar in its properties.

Al-bĭ-ven'ter,* Al-bĭ-ven'tris.* [From the Lat. *al'bus*, "white," and *ven'ter*, the "belly."] Having a white belly:—sometimes applied to birds and other animals as a specific name.

Albizzia. See MUSENNA.

Al-bu-ġin'e-ous. [Lat. **Albugin'eus**; from *albu'go, albu'ginis*, the "white of the eye."] White like the sclerotic coat of the eye; also, pertaining to albumen, or white of egg:—applied to a membrane of the eye, also to a covering of the testicles, each named *Tu'nica albugin'ea*.

Al-bu'go,* gen. **Al-bu'ġĭ-nis.** [From the Lat. *al'bus*, "white."] The white of the eye; sometimes the white of egg, or albumen. A white opacity of the cornea, not superficial, but affecting its very substance; also called the "pin and web." See ARGEMA and LEUCOMA.

Al'bum Græ'cum* (grē'kum). *Ster'cus ca'nis.* The white and solid excrement of dogs which subsist chiefly on bones. It consists, for the most part, of the earth of bones, or lime, in combination with phosphoric acid. It was formerly used in medicine; it is now sometimes used to soften leather in the process of dressing it after the depilatory action of lime.

Al'bum Ni'grum.* The excrement of mice and rats:—formerly used both externally and internally as a remedy, but now very properly abandoned.

Al-bu'men,* gen. **Al-bu'mĭ-nis.** [From the Lat. *al'bus*, "white."] The white of an egg. A peculiar constituent principle, of essentially the same character as the albumen of an egg, found in the animal and vegetable kingdoms. It is distinguished by its property of coagulability on the application of heat.

Animal albumen is the chief solid ingredient in the white of eggs: it also enters largely into the composition of blood, muscles, etc. It may be obtained pure by coagulating the white of an egg with alcohol, washing it thoroughly with that fluid, and then drying it at the temperature of 120° Fahrenheit.

In Botany, *albumen* of the seed is nourishing matter stored up with the embryo, but not within it.

Albumen, Vegetable. See VEGETABLE ALBUMEN.

Al-bu'mĭ-noid. [Lat. **Albuminoi'des**; from *albu'men*, and the Gr. εἶδος, "form" or "resemblance."] Resembling albumen:—often used in the sense of *Proteinaceous*. See PROTEIN.

Al-bu'mĭ-noids, or **Pro'te-ids.** A class of organic compounds found in animals and plants, composed of carbon, hydrogen, nitrogen, and oxygen. They are amorphous, more or less soluble in water, but nearly insoluble in alcohol. They are the chief constituents of blood, muscles, nerves, glands, etc.

Al-bu'mĭ-nose. [From the Lat. *albu'men.*] A product of digestion found in the chyle and blood. It differs from albumen in not being coagulable by heat.

Al-bu'mĭ-nous. [Lat. **Albumino'sus.**] Containing or resembling albumen. Furnished with albumen when perfectly ripe:—applied to seeds, as of maize.

Al-bu-mĭ-nu'rĭ-a.* [From the Lat. *albu'men*, and the Gr. οὖρον, "urine."] An albuminous state of the urine. See NEPHRITIS ALBUMINOSA.

Al-bur'num.* [From the Lat. *al'bus*, "white."] The soft white substance between the inner bark and the wood of trees. See SAP-WOOD.

Alcali. See ALKALI.

Alcana. See ALKANA.

Al-car'ġen. Another name for CACODYLIC ACID, which see.

Alchemy, al'kẹm-e. [Lat. **Alche'mia,** or **Alchym'ia**; supposed to be derived from the Arabic definite article *al*, and the Gr. χύμα, a "melting" or "pouring."] A chimerical art which proposed to find out the means of effecting the transmutation of metals and preparing a remedy for all diseases.

Alchornea Latifolia.* See ALCORNOQUE.

Alchymy. See ALCHEMY.

Al-cĭ-cor'nis.* [From the Lat. *al'ce*, an "elk," and *cor'nu*, a "horn."] Having horns, or similar objects, like those of the elk.

Alcoate. See ALCOHOLATES.

Al'co-hol, or **Al'ko-hol.** (Fr. *Alcool*, ăl'ko'ôl'.) [From the Arabic definite article *al*, and *kohol*, an "impalpable powder," "something very subtle."] A term applied to the pure spirit obtained by distillation from all liquids which have undergone vinous fermentation. When diluted with an equal weight of water, it is termed *proof spirit*, or *Spiritus tenuior* of the Pharmacopœia. The first product of distillation is technically called *low wine*, and is again subjected to distillation. The latter portions of what comes over are called *feints*, and are reserved for a further process in the wash-still. The second product is termed *raw spirit*, and when again distilled is called *rectified spirit*. The strongest alcohol which can be procured is termed *Absolute Alcohol*, or *Anhydrous Alcohol*, to denote its entire freedom from water. It is composed of carbon, hydrogen, and oxygen.

Alcohol is also the Pharmacopœial name (U.S. 1880) for a liquid composed of 91 per cent. by weight (94 per cent. by volume) of absolute ethyl alcohol and 9 per cent. by weight (6 per cent. by volume) of water. Alcohol is a powerful stimulant and narcotic. In a dilute form it is sometimes used for the prevention or cure of disease. See ALCOHOLISM.

ALCOHOL DILUTUM (Diluted Alcohol) is the Pharmacopœial name (U.S. 1880) for a liquid composed of 45.5 per cent. by weight (53 per cent. by volume) of absolute ethyl alcohol and 54.5 per cent. by weight (47 per cent. by volume) of water.

Alcohol, Absolute. See ALCOHOL.

Al'cohol Am-mo-nĭ-a'tum.* The *Spir'itus ammo'niæ aromat'icus.* A combination of alcohol and ammonia, prepared by passing ammoniacal gas into alcohol, which must be kept cool.

Al'cohol A-my'lĭ-cum.* "Amylic Alcohol." The Pharmacopœial name (U.S. 1870) for Fusel Oil, an oily, nearly colorless liquid, having a strong offensive odor and an acrid, burning taste. It is an active irritant poison. See FUSEL OIL.

Al'cohol Dĭ-lu'tum.* "Diluted Alcohol." The Pharmacopœial name (U.S. 1870) for alcohol mixed with an equal measure of distilled water. The specific gravity of diluted alcohol is 0.941.

Al'cohol For'tĭ-us* (or for'she-ŭs). "Stronger Alcohol." The Pharmacopœial name (U.S. 1870) for spirit of the specific gravity 0.817.

Al'co-hol-ātes. [From *al'cohol.*] A term applied to officinal medicines differing from alcoholic tinctures, first, in the menstruum containing the volatile principles of medicinal substances, and, secondly, in their mode of separation, which consists in impregnating the alcohol with medicinal principles, first by maceration and then by distillation.

Al-co-hol'ic. [Lat. **Alcohol'icus**; from *al'cohol.*] Pertaining to alcohol.

Al'co-hŏl-ĭsm. (Fr. *Alcoolisme*, ăl'ko'ol'ĕzm'.) A collective term used to include the various morbid phenomena resulting from an excessive indulgence in alcoholic drinks. It is distinguished into *acute* and *chronic* alcoholism. The former denotes ebriety, in which the morbid condition is simply the direct and immediate result of the alcoholic stimulus upon the brain and nervous system; it may be nothing more than a wild excitement, accompanied by disordered mental operations, but when extreme it is attended with great physical prostration, lethargy, and stertorous breathing, sometimes terminating in death. Chronic alcoholism, the result of repeated and long-continued excesses, is often attended with serious or even fatal deterioration of the tissues, such as fatty degeneration, cirrhosis of the kidneys, liver, etc. *Delirium tremens* is a common result of chronic alcoholism.

Al-co-hol-ĭ-zā'tion. The development of alcohol in a liquid.

Al-co-ho-lom'e-ter. [Lat. **Alcoholom'etrum**; from *al'cohol*, and the Gr. *μέτρον*, a "measure."] An instrument for ascertaining the quantity of alcohol in any fluid.

Alcohometer. See ALCOHOLOMETER.

Alcoolats, ăl'ko'o'lă'. The French of ALCOHOLATES, which see.

Alcoolisme. The French of ALCOHOLISM, which see.

Alcornoque, ăl'kor'nok'. (Fr.) The bark of the *Alchornea latifolia*, growing in the West Indies and South America. It is bitter and tonic, and has by some been regarded as a specific in phthisis.

Al'çy-on,* gen. **Al-çy'o-nis.** [Gr. *ἀλκυών*; from *ἅλς*, the "sea," and *κύω*, to "conceive," because said to hatch its eggs in the sea.] A bird of the swallow kind, found in Cochin China and the Philippine Islands, whose nest, composed chiefly of a gelatinous matter, possesses nutritious properties, and is esteemed in China as an article of diet.

Al'de-hȳde. [From *al*, the first syllable of *al'cohol*, and *de-hyd*, the first two syllables of *dehydroge'natus*, "deprived of hydrogen."] A colorless liquid, of a suffocating odor, and readily absorbing oxygen from the atmosphere.

Al-de-hȳd'ic. [Lat. **Aldehyd'icus**; from *al'dehyde.*] Pertaining to aldehyde.

Alder. See ALNUS.

Ale. The fermented infusion of pale malted barley, usually combined with infusion of hops.

Al-ec-tru'rous. [Lat. **Alectru'rus**; from the Gr. *ἀλέκτωρ*, a "cock," and *οὐρά*, a "tail."] Having a tail like the cock's:—applied to certain birds.

A-lem'bic. [Lat. **Alem'bicus**; from the Arabic *al*, and the Gr. *ἄμβιξ*, a "cup" or "pot."] A glass, metal, or earthenware utensil fitted to receive volatile products from retorts.

A-lem'broth. [Said to signify, in Chaldaic, the "key to art or knowledge."] The "Salt of Wisdom" of the alchemists. A muriate of mercury and ammonia, corresponding to the *Hydrar'gyrum præcipita'tum al'bum* of the London Pharmacopœia. It is a compound of bichloride of mercury and sal ammoniac.

Al'e-tris Făr-ĭ-no'sa.* Star-grass, or Colic Root, an herbaceous plant of the natural order *Hæmodoraceæ.* It is a native of the United States. It is intensely bitter, and is used as a tonic.

Alexipharmacon.* See ALEXIPHARMIC.

A-lex-ĭ-phar'mic. [Lat. **Alexiphar'micus**; from the Gr. *ἀλέξω*, to "ward off," to "protect," and *φάρμακον*, a "poison."] Antipharmic; neutralizing the effects of poison.

A-lex-ĭ-py-ret'ic. [Lat. **Alexipyret'icus**; from the Gr. *ἀλέξω*, to "ward off," and *πυρετός*, "a fever."] Driving off fevers; febrifuge.

Alèze, or **Alèse,** ă'lāz'. [Perhaps from the Gr. *ἀλέξω*, to "protect."] A cloth folded several times in order to protect the bed from discharges of blood, etc.

Al'ga.* An herb or weed growing in the sea; sea-weed.

Algaceæ,* al-ga'she-ē. An order of plants including the *Algæ* or Sea-weeds. They consist of leafless, flowerless plants, without any distinct axis of vegetation, growing in water.

Algæ,* al′jē, the plural of AL′GA, a "sea-weed," forming the Jussieuan name of a natural order of plants. The *Algæ* are a large and important group or alliance of cryptogamous plants, living mostly in the sea. They are composed of cellular tissue only, have no true roots or leaves, and some of them float on the surface of the sea. They are divided by some botanists into several classes or orders. Some algæ consist of a single cell. The term *algæ* is vaguely used, and is not well defined scientifically. See SEA-WEEDS.

Algaroba.* See CAROB.

Al′ga-roth. [From *Victor Algarotti*, a physician of Verona.] The oxide of antimony in the form of a white powder.

Al-ġe′do, d′*inis.* [From the Gr. *ἀλγος*, "pain."] Violent pain about the urethra, testes, bladder, perineum, and anus, caused by sudden stoppage of severe gonorrhœa.

Al′ġid. [Lat. **Al′gidus**; from *al′geo*, to "be cold," to "suffer from cold."] Chilled with cold.

Al′ġid Chol′er-a. [Lat. **Chol′era Al′gida.**] A term applied to Asiatic cholera, on account of the diminution of temperature, which is one of its chief characteristic symptoms.

Al′ġi-da Fe′bris.* A term for a malignant remittent fever, the *fièvre algide* (fe-ȧvR′ ȧl′zhĕd′) of the Continent, characterized by icy coldness on the surface.

Al′goid. [Lat. **Algoi′des**; from *al′ga*, a "sea-weed," and the Gr. *εἶδος*, a "form" or "resemblance."] Resembling the *Al′gæ*.

Al′gor, o′ris.* [From the Lat. *al′geo*, to "be cold."] The sense of coldness in the onset of fever; chillness. See RIGOR.

Al′ĭ-ble. [Lat. **Alib′ilis**; from *a′lo*, to "nourish."] Nutritious.

Al′ĭ-ca.* [From the same.] A kind of grain like wheat, supposed to be spelt, from which the ancients made their *tisanes;* also a kind of pottage made of this grain.

Alices,* al′e-sēz. [From the Gr. *ἀλίζω*, to "sprinkle."] Spots on the skin preceding the eruption of small-pox.

A′lien-ate, or **A′lien-āt-ed.** [Lat. **Aliena′tus**; from *alie′no, aliena′tum*, to "estrange," to "withdraw," to "put away."] A term applied in Botany to first leaves, which give way to others different.

Alienation, āl-yen-ā′shŭn. [Lat. **Aliena′tio, o′*nis;*** from the same.] Any species of derangement or wandering of the mind.

Aliena′tion of Mind. A term applied especially to *insanity*, as distinct from derangements symptomatic of some other disease, as delirium, etc.

Alienist, āl′yen-ist. A physician who treats cases of (mental) alienation. See PSYCHIATER.

Al′ĭ-form. [Lat. **Alifor′mis**; from *a′la*, a "wing."] Having the form of a wing; pterygoid.

Al′ĭ-ment. [Lat. **Alimen′tum**; from *a′lo*, to "nourish."] That which affords nourishment. A complete or perfect aliment is one which contains all the constituent or essential elements of our tissues. See ALITURA, PABULUM, and DIET.

Al-ĭ-men′ta-rў. [Lat. **Alimenta′rius**; from *a′lo*, to "nourish."] Pertaining to aliment; nourishing.

Alimen′tary Ca-nal′. The entire passage (from the mouth to the anus) through which the aliment or food passes.

Alimen′tary Duct. [Lat. **Duc′tus Alimenta′rius.**] A name sometimes applied to the thoracic duct.

Al-ĭ-men-tā′tion. [Lat. **Alimenta′tio, o′*nis;*** from *alimen′tum*, "nourishment."] The act of taking or receiving nourishment.

Al-ĭ-pæ′nos,* or **Al-ĭ-pæ′nus.*** [From the Gr. *a*, priv., and *λιπαίνω*, to "make fat."] A term applied to very lean persons; also to dry external remedies, as powders, etc.

Alipede, al′e-pēd. [Lat. **Al′ipes**; from *a′la*, a "wing," and *pes, pe′dis*, a "foot."] Having winged feet. See CHEIROPTERUS.

A-lip′tĭ-ca.* [From the Gr. *ἀλείφω*, to "anoint."] A department of ancient medicine which treats of anointing as a means of preserving or restoring health; but more commonly applied to the art of training athletes.

A-lis′ma Plan-ta′go,* or **Planta′go A-quăt′ĭ-ca.*** The water plantain, a medicinal plant formerly regarded as efficacious in cases of hydrophobia. It is a native of the United States and Europe.

Al-is-mā′ceous. [Lat. **Alisma′ceus**; from *alis′ma*, the "water-plantain."] Having an arrangement similar to that in the *Alis′ma*. In the plural feminine (*Alismaceæ*, al-is-ma′she-ē), applied to a natural order of herbaceous endogenous plants, growing in marshes and ditches.

A-liš′moid. [Lat. **Alismoi′des**; from *alis′ma*, and the Gr. *εἶδος*, a "form" or "resemblance."] Resembling the *Alis′ma*.

Al-ĭ-sphe′noid. [Lat. **Alisphenoi′des**; from *a′la*, a "wing," and os *sphenoi′des*, the "sphenoid bone."] Applied by Owen to the middle or great wing of the sphenoid bone.

Al-ĭ-tu′ra.* [From the Lat. *a′lo, al′itum*, to "nourish."] The process of assimilation or nutrition; food or nourishment; aliment.

Alizarin, or **Alizarine,** ȧ-liz′ȧ-rin. [Lat. **Alizari′na.**] A coloring-matter extracted from madder (*Ru′bia tincto′rum*), called in France *alizari* (ȧ′le′zȧ′re′). It is volatile, crystallizable, and soluble in alcohol and in ether. A large quantity of artificial alizarin is obtained from coal or anthracene. It imparts beautiful red and purple colors to cotton cloth, etc.

Al′ka-hest. The pretended universal solvent or menstruum of the ancient chemists.

Al-ka-lĕs′çent. [Lat. **Alkales′cens**; from *al′kali*, and *es′co*, a Latin termination signifying to "grow," to "become."] Having slightly alkaline qualities; becoming alkaline.

Alkali, al′ka-le. [From the Arabic definite article *al*, and *ka′li*, the plant from which soda was first obtained.] (Fr. *Alcali*, ȧl′kȧ′lē′.) A term applied to an important class of binary compounds (bases) which combine with acids to form salts and with oil or fat to form soap, and have the power to change vegetable blues to green. All

the alkalies, except ammonia, are metallic oxides. An alkali may be said to be the reverse of an acid, the properties of which, by combination, it neutralizes.

Al'kali, Caus'tic. [Lat. **Al'kali Caus'ticum.**] An alkali in a pure state,—in which it possesses strong caustic powers. Usually, caustic potash.

Al'kali, Fixed. A term applied to potash and soda, because they are permanently in a solid state.

Al'kali, Fos'sil, Al'kali, Min'eral. Other names for soda.

Al'kali, Phlo-ġis'tĭ-cāt-ed, Al'kali, Prus'sian. A term applied to a fixed alkali when mixed with an animal substance and lixiviated, because it is then found to be saturated with prussic acid; and from a former theory of this combination it received the first name.

Al'kali, Veġ'e-tą-ble. Another term for potash.

Al'kali, Vol'ą-tĭle. Another name for ammonia, given on account of its volatile nature.

Al-ką-lĭġ'en-ous. [Lat. **Alkaliġ'enus**; from *al'kali*, and the Gr. *γεννάω*, to "generate."] Producing alkaline qualities.

Al-ką-lim'e-ter. [Lat. **Alkalim'etrum**; from *al'kali*, and the Gr. *μέτρον*, a "measure."] An instrument for ascertaining the quantity of alkali in impure potash or soda.

Al-ką-lim'e-trў. [Lat. **Alkalime'tria**; from *al'kali*, and the Gr. *μετρέω*, to "measure."] The process by which the amount of free alkali in various substances is determined.

Al'ką-lĭne. [Lat. **Alkali'nus**; from *al'kali*.] Having the properties of an alkali.

Al-ką-lin'ĭ-tў. [Lat. **Alkalin'itas, a'tis.**] The peculiar properties of an alkali.

Al-kąl-ĭ-zā'tion. [Lat. **Alkaliza'tio.**] The act of imparting alkaline qualities.

Al'ką-loid. [Lat. **Alkaloi'des**; from *al'kali*, and the Gr. *εἶδος*, a "form" or "resemblance."] Resembling an alkali:—applied as a noun to the alkaline principles found in vegetables. An alkaloid is a substance formed in the tissues of a plant or animal, having a definite composition as regards the proportion of its chemical elements, and capable of combining with acids to form salts. Morphia, quinia, caffein, nicotin, atropia, conia, and strychnia are alkaloids. The majority of alkaloids are formed by plants. They are solid, crystallizable substances, except *nicotin*, the active principle of tobacco, and *conein*, the active principle of conium. These are liquid and volatile; both are powerful poisons.

Al'ką-na or **Al'ca-na.** The name of the root and leaves of the *Lawso'nia iner'mis*, a plant employed in the East for dyeing the nails, teeth, hair, garments, etc. See HENNE.

Al'ką-net Root. [From the Arabic *al'kanah*, a "reed."] The root of the ANCHUSA TINCTORIA, which see.

Alkanin. The same as ANCHUSIN, which see.

Alkekenge, al'ke-kenj. Winter-cherry, the fruit of the *Phys'alis Alkeken'gi*, used in nephritis, dysuria, ascites, etc.

Alkohol. See ALCOHOL.

Al-lą-man'dą.* A genus of climbing shrubs of the order *Apocynaceæ*, comprising many species, natives of Brazil, Guiana, etc. *Allamanda cathartica* has a milky juice which is purgative.

Al'lą-nīte. The name of a mineral containing *cerium*, found in Greenland, and named in honor of Mr. Allan, who first distinguished it as a species.

Al-lan-to'ic. [Lat. **Allanto'icus**; from *allan'toïs.*] Belonging to the allantoïs.

Allanto'ic Aç'id. The substance ALLANTOIN, which see.

Al-lan'toid. [Lat. **Allantoi'des**; from the Gr. *ἀλλᾶς*, *ἀλλᾶντος*, a "sausage," and *εἶδος*, a "form" or "resemblance."] Resembling a sausage.

Allan'toid Mem'brane. A membrane communicating with the bladder by the *urachus*, and containing the fœtal urine: it exists in almost all the *Mammalia*:—also termed *Allantoïs.*

Al-lan'to-in. [Lat. **Allantoi'na**; from *allan'toïs.*] The nitrogenous constituent of the urine of the fœtus of the cow:—also termed *Allantoic Acid.*

Al-lan'to-is, i'dis.* [From the Gr. *ἀλλᾶς*, *ἀλλᾶντος*, a "sausage," and *εἶδος*, a "form" or "resemblance."] The human allantoïs is a small, very vascular vesicle, sprouting from the end of the embryo. See ALLANTOID MEMBRANE.

Al-lan-to-tox'ĭ-cum.* [From the Gr. *ἀλλᾶς*, *ἀλλᾶντος*, a "sausage," and *τοξικόν*, a "poison."] A poison developed in putrid sausages made of blood and liver, often proving speedily fatal.

Alliaceous, al-le-ā'shus. [Lat. **Allia'ceus**; from *al'lium.*] Of the nature of garlic; resembling garlic.

Alliage. See ALLOY.

Al-li'ance. [From the Lat. *alli'go*, to "tie to."] A coalition; a union; a natural affinity. In Botany, a group of natural orders united according to their natural affinities or relationships.

Al-lĭ-a'rĭ-a Of-fĭç-ĭ-na'lis,* or **Sis-ym'brĭum Al-lĭ-a'rĭ-a.*** A plant of the order *Cruciferæ*, a native of England. It is reputed to be diuretic and diaphoretic.

Al-lĭ-gā'tor Pear. The *Per'sea gratis'sima*, a fruit-tree of the order *Lauraceæ*. See PERSEA GRATISSIMA.

Al'lĭ-um.* [Perhaps from the Gr. *ἀλέομαι*, to "avoid;" because of its offensive smell.] Garlic. The Pharmacopœial name (U.S. 1870, 1880) for the bulb of *Allium sativum*. Also a Linnæan genus of the class *Hexandria*, natural order *Liliaceæ*.

Al'lium Ce'pa.* The common onion.

Al'lium Por'rum.* The leek.

Al'lium Sa-ti'vum.* Garlic.

Al-lo-ehĭr'ĭ-a.* [From the Gr. *ἄλλος*, "other" (when repeated, *ἄλλος—ἄλλος*, "one—other"), and *χειρίζω*, to "handle," to "touch."] An affection in which, while the sense of feeling is retained, the patient is often at a loss to determine whether one or the other side of the body has been touched.

Al-lo-ehro-ma'sĭ-a.* [From the Gr. *ἄλλος*, "other," "different," and *χρῶμα*, "color."] A difference or change in color.

Al-lœ-o'sis.* [From the Gr. *ἀλλοιόω*, to "alter."] A constitutional change.

Al-lo-path'ic. [Lat. **Allopath'icus.**] Belonging to allopathy.

Al-lop'a-thy. [Lat. **Allopathi'a**; from the Gr. *ἄλλος*, "other," and *πάθος*, "affection."] The curing of a diseased action by inducing a different kind of action, yet not necessarily diseased. Written also *Allœopathy*. See HOMŒOPATHY.

Al-lo-trĭ-oph'a-ğy. [Lat. **Allotriopha'gia**; from the Gr. *ἀλλότριος*, "another's," "foreign," "not proper," and *φάγω*, to "eat."] Depraved appetite, or a desire for improper food.

Al-lo-trop'ic. Pertaining to allotropism. See ALLOTROPY.

Al-lot'ro-pў, or **Al-lot'ro-pĭsm.** [Lat. **Allotropis'mus**; from the Gr. *ἄλλος*, "other," and *τρέπω*, to "turn."] (Fr. *Allotropie*, ă'lo'tRo'pē'.) The capacity which some simple substances have to present themselves under different states and to exhibit different chemical and physical properties. Diamond, charcoal, and plumbago are allotropic states of carbon.

Al-lox'an. A substance obtained in the oxidation of uric acid by nitric acid.

Al-lox'a-nate. [Lat. **Allox'anas, a'tis.**] A combination of alloxanic acid with a base.

Al-lox-an'ic. [Lat. **Alloxan'icus**; from *allox'an.*] Of or belonging to alloxan:—applied to an acid into which alloxan is converted when brought into contact with soluble alkalies.

Al-lox-an'tin. [Lat. **Alloxanti'na.**] A substance obtained by boiling and evaporating a concentrated solution of alloxan.

Al-loy'. [From the Fr. *aloyer*, to "mix metals."] A combination of any two metals, except mercury, etc., the least valuable being called the alloy. See AMALGAM.

All'spice. The fruit of the *Myr'tus pimen'ta*, or *Euge'nia Pimen'ta*. See EUGENIA.

Al-lu'vĭ-al. [Lat. **Alluvia'lis**; from *allu'vium.*] A term applied to rocks or beds of recent formation, which still acquire the matter deposited by the waters.

Al-lu'vĭ-um.* [From the Lat. *al'luo*, to "wash."] Alluvial soil or formation, consisting of sand, gravel, clay, and mud, washed down by rivers and floods, and spread over low land that is not permanently submerged. Alluvial formations are the result of successive depositions, and cover usually a broad area on one or both sides of a river.

Almandine. See GARNET.

Almond, ă'mand. [Lat. **Amyg'dala.**] (Fr. *Amande*, ă'môNd'.) The fruit, both bitter and sweet, of the *Amyg'dalus commu'nis*.

Al'mond Oil. A bland, fixed oil, obtained usually from bitter almonds by the action of an hydraulic press, either cold, or by means of hot iron plates.

Al'mond-Tree. The *Amyg'dalus commu'nis*.

Al'monds of the Ears. The small external glands near the ears. See AMYGDALÆ.

Al'monds of the Throat. The tonsils.

Al'nus.* The Alder. A genus of trees of the order *Betulaceæ*.

Al'nus Glu-tĭ-no'sa.* A tree growing in many parts of Europe. The leaves and bark are bitter and astringent, and as a tonic are used in intermittent fevers.

Al'nus Ser-rat'u-la.* The American Alder, possessing properties like the preceding.

Al-o-ehi'a.* [From the Gr. *α*, priv., and *λοχεία*, "lochia."] Absence of the LOCHIA, which see.

Al'o-e,* gen. **Al'o-ēs**, in English **Aloes,** ăl'ōz. A genus of plants belonging to the Linnæan class *Hexandria*, natural order *Liliaceæ* (or *Asphodeleæ* of some writers). Also the Pharmacopœial name (U.S. 1880) for the inspissated juice of the leaves of *Al'oe Socotri'na*. It has a peculiar odor and an intensely bitter taste. The color of its powder is bright golden yellow. It is cathartic and stimulant.

Al'oë Bar-ba-den'sis.* The Pharmacopœial name (U.S. 1870) of Barbadoes aloes, or inspissated juice of the cut leaf of the *Al'oe vulga'ris*.

Al'oë Ca-pen'sis.* The Pharmacopœial name (U.S. 1870) for the inspissated juice of the leaves of *Al'oe spica'ta*, and of other species of *Aloe*.

Al'oë He-pat'ĭ-ca.* The name of a kind of aloes the source of which is uncertain.

Al'oë Per-fo-lĭ-a'ta.* The plant formerly believed to yield Socotrine aloes.

Al'oë Pu-rĭ-fĭ-ca'ta.* "Purified Aloes." The Pharmacopœial name (U.S. 1870, 1880) for aloes purified by dissolving in alcohol, straining, and evaporating by means of a water-bath.

Al'oë Soc-o-tri'na.* "Socotrine Aloes." The Pharmacopœial name of Socotrine aloes, obtained from the *Al'oe Socotri'na* (U.S. 1870), but, according to the British Pharmacopœia, from one or more undetermined species.

Al'oë Spi-ca'ta.* The plant which yields a kind of aloes used in place of the Socotrine. It is a native of Southern Africa.

Al'oë Vul-ga'ris.* The plant believed to afford common hepatic aloes, or Barbadoes aloes. It is a native of Europe, Northern Africa, and the West Indies.

Aloes, ăl'ōz. The English name for the juice of the several species of *Aloe*, reduced to an extract. The varieties of aloes are all bitter and cathartic.

Aloes, Socotrine. See ALOE SOCOTRINA.

Al'oes Wood. A fragrant resinous substance, consisting of the interior of the trunk of the *Aquila'ria ova'ta* and *A. agal'lochum*.

Al-o-et'ic. [Lat. **Aloet'icus**; from *Al'oē*, "aloes."] A term applied to any medicine containing a large proportion of aloes.

Al-o-got'ro-phy. [Lat. **Alogotro'phia**; from the Gr. *ἄλογος*, "without proportion," and *τρέφω*, to "nourish."] A term applied to the morbid or excessive nutrition of any part.

Al'o-in. [Lat. **Aloi'na.**] The cathartic principle of aloes.

Al-o-pe'çĭ-a.* [From the Gr. *ἀλώπηξ*, a "fox," because that animal is subject to loss of hair.] The falling off of hair from the beard and eyebrows, as well as from the scalp; baldness the effect of disease, and so distinct from *calvities;* alop'ecy.

Alouchi, a-loo'che. The name of a gum obtained from the tree of the *Canel'la al'ba.*

Al'phĭ-ta.* [Plural of the Gr. *ἄλφιτον*, "peeled barley," "barley-meal."] Another name for barley-meal; barley-meal fried.

Al'phoid. [Lat. **Alphoi'des;** from the Gr. *ἀλφός*, a skin disease, and *εἶδος*, a "form or "resemblance."] Like *Alphos*, as *Lepra alphoides.*

Al-phon'sin. [From *Alphon'so Fer'ri*, of Naples, its inventor.] An instrument for extracting balls from wounds.

Al'phos,* **Al'phus.*** [From the Gr. *ἀλφός*, "white."] A species of leprosy; the *Lepra alphoides.*

Al-pho'sis.* [From the same.] Albinoskin.

Al'pĭne. A term applied to plants which grow on high mountains, above the limit of forests.

Al-pi'ni, Bal'sa-mum.* [After *Pros'per Alpi'nus.*] The "Balsam of Alpinus." The balsam produced by the *Am'yris Gileaden'sis.*

Al-pin'ĭ-a.* [Named in honor of *Alpi'nus.*] A Linnæan genus of the class *Monandria*, natural order *Scitamineæ* or *Zingiberaceæ.*

Alpin'ia Car-da-mo'mum.* The plant said to produce the lesser cardamom seeds, formerly referred to the *Amo'mum Cardamo'mum*, and now to the *Eletta'ria Cardamo'mum.*

Alpin'ia Ga-lan'ga,* or **Alpin'ia Of-fiç-ĭ-na'rum.*** A plant found native in China. Its root-stock is an aromatic stimulant, called *galanga.*

Al-sto'nĭ-a.* [Named in honor of *Charles Alston*, of Edinburgh.] A genus of trees or shrubs of the order *Apocynaceæ*, comprising many species, natives of India, Australia, West Africa, etc. They have a milky juice.

Alsto'nia Scho-la'ris.* The Devil-Tree. This tree, a native of India, has a very bitter bark, which is tonic, febrifuge, and antidysenteric.

Alsto'nia The-æ-for'mis.* A plant, native of New Mexico. Its leaves are used as a substitute for tea.

Alterantia.* See ALTERATIVE.

Alteran'tia (ăl-ter-an'she-a) **Ner-vi'na.*** "Nervous Alteratives." A class of substances, as spirituous liquors and narcotics, which produce gradual changes in the brain, attended by disturbance of the intellectual functions.

Al'ter-a-tĭve. [Lat. **Al'terans;** from *al'tero, altera'tum*, to "vary."] A term applied to medicines (Lat. *Alteran'tia*) which re-establish the healthy functions of the system without any sensible evacuation.

Altern. Horis = *Alter'nis ho'ris.** "At alternate hours,"—that is, every other hour.

Al-ter'nate. [Lat. **Alterna'tus;** from *alter'no*, to "interchange."] A term applied to leaves or branches that are not opposite, but arranged one after or above another on the axis. Leaves are alternate when there is only one leaf at each node.

Al-thæ'a.* [Gr. *ἀλθαία*; from *ἀλθω*, to "heal."] A Linnæan genus of the class *Monadelphia*, natural order *Malvaceæ.* Marshmallow. Althæa is also the popular name of the *Hibis'cus Syri'acus*, a native of the Levant.

Althæ'a.* Marshmallow. The Pharmacopœial name (U.S. 1870, 1880) for the root of *Althæ'a officina'lis.* It is demulcent.

Althæ'a Of-fiç-ĭ-na'lis.* The marshmallow. It is a native of Europe.

Al-the'in. [Lat. **Althæi'na;** from *althæ'a.*] An alkaline substance discovered in the marshmallow, similar to *asparagin.*

Al-tim'e-trў. [Lat. **Altime'tria;** from *al'tus*, "high," and the Gr. *μετρέω*, to "measure."] The art of measuring heights or altitudes.

Aludel, al'oo-dĕl'. A pear-shaped vessel used by the earlier chemists, resembling the head of an alembic, with the exception of the beak, etc. A series of these vessels, joined together, is used in Spain for distilling mercury.

Al'u-la.* [Diminutive of the Lat. *a'la*, a "wing."] A little wing:—applied in the plural (*al'ulæ*) to the membranous scales above the *halteres* in certain *Diptera* and under the *elytra* of some aquatic *Coleoptera.*

Al'um. [Lat. **Alu'men,** gen. **Alu'minis.**] The sulphate of alumina and potassa, a double or sometimes a triple salt, consisting of sulphuric acid and alumina, with either potassa or ammonia, or frequently both. The alumen of the Pharmacopœias is mostly prepared from schistose clays. In Italy this salt is procured from *alum stone*, a mineral substance occurring in volcanic districts.

Al'um, Am-mo-nī'a-cal. A double salt, consisting of the sulphates of ammonia and alumina, in which ammonia takes the place of the potassa of common alum.

Al'um Curd of Ri-ve'rĭ-us. [Lat. **Albu'men Alumino'sum.**] A coagulum formed by briskly agitating a drachm of alum with the white of an egg.

Al'um Oint'ment. A preparation consisting of common turpentine, lard, and powdered alum.

Al'um Wa'ter. A solution of alum in water, used by painters in water-colors.

Al'um Whey. [Lat. **Se'rum Alumino'sum.**] A whey made by boiling two drachms of alum with a pint of milk, and then straining.

A-lu'men.* "Alum." The Pharmacopœial name (U.S. 1870, 1880) for the sulphate of aluminium and ammonium. Alum is a powerful astringent, and as such is employed both exte[rnally] and internally.

Alu'men Ex-sic-ca'tum (vel Us't[um] "Dried Alum" (or "Burnt Alum"). The [Pharma]copœial name (U.S. 1870, 1880) of alu[m] has undergone watery fusion and pa[rted] its water of crystallization by the [action] or dried by a heat not exceedin[g] chief use is as an escharotic fo[r] flesh.

Alu'men Ro-ma'num.* "Roman Alum." The purest variety of alum, containing no ammonia in its composition.

Alu'men Ru'pe-um.* [From the Lat. *ru'pes*, a "rock."] Roche or rock alum. A variety of alum brought from Roccha, formerly called Edessa, in Syria. That which is commonly sold under this name is common English alum, artificially colored.

A-lu'mĭ-na.* [From the Lat. *alu'men*, "alum."] (Fr. *Alumine*, ȧ'lü'mĕn'.) The base of alumen. Alumina is an oxide of aluminum, and the most abundant of all the earths. It is the chief constituent of clay, and is the most common base in the silicates. Sapphire is crystallized alumina, other varieties of which are called ruby, corundum, and adamantine spar.

A-lu-mĭ-na'tus.* Containing alumen; alu'minated.

A-lu-mĭ-nif'er-ous. [Lat. **Aluminif'erus**; from *alu'men*, and *fe'ro*, to "bear."] Bearing or having alum.

Al-u-min'ĭ-i Hy'dras.* "Hydrate of Aluminium." The Pharmacopœial name (U.S. 1880) for a white, light, amorphous powder prepared by precipitating a solution of alum with a solution of carbonate of sodium. It is a feebly astringent and desiccant powder, sometimes used externally.

Alumin'ii et Po-tas'sĭ-i Sul'phas.* "Sulphate of Aluminium and Potassium." The Pharmacopœial name (U.S. 1870) for potassa-alum.

Alumin'ii Sul'phas.* "Sulphate of Aluminium." The Pharmacopœial name (U.S. 1880) for a white crystalline powder which is the principal constituent of the alum salts. It is soluble in water, and is employed in solution as an antiseptic detergent application to foul ulcers and as an injection in fetid discharges from the vagina.

Aluminium.* See ALUMINUM.

Al-u'mĭ-nous. [Lat. **Alumino'sus**; from *alu'men*.] Pertaining to alum.

A-lu'mĭ-num* (sometimes spelled **Al-umin'ĭ-um**). The metallic base of alumina. It is a silver-white metal, sonorous, ductile, tenacious, and very malleable. Specific gravity about 2.5. It is not found in nature in a metallic state. It is not oxidized by exposure to air or moisture, nor tarnished by sulphuretted hydrogen. It resists the action of nitric and sulphuric acids. This metal, which is remarkable for its levity and sonorousness, is well adapted for many purposes in the arts. It is obtained from a mineral called *cryolite*.

Al'ums. [Lat. **Alu'mina**, plural of **Alu'men**.] A group of salts having a constitution similar to that of common alum.

Alun, ȧ'lŭn'. The French term for *Alum*. See ...MEN.

...u'sĭ-a.* [From the Gr. ἀλάω, to "become ...] Hallucination; illusion; mental de...ror, or misconception.

...letio* (e-la'she-o). Sentimentalism, ...gance. See ELATION.

...chon-dri'a-sis.* Low spir... ...m.

Alutaceous, al-u-tā'shŭs. [Lat. **Aluta'ceus**; from *alu'ta*, "dressed leather."] A term applied to the leaves of plants resembling a soft, tanned skin.

Alv. Adst. = *Alvo adstric'tâ.** "The bowels being bound."

Al-ve-a'rĭ-um.* [From the Lat. *alvea're*, a "beehive."] That part of the external meatus of the ear where the *cerumen* (ear-wax) is secreted.

Al-ve'o-lar. [Lat. **Alveola'ris.**] Belonging to the *alveoli*, or sockets of the teeth.

Al-ve'o-lar Struc'ture. A term applied by Hewson to minute superficial cavities found in the mucous membrane of the stomach, œsophagus, and small intestine, which he compared to the cells of honey-comb. They are distinct from the follicles.

Al-ve'o-late. [Lat. **Alveola'tus**; from *alve'olus*.] Having little cavities or cells like a honey-comb.

Al-ve'o-li.* [See ALVEOLUS.] The alveolar processes, or the sockets of the teeth:—hence the term *alveolar* as applied to the arteries and veins of the sockets of the teeth.

Al-ve'o-lĭ-form. [Lat. **Alveolifor'mis**; from *alve'olus*.] Formed like *alveoli*.

Al-ve'o-lus,* plural **Al-ve'o-li.** [Diminutive of the Lat. *al'veus*.] A little hollow:—applied to the socket of a tooth, or other cavity.

Al've-us.* [From the Lat. *al'vus*, the "belly."] A trough or channel; any large hollow, such as the hold of a ship:—applied to tubes or canals, especially their enlarged portions, through which some fluid flows.

Al'veus Am-pul-lĕs'çenș.* [See AMPULLA.] The dilated portion of the thoracic duct at its commencement from the *receptaculum chyli*.

Al'veus Com-mu'nis.* The communication of the *ampullæ* of the semicircular canals of the ear.

Al'vĭ-du'ca.* [From the Lat. *al'vus*, the "belly," and *du'co*, to "lead," to "move."] Medicines which promote evacuation of the contents of the intestines.

Al-vĭ-flux'us.* [From the Lat. *al'vus*, the "belly," and *flu'o*, *flux'um*, to "flow."] Diarrhœa; a flux or discharge of the contents of the intestines.

Al'vĭne. [Lat. **Alvi'nus**; from *al'vus*.] Belonging to the belly, stomach, or intestines.

Al'vine Con-cre'tion. [Lat. **Enterol'ithus.**] A calculus in the stomach or bowels. See BEZOAR.

Al'vus.* The belly, stomach, paunch, or intestines. See ABDOMEN, VENTER.

Al'vus As-tric'ta.* [From the Lat. *astrin'go*, *astric'tum*, to "bind."] A costive state of the bowels.

Al'vus Co-ac'ta.* Literally, "hard-bound belly." The state of costiveness.—(CELSUS.)

Al'vus Flu'ĭ-da.* A loose state of the bowels.

A-lỹx'ĭ-a.* A genus of the order *Apocynaceæ*, comprising sixteen species of evergreen trees and shrubs, natives of tropical Asia and Australia.

Some of the species are cultivated for ornament. The bark of the *Alyx'ia stella'ta* is used as a remedy for fevers.

Amadou (Fr.), ăm'mā'doo'. Literally, "touch-wood," a kind of fungus. A substance used in graduated compresses, also to support varicose veins, protect abraded surfaces, etc.

A-măl'gam. [Lat. **Amal'gama**; from the Gr. *ἀμα*, "together," and *γαμέω*, to "espouse."] A combination of mercury with any other metal.

A-mal-ga-mā'tion. [Lat. **Amalgama'tio, o'nis.**] The process of combining mercury with a metal, or forming an amalgam.

A-man'ĭ-tin. [Lat. **Amaniti'na**; from the Gr. *ἀμανῖται*, "fungi," or "mushrooms."] The poisonous principle of *fungi*.

A-ma'ra.* [Neuter plural of the Lat. *ama'rus*, "bitter."] Bitters; medicines with a bitter flavor and tonic property, as chamomile, gentian, etc.

Amaranthaceæ,* am-a-ran-tha'she-ē, or **Am-a-ran-ta'ce-æ.*** [From the Latinized Greek word *amaran'thus* or *amaran'tus*, "unfading."] A natural order of exogenous plants, mostly tropical. It comprises the *Amaranthus* and other flowers which are always dry and not liable to fade.

Am-a-ran'thi,* plural of **Amaran'thus.** A natural order of plants. See AMARANTHACEÆ.

Am-a-ran'thus.* [From the Gr. *α*, priv., and *μαραίνω*, to "wither" or "fade."] A genus of plants with unfading flowers:—written also *Amarantus*.

Am'a-rin. [Lat. **Amari'na**; from *ama'rus*, "bitter."] The bitter principle of vegetables.

Am-a-rȳl-lĭ-da'ce-æ* (-da'she-ē). A natural order of endogenous plants, including the *Amaryl'lis*, the *Galan'thus* (snow-drop), the *Narcis'sus*, the *Eu'charis*, the *Polian'thes* (tuberose), and other bulbous plants cultivated for the beauty of their flowers. They are mostly perennial herbs. This order comprises numerous species widely distributed in the tropical and temperate regions of both hemispheres.

Amatoria Febris.* See CHLOROSIS.

Am-a-to'rĭ-us.* [From the Lat. *a'mo, ama'tum*, to "love."] Belonging to love; amatory:—applied to the oblique muscle of the eye, used in ogling.

Am-au-ro'sis.* [From the Gr. *ἀμαυρόω*, to "darken."] Partial or total loss of vision, from paralysis of the retina, usually attended with paralysis and dilatation of the iris, though occasionally it is rigidly contracted. It is also termed *Gut'ta sere'na*. The term Amaurosis was originally used in the sense of general obscurity or dimness of vision; but now it is employed to denote a particular disease.

Am-au-rot'ĭc. [Lat. **Amaurot'icus.**] Belonging to amaurosis.

Am'be.* [Gr. *ἄμβη*, a "rising," "something elevated."] A machine formerly used for reducing dislocations of the shoulder.

Am'ber. [Lat. **Suc'çinum.**] (Fr. *Ambre*, ŏMBR.) A transparent resinous substance, of a yellow or orange color, having electric properties; anciently called in Greek *ἤλεκτρον*, whence the word *electricity*. It is a fossil resin and an exudation from ancient coniferous trees of extinct species. Insects of many extinct species are found preserved in it. It contains about 80 per cent. of carbon.

Am'ber, Açid of, or **Suc-çĭn'ic Aç'id.** An acid obtained from amber by dry distillation. It is a delicate reagent for separating red oxide of iron from compound metallic solutions.

Am'ber Cam'phor. A yellow, light sublimate, obtained by the destructive distillation of amber in a retort or alembic. It has been termed *volatile resin of amber*.

Amber, Oil of. See OLEUM SUCCINI.

Ambergris, or **Ambergrease,** am'ber-grēs. [Lat. **Ambragri'sea**; from the French *ambregris* (ŏM'BR-grē'), or "gray amber."] A concrete bituminous substance, of a grayish or ash color, inflammable, and when heated emitting a fragrant odor. It is found about the sea-coast of warm countries, or floating on the surface of the ocean, also in the intestines of the *Physeter macrocephalus*, and is supposed to be a morbid secretion of that and perhaps other species of the *Physeter*. It is chiefly valuable as a perfume.

Am-bĭ-dex'ter.* [From the Lat. *am'bo*, "both," and *dex'ter*, "right-handed," "skilful."] One who uses both hands with equal readiness, or who uses his left hand as well as his right.

Am-blo'sis.* [From the Gr. *ἀμβλόω*, to "have an abortion."] Miscarriage. Hence the term *amblot'ic* (Lat. *Amblot'icus*, plural *Amblot'ica*) as applied to a medicine supposed to cause abortion.

Am-blȳ-a'phĭ-a.* [From the Gr. *ἀμβλύς*, "blunt," and *ἁφή*, "sense of touch."] Blunted or dulled sense of touch.

Am-blȳ-o'pĭ-a.* [From the Gr. *ἀμβλύς*, "blunted," and *ὤψ*, the "eye."] Impaired vision from defective sensation of the retina; incomplete amaurosis, or the weakness of sight attending certain stages and forms of this disorder.

Am'bon.* [Gr. *ἄμβων*; perhaps from *ἀναβαίνω*, to "rise," to "ascend."] Literally, an "elevation." The margin of the sockets in which the heads of the large bones are lodged.

Am'bre-āte. [Lat. **Am'breas, a'tis.**] A combination of ambreic acid with a base.

Am-bre'ic Aç'id. A peculiar acid obtained by digesting ambrein in nitric acid.

Am'bre-in. [Lat. **Ambrei'na**; from the Fr. *ambre*, "amber."] A fatty substance forming the base of ambergris, and differing slightly from cholesterin.

Ambrosia,* am-bro'zhe-a. [From the Gr. *ἀμβροτος*, "immortal."] Literally, the "food of the gods," that which confers immortality or life. A name applied to several plants, as also to several alexipharmic medicines.

Ambro'sia Trifĭ-da.* Great Ragweed. A coarse weed of the natural order *Compositæ*. It is a native of the United States.

Am-bu-la'crum.* [From the Lat. *am'bulo*, to "walk."] The space between two *strigæ*, or each *striga*, formed by the small holes on the shell of the *Echinus*, as of a walk or path.

Am'bu-lance. [From the French *ambulant*, "ambulatory."] The kind of movable hospital accompanying an army. In popular language, a wagon or carriage for conveying wounded soldiers.

Am'bu-la-to-rĭ. [Lat. **Ambulato'rius**; from *am'bulo*, to "walk."] Having the power of walking; formed for walking; moving from place to place.

Am-bus'tion. [Lat. **Ambus'tio, o'nis**; from *ambu'ro, ambus'tum*, to "burn."] A burn or scald on any part of the body.

Am'e-lin. [Lat. **Ameli'na.**] A base precipitated in the alkaline solution from which melamin has been deposited on being supersaturated with acetic acid.

A-mend'ment. [Fr. *Amendement* (ă'mŏNd'-mŏN').] A change for the better; a diminution of the intensity of one or several morbid phenomena.

Amenomania.* See AMŒNOMANIA.

Amenorrhœa,* a-men'o-rē'a. [From the Gr. *α*, priv., *μήν*, a "month," and *ῥέω*, to "flow."] Absence or stoppage of the menstrual discharge, including *Emansio mensium* and *Suppressio mensium.*

A-men'ta,* the plural of AMENTUM, which see.

Amentaceæ,* am-en-ta'she-ē. [From the Lat. *amenta'ceus.* See next article.] The Jussieuan name of an order of plants now distributed among different orders.

A-men-tā'ceous. [Lat. **Amenta'ceus**; from *amen'tum.*] Having an amentum.

Amentia,* ą-men'she-ą. [From the Lat. *a*, "from," "away from," "out of," and *mens*, the "mind."] Idiocy; fatuity; imbecility of mind. A genus of the order *Vesaniæ*, class *Neuroses*, of Cullen's nosology. See DEMENTIA.

A-men'tum,* plural **A-men'ta.** [From the Gr. *ἄμμα*, a "thong."] A catkin, or spike of naked flowers with imbricated scales or bracts:— formerly sometimes termed *Nucamentum.*

Amer (Fr.), ă'maiR'. "Bitter." The bitter principle produced by digesting silk in nitric acid.

American Balsam. See BALSAM OF PERU.

American Gamboge. See GAMBOGE.

A-mer'ĭ-can Plague. A name for YELLOW FEVER, which see.

Amer'ican Sen'na. The common name for *Cas'sia Marilan'dica.*

Am'e-thŷst. [Lat. **Amethys'tus**; from the Gr. *α*, priv., and *μεθύσκω*, to "make drunk."] A violet-colored gem, a variety of quartz. Its name is derived from its reputed virtue of preventing intoxication: topers were formerly in the habit of wearing it about their necks. It consists almost entirely of silica.

Am-e-tro'pĭ-ą.* [From the Gr. *α*, priv. or negative, *μέτρον*, a "measure," and *ὤψ*, the "eye."] A term signifying a condition of the eye in which the refracting powers of the media are not adjusted (or measured) to the position of the retina; either the light is brought to a focus before reaching the retina (constituting *myopia*), or it is not sufficiently converged at the retina (*presbyopia*), or else, owing to the imperfect shape of the refracting media, the rays are unequally refracted and never brought to a perfect focus (*astigmatism*). See EMMETROPIA.

Am-ĭ-an'thĭ-um Mus-çæ-tox'ĭ-cum.* Fly-Poison. A plant of the order *Liliaceæ*, a native of New Jersey and the Southern States. It is said to be poisonous.

Am-ĭ-an'thoid, or **Am-ĭ-an'toid.** [Lat. **Amianthoi'des**, or **Amiantoi'des**; from *amian'thus* or *amian'tus*, a fossil, fibrous stone.] Resembling amianthus.

Am-ĭ-an'thus.* [From the Gr. *α*, priv., and *μιαίνω*, to "defile."] Literally, "that which cannot be defiled;" because cloth made of it could always be purified by burning. Mountain flax, an incombustible mineral, consisting of very delicate and regular silky fibres. See ASBESTOS.

Amide, ă'mĕd'. A saline compound, in which a compound of nitrogen and hydrogen occurs, containing an atom less of hydrogen than ammonia.

Am'ĭ-din. [Lat. **Amidi'na**; from the French *amidon*, "starch."] A substance intermediate between gum and starch, obtained by the solution of the latter in hot water.

Amilen, or **Amilene,** am'e-lĕn. A liquid hydro-carbon obtained by distilling hydrate of oxide of amyl repeatedly with anhydrous phosphoric acid.

Am'ĭne. A term applied to a group of chemical compounds in which one or many molecules of the hydrogen of the ammonia are replaced by alcoholic radicals.

Ammi. See SISON AMMI.

Am-mo'nĭ-ą.* The volatile alkali; ammoniacal gas. A transparent, colorless, pungent gas, formed by the union of nitrogen and hydrogen. By Priestley it was called *alkaline air.* It is called "the volatile alkali" to distinguish it from the fixed alkalies, soda and potash. Its present name is derived from sal ammoniac, of which it constitutes a basis, and which received its appellation from being first prepared in the district of Ammonia, in Libya.

Am-mo-nī'ą-cal. [Lat. **Ammoniaca'lis.**] Belonging to ammonia.

Ammoni'acal Al'um. A double salt, consisting of the sulphate of ammonia and alumina, the potassa of common alum being replaced by ammonia.

Ammoni'acal Gas. Ammonia; the volatile alkali.

Am-mo-ni'ą-cum.* [From the Gr. Ἄμμων, a name of Jupiter, who had his temple in a part of Libya where the tree chiefly grew.] The Pharmacopœial name (U.S. 1880) of a gum resin from the *Dore'ma ammoni'acum*; ammo'niac, or gum-ammo'niac.

Am-mo'nĭ-æ Li'quor.* "Liquor of Ammonia." The name of the concentrated solution of ammonia. One volume of water takes up about seven hundred and fifty times its bulk of the gas, forming a liquid possessed of similar properties, and termed *spirits of hartshorn* from its being produced by distillation from that substance.

Ammoniaque, ă'mo'ne-ăk'. The French term for AMMONIA, which see.

Am-mo'nĭ-i Ben'zo-as.* "Benzoate of Ammonium." The Pharmacopœial name (U.S. 1880) for white, laminar crystals produced by dissolving benzoic acid in water of ammonia, evaporating, and crystallizing. It is a slightly stimulant diuretic.

Ammo'nii Brom'ĭ-dum.* "Bromide of Ammonium." The Pharmacopœial name (U.S. 1880) for colorless, transparent crystals containing hydrobromic acid and ammonia. It resembles the bromide of potassium in medical properties, and is used for the same purposes.

Ammo'nii Car-bo'nas.* "Carbonate of Ammonium." (Formerly called Carbonate of Ammonia.) The Pharmacopœial name (U.S. 1870, 1880) for a salt having a pungent, ammoniacal odor, a sharp, saline taste, and an alkaline reaction. It is a powerful stimulant, though the effects are transient and hence the dose requires to be frequently repeated. The preparation commonly known as "smelling-salts" owes its virtues to carbonate of ammonium.

Ammo'nii Chlor'ĭ-dum.* "Chloride of Ammonium." The Pharmacopœial name (U.S. 1880) for a snow-white, crystalline powder containing hydrochloric acid and ammonia. Its medical properties are similar to those of carbonate of ammonium, but less powerful.

Ammo'nii I-od'ĭ-dum.* "Iodide of Ammonium." The Pharmacopœial name (U.S. 1880) for a white, granular salt containing hydriodic acid and ammonia. In its medical properties it resembles iodine and iodide of potassium.

Ammo'nii Ni'tras.* "Nitrate of Ammonium." The Pharmacopœial name (U.S. 1880) for colorless crystals, generally in the form of long, thin, rhombic prisms, or in fused masses, containing nitric acid and ammonia. It is somewhat deliquescent, is odorless, and has a sharp, bitter taste and a neutral reaction.

Ammo'nii Phos'phas.* "Phosphate of Ammonium." The Pharmacopœial name (U.S. 1880) for colorless, translucent, monoclinic prisms containing phosphoric acid and ammonia. It is soluble in water. It is used as a remedy for gout and rheumatism.

Ammo'nii Sul'phas.* "Sulphate of Ammonium." The Pharmacopœial name (U.S. 1880) for colorless, transparent, rhombic prisms, containing sulphuric acid and ammonia. It is not used as a medicine, but enters into the composition of ammonia-alum.

Ammo'nii Va-le-rĭ-a'nas.* "Valerianate of Ammonium." The Pharmacopœial name (U.S. 1880) for a substance, in colorless or white quadrangular plates, containing valerianic acid and ammonia. It is deliquescent in moist air, and has the odor of valerianic acid, a sharp and sweetish taste, and a neutral reaction. It is useful in mild functional nervous affections.

Am'mo-nīte. [Lat. **Ammoni'tes**; from Jupiter *Am'mon*,—worshipped as a ram.] An extinct genus of mollusks, with chambered, convoluted shells, of which more than five hundred species have been described. They belong to the class *Cephalopoda*, and lived in the Mesozoic Age. From its resemblance to the horns of the statues of Jupiter Ammon, the Ammonite is called *Cor'nu Ammo'nis*, "horn of Ammon."

Ammo'nĭ-um.* The supposed metallic base of ammonia.

Ammoniuret, am-mōn'yu-rĕt. [Lat. **Ammoniure'tum.**] A combination of ammonia with a metallic oxide.

Am-ne'sĭ-a,* Am-nes'tĭ-a.* [From the Gr. *a*, priv., and *μνήσις*, "remembrance."] Want of memory; forgetfulness.

Am'nĭ-i, Li'quor.* The fluid contained in the amnion.

Am'nĭ-on.* [From the Gr. *ἀμνός*, a "lamb."] The soft, most internal membrane containing the waters which surround the fœtus *in utero*:—also called *Agnina tunica.*

Am'nĭ-o-tāte. [Lat. **Am'niotas, a'tis.**] Amniotic acid combined with a base.

Am-nĭ-ot'ic. [Lat. **Amniot'icus.**] Pertaining to the amnion.

Amniot'ic Aç'id. The same as ALLANTOIC ACID.

A-mœ'ba.* [From the Gr. *ἀμείβω*, "to change."] The name of a very minute animal capable of changing its form at will.

A-mœ'boid. [From the Lat. *Amœ'ba*, and the Gr. *εἶδος*, a "form" or "resemblance."] Resembling the Amœba:—applied to pus-cells, white corpuscles, etc.

A-mœ-no-ma'nĭ-a.* [From the Lat. *amœ'nus*, "agreeable," "pleasant," and *ma'nia*, "madness."] A form of mania or insanity, in which the hallucinations of the patient seem to be of a pleasing character.

A-mo'me-us.* Having an arrangement as in the *Amomum*; amo'meous.

A-mo'mum.* [From the Gr. *ἄμωμος*, "blameless."] A Linnæan genus of the class *Monandria*, natural order *Scitamineæ*, or *Zingiberaceæ.* It comprises many species of aromatic herbs, natives of India, of Africa, and of Java and other Asiatic islands. Some of them are cultivated for ornament.

Amo'mum Car-da-mo'mum.* A plant which is believed to produce the *Round Cardamom.* It is a native of Java and Sumatra. See CARDAMOM.

Amo'mum Gra'na Par-a-di'si.* "Grains of Paradise Amomum." A plant of the order *Scitamineæ*, the fruit of which is well known under the name of *Grains of Paradise* or Melegetta (or Malagueta) Pepper.

Amo'mum Max'ĭ-mum.* An aromatic plant, a native of Java and other islands of the Malay Archipelago. It is supposed to be the plant that produces the *Java Cardamom.*

Amo'mum Re'pens.* A plant producing the Cardamom seed; but this is chiefly obtained from the *Alpin'ia Cardamo'mum.*

Amo'mum Zin'gĭ-ber.* The ginger plant, or *Zin'giber officina'le.*

A-mor'phism. [Lat. **Amorphis'mus**; from the Gr. *a*, priv., and *μορφή*, "form."] The state of being amorphous.

A-mor'phous. [Lat. **Amor'phus**; from the Gr. *a*, priv., and *μορφή*, "form."] Having no definite form; shapeless; uncrystallized. Nearly all minerals are either amorphous or crystallized. Amorphous minerals break with a conchoidal or earthy fracture.

Amor'phous Quĭ-nīne'. The substance *Quinoidine*:—so named because its salts cannot be crystallized. See QUINIA.

Am-pe-lop'sis.* [From the Gr. *ἄμπελος*, a "vine," and *ὄψις*, "appearance."] A genus of shrubs of the order *Vitaceæ*. The *Ampelopsis quinquefolia* (Virginia Creeper) is a native of the United States, and is planted in cities for ornament.

Am'pe-los-a'grĭ-a.* [From the Gr. *ἄμπελος*, a "vine," and *ἀγριος*, "wild."] The *Bryonia alba*, or wild vine.

Ampère, ŏN'pair'. [From *Ampère*, the celebrated physicist.] A term denoting the unit of intensity in galvanic electricity.

Am-phem-e-ri'na,* or **Am-phim-e-ri'na.*** [From the Gr. *ἀμφί*, "on" or "by," and *ἡμέρα*, a "day."] A term applied to a fever, such as a quotidian ague, or hectic, occurring "day by day,"—that is, every day.

Am'phi (*ἀμφί*). A Greek preposition, signifying "on both sides," "about," sometimes "on," "at," or "by." It is nearly allied to *ἀμφω*, "both," and to *ἀμφίς*, "on both sides," "in both directions," "around."

Am-phĭ-ar-thro'sis.* [From the Gr. *ἀμφω*, "both," and *ἄρθρον*, a "joint," an "articulation."] A movement partaking both of *diarthrosis* and of *synarthrosis*, as in the tarsal and carpal bones, and in the vertebræ.

Am-phib'ĭ-o-lite, or **Am-phib'ĭ-o-lith.** [Lat. **Amphibiol'ithus**; from *amphib'ius*, "amphibious," and the Gr. *λίθος*, a "stone."] A fossil relic of an amphibious animal.

Am-phib-ĭ-ol'o-ġў. [Lat. **Amphibiolo'gia**; from *amphib'ius*, and the Gr. *λόγος*, a "discourse."] A treatise on amphibious animals; the science of amphibious animals.

Am-phib'ĭ-us.* [From the Gr. *ἀμφω*, "both," or *ἀμφί*, "on both sides," and *βιόω*, to "live."] Amphibious:—applied to animals that live in both elements,—on land or in the water. In the system of Linnæus it included all reptiles. In the neuter plural (*Amphib'ia*), it forms the name of the class of vertebrated animals called Batrachians. The animals of this class begin their larval state as fishes, and undergo various degrees of metamorphosis.

Am-phĭ-dī-ar-thro'sis.* [From the Gr. *ἀμφί*, "on both sides," and *διάρθρωσις*, an "articulation."] A term applied to the articulation of the lower jaw with the temporal bone, because partaking of the nature of both *ginglymus* and *arthrodia*.

Am-phĭ-ga'mĭ-us.* [From the Gr. *ἀμφί*, "on both sides" (and hence "doubtful"), and *γάμος*, a "marriage."] In the neuter plural (*Amphyga'mia*), applied to plants (the *Cryptogamia*) whose fructification is unascertained and may be of both sexes.

Am-phip'o-dous. [Lat. **Amphip'odus**; from the Gr. *ἀμφί*, "about," and *πούς, ποδός*, a "foot."] Having feet round about:—applied to certain *Crustacea*.

Amphiscius,* am-fish'e-ŭs; plural, **Amphiscii,** am-fish'e-i. [From the Gr. *ἀμφί*, "on both sides," and *σκιά*, a "shade" or "shadow."] Having their shadow to the north one season, to the south another; amphis'cians:—applied to the people within the Torrid Zone.

Am-phis'to-mous. [Lat. **Amphis'tomus**; from the Gr. *ἀμφί*, "on both sides" or "at both ends," and *στόμα*, the "mouth."] A term applied to certain *Entozoa*, having a cup at each extremity, by which they adhere to the intestines.

Am-phĭ-the'a-tre. [Lat. **Amphithea'trum.**] A building in an oval form enclosing an open space called the arena, used for public shows; also a place where a professor gives his lectures.

Am-phit'ro-pal, or **Am-phit'ro-pous.** [Lat. **Amphit'ropus**; from the Gr. *ἀμφί*, "about," and *τροπέω*, to "turn."] A term applied to an ovule when it is half inverted and stands across the apex of the stalk.

Am'pho-ra.* [From the Gr. *ἀμφι*, "on both sides," and *φέρω*, to "carry;" because carried by two handles.] An ancient wine-vessel with two auricles, containing about nine English gallons.

Am-phŏr'ic. [Lat. **Amphor'icus.**] Belonging to an *amphora;* resembling an *amphora*. Applied to a sound (the amphoric resonance) in auscultation resembling that heard on blowing into a decanter.

Am-plex-ĭ-cau'lis.* [From the Lat. *amplec'tor, amplex'us*, to "surround," and *cau'lis*, a "stem."] Embracing; clasping the stem by the base, like some leaves; amplex'icaul, or amplexicau'line.

Am-pul'la,* plural **Am-pul'læ.** A big-bellied jug or bottle used by the Romans for containing wine:—applied in Anatomy to the trumpet-mouthed portions of the semicircular canals of the ear. See ALVEUS COMMUNIS. Also a small membranous bag attached to the roots and immersed leaves of certain aquatic plants.

Ampullaceous, am-pul-lā'shus. [Lat. **Ampulla'ceus.**] Appearing like an *ampulla*. In Botany, swelling out like a bottle or bladder.

Am-pul'lu-la.* [The diminutive of *ampul'la.*] A canal or bag slightly enlarged in the centre.

Am-pu-tā'tion. [Lat. **Amputa'tio, o'nis;** from *am'puto, amputa'tum*, to "cut off."] The operation of cutting off a limb, or a projecting part of the body, as the breast, etc.

Am'u-let. A supposed charm against infection or disease: such are anodyne necklaces, used in the teething of infants.

Amydriasis.* See MYDRIASIS.

A-mў-e'lĭ-a.* [From the Gr. *a*, priv., and *μυελός*, "marrow," "spinal marrow."] The condition of a monster-fœtus, born without the spinal

marrow. Such a fœtus is said to be *amy'elous*. When the encephalon also is absent, the fœtus is termed *amyenceph'alous*. There may be absence of the encephalon,—of the cerebrum and cerebellum only: in this case the fœtus is called *anenceph'alous*. Or the cerebrum merely may be in a state of defective development, or atrophy, more or less partial or extensive.

Amyelous. See preceding article.

A-mŏg'da-la.* [Gr. ἀμυγδάλη.] The fruit of *Amyg'dalus commu'nis*, the sweet and bitter almond.

Amŏg'dala A-ma'ra.* "Bitter Almond." The Pharmacopœial name (U.S. 1870, 1880) for the kernel of the fruit of *Amyg'dalus commu'nis*, variety *amara*.

Amŏg'dala Dul'cis.* "Sweet Almond." The Pharmacopœial name (U.S. 1870, 1880) for the kernel of the fruit of *Amyg'dalus commu'nis*, variety *dulcis*.

A-mŏg'da-læ* (plural of **Amyg'dala**). A popular name for the exterior glands of the neck and for the tonsils.

Amŏg'dalæ A-ma'ræ,* and **Amŏg'dalæ Dul'cēs.*** Bitter and sweet almonds; the fruit of two varieties of the *Amyg'dalus commu'nis*. The bitter almond contains prussic acid, and enters into the liquor or composition called *noyau*.

Amŏg'dalæ Pla-çen'ta.* "Almond Cake," the substance left after the expression of the oil, which when ground forms *almond-powder*, so generally used for washing the hands.

Am-ŏg-da'le-us.* Having an arrangement as in the *Amygdalus*; amygda'leous.

Am-ŏg-dal'ic. [Lat. **Amygdal'icus**; from *amyg'dala*, an "almond."] Belonging to the almond:—applied to an acid obtained from amygdalin.

A-mŏg-da-lif'er-ous. [Lat. **Amygdalif'erus**; from *amyg'dala*, an "almond," and *fe'ro*, to "bear."] Bearing almonds:—applied to a geode with a movable nodule.

A-mŏg'da-lin. [Lat. **Amygdali'na**; from *amyg'dala*, an "almond."] A white crystalline substance obtained from the bitter almond.

A-mŏg'da-lĭne. [Lat. **Amygdali'nus**; from the same.] Belonging to the almond.

A-mŏg-da-li'tis.* [From the Lat. *amyg'dalæ*, the "tonsils," and the affix *i'tis*, denoting inflammation.] The same as TONSILLITIS.

A-mŏg'da-loid. [Lat. **Amygdaloi'des**; from *amyg'dala*, an "almond," and the Gr. εἶδος, a "form" or "resemblance."] Having the form of an almond:—applied to some volcanic rocks, basalt, trap, etc., in which occur oval cavities filled with minerals foreign to the rock, such as quartz and calcite.

A-mŏg-da-loi'dal. The same as the preceding.

A-mŏg'da-lŭs.* [Gr. ἀμύγδαλος, the "almond-tree."] A Linnæan genus of the class *Icosandria*, natural order *Rosaceæ*.

Amŏg'dalus Com-mu'nis.* The tree which yields the almond, both bitter and sweet. It is a native of Barbary.

Amŏg'dalus Per'sĭ-ca.* The peach-tree:—also called *Pru'nus Per'sica*.

Am'ŷl. The hypothetical radical of a series of compounds, of which the hydrate of the oxide has long been known as *fusel oil*, or as the *oil of grain-spirit* or of *potatoes*.

Amyl Ni'tris.* "Nitrite of Amyl." The Pharmacopœial name (U.S. 1880) for a clear, pale-yellowish liquid, of an ethereal fruity odor, an aromatic taste, and a neutral or slightly acid reaction. It is useful in asthma and angina pectoris, and is used by inhalation. It is antiseptic, and is noted for its peculiar action on the heart and circulation.

Amylacea Corpora.* See NEUROGLIA.

Amylaceous, am-e-lā'shŭs. [Lat. **Amyla'ceus**; from *am'ylum*.] Composed of starch; starch-like.

Am'ŷ-len, or **Am'ŷ-lĕne.** A transparent liquid obtained by distilling amylic alcohol (or fusel oil) with chloride of zinc. It is a hydrocarbon or diatomic radical. It has anæsthetic properties, but is so poisonous that it is not safe to use it.

A-mŷl'ic. [Lat. **Amyl'icus**; from *am'ylum*, "starch."] A term applied to an acid obtained from starch.

Amylin. The same as AMIDIN.

Am'ŷ-loid. [Lat. **Amyloi'des**; from *am'ylum*, "starch."] Resembling starch.

Amyloid Degeneration. See LARDACEOUS DEGENERATION.

Am'ŷ-lo-lŷt'ic. [From the Gr. ἄμυλον, "meal," "starch," and λύω, to "dissolve."] Tending to dissolve starch, and thus to favor its conversion into sugar:—sometimes applied to the saliva.

Am'ŷ-lop'sin. [Etymology somewhat doubtful, but apparently from the Gr. ἄμυλον, "starch," and ὄψις, "sight," or "appearance."] Something having the appearance of, or resembling, starch:—applied to pancreatin.

Am'ŷ-lum.* [Gr. ἄμυλον, "fine meal."] The Pharmacopœial name (U.S. 1870, 1880) for starch, being the fecula of the seeds of *Trit'icum vulga're*. Starch may also be obtained from other cereals, from the potato, from arrow-root, etc.

Am'ylum I-o-da'tum.* "Iodized Starch." The Pharmacopœial name (U.S. 1880) for a dark-blue powder obtained by triturating iodine with a little water and starch, then drying it at a temperature not exceeding 104° Fahr.

Am'ylum Ma-ran'tæ.* Arrow-root,—a nutritive starch prepared from the *Maran'ta arundina'cea*.

Am-ŷ-os-the'nĭ-a.* [From the Gr. *a*, priv., μῦς, μυός, a "muscle," and σθενία, "strength."] A want of muscular strength, or a deficiency of the power of muscular contraction.

Am-ŷ-o-troph'ic. [From the Gr. *a*, priv., μῦς, μυός, a "muscle," and τροφή, "nourishment."] Deficient in the nourishment of muscular tissue.

Am'ŷ-ous. [Lat. **Am'yus**; from the Gr. *a*, priv., and μῦς, μυός, a "muscle."] Without muscle; fleshless.

Amyridaceæ,* am-ĭr-e-da'she-ē. A natural order of dicotyledonous plants, abounding in fragrant resin, and indigenous in the tropical parts of Asia and America. It comprises *Am'yris*, *Balsamoden'dron*, which yields myrrh, *Boswel'lia*, from which olibanum is obtained, *Burse'ra*, and *Cana'rium*, which yields elemi.

Am'ȳ-ris.* [From the Gr. *a*, intensive, and *μύρον*, a "sweet-scented juice."] A Linnæan genus of the class *Octandria*, natural order *Amyridaceæ* (formerly a division of *Terebinthaceæ*). It includes many species of trees, natives of India and tropical America.

Am'yris Com-miph'o-ra.* [From the Gr. *κομμι*, a name for "gum," and *φέρω*, to "bear."] A tree, a native of India, affording a gum-resin called Indian bdellium.

Am'yris El-e-mif'e-ra.* A tree which has been supposed to yield gum elemi.

Am'yris Gil-e-a-den'sis.* The systematic name of the tree which affords balm or balsam of Gilead. See BALSAM OF MECCA.

An (*ἀν*). A Greek particle having a privative force. See **A.**

Ana (*ἀνά*). A Greek particle signifying "through," "up through," "upwards," "again;" sometimes "according to."

For the use of *ana* in medical formularies, see **AA.**

A-nab'a-sis.* [From the Gr. *ἀνά*, "up," and *βαίνω*, to "go."] Literally, an "ascending." The increase of a disease or of a paroxysm. See ACME.

An-a-bat'ic. [Lat. **Anabat'icus.**] Pertaining to anabasis.

Anacardiaceus,* an-a-kar-de-a'she-ŭs. Having an arrangement as in the *Anacardium* (cashew-tree); anacardia'ceous:—applied in the feminine plural (*Anacardiaceæ*, an-a-kar-de-a'she-ē) to an order of dicotyledonous plants, including the cashew-tree, the sumach, etc.

An-a-car'dĭ-um.* *Anacardium Occidentale.* Cashew-nut, or marking-nut. The nut contains, between its rind and shell, a red, inflammable, and very caustic liquor, or oil. See CASHEW-TREE.

An'a-ca-thar'sis.* [From the Gr. *ἀνά*, "up," and *καθαίρω*, to "purge."] Literally, a "purgation upwards." A term used to denote cough with expectoration, or expectoration simply.

An-a-ca-thar'tic. [Lat. **Anacathar'ticus;** from the same.] Promoting expectoration or vomiting.

An-a-cȳc'lus Pȳr'e-thrum.* The Pharmacopœial (Lond. and Ed. Ph.) name for *An'themis Pyr'ethrum.*

An-ad'ro-mous. [Lat. **Anad'romus;** from the Gr. *ἀνά*, "up," and *δρόμος*, a "course."] Swimming up into rivers from the sea:—applied to fish; also to certain local pains, which pass from the lower to the upper part of the body.

An-æ'mĭ-a.* [From the Gr. *ἀν*, priv., and *αἷμα*, "blood."] Deficiency of blood in quantity, either general or local; also deficiency of the most important constituents of the blood. Also written *Anhæmia.*

An-æm'ic (or **An-em'ic**), or **An-æ'mĭ-al.** [Lat. **Anæm'icus**, or **Anæmia'lis;** from the same.] In a state of anæmia.

An-æ-mot'ro-phȳ. [From the Lat. *anæ'mia*, and the Gr. *τροφή*, "nourishment."] By this term and *hæmotrophy* are implied simply a deficiency and an excess of sanguineous nourishment. *Atrophy* and *hypertrophy*, as commonly understood, include the idea of diminished and increased magnitude; while *anæmia* and *hyperæmia* have reference only to the quantity of blood present, without regard to its nutritive properties. See ANÆMIA.

Anaeroid. See ANEROID.

Anæsthesia,* an-es-the'se-a. [From the Gr. *ἀν*, priv., and *αἰσθάνομαι*, to "perceive," to "feel."] Loss of feeling or perception; an'æsthesy. A genus of the order *Dysæsthesiæ*, class *Locales*, of Cullen's nosology.

Anæsthetic, an-es-thet'ik. [Lat. **Anæsthet'icus;** from *anæsthe'sia.*] (Fr. *Anesthésique*, ȧ'nĕs'tȧ'zĕk'.) Having no perception or sense of touch.

An-æs-thet'ics. [From the same.] A term applied to certain medicines, such as chloroform, ether, nitrous oxide, etc., having the power of rendering the recipient insensible to pain.

A'nal. [Lat. **Ana'lis.**] Pertaining to the anus.

An-a-lep'sis,* or **An-a-lep'sĭ-a.*** [From the Gr. *ἀναλαμβάνω*, to "take again," to "recover."] Recovering of strength after sickness.

An-a-lep'tic. [Lat. **Analep'ticus;** from the same.] Belonging to analepsis.

An-a-lep'tics. [From the same.] Restorative medicines.

An-ăl-ge'sĭ-a.* [From the Gr. *ἀν*, priv., and *ἀλγέω*, to "feel pain."] Insensibility to pain; also absence of pain.

An-ăl'gĭ-a.* [From the Gr. *a*, priv., and *ἄλγος*, "pain."] The same as ANALGESIA, which see.

A-nal'o-gous. [Lat. **Anal'ogus;** from the Gr. *ἀνά*, "according to," and *λόγος*, "ratio" or "proportion."] Literally, "proportionate:" hence, corresponding to in a general way.

Analogue, an'a-lŏg. [From the same.] Applied in Comparative Anatomy, by Owen, to a part or organ in one animal having the same function as another part or organ in a different animal.

A-nal'o-gy. [Lat. **Analo'gia;** from the same.] The relation of things or parts of a different nature but similar in their function, and so contradistinguished from the term *Homology.* Analogy, in Botany, denotes resemblance to a thing in form but not in function, or in function but not in form.

A-nal'y-sis. [From the Gr. *ἀναλύω*, to "undo," to "resolve into its elements."] The process of separating any compound substance into its constituents. It is the reverse of *synthesis*, and is one of the chief instruments of discovery. Chemical analysis is the identification and separation of the elements of a compound. The process which ascertains what elements are present in the compound is termed *qualitative analysis.* That which ascertains the absolute or relative quantities

of the elements or constituents is *quantitative analysis.*

An-a-mir'ta Coc'cu-lus,* or **An-a-mir'ta Pa-nic-u-la'ta.*** The plant which affords the *Cocculus Indicus* fruit. It belongs to the order *Menispermaceæ.*

An-am-nes'tic, An-am-nes'tĭ-cal. [Lat. **Anamnes'ticus**; from the Gr. *ἀναμνήσκω*, to "recall to mind."] Recalling to memory.

Ananassa Sativa.* See PINE-APPLE.

An-an'drous, or **An-an'drĭ-ous.** [Lat. **An-an'der,** or **Anan'drius**; from the Gr. *ἀν*, priv., and *ἀνήρ, ἀνδρός*, a "man," a "male."] A term applied to plants which have no male organs.

An-an'thous. [From the Gr. *ἀν*, priv., and *ἄνθος*, a "flower."] Destitute of flowers.

Anaphrodisia,* an-af-ro-diz'e-a. [From the Gr. *ἀν*, priv., and *ἀφροδίσια*, "things pertaining to Venus."] Impotence; incapability of sexual intercourse, from whatever cause.

An-a-plas'tic. [Lat. **Anaplas'ticus.**] Of or belonging to anaplasty.

An'a-plas-ty. [Lat. **Anaplas'tia**; from the Gr. *ἀνά*, "again," and *πλάσσω*, to "form" or "fashion."] Literally, "forming anew." Surgical operations for the restoration of lost parts, or for the reparation of certain deformities or natural defects in the structure of the body.

An-a-ple-ro'sis.* [From the Gr. *ἀναπληρόω*, to "fill again," to "supply."] The supplement of parts destroyed, as in wounds, cicatrices, etc.

An-a-ple-rot'ic. [Lat. **Anaplerot'icus.**] Belonging to anaplerosis; supplementary.

An-a-sar'ca.* [From the Gr. *ἀνά*, "through," and *σάρξ*, the "flesh."] Dropsy in the integuments of the body. General dropsy, as distinguished from dropsy of some particular organ or part.

An-a-spa'dĭ-as.* [From the Gr. *ἀνά*, "up," and *σπάω*, to "draw," to "tear."] A term applied to one whose urethra opens in the upper side of the penis.

An-a-stal'tic. [Lat. **Anastal'ticus**; from the Gr. *ἀνά*, "upwards," and *στέλλω*, to "set," to "send," to "contract."] A term formerly applied to styptic medicines.

A-nas'to-mose'. [See next article.] To communicate with one another, as veins or arteries. ANASTOMOSING (in Botany), forming a net-work, as the veins of leaves.

A-nas'to-mo'sis.* [From the Gr. *ἀνά*, "by," "through," and *στόμα*, a "mouth."] The communication of branches of vessels with one another.

A-nas-to-mot'ic. [Lat. **Anastomot'icus.**] Of the nature of anastomosis.

An-a-tom'ĭ-cal. [Lat. **Anatom'icus.**] Belonging to anatomy.

A-nat'o-mist. [From the Gr. *ἀνά*, "through," "up," and *τέμνω*, to "cut."] A dissector of organized bodies, whether human, brute-animal (then called Zoötomist), or vegetable (then Phytotomist).

A-nat'o-my. [Lat. **Anato'mia**; from the same.] Generally, the dissection of organized bodies, whether human, brute-animal, or vegetable. Also that science which has for its subjects organized bodies in a state of rest, and for its aim a knowledge of their constitution or structure.

Anat'omy, Ar-ti-fĭç'ial. [Lat. **Anato'mia Artificia'lis.**] Imitated dissections in wax, etc.

Anat'omy, Com-păr'a-tive. [Lat. **Anato'mia Comparati'va.**] The dissection of animals, plants, etc., with a view to comparing one with another in order to classify them, by determining those characteristics which are common to several different genera, orders, etc.

Anat'omy, De-scrip'tive. [Lat. **Anato'mia Descripti'va.**] Details of the situation, form, and relative attachments of the various parts.

Anat'omy, Gen'er-al. [Lat. **Anato'mia Genera'lis.**] A description of the structure and nature of the various tissues, apart from any consideration of the organs they compose.

Anat'omy, Hu'man. [Lat. **Anato'mia Huma'na.**] Dissection of man.

Anat'omy, Med'ĭ-cal. [Lat. **Anato'mia Med'ica.**] A term embracing *Descriptive, Physiological,* and *Pathological Anatomy.*

Anat'omy, Path-o-loġ'ĭ-cal. [Lat. **Anato'mia Pathologʒ'ica.**] The investigation of changes in the structure of organs by disease, or from congenital malformation.

Anat'omy, Phўs-ĭ-o-loġ'ĭ-cal. [Lat. **Anato'mia Physiologʒ'ica.**] The consideration of the organs of animals with regard to their respective functions in the healthy state.

Anat'omy, Speç'ial. [Lat. **Anato'mia Specia'lis.**] Properly, the anatomy of a single species, as the anatomy of man, of the horse, etc.—(CRUVEILHIER.) In this sense it is contradistinguished from Comparative Anatomy; but, according to most writers, it is that branch of Anatomy which treats of the particular organs or parts (in a state of health), as contradistinguished from General Anatomy, which treats of the tissues, etc., common to the various organs.

Anat'omy, Sur'ġĭ-cal. [Lat. **Anato'mia Chirur'gica.**] The examination of the various organs, muscles, nerves, and blood-vessels, and of their precise situation and relations to one another, with a special reference to surgery.

Anat'omy, Tran-sçen-den'tal. [Lat. **Anato'mia Transcendenta'lis.**] That branch of Anatomy which treats of the development of parts, their analogies, their primary model or type, and their approximation to, or deviation from, that model. Also termed PHILOSOPHICAL ANATOMY.

Anatomy, Vegetable. See VEGETABLE ANATOMY.

A-nat'ro-pous. [Lat. **Anat'ropus**; from the Gr. *ἀνατρέπω*, to "subvert."] A term applied in Botany to an ovule which is inverted on the stalk, so that the apex points towards the placenta.

An-au'dĭ-a.* [From the Gr. *ἀν*, priv., and *ἀυδή*, "speech."] Privation of voice. See DUMBNESS.

An-a-zo-tu'rĭ-a.* [From the Gr. *ἀν*, priv., *azo'tum*, a Latinized Greek word for "nitrogen," and *οὖρον*, "urine."] A variety of chronic diuresis, in which there is a deficiency of urea, this

being the chief nitrogenous ingredient in the urine. See UREA.

An'ceps.* [From the Lat. *am*, contraction of the Gr. *ἀμφί*, "on both sides," and *ca'pio*, to "take," to "compass."] Ancip'ital; having the sides sharp like a two-edged sword:—a term used in Botany.

An'ĕhĭ-lops.* [From the Gr. *ἀγχι*, "near to," and *ὤψ*, the "eye."] Supposed to be a stage of *fistula lachrymalis* before the inflamed swelling bursts.

An'ĕho-ne.* [From the Gr. *ἀγχω*, to "strangle."] The sensation of strangling, in hysteria.

An-ĕho-ra'lis.* [From the Lat. *an'chora*, an "anchor."] A term applied to the coracoid process of the scapula. See ANCYROIDES.

An-ĕhu'sa.* [From the Gr. *ἀγχω*, to "choke," to "constringe the fauces."] A Linnæan genus of the class *Pentandria*, natural order *Boraginaceæ*.

Anchu'sa Tinc-to'rĭ-a.* [From the Lat. *tin'go, tinc'tum*, to "dye."] Dyers' alkanet; a plant of the order *Boraginaceæ*, the root of which abounds in the red coloring-matter called *alkanet*, used by dyers: it is also used for imparting a deep red to oils, ointments, and plasters.

Anchusin, an'ku-sin. [Lat. **Anchusi'na.**] A red-colored principle obtained from *Anchusa tinctoria*, termed by some *Anchusic Acid*.

Anchylosis.* See ANKYLOSIS.

An-cip'ĭ-tal. Two-edged:—applied to stems. See ANCEPS.

Ancipitius,* an-se-pĭsh'e-ŭs. The same as ANCEPS.

An'con.* [From the Gr. *ἀγκών*, the "elbow."] The elbow; the olecranon process of the ulna.

An-co'nad. A term applied in the same manner as *anconal* used adverbially.

An-co'nal. [Lat. **Ancona'lis.**] Belonging to the *ancon*:—applied by Dr. Barclay, of Edinburgh, in his proposed nomenclature, as meaning towards the *ancon*.

Anconeus,* ang-ko-ne'ŭs or an-ko'ne-ŭs. [From the Lat. *an'con*.] Pertaining to the elbow:—formerly applied to various muscles attached to the olecranon; now limited to one.

An'co-noid. [Lat. **Anconoi'des**; from *an'con*, and the Gr. *εἶδος*, a "form" or "resemblance."] Resembling the *ancon*.

Ancyloglossia.* See ANKYLOGLOSSIA.

Ancylosis.* See ANKYLOSIS.

An-çÿ-ro-i'dēs.* [From the Gr. *ἄγκυρα*, an "anchor," and *εἶδος*, a "form" or "resemblance."] Resembling an anchor. See ANCHORALIS.

An'da Go-me'sĭ-i.* A tree of Brazil, of the natural order *Euphorbiaceæ*. The *oil of Anda*, obtained from its seeds, is cathartic, and the shell of the fruit is astringent.

An-di'ra.* A genus of trees of the natural order *Leguminosæ*, natives of Brazil, the West Indies, etc.

Andi'ra Ar-a-ro'ba.* A large tree of Brazil, from the trunk of which a medicinal substance called *chrysarobin* is obtained.

Andi'ra In-er'mis.* The systematic name of the cabbage-tree, a native of Jamaica. Its bark is cathartic.

An-dra-nat'o-mў. [Lat. **Andranato'mia**; from the Gr. *ανήρ, ἀνδρός*, a "man," and *ἀνατέμνω*, to "cut up."] Dissection of the human body, particularly the male.

An-drœ'cĭ-um.* [From the Gr. *ἀνήρ, ἀνδρός*, a "man," and *οἰκία*, a "house."] A term used to designate the stamens in the aggregate; a collective name for all the stamens of a flower:—in some cases, applied to a single stamen when this comprises all the staminate organs.

Androgynous, an-droj'e-nŭs. [Lat. **Androg'ynus**, or **Androgyn'ius**; from the Gr. *ἀνήρ, ἀνδρός*, a "man," and *γυνή*, a "woman."] Partaking of both sexes; having staminate and pistillate flowers distinct, but in the same cluster or on the same plant.

An'droid. [Lat. **Androi'des**; from the Gr. *ἀνήρ*, a "man," and *εἶδος*, a "form" or "resemblance."] Resembling a man.

An-dro-ma'nĭ-a.* [From the Gr. *ἀνήρ*, a "man" or "male," and *μανία*, "madness."] The same as NYMPHOMANIA or FUROR UTERINUS.

An-drom'e-da Ma-rĭ-a'na.* Stagger-Bush, a shrub of the order *Ericaceæ*, a native of New Jersey, New York, and other States. It bears beautiful flowers. The leaves are said to be poisonous to lambs and calves.

An-dro-pho-no-ma'nĭ-a.* [From the Gr. *ἀνήρ*, a "man," *φόνος*, "murder," and *μανία*, "madness."] Homicidal insanity.

An-droph'o-rus,* or **An'dro-phore.** [From the Gr. *ἀνήρ*, a "man" or "male," and *φέρω*, to "bear."] A column of united stamens, as in a mallow; the support on which stamens are raised.

An-drot'o-mў. [From the Gr. *ἀνήρ*, a "man" or "male," and *τέμνω*, to "cut."] The same as ANDRANATOMY, which see.

An'drum.* [Probably derived from *and*, a Hindoo word signifying "testicle."] A species of hydrocele peculiar to the south of Asia, and described by Kaempfer.

An-eĭ-lop'ter-us.* [From the Gr. *ἀνειλέω*, to "unroll," and *πτέρον*, a "wing."] A term applied to insects with four wings, the two superior of which are flexible; aneilop'terous.

An'e-lec-trot'o-nus.* [From the Gr. *ἀν*, priv., *ἤλεκτρον*, "amber" or "electricity," and *τόνος*, "tone" or "tension."] The condition of a nerve through which a galvanic current passes, characterized by diminished tone or irritability:—the opposite of ELECTROTONUS, which see.

A-nel-la'ta,* or **A-nel'lĭ-dēs.*** [From the Lat. *anel'lus*, a "little ring."] The fifth class of the *Diploneura* or *Helminthoida*, consisting of long, cylindrical, mostly aquatic worms, with red blood, covered with a soft and more or less segmented and annulated skin. The earth-worm belongs to this class. Also called ANNULATA, ANNULIDA, and ANNELIDANS.

Anemia. See ANÆMIA.

Anemic, Anemial. See ANÆMIC, etc.

An-e-mog'ra-phy. [Lat. **Anemogra'phia**; from the Gr. *ἄνεμος*, the "wind," and *γράφω*, to "write."] A description of the winds.

An-e-mol'o-gy. [Lat. **Anemolo'gia**; from the Gr. *ἄνεμος*, the "wind," and *λόγος*, a "discourse."] The doctrine or science of the winds.

An-e-mom'e-ter. [Lat. **Anemom'etrum**; from the Gr. *ἄνεμος*, the "wind," and *μέτρον*, a "measure."] An instrument for measuring the strength or velocity of the wind.

An-e-mom'e-try. [Lat. **Anemome'tria**; from the same.] The art of ascertaining the rapidity and direction of the winds.

An-em'o-ne,* or **An-e-mo'ne.** [Gr. *ἀνεμώνη*, from *ἄνεμος*, the "wind."] A genus of perennial herbaceous plants of the natural order *Ranunculaceæ*. The *Anem'one nemoro'sa*, or Wind-Flower, a native of Europe, Asia, and the United States, is an attractive plant growing in moist woods. It is said to be poisonous.

Anem'one Pa'tens, *var.* **Nut-tal-lĭ-a'na.*** The systematic name of the American Pasque-Flower, a native of Illinois, Wisconsin, etc. It is an officinal plant. See PULSATILLA.

Anem'one Pra-ten'sis.* Meadow Anemone, a native of Europe. It is used in medicine. See PULSATILLA.

Anem'one Pul-sa-til'la.* The Pasque-Flower, a native of Europe. It is cultivated for ornament, and is officinal. It has large violet-purple flowers. See PULSATILLA.

A-nem'o-scope. [Lat. **Anemosco'pium**; from the Gr. *ἄνεμος*, the "wind," and *σκοπέω*, to "examine."] An instrument which shows the direction of the wind; a weather-vane.

An-en-çe-pha'lĭ-a.* [From the Gr. *ἀν*, priv., and *ἐγκέφαλος*, the "brain."] A kind of fœtal monstrosity characterized by absence of the brain.

An-en-çe-phal'ic. [Lat. **Anencephal'icus**; from the same.] Pertaining to a monster-fœtus born without a brain.

An-en-çeph-a-lo-tro'phĭ-a.* [From the Gr. *ἀν*, priv., *ἐγκέφαλος*, the "brain," and *τροφή*, "nourishment."] Atrophy of the brain.

An-en-çeph'a-lous. [Lat. **Anenceph'alus.**] The same as ANENCEPHALIC.

An-en-çeph'a-lus.* A monster-fœtus without brains. See ANENCEPHALIA.

An-en'ter-ous. [Lat. **Anen'terus**; from the Gr. *ἀν*, priv., and *ἔντερον*, an "intestine."] Without intestines.

An-ep-ĭ-thўm'ĭ-a.* [From the Gr. *ἀν*, priv., and *ἐπιθυμία*, "desire."] Loss of any of the natural appetites, as hunger, thirst, etc.

An'e-roid, or **An'ae-roid.** [From the Gr. *ἀν*, priv., and *ἀήρ*, "air."] A defective term, meaning "without air." See next article.

An'eroid or **An'aeroid Ba-rom'e-ter.** An apparatus consisting of a flat, circular box of some white metal, having the upper and under surfaces corrugated in concentric circles. This box, being exhausted of air, is affected by every variation of pressure in the atmosphere, the corrugations on its surface giving it greater elasticity.

An'er-ў-throp'sĭ-a.* [From the Gr. *ἀν*, priv., *ἐρυθρός*, "red," and *ὄψις*, "vision."] Inability to distinguish red; a form of achromatopsia.

An'e-sis.* [From the Gr. *ἀνίημι*, to "relax."] A remission or relaxation of a disease or symptom.

A-ne'thum.* [Gr. *ἄνηθον*.] A genus of herbs of the natural order *Umbelliferæ*. The oil of the *Anethum graveolens* (*Oleum Anethi*) is used as a carminative. The seeds also are occasionally employed for the same purpose.

Ane'thum Fœ-nic'u-lum.* Sweet Fennel. Also called *Fœniculum dulce*, *F. Germanicum*, and *F. vulgare* or *officinale*. See FŒNICULUM.

Ane'thum Grav'e-o-lens,* Ane'thum Vul-ga're.* The common dill plant, a native of Europe. See ANETHUM

An-et'ic. [Lat. **Anet'icus**; from the Gr. *ἄνεσις*, a "remission."] A term applied to soothing medicines.

A-net'ĭ-ca.* Soothing medicines. See ANETIC.

An'e-tus.* [From the Gr. *ἄνεσις*, a "remission."] A term applied by Dr. Good as a generic name for intermittent fever.

An-eū-ral'gĭ-con.* [From the Gr. *α*, priv., *νεῦρον*, a "nerve," and *ἄλγος*, "pain."] An apparatus used by Dr. Downing for applying warmth and sedative vapor for the relief of neuralgia.

An'eū-rism. [Lat. **Aneuris'ma**, *a'tis*; from the Gr. *ἀνευρύνω*, to "enlarge."] (Fr. *Anévrisme*, ă'nă'vrèzm'.) A tumor filled with blood, from the rupture, wound, ulceration, or simple dilatation of an artery:—also applied to dilatation of the heart.

The old distinction was between *true* and *false aneurism*: the former comprehends dilatation without rupture of any of the arterial coats; the latter, dilatation with rupture of some of the coats.

FALSE ANEURISM admits of some distinctions. When the extravasation is diffused, the disease has been termed a *diffused false* aneurism; when circumscribed, a *circumscribed false* aneurism. The French writers term the former *anévrisme faux primitif*, the latter *anévrisme faux consécutif*. See DILATATION.

An'eurism by An-as'to-mo'sis. A mulberry-colored mark in children, caused by an anastomosis of the minute arteries. It sometimes increases in size, and is at length attended with pulsation.

An'eurism of the Heart. Enlargement or dilatation of the heart.

An'eū-riś'mal Nee'dle. A slender instrument for passing a ligature under an artery in order to tie it:—used in operations for aneurism.

Aneuris'mal Va'rix. [Lat. **Va'rix Aneurisma'lis.**] The dilatation and pulsation of a vein from the passing of blood into it from an artery, both, with the fascia, having been wounded in the act of blood-letting, and all the openings having become united into one by adhesive inflammation.

Aneurysm. See ANEURISM.

Anévrisme. See ANEURISM.

An-frac-tu-os'ĭ-ty. [Lat. **Anfractuos'itas**; from *anfrac'tus*, a "winding, bending, or turning" of a way.] A term applied to the furrows or *sulci* between the convolutions of the brain.

An-frac'tu-ous, or **An-frac'tu-ose.** [From the same.] Bent hither and thither, as the anthers of the squash.

An-frac'tus,* plural **An-frac'tus.** The same as ANFRACTUOSITY, which see.

Angeioleucitis.* See ANGIOLEUCITIS.

Angeioma.* See ANGIOMA.

Angeiospermia.* See ANGIOSPERMIA.

An-ġel'ĭ-cạ.* [From the Lat. *an'gelus*, an "angel:" named from its virtues.] A Linnæan genus of the class *Pentandria*, natural order *Umbelliferæ*.

Angel'ica Areh-an-ġel'ĭ-cạ.* The plant called Garden Angelica. It is a native of Europe, and is an aromatic tonic.

Angel'ica A-tro-pur-pu're-ạ.* Masterwort. It is a native of the United States, and is an aromatic tonic.

An-ġĭ-ec'ta-sis.* [From the Gr. *ἀγγεῖον*, a "vessel," and *ἔκτασις*, "extension."] Dilatation of a vessel, as aneurism, varix, etc.

An-ġĭ-i'tis.* [From the Gr. *ἀγγεῖον*, a "vessel."] Piorry's term for inflammation of vessels, particularly of the capillaries.

An-ġi'na.* [From the Gr. *ἀγχω*, to "strangle."] A term applied to diseases attended by a sense of suffocation, or by sore throat.

Angina Maligna.* See CYNANCHE MALIGNA.

Angina Parotidæa.* See PAROTITIS.

Angina Pectoris,* an-jī'na pek'to-ris. Spasm of the chest,—a disease attended by acute pain, sense of suffocation, and syncope. It has been called also *Asth'ma dolorif'icum*, *Sternal'gia*, *Sternodyn'ia syncopa'lis*, *Sternocar'dia*, etc.

Angina Tonsillaris.* See TONSILLITIS.

An-ġĭ-no'sus.* [From the Lat. *angi'na.*] Having angina, or accompanied by angina.

An-ġĭ-o-car'pi.* [From the Gr. *ἀγγεῖον*, a "vessel," and *καρπός*, "fruit."] The name of a tribe or division of *Fungi* which bear their seeds internally.

An-ġĭ-og'ra-phy. [Lat. **Angiogra'phia**; from the Gr. *ἀγγεῖον*, a "vessel," and *γράφω*, to "write."] A description of the vessels of the body.

An-ġĭ-o-leū-çi'tis.* [From the Gr. *ἀγγεῖον*, a "vessel," and *λευκός*, "white."] Literally, "inflammation of the white [or lymphatic] vessels." A diseased condition of the lymphatic vessels.

An-ġĭ-ol'o-ġy. [Lat. **Angiolo'gia**; from the Gr. *ἀγγεῖον*, a "vessel," and *λόγος*, a "discourse."] The doctrine or science of the blood-vessels and absorbents.

An-ġĭ-o'ma.* [From the Gr. *ἀγγεῖον*, a "vessel," and the affix *oma.*] A tumor consisting chiefly of newly-formed blood-vessels.

An-ġĭ-o-sper'ma-tous, or **An-ġeī-o-sper'ma-tous.** [Lat. **Angiosper'matus**; from the Gr. *ἀγγεῖον*, a "vessel," and *σπέρμα*, a "seed."] Having seeds enclosed in a seed-vessel.

Angiospermia,* an-je-o-sper'me-ạ, or **An-ġĭ-o-sper'mæ.*** [From the Gr. *ἀγγεῖον*, a "vessel," and *σπέρμα*, a "seed."] The name of a division or sub-class of exogenous plants, having a closed ovary, which contains the ovules and seeds.

Angiospermous. See ANGIOSPERMATOUS.

An-ġĭ-o-te-lec-ta'sĭ-ạ,* or **An-ġĭ-o-te-lec'ta-sis.*** [From the Gr. *ἀγγεῖον*, a "vessel," *τέλος*, an "extremity," and *ἔκτασις*, "extension."] Extension or dilatation of vessels or their terminating capillaries.

An-ġĭ-ot'o-mỹ. [Lat. **Angioto'mia**; from the Gr. *ἀγγεῖον*, a "vessel," and *τέμνω*, to "cut."] Dissection of the blood-vessels and absorbents.

An'gle. [Lat. **An'gulus.**] The degree of divergence of two lines which meet; the difference of direction of two lines meeting in, or tending to, a point.

An'gle, Facial (fā'shạl). [Lat. **An'gulus Facia'lis.**] The angle included between a straight line from the most prominent part of the forehead to the front edge of the upper jaw, and another from the external auditory foramen to the same point. Some writers attach great importance to the facial angle as a measure of the brain as compared with the rest of the head. If the fore part of the cranium (in which the intellect is supposed to reside) be very full, the facial angle will be large; if that part be very deficient, the facial angle will be proportionally small.

An'gle, Op'tic; An'gle of Vis'ion. The angle formed by two rays of light proceeding from different objects, or from opposite extremities of the same object, and meeting in the pupil.

An'glĭ-cus Su'dor.* [From the Lat. *An'glicus*, "English," and *su'dor*, "sweat."] The English sweating-fever, or the *Ephem'era malig'na* of Burserius, described by Dr. Caius as "a contagious pestilential fever lasting usually a single day;" in other words, it terminated fatally or favorably in twenty-four hours. It made its first appearance in London about the year 1480.

An'go-ne.* [From the Gr. *ἀγχω*, to "choke."] A sense of strangulation and suffocation. More properly written *Anchone.*

Angor Pectoris.* See ANGINA PECTORIS.

Angostura.* See ANGUSTURA.

Anguilliformes,* an-gwil'le-for'mēz. [From the Lat. *anguil'la*, an "eel."] The name of a family of fishes resembling an eel in form.

An-gui'na.* [From the Lat. *an'guis*, a "serpent."] The name of a family of reptiles.

Anguinidæ,* an-gwin'e-dē. [From the Lat. *an'guis*, a "serpent."] The name of a family of the *Ophidia* having for its type the *Anguis*, a genus of serpent-like reptiles having the maxillary teeth compressed and hooked, the palate being unarmed with teeth.

Angular, ang'gu-lar. [From the Lat. *an'gulus*, an "angle."] Having angles or corners; consisting of an angle; measured by an angle, as *angular* motion. The angular motion of a point or body is the same as that of the line or radius-vector joining the moving point to some fixed point.

An'gular Ar'te-rỹ, An'gular Vein. Terminations of the facial artery and vein near the inner angle of the eye.

An'gular Proç'ess-eṡ. The orbitary processes of the frontal bone.

An-gu-la'ris Scap'u-læ.* Another name for the muscle called *levator anguli scapulæ*, the "elevator of the angle of the scapula."

Angulate, ang'gu-lāt. [Lat. **Angula'tus**; from *an'gulus*, an "angle."] Having angles or corners.

An'gu-lous, or **An'gu-lōse.** [Lat. **Angulo'sus**; from *an'gulus*, an "angle."] Full of angles.

An-gus-tĭ-fo'lĭ-āte, or **An-gus-tĭ-fo'lĭ-ous.** [Lat. **Angustifo'lius**; from *angus'tus*, "narrow," and *fo'lium*, a "leaf."] Having narrow leaves.

An-gus-tĭ-sep'tus.* [From the Lat. *angus'tus*, "narrow," and *sep'tum*, a "partition."] Having narrow partitions.

An-gus-tu'ra.* The Pharmacopœial name (U.S. 1870) for the bark of *Galipe'a officina'lis*.

Angustura (an-gŭs-too'ra, written also **Angostura**) **Bark.** [From *Angostu'ra*, the name of a town of Venezuela.] The bark of *Galipe'a cuspa'ria*; also called *Cuspa'ria febrif'uga*, or *Galipe'a officina'lis* (U.S. 1870). See preceding article.

Angusturin, an-gŭs-too'rin, or **An-gos-tu'rin.** A neutral principle obtained by submitting the alcoholic tincture of Angustura bark to spontaneous evaporation.

An-he-lā'tion. [Lat. **Anhela'tio, o'nis**; from *anhe'lo, anhela'tum*, to "breathe short."] Shortness of breath:—sometimes used as a synonyme of asthma.

Anhelitus.* The same as ANHELATION.

An-hȳ'drīde. [From the Latinized Greek *anhy'drus.*] A chemical term applied to a group of bodies which represent acids deprived of water. They are anhydrous acids or oxides. See ANHYDROUS.

An-hȳ'drīte. [From the Latinized Greek *anhy'drus* (see next article), and the Gr. *λίθος*, a "stone."] Anhydrous sulphate of lime; a mineral.

An-hȳ'drous. [Lat. **Anhy'drus**; from the Gr. *ἀν*, priv., and *ὕδωρ*, "water."] Without water.

An-ĭ-dro'sis.* [From the Gr. *ἀν*, priv., and *ἱδρόω*, to "sweat."] Diminution or suppression of the perspiration.

Anil. See INDIGO.

An-il'ic or **In-dĭ-got'ic Aç'id.** An acid formed by the action of nitric acid on indigo.

An'ĭ-līne. [From *an'il*, "indigo."] An oily liquid formed by the action of caustic potash on indigo, and also obtained from coal-tar and benzol. It is very poisonous. Large quantities of aniline are manufactured and used for the production of various brilliant and beautiful colors on silk, woollen, and cotton tissues.

An'ĭ-ma.* [From the Gr. *ἄνεμος*, "wind," "breath," or "spirit."] Anciently, any simple volatile substance; also, the purest part of any substance. The vital principle of animals or vegetables.

An'ima Ar-tic-u-lo'rum.* Literally, "life of the limbs." A name given to colchicum on account of its medicinal virtues in rheumatism and gout. It formed the basis of many popular remedies against gout, such as the *pulvis arthriticus Turneri* and the Vienna gout decoction.

An'ĭ-mal.* [From the Lat. *an'ima*, the "spirit," or "life."] An organized body, endowed with life, sensation, and voluntary motion, and depending on organic matter for nutrition; an organism whose essential constituent parts are formed of anatomical elements having for proximate principles nitrogenous, organic substances. A difference between animals and vegetables is that the latter feed on mineral substance exclusively, but animals cannot live on mineral or inorganic food.

An'imal. [Lat. **Anima'lis**; from *an'ima*, "life."] Having life; pertaining to life.

An'imal Aç'id. [Lat. **Aç'idum Anima'le.**] An acid existing in animal bodies, or which can be obtained from them, as *Allantoic, Ambreic, Butyric*, etc.

Animal Charcoal, or **Animal Carbon.** See CARBON, ANIMAL

An'imal E-con'o-mȳ. [Lat. **Œcono'mia Anima'lis.**] The system of all matters relating to animal life; physiology. See ECONOMY.

Animal Heat. See CALOR ANIMALIS.

Animal Jelly. See GELATIN.

An'imal King'dom. [Lat. **Reg'num Anima'le.**] (Fr. *Règne animal*, rĕñ ă'ne'mȧl'.) A term denoting, collectively, all those beings possessing animal life, the study of which is called Zoology. See ZOOLOGY.

Animal Magnetism. See MESMERISM.

An'imal Me-chan'ics. That branch of physiology which investigates the laws of equilibrium and motion in the animal body.

Animal Temperature. See CALOR ANIMALIS.

Animalcula.* See next article.

An-ĭ-mal'cule. [Lat. **Animal'culum** (plural **Animal'cula**).] A microscopic animal. These animals doubtless exist in the atmosphere, and in all rivers or ponds. Those best known are—

1. *Infusory Animalcules* (*Animal'cula Infuso'ria*, often called simply *Infusoria*). Observed in nearly all fluids impregnated with any animal or vegetable substance.

2. *Spermatic Animalcules.* Supposed to have been discovered in the semen. See SPERMATOZOA.

An-ĭ-mal'cu-lum,* plural **An-ĭ-mal'cu-la.** [The diminutive of the Lat. *an'imal.*] Literally, a "minute animal." A creature whose true figure cannot be ascertained without a magnifying glass. See ANIMALCULE.

An-ĭ-mal'ĭ-tȳ. [Lat. **Animal'itas, a'tis.**] The assemblage of faculties that distinguish animal organic matter; vital activity of an animal body considered as unity.

An-ĭ-mal-ĭ-zā'tion. [Lat. **Animaliza'tio, o'nis**; from *an'imal.*] The process by which food is assimilated to the various substances of the body.

An-ĭ-mā'tion. [Lat. **Anima'tio, o'nis**; from *an'imo, anima'tum*, to "give life."] The effect

produced by the *vis vitæ* ("power of life"), by which life is begun and maintained; the state of being enlivened; the manifestation of the acts which characterize animals.

Animation, Suspended. See ASPHYXIA.

An'ĭ-me. A resinous substance, improperly called *gum animé*, said to be obtained from the *Hymenæa Courbaril*, and used in perfumes, varnishes, and certain plasters. It resembles copal in appearance, and is often sold under that name.

An'ĭ-mists. [From the Lat. *an'ima*, the "soul."] Those physiologists who refer all the phenomena of the living body to the direct agency of the soul or a principle distinct from the body.

An'ĭ-on.* [Gr. *ἀνίων*, the present participle of *ἀνειμι*, to "ascend."] A term applied by Dr. Faraday to the body which passes to the positive pole—to the *anode* of the decomposing body—as it is separated by electricity. See KATION.

An-i-rid'ĭ-a.* [From the Gr. *ἀν*, priv., and *ἶρις, ἰριδος*, a "rainbow," also the "iris of the eye."] The condition of an eye in which the iris is wanting.

An'ĭ-sate. [Lat. **Anisa'tus.**] Having the odor or taste of anise-seed.

Anise, an'iss. The PIMPINELLA ANISUM, which see.

An'ĭ-seed, or **An'ise-seed.** The seeds of the *Pimpinel'la ani'sum*, much used as a carminative.

Anisette de Bourdeaux, ăn'nĕ'zet' dẹh boor'dō'. A liqueur made by distilling anise, fennel, and coriander seeds, previously steeped in brandy, with sugar and one-half water.

Anisi Semina.* See ANISEED.

An-ĭ-so-pet'a-lous. [Lat. **Anisopet'alus**; from the Gr. *ἀνισος*, "unequal," and the Lat. *pet'alum*, a "petal."] Having unequal petals.

An-ĭ-so-phyl'lous. [Lat. **Anisophyl'lus**; from the Gr. *ἀνισος*, "unequal," and *φύλλον*, a "leaf."] Having unequal leaves.

An-ĭ-so-stem'o-nous. [Lat. **Anisostem'onis**; from the Gr. *ἀνισος*, "unequal," and *στήμον*, a "stamen."] Having unequal stamens.

Anisotropous. See ISOTROPOUS.

A-ni'sum.* [From the Gr. *ἀνίημι*, to "emit."] "Anise." The Pharmacopœial name (U.S. 1870, 1880) for the fruit (or seeds) of *Pimpinel'la ani'sum*. Anise is an excellent carminative. It is much used to impart a flavor to liquors. See ANISEED.

An'ker. A liquid measure used at Amsterdam, containing about thirty-two gallons English wine-measure.

An'kle Clo'nus. An irregular convulsive movement affecting the ankle. See CLONUS.

An-kŭ-lo-bleph'a-ron.* [From the Gr. *ἀγκύλη*, a "noose," and *βλέφαρον*, the "eyelid."] A preternatural union of the two eyelids.

An-kŭ-lo-glos'sĭ-a,* or **An-cŭ-lo-glos'sĭ-a.*** [From the Gr. *ἀγκύλη*, a "noose" or "bridle," and *γλώσσα*, the "tongue."] A natural defect termed *tongue-tie*.

An-kŭ-lo'sis,* or **An-chŭ-lo'sis.*** [From the Gr. *ἀγκύλη*, a "clasp."] The consolidation of the articulating extremities of two or more bones that previously formed a natural joint; stiff joint.

An-neal'ing. [From the Saxon *on-ælan*, to "set on fire," to "make hot," to "burn."] The process by which substances naturally hard and brittle are rendered tough. It consists in raising the substance (glass or metal) to be annealed to a high temperature, and then causing it to cool very slowly.

Annelidæ.* See ANELLATA.

An-nex'. (Fr. *Annexe*, ă'nĕx'.) An appendage; something annexed. In Anatomy, anything that depends on a principal organ.

An-not'ĭ-nus.* [From the Lat. *an'nus*, a "year."] In Botany, a year old:—also applied to leaves that are renewed every year.

An-not'to. [Derivation uncertain.] A kind of reddish dye, obtained from the *Bixa Orellana* or *Orleana*; the *Terra Orleana* of the shops.

An'nu-al. [From the Lat. *an'nus*, a "year."] A term applied to plants that live but one year, or less. They are all herbaceous, and are raised from the seed.

An'nu-ens,* plural **An-nu-en'tēs.** [From the Lat. *an'nuo*, to "nod."] A term applied to the muscles called *recti antici capitis*, because they are employed in nodding the head.

An'nu-lar. [From the Lat. *an'nulus*, a "ring."] In the form of a ring.

Annular Bone. See OS ANNULARE.

An'nu-lar Car'tĭ-lage. [Lat. **Cartila'go Annula'ris.**] The cricoid cartilage.

An'nular Lig'a-ment. [Lat. **Ligamen'tum Annula're.**] A strong ligament encircling the ankle; also one encircling the wrist.

An'nular Proç'ess, An'nular Pro-tu'berance. [Lat. **Proces'sus Annula'ris, Protuberan'tia Annula'ris.**] The Pons Varolii:—also called *Tuber annulare*, and *Corpus annulare*. See PONS VAROLII.

An'nular Vein. [Lat. **Annula'ris Ve'na.**] The vein between the little and ring fingers.

An-nu-la'tus.* [From the Lat. *an'nulus*, a "ring."] Having rings; an'nulate; marked by rings, or furnished with an *annulus*:—applied in the neuter plural (*Annula'ta*) to a class of worm-like animals. See ANELLATA.

Annulida.* The same as ANELLATA, which see.

An'nu-lus.* A Latin word, signifying a "ring," forming a part of a number of anatomical names. In Botany, an elastic ring between the rim of the capsule and the lid of mosses.

Annulus Abdominis.* See ABDOMINAL RING.

An'nulus Cil-ĭ-a'ris.* The ciliary circle or ligament, a white ring forming the bond of union between the choroid coat of the eye, the iris, and the corona ciliaris. It is the *annulus gangliformis tunicæ choroïdeæ* of Soemmering.

An'nulus Lig-a-men-to'sus.* The ciliary circle or ligament. See ANNULUS CILIARIS.

An'nulus O-va'lis.* The rounded margin of the septum which occupies the place of the foramen ovale in the fœtus. It is also called the *an'nulus foram'inis*.

An'ode. [From the Gr. *ἀν* for *ἀνά*, "up" or "into," and *ὁδός*, a "way."] Literally, the "way up or into." In galvanic electricity, the positive pole, through which the current enters a nerve or other substance. The term is also applied to that part of the surface of the decomposing body into which the electric current "ascends" or enters.

A-nod'ic. [Lat. **Anod'icus**; from the same.] Used by some writers in the same sense as ANASTALTIC.

An-o-don'tĭ-a.* [From the Gr. *ἀν*, priv., and *ὀδούς, ὀδόντος*, a "tooth."] Congenital want of teeth.

An'o-dyne. [Lat. **Anod'ynus**; from the Gr. *ἀν*, priv., and *ὀδύνη*, "pain."] A term applied to a medicine which assuages pain; antal'gic. See SOPIENS. Anodynes include opium, morphia, lupulin, bromide of potassium, atropia, ether, conia, etc.

An-o-dȳn'ĭ-a.* [From the same.] Literally, "absence of pain." Applied to certain diseases in which absence of pain is especially an unfavorable symptom, as, for example, in gangrene.

A-nom'a-lĭ-flo'rous. [Lat. **Anomaliflo'rus**; from *anom'alus*, "irregular," and *flos*, a "flower."] Having anomalous flowers.

A-nom'a-lĭ-pēde. [Lat. **Anom'alipes, p'edis**; from *anom'alus*, "irregular," and *pes*, a "foot."] Having anomalous feet.

A-nom'a-lo-çeph'a-lus.* [From the Gr. *ἀνώμαλος*, "irregular," and *κεφαλή*, the "head."] One whose head is deformed. See ANOMALOUS.

A-nom'a-lous. [Lat. **Anom'alus**; from the Gr. *ἀν*, priv., and *ὁμαλός*, "level," "even," "regular."] Irregular; not according to rule or system; contrary to the natural order:—applied to diseases or symptoms out of the regular course.

A-nom'a-lў. [From the same.] Irregularity; deviation from rule.

A-nom-o-çeph'a-lus.* [From the Gr. *α*, priv., *νομός*, a "law" or "rule," and *κεφαλή*, the "head."] One whose head is deformed:—the same as ANOMALOCEPHALUS.

An-om'pha-lous. [Lat. **Anom'phalus**; from the Gr. *ἀν*, priv., and *ὀμφαλός*, the "navel."] Having no navel.

An-o'na.* A genus of exogenous trees, of the natural order *Anonaceæ*, including the *Ano'na squamo'sa*, which bears the custard-apple, and the *Ano'na Cherimo'lia* (or *tripet'ala*), a native of South America, which produces a delicious fruit called *cherimoyer* or *chirimoya*.

An-o-na'ce-æ.* A natural order of exogenous trees or shrubs, the distinctive characters of which are trimerous, polypetalous flowers and a ruminated albumen. They are mostly tropical and aromatic. The order comprises many species, one of which, the *Anona Cherimolia*, bears an excellent fruit. The only genus of this order found in the United States is *Asimina* (Papaw).

An-o-nўch'ĭ-a.* [From the Gr. *ἀν*, priv., and *ὄνυξ*, a "nail."] A congenital defect, consisting in an absence of the nails.

A-non'ў-mus.* [From the Gr. *ἀν*, priv., and *ὄνυμα*, a "name."] Literally, "nameless." A term formerly applied to the cricoid muscle.

An-oph-thăl'mĭ-a.* [From the Gr. *ἀν*, priv., and *ὀφθαλμός*, the "eye."] The condition of being without eyes.

An'o-phўtes. [From the Gr. *ἄνω*, "above," and *φυτόν*, a "plant."] Superior cellular plants,—a class of cryptogamous plants composed of cellular tissue only, as mosses. They usually have distinct stems and foliage.

An-op-lo-the'rĭ-um.* [From the Gr. *ἀν*, priv., *ὅπλον*, "armor," and *θήριον*, a "beast."] A fossil animal found in the Paris tertiaries, destitute of horns, tusks, and claws.

An-op'sĭ-a.* [From the Gr. *ἀν*, priv., and *ὄφις*, "vision."] Defect of sight.

An-or'chous. [Lat. **Anor'chus**; from the Gr. *ἀν*, priv., and *ὄρχις*, a "testicle."] Having no testicles.

An-o-rex'ĭ-a.* [From the Gr. *ἀν*, priv., and *ὄρεξις*, "desire," "appetite."] Want of appetite; an'orexy. A genus of the order *Dysorexiæ*, class *Locales*, of Cullen's nosology.

Anormal. See ABNORMAL.

An-or-tho'pĭ-a.* [From the Gr. *ἀν*, priv., *ὀρθός*, "right" or "straight," and *ὄψις*, "vision."] A natural defect of sight, in which one is unable to detect a want of symmetry or proportion.

An-ōs'mĭ-a.* [From the Gr. *ἀν*, priv., and *ὀζω*, to "smell."] Loss of the sense of smell.

An-os-phre'sĭ-a.* [From the Gr. *ἀν*, priv., and *ὄσφρησις*, the "sense of smell."] Loss or absence of the sense of smell.

An-o'tus.* [From the Gr. *ἀν*, priv., and *οὖς, ὠτός*, the "ear."] Without ears.

An'ser.* A goose. In the plural (*An'ser-ēs*), it is applied to an order of birds including all the web-footed water-fowl.

An-ser-i'nus.* [From the Lat. *an'ser*, a "goose."] Pertaining to a goose; an'serine. See PES ANSERINUS.

Ant-aç'id. [From the Gr. *ἀντί*, "against," and the Lat. *aç'idum*, an "acid."] Destroying or counteracting acidity, by combining with and neutralizing it.

Ant-ac'rid. [Lat. **Antac'ridus**; from the Gr. *ἀντί*, "against," and the Lat. *ac'ridus*, "acrid."] Correcting an acrid condition of the secretions.

Ant-ag'o-nism. [Lat. **Antagonis'mus**; from the Gr. *ἀντί*, "against," and *ἀγωνίζω*, to "strive."] The action of muscles opposed to each other in their office.

Ant-ag'o-nist. [Lat. **Antagonis'ta**; from the same.] A term applied to muscles whose function is opposed to that of others, as abductors and adductors, extensors and flexors, etc.

Ant-ăl'gic. [Lat. **Antal'gicus**; from the Gr. *ἀντί*, "against," and *ἄλγος*, "pain."] The same as ANODYNE.

Ant-al'ka-lĭne. [Lat. **Antalkali'nus**; from the Gr. *ἀντί*, "against," and the Lat. *al'kali*.] Neutralizing alkalies.

Antaphrodisiac, ant'af-ro-dizh'e-ak, **Antaph'ro-dit'ic.** [Lat. **Antaphrodisi'acus, Antaphrodit'icus**; from the Gr. *ἀντί*, "against," and *Ἀφροδίτη*, the name of Venus, also "venereal

desire."] Tending to subdue amorous desire; anti-venereal.

Ant-arc'tic. [Lat. **Antarc'ticus**; from the Gr. *ἀντί*, "against," and *ἀρκτικός*, "pertaining to the north."] Opposite the north; southern.

Antarc'tic Cir'cle. A circle extending 23½ degrees from the South Pole, and marking that portion of the southern hemisphere within which at the winter solstice the sun does not set.

Ant-ar-thrit'ic. [Lat. **Antarthrit'icus**; from the Gr. *ἀντί*, "against," and *ἀρθρῖτις*, "gout."] Relieving gout.

Ant-asth-mat'ic. [Lat. **Antasthmat'icus**; from the Gr. *ἀντί*, "against," and *ἆσθμα*, "gasping."] Relieving asthma.

Ant-a-tro'phic. [Lat. **Antatroph'icus**; from the Gr. *αντί*, "against," and *ἀτροφία*, "atrophy," "defect of aliment."] Overcoming atrophy.

An-te-ce'dent. [Lat. **Antece'dens**; from *antece'do*, to "go before."] That which precedes; previous course or conduct. A patient's antecedents are his habits, his regimen, or his former diseases.

Anteflexio,* an-te-flek'she-o. [From the Lat. *an'te*, "before," and *flec'to, flex'um*, to "bend."] A bending forward; anteflexion.

Anteflex'io U'ter-i.* "Anteflexion of the Womb." Displacement of the uterus, the fundus sinking forward between its cervix and the neck of the bladder.

An-ten'na,* plural **An-ten'næ.** [A Latin term signifying a "sail-yard," and applied to the horns of insects, because, extending on each side of the head, they are supposed to resemble the yard-arms projecting on each side of the mast of a ship.] Certain articulated filaments inserted in the heads of the *Crustacea* and *Insecta*, peculiarly devoted to a delicate sense of touch. They are popularly called *horns*, or *feelers*.

An-ten-na'rĭ-a.* Immortelle. A genus of plants of the Linnæan class *Syngenesia*, natural order *Compositæ*. It comprises several species, natives of Europe and the United States. They are cultivated for their flowers, which are unfading and are used for decorating tombs, etc.

Antenna'ria Mar-ga-rĭ-ta'ce-a.* Pearly Everlasting, a plant indigenous in the Northern United States. Some botanists include it in the genus *Gnaphalium*. It is a favorite garden-plant in England.

An-ten'nāte. [Lat. **Antenna'tus.**] Having antennæ.

An-ten-nif'er-ous. [Lat. **Antennif'erus**; from *anten'na*, and *fe'ro*, to "bear."] Bearing antennæ.

An-ten'nĭ-form. [Lat. **Antennifor'mis**; from *anten'na.*] Having the form of antennæ; resembling antennæ.

An-te-pec'tus.* [From the Lat. *an'te*, "before," and *pec'tus*, the "breast."] The anterior segment of the *pectus*, or inferior surface of the trunk, in insects.

Ant-eph-ĭ-ăl'tic. [Lat. **Antephial'ticus**; from the Gr. *ἀντί*, "against," and *ἐφιάλτης*, "nightmare."] Efficacious against nightmare.

Ant-ep-ĭ-lep'tic. [Lat. **Antepilep'ticus**; from the Gr. *ἀντί*, "against," and *ἐπιλεψία*, "epilepsy."] Efficacious against epilepsy.

An-te'ri-or.* Before, as applied to muscles and nerves. In Botany, applied to that part of a flower next to the bract, or farthest from the axis of inflorescence.

An-te-ster'num.* [From the Lat. *an'te*, "before," and *ster'num*, the "breast-bone."] In Entomology, the first or anterior division of the sternum.

Anteversio,* an-te-ver'she-o. [From the Lat. *an'te*, "before," and *ver'to, ver'sum*, to "turn."] A turning forward; anteversion.

Antever'sio U'ter-i.* "Anteversion of the Womb." Displacement of the uterus, the fundus being thrown forward, so as to compress the neck of the bladder, the mouth being turned to the sacrum.

Ant-hæm-or-rhag'ic, or **Ant-hem-or-rhag'ic.** [Lat. **Anthæmorrhag'icus**; from the Gr. *ἀντί*, "against," and *αἱμορραγία*, "hemorrhage."] Checking hemorrhage.

Ant'he-lix.* [From the Gr. *ἀντί*, "against," "opposite to," and *ἕλιξ*, the "helix."] The inner circular ridge of the external ear.

An-thel-min'tic. [Lat. **Anthelmin'ticus**; from the Gr. *ἀντί*, "against," and *ἕλμινς, ἕλμινθος*, a "worm."] Expelling worms from the intestinal canal; vermifuge.

An'the-mis.* [From the Gr. *ἀνθέω*, to "flower."] Chamomile. A Linnæan genus of the class *Syngenesia*, natural order *Compositæ*. The Pharmacopœial name (U.S. 1870, 1880) for the flower-heads of *Anthemis nobilis*, collected from cultivated plants.

An'themis Nob'ĭ-lis.* The herb which yields chamomile flowers:—called also CHAMÆME'LUM, CHAMÆME'LUM NO'BILE, and CHAMOMIL'LA ROMA'NA. It is a native of Europe. Chamomile is a mild stomachic bitter, well adapted in small doses as a remedy for weakness of digestion.

An'themis Pyr'e-thrum.* The pellitory of Spain. The root of this plant, called *Pyrethrum* by the Pharmacopœias, is a powerful sialagogue. On account of its acrid and stimulating properties, it is used as a masticatory in toothache, rheumatism of the face, etc.

An'ther. [Lat. **Anthe'ra**; from the Gr. *ἄνθος*, a "flower."] (Fr. *Anthère*, ŏN'tair'.) The part of the flower which contains the pollen, or male fecundating principle. It is the head and essential part of the stamen.

An-ther-id'ĭ-um.* [Diminutive of the Lat. **Anthe'ra.**] The connate anther-like mass in the flowers of the *Asclepias*:—applied in the nominative plural (*Antherid'ia*) to collections of organs which are found in cryptogamous plants and are analogous or equivalent to anthers.

An-ther-if'er-ous. [Lat. **Antherif'erus**; from *an'ther*, and *fe'ro*, to "bear."] Bearing anthers.

An-the'sis.* [From the Gr. *ἀνθέω*, to "flower."] The production of flowers; the period or the act of the expansion of a flower.

Anthiarin, an-the'a-rin. The active principle of a gum resin obtained from the *Anthiaris toxicaria.*

An-thĭ-a'ris (or **An-tĭ-a'ris**) **Tox-ĭ-ca'-rĭ-a.*** The scientific name of the UPAS-TREE, which see.

An-tho-car'pous. [Lat. **Anthocar'pus;** from the Gr. *ἄνθος,* a "flower," and *καρπός,* "fruit."] A term applied to multiple fruits,—*i.e.,* masses of fruits resulting from several or many blossoms aggregated into one body, as the mulberry and pine-apple.

An-tho-çy'a-num.* [From the Gr. *ἄνθος,* a "flower," and *κύανος,* "blue."] A substance obtained from the blue of flowers.

An-tho'dĭ-um.* [From the Gr. *ἄνθος,* a "flower."] A kind of calyx, common to many flowers.—(MAYNE.) Also a head of flowers of the order *Compositæ.*

An-thog'ra-phy. [Lat. **Anthogra'phia;** from the Gr. *ἄνθος,* a "flower," and *γράφω,* to "write."] A description of flowers.

An'thoid. [Lat. **Anthoi'des;** from the Gr. *ἄνθος,* a "flower," and *εἶδος,* a "form" or "resemblance."] Resembling a flower.

An'tho-līte. [Lat. **Antholi'tes;** from the Gr. *ἄνθος,* a "flower," and *λίθος,* a "stone."] The fossil impression of a flower.

An-thol'o-gy. [Lat. **Antholo'gia;** from the Gr. *ἄνθος,* a "flower," and *λόγος,* a "discourse."] A treatise on flowers, their nature, qualities, appearance, etc. Also, in classic literature, a collection of epigrams and other beautiful thoughts and sentences.

An'tho-ny's Fire, Saint. [Lat. **Ig'nis Sanc'ti Anto'nii.**] Another name for ERYSIPELAS, which see.

An-thoph'ĭ-lus.* [From the Gr. *ἄνθος,* a "flower," and *φίλος,* a "lover."] Literally, "loving flowers." A term applied in the neuter plural (*Anthoph'ila*) to a family of hymenopterous insects; anthoph'ilous.

An-tho-pho'rĭ-um,* An-thoph'o-rum.* [From the Gr. *ἄνθος,* a "flower," and *φέρω,* to "bear."] A prolongation of the receptacle, bearing petals, stamen, and pistil; an an'thophore.

An-thox-an'thin. [Lat. **Anthoxanthi'na;** from the Gr. *ἄνθος,* a "flower," and *ξανθός,* "yellow."] A substance obtained from yellow flowers; the yellow coloring-matter of plants.

An'thra-çēne. [From the Gr. *ἄνθραξ,* a "coal."] A hydro-carbon which is obtained from coal-tar and is a considerable article of commerce. It is used in the manufacture of artificial alizarine and of beautiful dyes called anthracene colors.

Anthracia.* [From the Gr. *ἄνθραξ,* a "coal."] See FRAMBŒSIA.

An-thra'cĭ-a Ru'bu-la.* Dr. Good's term for the disease called "the yaws." See FRAMBŒSIA.

An-thra-cif'er-ous. [Lat. **Anthracif'erus;** from *an'thrax,* "coal" or "carbon," and *fe'ro,* to "bear."] Coal-bearing, or yielding anthracite:—applied to certain geological strata.

An'thra-cīte. [Lat. **Anthraci'tes;** from the Gr. *ἄνθραξ,* a "coal," and *λίθος,* a "stone."] The hardest variety of stone-coal, burning without smoke and with little effluvia. It consists, when pure, almost exclusively of carbon. It produces an intense and steady heat, and is the best of all fuels for metallurgic purposes and for combustion in cities.

Anthracodes.* The same as ANTHRACOIDES. See ANTHRACOID.

An'thra-coid. [Lat. **Anthracoi'des;** from the Gr. *ἄνθραξ,* a "coal," and *εἶδος,* a "form" or "resemblance."] Resembling carbuncle; having the nature of carbuncle.

An-thra-cok'a-lĭ. The name given to a remedy employed in certain herpetic affections. The *simple* preparation consists of a levigated coal-dust and pure potassa; the *sulphurated* preparation is composed of sulphur, levigated coal-dust, and caustic potassa.

An-thra-co-the'rĭ-um.* [From the Gr. *ἄνθραξ,* "coal," and *θηρίον,* an "animal."] A fossil animal found in coal and in sandstone.

An'thrax, a*cis.* [Lat. **Carbun'culus,** a "little coal;" Gr. *ἄνθραξ,* a "coal."] A carbuncle; a hard, circumscribed, inflammatory dark-red or purple tumor, accompanied by a sense of burning, resembling a boil, but having no central core.

An-thro-poġ'e-ny. [Lat. **Anthropoge'nia;** from the Gr. *ἄνθρωπος,* a "man," and *γένεσις,* "generation."] The generation of man.

An-thro-pog'ra-phy. [Lat. **Anthropogra'phia;** from the Gr. *ἄνθρωπος,* a "man," and *γράφω,* to "write."] A history or treatise on the structure of man.

An'thro-poid. [Lat. **Anthropoi'des;** from the Gr. *ἄνθρωπος,* a "man," and *εἶδος,* a "form" or "resemblance."] Resembling man:—applied to certain apes and monkeys.

An-throp'o-līte. [Lat. **Anthropoli'tes;** from the Gr. *ἄνθρωπος,* a "man," and *λίθος,* a "stone."] A petrifaction of human bones.

An-thro-pol'o-ġy. [Lat. **Anthropolo'gia;** from the Gr. *ἄνθρωπος,* a "man," and *λόγος,* a "discourse."] A treatise on man; a description of man; also the science which treats of the physical and intellectual nature of man.

An-thro-pom'e-try. [Lat. **Anthropome'tria;** from the Gr. *ἄνθρωπος,* a "man," and *μέτρον,* a "measure."] Measurement of the dimensions of man.

An-thro-po-mor'phous. [Lat. **Anthropomor'phus;** from the Gr. *ἄνθρωπος,* a "man," and *μορφή,* "shape."] Formed like man; man-shaped; resembling man in character.

An-thro-poph'a-gus,* plural **An-thropoph'a-ġi.** [From the Gr. *ἄνθρωπος,* a "man," and *φάγω,* to "eat."] One who eats human flesh; a cannibal.

An-thro-poph'a-ġy. [Lat. **Anthropopha'gia;** from the same.] The eating of human flesh.

An-thro-po-pho'bĭ-a.* [From the Gr. *ἄνθρωπος,* "man" or "mankind," and *φόβος,* "fear."] A peculiar form of mental disease in which there is a morbid dread of society.

An-thro-pos'co-py. [Lat. **Anthroposco'pia;** from the Gr. *ἄνθρωπος,* a "man," and *σκοπέω,*

to "observe."] The inspection of the lineaments or features of man; physiognomy.

An-thro-po-som'a-tol'o-ġў. [Lat. **Anthroposomatolo'gia**; from the Gr. *ἀνθρωπος*, a "man," *σῶμα*, the "body," and *λόγος*, a "discourse."] A description of the structure of the human body.

An-thro-pos'o-phў. [Lat. **Anthroposo'phia**; from the Gr. *ἀνθρωπος*, a "man," and *σοφία*, "wisdom."] Knowledge of the nature and general character of man.

An-thro-pot'o-mў. [Lat. **Anthropoto'mia**; from the Gr. *ἀνθρωπος*, a "man," and *τέμνω*, to "cut."] The dissecting of man; human anatomy.

Ant-hўp-not'ic. [Lat. **Anthypnot'icus**; from the Gr. *ἀντί*, "against," and *ὕπνος*, "sleep."] Hindering sleep.

Ant-hўp-o-chon'drĭ-ac. [Lat. **Anthypochondri'acus**; from the Gr. *ἀντί*, "against," and *ὑποχονδριακός*, "hypochondriac."] Overcoming hypochondriasis.

Ant-hўs-ter'ic. [Lat. **Anthyster'icus**; from the Gr. *ἀντί*, "against," and the Lat. *hyste'ria*.] Overcoming hysteria, or a remedy for hysteria.

Anti-. [Gr. *ἀντί*.] A Latinized Greek prefix signifying "against," "opposed to," or "corrective of;" also "instead of."

An-ti'ą-dēs.* [The plural of the Gr. *ἀντιάς*, *ἀντιάδος*, a "tonsil."] Another name for the tonsils.

An-tĭ-ą-di'tis.* [From the Gr. *ἀντιάς*, *ἀντιάδος*, a "tonsil."] Inflammation of the tonsils.

Antiaphrodisiac. See ANTAPHRODISIAC.

Antiaris.* See ANTHIARIS.

Antiarthritic. See ANTARTHRITIC.

An'tĭ-as.* The singular of ANTIADES, which see.

Antiasthmatic. See ANTASTHMATIC.

Antiatrophic. See ANTATROPHIC.

Antibrachial, an-te-brā'ke-al. [Lat. **Antibrachia'lis.**] Belonging to the *antibrachium*, or forearm.

An-tĭ-bra'ċhĭ-um.* [From the Gr. *ἀντί*, "against," and the Lat. *bra'chium*, the "arm."] The forearm, as opposed to, when bent upon, the proper arm.

An-tĭ-ca-ċhec'tic. [Lat. **Anticachec'ticus**; from the Gr. *ἀντί*, "against," and the Lat. *cachex'ia*, a "bad habit of body."] Opposed to cachectic diseases. See CACHEXIA.

An-tĭ-car'dĭ-um.* [From the Gr. *ἀντί*, "against," and *καρδία*, the "heart."] The *scrobic'ulus cor'dis*, or pit of the stomach.

Anticheir,* an'te-kīr. [From the Gr. *ἀντί*, "against," and *χείρ*, the "hand."] Opposed to the hand:—a term sometimes applied to the thumb.

An-tiç'ĭ-pāt-ing. [From the Lat. *ante*, "before," and *ca'pio*, to "take."] A term applied to a periodical phenomenon recurring at progressively shorter intervals.

An-tĭ-clĭ'nal. [Lat. **Anticlina'lis**; from the Gr. *ἀντί*, "against," and *κλίνω*, to "bend," to "incline."] Sloping in opposite directions:—applied in Geology to a ridge made of strata which slope in opposite directions. An *anticlinal axis* is the axial or ridge line of such a ridge.

An-tĭ-din'ic. [Lat. **Antidin'icus**; from the Gr. *ἀντί*, "against," and *δῖνος*, "giddiness."] Relieving from giddiness or vertigo.

An'tĭ-do-tal. Relating to an antidote; possessed of the power of an antidote.

An'tĭ-dote. [Lat. **Antid'otum**, or **Antid'otus**; from the Gr. *ἀντί*, "against," and *δίδωμι*, to "give."] A medicine given to counteract the effects of poison.

Antidotus.* See ANTIDOTE.

An-tĭ-dўs-en-tĕr'ic. [Lat. **Antidysenter'icus**; from the Gr. *ἀντί*, "against," and *δυσεντερία*, "dysentery."] Preventing or curing dysentery.

Antiephialtic. See ANTEPHIALTIC.

Antiepileptic. See ANTEPILEPTIC.

An-tĭ-feb'rĭle. [Lat. **Antifebri'lis**; from *anti*, "against," and *fe'bris*, a "fever."] Subduing fever; febrifuge.

An-tĭ-ga-lac'tic. [Lat. **Antigalac'ticus**; from the Gr. *ἀντί*, "against," and *γάλα*, "milk."] Lessening the secretion of milk.

An-tĭ-hec'tic. [Lat. **Antihec'ticus**; from the Gr. *ἀντί*, "against," and *ἑκτικός*, "hectic."] Assuaging hectic fever.

Antihelix.* See ANTHELIX.

Antihelmintic. See ANTHELMINTIC.

An-tĭ-hў-drop'ic. [Lat. **Antihydrop'icus**; from the Gr. *ἀντί*, "against," and *ὑδρωψ*, "dropsy."] Curative of dropsy.

Antihypnotic. See ANTHYPNOTIC.

Antihypochondriac. See ANTHYPOCHONDRIAC.

Antihysteric. See ANTHYSTERIC.

An-tĭ-Ic-tĕr'ic. [Lat. **Anti-Icter'icus**; from the Gr. *ἀντί*, "against," and *ἴκτερος*, the "jaundice."] Curative of *icterus*, or jaundice.

An-tĭ-lep'sis.* [From the Gr. *ἀντί*, "instead of," and *λαμβάνω*, to "take," in allusion to taking possession of the well part and operating from that, instead of directly attacking the diseased part.] A term applied to a mode of attaching a bandage over a diseased part by fixing it upon the sound parts; also treatment by revulsion or derivation.

An-tĭ-le-thar'ġic. A remedy for lethargy.

An-tĭ-lith'ic. [Lat. **Antilith'icus**; from the Gr. *ἀντί*, "against," and *λίθος*, a "stone."] Preventing the formation of stone, or calculus.

An-tĭ-lo'bĭ-um.* [From the Gr. *ἀντί*, "against," and *λοβός*, the "lobe of the ear."] The tragus, or part opposite the lobe of the ear.

An-tĭ-loi'mic, or **An-tĭ-lœ'mic.** [Lat. **Antiloi'micus**; from the Gr. *ἀντί*, "against," and *λοιμός*, the "plague."] Curative of plague or pestilence of any kind.

An-tĭ-lўs'sic. [From the Gr. *ἀντί*, "against," and *λύσσα*, "canine madness."] A remedy against hydrophobia. Among antilyssics are chloral and morphia.

An-tĭ-mo'nĭ-al. [Lat. **Antimonia'lis**; from *antimo'nium*.] Pertaining to antimony.

Antimo'nial Pow'der. The *Pulvis antimonialis*, or *Pulvis antimonii compositus*, used as a substitute for James's Powder.

Antimo'nial Wine. A solution of tartar emetic in sherry or other wine,—two grains or less of the tartar emetic being contained in every fluidounce of the wine. See VINUM ANTIMONII.

An-tĭ-mo'nĭ-ātе. [Lat. **Antimo'nias, a'tis**; from *antimon'icum* aç'idum.] A combination of antimonic acid with a base.

An-tĭ-mon'ic Aç'id. [Lat. **Antimon'icum Aç'idum.**] A substance otherwise called peroxide of antimony.

An-tĭ-mo'nĭ-i et Po-tas'sĭ-i Tar'tras.* "Tartrate of Antimony and Potassium." The Pharmacopœial name (U.S. 1880) for a substance popularly known as Tartar Emetic. It occurs in small transparent crystals of the rhombic system. In large doses it is a powerful emetic, sometimes causing death. See POISONS.

Antimo'nii Ox'ĭ-dum.* "Oxide of Antimony." The Pharmacopœial name (U.S. 1870, 1880) for a heavy, grayish-white powder, permanent in the air, odorless and tasteless, almost insoluble in water, and insoluble in alcohol. It is the antimonial salt used in preparing tartar emetic.

Antimo'nii Sul'phĭ-dum.* "Sulphide of Antimony." The Pharmacopœial name (U.S. 1880) for native sulphide of antimony purified by fusion and as nearly free from arsenic as possible. It is reputed to be diaphoretic and alterative.

Antimo'nii Sul'phidum Pu'rĭ-fĭ-ca'tum.* "Purified Sulphide of Antimony." The Pharmacopœial name (U.S. 1880) for a substance containing sulphur and antimony in the form of a dark gray powder, which is odorless and tasteless, and insoluble in water or alcohol. It is used as an alterative, as a diaphoretic, and sometimes as an emetic.

Antimo'nii Sul-phu-re'tum.* "Sulphuret of Antimony." The Pharmacopœial name (U.S. 1870) for the native tersulphuret of antimony purified by fusion.

An-tĭ-mo'nĭ-ous Aç'id. An acid formed by exposing the white hydrate of the peroxide of antimony to a red heat.

Antimo'nious Chlo'ride, or But'ter of An'timony. A yellow oily liquid, which is a caustic, and is sometimes taken as a poison.

An-tim'o-nīte. [Lat. **Antim'onis, i'tis**; from *antimo'nious* açid.] A combination of antimonious acid and an alkaline base.

Antimonium.* See ANTIMONY.

An-tĭ-mo'nĭ-um Tar-tar-ĭ-za'tum.* A name of emetic tartar, or *antimonii potassio-tartras*, or tartarized antimony. See TARTAR EMETIC.

An'tĭ-mo-nў. [Modern Lat. **Antimo'nium**, ancient Lat. **Stib'ium.**] A brittle, silver-white metal, of which many of the compounds are used in medicine. Its specific gravity is 6.7. Type-metal is an alloy of antimony and lead.

An-tĭ-ne-phrit'ic. [Lat. **Antinephrit'icus**; from the Gr. *ἀντί*, "against," and *νεφρῖτις*, "disease of the kidneys."] Curative of diseases of the kidneys.

An-tin'ĭ-ad. A term applied in the same manner as *antinial* used adverbially. See GLABELLAD.

An-tin'ĭ-al. [From the Gr. *ἀντί*, "against," and *ἰνίον*, the "occiput."] Opposite the occiput:—applied by Dr. Barclay as meaning towards the *glabella*, or space between the eyebrows.

Antiodontalgic. See ANTODONTALGIC.

An-tĭ-or-gas'tic. [Lat. **Antiorgas'ticus**; from the Gr. *ἀντί*, "against," and *ὀργάζω*, to "excite."] Allaying excitement:—synonymous with *sedative*.

An-tĭ-par'a-sta-ti'tis.* [From the Lat. *antiparas'tatæ*, Cowper's glands.] Inflammation of Cowper's glands.

An-tip'a-thў. [Lat. **Antipathi'a**; Gr. *ἀντιπάθεια*; from *ἀντί*, "against," and *πάθος*, "feeling," "affection."] Any opposite properties in matter; also aversion to particular objects; a natural opposition to anything.

An-tĭ-pe-rĭ-od'ic. A remedy which has the power to arrest morbid periodical movements, or to relieve or prevent paroxysms which exhibit a periodic character. Among the chief antiperiodics are cinchona bark, quinina, cinchonine, salicin, bebeerin, and *Eucalyptus globulus*.

An-tĭ-pĕr-ĭ-stăl'tic. [Lat. **Antiperistal'ticus**; from the Gr. *ἀντί*, "against," and the Eng. *peristal'tic*.] Applied to inverted peristaltic motion of the bowels. See PERISTALTIC.

An-tĭ-pĕs-tĭ-len'tial. [From the Gr. *ἀντί*, "against," and the Lat. *pestilen'tia*, "pestilence."] The same as ANTILOIMIC.

An-tĭ-phar'mic. [From the Gr. *ἀντί*, "against," and *φάρμακον*, "poison."] The same as ALEXIPHARMIC.

An'tĭ-phlo-gis'tic. [Lat. **Antiphlogis'ticus**; from the Gr. *ἀντί*, "against," and *φλέγω*, to "burn."] A term applied to treatment intended to subdue inflammation, or excitement of the system in inflammatory complaints.

Antiphthisic, an-te-tiz'ik. [Lat. **Antiphthis'icus**; from the Gr. *αντί*, "against," and *φθίσις*, "consumption."] Checking phthisis, or consumption.

An-tĭ-phўs'ic. [Lat. **Antiphys'icus**; from the Gr. *ἀντί*, "against," and *φυσάω*, to "inflate."] Dispelling flatulency. Also, against nature [from the Gr. *φύσις*, "nature"]. For the purpose of distinction it would perhaps be preferable to write *antiphu'sic* when we mean "dispelling" or "corrective of flatulency."

An-tĭ-plas'tic. [Lat. **Antiplas'ticus**; from the Gr. *ἀντί*, "against," and *πλάσσω*, to "form."] Unfavorable to healing, or granulation; disorganizing.

An-tĭ-pleū-rit'ic. [Lat. **Antipleurit'icus**; from the Gr. *ἀντί*, "against," and *πλευρῖτις*, "pleurisy."] Curative of pleurisy.

An-tĭ-po-dag'ric. [Lat. **Antipodag'ricus**; from the Gr. *ἀντί*, "against," and *ποδάγρα*, the "gout."] Curative of gout.

An-tĭ-pros'ta-tæ Glan'du-læ.* The antiprostate glands; a name for *Cowper's glands*:—also called *Antiparas'tatæ*.

An-tĭ-pros-tat'ic. [Lat. **Antiprostat'icus**; from the Gr. *ἀντί*, "against," and the Lat. *prostata* glan'dula, the "prostate gland."] Opposite the prostate gland.

Antiprostatus.* The same as ANTIPROSTATIC.

An-tip-sor'ic. [Lat. **Antipsor'icus**; from the Gr. *ἀντί*, "against," and *ψώρα*, the "itch."] Curative of the itch.

An-tĭ-pȳ'ic. [Lat. **Antipy'icus**; from the Gr. *ἀντί*, "against," and *πύον*, "pus."] Preventing or tending to prevent suppuration.

An-tĭ-pȳ-ret'ic. [Lat. **Antipyret'icus**; from the Gr. *ἀντί*, "against," and *πυρετός*, "fever."] Curative of fevers; antifeb'rile; feb'rifuge:—applied to medicines which reduce the temperature in fever. See FEBRIFUGE.

An-tĭ-pȳ-rot'ic. [Lat. **Antipyrot'icus**; from the Gr. *ἀντί*, "against," and *τῦρ*, "fire."] Curative of burns or of pyrosis.

An-tĭ-quar-ta-nā'rĭ-an, An-tĭ-quar'tan. [Lat. **Antiquartana'rius**; from the Gr. *ἀντί*, "against," and the Lat. *quarta'na* fe'bris, a "quartan fever or ague."] Curative of quartan ague.

Antirachitic, an-te-ra-kit'ik. [Lat. **Antirachit'icus**; from the Gr. *ἀντί*, "against," and the Lat. *rachi'tis*, "rickets."] Corrective of rachitis.

Antiscii,* an-tish'e-i, the plural of **Antiscius,** an-tish'e-ŭs. [From the Gr. *ἀντί*, "against," and *σκιά*, a "shade" or "shadow."] Having their shadow in opposite directions at noon, as the people north and south of the equator; antis'cious; antis'cian.

An-tĭ-scol'ic. [Lat. **Antiscol'icus**; from the Gr. *ἀντί*, "against," and *σκόληξ*, a "worm."] Against worms; capable of expelling worms; vermifuge; anthelmintic.

An-tĭ-scor-bu'tic. [Lat. **Antiscorbu'ticus**; from the Gr. *ἀντί*, "against," and the Lat. *scorbu'tus*, the "scurvy."] Corrective of scorbutus, or scurvy. Among the antiscorbutics are lemon-juice, other vegetable acids, fresh uncooked meat, ale, porter, and milk.

An-tĭ-scrof'u-lous. [Lat. **Antiscrofulo'sus**; from the Gr. *ἀντί*, "against," and the Lat. *scrof'ula*, the "king's evil."] Curative of scrofula.

An-tĭ-sep'tic. [Lat. **Antisep'ticus**; from the Gr. *ἀντί*, "against," and *σήπω*, to "putrefy."] Preventing putrefaction. A substance which prevents or retards putrefaction,—that is, the decomposition of animal or vegetable bodies with evolution of offensive odors. Among the principal antiseptics are alcohol, creasote, carbolic acid, common salt, vinegar, sugar, charcoal, chlorine, boric acid, tannic acid, and benzole.

An-tĭ-spaś-mod'ic. [Lat. **Antispasmod'icus**; from the Gr. *ἀντί*, "against," and *σπασμός*, a "spasm."] Allaying spasmodic pains. A medicine which prevents or allays spasms. The antispasmodics are valerian, castor, musk, sumbul, camphor, ammonia, alcohol, ether, chloroform, bromide of potassium, opium, conium, belladonna, etc.

An-tĭ-spas'tic. [Lat. **Antispas'ticus**; from the Gr. *ἀντί*, "against," and *σπάω*, to "draw."] Literally, "drawing against or in an opposite direction." Counteracting a state of spasm:—synonymous with *Antispasmodic.*

An-tĭ-sȳph-ĭ-lit'ic. [Lat. **Antisyphilit'icus**; from the Gr. *ἀντί*, "against," and the Lat. *syph'ilis.*] Curative of syphilis.

An-tith'e-nar.* [From the Gr. *ἀντί*, "against," and *θέναρ*, the "hollow of the hand or foot."] A term applied in Anatomy to the muscles *adductor ad indicem* of the hand, and *adductor* of the great toe.

Antithora.* See ANTHORA.

An-tĭ-tragʹĭ-cus.* [See ANTITRAGUS.] Belonging to the antitragus; antit'ragic.

An-tit'ra-gus.* [From the Gr. *ἀντί*, "against," and the Lat. *tra'gus.*] A part of the ear; the thicker part of the antihelix, opposite the tragus.

An-tit'ro-pous. [Lat. **Antit'ropus**; from the Gr. *ἀντί*, "against," and *τροπή*, a "turning."] A term applied, in Botany, to the embryo when the radicle is distant from the hilum, the cotyledons being next to the latter; inverted.

An-tĭ-ve-ne're-al. [Lat. **Antivene'reus**; from the Gr. *ἀντί*, "against," and the Lat. *vene're-us*, "venereal."] Curative of venereal disease; also allaying venereal desire.

An-tĭ-zȳm'ic. [Lat. **Antizym'icus**; from the Gr. *ἀντί*, "against," and *ζυμόω*, to "ferment."] Preventive of fermentation.

Ant'lĭ-a.* [Gr. *ἀντλία*, a "pump."] The spiral apparatus by which certain insects draw up the juices of plants.

Ant'lia Lac'te-a,* Ant'lia Mam-ma'rĭ-a.* An instrument for drawing milk from the breast; a milk-pump; a breast-pump.

Ant-o-don-tăl'gic. [Lat. **Antodontal'gicus**; from the Gr. *ἀντί*, "against," and *ὀδονταλγία*, "toothache."] Curative of the toothache.

Antonii Ignis Sancti.* See ERYSIPELAS.

Antorgastic. See ANTIORGASTIC.

An-tri'tis.* [From the Lat. *an'trum*, a "cave" or "cavity."] Inflammation of any cavity of the body, especially of the *Antrum Highmorianum.*

An'trum.* [From the Gr. *ἄντρον*, a "cave."] A cavity:—applied specially to one in the upper maxillary bone, termed *An'trum Highmoria'num.*

An'trum Buccinosum,* bŭk-sĭ-no'sŭm. [From the Lat. *buc'cina*, a "trumpet."] The trumpet-like cavity or cochlea of the ear.

An'trum Ge'næ.* "Antrum or Cavity of the Cheek." According to Quincy, this was the name given by Casserius to the *Antrum Highmorianum* before Highmore discovered it.

Antrum Highmorianum.* See HIGHMORIANUM ANTRUM.

An'trum Max-il'læ,* "Antrum of the Jaw." **An'trum Max-il-la're,*** "Maxillary Antrum." **An'trum of High'more.** The *Antrum Highmorianum.*

An'trum Pȳ-lo'ri.* "Antrum of the Pylorus." The small extremity of the stomach near the pylorus.

Ants, Acid of. See FORMIC ACID.

An-u'rĭ-a.* [From the Gr. *ἀν*, priv., and *οὖρον*, "urine."] Defective secretion of urine; an'ury.

A'nus.* [Perhaps from the Lat. *an'nus*, a "circle."] The extremity of the rectum; the fundament.

Anus, Artificial. See ARTIFICIAL ANUS.

Anus, Imperforate. See ATRESIA.

Anx-ī'e-tȳ. [Lat. **Anxi'etas, a'tis**; from *anx'ius*, "anxious" (from the Gr. *ἀγχω*, to "choke," to "distress").] A settled expression of anxiety in the features, forming a dangerous symptom in acute diseases.

A-or'ta.* [Gr. *ἀορτή*, from *ἀείρω*, to "raise up," to "support," to "suspend;" because it is supported or suspended from the heart.] The large arterial trunk arising from the left ventricle of the heart, and giving origin to every artery except the pulmonary and its ramifications.

Aorteurysma,* or **Aorteurisma,*** a-or-tū-riz'-ma. [From the Gr. *ἀορτή*, the "aorta," and *εὐρύνω*, to "dilate."] Aneurism of the aorta.

A-or'tic. [Lat. **Aor'ticus.**] Belonging to the aorta.

A-or-ti'tis, i*dis.* [From the Lat. *aor'ta.*] Inflammation of the aorta.

A-paġ'ȳ-nous. [Lat. **Apaġ'ynus**; from the Gr. *ἅπαξ*, "once," and *γυνή*, a "woman," "one who brings forth."] A term applied to plants which fructify but once and then die. See GYNÆCOLOGY.

Ap'a-thȳ. [Lat. **Apathi'a**; from the Gr. *α*, priv., and *πάθος*, "feeling," "passion."] Absence or privation of all passion, emotion, or excitement.

Ap'a-tīte. A native phosphate of lime. A mineral which occurs usually crystallized in hexagonal prisms having a resinous lustre. It is infusible before the blowpipe, except at the edges.

A-pep'sĭ-a.* [From the Gr. *α*, priv., and *πέπτω*, to "cook," to "digest."] Imperfect digestion:—a term formerly used for dyspepsia.

A-pe'rĭ-ent. [Lat. **Ape'riens**; from *ape'rio*, to "open."] Opening:—applied to a medicine which gently opens the bowels. Among aperients are fruits generally, honey, magnesia, and olive oil.

A-per'tor, o'ris.* [From the Lat. *ape'rio, aper'tum*, to "open."] Literally, "that which opens." The *Levator palpebræ superioris*; otherwise, the *Apertor oculi* ("opener of the eye").

A-pet'a-lous. [Lat. **Apeta'leus**; from the Gr. *α*, priv., and the Lat. *pet'alum*, a "petal."] Having no petals. Destitute of a corolla:—also extended to plants that have neither calyx nor corolla.

A'pex.* The point or extremity of a cone:—hence applied to parts of the body supposed to resemble a cone, as the apex of the heart, of the tongue, etc. In Botany, applied to the summit of a stem or leaf,—the part farthest from the base.

A-pha'çĭ-a,* or **A-pha'kĭ-a.*** [From the Gr. *α*, priv., and *φακός*, a "lentil," and hence a "lens."] An ocular defect caused by the absence of the crystalline lens. It is to be remedied by the use of artificial lenses.

Aphæresis,* a-fĕr'e-sis. [From the Gr. *ἀπό*, "from," and *αἱρέω*, to "take."] A term formerly applied to that branch of Surgery whose business it is to cut off or remove any portion of the body.

A-pha'ğĭ-a.* [From the Gr. *α*, priv., and *φάγω*, to "eat."] Literally, "inability to eat," but denoting especially inability to swallow.

Aphakia.* See APHACIA.

Aph-a-nop'te-rus,* or **Aph-a-nip'te-rus.*** [From the Gr. *ἀφανής*, "invisible," and *πτέρον*, a "wing."] In the neuter plural (*Aphanip'tera*, or *Aphanop'tera*), applied to a family of insects apparently without wings; aphanop'terous.

A-pha'sĭ-a.* [Gr. *ἀφασία*, from *α*, priv., and *θημί*, to "say" or "speak."] (Fr. *Aphasie*, ă'fă'zē'.) Speechlessness. A loss or defect of speech which is of cerebral origin and is a symptom of brain-disease. When it exists, the patient is unable to utter any proposition, though his distinct pronunciation of one or two words shows that his speechless condition is not due to a mere difficulty in the more mechanical act of articulation. The patient's intelligent manner and gestures may plainly show that he understands what is said, and is capable of thinking, though he is unable to select the precise words needed and arrange them in an intelligible sentence.

Aph-e'lĭ-on.* [From the Gr. *ἀπό*, "from," and *ἥλιος*, the "sun."] A term used in Astronomy to denote that point of a planet's orbit farthest from the sun.

A-phelx'ĭ-a.* [From the Gr. *ἀφέλκω*, to "draw away." See APO.] Literally, a "drawing away." *Aphelxia socors* denotes absence of mind; *Aphelxia intenta*, abstraction; *Aphelxia otiosa*, revery or brown study, etc.

A-phe'mĭ-a.* [From the Gr. *α*, priv., and *φημί*, to "speak."] A defect of speech from cerebral disease:—usually applied to a form of defective speech in which the patient has lost the power of speaking, but is able to write.

Aphides.* See APHIS.

Aph-ĭ-diph'a-gus.* [From the Lat. *a'phis*, and the Gr. *φαγεῖν*, to "eat."] A term applied in the plural masculine (*Aphidiph'agi*) to a family of *Coleoptera* which feed on aphides; aphidiph'agous.

A-phid'ĭ-us.* [From the Lat. *a'phis.*] Belonging to the *Aphides*. In the plural masculine (*Aphid'ii*), applied to a family of hemipterous insects; aphid'ious.

Aph-ĭ-div'o-rous. [Lat. **Aphidiv'orus**; from *a'phis*, and *vo'ro*, to "devour."] Eating aphides.

A'phis, i*dis,* plural **Aphides,** af'e-dēz. The plant-louse.

A'phis Vas-ta'tor.* A species of aphis remarkable for its destructive powers. See VASTATOR.

Aph-lo-ġis'tic. [Lat. **Aphlogis'ticus**; from the Gr. *α*, priv., and *φλόξ*, a "flame."] Without flame.

A-pho'nĭ-a.* [From the Gr. *α*, priv., and *φωνή*, the "voice."] Loss of voice; aph'ony. A genus of the order *Dyscinesiæ*, class *Locales*, of Cullen's nosology. See DUMBNESS.

A-pho'rĭ-a.* [From the Gr. *a*, priv., and *φέρω*, to "bear."] Barrenness; sterility; inability to conceive offspring.

Aph'o-rism. [From the Gr. *ἀφορίζω*, to "limit," to "define."] A maxim. The Aphorisms of Hippocrates is the title of a celebrated work, containing various maxims or short, pithy sentences relating to medicine.

Aph-ro-dis'ĭ-a.* [From the Gr. 'Αφροδίτη, Venus; 'Αφροδισιος, "pertaining to Venus," "venereal."] Morbid or immoderate desire of venery:—sometimes applied to the generative act. Also termed APHRODISIASMUS.

Aphrodisiac, af-ro-dizh'ē-ak. [Lat. **Aphrodisi'acus,** or **Aphrodis'ius**; from the same.] A term applied to medicines or food supposed to excite sexual desire or to increase the generative power.

Aphrodisiasmus.* The same as APHRODISIA.

Aph'tha,* plural **Aph'thæ.** [From the Gr. *ἅπτω*, to "set on fire."] Ulcers of the mouth, beginning with numerous minute vesicles and terminating in white sloughs. Aphthæ constitute the characteristic symptoms of "thrush," and also occur in other diseases.

Aph'thoid. [Lat. **Aphthoi'des**; from *aph'tha*, and the Gr. *εἶδος*, a "form" or "resemblance."] Resembling aphthæ.

Aph'thous. [Lat. **Aphtho'sus**; from *aph'tha*.] Having the appearance of aphthæ, or full of aphthæ.

A-phyl'lous. [Lat. **Aphyl'lus**; from the Gr. *a*, priv., and *φύλλον*, a "leaf."] Destitute of leaves.

Apiaceous, ā-pe-ā'shŭs. [Lat. **Apia'ceus.**] Having an arrangement as in APIUM.

Ap-ĭ-ca'lis.* [From the Lat. *a'pex, ap'icis.*] Belonging to the apex; ap'ical.

Ap-ĭ-ca'tus.* Having a conspicuous apex; ap'icated.

A-pic'u-late. Tipped with an abrupt minute point.

A-pĭ-cul'ture. [From the Lat. *a'pis*, a "bee," and *cultu'ra*, "cultivation."] The raising or education of bees.

A-pic'u-lus.* [Diminutive of the Lat. *a'pex.*] A term used in Botany to denote the projection of the midrib beyond the end of the leaf; a small, sharp, short point.

A'pĭ-ol. [Lat. **Apio'lum,** or, more correctly, **Apio'leum.**] A yellowish, oily liquid obtained from parsley (*A'pium Petroseli'num*). It has a peculiar odor, and an acrid, pungent taste.

A'pĭ-os Tu-be-ro'sa.* A plant of the natural order *Leguminosæ*, a native of New York, Ohio, etc. It has edible tubers, called *groundnuts* and *wild beans.*

A'pis Mel-lif'ĭ-ca.* [From the Lat. *a'pis*, a "bee," *mel*, "honey," and *fa'cio*, to "make."] The systematic name of the honey-bee, affording honey and wax.

A'pĭ-um.* A genus of the Linnæan class *Pentandria*, natural order *Umbelliferæ*, including the garden-plants celery and parsley.

A'pium Grav'e-o-lens* (or gra-ve'o-lens). The common Celery. (Fr. *Ache*, ăsh.) When wild, growing in wet places, it is acrid and poisonous; when cultivated in dry ground and partially blanched, it is used as salad. It is slightly aperient and carminative.

A'pium Pe-tro-se-li'num,* otherwise called **Petroseli'num Sa-ti'vum.*** The common Parsley, the root and seeds of which are diuretic and aperient.

Ap-la-nat'ic. [Lat. **Aplanat'icus**; from the Gr. *a*, priv., and *πλανάω*, to "wander," to "err."] Corrective of the aberrations of the rays of light.

A-plas'tic. [Lat. **Aplas'ticus**; from the Gr. *a*, priv., and *πλάσσω*, to "form."] Not capable of being organized.

Apleuria,* a-plu're-a. [From the Gr. *a*, priv., and *πλευρά*, a "rib."] An organic deviation characterized by the absence of ribs.

Ap-neū'mĭ-a.* [From the Gr. *a*, priv., and *πνεύμων*, the "lung."] The name of a monstrosity in which the lungs are wanting.

Apnœa,* ap-nē'a, or **Ap-neūs'tĭ-a.*** [From the Gr. *a*, priv., and *πνέω*, to "breathe."] Partial privation or entire suspension of the breath. The term is used by some medical writers as synonymous with *asphyxia.* It is more properly employed to signify the cessation of respiration which is caused by hyperoxygenation of the blood.

Apo. [Gr. *ἀπό.*] A prefix signifying "from," "off," "away." Before a word beginning with *h* the *o* is dropped and the *p* blended with the following letter: thus, *apo-helko* (from *ἀπό* and *ἕλκω*), to "draw away," is contracted into *aphelko* (*ἀφέλκω*).

Ap-o-car'pous. [Lat. **Apocar'pus**; from the Gr. *ἀπό*, "from," and *καρπός*, "fruit."] Having carpels distinct from one another. Pistils are apocarpous when the several pistils of the same flower are separate.

Ap-o-çe-no'sis,* plural **Ap-o-çe-no'sēs.** [From the Gr. *ἀπό*, "from," and *κενόω*, to "empty out."] Increased discharge, flux, or evacuation.

Apocynaceæ,* a-pos-se-na'she-ē. [From *Apoc'ynum*, one of the genera.] An order of dicotyledonous plants in some respects resembling the *Asclepiadaceæ*, and mostly natives of tropical regions. Many of its species have a poisonous milky juice. This order comprises the *Oleander*, the *Vinca* (periwinkle), the *Allamanda*, the *Tabernæ-montana utilis* (cow-tree), the milky juice of which is nutritious and wholesome, the *Amsonia*, the *Cerbera*, the *Thevetia*, and the *Alstonia.* See APOCYNUM.

Apocynaceous, a-pos-se-nā'shŭs. [Lat. **Apocyna'ceus.**] A term applied to plants resembling the *Apocynum*, or dog's-bane. Also belonging to the order *Apocynaceæ.*

Apocyneus.* The same as APOCYNACEUS.

Apocynin, or **Apocynine,** a-pos'se-nin. A bitter principle obtained from the *Apocynum cannabinum*, or dog's-bane.

Apocynum,* a-pos'se-nŭm. [From the Gr. *ἀπό*, "from," and *κύων*, a "dog," implying that it is something dogs should keep away from.] A genus of poisonous plants, called dog's-bane: the root is sometimes used as an emetic.

Ap'o-dēs.* [Formed in the plural from the Gr. *α*, priv., and *πούς*, *ποδός*, a "foot."] Literally, "without feet." A term applied to fishes without ventrals, or fins which correspond to legs and feet.

Ap'o-dus.* [From the same.] Without feet: ap'odous:—applied in the plural neuter (*Ap'oda*) to an order of *Radiata Echinodermata.*

Ap'o-gee. [Lat. **Apogæ'um**; from the Gr. *ἀπό*, "from," and *γῆ*, the "earth."] That point of the orbit of the sun, or of a planet, most distant from the earth.

A-pol-lĭ-na'ris, Waters of. Acidulous alkaline table waters containing carbonic acid and carbonate of soda. They are imported into the United States from Germany.

Ap-o-mor-phi'na,* Ap-o-mor'phine, or **Ap-o-mor'phĭ-a.*** An alkaloid obtained from morphina by the action of hydrochloric acid. It is a powerful emetic, but may generally be safely employed in very minute doses. The *fresh* solution alone should be used.

Ap-o-neū-ro'sis.* [From the Gr. *ἀπό*, "from," and *νεῦρον*, a "nerve."] (Fr. *Aponévrose*, ȧ'po'nȧ'vROz'.) Expansion of a tendon, or tendons, into a fibrous membrane.

A-poph'ў-sis,* plural **A-poph'ў-sēs.** [From the Gr. *ἀπό*, "from," and *φύω*, to "produce," to "grow."] A process or protuberance of bone:—also applied, in Botany, to any irregular swelling; the enlargement at the base of the spore-case of the umbrella moss.

Ap-o-plec'tic. [Lat. **Apoplec'ticus.**] Pertaining to apoplexy.

Ap-o-plex'ĭ-ą Pul-mo-na'ris.* "Pulmonary Apoplexy." Extravasation of blood in the lungs from the rupture of vessels.

Ap'o-plex-ў. [Lat. **Apoplex'ia**; from the Gr. *ἀπό*, "from," "away," and *πλήσσω*, to "strike." Hence *αποπλήσσω* signifies to "strike *away*,"—*i.e.*, to "strike into unconsciousness or insensibility:" so to "faint *away*" means to faint so completely as to become unconscious.] (Fr. *Apoplexie*, ȧ'po'plĕx'ē'.) A disease produced by congestion or rupture of the vessels of the brain, and causing a sudden arrest of sense and motion, the person lying as if asleep, respiration and the heart's action continuing. Loss of consciousness, of sensation, and of voluntary motion coming on more or less suddenly, and due to a morbid state of the brain. This condition of *coma* is termed "apoplectic" when of sudden or rapid onset.

Ap'oplexy, Cu-tā'ne-ous. A French term (*Apoplexie cutanée*, ȧ'po'plĕx'ē' kü'tȧ'nȧ') for sudden determination of blood to the skin and adjacent cellular membrane.

A-po'sĭ-ą.* [From the Gr. *α*, priv., and *πόσις*, "drink."] Absence of thirst.

Ap-o-spas'mą.* A solution of continuity.

Ap-os-te'mą, a*tis.* [From the Gr. *ἀφίστημι*, to "depart from."] An abscess; an ap'osteme. See Abscess.

Ap-o-the'cą.* [Gr. *ἀποθήκη*, a "store."] Any place where things are kept; a store, particularly a wine-cellar.

A-poth'e-cą-rў. [Lat. **Apotheca'rius**; from the Gr. *ἀποθήκη*, a "repository" or "store."] One who keeps a store of drugs; one who sells drugs and puts up prescriptions. In Great Britain, an apothecary, besides selling and compounding drugs, is entitled to practise medicine, and is in fact a sort of sub-physician.

Ap-o-the'çĭ-ą,* Ap-o-the'çĭ-um.* [From the same.] A botanical term applied to the receptacle enclosing the reproductive corpuscles in the lichens.

A-poth'e-mą, a*tis.* [From the Gr. *ἀπό*, "from," and *θέμα*, a "deposit."] A brown powder deposited when vegetable extract is submitted to prolonged evaporation.

Ap-pą-ra'tus. [From the Lat. *ap'paro, appara'tum*, to "prepare," to "arrange."] (Fr. *Appareil*, ȧ'pȧ'rą'ĭ'.) Instruments or mechanical arrangements for experimenting, operating, etc.:—sometimes applied to organs in animals and plants. In Anatomy and Physiology, the term signifies the *ensemble* of organs of various species which concur to the same function.

Ap-pen'dage. In Botany, any superadded part:—applied to all parts which are arranged around any other part. The hairs and glands found on many plants are appendages.

Ap-pen'dĭ-çēs Ep-ĭ-plo'ĭ-çæ.* "Appendages of the Omentum." (See Epiploon.) In Anatomy, a term applied to prolongations of the peritoneum, filled with a soft, fatty substance, attached along the large intestines only.

Ap-pen-dic'u-lą.* [The diminutive of *ap-pen'dix*, an "appendage."] A little appendage, or appendicle.

Appendicula Vermiformis.* See Appendix Vermiformis.

Ap-pen-dic'u-lāte. [Lat. **Appendicula'tus**; from *appendic'ula.*] Having appendicles, or having some appendage.

Ap-pen'dix, i*cis,* plural **Ap-pen'dĭ-çēs.** [From the Lat. *ad*, "to," and *pen'do*, to "hang" or "join."] A part of or addition to a thing; an appendage.

Appen'dix Ver-mĭ-for'mis,* or **Appen'dix Cæ'ci Ver-mĭ-for'mis.*** The "Worm-Shaped Appendage of the Cæcum." A small process of the cæcum, which hangs into the pelvis. It is often called the *Appendic'ula vermifor'mis.*

Appert's (ap'pairz') **Proç'ess.** A method introduced by M. Appert (ap'pair') for preserving articles of food unchanged for several years. The articles are enclosed in bottles, which are filled to the top with any liquid, and hermetically closed. They are then placed in kettles filled with cold water, and subjected to heat till the water boils; the boiling temperature is kept up for a considerable time, after which the bottles are suffered to cool gradually. Instead of bottles, tin canisters are sometimes used, and rendered tight by soldering.

Ap'pe-tence, or **Ap'pe-ten-cў.** [From the Lat. *ap'peto, appeti'tum*, to "desire."] The disposition of organized beings to acquire and appropriate substances adapted to their support; also an ardent desire or longing for any object.

Ap'pe-tīte. [Lat. **Appeti'tus**; from the same.] The natural desire for food; also any

natural inclination by which we are incited to act; inordinate desire; lust.

Appetite, Canine. See BULIMIA.

Appetite, Depraved. See PICA.

Appetite, Insatiable. See BULIMIA.

Appetite, Loss of. See ANEPITHYMIA.

Appetite, Voracious. See BULIMIA, ADEPHAGIA.

Ap'ple. [Lat. **Ma'lum.**] (Fr. *Pomme*, pom.) The fruit of the *Py'rus Ma'lus*, a tree of the order *Rosaceæ*. It is naturalized or cultivated in many temperate regions of Asia, Europe, and North America. It is one of the hardiest of fruit-trees, and its fruit is considered the most valuable of temperate climates. It does not succeed in tropical countries. The blossoms of the apple are beautiful and fragrant. Cultivation has developed several hundred varieties of this fruit, some of which are sweet and others sour. They are divisible into three classes, Summer, Autumn, and Winter apples, according to the season in which they ripen.

Apples, Acid of. See MALIC ACID.

Ap-plĭ-cā'tion. The act of applying one thing to another, as the application of an apparatus, a bandage, or a blister.

Ap-po-sĭ'tion. [Lat. **Apposi'tio**; from *ad*, "to" or "on," and *po'no, posi'tum*, to "put" or "place."] Literally, "placing or depositing on" or "in addition to." A term applied in Surgery to the supplying of deficient parts by placing portions of the adjacent integuments, etc., in contact. Sometimes used synonymously with PROSTHESIS (which see). Also applied to the deposition of matter which takes place in the growth of the non-vascular tissues, such as horn, the nails, etc.

Ap-pres'sus.* [From the Lat. *ap'primo, appres'sum*, to "press close."] Appressed. A term in Botany, signifying "pressed close to:"—applied to leaves and hairs that are pressed or lie close to the stem or axis.

Ap-prox'ĭ-mal. [From the Lat. *ap* (for *ad*), "to," and *prox'imus*, "next."] A term now generally employed to denote the contiguous surfaces of adjoining teeth. (See *Dental Cosmos*, vol. xxii. p. 84.)

Ap-prox'ĭ-mate. [From the same.] Growing or situated near each other.

Ap-prox-ĭ-mā'tion. [Lat. **Approxima'tio.**] An approach to the true value or quantity; a continual approach still nearer and nearer to the quantity sought, but not expected to be found.

Apricot. See PRUNUS ARMENIACA.

A-proc'tĭ-a.* [From the Gr. *a*, priv., and *πρωκτός*, the "anus."] Literally, "absence of the anus." Imperforation of the anus.

Ap'ter-us.* [From the Gr. *a*, priv., and *πτερόν*, a "wing."] A term applied in the plural neuter (*Ap'tera*) to a family of insects which have no wings; ap'terous.

Ap'tĭ-tude. [From the Lat. *ap'tus*, "fit."] Fitness; tendency; the natural disposition of an animal or a race to perform certain acts or to feel the influence of morbid causes.

Ap-tў-a'lĭ-a.* [From the Gr. *a*, priv., and *πτύαλον*, "saliva."] Deficiency or absence of saliva.

A-pў-ret'ic. [Lat. **Apyret'icus**; from the Gr. *a*, priv., and *πυρετός*, "fever."] Having no fever or febrile excitement.

Ap-ў-rex'ĭ-a.* [From the Gr. *a*, priv., and *πύρεξις*, a "fever" or "paroxysm."] Absence of fever, or intermission of its paroxysms; ap'yrexy.

Ap'ў-rous. [From the Gr. *a*, priv., and *πῦρ*, "fire."] A term applied to bodies which sustain the action of a strong heat for a long time without change of figure or other properties. It is synonymous with *refractory*.

Aq. = *A'qua*,* "water," or *A'quæ*, "of water."

☞ In the following examples, the abbreviation stands either for the nominative or genitive,—*i.e.*, either for *a'qua*, "water," or *a'quæ*, "of water;" *a'qua bul'liens*, "boiling water," or *a'quæ bullien'tis*, "of boiling water;" but the genitive is more frequently used in prescriptions.

Aq. Bull. = *A'qua bul'liens.** "Boiling water."

Aq. Destil. = *A'quæ destilla'tæ.** "Distilled water."

Aq. Ferv. = *A'qua fer'vens*,* or *a'quæ ferven'tis.** "Hot water."

Aq. Font. = *A'quæ fon'tis* or *fonta'næ.** "Fountain or spring water."

Aq. Marin. = *A'qua mari'na.** "Sea-water."

Aq. Pur. = *A'quæ pu'ræ.** "Pure water."

Aqua,* a'kwa, plural **Aquæ**, a'kwē. [As if *æ'qua*, from its equal surface.] "Water." According to the U.S. Pharmacopœia, "natural water in the purest attainable state." The principal varieties of water (not medicated) are the following:

A'QUA DESTILLA'TA.* [From the Lat. *destil'lo, destilla'tum*, to "distil."] Distilled water,—having a vapid taste from the absence of air, and slightly empyreumatic, in consequence, probably, of the presence of a small quantity of extractive matter which has undergone partial decomposition. See AQUA DESTILLATA in its alphabetical place.

A'QUA EX FLU'MINE.* [From the Lat. *flu'men, flu'minis*, a "river."] Literally, "water from the river." River-water,—generally of considerable purity, but liable to hold in suspension particles of earthy matter, which impair its transparency and sometimes its salubrity.

A'QUA EX LA'CU.* [From the Lat. *la'cus*, a "lake."] Literally, "water from a lake." Lake-water. A collection of rain-, spring-, and river-waters, sometimes contaminated with various animal and vegetable bodies which, from its stagnant nature, have undergone putrefaction in it.

A'QUA EX NI'VE.* [From the Lat. *nix, ni'vis*, "snow."] Literally, "water from snow." Snow-water,—differing apparently from rain-water only in being destitute of air, to which water is indebted for its briskness and many of its good effects upon animals and vegetables.

A'QUA EX PALU'DE.* [From the Lat. *pa'lus, palu'dis*, a "marsh" or "swamp."] Literally, "water from a marsh." Marsh-water,—the most impure, as being the most stagnant, of all water, and generally loaded with decomposing vegetable matter.

A'QUA EX PU'TEO.* [From the Lat. *pu'teus*, a "well."] Literally, "water from a well." Well-water,—essentially the same as spring-water, being derived from the same source, but more liable to impurity from its stagnation or slow infiltration.

A'QUA FONTA'NA,* or A'QUA FON'TIS.* [From the Lat. *fons, fon'tis*, a "fountain."] Literally, "water of a fountain." Spring-water,—containing, in addition to carbonic acid and carbonate of lime, a small portion of muriate of soda, and frequently other salts. Spring-water which dissolves soap is termed "soft;" that which decomposes and curdles it is called "hard."

A'QUA MARI'NA.* [From the Lat. *ma're*, the "sea."] Sea-water, containing sulphate of soda, the muriates of soda, magnesia, and lime, a minute proportion of potash, and various animal and vegetable bodies.

A'QUA PLUVIA'LIS.* [From the Lat. *a'qua*, "water," and *plu'via*, "rain."] Rain-water,—the purest form of natural water, yet holding in solution carbonic acid, a minute portion of carbonate of lime, and traces of muriate of lime.

A'qua Am-mo'nĭ-æ.* "Water of Ammonia." The Pharmacopœial name (U.S. 1880) for an aqueous solution of ammonia, containing 10 per cent. by weight of the gas. It is stimulant and irritant. In the stomach it acts as a stimulant antacid, and is often useful in heartburn, sick headache, etc. It is also called *Liquor Ammoniæ.*

A'qua Ammo'niæ For'tĭ-or.* "Stronger Water of Ammonia." The Pharmacopœial name (U.S. 1880) for an aqueous solution of ammonia, containing 28 per cent. by weight of the gas. It is too strong for medical use in its unmixed state. Diluted with spirit of camphor and rosemary, it has been employed as a prompt and powerful rubefacient, vesicatory, or escharotic in various neuralgic, gouty, rheumatic, and spasmodic affections.

A'qua A-mŭg'da-læ A-ma'ræ.* "Bitter Almond Water." The Pharmacopœial name (U.S. 1870, 1880) for a liquid consisting of nine hundred and ninety-nine parts of water and one part of oil of bitter almonds. The Bitter Almond Water of the Pharmacopœia of 1870 is essentially the same, though the directions for its preparation are different.

A'qua A-ni'si.* "Anise Water." The Pharmacopœial name (U.S. 1880) for a liquid containing two parts of oil of anise in one thousand parts of water. It is used solely as a vehicle.

A'qua Au-ran'tĭ-i (aw-ran'she-ī) **Flo'rum.*** "Water of Orange-Flowers." The Pharmacopœial name (U.S. 1880) for a liquid prepared from recent orange-flowers and water. It is used exclusively on account of its agreeable odor.

A'qua Bĭ-nel'lĭ.* An Italian quack medicine, supposed to be a solution of creasote, and celebrated at Naples for arresting hemorrhage.

Aqua Calcis.* See LIQUOR CALCIS.

A'qua Cam'pho-ræ.* "Camphor Water." The Pharmacopœial name (U.S. 1880) for a liquid prepared with nearly eight parts of camphor to one thousand parts of water. See CAMPHOR.

A'qua Cha-lўb-e-a'ta.* An artificial mineral water, consisting of a solution of citrate of iron highly charged with carbonic acid gas and flavored by a little aromatized syrup.

A'qua Chlo'ri* (**A'qua Chlo-ri'ni***). "Chlorine Water." The Pharmacopœial name (U.S. 1880) for an aqueous solution of chlorine, containing at least 0.4 per cent. of the gas. It is stimulant and antiseptic. Externally, it is employed, duly diluted, as a gargle in small-pox, scarlatina, and putrid sore throat. Internally, it has been used in typhus and in chronic affections of the liver.

A'qua Cin-na-mo'mi.* "Cinnamon Water." The Pharmacopœial name (U.S. 1880) for a liquid containing about two parts of oil of cinnamon in one thousand parts of water. It is used as a vehicle for other less agreeable medicines.

A'qua Cre-a-so'ti.* "Creasote Water." The Pharmacopœial name (U.S. 1880) for a 1 per cent. aqueous solution of creasote. It may be used with advantage as a gargle, as a lotion, or mixed with cataplasms to correct fetor, etc.

A'qua Des-til-la'ta.* "Distilled Water." The Pharmacopœial name (U.S. 1880) for pure water, a colorless, limpid liquid, without odor or taste. To obtain it perfectly pure, it must be distilled in silver vessels. The chief substances which require distilled water as a solvent are tartar emetic, corrosive sublimate, nitrate of silver, acetate of lead, sulphates of iron, zinc, quinine, and morphia, all the alkaloids, etc.

A'qua Fœ-nic'u-li.* "Fennel Water." The Pharmacopœial name (U.S. 1880) for a liquid containing two parts of oil of fennel in about one thousand parts of water. It is used as a vehicle for other medicines.

A'qua For'tis.* "Strong Water." A name formerly applied to nitric acid, on account of its powerfully corrosive properties. It is distinguished by the terms *double* and *single*, the latter being only half the strength of the former. Concentrated nitric acid, however, is much stronger even than double aqua fortis.

A'qua Men'thæ Pi-per-i'tæ.* "Peppermint Water." The Pharmacopœial name (U.S. 1880) for a liquid containing about two parts of oil of peppermint in one thousand parts of water. It is used as a vehicle for medicines given in the form of mixture.

A'qua Men'thæ Vir'ĭ-dis.* "Spearmint Water." The Pharmacopœial name (U.S. 1880) for a liquid containing about two parts of oil of spearmint in one thousand parts of water. It is used as a vehicle for medicines given in the form of mixture.

A'qua Re'gĭ-a.* "Royal Water." So called on account of its great power, it being the only solvent of gold and platinum. A mixture of nitric and hydrochloric acids.

A'qua Ro'sæ.* "Rose Water." The Pharmacopœial name (U.S. 1880) for a liquid prepared from the petals of recent pale rose and water by distillation. It has the perfume of the rose in great perfection, and is chiefly employed, on account of its odor, in collyria and other lotions.

A'qua Vi'tæ.* "Water of Life." Ardent spirits of the first distillation. Brandy.

Aquæ,* a'kwē, gen. **A-qua'rum**, the plural of **A'qua.** "Water."

A'quæ Min-e-ra'lēs. [From the Lat. *mineral'is*, a modern Latin term for our word "mineral."] "Mineral Waters." A term conventionally applied to such waters as are distinguished from spring-, lake-, river-, and other waters by peculiarities of color, taste, smell, or real or supposed medicinal effects. Mineral waters are of four principal kinds:

ACID'ULOUS, owing their properties chiefly to carbonic acid: they are tonic and diuretic, and in large doses produce a transient exhilaration:—often called *Soda Water*.

CHALYB'EATE, containing iron in the form of sulphate, carbonate, or muriate: they have a styptic, inky taste.

SA-LINE'. Mostly purgative, and advantageously employed in those hypochondriacal and visceral diseases which require continued and moderate relaxation of the bowels.

SULPHU'REOUS, deriving their character from sulphuretted hydrogen.

Aquæ Stillatitiæ,* a'kwē stil-la-tish'e-ē, also called **A'quæ Destilla'tæ.*** "Distilled Waters." Waters impregnated with the essential oil of vegetables, principally designed as grateful vehicles for the exhibition of more active remedies.

Aquamarine. See BERYL.

A-quā'rĭ-um* [literally, a "place where water is kept"[1], or **A-qua-vi-va'rĭ-um.*** A term applied to a glass tank or vessel containing water, in which living aquatic animals are kept for study or amusement. It should contain both animals and plants, as the former depend for breath on the oxygen given out by the plants.

A-quăt'ic. [Lat. **Aquat'icus**; from *a'qua*, "water."] Living or growing in water:—applied to plants growing wholly under water,—*i.e.*, *immersed*,—and also to those whose base is in water and all the rest raised above it,—*i.e.*, *emersed*. Animals are called aquatic which live constantly in the water, as fishes, or which swim on it and dive in it, as beavers, ducks, etc.

Aq'ue-duct. [Lat. **Aquæduc'tus**; from *a'qua*, "water," and *duc'tus*, a "canal" or "passage."] Literally, a "passage for water," though applied in Anatomy to several canals in the body not always containing fluid.

Aq'ueduct of the Coch'le-a. [Lat. **Aquæduc'tus Coch'leæ.**] A foramen of the temporal bone, for the transmission of a small vein from the cochlea.

Aq'ueduct of Fal-lo'pĭ-us. [Lat. **Aquæduc'tus Fallo'pii.**] The canal by which the portio dura winds through the petrous portion of the temporal bone.

Aq'ueduct of Sўl'vĭ-us. [Lat. **Aquæduc'tus Syl'vii.**] The canal which extends backwards under the tubercula quadrigemina into the fourth ventricle of the brain.

Aq'ueduct of the Ves-tib'u-lum or **of the Ves'tĭ-būle** [Lat. **Aquæduc'tus Vestib'uli**], also called the **Aq'ueduct of Co-tun'nĭ-us** [Lat. **Aquæduc'tus Cotun'nii**]. The commencement of a small canal which opens upon the posterior surface of the petrous portion of the temporal bone of the cranium and transmits a small vein.

Aqueous, ā'kwe-ŭs. [From the Lat. *a'qua*, "water."] Containing water; watery; hydrous.

A'queous Hu'mor. A colorless fluid in the anterior and posterior chambers of the eye.

A'queous Rocks. A term which is synonymous with *Sedimentary Rocks*. See SEDIMENTARY.

Aq-uĭ-fo-lĭ'a'ce-æ.* [From the Lat. *Aquifo'lium*, the "holly-tree."] A small natural order of exogenous trees or shrubs with simple leaves. The ovary has several cells, and becomes a berry-like fruit. This order comprises the *Ilex* (Holly), several species of which are natives of the United States.

Aquila,* ak'wĭ-la. Literally, an "eagle." A term which had formerly many epithets joined with it to denote particular substances: thus, *aquila alba*, seu *mitigata*, was one of the fanciful names of calomel.

Aq-uĭ-le'ġĭ-a.* A genus of herbaceous plants, of the order *Ranunculaceæ*. The *Aquile'gia Canaden'sis* (Wild Columbine) bears beautiful flowers. Its seeds are said to be tonic.

Aquula,* ak'wu-la. [The diminutive of the Lat. *a'qua*, "water."] Literally, a "small particle of water." A term applied to any small aqueous tumor, and sometimes to a fatty tumor under the skin of the eyelid.

Aq'uula A-cous'tĭ-ca.* The fluid in the cavity of the vestibule of the internal ear.

Ar'a-bic, Gum. See GUMMI ACACIÆ. (This word is very often pronounced *a-rā'bic*,—a fault to be most carefully avoided by all those who desire to speak correctly.)

Araceæ,* a-ra'she-ē, or **Aroideæ,*** ar-o-i'de-ē. A natural order of endogenous herbaceous plants, containing an acrid juice and in some cases a highly dangerous principle. The flowers are naked and crowded on a spadix. The order comprises the *Arisæma* or *Arum triphyllum* (Indian Turnip) and the *Acorus Calamus*.

Ar'a-chis Hўp-o-ġæ'a.* The Groundnut or Peanut, an annual plant of the natural order *Leguminosæ*, extensively cultivated in the Southern States. It is a native of South America. The immature pod is pushed into the soil, where it ripens. The seeds are oily and edible.

A-rach'nĭ-da,* or **A-rach'nĭ-dēs.*** [From the Gr. *ἀράχνη*, a "spider."] The third class of the *Diplo-gangliata* or *Entomoida*, comprising articulated animals, generally with four pairs of legs, without wings or metamorphosis.

A-rach-ni'tis, i*dis.* [From the Gr. *ἀράχνη*, a "spider," also a "spider's web."] A faulty term, denoting inflammation of the arachnoid membrane.

A-rach'noid. [Lat. **Arachnoi'des**; from the Gr. *ἀράχνη*, a "spider's web," and *εἶδος*, "form" or "resemblance."] Resembling a spider's web:—applied to the second or middle membrane of the brain.

Arachnoid Canal. See BICHAT, CANAL OF.

Arach'noid Mem'brane. *Meninx media*. The fine cobweb-like membrane situated between

[1] Compare *apia'rium* (from *a'pis*, a "bee"), a "place where bees are kept," *aviu'rium* (from *a'vis*, a "bird"), a "place where birds are kept," etc.

the dura and pia mater. It is the serous membrane of the cerebro-spinal centres.

A-raeh'no-ĭ-di'tis,* or **A-raeh-ni'tis.*** Inflammation of the arachnoid membrane.

Arack. See ARRACK.

Ar-æ-om'e-ter, or **Ar-e-om'e-ter.** [From the Gr. ἀραιός, "thin," "light," and μέτρον, a "measure."] An instrument for determining the specific gravity of liquids into which it is plunged, by the depth to which its weight causes it to sink in them. This instrument is also termed a *hydrom'eter.* The art or process of measuring the density or gravity of liquids is termed *aræom'etry.*

A-ra'lĭ-a.* A genus of plants of the order *Araliaceæ,* comprising many species, natives of India, China, Japan, and the United States.

Ara'lia Can-a-den'sis.* Another name for the *Panax quinquefolium,* or Ginseng.

Ara'lia His'pĭ-da.* Dwarf Elder, a plant sometimes used in dropsy in the form of decoction.

Ara'lia Nu-dĭ-cau'lis,* or Wild Sarsaparilla, is a stimulant tonic and diaphoretic. It is sometimes used as a substitute for the true sarsaparilla. It is known also by the name of American Spikenard (*Nar'dus America'nus.*)

Ara'lia Quin-que-fo'lĭ-a.* The systematic name of Ginseng, a native of the United States.

Ara'lia Raç-e-mo'sa,* or American Spikenard, is analogous in its medical properties to the ARALIA NUDICAULIS, which see.

Ara'lia Spi-no'sa.* Angelica Tree, a native of the United States. Its bark, root, and berries are medicinal, and are said to be diaphoretic.

Araliaceæ,* a-ra-le-a'she-ē. A natural order of exogenous plants, natives of many tropical and temperate countries, and mostly having aromatic properties. They bear umbels of pentamerous flowers, and resemble the *Umbelliferæ* in characters. This order comprises the *Ara'lia* and the *Hed'era* (Ivy).

A-rā-lĭ-ā'ceous. [Lat. **Aralia'ceus.**] Having an arrangement as in the *Aralia.*

Ar-a-ne'ĭ-dæ.* [From the Lat. *ara'nea,* a "spider."] A family of the *Arachnides Pulmonariæ.*

A-rā'ne-ous. [Lat. **Araneo'sus**; from *ara'neum,* a "spider's web."] Of the nature of spider's web.

Arantii (a-ran'she-i) **Cor'pŏ-ra.*** Small tubercles, one in each semilunar valve of the aorta and pulmonary arteries:—called also *Corpora sesamoidea* and *Noduli Arantii.*

Ar'bor, or*is.* (Fr. *Arbre,* ĀRBR.) A "tree." A plant having a single trunk, rising high, durable, woody, and divided into branches which do not perish in winter. In Chemistry the term is applied to any crystallization which ramifies like a tree.

Ar'bor Di-a'næ.* [From *Dia'na,* the "moon," and hence, like *luna,* denoting "silver."] "The tree of Diana," otherwise "silver tree." A beautiful arborescent precipitate of silver produced by throwing mercury into a dilute solution of lunar caustic (nitrate of silver).

Ar'bor Ma'ris.* [From the Lat. *ma're,* gen. *ma'ris,* the "sea."] The "Tree of the Sea." A name given to coral.

Ar'bor Min-e-ra'lis Phil-o-soph'ĭ-ca,* **Ar'bor Phĭ-los'o-pho'rum.*** The *Arbor Dianæ.*

Ar'bor Vi'tæ.* [From the Lat. *vi'ta,* "life."] Literally, the "tree of life." A term applied to the thick mass of white substance in either hemisphere of the cerebellum. This mass, when cut parallel to the median line, presents an arborescent or tree-like appearance, caused by the intermixture of the white substance with the cineritious. Also applied to the tree called *Thu'ya Occidenta'lis.*

Ar-bo're-al. Living on trees:—applied to certain animals of the class *Mammalia,* as many monkeys, the lemur, sloth, marten, raccoon, squirrel, etc.

Ar-bo're-ous. [Lat. **Arbo'reus**; from *ar'bor,* a "tree."] Belonging to a tree; like a tree; dendroid.

Ar-bo-rĕs'çent. [Lat. **Arbores'cens**; from *arbores'co,* to "grow like a tree."] Growing like a tree; resembling a tree in size or in form.

Arbre. See ARBOR.

Ar-bus'cu-la.* [The Lat. diminutive of *ar'bor,* a "tree."] A term applied to the *branchiæ* of certain *Anellata;* an ar'buscule or ar'buscle.

Ar'bu-tus.* A genus of shrubs and small trees of the order *Ericaceæ,* comprising many species, natives of Europe, Chili, and North America. The *Arbutus Unedo* (Strawberry-Tree), a native of Europe, is cultivated for ornament. Its bark and leaves are astringent.

Ar'butus U'va Ur'si.* The shrub now called *Arctostaphylos uva ursi.*

Arc. [Lat. **Ar'cus**; see ARCH.] Any part of the circumference of a circle.

Ar'ca Ar-ca-no'rum.* Literally, a "chest of secrets." The alchemical name of the philosopher's stone.

Ar-cāde'. [From the Lat. *ar'cus,* a "bow," also an "arch."] (Fr. *Arcade,* ĀR'kĀd'.) In Architecture, a series of apertures with arched ceilings supported by piers, forming an ornamental front of massive masonry. Also an anatomical term applied to several curved parts.

Ar-ca'na,* gen. **Ar-ca-no'rum,** the plural of ARCANUM, which see.

Ar-ca'num.* [From the Lat. *ar'ca,* a "chest" or "coffer" in which precious things were carefully kept.] A secret. A nostrum or medicine the composition of which is concealed.

Arch. [Lat. **Ar'cus.**] Literally, a "bow." A bending in the form of a bow. Any arc or part of the circumference of a circle. A concave, self-supporting structure of stone or brick, supported by its own curve and by the mutual pressure of its component parts.

Arch, Fem'o-ral. [Lat. **Ar'cus Femora'lis.**] The name of a considerable arch formed over the concave border of the pelvis. It is bounded above by Poupart's ligament, below by the border of the pubes and ilium. Also termed the *crural arch.*

Arch of the A-or'ta. The curved parts between the ascending and descending portions of the aorta.

Ar-chæ'us.* [From the Gr. ἀρχαῖος, "primeval;" from ἀρχή, the "beginning."] A term

used by Van Helmont, Paracelsus, and other visionary writers to denote a certain mysterious, immaterial principle which, as they supposed, presides over the functions and development of the body.

Ar-ɛhe-bĭ-o'sis.* [From the Gr. *ἀρχή*, "beginning," and *βίος*, "life."] A term used to denote the beginning of life in the (supposed) act or process of spontaneous generation. See BIOGENESIS.

Archencephalus,* ark-en-sef'a-lŭs. [From the Gr. *ἀρχός*, "chief," and *ἐγκέφαλος*, the "brain."] A term applied by Galen to man, because of the intellectual development of his brain; archenceph'alous.

Ar-ɛhe-ol'o-ġў. [Lat. **Archæolo'gia**; from the Gr. *ἀρχαῖος*, "ancient," and *λόγος*, a "discourse."] A discourse or treatise on ancient things or antiquities. The science or knowledge of antiquities.

Ar'ɛhe-tўpe. [Lat. **Archet'ypus**; from the Gr. *ἀρχή*, "beginning," "origin," and *τύπος*, a "type."] The original type or model on which others are formed.

Ar'chil (*ch* as in child). A violet-red paste, prepared from the Lichen Roccella, or Orseille, and other species of lichen, and used in dyeing.

The plant Lichen Roccella, reduced to a pulp and treated with impure ammoniacal liquor, yields a rich purple tincture, called *litmus*, or turnsole, used in Chemistry as a test.

Ar-ɛhop-to'ma,* or **Ar-ɛhop-to'sis.*** [From the Gr. *ἀρχός*, the "anus," and *πτῶμα* or *πτῶσις*, a "falling."] Prolapsus ani. A descent of the rectum. See PROLAPSUS.

Ar-ɛho-sўr'inx.* [From the Gr. *ἀρχός*, the "anus," and *σῦριγξ*, a "pipe," a "fistula."] Another term for *fistula in ano*.

Ar'çĭ-form. [Lat. **Arcifor'mis**; from *ar'cus*, a "bow" or "arch."] Formed like an arch.

Ar'ciform Fi'bres. A term applied by Mr. Solly to a set of fibres which proceed from the corpus pyramidale and pass outwards beneath the corpus olivare to the cerebellum. He distinguishes them into two layers, the *superficial cerebellar* and *deep cerebellar fibres*.

Arctatio,* ark-ta'she-o. [From the Lat. *arc'to, arcta'tum*, to "bind closely," to "make narrow."] Constipation of the intestines; also, a preternatural contraction of the vagina.

Arc'tic. [Lat. **Arc'ticus**; Gr. *αρκτικός*, "belonging to the north," from *Ἄρκτος*, the constellation called "The Bear," situated near the North Pole.] North; northern.

Arc'tic Cir'cle. A circle extending 23½ degrees from the North Pole, marking that portion of the northern hemisphere within which the sun at the summer solstice does not set.

Arc'tĭ-um Lap'pa.* The herb called burdock, belonging to the Linnæan class *Syngenesia* and the natural order *Compositæ*. The seeds are cathartic, the root diuretic and diaphoretic. A decoction of the leaves is sometimes used in cutaneous diseases.

Arc-to-staph'ў-los.* [From the Gr. *ἄρκτος*, a "bear," and *σταφυλή*, a "grape."] A Linnæan genus of the class *Decandria*, natural order *Ericaceæ*. The term signifies the same as *uva ursi*, —*i.e.*, "bear-grape."

Arctostaph'ylos U'va Ur'si.* Another name for the *Arbutus uva ursi*. (See UVA URSI.) It is a native of Europe and the Northern United States.

Ar-cu-a'lis.* [From the Lat. *ar'cuo*, to "bend like a bow."] A term applied to the coronal suture, which is also called *sutu'ra arcua'lis*, and to the temporal bones, or *os'sa arcua'lia*.

Ar'cu-ate. [From the same.] Bent or curved like a bow.

Arcuatio,* ar-ku-a'she-o. [From the Lat. *ar'cuo, arcua'tum*, to "bend like a bow."] A gibbosity or curvature of the dorsal vertebræ, the sternum, or the tibia.

Ar'cus.* A bow, arc, or arch. The periphery of any part of a circle.

Ar'cus Se-ni'lis.* A peculiar arched or circular opaque appearance on the eyes of old men, round the margin of the cornea.

Ar-de'ĭ-dæ.* [From the Lat. *ar'dea*, a "heron."] A family of birds having the *Ardea* for their type.

Ar'dent Spir'its. [From the Lat. *ar'dens*, "burning," a participle of *ar'deo*, to "be hot," to "burn."] A term applied to distilled alcoholic liquors,—namely, brandy, gin, rum, and whiskey.

Ar'dor, o'ris.* [From the Lat. *ar'deo*, to "burn."] Intense or morbidly increased sensation of heat.

Ar'dor Fe-bri'lis.* Feverish or febrile heat.

Ar'dor U-ri'næ.* A sensation in the inflamed urethra as if the passing urine were scalding hot.

Ar'dor Ven-tric'u-li.* Heartburn:—also called *Ar'dor stom'achi*.

A're-a.* An open space. The internal capacity of any given boundary or limit.

A'rea Dif'flu-ens* [from the Lat. *dif'fluo*, to "spread"] and **A'rea Ser'pens*** [from *ser'po*, to "creep"] are terms applied by Celsus to different forms of baldness. The latter is the same as OPHIASIS, which see.

A'rea Ger-mĭ-na-ti'va.* An opaque spot on the blastodermic vesicle in an egg or ovum, opposite to the insertion of the *mesometrium*.

A'rea O-pa'ca.* A dull circle surrounding the *area pellucida*, formed by the *area germinativa* becoming clear in the centre. See preceding article.

A'rea Pel-lu'cĭ-da.* A depression in the ovum, containing a pellucid fluid which surrounds the germ.

A-re'ca.* The betel-nut, the fruit of the *Are'ca Cat'echu*, belonging to the natural order *Palmæ*. It is tonic and astringent, and forms one of the principal ingredients of the *Betel*, so extensively used in the East as a masticatory. See BETEL.

Ar-e-fac'tion. [Lat. **Arefac'tio, o'nis**; from *a'reo*, "to be dry," and *fa'cio*, to "make."] A mode of drying medicinal substances by which they may be reduced to dust or powder.

Ar-e-nā'ceous. [Lat. **Arena'ceus**; from *are'na*, "sand."] Of the nature of sand; sandy.

Ar-e-nā'rĭ-ous. [Lat. **Arena'rius**; from *are'na*, "sand."] Growing in sandy soil.

Ar-e-nic'o-la,* and **Ar-e-nic'o-lus.*** [From the Lat. *are'na*, "sand," and *co'lo*, to "inhabit."] Inhabiting sandy places.

Ar'e-nose. [Lat. **Areno'sus**; from *are'na*, "sand."] Full of sand; sandy.

A-re'o-la.* [The diminutive of the Lat. *a'rea.*] The halo, or small reddish or brownish circular space, round the nipple of females. Also the circle surrounding certain pustules, such as the vaccine pustule. In Botany, a small cavity.

Are'ola Pap-ĭl-la'ris.* [From the Lat. *papil'la*, a "nipple."] The areola round the nipple. See AREOLA.

A-re'o-læ.* [Plural of the Lat. *are'ola.*] A term used by anatomists to denote the interstices between the fibres of an organ, or between vessels interlacing with one another:—also applied to little spaces or areas between the cracks in lichens.

A-re'o-lar. [Lat. **Areola'ris**; from *are'ola*, a "small, open space."] Containing areolæ, or small spaces. *Areolar tissue* is the cellular tissue of some writers, named from the interstices which it contains.

A-re'o-lāt-ed, or **A-re'o-late.** [Lat. **Areola'tus.**] Having areolæ; marked out into little spaces or areolæ.

Areometer and **Areometry.** See ARÆOMETER.

Ar-e-thu'sa Bul-bo'sa.* A plant of the natural order *Orchidaceæ*, a native of the United States. It bears a beautiful solitary flower. The bruised bulbs are used for cataplasms.

Ar'gand Lamp. A name applied to lamps with hollow or circular wicks, first invented by Argand about 1782. The intention of them is to furnish a more rapid supply of air to the flame, and to afford this air to the centre as well as to the outside of the flame.

Ar'ġe-ma,* or **Ar'ġe-mon.*** [From the Gr. ἀργός, "white."] A small white ulcer of the eye, described by Hippocrates.

Ar-ġe-mo'ne.* [From the Gr. ἄργεμον, a "disease of the eye,"—named from the supposed virtues of one species in curing diseases of the eye.] A genus of plants belonging to the poppy tribe, or *Papaveraceæ*. The *Argemo'ne Mexica'na*, or Thorn Poppy, contains a juice which, when dried, resembles gamboge, and has been used as a hydragogue cathartic. The seeds are sometimes employed as a substitute for ipecacuanha.

Ar'ġen-tāte of Am-mo'nĭ-a. The substance otherwise called FULMINATING SILVER, which see.

Ar-gen'ti Cy-an'ĭ-dum.* "Cyanide of Silver." The Pharmacopœial name (U.S. 1880) for a white powder, containing hydrocyanic acid and silver. It has sometimes been used in minute doses as an application to the gums. It is supposed to be anti-syphilitic.

Argen'ti I-od'ĭ-dum.* "Iodide of Silver." The Pharmacopœial name (U.S. 1880) for a heavy, amorphous, light-yellowish powder, containing hydriodic acid and silver. It possesses the general medical properties of nitrate of silver.

Argen'ti Ni'tras.* "Nitrate of Silver." The Pharmacopœial name (U.S. 1870, 1880) for colorless, transparent, tabular, rhombic crystals, containing nitric acid and silver. It becomes gray or grayish black on exposure to light in the presence of organic matter, is odorless, and has a bitter and strongly metallic taste and a neutral reaction. It is one of the most important and most extensively used of all caustic substances. It is employed as a counterirritant, stimulant, and alterative, and as an escharotic.

Argen'ti Ni'tras Dĭ-lu'tus.* "Diluted Nitrate of Silver." The Pharmacopœial name (U.S. 1880) for a substance consisting of equal parts of nitrate of silver and nitrate of potash. It occurs generally in the form of pencils or cones of a finely granular fracture, odorless, and having a caustic metallic taste and a neutral reaction. It is only used externally, and is similar in its action to the fused nitrate, but less energetic.

Argen'ti Ni'tras Fu'sus.* "Moulded Nitrate of Silver." The Pharmacopœial name (U.S. 1880) for a white, hard solid, generally in the form of pencils or cones of a fibrous fracture. Externally applied, it acts variously as a stimulant, vesicant, and escharotic. It should be restricted to external use.

Argen'ti Ox'ĭ-dum.* "Oxide of Silver." The Pharmacopœial name (U.S. 1880) for a heavy, dark, brownish-black powder, produced by precipitating a solution of nitrate of silver with an alkaline solution. It is liable to reduction by exposure to light, odorless, has a metallic taste, and imparts an alkaline reaction to water, in which it is slightly soluble. It is believed to have the general therapeutic virtues of nitrate of silver.

Ar-ġen-tif'er-ous. [Lat. **Argentif'erus**; from *argen'tum*, "silver," and *fe'ro*, to "bear."] Bearing, or containing, silver:—applied to minerals or ores.

Ar'ġen-tīne. [Lat. **Argenti'nus**; from *argen'tum*, "silver."] Having the appearance, brightness, or clear sound of silver.

Ar'gentine Flow'ers of An'ti-mo-nў. The sesquioxide of antimony, frequently occurring in the form of small, shining needles of silvery whiteness. See ANTIMONY.

Argentite. See SILVER GLANCE.

Ar-ġen'tum.* [From the Gr. ἀργός, "white."] Silver, the whitest of metals. It occurs native,—that is, in the metallic state,—and is also obtained from the ores of lead. It is employed in Pharmacy chiefly or solely in the preparation of the nitrate. Also the Pharmacopœial name (U.S. 1870) for a white metal having the specific gravity of 10.4. See SILVER.

Argen'tum Fo-lĭ-a'tum.* [From the Lat. *fo'lium*, a "leaf."] Silver-leaf:—used for covering pills and other substances.

Argen'tum Fu-ġĭ-ti'vum,* **Argen'tum Mob'ĭ-le.*** The same as *Argentum vivum*, or quicksilver.

Argentum Musivum.* See MOSAIC SILVER.

Argen'tum Vi'vum.* "Quicksilver," the metal *Hydrar'gyrum*, or mercury.

Ar-ġil'la.* [From the Gr. *ἀργός*, "white."] Alumina, or pure clay; ar'gil.

Ar-ġil-lā'ceous. [Lat. **Argilla'ceus**; from *argil'la*, "clay."] Of the nature of clay.

Ar-ġil-lif'er-ous. [Lat. **Argillif'erus**; from *argil'la*, "clay," and *fe'ro*, to "bear."] Containing clay as an accidental ingredient.

Ar'ġil-loid. [Lat. **Argilloi'des**; from *argil'la*, "clay," and the Gr. *εἶδος*, a "form" or "resemblance."] Resembling argil.

Ar'gŏl, or **Ar'gal.** (Fr. *Tartre brut*, tärtr brü, "raw" or "coarse tartar.") Wine-stone, or crude tartar, an acidulous concrete salt deposited by wine, and used by dyers as a mordant. It is impure bitartrate of potash.

Ar-ġўr'ĭ-a.* [From the Gr. *ἄργυρος*, "silver."] Disease caused by the use, or abuse, of salts of silver.

Arhythmous, a-rith'mŭs. [Lat. **Arhyth'mus**; from the Gr. *α*, priv., and *ῥυθμός*, "number."] Without rhythm or regularity of the pulse.

Ar-ĭ-çi'na.* An alkaloid found in cinchona bark, and very analogous in its properties to cinchonia and quinia. These three alkaloids may be viewed as oxides of the same compound radicle.

Ar'id. [Lat. **Ar'idus**, "dry, lean, barren."] Dry; parched with heat; destitute of moisture.

Ar'il. [Lat. **Aril'lus**; from *a'reo*, to "be dried up."] A botanical term, signifying a peculiar exterior coat of some seeds: thus, mace is the aril of the nutmeg.

Ar'il-late, or **Ar'il-lāt-ed.** [Lat. **Arilla'tus.**] Having arils; formed like an aril.

Arillus.* See ARIL.

A-ris'ta.* [From the Lat. *a'reo*, to "be dry."] A term in Botany, denoting the beard of the chaff of grasses; the awn.

A-ris'tate. [Lat. **Arista'tus**; from *aris'ta.*] Having an awn or rigid bristle-like process; awned; bearded.

A-ris-to-lo'ċhĭ-a* or **A-ris'to-lo-ċhi'a.*** [From the Gr. *ἄριστος*, the "best," and *λοχεία*, or *λοχία*, "childbirth;" also, "LOCHIA" (which see); because it promotes recovery after childbirth.] Birthwort. A Linnæan genus of the class *Gynandria*, natural order *Aristolochiaceæ*. It comprises numerous species, natives of the United States, Mexico, South America, and Europe.

Aristolo'chia Re-tic-u-la'ta.* A species of snake-root which is indigenous in Louisiana and Texas. It is used in medicine as a tonic.

Aristolo'chia Ser-pen-ta'rĭ-a.* The *Serpenta'ria Virginia'na*, or Virginia Snake-Root: —so named because supposed to be an antidote to the poison of serpents. It is a stimulant and tonic, and is given in cases of debility, and especially in intermittents.

Aristolo'chia To-men-to'sa.* A woody climbing plant, a native of the Southern United States. It is tonic and stimulant.

Aristolochiaceæ,* a-ris-to-lo-ke-a'she-ē, or **A-ris-to-lo'ċhĭ-æ.*** [From the Lat. *Aristolo'chia*, one of the genera.] A small natural order of exogenous plants, natives of the tropical and temperate parts of both hemispheres. They are tonic and stimulant. They are herbs or twining shrubs having apetalous flowers, some of which are beautiful.

A-ris-to-lo'ċhĭ-æ,* the plural of **Aristolo'chia.** The Jussieuan name of a natural order of plants. See ARISTOLOCHIACEÆ.

Arm. [Lat. **Bra'chium.**] The upper extremity from the shoulder to the wrist, divided by the elbow-joint into the arm proper and the forearm.

Ar-ma'rĭ-um.* [From the Lat. *ar'ma*, "arms" or "implements."] A store of medicines, instruments, etc.

Armed. In Botany, having thorns or prickles.

Ar-me'nĭ-an Bole. [Lat. **Bo'lus Arme'niæ.**] A pale, red-colored earth, used as a remedy against aphthæ; also used in tooth-powders, etc.

Ar-mil'la,* plural **Ar-mil'læ.** [From the Lat. *armil'la*, a "bracelet."] The name of the membranous ligaments confining the tendons of the carpus.

Ar'mil-la-rў. [Lat. **Armilla'ris**; from the same.] Applied in Astronomy to an artificial sphere formed of circles, representing orbs of celestial bodies; in Botany, applied to plants having leaves like bracelets.

Armora'ciæ (ar-mo-ra'she-ē) **Ra'dix.*** Horseradish-root. See COCHLEARIA ARMORACIA.

Ar'mus.* [From the Gr. *ἀρμός*, a "joint."] The shoulder or arm.

Ar-năl'dĭ-a.* A disease formerly known in England, and attended with alopecia, or baldness.

Ar'nĭ-ca.* [From the Gr. *ἄρς*, *ἀρνός*, a "lamb;" from the softness of its leaf.] A Linnæan genus of the class *Syngenesia*, natural order *Compositæ*. Also the Pharmacopœial name (U.S. 1870) for the flowers of *Arnica montana*.

Ar'nica Mon-ta'na.* Leopard's-bane. This plant is celebrated as a remedy for bruises, and hence has been called *panace'a lapso'rum* (the "panacea of the fallen,"—*i.e.*, of those who have had a fall occasioning a severe injury). It is a native of Europe.

Ar'nĭ-çæ Flo'rēs.* "Arnica Flowers." The Pharmacopœial name (U.S. 1880) for the flowerheads of *Arnica montana*. When taken internally, arnica acts as an irritant to the stomach and bowels, often producing an emetic and cathartic effect.

Ar'nicæ Ra'dix.* "Arnica Root." The Pharmacopœial name (U.S. 1880) for the rhizome and rootlets of *Arnica montana*. Their medical properties are similar to those of Arnica Flowers. The tincture of arnica root is officinal. See TINCTURA ARNICÆ RADICIS.

Ar'nĭ-çin. [Lat. **Arnici'na.**] A bitter resin, the active principle of *Arnica montana*.

A-roi'de-ous. [Lat. **Aroi'deus**; from *a'rum*, the "wake-robin," and the Gr. *εἶδος*, a "form" or "resemblance."] Resembling the *Arum*, or Wake-robin. The Latin term in the plural feminine (*Aroi'deæ*) forms the name of a natural order of plants. See ARACEÆ.

A-ro'ma,* gen. **A-ro'ma-tis**, plural **A-ro'ma-ta.** [Perhaps from the Gr. ἄρι, intensive, and ὀδμή, "odor."] The fragrant principle of plants and of substances derived from them.

Ar-o-mat'ic. [Lat. **Aromat'icus**; from *aro'ma.*] Odoriferous; having an agreeable smell or spicy flavor, as the nutmeg, vanilla, sassafras, lavender, wintergreen, cinnamon, and other spices.

Ar-o-mat'ĭ-cus Cor'tex.* "Aromatic Bark." The bark of *Canella alba*, or wild cinnamon.

Arquebusade, Eau d' (Fr.), ō-dārk'bü'zād'. [From the Lat. *ar'quebus*, a "hand-gun."] *A'qua Vulnera'ria.* A lotion composed of vinegar, sulphuric acid, honey, alcohol, and various aromatics, —originally applied to wounds inflicted by the arquebus.

Ar'rack, or **Ar'rak**, written also **Ar'ack.** An intoxicating beverage made in India by distilling fermented juice of various kinds, but especially from *toddy*, the sweet sap of the palm-tree.

Ar'ra-go-nīte. A species of carbonate of lime, first found in Aragon, Spain. It occurs in crystals the primary form of which is a rhombic prism.

Arrectores Pilorum.* See PILORUM ARRECTORES.

Ar-rest'ed. A term used in obstetrics when the head of the child is hindered, *but not impacted*, in the pelvic cavity,—a distinction of the greatest importance.

Ar'row-Root. The fecula or starch from the root of the *Maranta arundinacea* and *M. Indica:* —named from its supposed efficacy in poisoned wounds (wounds from poisoned arrows). Arrow-root is also obtained from the root of the *Arum maculatum* and other plants.

Arrow-Shaped. See SAGITTATE.

Ar-se'nĭ-āte. [Lat. **Arse'nias, a'tis.**] A salt consisting of arsenic acid united with a salifiable base.

Arseniate of Sodium, or **Arseniate of Soda.** See SODII ARSENIAS.

Ar'se-nic. [Lat. **Arsen'icum**, or **Arse'nium**; from the Gr. ἄρσην, "masculine," "vigorous,"—in allusion to its strong and acrimonious properties.] A metal plentifully met with in nature, generally in union with sulphur, or with other metals, or with oxygen, etc. Though arsenic in its metallic state is not dangerous, it is readily converted into a poisonous oxide, and all of its soluble compounds are more or less poisonous. Arsenic is also the common name for arsenious acid, sometimes called white oxide of arsenic, *arsen'icum al'bum* ("white arsenic"), ratsbane, and other names. This is the most common form in which arsenic is found in commerce. The only known antidote for this poison is the hydrated sesquioxide (or peroxide) of iron, which has been found much more efficacious when freshly prepared. This substance produces (by a transfer of a portion of the oxygen from the iron to the acid) an insoluble and therefore inert subarseniate of the protoxide of iron. That this antidote may be perfectly successful, it should be preceded by the use of emetics or the stomach-pump. See POISONS.

Ar-sen'ĭ-cal. [Lat. **Arsenica'lis.**] Belonging to arsenic or arsenious acid.

Arsenical Paste. See PÂTE ARSÉNICALE.

Arsenicalis Liquor.* See LIQUOR ARSENICALIS.

Ar-sen'ĭ-ci Al'bum Ox'ĭ-dum Ve-na'le.* The "White Oxide of Arsenic of Commerce." A name of arsenious acid, or sublimed oxide of arsenic.

Ar-sen'ĭ-cum.* "Arsenic." The Pharmacopœial name (U.S. 1870) for a brittle metal, usually of a dark hue, but exhibiting a steel-gray color and brilliant lustre when recently broken or sublimed. Its specific gravity is 5.88.

Arsen'icum Al'bum.* "White Arsenic." A name of arsenious acid, or sesquioxide of arsenic.

Ar-se'nĭ-i I-od'ĭ-dum. "Iodide of Arsenic." The Pharmacopœial name (U.S. 1880) for glossy, orange-red, crystalline masses, or shining, orange-red, crystalline scales, containing iodine and arsenic, having an iodine-like odor and taste and a neutral reaction. It has been used internally in lepra, impetigo, and diseases resembling cancer.

Ar-se'nĭ-ous Aç'id. The *Acidum arseniosum*, otherwise called *Arsenicum album*, or sesquioxide of arsenic, and *Arsenici album oxidum venale.* See ARSENIC.

Ar'se-nīte. [Lat. **Ar'senis, i'tis.**] A combination of arsenious acid with a base.

Ar'senite of Cop'per. [Lat. **Cu'pri Ar'senis.**] A green pigment, called *Paris Green*, or *Scheele's Green.* It is poisonous, and is extensively used as a remedy against injurious or destructive insects.

Arsenium.* See ARSENIC.

Arseniuret, ar-sĕn'yu-rĕt. [Lat. **Arseniure'tum.**] A combination of arsenic with a metallic or other base.

Ar-sen'o-vin'ic Aç'id. An acid produced by the action of arsenic on alcohol.

Ar-tan'the E-lon-ga'ta.* A name of the *Matico* plant. See MATICO.

Artemisia,* ar-te-mish'e-a. [Gr. Ἀρτεμισία; perhaps because sacred to Diana, in Gr. Ἄρτεμις.] A Linnæan genus of the natural order *Compositæ.* It comprises numerous species of herbaceous or shrubby plants widely distributed in temperate regions of both hemispheres. Many of them are bitter and tonic.

Artemis'ia A-brot'a-num.* Southern-wood, —formerly used as a tonic and anthelmintic.

Artemis'ia Ab-sin'thĭ-um.* Common wormwood; also called *Absinthium commune* and *Absinthium vulgare.* It is a native of Europe, and has tonic properties.

Artemis'ia Chi-nen'sis.* The Chinese wormwood, or mugwort of China.

Artemis'ia Dra-cunc'u-lus.* Tarragon, a plant which is used to impart a peculiar stimulating flavor to vinegar.

Artemis'ia In'dĭ-ca.* Indian wormwood, used similarly to *Artemisia Chinensis.*

Artemis'ia Ju-da'ĭ-ca.* The same as ARTEMISIA SANTONICA.

Artemis'ia Lat-ĭ-fo'lĭ-a.* The same as ARTEMISIA CHINENSIS.

Artemis'ia Ma-rit'ĭ-ma.* The plant which produces SANTONICA, which see.

Artemis'ia San-ton'ĭ-ca.* Tartarian southernwood, wormwood, or worm-seed plant.

Ar-tem'ĭ-sin. [Lat. **Artemisi'na.**] The bitter principle of *Artemisia Absinthium.*

Artère, ăr'tair', the French term for ARTERY, which see.

Arteria.* See ARTERY.

Ar-te'rĭ-a As'per-a.* The "Rough Artery." [See etymology of ARTERY.] The trachea or windpipe:—so called because of the inequalities or roughness of its surface.

Arte'ria In-nom-ĭ-na'ta.* The "Unnamed Artery." The first branch given off from the aorta, dividing into the right carotid and right subclavian arteries.

Arte'ria Mag'na.* The "Great Artery." The aorta.

Ar-te'rĭ-ac, or **Ar-te-rī'a-cal.** [Lat. **Arteri'acus.**] Pertaining to the *arteria aspera,* or windpipe:—applied to medicines for disorders of the voice or diseases of the windpipe.

Ar-te'rĭ-æ,* gen. **Ar-te-rĭ-a'rum,** the plural of **Arte'ria,** an "artery."

Arteriæ Venosæ,* ar-te're-ē ve-no'sē, the plural of **Arte'ria Veno'sa.** Literally, "venous arteries." A name sometimes given to the four pulmonary veins, because they contain arterial blood.

Ar-te'rĭ-al. [Lat. **Arteria'lis;** from *arte'ria,* an "artery."] Belonging to an artery.

Arterial Duct. See DUCTUS ARTERIOSUS.

Ar-te-rĭ-og'ra-phy. [Lat. **Arteriogra'phia;** from *arte'ria,* an "artery," and the Gr. γράφω, to "write."] A description of the arteries.

Ar-te-rĭ-ol'o-ğy. [Lat. **Arteriolo'gia;** from *arte'ria,* an "artery," and the Gr. λόγος, a "discourse."] A treatise on the arteries; the science of the arteries.

Ar-te-rĭ-o'sus.* [From the Lat. *arte'ria,* an "artery."] Having numerous arteries; of the nature of an artery.

Arteriosus Ductus.* See DUCTUS ARTERIOSUS.

Ar-te-rĭ-ot'o-my. [Lat. **Arterioto'mia;** from *arte'ria,* an "artery," and the Gr. τέμνω, to "cut."] The cutting into, dividing, or opening of an artery.

Ar-te-ri'tis.* [From the Lat. *arte'ria,* an "artery."] Inflammation of an artery.

Ar'ter-y. [Lat. **Arte'ria,** plural **Arte'riæ;** from the Gr. ἀήρ, "air" or "spirit," and τηρέω, to "keep" or "preserve," the arteries having been supposed by the ancients to contain air.] One of the vessels by which the blood is conveyed from the heart towards the various organs and members of the body.

Artesian, ar-te'zhan. [From *Artois,* Lat. *Arte'sia,* a province of France, in which they were first formed.] A term applied to certain wells or fountains produced by boring through various strata deep enough to reach a subterranean body of water the sources of which are higher than the mouth of the well. The diameter of these wells is small, often between five and ten inches. A well at Sperenburg, in Prussia, is three thousand nine hundred feet deep.

Ar'thra-gra.* [From the Gr. ἄρθρον, a "joint," and ἄγρα, a "seizure."] The same as ARTHRITIS.

Ar-thrăl'ğĭ-a.* [From the Gr. ἄρθρον, a "joint," and ἄλγος, "pain."] Chronic pain of a joint; gout or rheumatism.

Ar-thrit'ic. [Lat. **Arthrit'icus.**] Belonging to arthritis, or to gout.

Ar-thri'tis, *idis.** [From the Gr. ἄρθρον, a "joint."] Literally, "inflammation of a joint." Gout. A term generically used to signify any disease involving a joint, but more correctly confined to articular inflammation. See PODAGRA.

Arthri'tis Pla-neti'ca,* Arthri'tis Rheumat'ĭ-ca,* Arthri'tis Va'ga.* Other names for wandering or erratic gout. See PODAGRA.

Ar-throc'a-ce.* [From the Gr. ἄρθρον, a "joint," and κάκη, "disease."] An ulcerated condition or caries of the cavity of a bone:—also used as synonymous with *Spina ventosa.*

Ar-thro'dĭ-a.* [From the Gr. ἄρθρον, a "joint."] An articulation admitting of motion on all sides; a variety of *diarthrosis.*

Ar-thro-dyn'ĭ-a.* [From the Gr. ἄρθρον, a "joint," and ὀδύνη, "pain."] Pain in a joint, or chronic rheumatism.

Ar-throg'ra-phy. [Lat. **Arthrogra'phia;** from the Gr. ἄρθρον, a "joint," and γράφω, to "write."] A description of the joints.

Ar-throl'o-ğy. [Lat. **Arthrolo'gia;** from the Gr. ἄρθρον, a "joint," and λόγος, a "discourse."] A treatise on the joints; the science of joints.

Ar-thron'cus.* [From the Gr. ἄρθρον, a "joint," and ὄγκος, a "mass," a "swelling."] A distinct cartilaginous body (one or more) which sometimes forms within the knee-joint:—sometimes applied to the tumefaction of a joint.

Ar-thro-pa-thi'a.* [From the Gr. ἄρθρον, a "joint," and πάθος, an "affection."] An affection of the shoulder-joint, with violent pain and swelling of the brachial portion.

Ar-thro-phlo-go'sis.* [From the Gr. ἄρθρον, a "joint," and φλογόω, to "inflame."] Inflammation of a joint. See ARTHRITIS.

Ar-throp'o-da.* [From the Gr. ἄρθρον, a "joint," and πούς, ποδός, a "foot."] A term applied by Cope to a primary type or grand division of the animal kingdom. It is synonymous with *Articulata.*

Ar-thro-py-o'sis.* [From the Gr. ἄρθρον, a "joint," and πῦον, "pus."] Pus in a joint.

Ar-thro'sĭ-a.* [From the Gr. ἄρθρον, a "joint."] The generic name for articular inflammation, according to Dr. Good.

Ar-thro'sis.* [From the Gr. ἀρθρόω, to "fasten by joints."] Articulation, or connection by joints.

Artichoke. See CYNARA SCOLYMUS.

Ar-tic-u-la'ris.* [From the Lat. *artic'ulus,* a "joint."] Relating to joints; articular:—ap-

plied to arteries, muscles, etc., connected with the joints.

Articula'ris Ge'nu.* "The Articular [Muscle] of the Knee." This and the term *subcruræus* have been applied to a few detached muscular fibres frequently found under the lower part of the cruralis and attached to the capsule of the knee-joint.

Articula'ris Mor'bus.* The "Articular Disease," or disease of the joints. The same as ARTHRITIS, or gout.

Articulata.* See ARTICULATUS.

Ar-tic'u-la-ted. Jointed; connected by joints.

Ar-tic-u-lā'tion. [Lat. **Articula'tio, o'nis**; from *artic'ulus*, a "joint," *artic'ulo, articula'tum*, to "joint," to "make a joint."] The fastening together of the various bones of the skeleton in their natural situation; a joint. Also the distinct utterance of syllables or words.

The articulations of the bones of the body are divided into *synarthroses*, immovable articulations, and *diarthroses*, movable articulations. See DIARTHROSIS, SYNARTHROSIS.

Ar-tic-u-la'tus.* [From the same.] Articulated, jointed, or knotted:—applied in the plural neuter (*Articula'ta*) to the third great division of the animal kingdom, in which articulated rings encircle the body, and frequently the limbs; also called *Arthropoda*. In Botany the term is applied to parts connected by joints, as the petiole of a leaf with the stem.

Ar-tic'u-li,* gen. **Ar-tic-u-lo'rum**, the plural of **Artic'ulus**, a "joint."

Ar-tiç'u-lo Mor'tis.* "In or at the point or moment of death." See ARTICULUS.

Ar-tic'u-lus,* or **Ar'tĭ-cle.** [The diminutive of the Lat. *ar'tus*, a "joint."] A joint or articulation; a member or limb; a small part, as of a discourse; a point or moment:—in Botany, that part of the stalk between two knots or joints; also a knot or joint.

Ar-tĭ-fĭ'çial A'nus. An opening made in the parietes of the abdomen, through which the fæces are discharged during life; also an opening made in the natural situation in cases of imperforate anus.

Artifi'cial Eye. A hollow hemisphere, usually made of enamel, so as to present the appearance of the natural eye.

Artifi'cial Joint. A fracture united by the broken ends of the bone becoming rounded and smooth and connected by a fibrous, ligamentous substance; a false joint.

Artifi'cial Pu'pil. The result of an operation for overcoming the effect of adhesions or permanent contraction of the iris.

Artifi'cial Sys'tem. A system of botanical classification devised by Linnæus, and sometimes called the *Sexual system*, because it is founded on the stamens and pistils. He arranged all plants under twenty-four classes, founded mainly on the number, situation, proportion, and connection of the stamens.

Ar-to-car-pa'ce-æ.* A natural order of exogenous trees, natives of South America, Polynesia, and India. It comprises the *Artocarpus*, *Brosimum*, and *Antiaris*. Some botanists include these under *Urticaceæ*.

Ar-to-car'pus.* [From the Gr. ἄρτος, "bread," and καρπός, "fruit."] A genus of plants growing in Southern India and Polynesia. The *Artocar'pus inci'sa* is the bread-fruit proper; the *Artocar'pus integrifo'lia* has a very coarse fruit, called jack-fruit, common in the South of India. See BREAD-FRUIT.

Arundinaceus,* a-rŭn-de-na'she-ŭs. [From the Lat. *arun'do*, a "reed."] Belonging to a reed; resembling a reed; arundina'ceous:—applied in the feminine plural (*Arundinaceæ*, a-rŭn-de-na'she-ē) to a tribe of plants having the *Arundo* for its type.

Aryan. See RACE.

A-rÿt'æ-no-ĭ-dæ'us.* [See the two following articles.] Belonging to the arytenoid cartilages. The *arytænoidæus* muscle is a muscle extending from one of the arytenoid cartilages to the other.

A-rÿt'e-noid. [Lat. **Arytænoi'des**; from the Gr. ἀρύταινα, a "pitcher," and εἶδος, a "form" or "resemblance."] Resembling the mouth of a pitcher.

Aryt'enoid Car'tĭ-laġ'-ines Arytænoi'des.] Two cartilaginous bodies of the larynx, which, in their natural situation, resemble the mouth of a pitcher.

As-a-fœt'ĭ-da.* "Asafetida." The Pharmacopœial name (U.S. 1880) for a gum resin obtained from the *Ferula Narthex* and *Ferula Scorodosma*. See ASSAFŒTIDA.

As-a-græ'a.* [Named in honor of *Asa Gray*, the eminent American botanist.] A genus of plants of the order *Liliaceæ*, consisting of a single species, *Asagræ'a officina'lis*, a native of Mexico. It produces the SABADILLA, which see.

Asagræ'a Of-fiç'ĭ-na'lis.* The plant from which veratria is obtained.

A-saph'a-tŭm.* [From the Gr. ἀσαφής, "obscure," "uncertain;" named in allusion to their deceptive appearance.] A term applied to the collections in the sebaceous follicles of the skin, which, when pressed out, appear like little worms.

A-sa'phĭ-a.* [Gr. ἀσαφής; from *a*, priv., and σαφής, "clear," "plain."] Defective utterance; a want of clearness of articulation or of speech.

A-sar-a-bac'ca.* The *Asarum Europæum*.

Asari Folia.* See ASARUM EUROPÆUM.

As'a-rin. [From the Lat. *as'arum*.] A bitter principle found in the leaves of the ASARUM EUROPÆUM, which see.

As'a-rum.* A genus of stemless herbs of the order *Aristolochiaceæ*, comprising several species, natives of the United States. They have aromatic pungent root-stocks.

As'arum Can-a-den'se.* Canada Snake-root, or Wild Ginger. The root is sometimes used as a substitute for ginger.

As'arum Eu-ro-pæ'um.* The plant *Asarabacca*. The leaves (*As'ari fo'lia*) abound in a bitter principle called *as'arin*, and are used as an errhine. Its leaves and root are powerfully emetic and cathartic.

As-bes'tos.* [From the Gr. *ἀ*, priv., and *σβέννυμι*, to "extinguish."] Literally, "inextinguishable," "that which cannot be extinguished or destroyed." A mineral substance of a fibrous structure, from which an incombustible linen is made. The ancients are said to have made use of cloth of asbestos to wrap the bodies of their dead before placing them on the funeral pile. Asbestos is a variety of hornblende. Its incombustibility and slow conduction of heat are said to render it a complete protection against flame.

Ascarides.* See ASCARIS.

As'ca-ris,* plural **As-căr'i-dēs.** [Supposed to be derived from the Gr. *ἀσκαρίζω*, to "leap," to "kick."] A genus of worms found in the human intestines. The name is often incorrectly applied to the *Oxyuris*, or Thread-worm.

As'caris Lum'bri-co-i'dēs.* [From the Lat. *lumbri'cus*, an "earth-worm."] One of the most common of intestinal worms, resembling the earthworm.

As'caris Mȳs'tax.* [From the Gr. *μύσταξ*, a "moustache."] A small worm from two to four inches long, with an appendage at the mouth which has been compared to a moustache. It is sometimes found in the intestines of children, and also of cats.

As'caris Ver-mic-u-la'ris.* The thread-worm:—now called OXYURIS.

As-cend'ing. In Botany, rising obliquely upwards:—applied to stems. Also directed upwards or rising upwards, as the stem (which is the *ascending* axis).

Ascend'ing Ax'is. A term applied to the stem of plants, or that part which grows in an opposite direction from the root (which is the *descending* axis). See AXIS.

As-cen'sus.* [From the Lat. *ascen'do*, *ascen'sum*, to "climb," to "ascend."] Literally, an "ascending," or "ascent." A term applied in Chemistry to the process of sublimation, formerly termed *Destillatio per ascensum.*

Ascen'sus Mor'bi.* The "ascent or increase of a disease."

Ascia,* ash'e-a. An "axe" or "hatchet." The term is applied to a bandage, so called from its shape, described by Hippocrates.

Ascian. See ASCII.

As-çid'i-a,* or **As-çid'i-ans.** A group of Mollusks called *Tunicates*, which have no shell, but are enclosed in a leathery or elastic tunic.

As-çid'i-āte. [Lat. **Ascidia'tus**; from *ascid'ium.*] Shaped like a small bottle or pitcher.

As-çid-i-for'mis.* [See ASCIDIUM.] Formed like a small bottle or pitcher; ascid'iform.

As-çid'i-um.* [From the Gr. *ἀσκίδιον* (diminutive of *ἀσκός*, a "leather bag," or "wine-skin"), a "small leathern bag or bottle."] A hollow leaf resembling a small bottle or pitcher, as in the *Nepenthes* (Pitcher-plant).

As-çig'ĕr-us.* [From the Gr. *ἀσκός*, a "bag," and the Lat. *ge'ro*, to "bear."] Bearing or containing utricles.

Ascii,* ash'e-i, the plural of **Ascius,** ash'e-ŭs. [From the Gr. *ἀ*, priv., and *σκιά*, a "shade" or "shadow."] Literally, "without shadow." A term applied to the people of the Torrid Zone, who have twice in the year the sun perpendicular above their heads, and are then without shadow.

As-çi'tēs.* [Gr. *ἀσκίτης*; from *ἀσκός*, a "leather sack" or "bag," "something swollen or puffed up."] *Hy'drops utricula'rius*, or dropsy of the belly. A genus of the natural order *Intumescentiæ*, class *Cachexiæ*, of Cullen's nosology.

As-çit'ic. [Lat. **Ascit'icus.**] Having *Ascites* or pertaining to *Ascites.*

Asclepiadaceæ,* as-kle'pe-a-da'she-ē. A natural order of exogenous plants, of which the *Asclepias* is the type. It comprises also the *Stapelia*, the *Hoya*, and the *Stephanotis*, which are cultivated for the beauty of their flowers, and a medicinal plant called Mudar (*Calotropis.*) The seeds in many species are furnished with long tufts of silky hairs. This order includes about one thousand species, mostly natives of the tropical parts of Asia and America.

As-cle'pĭ-as, a*dis.* [From the Gr. Ἀσκληπιός, the Greek name of *Æsculapius*, the god of medicine.] The name of a genus of plants belonging to the Linnæan class *Pentandria*, natural order *Asclepiadaceæ.* It comprises many species which are natives of the United States.

Ascle'pias.* Asclepias, or Pleurisy Root. The Pharmacopœial name (U.S. 1880) for the root of *Asclepias tuberosa.*

Ascle'pias Cor-nu'ti.* The Silk-Weed; called also Milk-Weed. Of this plant the bark of the root is given in powder for asthma and other pulmonary affections.

Ascle'pias Cu-ras-sav'i-ca.* A plant, a native of the West Indies, called *Bastard Ipecacuanha.* Its leaves are emetic.

Ascle'pias In-car-na'ta.* The flesh-colored *Asclepias*, a plant whose medical properties appear to be similar to those of ASCLEPIAS TUBEROSA, which see.

Ascle'pias Sȳ-ri'a-ca.* A synonyme for *Asclepias cornuti.*

Ascle'pias Tu-be-ro'sa.* Swallow-wort:—called also Pleurisy Root. An American plant, the root of which is used as an expectorant and a diaphoretic in catarrh and rheumatism. It is given in powder and decoction or infusion.

As-cle'pĭ-on,* more correctly **As-cle-pĭ-ei'on*** (Gr. Ἀσκληπεῖον). [From the Lat. *Ascle'pias* or *Æscula'pius*, the god of medicine.] A temple of Æsculapius, where it is said the sick often resorted and were cared for.

A-sep'ta.* [From the Gr. *ἀ*, priv., and *σήπομαι*, to "putrefy."] Substances free from the putrefactive process.

Asetiger,* a-set'e-jer. [From the Lat. *a*, priv., *se'ta*, a "bristle," and *ge'ro*, to "bear."] Without bristles; asetiğ'erous:—applied in the neuter plural (*Asetiğ'era*) to a family of *Articulata abranchiata.*

A-sex'u-al. [Lat. **Asexua'lis**; from *a*, priv., and *sex'us*, "sex" or "gender."] A botanical term applied to plants having no sexual organs.

Ash. The common name of several trees and shrubs of the Linnæan genus *Frax'inus* and the

natural order *Oleaceæ*. The white ash (*Frax'inus America'na*) is a noble shade-tree, and valuable for timber. It is a native of the United States. *Bitter Ash* is the popular name for a species of Quassia growing in the West India islands.

Ash-Color. See CINEREUS.

Ash, Mountain. See PYRUS AMERICANA.

Ash, Prickly. See PRICKLY ASH.

Ash'es. [Lat. **Ci'nis, Cin'eris.**] The residual substance after burning anything; more usually, the residuum of the combustion of vegetables, containing alkalies and alkaline salts. The common name for the vegetable alkali potash, or *Potassa*.

Asiatic (ā'she-at'ik) **Bâl'sam.** [Lat. **Asiat'icum Bal'samum.**] The BALSAMUM GILEADENSE, which see.

Asitia,* a-sit'e-a. [From the Gr. *α*, priv., and *σῖτος*, "food."] Abstinence from food; also loss of appetite. See ANOREXIA, FASTIDIUM CIBI.

As-păr'a-ġi,* the plural of **Aspar'agus,** forming the Jussieuan name of a natural order of plants now included in *Liliaceæ*.

As-păr'a-ġin. [Lat. **Asparagi'na.**] A peculiar vegetable principle obtained from the Asparagus.

As-păr'a-gus [Gr. *ἀσπάραγος*] **Of-fiç-ĭ-na'lis.*** Common Asparagus, a plant belonging to the Linnæan class *Hexandria*, natural order *Liliaceæ*. The root and young shoots are diuretic, and are said to exert a sedative influence on the heart.

As-par'tāte. [Lat. **Aspar'tas, a'tis.**] A combination of aspartic acid with a base.

Aspen. See POPULUS TREMULOIDES.

Aspera Arteria.* See ARTERIA ASPERA.

As-per-ġil'lĭ-form. [Lat. **Aspergillifor'mis**; from *aspergil'lum*, a "brush."] Brush-like; divided into minute ramifications, as the stigmas of grasses, certain hairs of the cuticle, etc.

As'per-ĭ-fo'lĭ-us.* [From the Lat. *as'per*, "rough," and *fo'lium*, a "leaf."] Rough-leaved; asperifo'lious:—applied by Linnæus, in the plural feminine (*Asperifo'liæ*), to an order of plants. See BORAGINACEÆ.

As-per'ma-tism, or **As-per'mĭ-a.*** [From the Gr. *α*, priv., and *σπέρμα*, "seed," "semen."] Inability to produce or to discharge the seminal fluid.

As-per'ma-tous. [Lat. **Asper'matus,** or **Asper'mus**; from the Gr. *α*, priv., and *σπέρμα*, "seed."] Without seed.

As-per'sion. [Lat. **Asper'sio**; from *asper'go, asper'sum*, to "sprinkle."] The sprinkling of the body with a medicinal liquid or powder.

As-pĕr'u-la.* A genus of herbs of the natural order *Rubiaceæ*, natives of Europe. *Asperula odorata* has fragrant leaves, and is said to be diuretic and tonic.

As-phăl'tum.* [From the Gr. *α*, priv., and *σφάλλω*, to "slip," to "fail," because when used as a cement it prevented the stones from slipping or giving way.] Native bitumen, a solid, brittle bitumen found on the shores and on the surface of the Dead Sea, which was named Asphaltitis from this substance. It is also found in Mexico, Trinidad, etc. A brown coloring-matter is formed from it, which, when dissolved in oil of turpentine, is semi-transparent and is used as a glaze.

As'pho-del. [Lat. **Asphod'elus**; Gr. *ἀσφόδελος*.] A genus of herbaceous plants of the natural order *Liliaceæ*, natives of Sicily and the Levant. Several species of this genus are cultivated for the beauty of their flowers. The bulbs of *Asphodelus ramosus* contain fecula which is edible, and they are said to be diuretic.

Asphodeleæ,* as-fo-de'le-ē. A subdivision of the natural order *Liliaceæ*.

As-phod'e-lĭ,* the plural of the Lat. **Asphod'elus,** forming the Jussieuan name of a natural order the same as ASPHODELEÆ, which see.

As-phŷx'ĭ-a.* [From the Gr. *α*, priv., and *σφύξις*, the "pulse."] Literally, the "state of being without pulse." As'phyxy. Suspended animation; that state in which there is total suspension of the powers of body and mind, usually caused by interrupted respiration, as by hanging or drowning.

Asphyx'ia Al'ġĭ-da.* [From the Lat. *al'geo*, to "be cold."] Asphyxy from intense cold.

Asphyx'ia E-lec'trĭ-ca.* Asphyxy caused by lightning or electricity.

Asphyx'ia Id-ĭ-o-path'ĭ-ca.* "Idiopathic Asphyxy." Asphyxy, or sudden death, without any manifest cause. See IDIOPATHIC.

Asphyx'ia Me-phit'ĭ-ca.* Asphyxy from inhalation of some mephitic gas, carbonic acid, or other non-respirable gas.

Asphyx'ia Ne-oph-ŷ-to'rum.* [From the Gr. *νέος*, "young," "new," and *φυτόν*, a "plant," also a "child."] Called also **Asphyx'ia Ne-o-na-to'rum.*** [From the Lat. *na'tus*, "born."] Deficient respiration in new-born children.

Asphyx'ia Suffocatio'nis* (suf-fo-ka-she-o'nis). The "Asphyxy of Suffocation." Asphyxy by hanging or drowning.

As-phŷx'ĭ-āt-ed. [Lat. **Asphyxia'tus.**] Laboring under asphyxy.

As-pid'ĭ-um.* [From the Gr. *ἀσπίς*, a "round shield."] A Linnæan genus of the class *Cryptogamia*, order *Filices*.

As-pid'ĭ-um.* "Aspidium" (Male Fern). The Pharmacopœial name (U.S. 1880) for the rhizome of *Aspidium Filix-mas* and of *Aspidium marginale*.

Aspid'ium Ath-a-man'tĭ-cum.* [Etymology uncertain.] A species of fern growing in South Africa, much used as a remedy against worms, especially the tape-worm.

Aspid'ium Fi'lix-Mas.* The male fern; called also *Polypodium Filix-mas*. The root of this plant is considered by many to be an efficaceous remedy against the tape-worm.

As'pĭ-ra-tor. An explorative instrument invented by Dieulafoy for the evacuation of the fluid contents of tumors, etc. It consists of a glass syringe having at its lower end two openings provided with stop-cocks. When the piston is raised and the cocks are closed, a vacuum is created in the syringe, which can be maintained by fixing the piston in the withdrawn position. An

india-rubber tube is fitted into each of the two openings, and these must be provided with coils of wire inside to prevent them from collapsing. At the end of one tube is fixed a fine hollow needle.

As-ple'nĭ-um.* [From the Gr. *α*, priv., and *σπλήν*, the "spleen."] A genus of ferns, called spleenwort and miltwaste, from a belief that it removed disorders or reduced enlargements of the spleen.

Asple'nium Cet'arach* (set'a-rak). A species of fern much used as a remedy in nephritic and calculous diseases, also as a pectoral.

Asple'nium Fi'lix-Fœm'ĭ-na.* The female fern, a plant possessing medical properties similar to those of the male fern (*Aspidium Filix-mas*). The *Asple'nium ru'ta mura'ria*, the *A. scolopen'drium*, and the *A. trichomanoi'des* have properties similar to those of the *A. cetarach*.

Assafœtida,* as-sa-fet'e-da, written also **Assafetida*** and **Asafœtida.*** The Pharmacopœial name (U.S. 1870, 1880) for the gum resin, or concrete juice, obtained from the *Narthex Asafœtida*, otherwise called *Fer'ula Asafœt'ida*. It occurs massive and in tears. It was used by the ancients as a condiment, and at the present day the plant is eaten with relish in some countries of the East. Assafœtida is a powerful antispasmodic; it is also a stimulant expectorant and laxative. From its uniting antispasmodic and expectorant virtues, it often proves useful in spasmodic pectoral affections.

As-say'. [From the Fr. *essayer* (old Fr. *asaier*), to "try."] To test ores by chemical or blow-pipe examination: said to be in *the dry way* when done by means of heat (in a crucible), and in *the wet way* when done by means of acids and liquid tests.

ASSAYING. A term commonly applied to the operation of ascertaining the proportion of any metal in an ore or mixture. See CUPELLATION.

As-sim'ĭ-lāte. [From the Lat. *ad*, "to," and *sim'ilis*, "like."] Literally, to "make like." In Physiology, to change the food into a substance like the living body; to convert the food into nutriment,—in other words, into chyle and blood.

As-sim-ĭ-lā'tion. [Lat. **Assimila'tio, o'nis;** from the same.] The act or process of assimilating food. An action common to all organized beings, by which they transform foreign materials into their proper substance. In Botany, the conversion of inorganic mineral matter into the living substance of a plant, or into organic matter capable of becoming living substance.

As-so'dēs,* or **A-so'dēs.*** [From the Gr. *ἀση*, "disgust," "nausea."] A continual fever, attended with a loathing of food. Sauvages calls it *Trytæophya assodes*, and Cullen arranges it under the tertian remittents.

As-sur'gent. [Lat. **Assur'gens;** from *assur'go*, to "rise up."] A botanical term, signifying rising obliquely upwards, or rising with a curve from a declined base.

A-stat'ic. [Lat. **Astat'icus;** from the Gr. *α*, priv., and *ἱστημι*, to "stand."] A term applied to a magnetic needle when its directive property is destroyed by the proximity of another needle, of equal magnetic intensity, fixed parallel to it and in a reversed position, each needle having its north pole adjacent to the south pole of the other. In this state, the needles, neutralizing each other, are unaffected by the earth, while they are still subject to the influence of galvanism.

As-te-a-to'dēs.* [From the Gr. *α*, priv., and *στέαρ, στέατος*, "fat."] Deficiency or absence of the fatty secretions of the skin. See SEBACEOUS GLANDS.

As'ter.* [Gr. *ἀστήρ*, a "star."] A genus of plants of the natural order *Compositæ*, comprising many species which are indigenous in the United States and bear handsome flowers in radiated star-like heads.

Asteraceæ,* as-ter-a'she-ē. A name given by Lindley to a natural order of plants. See COMPOSITÆ.

As'ter Cor-dĭ-fo'lĭ-us.* Heart-Leaved Aster, a native of the United States. It bears pale-blue or purple flowers, and is said to have aromatic properties.

As'ter Pu-niç'e-us.* Red (Stalked) Aster, a native of the United States. Its flowers have long and showy lilac or violet-purple rays. The stalk is red-purple.

A-ster'nĭ-a.* [From the Gr. *α*, priv., and the Lat. *ster'num*.] An organic deviation in the fœtus, characterized by absence of the sternum.

As'ter-oid. [Lat. **Asteroi'des;** from the Gr. *ἀστήρ*, a "star" or "planet," and *εἶδος*, a "form" or "resemblance."] Resembling a star. As a noun, the term is applied, in Astronomy, to many small planets, including Ceres, Pallas, Juno, and Vesta.

As-the'nĭ-a.* [From the Gr. *α*, priv., and *σθένος*, "strength."] As'theny. Want or loss of strength; debility.

As-then'ic. [Lat. **Asthen'icus;** from *asthe'nia*.] Wanting or deficient in strength; adynamic.

As-the-nol'o-ġy. [Lat. **Asthenolo'gia;** from the Gr. *α*, priv., *σθένος*, "strength," and *λόγος*, a "discourse."] The consideration (or science) of diseases arising from debility.

As-the-no'pĭ-a.* [From the Gr. *α*, priv., *σθένος*, "strength," and *ὄψις*, "vision."] Weakness of sight.

Asth'ma, a*tis.* [Gr. *ἆσθμα*; from *ἀσθμάζω*, to "gasp for breath."] A disease attended with difficulty of breathing and a sensation of constriction in the chest, wheezing, cough, and expectoration. A genus of the order *Spasmi*, class *Neuroses*, of Cullen's nosology.

Asth-mat'ic. [Lat. **Asthmat'icus.**] Belonging to, or laboring under, asthma.

A-stig'ma-tĭsm. [Lat. **Astigmatis'mus;** from the Gr. *α*, neg., and *στίγμα*, a "point."] A defect in the eye, in which the rays of light are not brought to one point or focus, but converge at different distances, so as to form two linear images at right angles with each other.

As'to-mus.* [From the Gr. *α*, priv., and *στόμα*, a "mouth."] Having no mouth:—applied to an order of Mosses, and to a family of apterous insects.

As-trag'a-loid. [Lat. **Astragaloi'des**; from *astrag'alus*, the "ankle-bone," a "die," and the Gr. *εἶδος*, a "form" or "resemblance."] Resembling the astragalus.

As-trag-a-lo-i'dēs Sўph-ĭ-lit'ĭ-ca,* called also **Astrag'alus Es'ca-pus.*** The milk-vetch, a plant the root of which is said to cure syphilis.

As-trag'a-lus.* [Gr. *ἀστράγαλος*.] The ankle-bone. Also a genus of plants of the natural order *Leguminosæ*.

Astrag'alus Cret'ĭ-cus.* The Cretan milk-vetch, one of the species of *Astragalus* which are said to yield the gum tragacanth of commerce.

Astragalus Escapus.* See ASTRAGALOIDES SYPHILITICA.

Astrag'alus Gum'mĭ-fer.* A leguminous plant, a native of Syria. Tragacanth is obtained from it.

Astrag'alus Trag-a-can'tha.* The plant formerly supposed to yield gum tragacanth, now known to be chiefly obtained from the *Astragalus verus* and *Astragalus gummifer*.

Astrag'alus Ve'rus.* A plant of the Linnæan class *Diadelphia*, natural order *Leguminosæ*, from which gum tragacanth is derived. It is a native of Asia Minor, Persia, etc.

As-tric'tion. [Lat. **Astric'tio, o'nis**; from *ad*, "to," and *strin'go, stric'tum*, to "bind."] The state produced by astringent medicines.

As-trin'gent. [Lat. **Astrin'gens**; from the same.] Producing contraction and condensation in the soft solids, thereby diminishing excessive discharges.

Astrin'gent Prin'cĭ-ple. A vegetable principle found in the bark of many trees and plants. From its use in tanning skins it has obtained the name of TANNIN, which see.

As-trin'gents. A name applied to medicines (such as alum, tannin, etc.) having the power to check discharges, whether of blood, of mucus, or of any other secretion. They act by contracting the capillaries and secreting-orifices. The chief astringents are acetate of lead, nitrate of silver, tannic and gallic acids, sulphate of zinc, kino, catechu, dilute mineral acids, and alum. See ASTRICTION and ASTRINGENT.

As-trol'o-gў. [From the Gr. *ἀστρον*, a "star," and *λόγος*, a "discourse."] A description of the heavenly bodies, their nature and distinctions, and, so, like Astronomy:—more usually, however, the term is applied to a pretended science which explained the phenomena of nature, and events of human life, by the influence of the stars. Hippocrates considered astrology among the studies necessary for a physician.

As-tron'o-my. [Lat. **Astrono'mia**; from the Gr. *ἀστρον*, a "star," and *νόμος*, a "law."] Literally, that science which treats of the laws which govern the heavenly bodies; but, more generally, it includes everything which can be known of those bodies. It was the only branch of physical science which the ancients cultivated with assiduity or real success.

A-sўs-to'lĭ-a.* [From the Gr. *α*, priv., and *συστολή*, "systole."] The want of power in the heart to make a complete systole, or one sufficient to expel the blood from the ventricles.

At'a-vism. [From the Lat. *at'avus*, an "ancestor."] A term used to denote a reversion to morbid traits or anomalies existing in ancestors, but not in immediate parents; also a tendency of animals and plants to inherit the characters of their remote progenitors.

A-tax'ĭ-a.* [From the Gr. *α*, neg., and *τάσσω*, to "order."] (Fr. *Ataxie*, ă'tăx'ē'.) Literally, "want of order." Irregularity:—a term applied to some diseases.

A-tax'ic. [Lat. **Atax'icus**; from *atax'ia*.] Irregular.

Ataxie Locomotrice Progressive (Fr.), ă'tăx'ē' lo'ko'mo'trēss' pro'grĕs'sēv'. "Progressive Locomotor Ataxia." An affection in which there is a want of power to regulate or co-ordinate the voluntary muscular movements, as, for example, in walking.

Ataxy. See ATAXIA.

-Ate. A terminal syllable which, added to the name of an acid ending in *ic*, expresses a combination of that acid with a base: as, nitr*ate* of silver, or a combination of nitr*ic* acid with the oxide of silver.

At-e-lec'ta-sis,* or **Atelec'tasis Pul-mo'num.*** [From the Gr. *ἀτελής*, "imperfect," and *ἔκτασις*, "expansion."] A term applied to a state of the lungs in new-born children, resulting from some obstacle to the complete establishment of respiration. See PULMO.

A-thal'a-mous. [Lat. **Athal'amus**; from the Gr. *α*, priv., and *θάλαμος*, a "marriage-bed."] In Botany, having no conceptacles.

Ath-er-ĭ-çe'rus.* [From the Gr. *ἀθήρ*, the "point of a sword," and *κηρός*, "slender."] Atherice'rous:—applied in the nominative plural neuter (*Atherice'ra*) to a family of dipterous insects, in which the lower and side pieces of the sucker are linear and pointed, or setaceous.

A-ther'ma-nous. [Lat. **Ather'manus**; from the Gr. *α*, priv., and *θερμαίνω*, to "make warm."] Not communicating heat.

Ath-er-o'ma, a*tis.* [From the Gr. *ἀθήρα*, "gruel."] An encysted tumor containing a soft substance like panada. Beclard observes that this kind of cyst, and the varieties termed *meliceris* and *steatoma*, are merely sebaceous follicles enormously dilated. The term is also applied to a form of fatty degeneration in the inner coat of the arteries.

Ath-er-om'a-tous. [Lat. **Atheromato'sus.**] Of the nature of atheroma.

Ath-e-to'sis.* [From the Gr. *ἄθετος*, "without fixed position."] An affection in which there is inability to retain the fingers or toes in any position in which they chance to be placed.

Ath-let'ic. [Lat. **Athlet'icus**; from the Gr. *ἀθλητής*, an "athlete," "one who strove for a prize" (from *ἆθλον*, a "prize," a "contest").] Having a strong muscular development, like those who exercised in the ancient games. Also conducive to muscular strength or pertaining to muscular exercise.

At-lan'tad. The same as ATLANTAL used adverbially.

At-lan'tal. A term applied by Dr. Barclay as meaning "towards the atlas."

At'las, an'tis.* [From the Lat. *At'las*, an ancient giant, fabled to bear the heavens upon his shoulders.] The first cervical vertebra:—so named, it would seem, because it immediately sustains the head, a burden immensely disproportioned to itself in size.

At-mĭ-dom'e-ter, At-mom'e-ter. [Lat. **Atmidom'etrum, Atmom'etrum;** from the Gr. *ἀτμίς*, or *ἀτμός*, "vapor," and *μέτρον*, a "measure."] An instrument by which the vapor exhaled from a humid surface in a given time may be measured.

At'mos-phēre. [Lat. **Atmosphæ'ra;** from the Gr. *ἀτμός*, "vapor," and *σφαῖρα*, a "globe" or "sphere."] The thin, elastic fluid encompassing the earth to a height judged to be about forty-five miles; the natural air we breathe. Its mechanical properties form the subject of the science of Pneumatics. See AIR.

At-mos-phĕr'ic. [Lat. **Atmosphær'icus.**] Belonging to the atmosphere.

Atmospher'ic Press'ure, or weight of the atmosphere, is measured by the length of a column of mercury. A mercurial column thirty inches in length presses on a given surface with the same force as the atmosphere in its ordinary state; and hence the force of a sixty-inch column is equal to the pressure of *two atmospheres*, that of fifteen inches to half an atmosphere, that of one inch to one-thirtieth of the atmospheric pressure.

A-to'çĭ-ą,* or **A-to'kĭ-ą.*** [From the Gr. *α*, priv., and *τόκος*, "offspring."] Sterility.

Atoll, ă'tol. A name given by the natives of the Maldive Islands to low islands of coral formation which occur in the tropical parts of the Pacific and Indian Oceans. The atoll is a narrow rim or reef of coral, enclosing a central area of tranquil water, called a *lagoon*, which is connected with the open sea by an inlet, through which ships can enter. The highest part of the atoll is seldom more than ten feet above the sea-level. Many of the atolls are inhabited and covered with luxuriant verdure.

At'om. [Lat. **At'omus;** from the Gr. *α*, neg., and *τέμνω*, to "cut," to "divide."] The smallest particle of matter, incapable of further division.

At'om, Com-po'nent. An atom which unites with another atom of different nature to form a third or *compound* atom.

At'om, Com'pound. An atom formed by two atoms of different nature.

At'om, El-e-men'tą-rў. The atom of a substance not decomposed.

At'om, Or-gan'ic. The atom of a substance found only in organic bodies.

At'om, Pri'mą-rў. The same as ATOM, ELEMENTARY.

A-tom'ic. [Lat. **Atom'icus.**] Belonging to atoms or particles.

Atom'ic The'o-rў. A theory introduced by Dalton for explaining the laws of definite proportions in chemical combinations. It is founded on the supposition that matter consists of ultimate, indivisible particles, called *atoms*, that these are of the same size and shape in the same body, but differ in *weight* in different bodies, and that bodies combine in definite proportions with reference to those weights, which are hence called *atomic weights*. The main features of this theory are briefly stated in the following paragraphs.

In bodies capable of assuming the gaseous form, the weight of the atom is obtained from the *volume:* thus, water being composed of one volume of oxygen united with two volumes (or *one atom*) of hydrogen, the relative weights will be—oxygen, 8, hydrogen, 1, and water, 9.

In bodies which do not assume the gaseous form in their simple state, the weight of the atom is deduced from that of the *compound:* the weight of carbon, for instance, is obtained from that of carbonic acid gas, one volume of which weighs twenty-two times as much as our standard of unity; of the twenty-two parts, sixteen are oxygen, leaving 6 to represent the primary molecule of carbon.

In the case of bodies which are incapable of assuming a gaseous form, either alone or in combination, the weight must be obtained by *analysis:* thus, marble, or the carbonate of lime, is found to be composed of twenty-two parts of carbonic acid and twenty-eight of lime; 28, therefore, represents the atomic weight of lime.

The atomic weights are generally supposed to be related to one another by *multiple:* hence this law is often called the *law of multiples*, or of combination in *multiple proportion*. This will be easily seen by referring to the component parts of the following substances:

	Nitrogen.	Oxygen.
Nitrous oxide	14	8
Nitric oxide	14	16
Hyponitrous acid	14	24
Nitrous acid	14	32
Nitric acid	14	40

When only one combination of any two elementary bodies exists, Dr. Dalton assumes that its elements are united, atom to atom singly, by what he calls *binary* combinations; if several compounds can be obtained from the same elements, they combine, as he supposes, in proportions expressed by some simple multiple of the number of atoms, as in the following table:

1 of A + 1 of B = 1 of C, binary.
1 of A + 2 of B = 1 of D, ternary.
2 of A + 1 of B = 1 of E, ternary.
1 of A + 3 of B = 1 of F, quaternary.
3 of A + 1 of B = 1 of G, quaternary.

At-o-miç'ĭ-tў, or **Val'en-cў.** A chemical term used to denote the combining capacity or equivalent value of an element, measured by the number of monad atoms, as of hydrogen, with which it can unite. The atomicity of a body is the maximum quantity of atoms of another body which saturates the first in forming a combination.

Atonia.* See ATONY.

A-ton'ic. [Lat. **Aton'icus;** from the Gr. *α*, priv., and *τόνος*, "tone."] Without tone, or having diminished tone or power.

At'o-nў. [Lat. **Ato'nia;** from the same.] Want or diminution of muscular tone.

Atrabiliary, at-ra-bil'ya-re. [Lat. **Atrabilia'rius;** from *atrabi'lis*, "black bile."] Melancholy; atrabilious. Atrabiliary capsules, arteries, and veins are names applied to the renal or supra-

renal glands or capsules, and to the arteries and veins by which they are supplied, because they were formerly supposed to produce black bile. See ATRABILIS.

Atrabilious, at-ra-bil'yŭs. [From the same.] Melancholy; hypochondriac.

At-ra-bi'lis.* [From the Lat. *a'ter*, "black," and *bi'lis*, "bile."] Black bile,—an imaginary fluid, supposed, when existing in excessive quantity, to be the cause of MELANCHOLY, which see.

Atrachelus,* at-ra-ke'lŭs. [From the Gr. *a*, priv., and *τράχηλος*, the "neck."] Without a neck, or having a very short neck.

At-ra-men'tum.* [From the Lat. *a'ter*, "black."] A term denoting the coloring-matter secreted by the cuttle-fish (*Se'pia*); also, ink.

A-tre'sĭ-a.* [From the Gr. *a*, priv., and *τρῆσις*, a "boring," a "perforation."] Imperforation:—usually applied to the rectum, urethra, etc.

A-tret-o-çeph'a-lus,* A-tret-o-cor'mus.* [From the Gr. *a*, priv., *τίτρημι*, to "perforate," *κεφαλή*, the "head," and *κορμός*, a "trunk."] A monster-fœtus without the natural openings in the head or trunk.

Atriplex Fœtida.* See CHENOPODIUM VULVARIA.

A-trip'lĭ-çēs.* The Jussieuan name of a natural order of plants. See CHENOPODIACEÆ.

At'ro-pa.* [From the Gr. *Ἄτροπος*, of the three Fates, that one whose special duty it was to cut the thread of life:—so named on account of its deadly or poisonous qualities.] A Linnæan genus of the class *Pentandria*, natural order *Solanaceæ*.

At'ropa Bel'la-don'na.* The Deadly Nightshade, or Belladonna, a plant belonging to the narcotico-acrid poisons. It is a native of Europe. Its action on the system is similar to that of atropine. See BELLADONNÆ FOLIA, and ATROPINA.

A-tro'phĭ-a.* [From the Gr. *a*, priv., and *τροφή*, "nourishment."] Atrophy. A genus of the order *Marcores*, class *Cachexiæ*, of Cullen's nosology.

At'ro-phy. [Lat. **Atro'phia**; see ATROPHIA.] Defect of nutrition; wasting or emaciation, with loss of strength, unaccompanied by fever.

At'rophy, Pro-gres'sive Mus'cu-lar. A rare affection, in which the muscles gradually become atrophied to such an extent as to be incapable of performing their functions.

A-tro'pĭ-a,* or **At-ro-pi'na.*** A peculiar alkaline principle found in all parts of the *Atropa Belladonna*. It is highly poisonous, and in the most minute portion has the property of dilating the pupil of the eye. It is, in moderate doses, the most powerful, persistent stimulant to the respiratory centre known. See ATROPINA.

Atropin. See ATROPIA.

At-ro-pi'na.* "Atropine," or Atropia. The Pharmacopœial name (U.S. 1880) for an alkaloid prepared from belladonna, occurring in colorless or white acicular crystals, permanent in the air, odorless, having a bitter and acrid taste and an alkaline reaction. It depends chiefly for its therapeutic powers upon, first, its sedative action on the peripheral nerves; second, its stimulant action on the respiratory centres; third, its influence on the heart and vaso-motor centres. It is largely used as a local remedy for application to the eye or to the surface of the body, or for subcutaneous injection. It exerts a decided influence on the glandular system, and checks the functional activity of the salivary and perspiratory glands.

Atropi'næ Sul'phas.* "Sulphate of Atropine." The Pharmacopœial name (U.S. 1880) for a white, indistinctly crystalline powder, containing atropine and sulphuric acid. The effects of this salt on the system are precisely those of atropine, and its solubility in water gives it an advantage over that alkaloid.

At'ro-pism. [Lat. **Atropis'mus.**] The condition of the system produced by the persevering use of belladonna.

Attar Gul, ăt'tar gōōl. [From the Arabic and Persian *at'tar*, "essence," and the Persian *gul*, a "rose."] A phrase taken from the Persian, and signifying "Attar of Roses," or "Otto of Roses." See next article.

At'tar of Ro'ses [see preceding etymology], or **Oil of Roses.** An essence prepared from the petals of the damask-rose (and probably from other species) by distillation with water. The oil collects and floats on the surface of the water when it cools.

At-ten'u-ant. [Lat. **Atten'uans, an'tis**; from *atten'uo*, *attenua'tum*, to "make thin."] A term applied to medicines supposed to impart to the blood a thinner or more fluid consistence, as water, whey, etc.

At-ten'u-āt-ed. [Lat. **Attenua'tus**; from the same.] Slender; thin; tapering gradually until it becomes slender.

At'ten-u-ā'tion. [Lat. **Attenua'tio**; from the same.] The lessening of weight or of consistency; emaciation. The term is applied to a process by which a fluid becomes of less specific gravity, as when it undergoes fermentation and parts with carbonic acid.

Attitude. See POSTURE.

At-tol'lens.* [From the Lat. *attol'lo*, to "raise up."] Raising up.

Attol'lens Au'rem.* "Raising the ear." A muscle whose office is indicated by its name.

Attollens Oculi.* See RECTUS SUPERIOR OCULI.

At-tract'. [From the Lat. *ad*, "to," or "towards," and *tra'ho*, *trac'tum*, to "draw."] To draw to or towards. See ATTRACTION.

At-trac'tion. [Lat. **Attrac'tio, o'nis**; from the same.] That principle or power in the material universe by which one particle or mass of matter is drawn to or towards another. It is one of the general and essential properties of matter. The attractive force increases in proportion as the square of the distance decreases.

ATTRAC'TION OF AFFIN'ITY. The tendency of the atoms of different bodies to combine to form *chemical compounds*. See AFFINITY.

ATTRAC'TION, CAP'ILLARY. The power by which a liquid rises in a very small tube higher than the surface of the liquid which surrounds it. See CAPILLARY.

ATTRAC'TION OF COHE'SION. The tendency of the molecules of a body to cohere and form masses. It is the antagonist of AFFINITY.

ATTRAC'TION, ELEC'TRICAL. The property displayed by certain substances of attracting certain others on being rubbed.

ATTRAC'TION OF GRAVITA'TION. The tendencies of masses of bodies towards each other. See GRAVITY.

ATTRAC'TION, MAGNET'IC. The tendency of certain bodies, chiefly iron, towards the north pole of the earth, and towards other bodies possessed of the property called magnetism.

Attraction, Double Elective. See AFFINITY, DOUBLE ELECTIVE.

Attraction, Simple (or **Single**) **Elective.** See AFFINITY, SINGLE ELECTIVE.

At'trā-hens.* [The present participle of the Lat. *at'traho*, to "draw to, or towards." See ATTRACT.] A term applied in the neuter plural (*Attrahentia*, at-trā-hen'she-ą) to medicaments which irritate the surface, thereby attracting the fluids to the part, as blisters, sinapisms, etc. See EPISPASTIC.

At'trahens Au'ris.* [From the Lat. *at'trahens*, "drawing" or "drawing to," and *au'ris*, "of the ear."] A muscle which draws the ear forward and upwards:—also called *Anterior Auris*, and *Prior Auriculæ*.

Attrahentia.* See ATTRAHENS.

At'trĭ-bute. A quality; a characteristic; that which is permanent and essential in an individual or a species.

Attrition, at-trish'ŭn. [Lat. **Attri'tio, o'nis;** from *at'tero, attri'tum*, to "rub against," to "wear away."] An abrasion or solution of continuity of the cuticle; also, a severe kind of cardialgia:—sometimes applied in surgery to the violent crushing of a part.

A-tўp'ic. [From the Gr. *a*, priv., and *τύπος*, a "type."] Conforming to no type: hence, irregular.

Au'ber-ġīne (or aw'ber-jeen). A name of the Egg-plant, *Sola'num Melonge'na*.

Au'dĭ-phone. An instrument used in certain cases of deafness depending on a lesion of the middle ear: the sonorous vibrations arrive at the internal ear by the bony walls of the labyrinth.

Au-dĭ'tion. [Lat. **Audi'tio**; from *au'dio, audi'tum*, to "hear."] The act of hearing; the perception of sound; the sensation made by sonorous vibrations of air, etc., on the auditory nerves.

Au'dĭ-to-rў. [Lat. **Audito'rius**; from the same.] Belonging to the organ or the sense of hearing. The same as ACOUSTIC.

Au'ditory Nerve. The PORTIO MOLLIS of the seventh pair, which see.

Augite, aw'jīt. [From the Gr. *ἀυγή*, "brightness," and *λιθός*, a "stone."] Pyroxene, a silicate of lime and magnesia. It occurs crystallized in oblique rhombic prisms of the monoclinic system.

Aunée or **Aulnée,** ō'nā'. The French for "Elecampane." See INULA.

Au'ra.* [A Latin word signifying a "breath," a "gentle breeze;" from the Gr. *ἄω*, to "breathe."] A subtile vapor, or exhalation.

AU'RA ELEC'TRICA.* Literally, the "electrical breeze." The sensation, as of cold air, experienced when electricity is received from a sharp point.

AU'RA EPILEP'TICA.* The peculiar sensation felt by epileptic patients when a fit is coming on, as of a cold fluid rising towards the head.

AU'RA HYSTER'ICA.* The sensation as of cold air ascending to the head, said to occur sometimes in hysteria.

AU'RA SEMINA'LIS,* AU'RA SEM'INIS.* The supposed vivifying principle of the *semen virile*, believed to ascend through the Fallopian tubes, thereby impregnating the ovum in the ovarium.

AU'RA VITA'LIS.* The vital principle.

Aurantia,* aw-ran'she-ą, the plural of **Auran'tium**, forming the Jussieuan name of a natural order of plants. See AURANTIACEÆ.

Aurantiaceæ,* aw-ran-she-ā'she-ē. [From the Lat. *auran'tium*, the "orange."] A natural order of exogenous trees and shrubs, natives of the East Indies and other warm climates. It includes the orange, lemon, lime, and citron. The leaves and rind of the fruit abound in a volatile, fragrant, and stimulating oil. Gray and other botanists refer the above-named fruit-trees to the order *Rutaceæ*.

Aurantiaceous, aw-ran-she-ā'shŭs. [Lat. **Aurantia'ceus**; from *auran'tium*, an "orange."] Having an arrangement as in the orange-plant. See AURANTIACEÆ.

Au-ran'tĭ-ī (aw-ran'she-ī) **A-ma'ri Cor'tex.*** "Bitter Orange Peel." The Pharmacopœial name (U.S. 1870, 1880) for the rind of the fruit of *Citrus vulgaris*. Bitter orange peel is a mild tonic, carminative, and stomachic.

Auran'tii Dul'cis Cor'tex.* "Sweet Orange Peel." The Pharmacopœial name (U.S. 1870, 1880) for the rind of the fruit of *Citrus Aurantium*. It is aromatic.

Auran'tii Flo'rēs.* "Orange Flowers." The Pharmacopœial name (U.S. 1870, 1880) for the partly expanded fresh flowers of the *Citrus Aurantium* and *Citrus vulgaris*.

Aurantium,* aw-ran'she-ŭm. [Supposed to be derived from the Lat. *au'rum*, "gold."] The orange. The fruit of *Citrus bigaradia, Citrus Aurantium*, and *Citrus vulgaris*.

Au'rāte. [Lat. **Au'ras, a'tis.**] A combination of auric acid with a base.

Au'rate of Am-mo'nĭ-ą. [Lat. **Ammo'niæ Au'ras.**] FULMINATING GOLD, which see.

Au-re'lĭ-ą.* [From the Lat. *au'rum*, "gold."] A term for the chrysalis or pupa of insects, often adorned with golden spots.

Au'ri et So'dĭ-i Chlor'ĭ-dum.* "Chloride of Gold and Sodium." The Pharmacopœial name (U.S. 1880) for a mixture composed of equal parts of dry chloride of gold and chloride of sodium. It is reputed to be alterative, and to have a specific direction to the genital organs. It is much used in hysteria, ovarian irritation, neuralgia, etc.

Au'ric Aç'id. [Lat. **Au'ricum Aç'idum**; from *au'rum*, "gold."] A name proposed by

Pelletier for the peroxide of gold, on account of its property of forming salts with alkaline bases.

Auricle. See AURICULA.

Au-ric'u-la.* plural **Au-ric'u-læ.** [The diminutive of the Lat. *au'ris*, the "ear."] The auricle or external portion of the ear; also a plant (*Primula auricula*) which is cultivated for the beauty of its flowers.

Auric'ula In'fĭ-ma.* Literally, the "lowest ear." The lobe of the ear.

Au-ric'u-læ Cor'dis.* [From the Lat. *auric'ula*, "auricle," and *cor, cor'dis*, the "heart."] "Auricles of the Heart." A term applied to those cavities of the heart which lead to the ventricles.

Au-ric-u-la'ris.* [From the Lat. *auric'ula*, an "ear."] Belonging to the ear; auric'ular.

Au-ric'u-late. [Lat. **Auricula'tus**; from *auric'ula*, an "ear."] A term applied in Botany to a leaf when it has a small rounded lobe on each side of its base; eared.

Auricule, ō'rĕ'kūl'. The French term for AURICLE, which see

Au-ric'u-lo-Ven-tric'u-lar O'pen-ing. The opening between the auricle and ventricle of each side of the heart.

Au-rif'er-ous. [Lat. **Aurif'erus**; from *au'rum*, "gold," and *fe'ro*, to "bear."] Bearing or containing gold.

Au'ri-form. [Lat. **Aurifor'mis**; from *au'ris*, the "ear."] Formed like the ear.

Au-ri'go,* or **Au-ru'go.*** [From the Lat. *au'rum*, "gold."] Orange-skin:—a term applied to an orange hue diffused over the entire surface of the skin in new-born infants: Sauvages terms it *ephe'lis lu'tea*. Also an old name for jaundice.

Au'rĭ-lāve. [From the Lat. *au'ris*, the "ear," and *la'vo*, to "wash."] An instrument for cleansing the ear.

Au-rĭ-pig-men'tum.* [From the Lat. *au'rum*, "gold," and *pigmen'tum*, "paint."] Yellow orpiment. See ORPIMENT.

Au'ris.* The Latin term for the ear. It is distinguished into the external, the middle, and the internal ear. See EAR.

Au-rĭ-scăl'pum,* or **Au-rĭ-scăl'pĭ-um.*** [From the Lat. *au'ris*, the "ear," and *scal'po*, to "scrape."] An instrument for cleansing the ear.

Au'rĭ-scope. [From the Lat. *au'ris*, the "ear," and the Gr. *σκοπέω*, to "see," to "examine."] An instrument for examining the ear and for ascertaining the condition of the Eustachian passage.

Au'rist. A physician who gives especial attention to diseases of the ear.

Aurium Tinnitus.* See TINNITUS AURIUM.

Aurochs, ŏw'roks (*i.e.*, in Ger., "country ox," or "wild ox"). The *Bos urus*, a large and powerful animal, resembling in some respects the American bison. It was formerly found in many parts of Europe, though now limited to the eastern portion. The male has a strong smell, somewhat resembling that of musk.

Au'rum.* The Latin for GOLD, which see.

Aurum Fulminans.* See FULMINATING GOLD.

Aus-cul-tā'tion. [Lat. **Ausculta'tio, o'nis**; from *auscul'to, ausculta'tum*, to "listen."] The act of listening to the sound given by particular parts of the body when struck, or to the sounds produced by the functional movements of the lungs or heart.

AUSCULTA'TION, IMME'DIATE. Auscultation practised directly by the ear of the practitioner without the aid of an instrument.

AUSCULTA'TION, ME'DIATE. Auscultation performed by employing a stethoscope or some similar instrument.

Aus-tra'lis.* [From the Lat. *Aus'ter*, the "south wind."] Belonging to the south; aus'tral.

Au-to-car'pous. [Lat. **Autocar'peus**, or **Autocarpia'nus**; from the Gr. *αὐτός*, "itself," and *καρπός*, "fruit."] A term applied to fruit not adherent to the calyx. See SUPERIOR.

Autochthon,* au-tok'thon, plural **Au-toch'-tho-nēs.** [From the Gr. *αὐτός*, "itself," sometimes "very," and *χθών*, "land," or "country."] A name given, by those who hold the doctrine that the various races of mankind were originally distinct, to the first inhabitants of a country, supposed to have been produced in the "very country or place itself."

Autochthonous. See THROMBUS.

Au-to-cĭ-ne'sis.* [From the Gr. *αὐτός*, "one's self," and *κίνησις*, "motion."] Motion depending on one's self; voluntary motion.

Au-toġ'e-nous. [Lat. **Autoġ'enus**; from the Gr. *αὐτός*, "itself," or "one's self," and *γένω*, to "be born."] A term applied in Comparative Anatomy, by Owen, to parts developed from distinct and independent centres.

Au'to-lăr-ŷn-gos'co-pў. [From the Gr. *αὐτός*, "one's self," and the Eng. *laryngos'copy*.] Self-inspection of the larynx by means of a laryngoscope.

Au-to-mat'ĭc. [Lat. **Automat'icus**; from the Gr. *αὐτοματίζω*, to "act spontaneously."] A term applied to functions or motions performed without the will, as digestion, the heart's action, etc.

Au-to-pep'sĭ-a.* [From the Gr. *αὐτός*, "one's self," and *πέπτω*, to "digest."] Self-digestion, as sometimes occurs after death by the action of the gastric juice on the coats of the stomach.

Au-toph'a-ġў. [From the Gr. *αὐτός*, "one's self," and *φάγω*, to "eat," or "feed upon."] A term applied to a (suggested) mode of prolonging life, in the absolute absence of all food (as may occur in shipwreck), by one taking small portions of his own blood as nourishment.

Au-toph'o-nў. [Lat. **Autopho'nia**; from the Gr. *αὐτός*, "one's self," and *φωνή*, "voice," "sound."] A form of auscultation in which the observer speaks with his head close to the patient's chest, noting the change in his own voice. It is said that it will in some cases be sensibly modified by the condition of the subjacent organs.

Au-to-plas'tic. [Lat. **Autoplas'ticus.**] Belonging to autoplasty.

Au'to-plas-tў. [Lat. **Autoplas'tia**; from the Gr. *αὐτός*, "one's self," and *πλάσσω*, to "form."] Operations by which lesions are repaired by

means of healthy parts being taken from the neighborhood of the lesion and made to supply the deficiency caused by wounds or disease.

Au-top'so-rin. [From the Gr. *αὐτός*, "one's self," and *ψώρα*, the "itch."] That which is given under the homœopathic doctrine of administering a patient's own virus.

Au'top-sy. [Lat. **Autop'sia**; from the Gr. *αὐτός*, "one's self," and *ὄψις*, the "act of seeing."] Ocular examination.

Au'tumn. [Lat. **Autum'nus**; Fr. *Automne*, ō'tŏn'.] One of the seasons of the year: sometimes called *Fall*. (See SEASONS.) The autumn of Europe and the United States is synchronous with the spring of the south temperate zone.

A-ve'na.* "Oats." (Fr. *Avoine*, ȧ'vwȧn'.) The oat. See AVENÆ SEMINA.

Ave'na Sa-ti'va.* The oat-plant. See AVENÆ SEMINA.

Av-e-nā'ceous. [Lat. **Avena'ceus.**] Belonging to the *Avena*.

A-ve'næ Fa-ri'na.* "Meal of Oats." The Pharmacopœial name (U.S. 1870) for oatmeal, prepared from the seed of *Avena sativa*. Used for gruels, decoctions, etc. It affords a nutritious, bland, and easily digested aliment.

A-ve'næ Sem'i-na.* [From the Lat. *se'men*, "seed," plural *sem'ina*.] Literally, the "seeds of the oat." Oats; the fruit of the *Avena sativa*, of the order *Gramineæ*, yielding a flour or meal which forms a common article of food. *Groats* are the oats freed from the cuticle, and used in broth and gruels.

A-ven-i-for'mis.* [From the Lat. *ave'na*, "oats," and *for'ma*, "form."] Like a grain of oats; aven'iform.

A-ve'ni-ous. [Lat. **Ave'nius**; from *a*, priv., and *ve'na*, a "vein."] A term applied to the leaves of plants without veins or nerves.

Av-er-rho'a Bi-lim'bi.* An Indian tree of the natural order *Oxalideæ*. It bears an acid fruit which is used as a condiment and refrigerant.

A'vēs,* the plural of AVIS, which see.

Av-i-cen'ni-a To-men-to'sa.* White Mangrove, a tree of the order *Verbenaceæ* or *Myoporaceæ*, a native of Brazil, growing in salt marshes. Its bark is used for tanning leather.

A-vic'u-la* (Fr. *Avicule*, ȧ've'kül'), or **A-vic'u-la Mar-ga-ri-tif'e-ra*** (*i.e.*, "Pearl-bearing Avicula"). A name of the pearl-oyster.

A-vic'u-lar. [Lat. **Avicula'ris**; from *avic'ula*, a "little bird."] Pertaining to birds.

Av'i-la.* The fruit of the *Feuillea cordifolia*, a plant of the order *Cucurbitaceæ*, growing in tropical America. The seeds are strongly purgative. When ground and mixed with water, they are considered to be an antidote for the bite of venomous serpents. Hence the fruit is sometimes called *Serpent Nut*.

A'vis.* A "bird:"—applied in the plural (*A'ves*) to a class of oviparous *Vertebrata* including all birds proper.

Avocado Pear. See PERSEA.

Avoine, ȧ'vwȧn'. The French for "Oats." See AVENA.

Avortement, ȧ'vort'mŏn'. The French term for ABORTION, which see.

A-vul'sion. [Lat. **Avul'sio**; from *avel'lo*, *avul'sum*, to "tear asunder."] The forcible separation from each other of parts of the body which were previously more or less intimately united.

Awl'-Shaped, or **Sub'u-late.** Sharp-pointed from a broader base, as the leaves of red cedar and arbor-vitæ.

Awn. See ARISTA.

Awned. Furnished with awns.

Awn'less. Destitute of awns.

Ax-if'er-ous. [Lat. **Axif'erus**; from *ax'is*, and *fe'ro*, to "bear."] In Botany, having only a stem or axis, variously modified.

Ax'ile, or **Ax'i-al.** Belonging to the axis, or occupying the axis:—applied to a central placenta.

Ax-il'la.* (Fr. *Aisselle*, ȧ'sĕl'.) The armpit; the cavity under the upper part of the arm and shoulder; the axil. In Botany, the angle between the leaf and the stem on the upper side.

Ax-il-la'ris.* [From the Lat. *axil'la*, the "armpit."] (Fr. *Axillaire*, ȧx'ē'laiR'.) Belonging to the axilla; axillary:—applied also to buds and flowers.

Ax'il-la-ry. Belonging to the armpit. *Axillary buds* are those situated in the axils of leaves. All buds and flowers are either axillary or terminal.

Ax'illary Plex'us. [Lat. **Plex'us Axilla'ris.**] The brachial plexus, formed by the three last cervical and the first dorsal nerves.

Ax'is.* [Perhaps from the Lat. *a'go*, to "act," to "drive."] Literally, an "axle" about which any revolving body turns. A right line, real or imaginary, passing through the centre of any body. The name of the second vertebra of the neck, its tooth-like process serving as an axis on which the atlas, and so the head itself, turns:—also termed *Ver'tebra denta'ta*. In Astronomy, the axis of the earth is that diameter about which it performs its diurnal revolution. In Geology, the term signifies the centre of a mountain-group. In Botany, the stem and root of a plant are termed, respectively, the ascending and descending axis; and the peduncle is called the axis of inflorescence.

Axis, Anticlinal. See ANTICLINAL.

Axis, Synclinal. See SYNCLINAL AXIS.

Axonge. See AXUNGIA.

Ax-ot'o-mous. [Lat. **Axot'omus**; from the Gr. *ἄξων*, the "axis," and *τέμνω*, to "cut."] A term applied to minerals which are cleavable in one direction, perpendicular to the axis.

Ax-un'gi-a.* [From the Lat. *ax'is*, an "axle-tree," and *un'guo*, to "anoint," to "smear."] (Fr. *Axonge*, ȧx'ŏNzh'.) Hog's lard. A name of the fat of the *Sus scrofa*, the *Adeps*, or *Adeps suillus*. See ADEPS.

Axungia Porcina.* The same as ADEPS SUILLUS, which see.

A-ỹp'ni-a.* [From the Gr. *α*, priv., and *ὕπνος*, "sleep."] Insomnia.

A-za'le-a.* [From the Gr. *ἀζαλέος*, "arid."] A genus of ornamental shrubs, of the natural order *Ericaceæ*, natives of Japan, China, the United States, etc. It comprises numerous species, some of which have showy and fragrant flowers. The *Azalea Pontica* is narcotic and poisonous.

A-zed'a-raeh. The Pharmacopœial name (U.S. 1880) of the bark of the root of *Melia Azedarach*. This bark, which is given in decoction, is cathartic and emetic. See MELIA.

Az-e-lā'ic Aç'id. An acid obtained by treating oleic acid with nitric acid. It closely resembles suberic acid. Another acid, the *Azolei'ic*, is procured by the same process. The terms are derived from the words *azote*, *elaïon*, and *oleum*.

Az-o-ben'zide. A substance obtained by heating a mixture of nitrobenzide with an alcoholic solution of potassa.

A-zo'ic. [From the Gr. *a*, priv., and *ζωή*, "life."] A geological term applied to granite and other primary rocks which contain no organic remains or signs of life, and to the time in which they were formed. The Azoic rocks constitute the only universal formation. The Azoic Age is the first in geological history, and preceded the appearance of animal life.

Az-o-lit'man. A pure coloring-material, of a deep blood-red color, obtained from litmus.

A-zo'o-sper'mĭ-a.* [From the Gr. *a*, priv., *ζωή*, "life," and *σπέρμα*, "sperm."] Want of vitality in the spermatozoa.

Az'ote. [Lat. **Azo'tum**; from the Gr. *a*, priv., and *ζάω*, to "live;" because unfit for sustaining life.] Nitrogen gas.

A-zot'ic Aç'id. Another name for NITRIC ACID, which see.

Az'o-tīte. A term applied to a salt consisting of azotous (nitrous) acid and a base.

A-zo'tous Aç'id. Another name for nitrous acid; the hyponitrous acid of Turner. See NITROUS ACID.

Az-o-tu'rĭ-a.* [From the Lat. *azo'tum*, and the Gr. *ὄυρον*, the "urine."] A class of diseases characterized by a great increase of urea in the urine. See UREA.

Az'u-līne. A fine, permanent blue color obtained from aniline or coal-tar.

Az-ul'mic Aç'id. The name given by Boullay to the black matter deposited during the decomposition of prussic acid. It is very similar to ulmic acid. See ULMIN.

Azure, ā'zhūr or ā'zhŭr. A sky-blue, especially the color of the sky seen on high mountains or in the Levant and in warm climates. A fine blue pigment, commonly called *smalt*, consisting of glass colored with oxide of cobalt and ground to an impalpable powder.

A'zure Stone. [Lat. **La'pis Laz'uli.**] A blue mineral from which the unchangeable blue color ultramarine is prepared.

Azygos Uvulæ.* See AZYGOUS MUSCLE.

Az'ў-gous. [Lat. **Az'ygos**; from the Gr. *a*, priv., and *ζυγός*, a "yoke."] Without a fellow or corresponding part.

Az'ygous Mus'cle. A muscle of the uvula.

Az'ygous Proç'ess. [Lat. **Proces'sus Az'ygos.**] A process of the sphenoid bone.

Az'ygous Vein. [Lat. **Ve'na Az'ygos.**] A vein formed by the union of the lower intercostal veins of the left side, and ascending in front of the spine on the right side of the aorta.

B.

B. A. = *Bal'neum Are'næ.** A sand-bath.

Bab'lah. The rind or shell which surrounds the fruit of the *Mimosa cineraria*. It is brought from the East Indies, under the name of *nebneb*, and is employed as a dye-stuff.

Bā'bў. [The diminutive of *Bab*, which is formed by imitation from the Welsh *mab*, a "son."—SKEAT.] An infant; a young child.

Bac'ca.* A berry; an inferior, indehiscent, pulpy fruit, as the gooseberry. See BERRY.

Bac'cate. [Lat. **Bacca'tus**; from *bac'ca*, a "berry."] Resembling a berry; succulent.

Bacchia,* bak-ki'a. [From the Lat. *Bac'chus*, the "god of wine."] *Gutta Rosacea*. The pimpled condition of the face consequent on hard drinking. See ACNE ROSACEA.

Bacciferous, bak-sif'er-ŭs. [Lat. **Bac'çifer**, or **Bacciferus**; from *bac'ca*, a "berry," and *fe'ro*, to "bear."] Bearing berries.

Bacciform, bak'se-form. [Lat. **Baccifor'mis**; from *bac'ca*, a "berry."] Having the form of a berry.

Baccivorous, bak-siv'o-rŭs. [Lat. **Bacciv'orus**; from *bac'ca*, a "berry," and *vo'ro*, to "devour."] Eating or living on berries.

Băch'e-lor's But'tons. A name sometimes applied to NUX VOMICA, which see.

Bach'er's Ton'ic Pills. Extract of hellebore and myrrh, of each ʒj, with ʒiij of powdered *Carduus benedictus*, to be divided into pills of one grain each: dose, two to six three times a day.

Ba-cil'lus,* plural **Ba-cil'li.** A genus of vegetable infusoria of the family *Vibriones*. (See BACTERIA.) The term *bacilli* is also applied to the cylindrical bodies in the *Tunica Jacobi*, placed perpendicularly to the surface of the retina. They are believed to be the especial instruments through which color is perceived by the eye.

Backbone. See SPINE.

Bac-te'rĭ-a.* [Gr. *βακτήριον*, a "rod."] In the singular, **Bac-te'rĭ-um.** A name of certain infusoria, or microscopic plants, which are among the lowest known forms of life. They often occur as minute, rod-like bodies, about $\frac{1}{10,000}$ of an inch in length. They swarm in all putrefying solutions and mixtures of organic matter, and in many fermenting fluids. They multiply by division or fissiparous generation. "Bacteria and their allies are as uniformly coexistent with a few general diseases and certain local morbid processes as they are with putrefactions and fermentations."—(BASTIAN.) Many biologists and pathologists regard bacteria and allied organisms as the causes of all communicable or contagious diseases.

Bac'u-lus.* Literally, a "stick" or "staff," and hence the name of a lozenge shaped into a little, short roll.

Baie. The French name for BERRY, which see.

Baignoire. See BAPTISTERIUM.

Bain, bĂN. The French word for BATH, which see.

Ba'ker's Itch. A species of *Psori'asis diffu'sa*, resulting from the irritating qualities of yeast.

Ba'ker's Salt. A name given to the subcarbonate of ammonia, or smelling-salts, from its being used by bakers as a substitute for yeast in the manufacture of some of the finer kinds of bread.

Ba-læ'na Mys-tĭ-ce'tus.* The systematic name of the true Greenland whale, from which oil and whalebone are obtained.

Balænidæ,* ba-len'e-dē. [From the Lat. *balæ'na*, a "whale."] A family of the *Cetacea*.

Bal'ance. [Lat. **Bilanx**; from *bis* or *bi*, "two," and *lanx*, a "dish."] A machine for weighing substances; also equality of weight; equipoise. The ordinary balance consists of a metallic bar or lever, called the *beam*, either delicately suspended or supported on a stand, by the intervention of a wedge-shaped prism, exactly at its middle point. A scale-pan is suspended from each end of the lever. It is an important part of chemical apparatus.

Bal'ance E-lec-trom'e-ter. An instrument, constructed on the principle of the common balance and weights, to estimate the mutual attraction of oppositely-electrified surfaces.

Bal-a-nif'er-ous. [Lat. **Balanif'erus**; from the Gr. *βάλανος*, an "acorn," and *fe'ro*, to "bear."] Bearing acorns.

Bal'a-nism. [Lat. **Balanis'mus**; from the Gr. *βαλανίς*, a "pessary."] The application of a pessary.

Bal-a-ni'tis.* [From the Gr. *βάλανος*, the *glans penis*.] Inflammation of the *glans penis* and prepuce, commonly complicated with phymosis; otherwise termed *Gonorrhœ'a bal'ani*, *Bal'ano-posthi'tis*, and *I'osthitis*.

Bal'a-noid. [Lat. **Balanoi'des**; from the Gr. *βάλανος*, an "acorn."] Resembling an acorn.

Balanophoraceæ,* bal'a-no-fo-ra'she-ē. [From the Lat. *Balanoph'ora*, one of the genera.] A natural order of fungus-like exogenous parasitical plants, natives of hot climates, growing on the roots of trees.

Bal'a-no-Pos-thi'tis, i*dis.* [From the Gr. *βάλανος*, the *glans penis*, and *πόσθη*, the "prepuce."] The same as BALANITIS.

Bal'a-nus.* [Gr. *βάλανος*, an "acorn," (in Lat. *glans*,) a "gland."] The *glans penis* and *glans clitoridis*.

Ba-laus'tĭ-um.* [From the Gr. *βαλίος*, "various."] The flower of the pomegranate tree.

Balbuties,* băl-bu'she-ēz. [From the Lat. *balbu'tio*, to "stammer."] Hesitation of speech; stammering. See STAMMERING.

Bald. [Lat. **Cal'vus.**] (Fr. *Chauve*, shōv.) Deprived of hair on the cranium or any part of it; deprived of the natural or usual covering on the head or top. In Botany, naked at the summit:—applied to akenes destitute of pappus or crown.

Ball-and-Socket Joint. See ENARTHROSIS.

Bal-lis'mus.* [From the Gr. *βαλλίζω*, to "dance."] A name for *Chorea*, or St. Vitus's dance.

Bal-loon'. (Fr. *Ballon*, bȧl'lôN'.) A spherical glass receiver, with one or two necks for adaptation to a retort or other vessel; also a bag made of silk or cotton and filled with hydrogen or carburetted hydrogen gas, for the purpose of aërial navigation.

Bal-lo'ta La-na'ta.* A plant of the order *Labiatæ*, indigenous in Siberia, recommended by Brera in rheumatic and gouty affections.

Ballottement, bȧ'lot'môN'. [From the French *ballotter*, bȧ'lot'tȧ', to "toss as a ball," to "shake about."] The passive movements of the fœtus in the *liquor amnii*, felt by applying the finger to the *cervix uteri* and raising it suddenly upwards, when the fœtus will strike on the finger in its descent.

Balm, bȧm. [From the Lat. *bal'samum*, "balsam."] (Fr. *Baume*, bōm.) A soothing or healing medicine. Also the popular name of *Melissa*.

Balm of Gilead. See BALSAM OF MECCA.

Balm Tea. An infusion of the leaves of *Meli'sa officina'lis*, or common Balm.

Băl-ne-og'ra-phy. [Lat. **Balneogra'phia**; from *bal'neum*, a "bath," and the Gr. *γράφω*, to "write."] A description of baths.

Băl-ne-ol'o-ġy. [Lat. **Balneolo'gia**; from *bal'neum*, a "bath," and the Gr. *λόγος*, a "discourse."] A treatise on baths; the science of baths.

Băl'ne-o-thĕr-a-pi'a.* [From the Lat. *bal'neum*, a "bath," and the Gr. *θεραπεία*, "attendance."] The proper employment of baths.

Băl'ne-um.* [Gr. *βαλανεῖον*.] The Latin term for BATH, which see.

Bal'neum An-ĭ-ma'le.* Any part of a newly-killed animal, wrapped round the body or a limb.

Bal'neum A-re'næ.* "Bath of Sand." See SAND.

Bal'neum Med-ĭ-ca'tum.* A medicated bath; a bath impregnated with medicinal substances.

Bal'neum Sic'cum.* "Dry Bath." Immersion in any dry substance, as ashes, salt, sand, etc.

Bal'neum Sul-phu're-um.* A bath containing sulphur.

Bals. Abbreviation for the Lat. *balsamum*, "balsam."

Balsam. See BALSAMUM.

BAL'SAM (baul'sam) OF THE AU'GIA SINEN'SIS, or CHINESE' VAR'NISH: it dries into a smooth, shining lac, used for lacquering and varnishing.

BALSAM OF COPAIBA. See COPAIBA.

BAL'SAM OF LIQUIDAM'BAR. Balsam which flows from incisions made into the trunk of the *Liquidambar styraciflua*: it dries up readily, and thus occurs in the solid form.

BAL'SAM OF MEC'CA ("Mecca Balsam"), or O'POBALSAM, called also *Balm of Gilead*. Balsam obtained by incisions of, and by boiling, the branches and leaves of the *Amyris Gileadensis* (otherwise called *Balsamodendron Gileadense*) and the *Amyris Opobalsamum*. It becomes eventually solid.

BAL'SAM OF PERU'. (Lat. *Bal'samum Peruvia'num*.) A balsam procured from the *Myrospermum Peruiferum*, or *Myroxylon Pereiræ*. There are two kinds,—the *brown* balsam, extracted by incision, very rare, imported in the husk of the cocoanut, and hence called balsam *en coque*, and the *black* balsam, obtained by evaporating the decoction of the bark and branches of the tree. These are semi-fluid balsams. It is a warm stimulating stomachic and expectorant.

BAL'SAM OF STO'RAX. Balsam said to be procured from the *Liquidambar Orientale*. The substance sold as *strained storax* is prepared from an impure variety of liquid storax.

BAL'SAM OF TO'LU. (Lat. *Bal'samum Toluta'num*.) A balsam which flows spontaneously from the trunk of the *Myroxylon toluifera*, or *Myrospermum toluiferum*, and dries into a reddish resinous mass. It is a stimulant stomachic.

The following artificial balsams may be named:

BAL'SAM OF HORE'HOUND. An aqueous infusion of horehound and liquorice-root, with double the proportion of proof spirit, or brandy, to which are then added opium, camphor, benzoin, squill, oil of aniseed, and honey.

BAL'SAM OF LIQ'UORICE. This consists principally of paregoric elixir, very strongly impregnated with the oil of aniseed.

BAL'SAM OF SUL'PHUR. A solution of sulphur in volatile oils.

Balsamaceæ,* băl-sa-ma'she-ē, or **Băl-sa-mĭf'lu-æ.*** A natural order of balsamiferous trees, consisting of one genus, the *Liquidambar*. Gray refers the *Liquidambar* to the order *Hamamelaceæ*.

Balsamatio (băl-sa-ma'she-o), **o'nis.*** [From the Lat. *bal'samum*.] The process of embalming dead bodies. See EMBALMING.

Băl-sa'me-us.* Of the nature of a balsam. Also the specific name of a tree which produces balsam.

Băl-sam'ic. [Lat. **Balsam'icus.**] Pertaining to balsam; of the nature of balsam; aromatic; stimulating.

Băl-sam'ĭ-ca.* "Balsamics." A term generally applied to substances of a smooth and oily consistence, possessing emollient and generally aromatic properties.

Băl-sa-mif'e-ra Bra-zil-ĭ-en'sis.* Another name for the *Copaifera officinalis*.

Băl-sa-mif'er-ous. [Lat. **Balsamif'erus**; from *bal'samum*, a "balsam," and *fe'ro*, to "bear."] Bearing or yielding balsam.

Balsaminaceæ,* băl-sam-ĭ-na'she-ē. [From the Lat. *Balsami'na*, one of the genera.] A natural order of exogenous herbaceous plants, including the *Impatiens noli-me-tangere*. They are prized for their showy flowers.

Băl-sa-mo-den'dron.* [From the Gr. *βάλσαμον*, a "balsam," and *δένδρον*, a "tree."] A Linnæan genus of the class *Octandria*, natural order *Amyridaceæ*. It comprises many species of balsamiferous trees, natives of Asia and Africa. Among these are the *Balsamodendron Gileadense* and the *Balsamodendron Africanum*, which is said to yield *African bdellium*.

Balsamoden'dron Eh-ren-ber-ğĭ-a'num.* A tree from which myrrh is said to be obtained. It is a native of Arabia.

Balsamoden'dron Moo'kŭl.* A tree, a native of Scinde and Persia, yielding a resin called *goo'gŭl* in Scinde and *mookŭl* in Persia. This resin is said to be identical with the bdellium of the Scriptures. It has cordial and stimulant properties.

Balsamoden'dron Mŷr'rha.* The tree supposed to yield myrrh. It is a native of Arabia.

Băl'sa-mum.* [Gr. *βάλσαμον*; from the Heb. *baal samen*, the "prince of oils."] A balsam; a fragrant and resinous vegetable juice, liquid or semi-fluid, or spontaneously becoming concrete.

Bal'samum Can-a-den'se.* Canadian balsam: obtained from the *Abies balsamea*.

Bal'samum Co-pai'bæ.* Balsam of copaiba or copaiva: vulgarly termed *capivi*, and *capivi oil*. See COPAIBA.

Balsamum Gileadense.* See BALSAM OF MECCA.

Bal'samum Ju-da'ĭ-cum.* Another name for the *Balsamum Gileadense*.

Bal'samum Pe-ru-vĭ-a'num.* "Balsam of Peru." The Pharmacopœial name (U.S. 1880) for a balsam obtained from the *Myroxylon Pereiræ*. It is a warm, stimulating stomachic and expectorant. See BALSAM OF PERU.

Bal'samum Sapona'ceum* (sap-o-na'she-ŭm). The camphorated soap liniment, or opodeldoc.

Bal'samum Sŷ-ri'a-cum.* The *Balsamum Gileadense*.

Bal'samum To-lu-ta'num.* "Balsam of Tolu." The Pharmacopœial name (U.S. 1880) for a balsam obtained from the *Myroxylon toluifera*. It is a stimulant stomachic, with a peculiar tendency to the pulmonary organs. See BALSAM OF TOLU.

Bal'samum Ve'rum.* "True Balsam." The *Balsamum Gileadense*.

Bam-boo′. [Lat. **Bambu′sa.**] A genus of arborescent grasses, of the order *Gramineæ*, natives of China, India, and other warm or tropical regions. The bamboo, which has been called the national plant of China, is a very important plant. It has a hollow, jointed stem, which is coated with silex. Houses, bridges, fans, chairs, and many other articles of furniture are made of the bamboo in China and Japan. It sometimes grows to the height of fifty feet.

Bambusa.* See BAMBOO.

Ba-na′na. [Lat. **Mu′sa Sapien′tum.**] An herbaceous tropical plant, of the natural order *Musaceæ* or *Scitamineæ*, extensively cultivated in the warm parts of Asia and America. It bears leaves nearly ten feet long, and an oblong, seedless fruit, which has a luscious taste and is an important article of food. There is probably no plant that produces a greater amount of nutriment on the same quantity of ground.

Ban′dage. [Lat. **Fas′cia, Deliga′tio, o′nis,** and **Des′ma.**] One or more pieces of cotton, linen, or flannel, for wrapping round any part of the body. Bandages are simple, as the circular, the spiral, the uniting, etc., or compound, as the T bandage, the suspensory, the eighteen-tailed, etc.

Ban-dan′a. A style of calico-printing practised in India, in which white or brightly-colored spots are produced upon a red or dark ground.

Ban′dy-Legged. [*Bandy* is a corruption of the French participle *bandé*, "bent," from *bander*, to "bend."] Having legs the bones of which are curved outwards, or otherwise. See DEVALGATUS.

Bang, or Bangue. See CANNABIS INDICA, and BHANG.

Ban′ner. The broad, upper petal of a papilionaceous flower:—called also the *vexillum*, or standard.

Ban′ting-ism. [Named from the inventor.] A method of correcting corpulency by limiting the patient to chiefly a meat diet and avoiding farinaceous and saccharine food.

Ban′yer's Oint′ment. An ointment consisting of half a pound of litharge, two ounces of burnt alum, one ounce and a half of calomel, half a pound of Venice turpentine, and two pounds of lard, well rubbed together. It is used in *Porrigo*.

Baobab, bā′o-bāb′. The African name of the *Adanso′nia digita′ta*, a tree growing native in West Africa and cultivated in Egypt and Abyssinia. The trunk is said to attain, in some instances, the enormous thickness of ten yards. The leaves, in the form of powder, are sometimes used in African cookery. The fruit has a subacid juice, which renders it valuable in fevers. The bark of the baobab abounds in mucilage. It is said to have sometimes been given in fevers as a substitute for cinchona.

Ba′phĭ-a Nit′ĭ-da.* A tree of the order *Leguminosæ*, which produces a red dye-stuff called "cam-wood." It is a native of Western Africa.

Baphicus Coccus,* or Baphicum Coccum.* See KERMES BERRY.

Bap-tis′ĭ-a Tinc-to′rĭ-a,* or So-pho′ra Tinc-to′rĭ-a.* Wild Indigo, a perennial herb of the order *Leguminosæ*, found in nearly all parts of the United States. Its root is emetic, and in large doses cathartic. It is reputed to be febrifuge and antiseptic.

Bap-tis-te′rĭ-um.* [From the Gr. *βαπτίζω*, to "dip," to "bathe."] (Fr. *Baignoire*, bĕñ′wȧr′.] A bathing-place.

Baptorrhœa,* bap-to-re′a. [From the Gr. *βαπτός*, "infected," and *ῥέω*, to "flow."] A term intended to designate *Gonorrhœa, Blennorrhœa, Blennorrhagia*, etc.

Băr-æs-the-sĭ-om′e-ter. [From the Gr. *βαρύς*, "heavy," *αἴσθησις*, "perception" or "sensation," and *μέτρον*, a "measure."] An instrument for measuring the degree of pressure felt at any given spot.

Barb. [From the Lat. *bar′ba*, a "beard."] In Botany, a double hook; a slender process having retrorse teeth.

Bar-bā′does Leg. The *Elephantiasis Arabum*, a disease of hot climates.

Barba′does Nuts. [Lat. **Nu′ces Barbaden′ses.**] The fruit of the *Jatropha curcas*. The seeds are called *physic nuts*. See JATROPHA, and CURCAS PURGANS.

Barba′does Tar. The *Bitumen Barbadense, Bitumen petroleum*, or *Petroleum Barbadense*.

Bar′ba-rў Gum, or Mo-roc′co Gum. A variety of gum Arabic said to be produced by the *Acacia gummifera*.

Bar′bate. [Lat. **Barba′tus**; from *bar′ba*, a "beard."] Bearded; bearing tufts or lines of hairs.

Bar′bel-late. [Lat. **Barbella′tus**; from *barbel′la*, a "little beard."] Having barbels; armed with little barbs.

Bar′ber-rў, or Ber′ber-rў. [Lat. **Ber′beris.**] A genus of plants (shrubs), the type of the natural order *Berberidaceæ*, natives of Europe, the United States, etc. They have six *irritable* stamens. The common barberry (*Berberis vulgaris*) is naturalized in the United States. It bears small, oblong, red, acid berries, which are valuable for preserves and jelly.

Bar′biērs. A disease of India and the Malabar coast; a peculiar species of palsy.

Bar-biġ′er-ous. [Lat. **Barbiġ′erus**; from *bar′ba*, a "beard," and *ge′ro*, to "bear."] Having a beard; hairy.

Barége, bȧ′rȧzh′, written also **Barrége.** A village situated on the French side of the Pyrenees, celebrated for its thermal waters. A peculiar substance has been obtained from these and other waters, termed *Barégine*, bȧ′rȧ′zhĕn′.

Ba′rĭ-i Car-bo′nas.* The Pharmacopœial name (U.S. 1870) for a native carbonate of barium. It is poisonous.

Ba-rĭl′la. [From the Spanish *barrilla*, bȧr-reel′yȧ, a plant called "salt-wort."] Impure carbonate of soda imported from Spain and the Levant. British barilla, obtained by burning seaweeds, is called "kelp."

Ba'rĭ-um.* [From the Gr. *βαρύς*, "heavy."] The metallic basis of the earth baryta, so named from the great density of its compounds. It is an element of a silvery-gray color. Density about 4. It is not used in the arts in a metallic state, and occurs in nature only combined with oxygen, sulphur, etc. It is quickly oxidized when exposed to the air.

Bark. [Lat. **Cor'tex.**] The covering of a stem outside of the wood of exogenous trees and shrubs. It is composed of cellular tissue. In the plural, a popular term for Peruvian bark, or that of any species of cinchona. See CINCHONA.

Bark, Căr-ĭ-be'an, or **Saint Lu-ci'a** (loo-see'ă) **Bark,** sometimes improperly called **Cinchona Căr-ĭ-bæ'a.*** The bark of the *Exostem'ma Caribæ'um*, a tree of the order *Rubiaceæ*, and perhaps of some other trees. It is a useful substitute for cinchona, and, though containing neither quinia nor cinchonia, is one of the most valuable of the spurious barks.

Bark, Es-sen'tial Salt of. An extract prepared by macerating the bruised substance of bark in cold water and submitting the infusion to a very slow evaporation.

Bar'ley. [Lat. **Hor'deum.**] The seeds of *Hordeum distichon* or *vulgare*, a valuable cereal plant of the order *Gramineæ*. It is adapted to both cold and warm climates, and is cultivated in many parts of Europe, Asia, and America. The seeds afford a mucilaginous decoction which is used as a diluent. See HORDEI SEMINA.

Bar'ley, Caus'tic. The seeds of *Veratrum sabadilla*.

Barm. See FERMENTUM CEREVISIÆ.

Băr-o-mac-rom'e-ter. [Lat. **Baromacrom'etrum**; from the Gr. *βάρος*, "weight," *μάκρος*, "length," and *μέτρον*, a "measure."] An instrument for ascertaining the weight and length of new-born infants.

Ba-rom'e-ter. [Lat. **Barom'etrum**; from the Gr. *βάρος*, "weight," and *μέτρον*, a "measure."] (Fr. *Baromètre*, bă'ro'mĕ'tr'.) An instrument for ascertaining the weight or pressure of the atmosphere; a weather-glass.

Băr'o-scōpe. [Lat. **Barosco'pium**; from the Gr. *βάρος*, "weight," and *σκοπέω*, to "observe."] A barometer sensible to the slightest atmospheric variations.

Ba-ros'ma.* [From the Gr. *βαρύς*, "heavy," and *ὀσμή*, "odor."] A genus of plants of the order *Rutaceæ*, comprising several species of evergreen shrubs, natives of South Africa. The leaves of several species constitute *buchu*. It was formerly called *Diosma*. See BUCHU.

Bar'ras (French pron. bă'RĂ'). An oleo-resinous substance. See GALIPOT.

Barrenness. See STERILITY.

Barringtoniaceæ,* băr'ring-to-ne-a'she-ē. A natural order of exogenous trees or shrubs, found in the tropics. Some of them have beautiful flowers, the stamens of which are very numerous and conspicuous. This order comprises, besides the *Barringto'nia*, the *Careya* and the *Gustavia speciosa*, the latter of which bears an edible fruit.

Bartholinianæ, Glandulæ,* glan'du-lē bar'to-le-ne-a'nē. The sublingual glands:—named after Bartholin.

Bar'wood. A red dye-wood brought from Africa, and used with sulphate of iron for producing the dark red upon British bandana handkerchiefs.

Baryecoia,* băr'e-e-ko'yą, or **Băr-ȳ-ą-co'ĭą.*** [From the Gr. *βαρύς*, "heavy," and *ἀκοή*, "hearing."] Dulness of hearing; deafness.

Băr-ȳ-ma'zĭ-ą.* [From the Gr. *βαρυς*, "heavy," and *μαξός*, the "breast."] A term denoting the condition of one who has large breasts.

Bą-rȳph'o-nȳ. [Lat. **Barypho'nia**; from the Gr. *βαρύς*, "heavy," and *φωνή*, the "voice."] Difficulty of speech, or hesitating speech.

Bą-rȳ'tą,* or **Bą-rȳ'tēs.*** [From the Gr. *βαρύς*, "heavy;" on account of its weight.] An alkaline earth, the heaviest of all the earths. It is an oxide of barium, and is a virulent poison. The native sulphate of baryta is termed *heavy spar*.

Bā'sal. Pertaining or attached to the base, as ovules at the base of an axile placenta.

Basalt, bą-sault'. [From the Lat. *basal'tes*, described by Pliny as a kind of marble very hard and of an iron color.] A variety of volcanic rock, essentially composed of felspar and augite. It is of a compact texture, and of a dark-green, gray, or black color. It is often found in regular columns, of which the Giants' Causeway and the island of Staffa furnish magnificent examples.

Bą-sâl'tĭ-form. [Lat. **Basaltifor'mis**; from *basal'tes*, "basalt."] Formed like basalt.

Bą-sâl'toid. [Lat. **Basaltoi'des**; from *basal'tes*, "basalt," and the Gr. *εἶδος*, a "form" or "resemblance."] Resembling basalt.

Bas'ą-nīte. [From the Gr. *βάσανος*, a Lydian stone.] A sort of touchstone by which the purity of gold was tried, and of which medical mortars were made. It consists of silica, lime, magnesia, carbon, and iron.

Bas-cu-lā'tion. [From the French *basculer*, to "seesaw."] A term used in examinations of the uterus in retroversion: the fundus is pressed upwards, the cervix downwards. It is half the *seesaw* movement.

Base. [Lat. **Ba'sis**; Gr. *βάσις*, a "foundation."] The earth, alkali, or metallic oxide which, combined with an acid, forms a salt. In Pharmacy the term denotes the principal ingredient of any compound preparation. In Geometry, the base of a solid, as a cone or pyramid, is the lowest part, or the side on which it stands. In Botany, the base is that extremity of an organ by which it is attached to its support.

Basedow (bă'zęh-dov), **Disease of.** See EXOPHTHALMIA.

Basellaceæ,* băs-el-la'she-ē. [From the Lat. *Basel'la*, one of the genera.] A small natural order of herbaceous plants, found in tropical regions, more properly a tribe of the order *Chenopodiaceæ*. The *Basel'la ru'bra* yields a rich purple dye.

Base'ment Mem'brane. A delicate structureless membrane found beneath the epidermis or epithelium, forming the basement on which these tissues may be said to rest.

Bas-Fond, bȧ'-fôn'. A French term denoting the fundus or lowest part of an organ.

Ba-sĭ-a'tor, o'ris.* [From the Lat. *ba'sio, basia'tum*, to "kiss."] A muscle whose office it is to contract the mouth. See ORBICULARIS ORIS.

Bas-ĭ-bran'chĭ-al. [Lat. **Basibranchia'lis**; from *ba'sis*, "base," and *branchia'lis*, "branchial."] A term applied by Owen to certain parts of the branchial arch in fishes.

Bas'ic or **Bā'sic.** [Lat. **Bas'icus.**] Belonging to, or like, a base.

Bas-ĭ-hȳ'al. [Lat. **Basihya'lis**; from *ba'sis*, "base," and *hyoi'des*, "hyoid."] A term in Comparative Anatomy applied to the two small subcubical bones on each side, forming the body of the inverted hyoid arch.

Bā'sil, or **Sweet Bā'sil.** [Lat. **Oç'imum Basil'icum.**] A plant of the order *Labiatæ*, a native of India. It has an aromatic flavor, and is used as a condiment.

Bas'ĭ-lad. The same as BASILAR used adverbially.

Bas'ĭ-lar. Belonging to the base; seated at the base:—applied by Dr. Barclay as meaning "towards the base of the skull." In Botany, the term is applied to any organ placed at the base of another part or organ.

Bas'ilar Mem'brane. A membrane found in the cochlea of the ear.

Bas'ilar Proç'ess. [Lat. **Proces'sus Basila'ris.**] The bony projection at the inferior angle of the occipital bone, where it is articulated with the sphenoid. It is also called the *Cuneiform Process*.

Ba-sĭl'ic. [Lat. **Basil'icus**; from the Gr. *βασιλεύς*, a "king."] Kingly, royal:—sometimes applied by the ancients to parts supposed to hold an important place in the animal economy.

Basil'ic Vein. A large vein situated at the fold of the elbow, in front of the humeral artery. It was important because often opened in cases of blood-letting.

Ba-sĭl'ĭ-con Oint'ment, sometimes written **Basil'icum.** [From the Gr. *βασιλικός*, Lat. *basil'icus*, "royal;" so named on account of its great virtues.] An ointment composed of five parts of resin, eight of lard, and two of yellow wax. It was formerly much used as a stimulating application in blistered surfaces, indolent ulcers, burns, etc. It is essentially the same as the CERATUM RESINÆ, which see.

Bā'sin. [From the French *bassin*, a "wet-dock."] A geological term denoting a natural concavity on the surface of the earth, or a depression of strata forming a hollow. When such a hollow is occupied by deposits of coal, it is called a *coal-basin*. The basin of a river is the whole area or territory drained by that river and its tributaries.

Bas'ĭ-nerved. A term applied to a leaf when the ribs all spring from its base.

Ba'sĭ-o-. A prefix denoting connection with the basilar process of the occipital bone.

Basio-Chondro-Cerato-Glossus.* See HYOGLOSSUS.

Ba'sio-Glos'sus.* [From the Lat. *ba'sis*, "base," and the Gr. *γλῶσσα*, the "tongue."] A muscle running from the base of the os hyoïdes to the tongue.

Basioccipital, bas'e-ok-sip'e-tal. [Lat. **Basi-occipita'lis**; from *ba'sis*, "base," and *occipita'le os*, the "occipital bone."] A term applied in Comparative Anatomy, by Owen, to a bone homologous with the basilar process of the occipital bone.

Ba'sis.* [Gr. *βάσις*; from *βαίνω*, to "go," to "step;" hence, "that on which one steps or stands," a "foundation."] The substance with which an acid is combined in a salt. (See BASE.) A *mordant*, or substance used in dyeing, which has an affinity both for the cloth and for the coloring-matter. Also, the principal medicine in a prescription.

Ba'sis Cor'dis.* [From the Lat. *cor, cor'dis*, the "heart."] The "Base of the Heart." The broad part of the heart is thus called, as distinguished from the *apex*, or point.

Bas-ĭ-sphe'noid. [Lat. **Basisphenoi'des.**] A term applied in Anatomy and Comparative Anatomy, by Owen, to a bone homologous with the base of the sphenoid bone.

Bas'sĭ-a.* A genus of trees of the order *Sapotaceæ*, natives of tropical or sub-tropical countries. The *Bassia Parkii* of Central Africa is called the Shea-tree. Its seeds afford an oily substance called Galam butter, which is an important article of commerce.

Bas'sia Bu-tȳ-ra'ce-a.* The Indian Butter-Tree, a native of Nepaul. A fatty substance obtained from its seeds is used for making soap, and is adapted for burning in lamps.

Bas'sia Lat-ĭ-fo'lĭ-a.* The Mahwa-Tree, a native of Bengal. It furnishes hard timber, and oil which is burned in lamps. An ardent spirit resembling whiskey is distilled from its flowers.

Bas'so-ra Gum. The gum of an unknown plant which came originally from Bassora, on the Euphrates. It is white or yellow, and nearly insoluble in water. It resembles gum Arabic, and is employed to adulterate tragacanth.

Bass'-Wood. The popular name in the United States of the *Tilia Americana*.

Bast, or **Bass.** The fibrous inner bark of exogenous plants, composed of elongated cells or fibres, the toughness of which renders the bast valuable for ropes, mats, cloths, etc.

Bas'tard. [Lat. **No'thus.**] Illegitimate; spurious:—applied to a plant or a disease closely resembling but not really what it appears to be.

Bas'tard Dit'ta-nȳ. The root of the *Dictamnus fraxinella*, now fallen into disuse.

Bā'sȳle. [From the Gr. *βάσις*, a "base," and *ὕλη*, "stuff," "substance."] A term proposed by Mr. Graham to denote the metallic radical of a salt. Thus, sodium is the *basyle* of sulphate of soda.

Ba-ta'tas E-du'lis.* The systematic name of the sweet potato.

Bate'man's Pec'to-ral Drops. A medicinal preparation consisting principally of the tincture of castor, with portions of camphor and opium, flavored with aniseed and colored by cochineal: —used in coughs or lung-affections.

Bates's Al'um Wat'er. The *Li'quor Alu'minis Compos'itus* of the London Pharmacopœia, —a powerful astringent solution employed for stimulating and cleansing foul ulcers.

Bath. [Lat. **Bal'neum**, plural **Bal'nea.**] (Fr. *Bain*, bĂN.) A term applied to any yielding medium, such as water, sand, etc., in which a body is immersed. Baths are commonly divided into *general* and *partial:* they may consist of simple water, or be *medicated.* As the physiological and therapeutic effects of general baths are modified by their temperature, they may be arranged under the following heads:

ARTIFIC'IAL SEA-WAT'ER BATH. (Lat. *Bal'neum ma'ris facti'tium.*) A solution of one part of common salt in thirty parts of water.

COLD BATH. (Lat. *Bal'neum frig'idum.*) Temperature from 33° to 60° Fahr. Below 50° it is considered very cold.

COOL BATH. (Lat. *Bal'neum frig'idum.*) Temperature from 60° to 75° Fahr.

HOT BATH. (Lat. *Bal'neum cal'idum.*) Temperature from 98° to 112° Fahr.

HOT-AIR BATH. (Lat. *Bal'neum sudato'rium.*) The "sweating bath." Temperature from 100° to 130° Fahr.

TEM'PERATE BATH. (Lat. *Bal'neum tempera'tum.*) Temperature from 75° to 85° Fahr.

TEP'ID BATH. (Lat. *Bal'neum tep'idum.*) Temperature from 85° to 92° Fahr.

VA'POR BATH. (Lat. *Bal'neum vapo'ris, Bal'neum lacon'icum.*) Temperature from 122° to 144–5° Fahr. When a vapor bath is applied only to a particular part of the body, it is called a *fumigation*, or vapor douche.

WARM BATH. (Lat. *Bal'neum cal'idum.*) Temperature from 92° to 98° Fahr.; that is, about the temperature of the body.

SAND BATH. (Lat. *Bal'neum are'næ.*) A term applied to an iron dish, containing fine sand, placed on a fire. A glass vessel may be immersed in this and gradually heated without danger of breaking.

Batrachia.* See BATRACHIUS.

Bat'ra-chīte. [Lat. **Batrachi'tes**; from the Gr. *βάτραχος*, a "frog," and *λίθος*, a "stone."] A stone like a frog; the toad-stone.

Ba-tra'chĭ-us.* [From the Gr. *βάτραχος*, a "frog."] Batra'chian :—applied in the plural neuter (*Batra'chia*) to an order of *Reptilia.* The Batrachians are also called *Amphibia* by some naturalists.

Bat'ra-choid. [Lat. **Batrachoi'des**; from the Gr. *βατραχος*, a "frog," and *εἶδος*, a "form" or "resemblance."] Resembling a frog.

Bat'ra-chus.* [Gr. *βάτραχος*, a "frog."] The same as RANULA, which see.

Bat'ter-ў, E-lec'trĭ-cal. A series of coated jars, like the Leyden jar, for the purpose of accumulating a powerful electric charge.

Bat'tery, Găl-van'ic. A combination of several pairs of zinc and copper plates soldered together, and so arranged that the same metal shall always be on the same side of the compound plate.

Bauhin (bō'ĂN'), **Văl'vule of.** A valve in the cæcum, whose office it is to prevent the return of the excrementitious matters from the cæcum into the small intestine. The extremities of its two lips form rugæ in the straight part of the cæcum, called by Morgagni *fræna of the valvule of Bauhin.*

Bau-hin'ĭ-a.* [Named in honor of John and Caspar *Bauhin*, French botanists.] A genus of plants of the order *Leguminosæ*, comprising many species of trees or climbing shrubs, natives of India, Brazil, etc. The *Bauhinia tomentosa* is used in Ceylon as a remedy for dysentery. The *Bauhinia Vahlii*, a native of India, is a climbing shrub which attains a length of three hundred feet and climbs over the tops of the highest trees.

Baume, bōm. The French for BALSAM, which see.

Baume de Vie, bōm dẹh vẹ. "Balm of Life." The compound decoction of aloes.

Baunscheitismus, bŏwn'shīt-ĭs'mus. [Named from the introducer.] A mode of counter-irritation, consisting of pricking or scratching the skin by a brush of wire and then rubbing the part with a liquid containing mustard and pepper.

Bay Ber'ries. [Lat. **Bac'çæ Lau'ri.**] The berries of the *Laurus nobilis*, or Sweet Bay. A solid substance is extracted from them, called *laurin*, or camphor of the bay berry.

Bay Cher'rў, or **Bay Lau'rel.** The *Prunus lauro-cerasus.* See CHERRY-LAUREL.

Bay Rum. See SPIRITUS MYRCIÆ.

Bay Salt. Chloride of sodium, or common salt, as obtained by solar evaporation on the shores of the Mediterranean.

Bdella.* See HIRUDO.

Bdel'lĭ-um.* A name applied to two gum-resinous substances. One of these is the Indian bdellium, or *false myrrh*, procured from the *Am'yris commiph'ora.* The other is called African bdellium, and is obtained from the *Heudelotia Africana*, or *Balsamodendron Africanum.*

Bdellometer, del-lom'e-tẹr. [Lat. **Bdellom'etrum**; from the Gr. *βδέλλα*, a "leech," and *μέτρον*, a "measure."] An instrument intended as a substitute for the leech.

Bead'ed. [Lat. **Granula'tus.**] A term applied, in Botany, to roots knotted, like beads strung closely together.

Bead'-Proof. A term denoting the strength of spirituous liquors, as shown by the continuance of the bubbles or beads on the surface.

Beak. [Lat. **Ros'trum.**] The tubular portion of a retort. In Ornithology, the prolongation of the mouth, or substance investing the mandibles, almost always horny, and of various forms, according to the kind of food used by each species; the bill. In Botany, a terminal tapering process; a long narrow tip.

Beaked. Having or terminating in a beak: ending in a long terete or angular point.

Bean. The popular name of several annual herbaceous plants of the order *Leguminosæ*. The common bean of Europe is the *Faba vulgaris* or *Vicia faba*. The species commonly cultivated in the United States are the *Phase'olus vulga'ris* (Kidney bean and String bean), and the *Phase'olus luna'tus* (Lima bean). Beans are very nutritious, and contain an important product called LEGUMINE, which see.

Bean of St. Ignatius. See STRYCHNOS IGNATIA.

Bear'ber-rў, Bear's Ber'rў, or **Bear's Whor'tle-ber-rў.** The *Arctostaphylos uva ursi*, formerly called *Arbutus uva ursi*.

Beard'ed. [Lat. **Barba'tus.**] Having a beard, or some beard-like appendage; crested, or furnished with parallel hairs, as the flowers of the iris and the violet.

Bea'ver. [Lat. **Cas'tor Fi'ber.**] An animal of the order *Rodentia*, a native of Europe and North America. It affords valuable fur, and a medicinal substance called CASTOR, which see.

Be-bee'rin. [Lat. **Bebeeri'na.**] A vegetable alkali discovered in the *Bebeeru*, or greenheart tree, of British Guiana. It is bitter and tonic.

Bebeeru, or **Bibiru,** be-bē'roo. A tree of British Guiana, the timber of which is known to wood-merchants by the name of Green-heart. It is the *Nectandra Rodiei*, a tree of the order *Lauraceæ*. (See NECTANDRA.) It yields a substance, called *bebeerin*, of antiperiodic properties.

Bec de Cuiller (Fr.), bĕk dẹh kwē'yà'. An instrument for extracting balls.

Bec de Lièvre. See HARE-LIP.

Bec'cą-bun'ga.* [From the German *Bachbungen*, "water-herb."] The specific name of the *Veroni'ca Beccabun'ga*.

Bechic, bĕk'ik. [Lat. **Bech'icus**; from the Gr. *βήξ, βηχός*, "cough."] Belonging to, or relieving, a cough.

Bechica,* bĕk'e-kạ. [See preceding article.] A general term for medicines tending to relieve cough of any kind.

Bed'-Straw. The popular name of several species of *Galium*.

Bedegar, or **Bedeguar,** bed'ẹ-gar. A remarkable gall, termed *sweet-brier sponge*, found on various species of *Rosa*, and produced by the puncture of several species of insects, more especially the *Cynips Rosæ*.

Bee. [Lat. **A'pis.**] A genus or family of insects of the order *Hymenoptera*, having four wings. The honey-bee is the *A'pis mellif'ica*.

Bee-Bread. See PROPOLIS.

Beech. [Lat. **Fa'gus.**] A genus of trees of the natural order *Cupuliferæ*, having a close, smooth bark, and a light horizontal spray. The fruit is an edible nut, yielding a bland fixed oil, which is used for food. The American Beech (*Fa'gus ferrugin'ea*) is an ornamental tree. It is common in the Northern United States, and on the Alleghany Mountains in Virginia, etc.

Beech Drops. See EPIPHEGUS.

Beef Tea. [Lat. **Jus Bovi'num.**] An infusion of lean beef. It is an important article of diet for infants and patients who cannot digest solid food. Beef tea should never be boiled.

Beer. [Lat. **Cerevi'sia**; Fr. *Cervoise*, sĕr'vwăz'.] The fermented infusion of malted barley, flavored with hops. The term is also applied to beverages consisting of a saccharine liquor partially advanced into the vinous fermentation and flavored with peculiar substances; as, spruce-beer, ginger-beer, etc.

Bees'tings. The first milk taken from the cow after calving.

Bees' Wax. [Lat. **Ce'ra.**] Wax obtained from the comb of the *A'pis mellif'ica*. See CERA.

Be-go'nĭ-ạ.* [Named after M. *Begon.*] A genus of herbs of the order *Begoniaceæ*, comprising many species, natives of India, Brazil, Mexico, etc. The *Begonia tomentosa*, a native of Peru, has astringent roots.

Begoniaceæ,* be-go-ne-a'she-ē. A natural order of exogenous plants, mostly herbaceous, found in the tropics, including the *Begonia*. They are prized for their showy flowers. Among their distinctive characters are oblique or unequal-sided leaves.

Bela. See ÆGLE MARMELOS.

Be-lem'nīte. [Lat. **Belemni'tes**; from the Gr. *βέλεμνον*, a "dart," and *λίθος*, a "stone."] The arrow-stone, or fossil thunder-bolt, a genus of fossil Mollusca of the class *Cephalopoda*. They are slender, straight, and conical or sharp at one end. Often found in chalk.

Bel-la-don'nạ.* [It. a "handsome lady;" the juice being used as a cosmetic.] The name for the leaves of the *Atropa Belladonna*. The active principle of this plant is a powerful narcotic. When applied to the eye, it has the remarkable property of greatly dilating the pupil.

Bel-la-don'næ Fo'lĭ-ạ.* "Belladonna Leaves." The Pharmacopœial name (U.S. 1870, 1880) for the leaves of the *Atropa Belladonna*.

Belladon'næ Fo'lĭ-um.* "Leaf of Belladonna." See preceding article.

Belladon'næ Ra'dix.* "Belladonna Root." The Pharmacopœial name (U.S. 1870, 1880) for the root of the *Atropa Belladonna*.

Bel'lis Per-en'nis.* The Daisy, a plant of the order *Compositæ*, a native of Europe. It is cultivated for the beauty of its flowers.

Bell-Met'al. An alloy of copper, zinc, and tin, used for bells, mortars, etc.

Bell'-Shaped. Shaped like a bell; the same as CAMPANULATE.

Bell-Wort. See UVULARIA.

Bellows'-Sound. See BRUIT DE SOUFFLET.

Belly. See ABDOMEN, ALVUS, VENTER.

Bel'o-noid. [Lat. **Belonoi'des**; from the Gr. *βελόνη*, a "bodkin," and *εἶδος*, a "form."] Resembling a bodkin; styloid:—applied to processes of bone.

Belvisiaceæ,* bel-vis-e-a'she-ē. [From the Lat. *Belvis'ia*, one of the genera.] A small natural order of exogenous plants, found only in

Africa and Brazil. It includes the *Napoleona imperialis*.

Belvisieæ.* See BELVISIACEÆ.

Ben, Oil of. The expressed oil of the Ben-nut, or the *Moringa pterygo-sperma*, remarkable for not becoming rancid for many years.

Ben-e-dic'tus.* [From the Lat. *benedi'co, benedic'tum*, to "bless."] Literally, "blessed." A term prefixed to compositions and herbs on account of their supposed good qualities: thus, antimonial wine was termed *benedictum vinum*, etc.

Benign, bę-nīn'. [Lat. **Benig'nus.**] A term applied to diseases of a mild type.

Ben'ja-min. A corruption of *Benzoin*. See BENZOINUM.

Ben'jamin, Flow'ers of. A name for BENZOIC ACID.

Benne Leaves. See SESAMUM.

Ben-zi'num.* "Benzin," or Benzole. The Pharmacopœial name (U.S. 1880) for a transparent, colorless, diffusive liquid, a hydro-carbon, having a strong characteristic odor slightly resembling that of petroleum. See BENZOLE.

Ben'zo-āte. [Lat. **Ben'zoas, a'tis.**] A combination of benzoic acid with a base.

Ben-zo'ic. [Lat. **Benzo'icus.**] A term applied to an acid obtained from gum benzoin.

Ben-zo-if'er-a.* [From the Lat. *benzo'inum*, and *fe'ro*, to "bear."] A name applied to the tree commonly known as the *Styrax benzoin*.

Benzoin. See BENZOINUM.

Ben'zo-in, Ben'zo-ĭne. [Lat. **Benzoi'na.**] The name of a substance obtained from oil of bitter almonds.

Ben-zo'ĭ-num.* [Arab. *Benzo'ah.*] The Pharmacopœial name (U.S. 1870, 1880) of a balsamic resin obtained from the *Styrax benzoin*. It is a stimulant and expectorant. The inhalation of the vapor of benzoin has been recommended in chronic laryngitis.

Ben-zōle', or **Ben-zene'.** [Lat. **Benzi'num.**] A compound of carbon and hydrogen obtained by the distillation of coal or naphtha. It is a limpid, colorless, and volatile liquid, of an ethereal or agreeable odor. It is inflammable, and soluble in alcohol, ether, and turpentine. It is a powerful solvent of fats, gutta-percha, resins, caoutchouc, etc. See BENZINUM.

Berberaceæ.* See BERBERIDACEÆ.

Berberidaceæ,* ber-bĕr-e-da'she-ē, or **Ber-ber-id'e-æ.*** A natural order of exogenous plants, named after the *Berberis* (Barberry or Berberry), which is the most important genus it contains. They are shrubs or herbs, natives of Europe, India, the United States, etc. This order comprises the *Caulophyllum*, the *Podophyllum*, and the *Nandina*.

Ber'ber-in. [Lat. **Berberi'na.**] An alkaline substance obtained from the *Berberis vulgaris*.

Berberis.* See BARBERRY.

Berberry. See BARBERRY.

Ber'ga-mot. An essence prepared from the rind of the *Citrus bergamia*, otherwise called *Citrus mella rosa*.

Ber'ger-a.* A genus of small trees of the order *Aurantiaceæ*, comprising several species. *Bergera Koenigii* is a native of India. Its bark, root, and leaves are aromatic and antidysenteric.

Bergmehl (Ger.), bĕrg'māl. Literally, "mountain meal." An earth, found in Sweden, resembling fine flour, and celebrated for its nutritious qualities. It is composed entirely of the shells of microscopic animalcules.

Beriberi, bā-re-bā're. A spasmodic rigidity of the lower limbs, etc.; an acute disease occurring in India, and commonly considered the same as *barbiers*,—but the latter is a chronic disease. The word *beriberi* is, in all probability, derived from the reduplication of the Hindoo word *beri*, signifying irons or fetters fastened to the legs of criminals, elephants, etc. A person afflicted with this disease is literally "fettered."

Berlin Blue. See PRUSSIAN BLUE.

Ber'ry. [Lat. **Bac'ca.**] A pulpy, indehiscent pericarp or fruit in which the seeds are embedded, as the grape, the gooseberry, etc.

Bertin (bĕr'tăN'), **Spon'gy Bones of.** Two small, triangular, turbinated bones, often found beneath the small opening of the sphenoidal sinus.

Bĕr'yl. [Gr. *βήρυλλος.*] A species of mineral or gem, usually of a green color of various shades, passing into honey-yellow and sky-blue. When colored green by oxide of chromium, it forms the true emerald, and when sea-green and transparent, *aquamarina*. It occurs in hexagonal prisms which have a vitreous lustre and are harder than quartz.

Ber-yl'lĭ-um.* A synonyme of GLUCINUM, which see.

Bē'tel. A famous masticatory employed in the East, consisting chiefly of the *areca*, *betel*, or *pinang nut*, the produce of the *Areca Catechu*, or Catechu Palm. A portion of the nut is rolled up with a little lime in the leaf of the *Chavica Betel*, and the whole chewed.

Betel Pepper. See CHAVICA BETEL.

Be-ton'ĭ-ca Of-fĭç-ĭ-na'lis.* Wood Betony, a plant of the natural order *Labiatæ*, a native of Europe. It is called *Stachys Betonica* by many botanists.

Betula.* See BIRCH.

Betulaceæ,* bet-u-la'she-ē, **Bet-u-lin'e-æ.*** [From the Lat. *bet'ula*, a "birch-tree."] A natural order of trees, consisting of the various kinds of Birch and Alder, natives of Asia, Europe, the United States, and South America. These trees formed part of the Jussieuan order *Amentaceæ*.

Betulaceous, bet-u-la'shŭs, or **Bet-u-lin'e-ous.** [Lat. **Betula'ceus,** or **Betulin'eus**; from *bet'ula*, the "birch-tree."] Having an arrangement as in the *Betula*. See BETULACEÆ.

Beurre. See BUTTER.

Be-zo'ar, or **Be-zo'ard.** [Pers. *Pazahar*; from *pa*, "against," and *zahar*, a "poison."] A calculous concretion sometimes found in the stomach, intestines, and bladder of certain land-animals, such as the ox, horse, and deer. These concretions were formerly considered to possess wonderful medicinal virtues, and to be completely

efficacious not only against poisons, but also against pestilential and other diseases.

Bez'o-ar'dics. A class of medicines supposed to possess virtues similar to those of the bezoar.

Bhang, b'hăng or băng. The *Can'nabis In'dica*, or Indian Hemp, a plant common in India, containing powerful narcotic properties. It is used in various forms by the people of India for the purpose of intoxication. The tops and tender parts of the plant, when dried, constitute the hashîsh (hă-sheesh') of the Arabs. See CANNABIS INDICA.

Bi-. [From the Lat. *bis*, "twice."] A prefix in certain compound names, signifying "two," or "twice;" as, *biceps*, "two-headed."

Bī-ar-tic'u-late. [From the Lat. *bi-*, "twice," and *artic'ulus*, a "joint."] Twice-jointed, or two-jointed.

Bib. = *Bi'be.** "Drink" (imperative mood of the Latin verb *bi'bo*).

Bī-bas'ic. [Lat. **Bibas'icus**; from *bi-*, "two," and *ba'sis*, a "base."] Having two bases, as the tartrate of potash and soda.

Bib-ĭ-to'rĭ-us.* [From the Lat. *bi'bo*, *bib'itum*, to "drink."] A former name of the *rectus internus oculi*, from its drawing the eye inwards towards the nose, and thus directing it into the cup in drinking.

Bi'bron's An'tĭ-dote. A remedy against the poison of the rattlesnake, consisting of iodide of potassium, corrosive sublimate, and bromine. See POISONS.

Bib'u-lose. [Lat. **Bib'ulus**; from *bi'bo*, to "drink."] Attracting moisture; absorbing.

Bī-cal'lous. [From the Lat. *bi-*, "two," and *cal'lus*, "hardness."] Having two callosities or harder spots, as the lip of many orchids.

Bī-cap'su-lar. [Lat. **Bicapsula'ris**; from *bi-*, "two," and *cap'sula*, a "capsule."] Having two capsules.

Bī-car'bo-nate. [Lat. **Bicarbo'nas, a'tis**; from *bi-*, "two," and *carbo'nas*, a "carbonate."] Two equivalents of carbonic acid combined with one of base.

Bī-căr'ĭ-nate. [From the Lat. *bi-*, "two," and *cari'na*, a "keel."] Having two keels:—applied to the glumes of certain grasses.

Bī-cau'dal. [Lat. **Bicauda'lis**; from *bi-*, "two," and *cau'da*, a "tail."] Having two tails:—applied to a muscle.

Bī-çe-pha'lĭ-um.* [From the Lat. *bis*, "twice" or "twofold," and the Gr. *κεφαλή*, the "head."] A large sarcoma on the head, as if another head were grown upon it.

Bī-çeph'a-lous. [Lat. **Biceph'alus**; from the same.] Having two heads.

Bi'ceps,* gen. **Bi-cip'ĭ-tis.** [From the Lat. *bi-*, "two," and *ca'put*, the "head."] Having two heads; bicipital:—applied to a muscle of the arm, and to one of the thigh.

Bichat (bē'shă'), **Ca-năl' of.** A small round hole above the pineal gland, opening into the third ventricle of the brain:—called also the *Arachnoid Canal.*

Bī-chlo'rĭde of Mer'cu-rў. Corrosive sublimate.

Bī-cip'ĭ-tal. [Lat. **Bicipita'lis.**] Belonging to the *biceps* muscle. In Botany, two-headed.

Bī-con'ju-gate. [Lat. **Biconjuga'tus**; from *bi-*, "two," and *con'jugo*, to "yoke together."] In pairs; twice-paired, as when a petiole forks twice, or each of two secondary petioles bears a pair of leaflets.

Bī-cor'nous. [Lat. **Bicor'nis**; from *bi-*, "two," and *cor'nu*, a "horn."] Two-horned:—applied to parts of plants having a resemblance to two horns.

Bī-cus'pid, or Bī-cus'pĭ-dāte. [Lat. **Bicus'pis, Bicuspida'tus**; from *bi-*, "two," and *cus'pis*, the "point of a spear."] Having two points; ending in two sharp points. See TOOTH.

Bī-den'tal. [Lat. **Bi'dens, en'tis, Bidenta'lis**; from *bi-*, "two," and *dens*, a "tooth."] Having two teeth.

Bī-den'tate. [Lat. **Bidenta'tus**; from the same.] Having two teeth.

Bī-dĭg'ĭ-tate. [Lat. **Bidigita'tus**; from *bi-*, "two," and *dĭg'itus*, a "finger."] Having two fingers or finger-like divisions:—applied to leaves.

Bī-en'nĭ-al. [Lat. **Bien'nis**; from *bien'nium* (*bi-*, "two," and *an'nus*, a "year"), the "space of two years."] Of two years' duration; living two years; requiring two years to form its flowers and fruit.

Bī-fā'rĭ-ous. [Lat. **Bifa'rius**; from *bi-*, "two," and *fa'ri*, to "speak."] Having a double meaning; pointing two ways. In Botany, arranged in two rows; two-ranked; pointing in two directions.

Bĭf'er-ous. [Lat. **Bi'fer, Bif'erus**; from *bi-* for *bis*, "twice," and *fe'ro*, to "bear."] Bearing twice in the year.

Bī'fid. [Lat. **Bif'idus**; from *bi-*, "two," and *fin'do*, to "cleave."] Divided into two; two-cleft to about the middle.

Bī-fis'tu-lar. Having two parallel tubes.

Bī-flo'rous, or Bī-flo'rate. [Lat. **Biflo'rus**; from *bi-*, "two," and *flos*, a "flower."] Having two flowers on the same footstalk, or flowering twice in a year.

Bī-fō'lĭ-ate. [From *bi-*, "two," and *fo'lium*, a "leaf."] A term applied to a compound leaf of two leaflets.

Bī-fo'rate, Bī-fo'rous. [Lat. **Bifora'tus, Bif'orus**; from *bi-*, "two," and *fo'res*, a "door."] Having two entries, apertures, or pores.

Bī-fur'cate. [Lat. **Bifurca'tus**; from *bi-*, "two," and *fur'ca*, a "fork."] Divided into two, like a fork; sometimes twice-forked.

Bī-fur-cā'tion. [Lat. **Bifurca'tio, o'nis**; from the same.] A dividing into two, as a fork into its prongs.

Bī-gas'ter.* [From the Lat. *bi-*, "two," and the Gr. *γαστήρ*, the "belly."] The same as BIVENTER, which see.

Bī-ĝem'ĭ-nate. [Lat. **Bigemina'tus**; from *bi-*, "two," and *gem'ini*, "twins."] A term applied in Botany to leaves having two secondary petioles, each of which has a pair of leaflets.

Bī-glan'du-lar. [From the Lat. *bi-*, "two," and *glans*, a "gland."] Having or producing two glands.

Big-no'nĭ-a.* [Named after Abbé *Bignon*, librarian to Louis XIV. of France.] A genus of ornamental climbing shrubs, of the order *Bignoniaceæ*, comprising many species, natives of Brazil, the West Indies, Guiana, etc. They bear showy flowers. Some of them climb to the tops of high trees, descend to the ground, take fresh root, and ascend other trees.

Bigno'nia Cap-re-o-la'ta.* A climbing shrub, a native of the Southern United States. Its root and other parts are used in medicine.

Bigno'nia Leū-cox'ȳ-lon,* or **Te-co'ma Leucox'ylon.*** White-Wood, a tall timber-tree, a native of Jamaica. Its timber is hard and excellent for ship-building.

Bigno'nia Rad'ĭ-cans.* A synonyme of TECOMA RADICANS, which see.

Bignoniaceæ,* big-no-ne-a'she-ē. A natural order of exogenous plants, including the *Bigno'nia* (trumpet-flower), *Tecoma*, *Sesamum*, *Martynia*, *Delostoma*, and *Catalpa*. Many of them are trees or twining plants remarkable for the beauty of their flowers. They are mostly natives of tropical countries.

Bignoniaceous, big-no-ne-ā'shŭs. [Lat. **Bignonia'ceus**; from *Bigno'nia*, the "trumpet-flower."] Having an arrangement as in the *Bignonia*. See BIGNONIACEÆ.

Bignoniæ,* big-no'ne-ē, the plural of **Bigno'nia**, forming the Jussieuan name of a natural order of plants. See BIGNONIACEÆ.

Bī-ho'rĭ-us.* [From the Lat. *bi-*, "two," and *ho'ra*, an "hour."] Enduring two hours:—used in prescriptions to denote a stated period.

Bī'ju-gate. [Lat. **Bijuga'tus**, or **Bij'ugus**; from *bi-*, "two," and *ju'gum*, a "yoke."] Double-yoked; in two pairs.

Bī'labe. [Lat. **Bila'bium?** perhaps from the Lat. *bis*, "twice," or "two," and *la'bium*, a "lip."] An instrument for extracting foreign bodies of sufficiently moderate size from the bladder through the urethra.

Bī-lā'bĭ-ate. [Lat. **Bilabia'tus**; from *bi-*, "two," and *la'bium*, a "lip."] Having two lips. The same as LABIATE:—applied to flowers.

Bī-la-cin'ĭ-ate. [Lat. **Bilacinia'tus**; from *bi-*, "two," and *lacinia'tus*, "fringed."] Double-fringed.

Bī-lam'el-late. [Lat. **Bilamella'tus**; from *bi-*, "two," and *lamella'tus*, "having little plates."] Having two layers, lamellæ, or thin plates.

Bī-lat'er-al. [Lat. **Bilatera'lis**; from *bi-*, "two," and *latera'lis*, "pertaining to the side."] Having two sides one of which is a duplicate of the other. Applied to the form of certain animals, including the Vertebrates and Articulates, the limbs and most important muscles of which are *bilateral* and symmetrical. The term *bilateral symmetry* is used to express the exact likeness which exists between many organs that are situated on each side of the median line.

Bile. [Lat. **Bi'lis**, or **Fel**; Gr. χολή; Fr. *Bile*, bĕl, and *Fiel*, fe-ĕl'.] The gall, or peculiar secretion of the liver. It is a viscid fluid, of a greenish-yellow color, and exceedingly bitter, whence the proverb "bitter as gall." The bile or gall of the ox (*bi'lis bovi'na*) has often been used medicinally as a tonic and anthelmintic, and as a laxative in cases of deficient biliary secretion. It has also been supposed to possess great healing virtues when applied externally to bruises and other sores.

Bil'ĭa-rȳ. [Lat. **Bilia'ris.**] Belonging to the bile.

Bil-ĭ-fus'çin. [From the Lat. *bi'lis*, "bile," and *fus'cus*, "brown."] A dark-colored substance found in gall-stones.

Bil-ĭ-pra'sin. [From the Lat. *bi'lis*, "bile," and *pras'inus*, "dark green."] A substance found in gall-stones.

Bī'lin, or **Bī'lĭne.** [Lat. **Bili'na**; from *bi'lis*, "bile."] A gummy, pale-yellow mass, considered to be the principal constituent of the bile.

Bilious, bil'yŭs. [Lat. **Bilo'sus**; from *bi'lis*, "bile."] Having much bile, full of bile, or relating to the bile.

Bilious Temperament. See TEMPERAMENT.

Bil-ĭ-phe'in. [Lat. **Biliphæi'na**; from *bi'lis*, "bile," and the Gr. φαιός, "of a brown color."] The most important coloring-matter of the bile.

Bil-ĭ-ru'bin. [From the Lat. *bi'lis*, "bile," and *ru'ber*, "red."] A red coloring-matter found in human bile.

Bilis.* See BILE.

Bilis Atra.* See MELANCHOLIA.

Bi'lis Bo-vi'na.* The Latin term for ox's gall. See BILIS.

Bil-ĭ-ver'din. [Lat. **Biliverdi'na**; from *bi'lis*, "bile," and *vir'idis*, "green."] A green substance obtained from the yellowish coloring-matter of bile.

Bī-lo'bate. [From the Lat. *bi-*, "two," and the Gr. λοβός, a "lobe."] Having two lobes; bilobed.

Bī'lobed. [Lat. **Bilo'bus.**] Two-lobed; divided into two lobes.

Bī-loc'u-lar. [Lat. **Bilocula'ris**; from *bi-*, "two," and *loc'ulus*, a "little cell."] Having two cells.

Bim'a-nous. [Lat. **Bim'anus**; from *bi-*, "two," and *ma'nus*, a "hand."] Having two hands:—applied in the plural neuter (*Bim'ana*) to an order of *Mammalia*, of which man constitutes the only genus.

Bī-mes'tris.* [From the Lat. *bi-*, "two," and *men'sis*, a "month."] Of two months; two months old.

Bi'mus.* Lasting two years.

Bin-. The same as *Bi-*, the *n* being added for the sake of euphony before a vowel; as, bi*n*oxalate, etc.

Bī'na-rȳ. [Lat. **Bina'rius**; from *bi'nus*, "by couples."] Consisting of two, as two elements, two measures, etc. Double stars are called *binary stars*. The term is also applied to chemical compounds formed by the union of two elements.

Bī'nate. [Lat. **Bina'tus**; from *bi-*, "two," and *na'tus*, "born," "produced."] Growing in pairs or couples.

Bī-ner'vate, Bī-ner'vĭ-ous. [Lat. **Biner'vatus, Biner'vius**; from *bi-*, "two," and *nerva'tus*, "nerved."] Having two nerves.

Bī-noc'u-lar. [Lat. **Binocula'ris**; from *bin-*, "two," and *oc'ulus*, the "eye."] Having the use of both eyes, or adapted to the use of both eyes, as a *binocular microscope*.

Binoc'ular Tel'e-scope. A telescope to which both eyes may be applied at once, so that an object may be observed with both eyes.

Bī-noc'u-lus.* [From the Lat. *bin-*, "two," and *oc'ulus*, the "eye."] A term applied in Surgery to a bandage for maintaining dressings on both eyes. Also the name of an animal resembling the king-crab.

Bī-no'dal. Consisting of two nodes (or joints) and no more.

Bī-nox'a-lāte. [Lat. **Binox'alas, a'tis**; from *bin-*, "two," or "twice," and *ox'alas*, an "oxalate."] A combination of an excess of oxalic acid with a base.

Bī-o-dy-nam'ics. [Lat. **Biodynam'ica**; from the Gr. *βίος*, "life," and *δύναμις*, "power."] The doctrine or science of the vital forces.

Bī-o-ġen'e-sis.* [From the Gr. *βίος*, "life," and *γένεσις*, "origin," "production."] The origin of life. Essentially the same as ARCHEBIOSIS, which see.

Bi-o-loġ'ĭ-cal Bot'a-nў, also termed **Struc'tu-ral Bot'any.** That part of Botany which treats of the organic structure, life, growth, action, and propagation of plants.

Bī-ol'o-ġў. [Lat. **Biolo'gia**; from the Gr. *βίος*, "life," and *λόγος*, a "discourse."] The doctrine or science of life. The science of living organisms, both animal and vegetable, comprising Botany, Zoology, and Physiology. That department of natural science which treats of organized beings under their diverse relations, their organic structure, life, growth, action, and reproduction.

Bī-ol'y-sis.* [From the Gr. *βίος*, "life," and *λύω*, to "dissolve," to "destroy."] The destruction of life. See next article.

Bī-o-lyt'ic. [Lat. **Biolyt'icus**; from the same.] Destroying or impairing life:—applied to agents of a deleterious quality, as the more powerful acids, narcotics, etc.

Bī-o-mag-ne-tiś'mus.* [From the Gr. *βίος*, "life," and the Lat. *magnetis'mus*, "magnetism."] Another name for animal magnetism.

Bī'o-plasm. [From the Gr. *βίος*, "life," and *πλάσμα*, "form," "formation."] A term used to denote the germinal matter of which living tissue is formed. A white corpuscle of blood, for example, is a *particle* of bioplasm.

Bī-o-plas'tic. Pertaining to bioplasm.

Bī-part'ĭ-ble. Separable spontaneously into two parts.

Bī-par'tīte. [Lat. **Biparti'tus**; from *bi-*, "two," and *par'tio*, to "divide."] Divided deeply into two segments.

Bī-pel'tate. [Lat. **Bipel'tatus**; from *bi-*, "two," and *pel'ta*, a "target," or "buckler."] Having two shields:—applied to a family of the *Crusta'cea Stomap'oda*.

Bi'pes,* gen. **Bip'ed-is.** [From the Lat. *bi-*, "two," and *pes*, a "foot."] Having two feet; bi'ped.

Bī-pin'nate. [Lat. **Bipinna'tus**; from *bi-*, "two," and *pin'na*, a "leaflet."] Twice pinnate:—applied to a leaf when the common petiole has opposite branches and each of those branches bears opposite leaflets.

Bī-pin-nat'ĭ-fid. [Lat. **Bipinnatif'idus**; from *bi-*, "two," and *pinnatif'idus*, "pinnatifid."] Doubly pinnatifid; twice pinnatifid: *i.e.*, when both the primary and the secondary segments of a leaf are pinnatifid.

Bī'plĭ-cate. Having two folds or plaits.

Bī-po'rose. Opening by two round holes.

Birch. [Lat. **Bet'ula.**] A genus of trees of the order *Betulaceæ*, natives of the United States, Europe, etc. The white birch (*Betula alba*) is a small, handsome tree, with a smooth white bark, indigenous in New England, New York, and Pennsylvania, also in Europe. Its leaves and sap are used in medicine.

Bird'lime. [Lat. **Vis'cus.**] A glutinous substance prepared from the bark of the holly and mistletoe. It contains resin, which has been called *viscina*.

Bī-ri'mose. [From the Lat. *bi-*, "two," and *ri'ma*, a "cleft," a "chink."] Opening by two slits, as most anthers.

Bī-ros'trate. [Lat. **Birostra'tus, Biros'tris**; from *bi-*, "two," and *ros'trum*, a "beak."] Having two beaks.

Bis-cuit, bis'kit. (Fr. *bis*, "twice," and *cuit*, "cooked.") [Lat. **Biscoc'tus.**] A kind of dry hard wheat bread or cake, which is unfermented, and is sometimes called *sea-biscuit*.

Bī-sep'tate. [From the Lat. *bi-*, "two," and *sep'tum*, a "partition."] Having two partitions.

Bī-se'rĭ-al. In two rows; occupying two rows.

Bī-ser'rate. [From the Lat. *bi-*, "two," and *ser'ra*, a "saw."] Doubly serrate, as when the teeth of a leaf are themselves serrate.

Bī-se'tose. [From the Lat. *bi-*, "two," and *se'ta*, a "bristle."] Having two bristles:—applied mostly to plants.

Bī-sex'u-al. [Lat. **Bisexua'lis**; from *bi-*, "two," and *sexua'lis*, "pertaining to sex."] Of both sexes; hermaphrodite.

Bis. ind. = *Bis in di'es.** "Twice daily."

Bis'muth. [Lat. **Bismu'thum**; Ger. *Bis'mut.*] A yellowish-white metal, found generally native or in the metallic state. Its specific gravity is about 9.8. An alloy of bismuth, lead, and tin is very fusible, and melts in boiling water. Bismuth is a brittle, crystalline metal. It is not much used in the arts in a pure state, but some of its alloys are useful.

Bis-mu'thi Cit'ras.* "Citrate of Bismuth." The Pharmacopœial name (U.S. 1880) for a white amorphous powder containing citric acid and bismuth. It is permanent in the air, odorless and

tasteless, insoluble in water or alcohol, but soluble in water of ammonia. It is not used itself in medicine.

Bismu'thi et Am-mo'nĭ-i Cit'ras.* "Citrate of Bismuth and Ammonium." The Pharmacopœial name (U.S. 1880) for the small pearly scales produced by dissolving citrate of bismuth in water of ammonia, evaporating the solution, and drying it upon glass plates.

Bismu'thi Sub-car-bo'nas.* "Subcarbonate of Bismuth." The Pharmacopœial name (U.S. 1880) for a white or pale yellowish-white powder containing carbonic acid and bismuth. It is permanent in the air, odorless and tasteless, and insoluble in water or alcohol. It is therapeutically equivalent to the subnitrate.

Bismu'thi Sub-ni'tras.* "Subnitrate of Bismuth." The Pharmacopœial name (U.S. 1880) for a heavy white powder containing nitric acid and bismuth. It is permanent in the air, odorless and almost tasteless, showing a slightly acid reaction when moistened on litmus-paper, and insoluble in water or alcohol. It is tonic, and is a useful remedy in subacute gastritis, gastralgia, pyrosis, gastric ulcers, etc.

Bis-mu'thum.* "Bismuth." The Pharmacopœial name (U.S. 1870) for commercial bismuth of good quality. See BISMUTH.

Bismu'thum Al'bum.* A name of the trisnitrate of bismuth; flake-white, or pearl-white: now called the subnitrate of bismuth (*Bismuthi subnitras*, which see).

Bis-tor'ta,* or **Bis'tort.** [From the Lat. *bis*, "twice," and *tor'queo*, to "twist;" so named from the form of the root.] See next article.

Bis-tor'tæ Ra'dix.* The root of the *Polygonum bistorta*, Great Bistort or Snake-Weed.

Bistoury, bis'tŭr-e. [Fr. *Bistouri;* from *Pistori*, a town where it was manufactured.] A small knife, or scalpel, for surgical purposes. There are the *straight*, the *curved*, and the *probe-pointed*, which is also curved.

Bistre, bĭs't'r. A brown color, made of wood-soot boiled and evaporated. Beech-soot is said to make the best.

Bī-sul'cate. [From the Lat. *bi-*, "two," and *sul'cus*, a "furrow."] Having two grooves or furrows.

Bī-sul'phāte. [Lat. **Bisul'phas, a'tis;** from *bi-*, "two," and *sul'phas.*] A combination of two equivalents of sulphuric acid with one of base.

Bī-sul'phide of Carbon. A poisonous compound of carbon and sulphur, which is used to vulcanize caoutchouc. It is a colorless liquid, very diffusive, having a fetid odor and a sharp aromatic taste. It is insoluble in water, but soluble in alcohol and ether. It is an energetic agent of sulfuration. In medicine it is used externally as an anodyne. See CARBONEI BISULPHIDUM.

Bī-sul'phīte. [Lat. **Bisul'phis, i'tis;** from *bi-*, "two," and *sul'phis*, a "sulphite."] A combination of two equivalents of sulphurous acid with one of the base.

Bī-tar'trāte. [Lat. **Bitar'tras, a'tis;** from *bi-*, "two," and *tar'tras*, a "tartrate."] A supersalt with twice as much tartaric acid as the corresponding neutral salt.

Bī-ter'nate. [Lat. **Biterna'tus;** from *bis*, "twice," and *terna'tus*, "ternate."] Twice ternate. A leaf is biternate when the common petiole is divided into three branches, each of which bears three leaflets.

Bit'ter Alm'onds, Wat'er of, or **Bit'ter Alm'ond Wat'er.** [Lat. **A'qua Amyg'dalæ Ama'ræ,** or **A'qua Amygdala'rum Ama'rum.**] A preparation containing sixteen minims of the oil of bitter almonds to two pints of water, or half a minim to a fluidounce. It is employed as a vehicle for other medicines in nervous coughs and spasmodic affections.

Bit'ter Ap'ple, Bit'ter Cu'cum-ber, or **Bit'ter Gourd.** The plant and fruit of the *Cucumis colocynthis.*

Bit'ter Prin'cĭ-ple. A peculiar principle, on the presence of which the bitter quality of certain vegetables depends; as in the wood of quassia, gentian-root, the hop, etc.

Bit'ter-Sweet. The SOLANUM DULCAMARA, which see.

Bit'ter-ing. A preparation for adulterating beer, composed of cocculus Indicus, liquorice, tobacco, quassia, and sulphate of iron or copperas. Corruptly called *Bittern.* A similar preparation is sold under the name of "bitter balls."

Bit'tern. The water remaining after the crystallization of common salt from sea-water or salt springs.

Bit'ters. [Lat. **Ama'ra.**] A term applied to several medicinal substances, expressing their quality as particularly perceptible to the taste. They are distinguished into aromatic, pure, and styptic bitters.

Bĭ-tu'men, m*inis.* [As if *pittu'men;* from the Gr. *πίττα*, "pitch."] A name for certain inflammable mineral substances, of different consistencies ranging from fluid to solid. Asphaltum, naphtha, and petroleum are varieties of bitumen.

Bitu'men Bar-ba-den'se.* The *Petroleum* of the Pharmacopœias, or "Barbadoes Tar."

Bĭ-tu'mĭ-nĭ-zā'tion. [Lat. **Bituminiza'tio, o'nis.**] The transformation of organic matter into *bitumen*, as wood into coal, and the remains of vegetable substances into peat.

Bĭ-tu'mĭ-nous. [Lat. **Bitumino'sus;** from *bitu'men.*] Of the nature of bitumen.

Bī'valve. [Lat. **Bival'vis;** from *bi-*, "two," and *valva*, a "valve."] Having two valves:—applied to shells (of Mollusks) each of which consists of two concave pieces or valves, as the oyster.

Bī'valved. In Botany, having two valves.

Bī-ven'ter.* [From the Lat. *bi-*, "two," and *ven'ter*, the "belly."] Having a double belly:—a term used for *Digastricus:*—also called *Bigaster.* A term applied to certain muscles.

Bix'a O-rel-la'na.* A small tree of the order *Flacourtiaceæ*, a native of tropical America. Its seeds have a coat of red, waxy pulp, which is called *Annotto*, or *Arnatto.* This is used to color cheese.

Bixaceæ,* bix-a′she-ē. A synonyme of *Flacourtiaceæ*, the name of a natural order of tropical trees and shrubs, including the *Bixa*.

Black′ber-rў. The popular name of the fruit of *Rubus villosus* and other species of *Rubus*.

Black Death. [Lat. **Mors Ni′gra**, or **Pes′tis Ni′gra**; Fr. *Peste noir*, pĕst nwȧR.] The name given in Germany and the North of Europe to an Oriental plague which occurred in the fourteenth century, characterized by inflammatory boils and black spots on the skin, indicating putrid decomposition. In Italy it was called *la mortalega grande*, "the great mortality." In many of its characters this pestilence resembled the bubo plague of the present day, complicated with pneumonia and hemorrhages. See PLAGUE.

Black Draught. A popular purgative, consisting of the infusion of senna with sulphate of magnesia.

Black Drop. [Lat. **Gut′tæ Ni′græ**: literally, "black drops."] A solution of opium in verjuice, corresponding nearly in its medicinal properties to the *Acetum Opii* of the U.S. Pharmacopœia. One drop of this solution is equal to about three drops of laudanum. It is less apt to disturb or excite the nervous system than the latter preparation. See U.S. Pharmacopœia, 1880, page 8.

Black Flux. A mixture of charcoal and carbonate of potash, obtained by deflagrating tartar with half its weight of nitre.

Black Haw. See VIBURNUM PRUNIFOLIUM.

Black Lead. See GRAPHITE.

Black Oak. See QUERCUS TINCTORIA.

Black Vom′it. [Lat. **Vom′itus Ni′ger.**] The throwing up, in certain fevers, of a dark-colored fluid resembling coffee-grounds. This fluid consists chiefly of blood changed by the morbid secretions of the stomach. It is one of the most fatal symptoms attending yellow fever, which in Spanish is often called simply *El vom′ito* ("the vomit"), or *El vom′ito ne′gro* ("the black vomit").

Black Wal′nut. The popular name of the *Juglans nigra*. See JUGLANS.

Black Wash. [Lat. **Lo′tio Ni′gra**, or **Lo′tio Hydrar′gyri Ni′gra.**] A lotion made with calomel in lime-water, much used for syphilitic sores.

Blad′der. [Lat. **Vesi′ca.**] Generally, the receptacle of the urine in man and other animals:—applied in Botany and Natural History to various objects and productions of similar appearance, as those of sea-wrack, the air-bag of fishes, etc.

Blad′der-Fu′cus, Blad′der-Wrack. The *Fucus vesiculosus*.

Bladder, Gall. See GALL-BLADDER.

Bladder, Urinary. See URINARY BLADDER.

Bladder-Worm. See HYDATID.

Blad′der-ў. In Botany, thin and inflated.

Bladdery Fever. [Lat. **Fe′bris Bullo′sa.**] See PEMPHIGUS.

Blade. A term applied to the expanded part of a leaf; the lamina.

Blæs′ĭ-tas, a′tis.* [From the Gr. *βλαισός*, "one who has crooked legs;" also "one who stammers."] The defect of speech termed stuttering or stammering. Some writers understand by it the substitution of soft consonants for hard,—as *d* for *t*, *b* for *p*, etc. See PSELLISMUS.

Blain. A pustule, blotch, or sore. See CHILBLAIN.

Blanc de Troyes, blôN dẹh tRwȧ. Spanish White, prepared chalk, or the *Cre′ta præpara′ta* of the Pharmacopœias.

Blanc Mange, blôN môNzh. Animal jelly combined with an emulsion of sweet almonds, sweetened with sugar and flavored with some aromatic or essence.

Blas-te′ma, a′tis.* [From the Gr. *βλαστάνω*, to "germinate."] A term applied to the rudimental mass of an organ in the process of formation. In Botany, the axis of an embryo, comprising the plumule and radicle.

Blas′to-derm. [Lat. **Blastoder′ma, a′tis**; from the Gr. *βλαστάνω*, to "germinate," and *δέρμα*, the "skin."] A minute, thin membrane on that surface of the yelk which, whatever be the position of the egg, is, by a peculiar arrangement, always uppermost; the germinal membrane, or *Cicatricula*.

Blas-to-der′mic. [Lat. **Blastoder′micus.**] Belonging to the blastoderm.

Blastoder′mic Ves′ĭ-cle. [Lat. **Vesic′ula Blastoder′mica.**] A distinct envelope immediately surrounding the yelk, and covered by the vitelline membrane; afterwards called the *umbilical vesicle*.

Blas-to-ġen′e-sis.* [From the Gr. *βλαστός*, a "sprout," and *γένεσις*, "generation."] The multiplication of plants by means of buds.

Blas′tus.* The plumule of a plant.

Blé, blȧ. The French name for wheat.

Bleach. [From the German *blei′chen*, to "whiten."] To whiten by the removal of, or by changing the nature of, the coloring-matter in any substance. See next article.

Bleach′ing. [Lat. **Dealba′tio**; from *de*, intensive, and *al′bus*, "white."] The chemical process of whitening linen or woollen stuffs. Linen is usually bleached by means of chlorine or a solution of chloride of lime. Woollen stuffs are bleached by exposure to the vapor of sulphurous acid.

BLEACH′ING POW′DER. Chloride of lime, formerly called oxymuriate of lime: prepared by exposing hydrate of lime gradually to chlorine gas.

BLEACH′ING LIQ′UID. [Fr. *Eau de Javelle*, ō dẹh zhȧ′vĕl′.] This is the preceding compound obtained in solution by transmitting a stream of chlorine gas through hydrate of lime suspended in water.

Blear′-Eye. A chronic catarrhal inflammation of the eyelids.

Bleb.* See BULLA.

Bleeding. See BLOOD-LETTING, HEMORRHAGE.

Blende, blĕnd [perhaps from the Saxon *blen′dan*, to "mix together"], or **Sphal′er-ite.** A native sulphide of zinc which occurs in crystals

of the isometric system and also massive. The crystals have a perfect cleavage, a resinous or waxy lustre, and various colors. It is sometimes transparent, and is nearly infusible. It is called by miners *black-jack*.

Blen'nad-e-ni'tis, i*dis*.* [From the Gr. *βλέννα*, "mucus," and the Lat. *adeni'tis*.] Inflammation of mucous glands.

Blen'ne-lŷt'rĭ-a.* [From the Gr. *βλέννα*, "mucus," and *ἔλυτρον*, a "sheath."] The same as LEUCORRHŒA.

Blen'nen-te'rĭ-a.* [From the Gr. *βλέννα*, "mucus," and *ἔντερον*, an "intestine."] Mucous flow from the intestines.

Blen'no-ġen'ic. [Lat. **Blen'nogen'icus**; from the Gr. *βλέννα*, "mucus," and *γεννάω*, to "generate."] Generating mucus; muciparous.

Blennoġ'enus.* The same as BLENNOGENIC, which see.

Blen'no-me-tri'tis, i*dis*.* [From the Gr. *βλέννα*, "mucus," and the Lat. *metri'tis*.] Mucous flow accompanying metritis.

Blen'noph-thăl'mĭ-a.* [From the Gr. *βλέννα*, "mucus," and the Lat. *ophthal'mia*.] Inflammation of the mucous membrane of the eye.

Blen-nor-rha'ġĭ-a.* [From the Gr. *βλέννα*, "mucus," and *ῥῆγνυμι*, to "break" or "burst."] Literally, a "bursting forth of mucus:" hence, an excessive discharge of mucus, or muco-purulent matter, more especially from the genital organs.

Blennorrhœa,* blen-no-rē'a. [From the Gr. *βλέννα*, "mucus," and *ῥέω*, to "flow."] A flowing or excessive secretion from mucous glands in any situation:—sometimes applied to the increased secretion in the urethra and vagina of an infectious purulent or muco-purulent discharge, and called *Gonorrhœa*. See BAPTORRHŒA.

Blennorrhœ'a Chron'ĭ-ca.* Gleet:—also named *Catarrhus urethralis*.

Blennorrhœ'a Sim'plex.* Increased secretion of mucus from the urethra.

Blen-ny'men, en*is*.* [From the Gr. *βλέννα*, "mucus," and *ὑμήν*, a "membrane."] A mucous membrane.

Blen-ny'me-ni'tis, i*dis*.* [From the Gr. *βλέννα*, "mucus."] Inflammation of a mucous membrane.

Bleph'ar-ad'e-ni'tis, i*dis*.* [From the Gr. *βλέφαρον*, the "eyelid," and *ἀδήν*, a "gland."] Inflammation of the Meibomian glands.

Bleph'a-ri'tis, i*dis*.* [From the Gr. *βλέφαρον*, the "eyelid."] Inflammation of the eyelids.

Bleph-ar-œ-de'ma.* [From the Gr. *βλέφαρον*, an "eyelid," and *οἴδημα*, a "swelling."] A swelling (usually watery) of the eyelids. See HYDROBLEPHARON.

Blepharœde'ma A-quo'sum.* "Watery Blepharœdema." See preceding article.

Bleph'ar-on'cus.* [From the Gr. *βλήφαρον*, the "eyelid," and *ὀγκός*, a "tumor."] A tumor on the eyelid.

Bleph'ar-oph-thăl'mĭ-a.* [From the Gr. *βλέφαρον*, the "eyelid," and *ὀφθαλμία*, "inflammation of the eye."] Inflammation of the eye and eyelids coexisting.

Bleph'ar-oph-thăl'mic. [Lat. **Bleph'aroph-thal'micus**.] Belonging to blepharophthalmia.

Bleph'ar-o-plas'tic. [Lat. **Bleph'aroplas'ticus**.] Belonging to blepharoplasty.

Bleph'ar-o-plas'tў. [Lat. **Bleph'aroplas'tia**; from the Gr. *βλέφαρον*, the "eyelid," and *πλάσσω*, to "form."] An operation for repairing any lesion of the eyelids, by taking a flap from the sound parts contiguous.

Bleph'ar-o-ple'ġĭ-a.* [From the Gr. *βλέφαρον*, the "eyelid," and *πληγή*, a "stroke."] The falling down of the upper eyelid from paralysis.

Bleph'a-rop-to'sis.* [From the Gr. *βλέφαρον*, the "eyelid," and *πτῶσις*, a "falling."] The same as BLEPHAROPLEGIA.

Blessed. See BENEDICTUS.

Blight, blīt. The popular name of a slight palsy, caused by sudden cold or damp. "Blight in the eye" is another term for catarrhal ophthalmia. Also mildew,—a disease of cereal grain and cultivated plants, caused by parasitic fungi.

Blindness, Day. See NYCTALOPIA.

Blindness, Night; Blindness, Nocturnal. See HEMERALOPIA.

Blis'ter. [Lat. **Vesic'ula**; Fr. *Vessie*, vĕs'sē'.] A collection of serous fluid beneath the cuticle. In common language, the plaster itself [Lat. **Vesicato'rium**; Fr. *Vésicatoire*, vā'zē'kā'twȧR'] which produces the blister. See BULLA.

Blister-Beetle, Blister-Fly. See CANTHARIS.

Blistered. See BULLATUS.

Blis'ters, Fly'ing. (Fr. *Vésicatoires volants*, vā'zē'kā'twȧR' vo'lɔN'.) A mode of treatment employed by the Continental practitioners for the purpose of insuring a more diffusive counter-irritation. According to this plan, the blister remains only till it produces a rubefacient effect; a second blister is then applied to some other part, and so on in succession.

Blood. [Lat. **San'guis**, *inis*; Gr. *αἷμα*; Fr. *Sang*, sɔN.] The red fluid which circulates through the cavities of the heart, the arteries, and the veins. Every organ of the body, and every tissue, is nourished by the blood, which is also the source of every secretion. It is red and usually warm in vertebrated animals, but cold and white for the most part in the *Invertebrata*.

Blood contains albumen in three states of modification,—viz., *albumen* properly so called, *fibrin*, and *red particles*. On coagulation it separates into—

SE'RUM,* a yellowish liquid, containing albumen and various saline matters suspended in water; and

CRASSAMEN'TUM,* called also CRU'OR,* a red solid, consisting of fibrin and red particles.

BLOOD, ARTERIAL AND VENOUS. The blood contained in the arteries, coming so recently from the lungs, where it has been oxygenated, is of a bright red or scarlet color; but as it passes into the veins it changes its hue, becoming sometimes very dark, or rather a dark blue; but it is more usually a brownish red. It is now termed venous blood, and retains its color till it is again oxyge-

nated in the lungs, where it reassumes the character of arterial blood, as above described.

Blood'-Let-ting. [Lat. **Mis'sio San'guinis, Abstrac'tio San'guinis,** or **Detrac'tio San'guinis.**] A term embracing every artificial discharge of blood for the cure or prevention of disease. It is *general,* as in venesection and arteriotomy, or *topical,* as in the application of leeches or of cupping-glasses, or by scarification. Blood-letting is not practised nearly so much as it was formerly. Less than one hundred years ago it was almost universal, and it was customary to bleed healthy people. In country districts it was considered proper or necessary that adults should be bled as regularly as they went to market.

Blood-Poisoning. See TOXÆMIA.

Blood-Root. See SANGUINARIA.

Blood'-Shot. Filled with blood:—applied to a condition of the eye when there is a distention or preternatural fulness of the blood-vessels from inflammation or other cause. See HYPERÆMIA.

Blood'stone. [Lat. **Hæmati'tes.**] A species of chalcedony supposed to be useful in stopping a bleeding from the nose.

Blood-Stroke. See COUP DE SANG.

Blood-Ves'sel. A vessel or canal in which the blood circulates.

Bloody Flux. See DYSENTERY.

Bloom. In Botany and Pomology, a fine white or grayish powder, like that on a plum. Also a flower; a blossom.

Bloom'a-rў, or **Bloom'er-ў.** [From *bloom,* a "mass of iron."] A furnace in which cast iron is converted into malleable iron, or a furnace in which malleable iron is made directly from the ore.

Blossom. See COROLLA.

Blow'-Pipe. A simple, tapering, tube-like instrument of silver or brass, used for the purpose of inflation; also for directing a stream of air into the flame of a lamp, which thus assumes a conical form, at the point of which the heat is equal to that of a powerful furnace.

The *oxy-hydrogen blow-pipe* is an apparatus for producing intense heat, by supplying a stream of hydrogen with pure oxygen, so that the two gases issue together in the form of a jet from the nozzle of the blow-pipe. The heat produced by this apparatus (which is also called the *compound blow-pipe*) is so intense as quickly to fuse substances completely infusible by any other means except a powerful galvanic battery or a very large burning lens.

Blue. [Lat. **Cæru'leus;** Fr. *Bleu,* blŭh.] One of the primary colors, which occurs nearly pure in the sapphire and ultramarine. It is said to be the coldest color. "Pure blue is the coldest of abstract hues."—RUSKIN.

Blue'ber-rў. A popular name for several species of *Vaccinium.*

Blue Black. Another name for ivory-black, or the *eber ustum,* from its bluish hue.

Blue Disease. [Lat. **Mor'bus Cæru'leus.**] See CYANOSIS.

Blue John. A name given by miners to fluor spar:—also called *Derbyshire spar.*

Blue Mass. [Lat. **Mas'sa de Hydrar'gyro.**] A substance formed by rubbing metallic mercury with conserve of roses until all the globules disappear. Of this mass blue pills are made. This is regarded as one of the mildest preparations of mercury. See PILULÆ HYDRARGYRI.

Blue Oint'ment. The *Unguentum Hydrargyri.*

Blue Pills. The *Pilulæ Hydrargyri.* See BLUE MASS.

Blue Pot. Another term for a black-lead crucible, made of a mixture of coarse plumbago and clay.

Blue, Prussian. See PRUSSIAN BLUE.

Blue Stone, Blue Vit'rĭ-ol. [Lat. **Cæru'leus La'pis.**] The sulphate of copper (*Sulphas Cupri*).

Blu'me-a Au-ri'ta, and **Blu'mea Laç'e-ra.** Species of plants of the order *Compositæ,* natives of India. They are used by the Hindoos in cases of dyspepsia.

Blunt Hook. [Lat. **Embryul'cus.**] An instrument used in obstetrical surgery.

B. M. = *Bal'neum Mari'æ.** A "water-bath."

Boat'-Shaped. See NAVICULAR, and SCAPHOID.

Bod'ў. [Lat. **Cor'pus, Cor'poris;** Gr. σῶμα; Fr. *Corps,* kor.] Any mass or portion of matter. In a more restricted sense, the material part of man or of any animal, considered separately from the soul or life. The term is often employed synonymously with "trunk." Material bodies are arranged in two primary divisions, *organized* and *inorganic.*

Bog-Bean'. The common name for the *Menyan'thes trifolia'ta.*

Bo-hēa'. The *The'a ni'gra,* or black tea.

Boh-me'rĭ-a Ni've-a.* A shrubby plant of the order *Urticaceæ,* a native of China and Sumatra. It is cultivated in China and India. The beautiful fabric called grass-cloth is manufactured from the fibre of the inner bark of this plant.

Bo'hun U'pas. A bitter gum-resin which exudes from incisions in the bark of a large tree in Java and the neighboring islands, called *Antiar,* or *Antikar,* by the Javanese; the *Antiaris toxicaria* of botanists. It is a deadly poison.

Boil. See FURUNCULUS.

Boiling. See EBULLITION.

Boil'ing Point of Wa'ter, near the level of the sea, is 212° of Fahrenheit; *in vacuo,* 67°; under sufficient pressure, water may be raised almost to a red heat. According to the Centigrade thermometer, the boiling point is 100°; according to Réaumur's, 80°.

Bois, bwå, the French word for "wood:" hence **Bois Amer,** bwåz ă'maiR' ("bitter wood"), another name for QUASSIA, which see.

Bois de Campèche, bwå deh kŏm'pĕsh'. "Campeachy Wood." A name for logwood. See HÆMATOXYLUM.

Bol. = *Bolus.** See BOLUS.

Bol-do'a Fra'grans,* or **Pri-eū'mus Bol'dus.*** A small tree of the order *Monimiaceæ*, a native of Chili, bearing an edible fruit. Its leaves are fragrant, and are used in medicine in affections of the liver.

Bole. See BOLUS.

Bo-le'tāte. [Lat. **Bole'tas, a'tis.**] A combination of boletic acid with a base.

Bo-let'ic Aç'id. An acid discovered in the *Boletus pseudo-igniarius.*

Bo-le'tus.* [From the Gr. *βῶλος*, a "mass."] A genus of *Fungi*, comprising numerous species, some of which are poisonous and others edible. The *Bole'tus edu'lis* is an edible mushroom, a native of Europe.

Bole'tus Ig-nĭ-a'rĭ-us.* [From the Lat. *ig'nis*, "fire;" because often used as tinder.] The agaric of the oak, or touchwood. See AGARICUS QUERCUS.

Bole'tus Pur'gans.* Larch agaric:—formerly employed as a drastic purgative.

Bo'lus.* [Gr. *βῶλος*, a "lump" or "mass."] Any roundly-formed medicine, larger than an ordinary-sized pill, yet small enough to be swallowed. Also a kind of argillaceous earth; bole.

Bolus Armeniæ.* See ARMENIAN BOLE.

Bombaceæ,* bom-ba'she-ē. [From *Bom'bax*, one of the genera.] A natural order of trees, including the gigantic *Baobab* and the cotton-tree of India. They grow in tropical countries. The cotton of the *Bombax* is too short for textile tissues. This order is called *Sterculiaceæ* by Lindley.

Bom'bax, a'cis.* The Cotton-Tree, a Linnæan genus of the class *Monadelphia*, natural order *Bombaceæ* or *Sterculiaceæ*. It comprises many species of large trees, mostly natives of tropical America. The seeds of these trees are surrounded with beautiful silky hairs, called *silk-cotton.*

Bom'bĭ-āte. [Lat. **Bom'bias, a'tis.**] A combination of bombic acid with a base.

Bom'bic. [Lat. **Bom'bicus**; from the Gr. *βόμβυξ*, a "silk-worm."] Pertaining to the silk-worm.

Bom'bic Aç'id. An acid obtained from the silk-worm chrysalis.

Bom'bus.* [Gr. *βόμβος*, the "buzzing of bees."] A ringing noise in the ears; also, the sound of flatus moving through the intestines. See TINNITUS AURIUM, and BORBORYGMUS.

Bom'by-cĭne. [From the Gr. *βόμβυξ*, a "silk-worm."] Silky; feeling like silk.

Bone. [Lat. **Os, Os'sis**; Gr. *ὀστέον*; Fr. *Os*, ō.] A substance consisting chiefly of phosphate of lime and gelatin, forming the solid framework or skeleton in vertebrated animals. See OSTEOLOGY, and SKELETON.

Bone'-Bind-er. A name for OSTEOCOLLA, which see.

Bone Earth. Phosphate of lime; the earthy basis of the bones of animals.

Boneset. See EUPATORIUM PERFOLIATUM.

Bone Spir'it. A brown, ammoniacal liquor, obtained in the process of manufacturing animal charcoal from bones.

Bon-plan'dĭ-a Trĭ-fo-lĭ-a'ta.* [Named from *Bonpland*, the discoverer.] The former name of the tree affording *Angustura bark*, now referred to the *Galipea cusparia.*

Bo-raç'ic Aç'id, or Bor'ic Aç'id. An acid obtained from borax. It is a compound of boron and oxygen. It is solid, and is soluble in water and alcohol. See ACIDUM BORICUM.

Boraginaceæ,* bo-raj-e-na'she-ē. A natural order of exogenous plants, comprising the Borage (*Bora'go, Borag'inis*), Myosotis, and Heliotrope, and possessing mucilaginous and emollient properties. They are natives of Europe, Asia, the United States, etc.

Bo-ra-gin'e-æ.* The Jussieuan name of an order of plants. See BORAGINACEÆ.

Bo-ra'go Of-fiç-ĭ-na'lis.* Borage, an herbaceous plant, a native of Europe, cultivated in gardens for its blue or purplish flowers. The leaves are said to be aperient.

Bo-ras'sus Fla-bel'lĭ-for'mis.* The Palmyra Palm, a noble and lofty tree, which is widely distributed through the tropical parts of Asia. Its large, fan-shaped leaves are used for a great variety of purposes. An important product, called *palm-wine*, or *toddy*, is obtained from this tree.

Bo'rāte. [Lat. **Bo'ras, a'tis.**] A combination of boracic acid with a base.

Bo'rax, a'cis.* The common name for the borate of soda (*So'dæ Bo'ras*), otherwise called biborate of soda (*So'dæ Bibo'ras*). Borax is a mild refrigerant and diuretic; in the form of powder mixed with sugar, it is often used as a remedy for aphthæ in children. It is used in welding iron, and as a flux in promoting the fusion of metallic mixtures. See SODII BORAS.

Bor-bo'nĭ-a Rus-çĭ-fo'lĭ-a.* A tree of the order *Leguminosæ*, a native of South Africa. It is diuretic.

Bor-bo-rўg'mus.* [From the Gr. *βορβορύζω*, to "have a rumbling in the bowels."] The gurgling noise produced by the movements of flatus in the intestines.

Bor'deaux Wine. A name of several kinds of French wine, one of which is called *Médoc.* The red Bordeaux wine is called *claret* by the English. See CLARET.

Bor'der. The summit or upper spreading part of a calyx or corolla:—called also a *limb.*

Boric Acid. See ACIDUM BORICUM.

Bor'ne-ĕn. The name given to a compound of carbon and hydrogen found in valeric acid, and which, on exposure to moisture, acquires the properties of *Borneo camphor:* it is supposed to be identical with liquid camphor. The camphor itself has been named *borneol;* and it is converted by the action of nitric acid into laurel camphor.

Bor'ne-o Cam'phor, called also **Su-mat'ra Cam'phor.** A crystalline solid found in crevices of the wood of the *Dryobal'anops aromat'ica.*

Bo'ron. [Lat. **Bo'rium.**] The base of boric acid; a non-metallic element, which exists in three allotropic states,—amorphous, graphitoidal, and crystallized. The amorphous is an olive-brown powder which is infusible and has neither taste nor smell. It is not used in the arts in a

separate state. It occurs in nature only in combination with oxygen. Crystallized boron resembles the diamond in lustre and hardness, and is called *boron diamond*. Specific gravity, 2.6.

Bos,* gen. **Bo'vis.** A genus of ruminant animals, comprising, besides other species, the *Bos taurus* (ox and cow), the bison, the buffalo, and the aurochs. The first-named furnishes a favorite viand, called beef. Animals of this genus are called *bovine*.

Bos-op'ric Aç'id. A strong, colorless acid, procured from fresh cow-dung, of great efficacy in purifying mordanted cotton. A better term would be *bucopric acid*.

Bos-wel'lĭ-a.* A genus of trees of the order *Amyridaceæ*, natives of India, Arabia, etc. The *Boswel'lia thurif'era* or *serra'ta* affords the fragrant resin *olibanum*. It is a native of India.

Boswel'lia Ser-ra'ta.* The tree believed to afford *olibanum*.

Bo-Tree. A name of the *Fi'cus religio'sa*, the sacred fig-tree of Hindostan:—also called PEE'PUL, which see.

Botal, Foramen of. See FORAMEN OVALE.

Botal's Hole. [Lat. **Fora'men Bota'le.**] See FORAMEN OVALE.

Bot-an-ol'o-ğy. [Lat. **Botanolo'gia**; from the Gr. *βοτανή*, an "herb," and *λόγος*, a "discourse."] The science of plants. The same as BOTANY.

Bot'a-nў. [Lat. **Botan'ica**, from the Gr. *βοτανή*, an "herb," or **Res Herba'ria.**] That branch of Natural History which treats of plants, or of the vegetable kingdom. It comprises two primary divisions, *Structural Botany* and *Systematic Botany*. Structural or Biological Botany includes *Morphology*, *Histology*, and *Vegetable Physiology*. Systematic Botany comprises *Taxonomy*, or classification, and *Phytography*, or Descriptive Botany.

Both-rĭ-o-çeph'a-lus.* [From the Gr. *βοθρίον*, a "little pit," and *κεραλή*, the "head."] Another name for the TÆNIA LATA, which see.

Bot'rў-oid, or **Bot-rў-oid'al.** [Lat. **Botryoi'des**; from the Gr. *βότρυς*, a "cluster of grapes."] Resembling a cluster of grapes:—applied to certain minerals.

Bottle-Shaped. See LAGENÆFORMIS.

Botts. Small worms which breed in the intestines of horses: they are the larvæ of the *Œstrus*, or gadfly, which deposits its eggs on the hair of the horse, and by the licking of the animal they are swallowed. See ŒSTRUS.

Bo-tu'lĭ-form. [From the Lat. *bot'ulus*, a "sausage," and *for'ma*, "form."] Sausage-shaped.

Bot-u-lin'ic [from the Lat. *bot'ulus*, a "sausage"] **Aç'id.** An acid found in putrid sausages, supposed to be the same principle as ALLANTOTOXICUM.

Bougie, boo'zhē'. [Fr., a "wax candle;" from their having formerly been sometimes made of wax.] A slender instrument for introduction into the urethra; also, stronger, for the rectum, vagina, and œsophagus.

Bougie', Armed, or **Caus'tic Bougie.** A bougie with a piece of lunar caustic fixed in its extremity.

Bouillon, boo'yoN'. [Fr., from *bouillir*, to "boil."] A broth or soup made by boiling the flesh of animals in water.

Boulimia.* See BULIMIA.

Bouquet, boo'kā'. (Fr.) A bunch of flowers. Also the special characteristic taste or flavor of wines. This is attributed to small quantities of ether, formed by the union of alcohol with various acids.

Bovidæ.* See Table of Mammalia, p. 840, Appendix.

Bo-vi'na Fa'mēs.* See BULIMIA.

Bow-dich'ĭ-a Vir-ğil-ĭ-o-i'dēs.* An ornamental tree of the order *Leguminosæ*, a native of Brazil. It bears panicles of beautiful flowers, the color of which is amethystine or violet. Its bark is astringent.

Bŏw'els. The intestines.

Bōwl'-Shaped. Hemispherical and concave.

Box-Tree. See BUXUS SEMPERVIRENS.

Bra-chē'rĭ-um.* [From the Lat. *bra'chium*, the "arm."] A kind of truss.

Brachiæus.* The same as BRACHIAL.

Bra'chĭ-al. [Lat. **Brachia'lis**; from *bra'chium*, the "arm."] Belonging to the arm.

Braeh-ĭ-ăl'ğĭ-a.* [From the Lat. *bra'chium*, the "arm," and the Gr. *ἄλγος*, "pain."] Pain of the arm, or of any part of it.

Bra'chĭ-ate. [Lat. **Brachia'tus**; from *bra'chium*, the "arm."] Having branches in pairs at right angles with those above and below, as the maple and the lilac.

Bra'chĭ-o-. [From the same.] A prefix in compound names of vessels, ligaments, etc., connected with the arm.

Brachiopoda.* See BRACHIOPODOUS.

Bra-chĭ-op'o-dous. [Lat. **Brachiop'odus**; from the Gr. *βραχίων*, an "arm," and *πούς*, a "foot."] A term applied in the plural neuter (*Brachiop'oda*) to a class of Mollusks with two fleshy arms instead of feet.

Bra'chĭ-um.* [Gr. *βραχίων*; Fr. *Bras*, brå.] The arm, from the shoulder to the wrist; strictly, from the shoulder to the elbow, forming the proper arm. In Botany, an ell, or two feet, long.

Brach's (braks) **Symp'tom.** A term denoting the condition of a patient who, standing with his eyes closed and his feet together, is unable to control his body so as to prevent oscillation.

Braeh'ў-ce-phal'ic. [From the Gr. *βραχύς*, "short," and *κεφαλή*, "head."] Having a short head, measuring from the forehead to the occiput.

Bra-chўp'ter-us.* [From the Gr. *βραχύς*, "short," and *πτερόν*, a "wing."] Brachyp'terous:—applied in the neuter plural (*Brachyp'tera*) to a family of birds with small wings.

Braeh-ў-u'rus.* [From the Gr. *βραχύς*, "short," and *οὐρά*, a "tail."] Having a short tail; brachyu'rous:—applied in the plural neuter (*Brachiu'ra*) to a family of *Crusta'cea Decap'oda*.

Brac'te-ạ,* plural **Brac'te-æ.** A Latin term, denoting a thin leaf or plate of any metal. A bract. It is applied in Botany to all those modifications of leaves which are found upon the inflorescence and are situated between the true leaves and the calyx of the flower. They compose the *involucrum* of Compositæ, the *glumes* of Gramineæ, the *spathes* of Arum, etc.

Brac'te-ate. [Lat. **Bractea'tus**; from *brac'tea.*] Having floral leaves or bracts.

Brac-te'ĭ-form. [Lat. **Bracteifor'mis**; from *brac'tea.*] Resembling a floral leaf.

Brac-te'o-late. [Lat. **Bracteola'tus.**] Having bracteoles.

Brac'te-ole. [Lat. **Bracte'ola**; diminutive of *brac'tea.*] A little bract.

Brad-ў-sper-ma-tis'mus.* [From the Gr. *βραδύς*, "slow," and *σπέρμα*, "seed."] Too slow emission of the semen; bradysper'matism.

Bra-gan'tĭ-ạ To-men-to'sạ.* A plant of the order *Aristolochiaceæ*, a native of Java. It is bitter, and is used in medicine as a tonic.

Braid'ism. [Named from a Mr. *Braid*, who wrote upon the subject.] Another name for animal magnetism. See MESMERISM.

Brain. A word generally denoting the whole nervous mass within the cranium, or skull. See CEREBRUM.

Brain, Little. See CEREBELLUM.

Bram'ble. A popular name of the genus *Rubus*:—also applied to any rough, prickly shrub or bush.

Bran. See FURFUR TRITICI.

Branch. [Lat. **Ra'mus**; Fr. *Branche*, brŏNsh.] In Anatomy, a term applied to the several portions of blood-vessels, etc., as they divide, like the branches of a tree. In Botany, branches are repetitions of the main stem, and consist of similar parts,—namely, joints of stem and leaves. The branches of the stem regularly arise from a particular place, and are symmetrically arranged on the stem.

Branched. See RAMOSUS.

Branchia.* See next article.

Branchiæ,* brank'e-ē. [Gr. *βράγχια.*] The gills, or breathing apparatus, in fishes, analogous to the lungs of land-animals. Also, the organs of respiration in *Mollusca*, *Crustacea*, and some *Reptilia.*

Branchiopoda.* See BRANCHIOPODUS.

Branch-ĭ-op'o-dus.* [From the Gr. *βράγχια*, "gills," and *πούς*, a "foot."] A term applied in Zoology to an order (*Branchiopoda*, brank'e-op'o-da) of *Crusta'cea Entomos'traca*, in which the *branchiæ* constitute part of their feet.

Branch-ĭ-os'te-gal. [Lat. **Branchiostega'lis**; from the Gr. *βράγχια*, "gills," and *στέγω*, to "cover."] Covering the gills:—applied in Comparative Anatomy to appendages of the hyoid and scapular arches.

Branch-ĭ-os'te-ous. [Lat. **Branchios'teus**; from the Gr. *βράγχια*, "gills," and *ὀστεόν*, a "bone."] Having gills with bony rays.

Branch'let. A small branch, or a subdivision of a branch.

Bran'dў. [Lat. **Vi'num Adus'tum**, or **A'qua Vi'tæ**; Fr. *Eau de Vie*, ō dẹh vē; Ger. *Branntwein*, brânt'wīn, literally, "burnt wine."] The spirit distilled from wine; one of the most popular forms in which alcoholic spirit is administered. It is composed of alcohol, water, and an aromatic volatile oil. It is a diffusible stimulant and cordial.

Bras. See BRACHIUM.

Bra-se'nĭ-ạ Pel-ta'tạ.* Water Shield, an aquatic plant of the order *Nymphæaceæ*, a native of the United States, Japan, and Australia. Its leaves are mucilaginous.

Brasque, brask. A French term used by metallurgists to denote the lining of a crucible or a furnace with charcoal.

Brass. [Lat. **Æs**, **Æ'ris**; Fr. *Airain*, ạ'rÂN'.] An alloy of copper and zinc. Common brass consists of three parts of copper and one of zinc.

Bras'sĭ-cạ O-le-ra'ce-ạ.* The systematic name of the Cabbage, a plant of the order *Cruciferæ*, a native of Europe. Cultivation has developed varieties of this species,—namely, *Broccoli* and *Cauliflower.*

Brassicaceæ,* bras-se-ka'she-ē. A name given by Lindley to an order of plants, including mustard, cabbage, etc.

Bray-e'rạ.* [Named after Dr. *Brayer*, a French physician.] A genus of trees of the order *Rosaceæ*, consisting of a single species, *Braye'ra anthelmin'tica*, a native of Abyssinia. Also the Pharmacopœial name (U.S. 1880) for the female inflorescence of *Brayera anthelmintica.* It is a vermifuge. See KOOSSO.

Bra-zil'-Nut. A triangular nut growing in Brazil, the fruit of the *Bertholle'tia excel'sa*, or cream-nut.

Brazil'-Root. [Lat. **Ra'dix Brazilien'sis.**] A name sometimes given to the root of the *Ipecacuanha.*

Brazil'-Wood. The wood of the *Cæsalpin'ia echinata* and other species of *Cæsalpinia*, which yields a red coloring-matter used by dyers.

Braz-ĭ-let'to. An inferior species of Brazilwood, brought from Jamaica. It is one of the cheapest and least esteemed of the red dye-woods.

Bread. [Lat. **Pa'nis**; Fr. *Pain*, pÂN.] Food made of the flour or meal of some cereal grain, especially wheat (*Triticum*).

Bread'-Fruit Tree. The *Artocar'pus inci'sa*, a tree of the order *Urticaceæ* or *Artocarpaceæ.* It has broad, lobed leaves and large, globular heads of fruit. The fruit is a *sorosis*, or multiple fruit, formed, like the mulberry and osage-orange, by the union of many flowers, which are crowded in a spherical head and become a pulpy or farinaceous mass, weighing several pounds. A viscid milky juice is obtained from the tree.

Break-Bone Fever. See DENGUE.

Breast. The *mam'ma* of females; the *mammil'la* of males. Also, popularly, the thorax, or chest. See PECTUS.

Breast-Bone. See STERNUM.

Breast-Pump. The same as ANTLIA MAMMARIA.

Breath. [Lat. **Hal'itus** and **Spir'itus.**] The air received and discharged by expansion and contraction of the lungs.

Brēath'ing Ca-paç'ĭ-tў; called also **Vi'tal Capaç'ity.** A term used to indicate the relative number of cubic inches of air which one can forcibly expire after a full inspiration.

Breccia, brĕt'chȧ. [It. a "fragment."] Rock with fragmentary structure; a rock made up of angular fragments of rocks.

Brecciolar, brĕtch'o-lar. [Lat. **Brecciola'ris.**] A term applied to rocks having various bodies in their paste or substance.

Bredouillement, brẹh-dooĭ'mŏN'. (Fr.) A defective utterance, in which only a part of the words is pronounced. It differs from stammering in being produced solely by a too great rapidity of speech.

Breg'ma, a*tis.** [From the Gr. *βρέχω*, to "moisten;" so named because it was deemed to cover the most humid part of the brain.] An anatomical term for the *sinciput*, or top of the head. See SINCIPUT.

Breph-o-tro'phĭ-um.* [From the Gr. *βρέφος*, an "infant," and *τρέφω*, to "nourish."] A foundling-hospital.

Bres'lau Fe'ver. An epidemic which broke out in the Prussian army at Breslau (in Lat. *Vratisla'via*, or *Bratisla'via*) in the middle of the last century, and which has been named by Sauvages *Tritæophya Vratislaviensis.*

Brev-ĭ-pen'nate. [Lat. **Brevipen'nis;** from *bre'vis*, "short," and *pen'na*, a "wing."] Short-winged:—a term applied to certain birds.

Bre-vis'sĭ-mus Oc'u-li.* [From the Lat. *bre'vis*, "short," and *oc'ulus*, the "eye."] A synonyme of the *obliquus inferior*, from its being the "shortest [muscle] of the eye."

Brexiaceæ,* brex-e-a'she-ē. A small natural order of exogenous trees, with coriaceous leaves and green flowers. It includes the genus *Brex'ia*, which is a native of Madagascar. Several species of *Brexia* are cultivated for ornament, under the name of *Theophrasta.*

Brez'ĭ-lin. The name applied to the coloring-matter of Brazil-wood obtained from several species of *Cæsalpinia.*

Brick'lay-er's Itch. A species of local tetter, or impetigo, produced on the hands of bricklayers by the contact of lime.

Bright's Dis-ease'. [Lat. **Mor'bus Brigh'tii.**] A genus or group of diseases of the kidney, first described by Dr. Bright. See NEPHRITIS.

Brim'stone. [Perhaps a corruption of *Brenstone*, or *Burnstone*, referring to its great combustibility.] A name for sulphur. The sublimed sulphur of the Pharmacopœia is sometimes termed *flowers of brimstone* or *flowers of sulphur.*

Brise-pierre, brēz'pe-aiR'. [Fr., from *briser*, to "break," and *pierre*, a "stone."] An instrument for breaking stones in the bladder. See LITHOTRITY.

Bris'tles. In Botany, stiff, sharp hairs, straight or hooked. *Bristly* signifies covered with such hairs.

Brit'ish Gum. A term applied to starch when reduced to a gum-like state by exposure to heat. It then becomes of a brown color, and in that state is employed by calico-printers.

Brit'ish Oil. An artificial preparation, composed as follows: camphor, one ounce; rectified spirits of wine, four ounces; sweet oil, twelve ounces; oil of hartshorn, five ounces; boiled together. This name is also given to the *Oleum Petræ Vulga're*, or common oil of petre, a variety of petroleum.

Brit'tle. Apt to break; fragile; easily broken. A mineral is called brittle when its parts separate into powder (or small particles) on attempting to cut it.

Bro'dĭ-um.* A term synonymous in Pharmacy with *jusculum*, or broth, the liquor in which anything is boiled; as, *bro'dium sa'lis*, a decoction of salt.

Bro'ma.* [From the Gr. *βιβρώσκω*, to "eat."] Food; anything that is masticated.

Bro'mal. An oily, colorless, poisonous liquid, a compound of bromine, carbon, hydrogen, and oxygen. It has been used in medicine as an anodyne and hypnotic.

Bro'māte. [Lat. **Bro'mas, a'tis.**] A combination of bromic acid with a base.

Brom-a-tog'ra-phў. [Lat. **Bromatogra'phia;** from the Gr. *βρῶμα*, "food," and *γράφω*, to "describe."] A treatise on foods; a description of different kinds of food.

Brom-a-tol'o-gў. [Lat. **Bromatolo'gia;** from the Gr. *βρῶμα*, "food," and *λόγος*, a "discourse."] The consideration of food, its nature, quality, and uses; the science of food.

Bro-me'lĭ-a Pin'guin.* A plant, a native of the West Indies, bearing a succulent fruit, the cooling juice of which is administered in fevers. Wine is made of this fruit or juice.

Bromeliaceæ,* bro-me-le-a'she-ē. [From *Brome'lia*, one of the genera.] A natural order of endogenous plants, found in tropical regions, and capable of growing in air without contact with the earth. It includes the *Tillandsia* (Long Moss), and some plants prized for their flowers.

Bromeliæ,* bro-me'le-ē, the plural of **Brome'lia**, forming the Jussieuan name of an order of plants. See BROMELIACEÆ.

Brom'ic, or **Bro'mic.** [Lat. **Brom'icus.**] Belonging to bromine.

Brom'ic Aç'id. A compound of bromine and oxygen.

Bro'mĭde. [Lat. **Bro'mis, i'dis;** from *bro'mium.*] A combination of bromine with a metallic base.

Bromide of Ammonium. See AMMONII BROMIDUM.

Bro'mide of Cal'çĭ-um. A white, soluble, crystalline substance, with a pungent taste. It allays nervous irritation, and is used as a hypnotic. See CALCII BROMIDUM.

Bro'mide of I'ron. [Lat. **Fer'ri Bro'midum.**] A brick-red, deliquescent salt, very soluble, and extremely styptic. It is used as a tonic and an alterative.

Bro'mide of Po-tas'sĭ-um. [Lat. **Potas'sii Bro'midum.**] A colorless, crystalline salt, soluble in water. It is used in medicine and photography,—in the former as an anodyne, and as a remedy for epilepsy, hysteria, insomnia, etc.

Brom-ĭ-dro'sis.* [From the Gr. *βρῶμος*, a "stench" or "strong odor," and *ἱδρώς*, "sweat."] Fetid perspiration.

Bro'mĭne. [Lat. **Bro'mium, Bromin'ium,** or **Bro'mum**; from the Gr. *βρῶμος*, a "stench."] (Fr. *Brome*, brōm.) An elementary body usually obtained from the residue of sea-water, called Bittern:—named on account of its powerful, suffocating odor. It is a liquid of a deep-red color, and is very poisonous. Specific gravity, nearly 3. Bromine is one of the monad elements, and resembles chlorine in chemical habitudes. It is used externally in hospital gangrene.

Bro-min'ĭ-um.* The Pharmacopœial name (U.S. 1870) of BROMINE, which see.

Bro'mism. A term applied to the morbid effects produced by the administration of the salts of bromine under certain circumstances. The effect of these salts, when administered in medicinal doses, is to reduce nervous activity and to promote rest and sleep. When such doses have been long continued, or in certain idiosyncrasies, or when excessive doses are administered, results are produced which constitute a state of disease which is termed *bromism*. These results are manifested on the brain and spinal cord, on the skin, on the mucous membranes, and on the organs of circulation and respiration. There is often somnolency, with impaired memory, and frequently eruptions on the skin. There is sometimes dryness of the tongue, though occasionally an increased flow of saliva, attended with nausea, flatulence, and eructations. The circulation and breathing become feeble, accompanied by a pallid skin, with cold extremities.

Bromium.* See BROMINE.

Bro'mo-form. [From the Lat. *bro'mium*, and *for'myle.*] A peculiar substance compounded of bromine and formic acid, somewhat analogous in its effects to chloroform.

Bro'mum.* "Bromine." The Pharmacopœial name (U.S. 1880) for a dark, brownish-red, mobile liquid, having a suffocating odor resembling that of chlorine. It is the principal constituent of the bromides, and is now produced largely in the United States. See BROMINE.

Bromure, bro'mŭR'. The French for BROMIDE, which see.

Bro'mu-ret. [Lat. **Bromure'tum**; from *bro'mium.*] A combination of bromine with a base; a bromide.

Bronches. The French term for BRONCHIA, which see.

Bronchi,* bronk'ī (the plural of **Bronch'us**). The same as BRONCHIA, which see.

Bronchia,* bronk'e-a, gen. **Bron-ehĭ-o'rum** (found only in the plural). [From the Gr. *βρόγχος*, the "windpipe."] (Fr. *Bronches*, brŏNsh.) The first two branches of the *bronchus*, or windpipe; otherwise called *bronchi.*

Broneh'ĭ-al. [Lat. **Bronchia'lis**; from *bron'chia.*] Belonging to the bronchia, or bronchi.

Broneh'ial Tubes. The minute ramifications of the bronchi, terminating in the *bronchial cells*, or air-cells of the lungs.

Bron-ehĭ-ec'ta-sis.* [From the Lat. *bron'chia*, and the Gr. *ἔκτασις*, "extension" or "dilatation."] Dilatation of the bronchia.

Bron'ehĭ-ole. [Lat. **Bron'chiolus,** or **Bron'chiolum.**] A small bronchial tube.

Bron'ehi-o-ste-no'sis.* [From the Lat. *bron'chia*, and the Gr. *στένωσις*, a "narrowing" or "contraction."] Contraction of the bronchia.

Bronchitis,* bronk-ī'tis. [From the Lat. *bron'chia.*] Inflammation of the bronchia.

Broneh-lem-mi'tis.* A membrane-like inflammation of the bronchia.

Broneh'o-çēle.* [From the Gr. *βρόγχος*, the "windpipe," and *κήλη*, a "tumor."] An indolent swelling of the thyroid gland; goître; tracheocele. Called also *Derbyshire neck.*

Bronchohæmorrhagia,* bronk'o-hem'o-ra'je-a. [From the Gr. *βρόγχος*, the "windpipe," and *αἱμορραγία*, "hemorrhage."] A term proposed by Andral to designate the exhalation of blood from the lining membrane of the bronchial tubes, commonly called *bronchial hemorrhage.*

Broneh-oph'o-nĭsm, Broneh-oph'o-nў. [Lat. **Bronchophonis'mus, Bronchopho'nia**; from the Gr. *βρόγχος*, the "windpipe," and *φωνή*, the "voice."] The sound of the voice, heard by means of the stethoscope, in the bronchia.

Broneh'o-pneu-mo'nĭ-a.* [From the Lat. *bron'chia* and *pneumo'nia.*] Inflammation of the bronchia and lungs.

Broneh-or-rha'ğĭ-a.* [From the Lat. *bron'chia*, and the Gr. *ῥήγνυμι*, to "break forth."] Hemorrhage from the bronchia.

Bronchorrhœa,* bronk-o-rē'a. [From the Lat. *bron'chi*, and the Gr. *ῥέω*, to "flow."] Increased discharge of mucus from the bronchia.

Broneh-ot'o-mў. [Lat. **Bronchoto'mia**; from the Gr. *βρόγχος*, the "windpipe" or "bronchia," and *τέμνω*, to "cut."] The operation of cutting into the bronchus, or windpipe.

Bron'ehus.* [From the Gr. *βρόγχος*, the "windpipe."] The same as TRACHEA. In the plural, *bronchi* is used synonymously with *bronchia.*

Bron'to-līte, or **Bron'to-lĭth.** [Lat. **Brontoli'tes**; from the Gr. *βροντή*, "thunder," and *λίθος*, a "stone."] A thunder-stone; another name for *Aërolite*, or meteoric stone.

Brŏnze. A compound metal or alloy, consisting of copper with a small proportion of tin,—similar to bell-metal. Bronze utensils and weapons were used by the ancients before the art of working iron was invented.

Brook'lime. The *Veroni'ca Beccabun'ga.*

Broom. The *Spar'tium scopa'rium*, or *Sarotham'nus scopa'rius.*

Broom Corn. A common name of the *Sor'ghum vulga're*, the panicles of which are used for making brooms and clothes-brushes.

Bros'ĭ-mum Al-ĭ-cas'trum.* The Bread-Nut Tree, a native of Jamaica, bearing a round yellow fruit which is about one inch in diameter

and contains a single edible seed, called bread-nut.

Bros'imum Au-ble'tĭ-i.* A tree of the order *Artocarpaceæ*, a native of Guiana and Trinidad. It affords a costly ornamental wood, called Letter-Wood or Leopard-Wood, which is very hard and exceedingly beautiful, being of a rich brown color, mottled with darker spots or shades.

Bros'imum Gal-ac-to-den'dron.* The Cow-Tree, a large tree of the order *Artocarpaceæ*, a native of Venezuela. It affords a nutritious milky juice, said to be as good as cow's milk, which it closely resembles in chemical composition.

Broth. (Fr. *Bouillon*, boo'yôn'.) A weak decoction of beef, chicken, or other meat.

Brous-son-e'tĭ-a Pap-ў-rif'er-a.* The Paper Mulberry, a tree of the order *Urticaceæ* or *Moraceæ*, a native of Japan. It is cultivated as a shade-tree in the United States. The Chinese and Japanese make paper of its inner bark.

Brown'ĭ-an. [Named from Dr. Robert *Brown*, one of the first to observe them.] A name applied to certain movements seen when minute particles are disseminated in a liquid.

Brown'ing. A preparation of sugar, port-wine, spices, etc., for coloring and flavoring meat, etc.

Brown'ism. The theory or doctrine of John Brown. See BRUNONIAN THEORY.

Bru'çin, or **Brucine,** broo'sin. [Lat. **Bru'cia,** or **Bruci'na.**] A vegetable alkali discovered in the false Angustura bark and in the *Nux vomica*. It is of a pearly-white color, very bitter and styptic; it is poisonous, but less active than strychnine.

Bruissement, brwēss'môn'. (Fr.) Corvisart's term for the *purring tremor*, or *frémissement cataire*, of Laennec.

Bruit, brwē. A French term, signifying "noise:"—applied to the different conditions of the sound perceived by means of the stethoscope, according as the thorax or its organs are affected.

Bruit de Craquement, brwē dẹh krăk'môn' ("crackling sound"), or **Bruit de Cuir Neuf,** brwē dẹh kwĒr nuf ("sound of new leather"). (Fr.) A sound caused by friction of the pericardium in certain diseased conditions.

Bruit de Pot Fêlé, brwē dẹh po fā'lā' ("sound of a cracked pot"). (Fr.) A sound sometimes heard on percussion when a cavity in the lungs is filled with air.

Bruit de Soufflet, brwē dẹh soo'flā' ("bellows-sound"). (Fr.) A sound sometimes heard during the contraction of the auricles and ventricles of the heart. It is also termed *Bruit de Souffle*, brwē dẹh soofl, or "blowing sound."

Bruit Tympanique, brwē tăm'pă'nēk' ("tympanic sound"). See TYMPANITIS.

Bruniaceæ,* broo-ne-a'she-ē. [From *Bru'nia*, one of the genera.] A small natural order of exogenous shrubs, found at the Cape of Good Hope. Their properties are unknown.—(LINDLEY.)

Brun'ner's Glands. [Lat. **Glan'dulæ Brune'rii.**] The *Glan'dulæ solita'riæ*, or mucous follicles discovered by Brunner in the mucous membrane of the small intestines.

Brun'ne-us.* Deep brown,—nearly the same as chestnut-brown.

Brunoniaceæ,* broo-no-ne-a'she-ē. A natural order of herbaceous plants, found in Australia. It consists of one genus, *Bruno'nia*.

Bru-no'nĭ-an The'o-rў. A theory or system founded by John Brown, who maintained that all diseases are the result either of an excess or a deficiency of an *excitability* in the animal system.

Brunś'wick Green. An ammoniaco-muriate of copper, used for oil-painting.

Brў'mus.* [Gr. *βρυγμός*; from *βρύχω*, to "gnash with the teeth."] Gnashing or grating with the teeth:—one of the symptoms occurring in certain diseases.

Brў-ol'o-ğў. [From the Gr. *βρύον*, "moss."] That part of Botany which relates to mosses.

Bry-o'nĭ-a.* "Bryony." The Pharmacopœial name (U.S. 1880) for the root of *Bryonia alba* and *Bryonia dioica*. It is an active hydragogue cathartic.

Bryo'nia Al'ba.* A climbing herbaceous plant, a native of Europe. See preceding article.

Bryo'nia Dĭ-oi'ca.* The common bryony. Its root is cathartic and emetic.

Brў'o-nў. [Lat. **Bryo'nia;** from the Gr. *βρύω*, to "abound."] A Linnæan genus of the class *Monœcia*, natural order *Cucurbitaceæ*.

Bryony, Black. See TAMUS COMMUNIS.

Bu'bo, o'nis,* Bu'bon, o'nis.* [From the Gr. *βουβών*, the "groin."] The inflammatory swelling of a lymphatic gland, particularly in the groin or axilla. A genus of the order *Tumores*, class *Locales*, of Cullen's nosology. In Botany, a Linnæan genus of the class *Pentandria*, natural order *Umbelliferæ*.

Bu'bŏn Gal'ba-num.* The name of the plant which yields galbanum:—also called *Gal'banum officina'le.*

Bu-bo-năl'ğĭ-a.* [From the Gr. *βουβών*, the "groin," and *ἄλγος*, "pain."] Pain in the groin; bu'bonalgy.

Bu-bon'o-çēle.* [From the Gr. *βουβών*, the "groin," and *κήλη*, a "tumor."] A species of hernia in which part of the bowels protrudes at the abdominal (or inguinal) ring:—synonymous with *inguinal hernia*.

Buc'cal. [Lat. **Bucca'lis;** from *buc'ca*, the "cheek."] Belonging to the cheek.

Buc'cal Glands. The name of numerous follicles situated beneath the mucous layer of the cheek.

Buc'cal Nerve, called also the **Buc'co-Labĭ-a'lis.*** A nerve generally arising from the inferior maxillary: it sends its branches to the buccinator muscle.

Buc-çĭ-na'tor, o'ris.* [From the Lat. *buc'cino, buccina'tum*, to "sound a trumpet."] The trumpeter's muscle,—a flat muscle which forms the wall of the cheek:—so called from its being much used in blowing the trumpet.

Buccinoidæ,* bŭk-se-no'ĭ-dē. [From the Lat. *buc'cinum*, a shell-fish like a trumpet or horn.] A

name in Zoology given to a family of the *Mollus'ca Gasteropo'oda Pectinibranchia'ta*, having the *Buccinum* for its type.

Bucco-Labialis Nerve. See BUCCAL NERVE.

Buc'cu-la.* [The diminutive of the Lat. *buc'ca*, the "cheek."] The fleshy part under the chin.

Buchu,* boo'koo. The Pharmacopœial name (U.S. 1870) of the *Baros'ma crena'ta*, and other species of *Barosma;* the *Bucco* of the British Pharmacopœia. Also the Pharmacopœial name (U.S. 1880) for the leaves of the *Baros'ma betuli'na* and *Baros'ma crenula'ta*. Buchu is diuretic, and is useful in diseases of the urinary organs, such as gravel, chronic catarrh of the bladder, etc.

Buck'-Bean. A plant of the natural order *Gentianaceæ*, used by brewers in some parts of Germany as a substitute for hops. See MENYANTHES TRIFOLIATA.

Buck'-Eye. A popular name of several species of *Æs'culus*, especially *Æs'culus gla'bra*, *Æs'culus Pa'via*, and *Æs'culus fla'va*. These are ornamental trees, natives of the United States.

Buck'-Thorn. The common name of the *Rham'nus cathar'ticus*. The berries yield a delicate green, named by painters *verdevis'sa*.

Buck'u.* A name for the leaves of several species of *Barosma*. See BUCHU.

Buck'wheat. The *Fagopy'rum esculen'tum*, or *Polyg'onum Fagopy'rum*, an annual plant of the order *Polygonaceæ*, a native of Asia. It is cultivated for food in the United States and Europe, and is very nutritious.

Buc-ne'mĭ-a.* [From the Gr. *βοῦ*, a particle denoting increase, and *κνήμη*, the "leg."] A disease of the leg, distinguished by tense, diffuse, inflammatory swelling.

Bucopric Acid. See BOSOPRIC ACID.

Bud. [Lat. **Gem'ma**; Fr. *Bouton*, boo'tôN', or *Bourgeon*, booR'zhôN' (or "flower").] A growing point; a branch or flower in its undeveloped state. The rudiments of a plant in a latent state, till evolved at the proper season. Buds are either *axillary* or *terminal*. They are formed in summer, and remain dormant or stationary until the next spring. From some buds both leaves and flowers are developed, others enclose flowers only.

Bŭf'fy Coat. [Lat. **Co'rium Phlogis'ticum.**] The inflammatory crust or buff-colored substance on the surface of the *crassamentum* of blood taken from persons laboring under inflammation, when coagulation is completed.

Bu-lam' Fe'ver. A name given by the natives on the African coast to the yellow fever.

Bŭlb. [Lat. **Bul'bus**; Gr. *βολβός*.] In Botany, a globular, coated body, solid, or composed of fleshy scales or layers. A subterranean leaf-bud with fleshy scales, or an extremely short subterranean stem, radicating beneath. Also applied in Anatomy to portions of the body resembling a bulb.

Bulb of the U-re'thra. The bulb-like commencement of the *corpus spongiosum penis:* hence the included urethra is called the *bulbous portion.*

Bul-bif'er-ous. [Lat. **Bulbif'erus**; from *bul'bus*, a "bulb," and *fe'ro*, to "bear."] Bearing bulbs.

Bul'bil. [Lat. **Bulbil'lus**, or **Bul'bulus**; the diminutive of *bul'bus*.] A small, solid, or scaly bud, which being detached from a plant becomes developed and perfectly similar to it.

Bulb'let. A small bulb borne above ground, as on the stems of the bulb-bearing Lily.

Bul'bo-Cav-er-no'sus.* [Named from its connection with the bulb of the urethra and the *corpus cavernosum*.] A muscle of the urethra. The same as ACCELERATOR URINÆ, which see.

Bul'bose. Bulb-like in shape.

Bul'bous. [Lat. **Bulbo'sus**; from *bul'bus*, a "bulb."] Having bulbs, or full of bulbs; also like a bulb.

Bulbulus.* See BULBIL.

Bul'bus Ar-te-rĭ-o'sus.* "Arterial Bulb." The name of the anterior of the three cavities of the heart in all *Vertebrata*, as exhibited in the early period of their development.

Bul'bus Ol-fac-to'rĭ-us.* "Olfactory Bulb." That portion of the olfactory nerve which expands into a bulb-like form and rests upon the cribriform plate of the ethmoid bone.

Bu-lim'ĭ-a,* Bu-lĭ-mi'a-sis,* Bu-li'mus.* [From the Gr. *βοῦ*, a particle denoting increase, and *λιμός*, "hunger."] A disease causing great voracity or insatiable hunger; canine hunger. A genus of the order *Dysorexiæ*, class *Locales*, of Cullen's nosology.

Bu'lith-um.* [From the Gr. *βοῦς*, an "ox," and *λίθος*, a "stone."] A bezoar stone found in the intestines, the kidneys, the gall, or the urinary bladder of the ox. See BEZOAR.

Bull. = *Bul'liat.** "Let it boil."

Bul'la.* Literally, a "bubble." A transparent vesicle caused by burns, scalds, or otherwise; a bleb; a blister. Also a genus of marine univalve Mollusks.

Bul'late. [Lat. **Bulla'tus, Bullo'sus**; from *bul'la*, a "blister."] Having *bullæ*, or full of *bullæ;* appearing us if blistered or bladdery.

Bunion, or **Bunyon,** bŭn'yon. [From the Gr. *βούνιον*, the "earth-nut."] Inflammation (or rather its effects) of the *bursa mucosa*, at the ball of the great toe, induration of adjacent parts, enlargement of the joint, etc.

Bu'nĭ-um Flex-u-o'sum.* [From the same.] The systematic name of the plant producing the earth-nut. It has a tuberous root, which is eaten roasted or raw. It is a plant of the order *Umbelliferæ*, and is a native of Europe.

Buphthalmia,* bŭf-thăl'me-a, or **Bu-ophthăl'mĭ-a,*** or **Buph-thăl'mus.** [From the Gr. *βοῦς*, an "ox," and *ὀφθαλμός*, the "eye."] The first stage of *hydrophthalmia*, or ox-eye.

Burdach, Columns of. See CUNEIFORM COLUMNS.

Bur'dock. The common English name of the *Arc'tium lap'pa* and *Lap'pa mi'nor*.

Bur'gun-dy Pitch. The *Pix Burgun'dica* of the Pharmacopœias. The concrete juice of the *Abies excelsa*. It is said to have been first prepared in Burgundy, France.

Bur'gundy Wine. A celebrated French wine produced in the former province of Burgundy, on the range of hills called Côte-d'Or. It contains 11 to 13 per cent. of alcohol.

Burmanniaceæ,* bŭr-man-ne-a'she-ē. [From *Burman'nia*, one of the genera.] A natural order of endogenous plants related to the Orchids.

Burn. [Lat. **Us'tio** and **Ambus'tio, o'nis.**] A lesion caused by the application of heat.

Bur'nett's Dis-in-fect'ing Flu'id. A strong solution of chloride of zinc. It is antiseptic, and is used in the preservation of dead animals. It acts also as a deodorizer.

Burning Bush. See EUONYMUS.

Burnt Alum. See ALUMEN EXSICCATUM.

Burnt Sponge. [Lat. **Spon'gia Us'ta.**] A substance prepared by cutting sponge into small pieces and burning it in a covered vessel until it becomes black and friable, when it is rubbed into a fine powder. It is employed as a remedy in goître and scrofulous swellings.

Bur'sa,* plural **Bur'sæ.** [Gr. *βύρσα*, a "leathern bottle."] A sac, or purse.

Bur'sa Mu-co'sa,* plural **Bur'sæ Muco'sæ.** A membranous sac for secreting a substance (*syno'via*) to lubricate tendons and joints, rendering their motion easy.

Bur-sa'lis.* [From the Lat. *bur'sa.*] Belonging to a purse or bag; bursal.

Bur-sal'o-ġy. [Lat. **Bursalo'gia**; from the Gr. *βύρσα*, a "bag," and *λόγος*, a "discourse."] The consideration (or science) of the *bursæ mucosæ.*

Bur-se'ra Gum-mif'er-a.* A tree or shrub, a native of the West Indies, belonging to the order *Amyridaceæ.* It yields a resinous exudation which is transparent and has balsamic properties.

Burseraceæ,* bur-se-ra'she-ē. [From *Burse'ra*, one of the genera.] A natural order of exogenous trees which some botanists consider a tribe of *Amyridaceæ.*

Bu'te-a Fron-do'sa.* The Dhak-Tree, a tree of the order *Leguminosæ*, a native of India. It bears showy flowers of an orange-red color, and affords a red, astringent juice, which, when dried, is called *butea kino*, or *Bengal kino.* This is used for tanning leather.

Bu'tea Gum. A gum procured from fissures and wounds made in the bark of the *Bu'tea frondo'sa.*

Butomaceæ,* bu-to-ma'she-ē. A natural order of endogenous aquatic plants, including the *Bu'tomus.*

But'ter. [Lat. **Bu'tyrum**; Gr. *βούτυρον*; Fr. *Beurre*, bŭr.] An oil, more or less concrete, obtained from the milk of animals. It can be separated from milk or cream by almost any kind of violent and continued agitation. This process of separation is popularly termed "churning." It consists chiefly of oleine, palmitine, and stearine.

Butter, Artificial. See OLEO-MARGARINE.

But'ter-cup. A popular name of the *Ranun'culus bulbo'sus.* See RANUNCULUS.

But'ter of Ca-ca'o. An oily, concrete, white matter, of a firmer consistence than suet, obtained from the *Cacao*, of which chocolate is made.

Butterfly-Shaped. See PAPILIONACEUS.

But'ter-Tree. A name of several trees which afford oil used as a substitute for butter. See BASSIA, and CARYOCAR.

Button-Bush. See CEPHALANTHUS.

Butua.* Another name of PAREIRA BRAVA, which see.

Bu-tў-rā'ceous. [Lat. **Butyra'ceus**; from *bu'tyrum*, "butter."] Of the appearance or consistence of butter.

Bu'tў-rāte. [Lat. **Bu'tyras, a'tis.**] A combination of butyric acid with a base.

Bu-tўr'ic Aç'id. A volatile acid obtained from butter.

Bu'tў-rin. [Lat. **Butyri'na**; from *bu'tyrum*, "butter."] The essential fatty matter of butter; the butyrate of glycerin.

Bux'in. [Lat. **Buxi'na.**] An alkaline substance obtained from the common box-tree (*Bux'us sempervi'rens*).

Bux'us Sem-per-vī'rens.* The Box-Tree, a small evergreen tree of the order *Euphorbiaceæ*, a native of Asia and Europe. Its wood is very hard and heavy, and is well adapted for wood-engraving, and for musical and other instruments.

B. V. = *Bal'neum Vapo'ris.** A "vapor-bath."

Bўs'sum,* Bўs'sus.* [Gr. *βύσσος*, a kind of fine flax.] In Anatomy, the *pudendum muliebre.* In Botany, a genus of lichens. Also, the hairy appendage by which the *Mollusca* attach themselves to rocks, etc.

Byttneriaceæ,* bit-ner-e-a'she-ē. A natural order of exogenous trees or shrubs, including the *Byttne'ria*, the *Theobro'ma Caca'o*, which produces chocolate or cocoa, and the *Abro'ma augus'tum*, an Indian tree, which bears beautiful flowers.

C.

C. An abbreviation for *Congius*,* a "gallon;" also for "compound," or "composite," *Carbonium*,* *compositi*,* or *compositæ*.*

Cab'al-līne. [Lat. **Caballi'nus**; from *caba'llus*, a "horse."] A term applied to a coarse kind of aloes fit only for horses.

Cabbage. See BRASSICA OLERACEA.

Cab'bage-Tree. A common name of the genus *Areca*. Also the *Geoffræa inermis*, or *Andira inermis*.

Cabombaceæ,* kab-om-ba'she-ē, or **Cabom'be-æ**.* [From *Cabom'ba*, one of the genera.] A natural order, including aquatic plants with floating peltate leaves, natives of the United States, South America, and Australia. It is also called *Hydropeltideæ*.

Cacao. See COCOA.

Caçh'a-lot. A name of a species of whale from which spermaceti is obtained, the *Catodon macrocephalus* or *Physeter macrocephalus*. It has an enormous head, as its specific name indicates.

Cachectic, ka-kek'tik. [Lat. **Cachec'ticus**; from *cachex'ia*.] Pertaining to cachexia.

Caeh-el-co'ma, a*tis*.* [From the Gr. *κακός*, "bad," and *ἕλκος*, an "ulcer."] A malignant ulcer.

Ca-ehex'ĭ-a.* [From the Gr. *κακός*, "bad," "evil," and *ἕξις*, a "habit."] Cachex'y. A depraved habit of body. In the plural (*Cachexiæ*) the term is applied to a class of Cullen's nosology.

Cac-o-ehym'ĭ-a.* [From the Gr. *κακός*, "bad," and *χυμός*, "juice," "humor."] A depraved condition of the humors.

Cac-o-col'pĭ-a.* [From the Gr. *κακός*, "bad," and *κόλπος*, a "sinus," also the "womb," or "vulva."] A putrid condition of the vulva and vaginal entrance.

Cac'o-dyl. [From the Gr. *κακώδης*, "fetid."] A poisonous limpid liquid, of fetid odor, derived from acetyl. *Cacodylic acid* is formed from cacodyl by oxygenation.

Cac-o-e'thēs.* [From the Gr. *κακός*, "bad," and *ἦθος*, "manner" or "disposition."] A bad habit or disposition.

Cac-o-ga-lac'tĭ-a.* [From the Gr. *κακός*, "bad," and *γάλα, γάλακτος*, "milk."] A bad condition of the milk.

Cac-o-pho'nĭ-a.* [From the Gr. *κακός*, "bad," and *φωνή*, the "voice."] A bad or dissonant condition of the voice.

Cac-o-plas'tic. [From the Gr. *κακός*, "bad," and *πλάσσω*, to "form," to "organize."] Susceptible only of a very imperfect kind of organization.

Ca-co'sis.* [From the Gr. *κακός*, "bad."] A bad condition of body.

Cac-o-so'mĭ-um.* [From the Gr. *κακός*, "bad," and *σῶμα*, a "body," or "state of body."] A lazaretto for leprosy and other incurable diseases.

Cactaceæ,* kak-ta'she-ē. A natural order of exogenous plants, remarkable for their large and gay flowers, of which the *Cactus* is the typical genus. They are destitute of foliage, except one genus, and are armed with clusters of spines. They are succulent shrubs, found in hot, dry countries. The stems of some species abound in a juice which is a wholesome beverage easily obtained where other drink is scarce. Their curious and greatly diversified forms constitute a characteristic feature of the vegetation of their native regions. They are all natives of America.

Cac'ti,* the plural of **Cac'tus** (a "prickly pear"), the Jussieuan name of an order of plants. See CACTACEÆ.

Ca-cu'men,* plural **Ca-cu'mĭ-na.** The "top" of anything. In Pharmacopœial language, the tops of plants.

Ca-dav'er-ic. [Lat. **Cadaver'icus**; from *cada'ver*, a "corpse."] Belonging to a dead body.

Ca-dav'er-ous. [From the same.] Having the appearance of a dead body; pertaining to a dead body.

Ca-det', Liq'uor of. A liquid obtained by distilling acetate of potash and arsenious acid. It is remarkable for its insupportable odor and its spontaneous inflammability in air.

Cad'mĭ-a,* or **Cad-mi'a.*** [Gr. *καδμία*, or *καδμεία*, "calamine," or "cadmia."] A name applied to several metallic substances, or ores,—as calamine, cobalt, tutty, etc.

Cad'mĭ-um,* or **Cad-mi'um.*** [From the Lat. *cad'mia*, "calamine" or "tutty," in which it was first observed. See preceding article.] The name for a metal, resembling tin, found in several of the ores of zinc. Specific gravity, 8.7. A dilute solution of the sulphate of cadmium has been used as a collyrium for spots on the cornea, and for chronic inflammation of the conjunctiva. The sulphide of cadmium is used as a yellow pigment, and the iodide is used in medicine. It is said to possess the medicinal qualities of the other preparations of iodine.

Cad'mĭ-um.* The Pharmacopœial name (U.S. 1870) for a malleable metal nearly as volatile as mercury, and of a tin-white color.

Cadre du Tympan, kȧdR dü tȧM'pŏN'. [Fr., "frame of the tympanum."] The part of the temporal bone supporting the membrane of the tympanum.

Ca-du'ca.* [See next article.] A name sometimes given to the deciduous membrane of the uterus.

Ca-du'cus.* [From the Lat. *ca'do*, to "fall."] Falling off very early; cadu'cous:—applied to the leaves and flowers of plants.

Caduque, kȧ'dük'. (Fr.) The same as CADUCA, which see.

Cæ'cal, or **Ce'cal.** [Lat. **Cæca'lis**; from *cæ'cum*, the "blind gut."] Belonging to the cæcum.

Cæcitas (sĕs′e-tas), **a′tis.*** [From the Lat. *cæ′cus*, "blind."] Blindness.

Cæ-ci′tis.* [From the Lat. *cæ′cum.*] Inflammation of the cæcum.

Cæ′cum.* [Neuter singular of the Lat. *cæ′cus*, "blind."] The blind gut (*intes′tinum* being understood, or the first portion of the large intestine; the *ca′put co′li.*

Cad′mĭ-i Sul′phas.* "Sulphate of Cadmium." The Pharmacopœial name (U.S. 1870) for colorless prismatic crystals, soluble in water. It is astringent and emetic.

Cæruleus.* See BLUE.

Cæ-ru′le-us Mor′bus.* The "Blue Disease." See CYANOSIS.

Cærulina.* See CERULIN.

Cæsalpinia,* ses-al-pin′e-a. [Named from *Cæsalpi′nus.*] A genus of trees of the order *Leguminosæ*, comprising nearly fifty species, natives of Brazil, Mexico, India, and the West Indies. Brazil-wood is said to be obtained from *Cæsalpinia echinata* and other species. See BRAZIL-WOOD.

Cæsalpin′ia Sap′pan.* A small tree, a native of India, affording the sappan-wood of commerce, which is used to dye a red color.

Cæ-sā′re-an Op-er-ā′tion, Cæsa′rean Sec′tion. [Lat. **Opera′tio Cæsa′rea, Sec′tio Cæsa′rea**; from *Julius Cæsar*,—said to have been born thus; more probably from *cæ′do*, *cæ′sum*, to "cut."] In Obstetrics, the operation of cutting into the womb through the parietes of the abdomen when natural delivery is impracticable; hysterotomy. According to Pliny, persons thus born were called *Cæso′nes.*

Cæ′sĭ-um.* A white alkaline metal, discovered by Bunsen and Kirchhoff, about 1860, in certain mineral springs of Germany.

Cæspitose. See CESPITOSE.

Café Citrin, kă′fā′ se′trăN′. (Fr.) An infusion of unroasted coffee:—so named on account of its yellow or citrine color.

Caf′fe-a.* The Pharmacopœial name (U.S. 1870) of the seed of the *Caf′fea Arab′ica* (the coffee-plant). See next article.

Caf′fe-in. [Lat. **Caffei′na**; from *Caf′fea*, the generic name of the coffee-tree.] A bitter principle obtained from coffee. It is an alkaloid highly nitrogenized, and is essentially the same as THEIN.

Caf-fe-i′na.* "Caffeine." The Pharmacopœial name (U.S. 1880) of a proximate principle, of feebly alkaloidal power, prepared from the dried leaves of *Camellia Thea*, or from the dried seeds of *Caffea Arabica.*

Cagot. See CRETINISM.

Ca-in′ca,* or **Ca-hin′ca,*** called also **Chi-o-coc′ca.*** a plant of the order *Rubiaceæ*, the root of which has been employed as a tonic and diuretic.

Ca-ja′nus In′dĭ-cus.* A shrub of the order *Leguminosæ*, a native of India, naturalized and cultivated in the West Indies and other tropical regions. Its seeds, which resemble pulse or peas, are edible, and valuable for food. It is called *Congo Pea* in Jamaica.

Cajeput, kăj′e-pŏŏt, written also **Cai′eput** and **Caj′uput.** [Lat. **Cajupu′tum.**] See OLEUM CAJUPUTI.

Cajuputi Oleum.* See OLEUM CAJUPUTI.

Cal-a-bar′ Bean, or **Or′de-al Nut.** A medicinal substance having the remarkable property of causing contraction of the pupil of the eye. See ORDEAL NUT.

Calabash-Tree. See CRESCENTIA CUJETE.

Ca-la′dĭ-um Se-gui′num.* An Indian plant, of the order *Araceæ.* It has an acrid juice.

Cal-a-man′der-Wood. An excellent cabinet wood, allied to ebony, produced by the *Diospy′rus hirsu′ta* or *quæsi′ta*, a native of Ceylon and India. It resembles rosewood, but is more durable, and it displays great beauty and variety of color. It is extremely hard.

Cal′a-mi Ra′dix.* "Root of Calamus." See CALAMUS.

Cal-a-mi′na.* [From the Lat. *cad′mia lapido′sa*, an ore of zinc.] The Latin name of a native impure carbonate of zinc; calamine.

Ca-lam-ĭ-na′ris.* Belonging to calamine, or *Lapis calaminaris.*

Cal-a-min′tha.* "Calaminth." A genus of aromatic herbs, of the order *Labiatæ.* Several species of it have medicinal virtue. They are mostly natives of Europe.

Cal′a-mus.* [From the Arabic *ka′lam*, the "stalk of a plant," a "reed."] A Latin word signifying a "reed," and hence a "pen." The Pharmacopœial name (U.S. 1880) of the rhizoma of *Ac′orus cal′amus.* It is a feeble aromatic. The term is applied in Botany to a fistular stem without an articulation. *Cal′amus* is also the name of a genus of Palms (order *Palmaceæ*), comprising many species, natives of Southern Asia and the Malay Archipelago. The stems of several species are well known in commerce under the name of rattans or canes. They have slender stems, which grow to a great length and climb over trees.

Cal′amus Ro′tang,* or **Cal′amus Dra′co.*** A species of Palm. A plant generally supposed to yield the substance known as dragon's blood, said likewise to be obtained from the *Pterocar′pus dra′co.*

Cal′amus Scrip-to′rĭ-us.* A "writing-pen." A term applied in Anatomy to a narrow fissure on the back and in the median line of the *pons Varolii.*

Ca-lap′pīte. [From the Malay *calap′pa*, the "cocoa-tree."] A stony concretion sometimes found in the inside of the cocoanut:—also called a *vegetable bezoar.*

Cal-a-thid′ĭ-um.* [From the Gr. καλαθίς, a "little basket."] A kind of inflorescence composed of sessile flowers thickly placed upon a common involucre, as the head of *Compositæ.*

Ca-lath′ĭ-form. Cup-shaped; almost hemispherical.

Cal-ca′ne-um.* [From the Lat. *calx*, the "heel."] The largest bone of the tarsus; the heel-bone, or *os calcis.*

Cal'car.* In Botany, a spur.

Căl'ca-rate. [Lat. **Calcara'tus**; from *cal'car*, a "spur."] Having spurs, or having a process like a spur,—like the flower of the larkspur.

Cal-cā're-ous. [Lat. **Calca'rius**; from *calx*, *cal'cis*, "lime."] Belonging to lime; containing lime.

Calca'reous Earth. Lime.

Calca'reous Spar, or **Calc Spar.** Crystallized carbonate of lime. Iceland spar is one of its purest varieties. Its primary form is a rhombohedron.

Cal-ca're-us.* Dead-white, like chalk.

Căl'ce-ĭ-form [Lat. **Calceifor'mis**; from *cal'ceus*, a "shoe"], or **Cal'ce-o-late.** Slipper-shaped; like a shoe.

Cal'ce-us.* Dead-white, like chalk.

Căl-cif'er-ous. [Lat. **Calcif'erus**; from *calx*, "lime," and *fe'ro*, to "bear."] Containing lime or carbonate of lime.

Calcification. See PETRIFACTION.

Căl-cĭg'e-nous. [Lat. **Calcig'enus**; from *calx*, "lime," and the Gr. *γεννάω*, to "generate."] A term applied to metals which with oxygen form a calx or earthy-looking substance.

Cal-cig'ra-dus.* [From the Lat. *calx*, "heel," and *gra'dus*, a "step."] One who walks on his heels.

Cal'cĭ-i Bro'mĭ-dum.* "Bromide of Calcium." The Pharmacopœial name (U.S. 1880) for a white granular salt containing hydrobromic acid and calcium. It is very deliquescent, odorless, and has a pungent, saline, and bitter taste, and a neutral reaction. It is sometimes employed as an adjuvant in epilepsy and hysteria.

Cal'cii Car-bo'nas Præ-cip-ĭ-ta'tus.* "Precipitated Carbonate of Calcium." Precipitated Chalk. The Pharmacopœial name (U.S. 1870, 1880) for a very fine, white, impalpable powder, containing carbonic acid and calcium. It is permanent in the air, odorless, and tasteless, and insoluble in water or alcohol. It is used in the preparation of tooth-powders.

Cal'cii Chlor'ĭ-dum.* "Chloride of Calcium." The Pharmacopœial name (U.S. 1870, 1880) for a salt containing hydrochloric acid and calcium.

Cal'cii Hy-po-phos'phis.* "Hypophosphite of Calcium." The Pharmacopœial name (U.S. 1870, 1880) for colorless or white, six-sided prisms, or thin, flexible scales of a pearly lustre, containing hypophosphorous acid and calcium. It is permanent in dry air, odorless, and has a nauseous, bitter taste, and a neutral reaction. It is used in chronic phthisis.

Cal'cii Phos'phas Præ-cip-ĭ-ta'tus.* "Precipitated Phosphate of Calcium." The Pharmacopœial name (U.S. 1870, 1880) for a light, white, amorphous powder, containing phosphoric acid and calcium. It is permanent in the air, odorless, tasteless, and insoluble in water or alcohol. It is used as a remedy for scrofula, rickets, and *mollities ossium*.

Căl-cĭ-nā'tion. [Lat. **Calcina'tio, o'nis.** See CALCINE.] The application of heat to saline, metallic, or other substances, to deprive them of moisture, etc.

Căl-cĭ-na'tus.* Reduced to powder by heat; calcined. See CALCINATION.

Căl'cīne. [Lat. **Cal'cino, Calcina'tum**; from *calx*, *cal'cis*, "lime."] To burn, as lime; to reduce to a powder, or to an oxide, by heat. See CALCINATION.

Căl'cīte. [From the Lat. *calx*, "lime."] A species of mineral comprising nearly all the varieties of carbonate of lime,—namely, calc spar, limestone, marble, chalk, Iceland spar, stalactite, etc. Calcite occurs in crystals of the hexagonal system, some of which are very beautiful. The purest crystals are transparent, and have a vitreous lustre.

Calcium,* kăl'se-ŭm. [From the Lat. *calx*, *cal'cis*, "lime."] The metallic base of lime. It is an element and a yellow metal, which does not occur naturally in a separate state. Specific gravity, about 1.5. It is an essential constituent of the human body.

Calcium, Bromide of. See BROMIDE OF CALCIUM.

Calc Spar. See CALCAREOUS SPAR.

Cal'cu-li,* the plural of CALCULUS, which see.

Căl-cu-lif'ra-gus.* [From the Lat. *cal'culus*, and *fran'go*, to "break."] Breaking or reducing *calculi*; calculif'ragous. (See LITHOTRIPTIC.) As a noun, *calculif'ragus* forms the name of a surgical instrument for breaking down calculi in the bladder. See LITHOTRIPTOR.

Căl'cu-lous. [Lat. **Calculo'sus**; from *cal'culus*.] Of the nature of stone or calculus. Having a calculus, or full of *calculi*:—applied to persons afflicted with stone in the bladder.

Căl'cu-lus,* plural **Cal'cu-li.** [The diminutive of *calx*, "limestone" or "chalk." See CALX.] (Fr. *Calcul*, kăl'kül', and *Pierre*, pe-aiR'.) A stone-like concretion in the urinary bladder, kidney, gall-bladder, intestines, or in and about the joints.

URINARY CALCULI, commonly called "stone," or "gravel," vary in composition according to the diathesis of the patient. Sometimes they are of a reddish or brick color, consisting usually of lithate of ammonia, or of crystals of lithic and uric acid. At other times they are white, or whitish, and consist for the most part of the phosphates of magnesia and ammonia, occasionally mixed with the phosphate of lime. Urate of ammonia and oxalate of lime sometimes occur in a crystalline form.

BILIARY CALCULI (*Cal'culi Bilio'si* or *Biliā'rii*) are usually found in the gall-bladder, and are then termed *cystic*; sometimes they occur in the substance of the liver, in which case they are called *hepatic* calculi. In many instances they seem to be little more than bile in a concrete state: many of them are composed chiefly of cholesterin.

CALCULOUS CONCRETIONS, called *arthritic* calculi (*Cal'culi arthrit'ici*, *Cal'culi podag'rici*, or *Tuber'cula arthrit'ica*), are found in the ligaments, and within the capsules of the joints, in persons afflicted with the gout. These are for the most part composed of uric acid and soda combined with a small portion of animal matter; sometimes of urate of lime.

CALCULI found in the intestines of animals are called BEZOARS, which see.

Cal-e-fā'cient. [Lat. **Calefa'ciens**; from *cal'idus*, "warm," and *fa'cio*, to "make."] Exciting warmth; making warm:—applied to medicines or external applications causing a sense of warmth.

Cal-e-fac'tion. [Lat. **Calefac'tio**, *o'nis*; from the same.] The act of applying heat.

Ca-len'du-la.* "Calendula." The Pharmacopœial name (U.S. 1880) for the fresh flowering herb of *Calendula officinalis*, or marigold. Its medical properties are probably very feeble.

Calen'dula Of-fiç-ĭ-na'lis,* or **Gar'den Mar'ĭ-gold.** A plant of the order *Compositæ*, commonly cultivated for its flowers.

Cal'en-tūre. [Sp. *Calentura*, kå-lĕn-too'rå.] A violent fever, attended with delirium, incident to persons in hot countries. Under its influence it is said that sailors imagine the sea to be green fields, and will throw themselves into it if not restrained.

Cal'ĭ-cate. Furnished with a calyx.

Calice. The French for CALYX.

Calico Bush. See KALMIA LATIFOLIA.

Ca-lĭ'go, ġ'inis.* (Fr. *Brouillard*, broo'yȧR'.) Dimness of sight, or blindness, sometimes coming on without apparent cause. A genus of the order *Dysæsthesiæ*, class *Locales*, of Cullen's nosology.

Cali'go Cor'ne-æ.* "Obscurity of the Cornea." Dimness of sight arising from opacity of the cornea, or sometimes a mere speck on the cornea.

Cali'go Hu-mo'rum.* "Obscurity of the Humors." Obscurity of vision, or blindness, arising from a defect in the humors of the eye. See GLAUCOMA.

Cali'go Len'tis.* "Obscurity of the Lens." The true CATARACT, which see.

Cal-ĭ-sa'yą Bark. The *Cinchona flava*.

Cal-is-then'ics. [Lat. **Calisthen'ica** and **Calisthe'nia**; from the Gr. *καλός*, "beautiful," and *σθένος*, "strength."] An exercise for strengthening the body and giving ease and elegance to the movements of the limbs.

Cal-lĭ-an'drą.* A genus of ornamental shrubs and herbs, of the order *Leguminosæ*, comprising many species, natives of California, Mexico, and South America. Several of the species yield an astringent juice.

Cal-lĭ-car'pą A-mer-ĭ-ca'ną.* French Mulberry, a shrub of the order *Verbenaceæ*, said to have medicinal virtue. It is a native of the Southern United States.

Callitrichaceæ,* kal'le-tre-ka'she-ē. [From the Gr. *κάλλος*, "beauty," and *θρίξ*, gen. *τριχός*, "hair."] A natural order of aquatic plants, consisting only of the genus *Callitriche*, several species of which are natives of the United States.

Cal-los'ĭ-tў. [Lat. **Callos'itas**, *a'tis*; from *cal'lus*.] A preternatural hardness in the skin or in naturally soft parts.

Cal'lous, or **Cal'lose.** Hardened; firm and gristle-like:—applied to hardened skin, also to plants. See next article.

Cal'lus.* The osseous substance deposited between the divided portions of a fractured bone. Also, unnatural hardness or induration of any soft part, or a thickening of the cuticle, caused by pressure or friction. In Botany, a compact gristle-like tubercle or substance.

Calomel. See next article.

Cą-lom'e-las, *anos.** [From the Gr. *καλός*, "beautiful," "good," and *μέλας*, "black;" conjectured to have been so named because it was good for black bile.] "Calomel." The Pharmacopœial name (Br. Ph.) for the protochloride or mild chloride of mercury. See HYDRARGYRI CHLORIDUM MITE.

Cal-o-phў'lum.* [From the Gr. *καλός*, "beautiful," and *φύλλον*, a "leaf."] A genus of trees of the order *Clusiaceæ* or *Guttiferæ*, natives of the warm parts of Asia. The resin or balsam called *East Indian Tacamahac* is obtained from the *Calophyllum Inophyllum*, which is a valuable timber-tree. Some of the species bear edible fruits.

Ca'lor.* The Latin term for heat. *Calor fervens* denotes boiling heat, or 212° Fahr.; *calor lenis*, gentle heat, between 90° and 100° Fahr.

Ca'lor An-ĭ-ma'lis.* Animal caloric, or animal heat. The term applied to the caloric constantly generated in the bodies of living mammalia and birds, by means of which the animal is kept at nearly a uniform temperature. That of the mammalia varies from about 96° to 106° or 107°, —the Arctic fox, the Arctic wolf, and the whale being among those that have the highest temperature. The animal heat of birds ranges somewhat higher than that of the mammalia, the temperature of several species being above 108°, while that of the Arctic finch (*Fringilla Arctica*), the redbreast (*Rubecula*), and some others is said to reach 111°.

The temperature of those animals even which are commonly termed cold-blooded is often found to be considerably above that of the surrounding medium: among fishes, the most highly organized, such as the tunny-fish (*Thynnus*) and the shark, have usually the warmest blood. During the state of hibernation, many animals which are classified as "warm-blooded" lose a large portion of their natural heat, so that the temperature of their bodies sometimes sinks down to near the freezing point.

Ca'lor Mor'dĭ-cans.* Literally, a "biting heat." A term applied to a dangerous symptom in typhus, in which there is a biting and pungent heat upon the skin, leaving a smarting sensation on the fingers for several minutes after touching it.

Cą-lor'ic. [Lat. **Calor'icum**; from *ca'lor*, "heat."] The matter of heat, or cause of the sensation of heat.

SENSIBLE or FREE CALORIC is that which produces the sensation of heat or affects the thermometer.

INSENSIBLE or LATENT CALORIC, formerly supposed to be in a state of combination, is that which passes into bodies during a change of form. Thus, it may pass into ice at 32°, changing it to water, *but not increasing the temperature* (it has hence been termed the *caloric of fluidity*), or into water at 212°, converting it into vapor (and termed, in consequence, the *caloric of evaporation*).

Specific Caloric denotes the unequal quantities of caloric required by the same quantity of different bodies to heat them to a given temperature. Thus, if equal weights of water at 40° and mercury at 160° be mixed together, the resulting temperature is 45°, showing that, computing by weight, water has twenty-three times as great a capacity for caloric as mercury.

Cal-o-riç'ĭ-tў. [Lat. **Caloriç'itas**; from *ca'lor*, "heat."] A term applied to the power which animals possess of generating heat sufficient to protect them against atmospheric or other cold, and maintaining the proper temperature of the body in all situations. See preceding article.

Calorie, kă'lo'rē'. A French term denoting the *unit of heat*, or the quantity required to raise one kilogramme of water one degree centigrade in temperature.

Cạ-lŏr'ĭ-fā'cient. [Lat. **Calorifa'ciens**; from *ca'lor*, "heat," and *fa'cio*, to "make."] Having the power of making or generating heat.

Cal-o-rif'ic. [Lat. **Calorif'icus**; from *ca'lor*, "heat," and *fa'cio*, to "make."] Heat-producing; heat-creating.

Cal-o-rim'e-ter. [Lat. **Calorim'etrum**; from *ca'lor*, "heat," and the Gr. *μέτρον*, a "measure."] An instrument for ascertaining the quantity of caloric disengaged from any substance.

Cạ-lor-ĭ-mo'tor, o'ris.* [From the Lat. *ca'lor*, "heat," and *mo'tor*, a "mover."] An electric apparatus which produces by its discharge highly elevated temperatures.

Cạ-lot'ro-pis Ǧi-gan-te'a.* An asclepiadaceous plant introduced from India, under the name of *mudar*, or *madar*, as an alterative and sudorific.

Cal'thạ Pạ-lus'tris.* Marsh Marigold, an herbaceous plant of the order *Ranunculaceæ*, a native of the Northern United States and of Europe.

Cạ-lum'bạ.* [From *Colom'bo*, in Ceylon, whence the drug was once supposed to be derived.] The Pharmacopœial name (U.S. 1870, 1880) for the root of *Jateorrhi'za Calum'ba*, or *Coc'culus palma'tus*. The name is often written *Colomba*. See Columbo.

Cal-va'rĭ-ạ.* [From the Lat. *cal'veo*, "to be bald."] That portion of the cranium above the orbits of the eyes, temples, ears, and occipital protuberance.

Calvities,* kăl-vish'e-ēz. [From the Lat. *cal'vus*, "bald."] Want or loss of hair, particularly on the sinciput; baldness.

Cal'vus.* Bald; naked, having no hair.

Călx,* gen. **Căl'cis.** The heel.

Călx,* gen. **Căl'cis.** [From the Gr. *χάλιξ*, a "small stone," "rubbish,"] Literally, "chalk," or "limestone." The Pharmacopœial name (U.S. 1870, 1880) for lime, or oxide of calcium. It acts externally as an escharotic.

Calx Ċhlo-ra'tạ.* "Chlorinated Lime." The Pharmacopœial name (U.S. 1880) for chloride of lime. It is prepared by treating lime with chlorine. Internally it is stimulant and alterative.

Calx Ċhlo-rĭ-na'tạ.* "Chlorinated Lime." The Pharmacopœial name (U.S. 1870) for the preparation popularly known as chloride of lime. See Lime, Chloride of.

Calx Sul-phu-ra'tạ.* "Sulphurated Lime." The Pharmacopœial name (U.S. 1880) for a mixture (commonly misnamed sulphide of calcium) consisting chiefly of sulphide of calcium and sulphate of calcium, containing not less than 36 per cent. of absolute sulphide of calcium. It is used as a depilatory.

Calx Vi'vạ.* Quicklime; oxide of calcium. See Lime.

Calycanthaceæ,* kal-e-kan-tha'she-ē, or **Cal-ў-can'the-æ.*** [From *Calycan'thus*, one of the genera.] A natural order of exogenous shrubs, found in Japan and North America. The flowers have an aromatic odor. The root of *Calycan'thus flor'idus* is said to have emetic properties.

Cal-ў-can'thus.* A genus of shrubs of the order *Calycanthaceæ*, comprising several species, natives of the Southern United States.

Cal-ў-can'thus Flor'ĭ-dus.* Carolina Allspice, or Sweet-Scented Shrub, a native of Virginia, Carolina, etc. It is cultivated for its fragrant strawberry-scented flowers, which are livid purple or dull red. Its root is said to be emetic.

Calyceraceæ,* kal-e-se-ra'she-ē. A small natural order of exogenous herbaceous plants, including the genus *Calycera*. They are natives of the Andes of Chili and Peru.

Calyces,* kal'e-sēz. [The plural of the Lat. *ca'lyx*, a "cup."] Small, membranous, cup-like pouches which invest the points of the papillæ of the kidney. Their union forms the *infundibula*.

Cal'ў-cĭ-flo'ræ.* [From the Lat. *ca'lyx*, a "flower-cup," and *flos*, a "flower."] A sub-class of exogenous plants which have their flowers furnished with both a calyx and a corolla, the latter consisting of distinct petals and their stamens perigynous.

Cal'ў-cĭ-flo'rate. [Lat. **Calyciflo'rus**; from *ca'lyx*, and *flos*, a "flower."] Having the stamens inserted into the calyx.

Cal'ў-cĭ-form. [Lat. **Calycifor'mis**; from *ca'lyx*, and *for'ma*.] Formed like a calyx.

Cal'ў-cīne, or **Cal-ў-ci'nal.** [Lat. **Calyci'nus**; from *ca'lyx*.] Belonging to a calyx.

Cal'ў-coid. [Lat. **Calycoi'des**; from *ca'lyx*, and the Gr. *εἶδος*, a "form" or "resemblance."] Resembling a calyx.

Cạ-lўc'u-late. [Lat. **Calycula'tus**; from *calyc'ulus*.] Having an outer accessory calyx.

Cạ-lўc'u-lus,* plural **Cạ-lўc'u-li.** [The diminutive of the Lat. *ca'lyx*.] A little calyx exterior to the proper one, or a partial involucre.

Cạ-lўp'trạ,* plural **Cạ-lўp'træ.** [From the Gr. *καλύπτρα*, a "veil;" from *καλύπτω*, to "cover."] A membranous covering over the capsule in Mosses; also, the proper covering or coat of the seed, which falls off spontaneously.

Cạ-lўp-tra'tus.* [From the Lat. *calyp'tra*, the "veil" of mosses.] Having *calyptræ*; calyp'trate.

Cal'ўx,* plural **Cal'ў-çēs.** [Gr. *κάλυξ*, a "covering," the "cup of a flower."] A membranous cup or sac surrounding one or two of the

papillæ of the kidney. (See CALYCES.)—Applied in Botany to the flower-cup, or the outer set of floral envelopes, for the most part green and surrounding the corolla; but in apetalous flowers it is the only floral envelope. Also the Physiological name of the very vascular capsule enclosing the vesicle, or yelk, formed of the three layers of the ovarium.

Ca-mas'si-a Es-cu-len'ta.* Quamash, a plant of the order *Liliaceæ*, a native of Oregon and other Pacific States. Its bulbs are eaten by Indians.

Cam'bĭ-um.* [Probably from the Lat. *cam'bio*, to "change."] A glutinous fluid between the bark and *alburnum* of trees, supposed by some physiologists to furnish the material out of which the new wood is formed.

Cam'bium Lay'er. A delicate tissue of young and forming cells between the inner bark and the wood of exogenous trees. "This layer is loaded with a rich mucilaginous sap, and so tender that in spring the bark may be raised from the wood by the slightest force. Here, nourished by this rich mucilage, new cells are rapidly forming by division."—(GRAY.)

Cam-bo'gĭ-a.* "Gamboge." The Pharmacopœial name (U.S. 1880) for a gum resin obtained from *Garcinia Hanburii*. It is a powerful drastic hydragogue cathartic. See GAMBOGE.

Ca-mel'lĭ-a The'a.* One of the systematic names of the tea-plant. See TEA.

Camelliaceæ,* ka-mel-le-a'she-ē. A natural order of exogenous trees and shrubs, natives of Asia and America. It comprises the *Camel'lia*, the *The'a* (tea-plant), the *Gordo'nia*, and the *Stuar'tia*. The last two are natives of the United States, and bear beautiful flowers. The *Camellia Japonica* is extensively cultivated for its flowers.

Cam'e-ra,* plural **Cam'e-ræ.** [From the Gr. *καμάρα*, an "upper gallery."] In the plural, the anterior and posterior chambers of the eye.

Camomile. See CHAMOMILE.

Cam-pa'na.* [From *Campa'nia*, in Italy, where they were first used in churches.] A bell:—applied in Chemistry to a dish or cover shaped like a bell, employed in making sulphuric acid.

Campanaceus,* kam-pa-na'she-ŭs. [From the Lat. *campa'na*.] Campana'ceous; like a bell:—applied in the plural feminine (*Campanaceæ*, kam-pa-na'she-ē) to an order in Linnæus's Natural Method.

Cam-pan'ĭ-form. [Lat. **Campanifor'mis**; from *campa'na*, a "bell."] Formed like a bell. The same as CAMPANULATE.

Campanulaceæ,* kam-pan'u-la'she-ē, or **Cam-pan'u-læ.*** [From *Campan'ula*, one of the genera.] A natural order of herbaceous plants, found in temperate climates, and prized for the beauty of the flowers.

Cam-pan-u-lā'ceous. [Lat. **Campanula'ceus**; from *campan'ula*, a "little bell;" also the "bell-flower."] Having an arrangement as in the *Campanula*. See CAMPANULACEÆ.

Cam-pan'u-late. [Lat. **Campanula'tus**; from *campan'ula*, a "little bell."] Like a little bell; bell-shaped.

Campeachy Wood. See HÆMATOXYLUM.

Camphene, or **Camphine,** kam-fēn'. [From the Lat. *cam'phora*.] A substance procured from common turpentine. It is a synonyme for purified oil of turpentine. With an equivalent of oxygen it forms camphor. Also called *Cam'phogen* (*i.e.*, "producing camphor").

Camphor. See CAMPHORA.

Camphor, Bromized. See CAMPHORA MONOBROMATA.

Cam'pho-ra.* "Camphor." [Gr. *καμφουρά*, "camphor."] The Pharmacopœial name of "a peculiar concrete substance derived from *Camphora officinarum* and purified by sublimation" (U.S. 1870). Also the Pharmacopœial name (U.S. 1880) for a stearopten derived from *Cinnamomum camphora*, and purified by sublimation. Camphor is volatile, and has narcotic and diaphoretic properties. Its effect in moderate doses is to allay nervous irritation; but in overdoses it is poisonous and may produce death.

Cam'phora Mon-o-bro-ma'ta.* "Monobromated Camphor." The Pharmacopœial name (U.S. 1880) for a compound produced by acting on camphor with bromine. It is in colorless prismatic needles or scales, permanent in the air, unaffected by light, and having a mild camphoraceous odor and taste. It is soluble in alcohol and ether. It is used as a nervous sedative in delirium tremens, hysteria, etc.

Cam'phora Of-fĭç-ĭ-na'rum.* The plant which yields the officinal camphor. It is an evergreen tree, of the order *Lauraceæ*, a native of China, Japan, etc. It is also called *Cinnamo'mum cam'phora*.

Cam'pho-ræ Flo'rēs.* "Flowers of Camphor." A name sometimes given to sublimated camphor.

Cam'pho-rāte. [Lat. **Cam'phoras, a'tis.**] A combination of camphoric acid with a base.

Cam'pho-rāt-ed. [Lat. **Camphora'tus**; from *cam'phora*, "camphor."] Having camphor, or combined with camphor.

Cam-phor'ic. [Lat. **Camphor'icus**; from *cam'phora*, "camphor."] Belonging to camphor:—applied to an acid obtained from camphor.

Camp Vin'e-gar is prepared as follows: Steep in the best vinegar for a month one drachm of cayenne pepper, two tablespoonfuls of soy, and four of walnut ketchup, six anchovies chopped, and a small clove of garlic minced fine. Shake it frequently, strain through a tamis, and keep it well corked in small bottles.

Cam-pȳ-lot'ro-pous. [From the Gr. *καμπύλος*, "curved," and *τρέπω*, to "turn."] A term applied to the ovule of plants when its axis is curved down upon itself, bringing the apex close to the base.

Cam'wood. A red dye-wood, principally obtained from the vicinity of Sierra Leone. It is the wood of the *Ba'phia nit'ida*.

Canada Balsam. See BALSAMUM CANADENSE.

Ca-năl'. [From the Lat. *cana'lis*, a "channel," or "pipe."] A term applied in Anatomy to any passage in the body.

CANAL OF FONTA'NA. A minute vascular canal situated within the ciliary ligament, and so named from its discoverer. It is also termed the *ciliary canal.*

CANAL OF PETIT (pẹh-tē'). A triangular canal situated immediately around the circumference of the crystalline lens:—so named from its discoverer. When distended with air or size-injection, it presents a plaited appearance, and has hence been called by the French *canal godronné.*

Canal' of Mül'ler. A canal existing in the fœtal state on the *corpus Wolffianum.*

Can-ạ-lic-u-la'tus.* [From the Lat. *canalic'ulus.*] Canalic'ulate. Having a little canal or channel; channelled or furrowed.

Can-ạ-lic'u-li,* the plural of **Can-ạ-lic'u-lus.** The name given by Morgagni to some large lacunæ which secrete mucus in the canal of the urethra.

Can-ạ-lic'u-lus.* [The diminutive of the Lat. *cana'lis.*] A small channel or vessel.

Cạ-na'lis,* plural **Cạ-na'lēs.** [From the Lat. *can'na,* a "hollow reed."] A canal, or channel:—applied to blood-vessels, cavities, etc. See ALVEUS.

Cana'lis Ar-te-rĭ-o'sus.* "Arterial Canal." A blood-vessel which unites the pulmonary artery and aorta in the fœtus.

Cana'lis Ve-no'sus.* "Venous Canal." A canal which conveys the blood from the *venæ portæ* of the liver to the ascending *vena cava* in the fœtus.

Cạ-na'rĭ-um.* A genus of trees of the order *Amyridaceæ,* natives of the East Indies. The *Cana'rium commu'ne,* a tree of Java and the Moluccas, bears an edible fruit. Elemi is said to be obtained from it.

Cạ-nā'rў-Seed. The grain or seed of PHALARIS CANARIENSIS, which see.

Can-cel-la'tus,* or **Can'cel-late.** [From the Lat. *cancel'li.*] Cancellated; having a latticed appearance; resembling lattice-work.

Can-cel'li,* gen. **Can-cel-lo'rum.** Lattices; minute divisions in the reticulated structure of bones.

Can'çer,* gen. **Can'cri,** or **Can'çer-is.** A crab. A genus of *Crustacea Malacostraca.*

Can'cer.* [Literally, a "crab," its turgid veins and branch-like extensions having been supposed to resemble a crab's claws.] Called also **Car-çĭ-no'mạ*** (from the Gr. *καρκίνος,* a "crab"). A malignant tumor, of which there are many forms. The principal distinction is into hard cancer, or *scirrhus,* and soft cancer, or *encephaloid.* Scirrhus (from the Gr. *σκίρρος,* "hard"), properly speaking, may be described as the early stage of what is commonly known as cancer, before it becomes an open ulcer. Encephaloid (from the Gr. *ἐγκέφαλον,* "brain") is so called from its obvious resemblance to brain-tissue. This is the most malignant form of cancer, and spreads very rapidly.

It may be doubted whether true cancer is ever thoroughly cured; but, if the tumor is carefully removed at an early stage, a fatal termination may not unfrequently be indefinitely postponed. See SARCOMA, FUNGUS HÆMATODES, and EPITHELIOMA.

Can'cer Aquat'icus.* "Water Canker." See CANCRUM ORIS.

Can'cer As'ṭa-cus.* The craw-fish, affording the *Lapilli cancrorum,* or crabs' eyes.

Can'cer Mun-dĭ-to'rum.* "Chimney-Sweepers' Cancer." See CANCER SCROTI.

Can'cer Pạ-gu'rus.* The crab-fish, affording the *Chelæ cancrorum,* or crabs' claws.

Can'cer Scro'ti.* "Cancer of the Scrotum:"—called also *Chimney-Sweepers' Cancer* (*Can'cer Mundito'rum*). A form of cancer to which chimney-sweepers are especially exposed, on account of the irritating effects of soot.

Can'cri,* gen. **Can-cro'rum.** The plural of *can'cer,* a "crab."

Can'croid. [Lat. **Cancroi'des;** from *can'cer,* and the Gr. *εἶδος,* a "form" or "resemblance."] Resembling cancer.

Cancroïde, kŏN'kro'ĕd'. The French form of the preceding term.

Can-cro'rum [see CANCRI] **Che'læ.*** "Crabs' Claws." The claws of the *Cancer pagurus,* the black-clawed, or large, edible crab: these, when prepared by grinding, constitute the prepared crabs' claws of the shops, formerly used to correct acidity in the stomach and bowels.

Cancro'rum La-pil'li* ("Crabs' Stones"), and **Cancro'rum Oc'u-li*** (Crabs' Eyes"), are used for the same purposes as the preceding.

Can'crum.* Low Latin for "canker." It appears to be used only in the following phrase.

CAN'CRUM O'RIS.* "Canker of the Mouth." Also called *Water Canker* (*Cancer Aquaticus*). A deep, foul, fetid, irregular ulcer inside the lips and cheeks,—often attended with a discharge of blood.

Can'di-dus.* In Botany, this term signifies pure white, but not so white as snow, which is *niveus.*

Can'dle-Tree Oil. A solid oil obtained from the seed of the *Stillin'gia sebif'era,* or *Cro'ton sebif'erum* (or Candle-tree), a native of China. It is used by the Chinese for making candles.

Cane. [Lat. **Can'na.**] A common commercial name for the stems of various grasses, palms, etc. See RATTAN, and CALAMUS.

Cạ-nel'lạ.* [From the Lat. *can'na,* a "reed."] A Linnæan genus of the class *Dodecandria,* natural order *Clusiaceæ,* or *Canellaceæ.* The Pharmacopœial name (U.S. 1870) for the bark of *Canella alba.*

Canel'la Al'ba.* "White Canella." The laurel-leaved canella, yielding a bark somewhat resembling cinnamon. It is a tree of Florida and the West Indies: its bark is aromatic, tonic, and stimulant.

Canellaceæ,* ka-nel-la'she-ē. [From *Canella,* one of the genera.] A small natural order of exogenous shrubs, natives of tropical America. They are aromatic. Some botanists include them in the order *Clusiaceæ.*

Ca-nĕs'çent. [Lat. **Canes'cens;** from *canesco,* to "grow gray."] Grayish-white; hoary.

Ca-nic-u-la'ris.* [From the Lat. *canic'ula*, a "little dog," the "dog-star."] A term applied to the dog-days (*Di'es canicula'res*).

Can'ĭ-dæ.* [From the Lat. *ca'nis*, a "dog."] The name of a family of mammals including the dog, wolf, jackal, fox, etc.

Ca-nīne'. [Lat. **Cani'nus**; from *ca'nis*, a "dog."] Belonging to the dog.

Canine Appetite. See BULIMIA.

Canine Madness. See HYDROPHOBIA.

Canine' Teeth. [Lat. **Den'tes Cani'ni** or **Cuspida'ti.**] Eye-teeth:—applied to the four teeth which immediately adjoin the incisors.

Ca-ni'nus Mus'cu-lus,* or **Canine' Mus'cle.** [See next article.] The *Levator anguli oris.*

Cani'nus Ri'sus.* "Canine Laugh." A spasmodic contraction of the canine muscle, causing what is popularly known as a sardonic laugh.

Cani'nus Spas'mus.* The *Spasmus cynicus.*

Canities,* kā-nish'e-ēz. [From the Lat. *ca'nus*, "gray-haired."] Grayness of the hair.

Can'na,* or **Can'na Starch.** The Pharmacopœial name (U.S. 1870) for the fecula prepared from the rhizoma of an undetermined species of canna, and used for the same purpose as arrow-root. *Canna* is also the name of a genus of herbaceous plants of the order *Scitamineæ.* The *Canna Indica* (popularly called "Indian Shot") is commonly cultivated for ornament.

Cannabinaceæ,* kan-na-be-na'she-ē, or **Can-na-bin'e-æ.*** [From the Lat. *can'nabis*, "hemp."] A natural order of herbaceous plants, including the hemp and hop, which have narcotic and intoxicating properties. Most botanists include these plants in the order *Urticaceæ.*

Can'na-bĭne. [Lat. **Cannabi'na**; from *cannabis*, "hemp."] A resin extracted from the *Cannabis Indica.*

Can'na-bis.* [Gr. *κάνναβις.*] "Hemp." A Linnæan genus of the class *Diœcia*, natural order *Cannabinaceæ* (or *Urticaceæ*).

Can'nabis A-mer-ĭ-ca'na.* "American Hemp." The Pharmacopœial name (U.S. 1870) for the flowering tops of *Cannabis sativa*, grown in North America.

Can'nabis America'na.* "American Cannabis." The Pharmacopœial name (U.S. 1880) for *Cannabis sativa*, grown in the Southern United States. Extract of hemp is a powerful narcotic, causing exhilaration, intoxication, and subsequently drowsiness and stupor.

Can'nabis In'dĭ-ca.* "Indian Hemp." A kind of hemp well known in South America, Turkey, Asia Minor, India, etc., the leaves of which furnish an intoxicating drug called *Bhang*, or *Bang*, or *Bangue*, among the Hindoos, *Hashîsh* (or *Hasheesh*) by the Arabs, *Maslach* by the Turks, and among the Hottentots *Dacha.* It is now believed to be merely a variety of the common hemp, or *Cannabis sativa. Can'nabis In'dica* is also the Pharmacopœial name (U.S. 1870, 1880) for the flowering tops of the female plant of *Cannabis sativa*, variety *Indica*, grown in the East Indies.

Can'nabis Sa-ti'va.* (Fr. *Chanvre*, shŏNvr.) The systematic name of common hemp. See preceding article.

Cannaceæ,* kan-na'she-ē. [From *Can'na*, one of the genera.] A natural order of endogenous plants, natives of the tropical parts of Africa and America. Some botanists refer them to the order *Scitamineæ* or *Marantaceæ.*

Can'næ,* the plural of **Can'na**, a "reed," forming the Jussieuan name of an order of plants. See ZINGIBERACEÆ or MARANTACEÆ.

Can'nel Coal. A bituminous substance which yields on combustion a bright flame without smoke. The term is probably a corruption of *candle coal*, in allusion to its illuminating properties.

Can'nu-la.* [The diminutive of the Lat. *can'na*, a "reed."] A tubular surgical instrument, introduced by means of a *stilette* into a cavity or tumor, for drawing off fluid.

Can-thăr'ĭ-dēs.* The plural of CANTHARIS, which see.

Can-thăr'ĭ-din. [Lat. **Cantharidi'na**; from *can'tharis*, the "Spanish fly."] A peculiar substance in *Cantharides*, on which their vesicating quality depends.

Can'tha-ris,* plural **Can-thăr'ĭ-dēs.** [From the Gr. *κάνθαρος*, a "beetle."] The Pharmacopœial name (U.S. 1870, 1880) of the blistering-fly; the *Can'tharis vesicato'ria*: called also the *Mus'ca Hispanio'la* ("Spanish fly"), *Lyt'ta vesicato'ria*, and *Mel'oë vesicato'rius.*

Cantharis Vesicatoria.* See preceding article.

Can-thi'tis.* [From the Lat. *can'thus.*] Inflammation of one or both can'thi.

Can'tho-plas-tў. [Lat. **Canthoplas'tia**; from the Gr. *κανθός*, the "angle of the eye," and *πλάσσω*, to "form."] The operation of transplanting a portion of the conjunctiva of the eyeball to the external canthus of the eyelids.

Can'thus,* plural **Can'thi.** [Gr. *κανθός.*] The angle formed by the junction of the eyelids, the internal being the *greater*, the external the *lesser*, canthus.

Can'ton's Phos'pho-rus. A substance made by exposing calcined oyster-shells and sulphur to a red heat. On exposure to the air it acquires the property of shining in the dark.

Canula.* See CANNULA.

Ca'nus.* Gray; hoary; grayish-white:—applied to plants with hairy surfaces.

Caoutchouc,* koo'chŏŏk, or ka-oo'chŏŏk. Elastic gum, or India rubber; the concrete juice of the *Ja'tropa elas'tica*, *Fi'cus In'dica*, *Artocar'pus integrifo'lia*, *Sipho'nia elas'tica*, *Fi'cus elas'tica*, several species of *Heve'a*, and several species of *Castillo'a.* It is a hydro-carbon, insoluble in alcohol, but soluble in the essential oils. Combined with sulphur, and exposed to a high temperature, it is converted into a valuable elastic material called *vulcanized rubber.* This preserves its elasticity under the influence both of heat and of cold, is compressible with great difficulty, and resists the ordinary solvents. Caoutchouc is used enormously in the arts for an immense variety of purposes, and has numerous applications in Chem-

istry and Surgery. The main supply of this commodity is from India and South America.

Caoutchoucin, koo'chōō sin. [Lat. **Caoutchouci'na.**] The principle on which the properties of caoutchouc depend.

Cap. = *Ca'pe,** "take," or *Ca'piat,** "let him take."

Cap, or **Pi'le-us.*** The convex part of an agaric or mushroom, or other similar fungus.

Capacity, Breathing. See BREATHING CAPACITY.

Ca'per Fam'ĭ-lў. A synonyme for the order *Capparidaceæ.*

Cā'pers. The pickled flower-buds of the *Cap'paris spino'sa,* a low shrub growing out of the joints of old walls and the fissures of rocks in Southern Europe and in Syria.

Capillaceous. The same as CAPILLARY.

Capillaire, kă'pĕl'lair'. [From the Lat. *Capil'lus Ven'eris,* "Venus's hair."] A syrup made with sugar or honey from the fern termed *Adian'tum capil'lus Ven'eris* (popularly known as "Maiden's hair"). The name is also sometimes given to other syrups made in imitation of the above. Capillaire is employed as a demulcent in coughs.

Cap'il-la-rў. [Lat. **Capilla'ris;** from *capil'lus,* "hair."] Resembling a hair in size:—applied to the minute ramifications of arteries terminating on the surfaces of the body, etc.,—in other words, to the vessels which intervene between the minute arteries and veins; often called *capillaries.* In Botany, hair-like; as fine as hair.

Cap-il-lic'u-lus,* plural **Cap-il-lic'u-li.** [Diminutive of the Lat. *capil'lus,* the "hair."] A term applied in Anatomy to the arterial and venous radicles pervading, more minutely than the capillaries, the ultimate elements of every organ.

Cap-il-lĭ-fo'lĭ-ous. [Lat. **Capillifo'lius;** from *capil'lus,* "hair," and *fo'lium,* a "leaf."] Having hair-like leaves.

Ca-pil'lĭ-form. [Lat. **Capillifor'mis;** from *capil'lus,* "hair."] Formed like hair.

Ca-pil'lus.* Hair. Sometimes used in Botany to denote the breadth of a hair.

Ca-pis'trum.* [From the Lat. *ca'pio,* to "take."] Literally, a "halter" or "bridle." The single split-cloth bandage:—so called from its being used to support the lower jaw like a bridle.

Cap'ĭ-ta,* gen. **Cap'ĭ-tum,** the plural of CAPUT, which see.

Cap'ĭ-tal. [Lat. **Capita'lis;** from *ca'put,* the "head" or "life."] Belonging to the head or life,—and, hence, of great or vital importance. Also the upper part of an alembic. Applied in the plural neuter to medicines for the head,—*Capita'lia medicamen'ta.* Also applied in Surgery to the more important operations.

Cap'ĭ-tate. [Lat. **Capita'tus;** from *ca'put,* a "head."] Having a globular apex, as the head of a pin; or forming a spherical flower-cluster. The term is applied to a stigma in the form of a rounded head, and to glandular hairs.

Capitellatus.* The same as CAPITULATE.

Cap'ĭ-tĭ-lu'vĭ-um.* [From the Lat. *ca'put,* the "head," and *lu'o,* to "wash."] A bath for the head.

Cap'ĭ-tis,* the genitive of CAPUT, which see.

Ca-pit'u-late, or **Ca-pit'u-lāt-ed.** [Lat. **Capitula'tus.**] Having a *capitulum,* or knob on the top.

Ca-pit'u-lum.* [The diminutive of the Lat. *ca'put.*] A "little head," or "knob." A protuberance of bone received into a hollow portion of another bone. In Botany, this term is applied to a round dense cluster or head of sessile flowers. The term is also used to designate an alembic.

Capivi Oil. See COPAIBA.

Cap'no-mor. [From the Gr. *καπνός,* "smoke," and *μοῖρα,* "part;" so called from its being one of the ingredients of smoke.] A colorless, transparent liquid, the oily ingredient in tar which can dissolve caoutchouc. It occurs along with creasote in the heavy oil of tar.

Capparidaceæ,* kap-păr-e-da'she-ē. A natural order of exogenous plants, including the *Cap'paris* (Caper) and *Cleo'me.* They have all a strong pungent, or even acrid, taste, and have been used as a substitute for mustard. Some of them are poisonous. This order comprises three hundred and fifty-five species of herbs, shrubs, and trees, natives of India, Africa, Brazil, the United States, etc.,—chiefly tropical.

Cap-pa-rid'e-æ,* the Jussieuan name of a natural order of plants. See CAPPARIDACEÆ.

Cap'pa-ris.* A genus of shrubs of the order *Capparidaceæ,* comprising many species, natives of Brazil, Europe, and Africa. *Cap'paris Baduc'ca* is cultivated in India for the beauty of its flowers, which are reputed to be purgative.

Cap'paris Spi-no'sa.* The common Caper, a trailing shrub, a native of Southern Europe and Barbary. It bears handsome flowers. The capers of commerce are the pickled flower-buds of this plant.

Cap'rāte. [Lat. **Ca'pras, a'tis.**] A combination of capric acid with a base.

Ca-pre'o-late, Ca-pre'o-la-rў. [Lat. **Capreola'tus, Capreola'ris;** from *capre'olus,* a "tendril."] A term applied to the spermatic vessels, or *vasa capreolaria,* from their twisted appearance. In Botany, bearing tendrils.

Cap-re'o-lus.* A tendril (of a plant).

Cap'ric Aç'id. [From the Lat. *ca'pra,* a "she-goat."] A volatile acid, a constituent of butter from the milk of the goat or cow.

Cap'rĭ-dæ.* [From the Lat. *ca'per,* a "goat."] A family of animals of which the goat is the type.

Cap-rĭ-fo'lĭ-a,* the plural of **Caprifo'lium,** the "honeysuckle," forming the Jussieuan name of a natural order of plants. See CAPRIFOLIACEÆ.

Caprifoliaceæ,* kap-re-fo-le-a'she-ē. [From *Caprifo'lium,* the ancient Latin name of the "honeysuckle."] A natural order of exogenous plants, comprising the *Lonice'ra* (Honeysuckle), *Diervil'la, Sambu'cus* (Elder), *Linnæ'a* (Twin Flower), and *Vibur'num.* The leaves of the elder are emetic and cathartic; and these properties are possessed in some degree by most of the genera of this order.

Cap-rĭ-fo'lĭ-um.* A synonyme of a genus of ornamental shrubs, which many botanists call *Lonicera*. The popular names of these shrubs are Woodbine and Honeysuckle.

Cap'ro-āte. [Lat. **Cap'roas, a'tis.**] A combination of caproic acid with a base.

Ca-pro'ic Aç'id. [Lat. **Capro'icum Aç'idum**; probably from *ca'pra*, a "she-goat," the milk of which is often used in making butter.] An oily, limpid liquid, obtained from the caproate of baryta, and entering into the constitution of butter.

Cap'sĭ-çin. An acrid, soft resin, obtained by digesting the alcoholic extract of the *Capsicum annuum* in ether and evaporating the ethereal solution.

Cap'sĭ-cum.* [From the Gr. *κάπτω*, to "devour," to "bite."] A Linnæan genus of the class *Pentandria*, natural order *Solanaceæ*. Also the Pharmacopœial name (U.S. 1880) of the capsules and seeds of *Capsicum fastigiatum*, or Cayenne Pepper.

Capsicum is a powerful stimulant without any narcotic effect. Whether taken into the stomach or applied externally, it causes a decided sense of heat or burning; but its influence upon the general system bears no proportion to its local action. Capsicum is chiefly used in medicine as a stomachic and rubefacient.

Cap'sicum An'nu-um.* The Capsicum, Cayenne or Guinea Pepper plant.

Cap'sicum Fru-tĕs'çens.* The species which yields the capsules mostly sold as *Guinea pepper* and *bird pepper*.

Cap'su-lar. Relating to or like a capsule.

Cap'sular Lig'a-ment. [Lat. **Ligamen'tum Capsula're.**] A kind of ligamentous bag surrounding every movable articulation, and containing the synovia.

Cap'sule. [Lat. **Cap'sula,** diminutive of the Lat. *cap'sa*, a "box."] A membranous bag, containing some part, or organ, or the extremities of bones forming a joint. In Botany, a membranous pericarp; a dry dehiscent seed-vessel. The true capsule is the pod of a compound pistil.

Capsule of Glisson. See GLISSON, CAPSULE OF.

Cap'sule, Re'nal. The Renal Capsules (*Cap'sulæ rena'les*) are two yellowish, triangular, and flattened bodies, lying over the kidneys in the fœtus, in which they are as large as the kidneys themselves. In the adult they are two lobes. Called, also, *supra-renal capsules*.

Cap-su-lif'er-ous. [Lat. **Capsulif'erus**; from *cap'sula*, a "capsule," and *fe'ro*, to "bear."] Bearing or containing capsules.

Cap-su-lī'tis, i*dis.* [From the Lat. *cap'sula*, a "capsule."] Inflammation of the capsule of the eye.

Ca'put,* gen. **Cap'ĭ-tis.** The head, consisting of the cranium, or skull, and the face:—also applied to any prominent object like a head.

Ca'put Co'li.* The "head of the colon,"—that is, the cæcum.

Ca'put Gal-lĭ-naġ'ĭ-nis.* Literally, "head of a woodcock." The *ve'ru monta'num*, or prominent fold of the lining membrane in the prostatic portion of the urethra.

Ca'put Suc-çe-da'ne-um.* [From the Lat. *ca'put*, a "head," and *succeda'neus*, "that which succeeds" or follows something else.] A term applied to a dropsical swelling of the head of a child, resulting from long-continued pressure during delivery.

Caramel, kă'rȧ'mĕl'. The French name for sugar partly decomposed by the action of heat; also a sort of confectionery.

Ca-ra'pa Gui-a-nen'sis.* A large tree, of the order *Meliaceæ*, a native of Guiana. Its bark is febrifuge and is used for tanning leather. An oil obtained from its seeds is burned in lamps.

Căr'a-pāce. [Etymology uncertain.] A term applied in Zoology to the hard covering or shell on the upper part of the body of the *Chelonia*.

Căr'a-way. The *Carum Carui*.

Car'bo An-ĭ-ma'lis.* "Animal Charcoal." The Pharmacopœial name (U.S. 1870, 1880) for animal charcoal prepared from bone. See CARBON, ANIMAL.

Car'bo Anima'lis Pu-rĭ-fĭ-ca'tus.* "Purified Animal Charcoal." The Pharmacopœial name (U.S. 1870, 1880) for animal charcoal purified by the action of hydrochloric acid.

Car'bo Lig'ni.* Charcoal. The Pharmacopœial name (U.S. 1870, 1880) for charcoal prepared from soft wood. Powdered charcoal is disinfectant and absorbent.

Carbohydrogens. A synonyme of HYDROCARBONS.

Car-bol'ic Aç'id, Car'bol, or **Phe'nol.** A substance obtained by the distillation of coal-tar between the temperatures of 300° and 400° F. When pure, it is a white or colorless solid, which resembles creasote in odor, taste, and causticity. It is soluble in water and in alcohol. It is employed as an antiseptic and disinfectant. In the liquid form it is a locally powerful irritant and anæsthetic. Taken internally in large quantities, it is a fatal narcotic poison. See ACIDUM CARBOLICUM.

Car'bon. [Lat. **Carbo'nium**; from *car'bo*, a "coal."] (Fr. *Carbone*, kȧR'bon'.) An important element, the basis of charcoal; also, charcoal itself. Carbon is found pure in the diamond, and nearly pure in graphite and anthracite. "It performs as fundamental a part in living nature as silicon in dead nature."—(DANA.)

Car'bon, An'ĭ-mal. Animal charcoal, bone charcoal, and ivory-black, are names applied to bones calcined or converted into charcoal in a close vessel. Animal charcoal is also prepared by calcining dried blood, horns, hoofs, clippings of hides, etc., in contact with carbonate of potash, and washing the calcined mass afterwards with water. Animal charcoal is principally used to decolorize vegetable principles, such as gallic acid, quinia, veratria, etc.

Car'bon, Min'er-al. A term applied to charcoal with various proportions of earth and iron, without bitumen. It has a silky lustre, and the fibrous texture of wood. It occurs stratified with various kinds of coal.

Carbon, Sulphide of, or **Carburet of Sulphur.** See BISULPHIDE OF CARBON.

Car-bo-nā'ceous. [Lat. **Carbona'ceus;** from *car'bo*, "coal," "carbon."] Of the nature of carbon.

Car'bo-nāte. [Lat. **Carbo'nas, a'tis;** from the same.] A combination of carbonic acid with a base.

Carbonate of Ammonia. See AMMONII CARBONAS.

Carbonate of Ammonium. See AMMONII CARBONAS.

Carbonate of Copper. See MALACHITE.

Carbonate of Lime. See LIMESTONE, and CALCITE.

Car-bo'ne-i Bī-sul'phī-dum.* "Bisulphide of Carbon." The Pharmacopœial name (U.S. 1880) for a clear, colorless, highly refractive liquid containing carbon and sulphur. It is very diffusive, and has a strong characteristic odor, a sharp aromatic taste, and a neutral reaction. It is a powerful poison, and is not used internally. It is used in France on an enormous scale to kill the *Phylloxera*. See BISULPHIDE OF CARBON.

Car-bon'ic Aç'id. [Lat. **Carbon'icum Aç'idum;** from *car'bo*, "coal."] An acid formed in the burning of charcoal, and very abundant in nature, composing .44 per cent. of the weight of limestone, marble, etc.; also called *Carbon Dioxide*. In the form of *carbonic acid gas* it constitutes a small proportion of atmospheric air. It is often found in mines, dry wells, etc. When unmixed, or nearly so (as it frequently is in mines, and in ill-ventilated rooms where charcoal is burning), breathing it proves extremely deleterious, and often fatal to animal life. When it is subjected to a pressure of thirty-six atmospheres it becomes a limpid liquid. See CHOKE-DAMP, and POISONS.

Carbon'ic Aç'id Wat'er, commonly called **Soda Water,** is the same as ACIDULOUS WATER, which see.

Carbon'ic Ox'ide. A colorless gas, formed when carbon is burned with an imperfect supply of oxygen.

Car-bo-nif'er-ous. [Lat. **Carbonif'erus;** from *car'bo*, "coal," and *fe'ro*, to "bear."] Having or containing coal. In Geology the Carboniferous age was the last age of the Palæozoic era, and came next after the Devonian. It derives its name from the beds of coal that were deposited during that age. The term Carboniferous formation or system is applied to all the strata deposited in that age, including limestone, sandstone, and shale.

Car-bon-ī-zā'tion. [Lat. **Carboniza'tio, o'nis;** from *car'bon.*] The process of converting organic substances into charcoal.

Car'bun-cle. [Lat. **Carbun'culus;** the diminutive of *car'bo*, "coal."] The name of a gem of a deep bright-red color:—applied in Surgery to an inflammation of a gangrenous nature attended with a severe sense of burning. The same as ANTHRAX.

Car'bu-ret. [Lat. **Carbure'tum;** from *car'bon.*] The combination of carbon with another substance.

Car'bu-ret-ted. [From the Lat. *carbure'tum*, a "carburet."] Of the nature of a carburet.

Car'buretted Hy'dro-ġen. A compound formed of carbon and hydrogen. A colorless, inflammable gas, abundantly formed in nature in stagnant pools, wherever vegetables are undergoing the process of putrefaction: it also forms the greater part of the gas obtained from coal. Of this gas there are two kinds: the one termed *light carburetted hydrogen* is found abundantly in some coal-mines, where, under the name of "fire-damp," it was the cause of those terrible explosions which were so common before the invention of the safety-lamp by Davy. The other kind, called *heavy carburetted hydrogen*, *olefiant gas*, or *ethylene*, forms the essential part of the gas used to light our streets.

Car-çī-no'ma, a'tis.* [From the Gr. *καρκίνος*, an "eating ulcer."] A name for CANCER, which see.

Car-çĭ-nom'a-tous. [Lat. **Carcinom'atus;** from *carcino'ma.*] Belonging to *carcinoma*, or cancer.

Carcinome, kär'sē'nom', the French for *Carcinoma*. See CANCER.

Car-dam'ī-ne Pra-ten'sis.* The Cuckoo-Flower, which yields cardamine flowers. It belongs to the order *Cruciferæ*, and is a native of Europe and the Northern United States.

Car'da-mom. [Lat. **Cardamo'mum.**] The fruit of several species of *Elettaria* and *Amomum*, the capsules and seeds of which furnish a warm and pleasant aromatic. Cardamom is largely used as a condiment in India.

Car-da-mo'mum.* "Cardamom." The Pharmacopœial name (U.S. 1870, 1880) for the fruit of the *Elettaria Cardamomum*, a native of India.

Car'dĭ-a.* [Gr. *καρδία.*] The heart; also the superior opening of the stomach.

Car'dĭ-ac. [Lat. **Cardi'acus;** from *car'dia.*] Belonging to the heart:—applied to the superior opening of the stomach. Also applied to cordial or invigorating medicines.

Car'diac Plex'us. [Lat. **Plex'us Cardi'acus.**] The principal cardiac plexus is situated on the bifurcation of the trachea. It is formed by the meeting of the middle and inferior cardiac nerves. There are two other cardiac plexuses,—the one termed *anterior*, and the other *posterior*,—situated respectively before and behind the ascending aorta, near its origin.

Car-dī'a-gra.* [From the Gr. *καρδία*, the "heart," and *ἄγρα*, a "seizure."] Pain or gout of the heart.

Car-dĭ-ăl'ġĭ-a.* [From the Gr. *καρδία*, the "heart," and *ἄλγος*, "pain."] An uneasy or painful sensation in the stomach; heart-burn; car'dialgy.

Cardianastrophe.* See ECTOPIA CORDIS.

Car-dĭ-ăsth'ma* (*i.e.*, Cardiac Asthma), or **Car'di-ac Dysp'nœ-a.*** Dyspnœa caused by disease of the heart.

Car'dĭ-a-tro'phĭ-a.* Atrophy of the heart.

Car-dĭ-ec'ta-sis.* [From the Gr. *καρδία*, the "heart," and *ἔκτασις*, "extension" or "dilatation."] Dilatation of the heart.

Car'dĭ-nal Flŏw'er. The popular name of the *Lobelia Cardinalis*. See LOBELIA.

Car'dĭ-o-çēle.* [From the Gr. *καρδία*, the "heart," and *κήλη*, a "tumor."] The protrusion of the heart through a wound of the diaphragm.

Car'dĭ-o-dўn'ĭ-a.* [From the Gr. *καρδία*, the "heart," and *ὀδύνη*, "pain."] Pain in the heart. See CARDIAGRA.

Car-dĭ-og'mus,* or **Kar-dĭ-og'mos.*** Another term for cardialgia :—sometimes applied to palpitation of the heart, and to *Angi'na pec'toris*.

Car'dĭ-o-graph. [From the Gr. *καρδία*, the "heart," and *γράφω*, to "write."] An instrument which, placed over the heart, marks the force and character of its pulsations.

Car'dĭ-o-ma-la'cĭ-a.* [From the Gr. *καρδία*, the "heart," and *μαλακία*, "softness."] Morbid softening of the muscular tissue of the heart.

Car-dĭ-om'e-trў. [Lat. **Cardiome'tria**, from the Gr. *καρδία*, the "heart," and *μέτρον*, a "measure."] Measuring the heart by percussion or auscultation.

Car-dĭ-o-păl'mus.* [From the Gr. *καρδία*, the "heart," and *παλμός*, "palpitation."] See CARDIOTROMUS.

Car'dĭ-o-pĕr-ĭ-car-di'tis, i*dis.* [From the Lat. *car'dia* and *pericardi'tis*.] Inflammation of the heart and pericardium.

Cardiorhexis,* kar'de-o-rex'is. [From the Gr. *καρδία*, the "heart," and *ῥῆξις*, a "breaking" or "laceration."] Rupture of the heart.

Car-dĭ-o-ste-no'sis.* [From the Gr. *καρδία*, the "heart," and *στένωσις*, a "narrowing" or "contraction."] A narrowing of the passages of the heart.

Car'dĭ-ot'ro-mus.* [From the Gr. *καρδία*, the "heart," and *τρόμος*, a "trembling."] Fluttering of the heart.

Car-di'tis.* [From the Gr. *καρδία*, the "heart."] Inflammation of the heart. A genus of the order *Phlegmasiæ*, class *Pyrexiæ*, of Cullen's nosology.

Car'do,* gen. **Car'dĭ-nis.** A hinge :—applied in Anatomy to the articulation called *ginglymus*.

Caribean Bark. See BARK, CARIBEAN.

Căr'ĭ-ca Pa-pa'ya.* The Papaw-Tree, the milky juice of which contains an abundance of fibrin resembling animal matter. See PAPAW.

Car'ĭ-çæ Fruc'tus.* The preserved fruit of the fig. See FICUS CARICA.

Cā'rĭ-ēs.* Literally, "rottenness." A disease of bones, analogous to ulceration of the soft parts. In Botany, decay of the walls of the cells and vessels.

Ca-ri'na.* Literally, the "keel of a ship." A term applied in Botany to the lower petal of the papilionaceous corolla; the keel.

Căr'ĭ-nate, or **Căr'ĭ-nāt-ed.** [Lat. **Carina'tus**; from *cari'na*.] Furnished with a keel, or sharp ridge on the lower side; keel-shaped :—applied to leaves, petals, etc.

Cariopsis.* See CARYOPSIS.

Căr'ĭ-ous. [Lat. **Cario'sus**; from *ca'ries*.] Having, or affected with, caries.

Ca-ris'sa.* A genus of shrubs of the order *Apocynaceæ*, natives of Asia and Australia. They have a milky juice. Some of the species are as bitter as gentian, and have medicinal properties.

Car-li'na.* A genus of plants of the order *Compositæ*, comprising several species, natives of Europe. *Carlina acaulis* (or *subacaulis*) is used in medicine as an aromatic and sudorific. *Carlina gummifera* contains an acrid, poisonous, milky juice, and has been used in medicine.

Car-min'a-tĭve. [Lat. **Carminati'vus**; from *car'men*, a "song" or "charm."] A term applied to medicines which assuage pain and relieve flatulence. They mostly belong to the class of aromatics.

Car'mīne. A beautiful red coloring-matter or pigment, prepared from cochineal combined with alumina and the oxide of tin :—also called *Coccinellin*.

Car-min'ic Aç'id. A solid substance of a brilliant purple-red color, soluble in water, and insoluble in ether. It is the coloring principle of cochineal.

Carnahuba Palm. See COPERNICIA CERIFERA.

Car-na'tion. A fragrant variety of the *Dianthus Caryophyllus*, or clove pink. See DIANTHUS.

Carneæ Columnæ.* See COLUMNÆ CARNEÆ.

Car'ne-us.* [From the Lat. *ca'ro*, *car'nis*, "flesh," "fleshy."] Belonging to flesh; flesh-colored; car'neous. See CARNOSUS.

Car-nĭ-fĭ-cā'tion. [Lat. **Carnifica'tio, o'nis**; from *ca'ro*, "flesh," and *fi'o*, to "become."] The change of any texture of the animal body into flesh. The term has been applied by Laennec to a diseased condition of the lungs when they have become converted into a substance resembling muscular flesh.

Car-nĭ-for'mis.* [From the Lat. *ca'ro*, "flesh."] Resembling flesh.

Car-niv'o-ra.* [From the Lat. *ca'ro*, "flesh," and *vo'ro*, to "devour."] A term applied to animals which feed upon flesh,—more especially to that tribe of the *Mammalia*, such as the wolf, lion, etc., whose teeth are peculiarly adapted for seizing and destroying living animals.

Car-niv'o-rous. [Lat. **Carniv'orus**; from the same.] Flesh-devouring, or feeding on flesh.

Carniv'orous (or **In-sec-tiv'o-rous**) **Plants.** A term applied to the *Darlingtonia*, *Dionæa*, *Drosera*, *Cephalotus*, *Nepenthes*, etc., which catch insects and are supposed to digest them.

Car-no'sus.* [From the Lat. *ca'ro*, "flesh."] Fleshy; full of flesh; car'nose :—applied in the plural to an order of *Polypi*. In Botany, *carnose* is fleshy in texture.

Ca'ro,* gen. **Car'nis.** The red fibrous part, or belly, of muscles; the flesh. Also the soft portion of fruits.

Căr'ob. [From the Ar. *Kharrúb*; Sp. *Algarro'ba*.] A common name for the *Cerato'nia Sil'iqua*, a tree of the natural order *Leguminosæ*, a native of Palestine, the Levant, Southern Europe, and Northern Africa. Its fruit is an edible, mucilaginous pod, which is used as food,—sometimes called *St. John's bread*.

Căr-o-lī'nạ Pink. The *Spigelia Marilandica.*

Caroncule, kă'rŏN'kūl'. The French term for CARUNCULA, which see.

Cạ-ro'ta.* The Pharmacopœial name (U.S. 1870) for the fruit of the carrot (*Dau'cus caro'ta*).

Cạ-rot'ĭ-cus.* [From the Gr. *καρόω*, to "stupefy."] Having power to stupefy; carot'id:—applied in the plural neuter (*Carot'ica*) to narcotics.

Cạ-rot'id. [Lat. **Caro'tis,** *ĭdis;* from the Gr. *καρόω*, to "stupefy."] A term applied to an artery on each side of the neck, carrying blood to the head. They were so named from an idea that tying them would produce coma.

Căr'o-tin. [Lat. **Carot'ina;** from *caro'ta.*] A peculiar crystalline principle of the carrot, or *Dau'cus caro'ta.*

Car'pal. [Lat. **Carpa'lis.**] Belonging to the *carpus,* or wrist.

Car'pel. [Lat. **Carpel'lium,** or **Carpel'lum;** from the Gr. *καρπός*, "fruit."] A term applied in Botany to a simple pistil, or to one of the elements of a compound pistil.—(GRAY.) One of the leaves or parts of a compound ovary or fruit.

Car'pel-la-rў. Pertaining to a carpel.

Car-phol'o-ġў. [Lat. **Carpholo'gia;** from the Gr. *κάρφος*, "chaff," and *λέγω*, to "collect."] The movements of delirious patients in searching for or grasping at imaginary objects, picking the bed-clothes, etc.; floccillation. It is considered a very unfavorable symptom in fevers.

Car-pi'nus A-mer-ĭ-ca'nạ.* Ironwood, or Hornbeam, a tree of the order *Cupuliferæ.* Its leaves are astringent.

Car-pol'o-ġў. [Lat. **Carpolo'gia;** from the Gr. *καρπός*, "fruit," and *λόγος*, a "discourse."] A description of fruits or seeds; that part of Botany which treats of the fruits or seeds of plants.

Car-po-pe'dal. [From the Lat. *car'pus,* the "wrist," and *pes,* a "foot."] Affecting the hands (or wrist) and feet. CARPOPEDAL SPASM is a spasmodic affection of the chest, larynx, thumbs, and toes, in infants,—probably connected with dentition or a spinal irritation. The remedies are warm baths, purgatives, mild narcotics, and incision of the gums.

Car'po-phore, Car-po-pho'rum.* The stalk or support of a fruit or pistil within the flower.

Car-po-po'dĭ-um.* [From the Gr. *καρπός*, "fruit," and *πούς, ποδός*, a "foot" or "support."] A fruit-stalk.

Car-pot'ĭ-cus.* [From the Gr. *καρπός*, "fruit," "offspring."] Carpot'ic:—a term applied in the plural neuter (*Carpot'ica*) to an order of Dr. Good's class *Genetica,* or diseases affecting impregnation.

Car'pus.* [Gr. *καρπός.*] The Latin term for the WRIST, which see.

Căr'rạ-ġeen Moss, Căr'rạ-gheen Moss. A species of sea-weed, found on the rocks and shores of Northern Europe, and in Carragheen, near Waterford, Ireland. It is a good diet for the sick.

Căr-rạ-ġee'nin. The name given by Dr. Pereira to the mucilaginous matter called by some writers *vegetable jelly,* by others *pectin.*

Carrara (kar-rä'rä) **Wat'er.** The name of a liquid prepared in imitation of the qualities of certain springs of Carrara, in Italy, famous for its marble-quarries.

Căr'rọn Oil. [So called because used at the Carron Iron-Works, in Scotland.] The *Linimentum Aquæ Calcis,* or LINIMENTUM CALCIS, which see.

Car'rot. The common name of the *Dau'cus caro'ta,* which see.

Car'thạ-min, Car'thạ-mĭne, or **Car-tham'ic Aç'id.** A red coloring-matter obtained from the safflower.

Car'thạ-mus Tinc-to'rĭ-us.* The Safflower, or *Bastard* Saffron, a plant of the order *Compositæ.* The flowers are used by dyers. The seeds are cathartic and diuretic.

Car'tĭ-lage. [Lat. **Cartila'go,** *inis;* etymology uncertain.] Gristle,—a pearly white, glistening, elastic, uniform substance, adhering to the articular surfaces of bones.

Car-tĭ-laġ'ĭ-nous, or **Car-tĭ-lạ-gin'e-ous.** [Lat. **Cartilagin'eus,** or **Cartilagino'sus.**] Of the nature of cartilage:—applied in Botany to leaves or other parts that are firm and tough like gristle, and to the carpels or cells of an apple.

Căr'u-i.* A name for the fruit of the *Ca'rum Car'ui.*

Ca'rum.* [From the Arabic *Carvi,* or *Carvia.*] A Linnæan genus of the class *Pentandria,* natural order *Umbelliferæ.* Also the Pharmacopœial name (U.S. 1870, 1880) for the fruit of the *Carum Carui.* It is carminative.

Ca'rum Căr'u-i.* The caraway-plant.

Cạ-run'cu-lạ,* plural **Cạ-run'cu-læ.** [Diminutive of the Lat. *ca'ro,* "flesh."] A little fleshy excrescence; a car'uncle. An excrescence at the scar of some seeds.

Carun'cula Lach-rў-ma'lis.* (Fr. *Caroncule lacrymale,* kă'rŏN'kūl' lă'kre'mål'.) The small red body situated in the inner angle of the eye.

Cạ-run'cu-læ Myr-tĭ-for'mēs.* The remnants of the lacerated *hymen,* two, three, or four in number.

Ca'rus.* [Gr. *κάρος.*] A deep, heavy sleep; lethargy.

Carya.* See HICKORY.

Căr-ў-o-car'.* A genus of trees of the order *Rhizobolaceæ,* natives of Brazil and Guiana. They are called Butter-trees, and bear edible fruits, which have a delicious kernel enclosed in a pulp which is like butter. The timber of *Caryocar nuciferum* is very durable, and is used for shipbuilding.

Caryophyllaceæ,* kăr-e-o-fil-la'she-ē. A natural order of exogenous plants, including the *Dianthus* (Carnation and Pink), the *Lychnis,* the *Silene,* and many weeds. Named from *Caryophyllus,* the specific name of the carnation or clove-pink.

Căr-ў-o-phўl-la'ceous. Pink-like:—applied to a corolla of five long-clawed petals.

Căr-ў-o-phўl'le-æ.* The Jussieuan name of an order of plants. See CARYOPHYLLACEÆ.

Căr-ȳ-o-phȳl'lic Aç'id. [From the same.] Eugenic acid; clove acid, or heavy oil of cloves; one of the two oils composing oil of cloves; the other is light oil, called *clove hydrocarbon.*

Căr-ȳ-o-phȳl'lin. [From the same.] Clove sub-resin,—a crystalline substance extracted from cloves by alcohol.

Căr-ȳ-o-phȳl'lum.* [From the same.] The name for the unexpanded flower of the *Caryophyllus aromaticus.* See CLOVE.

Căr-ȳ-o-phȳl'lus.* [From the Gr. *κάρυον*, a "nut," and *φύλλον*, a "leaf," because supposed to be the leaf of the Indian nut plant.] A Linnæan genus of the class *Polyandria*, natural order *Myrtaceæ.* Also the Pharmacopœial name (U.S. 1870) for the unexpanded flowers of the *Caryophyllus aromaticus.* Also the Pharmacopœial name (U.S. 1880) for the unexpanded flowers of the *Eugenia caryophyllata.*

Caryophyl'lus Ar-o-mat'ĭ-cus.* The systematic name of the clove-tree. See CLOVE.

Căr-ȳ-op'sis.* [From the Gr. *κάρυον*, a "nut," and *ὄψις*, an "appearance."] In Botany, a one-seeded fruit or grain, the pericarp of which is thin and adheres firmly to the integument of the seed, as wheat, barley, maize, etc.

Cas-ca-ril'la.* [Diminutive of *cas'cara*, the Spanish word for "bark."] The Pharmacopœial name (U.S. 1870, 1880) of the bark of the *Cro'ton eleuthe'ria* or *elute'ria.* Cascarilla is aromatic and tonic.

Cascarillæ Cortex.* "Bark of Cascarilla." See CASCARILLA.

Case. [Lat. **Ca'sus**; from *ca'do, ca'sum*, to "fall."] The occurrence of a disease in some particular individual; the condition of a patient: —also applied to the history of a disease.

Ca-se-a'rĭ-a.* A genus of trees or shrubs of the order *Samydaceæ*, comprising many species, natives of India, Brazil, and other tropical countries. The bark of *C. astringens* is used in Brazil as a remedy for ulcers. *C. esculenta*, a native of India, has purgative roots. *C. Ulmifolia*, a native of Brazil, is used as a remedy for the bites of serpents.

Cā-se-ā'tion. [From the Lat. *ca'seus*, "cheese."] The degeneration of any animal tissue into a mass like cheese or curd.

Cā'se-in, Cā'se-īne, or **Ca'se-um.*** [From the Lat. *ca'seus*, "cheese."] The albumen of milk; the curd separated from milk by the addition of an acid or rennet, constituting the basis of cheese in a state of purity.

Caseous, kā'she-ŭs or kā'se-ŭs. [Lat. **Caseo'sus**; from *ca'seus*, "cheese."] Like cheese, or full of cheese; cheesy.

Ca-shew'-Tree. The *Anacar'dium Occidenta'le*, a tree belonging to the natural order *Anacardiaceæ*, found in the West Indies. It produces a kidney-shaped nut, yielding a caustic oil, which is used as a marking-ink, and also as a remedy for warts, etc.

Cassava,* kăs-sā'vā. A fecula separated from the juice of the root of the *Jatropha* (or *Janipha*) *Manihot*, and exposed to heat,—a principal article of diet in South America. The same substance differently prepared and granulated constitutes *tapioca.*

Casserian (Ganglion). See GASSERIAN.

Cassia,* kash'e-a. [Gr. *κασία*, or *κασσία.*] A Linnæan genus of the class *Decandria*, natural order *Leguminosæ.* Several species of the genus *Cassia*—e.g., *C. acutifolia, C. elongata*, and *C. obovata*—produce the senna of commerce. See SENNA.

Cas'sia Fis'tu-la.* The purging cassia-tree. The Pharmacopœial name (U.S. 1870, 1880) for the fruit of the *Cassia fistula.* It is a native of Egypt and India.

Cassia Lignea.* See LAURUS CASSIA.

Cas'sia Măr-ĭ-lan'di-ca.* The Pharmacopœial name (U.S. 1870) for the leaves of the *Cassia Marilandica*, or American Senna. It is purgative.

Cas'sia Oil. The common oil of cinnamon, procured from the *Laurus cassia.*

Cassiæ (kash'e-ē) **Pul'pa.*** "Pulp of Cassia." A name for the fruit of the *Cassia fistula.*

Cas-sid'e-ous. [From the Lat. *cas'sis*, gen. *cas'sidis*, a "helmet."] Having the form of a helmet, as the upper sepal in the flower of aconite.

Cas'sit-er-īte. [From the Gr. *κασσίτερος*, "tin," and *λίθος*, a "stone."] A native peroxide of tin, the common ore of tin. It occurs in beautiful crystals (dimetric) having an adamantine lustre; also massive.

Cassius (kash'e-ŭs), **Pur'ple of.** A purple-colored precipitate, obtained by mixing the protochloride of tin with a dilute solution of gold.

Cassonade, kăs'so'năd'. (Fr.) Raw sugar; the crystallized and dried portion of sugar.

Cas-su-mu'nĭ-ar, or **Cas-a-mu'nar.** A root obtained from the East Indies in slices of various shapes. It is an aromatic, bitter tonic and stimulant.

Cassythaceæ,* kas-se-tha'she-ē. A natural order of exogenous parasitical plants, consisting of one genus, the *Cassy'tha*, which is regarded as a genus of the *Lauraceæ* by some.

Cas-ta'ne-a.* "Chestnut." The Pharmacopœial name (U.S. 1870, 1880) for the leaves of the *Casta'nea vesca*, collected in September or October while still green. They are used as a remedy for hooping-cough.

Casta'nea Ves'ca.* The systematic name of the chestnut, a tree of the order *Cupuliferæ.* It is a native of Europe and the United States. See CHESTNUT.

Castaneæ,* kas-ta'ne-ē, the plural of **Casta'nea**, a "chestnut." A name given by some botanists to a natural order including the chestnut, oak, etc. See CUPULIFERÆ.

Cas-tig-lĭ-o-ne'a Lo-ba'ta.* The Piñoncillo Tree, a Peruvian tree which bears an edible fruit. Its sap or juice is a powerful caustic.

Cas-til-lo'a E-las'tĭ-ca.* A tree of the order *Artocarpaceæ*, a native of the tropical parts of South America. Caoutchouc is obtained from this tree and from other species of *Castilloa.*

Cas'tor.* [Probably from the Sanscrit *kastûrî*, "musk."] The Castor Fiber (Beaver), an ani-

mal which yields the medicinal substance CASTOREUM, which see. *Castor* is an Oriental word; *fiber* is merely its Latin equivalent.

Cas'tor. Another name for CASTOREUM, which see.

Cas'tor Oil. [Lat. **O'leum Riç'ini.**] An oil extracted from the seeds of the *Riç'inus commu'nis.* It is one of the most valuable of purgatives, being at the same time mild and speedy in its operation.

Cas-to're-um.* [From the Lat. *cas'tor*, the "beaver."] The Pharmacopœial name (U.S. 1870) of a peculiar concrete substance obtained from the follicles of the prepuce of the *Castor fiber*, or beaver. It has a strong, unpleasant odor. It is a moderate stimulant and antispasmodic.

Cas-tor'ĭ-dæ.* [From the Lat. *cas'tor*, the "beaver."] A family of animals, of which the *Castor* is the type.

Cas'to-rin, or **Cas'to-rĭne.** [Lat. **Castori'na**; from *casto'reum.*] The active matter of *castoreum.*

Cas-trā'tion. [Lat. **Castra'tio, o'nis**; from *cas'tro, castra'tum*, to "cut off," to "emasculate."] Emasculation:—sometimes applied to the entire removal of the genital organs, but more commonly it denotes simply the removal of the testicles; orchotomy. In Botany, the term is applied to the removal of the anthers of a flower.

Cas-tren'sis.* [From the Lat. *cas'tra*, a "camp."] A term applied to diseases to which soldiers encamped under unhealthy circumstances are particularly liable, as *Febris castrensis*, "camp-fever."

Cas-u-ạ-ri'nạ E-quĭ-set-ĭ-fo'lĭ-ạ.* A tree, a native of India, Oceanica, etc. It has hard and durable wood, and an astringent bark, which is used in medicine as a substitute for krameria.

Casuarinaceæ,* kas-u-ăr-ĭ-na'she-ē. [From *Casuari'na*, the name of one of the genera.] A curious natural order of exogenous trees without leaves, found in Australia, India, etc. They are prized for their hard and heavy timber.

Cat. = *Cataplas'ma.** A "cataplasm."

Cata (*κατά*). A Greek preposition signifying, in composition, "against," "according to," but most frequently "down," as in *catarrh* (from *καταῤῥέω*), literally, a "flowing down." It is often an intensive, as in CATACAUSIS, CATACLYSM, and CATALEPSY, which see. Before a vowel and before *h* the final *a* is dropped. See CATION, CATHODE, etc.

Cat-ạ-cau'sis.* [From the Gr. *κατακαίω*, to "burn completely up."] A term denoting the phenomenon called preternatural or spontaneous combustion.

Cạ-tac'lạ-sis.* [From the Gr. *κατακλάω*, to "break," to "turn out of its natural course."] The fracture of a bone; also a spasmodic distortion of the eyes, or spasmodic closing of the eyelids.

Cat-ạ-cleĭ'sis.* [From the Gr. *κατακλείω*, to "shut or lock up."] A morbid closing of the eyelids.

Cat'ạ-clўsm. [Lat. **Cataclys'mus**; from the Gr. *κατακλύζω*, to "inundate."] A deluge, or inundation; also an affusion.

Cat-ạ-cous'tĭ-cạ* (for pronunciation see ACOUSTIC). [From the Gr. *κατά*, "against," and *ἀκούω*, to "hear."] That branch of Acoustics which treats of reflected sounds; catacous'tics.

Cat'ạ-lep-sў. [Lat. **Catalep'sia**, and **Catalep'sis**; from the Gr. *καταλαμβάνο*, to "seize."] A total suspension of sensibility and voluntary motion, and, for the most part, of mental power, the action of the heart and lungs continuing; trance.

Cat-ạ-lep'tic. [Lat. **Catalep'ticus.**] Belonging to catalepsy.

Ca-tăl'pạ.* A genus of ornamental trees of the order *Bignoniaceæ*, comprising several species, natives of China, Japan, and the United States. Their bark is said to be tonic and stimulant.

Catal'pa Big-no-nĭ-o-i'dēs.* The Catalpa, or Indian Bean, a tree of the order *Bignoniaceæ*, a native of the United States. It bears showy flowers, and pods one foot long.

Cạ-tal'ў-sis.* [From the Gr. *καταλύω*, to "dissolve."] A force or power which decomposes a compound body by mere contact: thus, peroxide of hydrogen is decomposed by contact with platinum, which is termed, in consequence, the *catalytic* agent. The catalytic force is occult, special, unique, and hypothetical. The term was invented to designate the fact that chemical actions are caused by the presence of certain substances, without the latter being chemically modified.

Cat-ạ-lўt'ic, Cat-ạ-lўt'ĭ-cal. [Lat. **Catalyt'icus.**] Belonging to, or causing, *catalysis:* sometimes applied to a medicine supposed to destroy a morbific agency in the blood. See preceding article.

Cat-ạ-me'nĭ-ạ,* gen. **Cat-ạ-me-nĭ-o'rum**; found only in the plural. [From the Gr. *κατά*, "according to," and *μήν*, a "month."] The monthly discharge from the uterus; otherwise called the *menses, menstrual discharge, courses*, etc. See MENSES.

Cat-ạ-phon'ĭ-cạ.* [From the Gr. *κατά*, "against," and *φωνή*, "sound."] Cataphon'ics; that branch of Acoustics which treats of the reflection of sound.

Cạ-taph'o-rạ.* [From the Gr. *καταφέρομαι*, to "be weighed down," to "fall asleep."] The *co'ma somnolen'tum* of many writers; a variety of lethargy, attended with short remissions, or intervals of imperfect waking, sensation, and speech.

Cat'ạ-plaśm. [Lat. **Cataplas'ma, a'tis**; from the Gr. *καταπλάσσω*, to "overlay with plaster."] A soft application or poultice of bread, linseed-meal, oat-meal, etc., medicated or not.

Catapotium,* kat-ạ-po'she-ŭm. [From the Gr. *καταπίνω*, to "drink," to "gulp," to "swallow down."] A pill or medicine to be swallowed without chewing:—written also *Catapotion.*

Cat'ạ-ract. [Lat. **Catarac'ta**; from the Gr. *καταῤῥάσσω*, to "confound."] Obstructed sight, produced by opacity of the crystalline lens or its capsule.

Cạ-ta'rĭ-ạ.* The Pharmacopœial name (U.S. 1870) for the leaves and tops of the *Nep'eta cata'ria*, or catnep.

Ca-tarrh'. [Lat. **Catar'rhus**; from the Gr. *καταῤῥέω*, to "flow down."] In its largest sense, the term is applied to any discharge from any of the mucous surfaces of the body. But in popular language (among English-speaking people) it is more usually restricted to a cold in the head or chest. The other more important applications are catarrh of the bladder (see VESICAL CATARRH), and catarrh of the vagina, commonly called *leucorrhœa*.

Ca-tarrh'al. [Lat. **Catarrha'lis.**] Belonging to catarrh.

Cat-a-stag'mus.* [From the Gr. *κατά*, "down," and *στάζω*, to "drop," to "flow by drops."] A term applied by some medical writers to a defluxion from the fauces, etc. Essentially the same as CATARRH.

Cat-a-stăl'tic. [Lat. **Catastal'ticus**; from *καταστέλλω*, to "restrain."] Having power to restrain, check, or astringe:—applied to medicines that check evacuations, as astringent and styptic substances. The same as ANASTALTIC. Applied by M. Hall to the action of the *vis nervosa* from above downwards.

Ca-taw'ba. The name of an excellent American grape and wine of a muscadine flavor. There are three kinds of Catawba wine, the still, the sparkling, and the sweet. Still Catawba is a light, dry, acidulous wine. Sparkling Catawba is made by letting the wine undergo the secondary fermentation in the bottle, and looks like champagne. Sweet Catawba is prepared by adding sugar to the grape-juice.

Catechu, kat'e-kū. [Said to be derived from the Japanese *kate*, a "tree," and *chu*, "juice."] The Pharmacopœial name (U.S. 1870, 1880) for an extract obtained from the wood of *Acacia catechu*. It is a powerful astringent. The term is applied also to a variety of astringent extracts, which are imported under the names of *terra japonica* (Japan earth), *cutch*, and *gambir*.

Cat-e-chu'ic Aç'id. An acid (somewhat resembling gallic acid) obtained by Buchner from catechu.

Ca-ten'u-late. [From the Lat. *caten'ula*, a "little chain."] Formed by parts united end to end like the links of a chain.

Cath. = *Cathar'ticus.** "Cathartic."

Ca'tha E-du'lis.* A shrub of the order *Celastraceæ*, a native of Arabia. Its leaves are used by the Arabs in the preparation of a beverage having properties similar to those of coffee and tea.

Cath-æ-ret'ic, or **Cath-e-ret'ic.** [Lat. **Cathæret'icus**; from the Gr. *καθαιρέω*, to "remove."] Mildly caustic, as nitrate of silver.

Ca-thar'sis.* [From the Gr. *καθαίρω*, to "purge."] Purgation of the excrements, medically or naturally.

Ca-thar'tic. [Lat. **Cathar'ticus**; from the same.] A term applied to a medicine which quickens or increases evacuation from the intestines, or produces purging. Among the best cathartics are castor oil, rhubarb, senna, bela, aloes, Epsom salt. See PURGATIVE.

Ca-thar'tin. [Lat. **Catharti'na**; from the Gr. *καθαίρω*, to "purge."] A peculiar principle obtained from jalap and senna leaves, on which their purging quality depends.

Ca-thar'to-car'pus Fis'tu-la.* Another name for the tree producing cassia. See CASSIA FISTULA.

Cath-e-lec-trot'o-nous. [From the Gr. *κατά*, "down," also intensive, *ἤλεκτρον*, "amber" or "electricity," and *τόνος*, "tone" or "tension."] An electric condition characterized by exalted irritability.

Căth'e-ter.* [Gr. *καθετήρ*; from *καθιήμι*, to "send down or into."] A surgical instrument like a tube, closed, but with several small perforations towards the extremity, which is introduced into the bladder through the urethra for the purpose of drawing off the urine in cases of retention, etc.

Cath'e-ter-is'mus.* [From the Lat. *cath'eter.*] The operation of introducing the catheter; cath'eterism.

Cath'ōde. [From the Gr. *κατά*, "down" or "out," and *ὁδός*, a "way."] In electro-chemical action, that part of the decomposing body which the electric current leaves; or, the electrode through which the current leaves a nerve or other substance.

Cath-od'ic. [Lat. **Cathod'icus**; from the Gr. *κατά*, "downwards," and *ὁδός*, a "way."] Proceeding downwards:—applied by M. Hall to the course of action of the nervous influence. See CATASTALTICUS.

Ca-thol'ĭ-con.* [From the Gr. *καθολικός*, "general" or "universal."] A panacea, or universal medicine.

Cat'ĭ-on.* [Gr. *κατιών*, the present participle of *κάτειμι*, to "go down," to "descend."] Literally, "descending" or "passing down." A term in electro-chemical action for a body that passes to the cathode of the decomposing body.

Cat'kin. [Fr. *Chaton*, shȧ'tôN'.] A scaly, deciduous spike of flowers. The same as AMENTUM, which see.

Cat'ling. A double-edged, sharp-pointed, straight knife for amputations.

Catnep. See CATARIA.

Cat'o-chē,* or **Cat'o-chus.*** [From the Gr. *κατέχω*, to "restrain," to "retain," to "keep."] A kind of catalepsy in which the body is kept rigidly in an erect posture.

Cat-op'tric, Cat-op'trĭ-cal. [Lat. **Catop'tricus**; from the Gr. *κάτοπτρον*, a "mirror."] Belonging to a mirror, or to Catoptrics.

Cat-op'trics. [Lat. **Catop'trica**; from the same.] That branch of Optics which treats of the reflection of light.

Cat's Eye. A mineral brought from Ceylon; a variety of quartz:—so called from a peculiar play of light arising from white fibres interspersed. The French call this appearance *chatoyant* (shȧ'twȧ'yôN').

Cat's Purr. A characteristic sound of the chest, heard by means of the stethoscope.

Cat's Tail. The common name for the *Typha*.

Cat'sup, or **Ketch'up.** A pickle or sauce prepared from the tomato, mushroom, walnut, etc.

Cat'u-lus.* A catkin, or amentum, such as is borne by the hazel.

Ca-tu'rus Spi-cĭ-flo'rus,* or **A-cal'ў-pha In'dĭ-ca.*** A shrub of the order *Euphorbiaceæ*, a native of India, used as a remedy for dysentery, etc. It is said to be cathartic.

Cau'da.* The Latin for "tail." A term applied to any long, soft, narrow, terminal appendage (of a plant).

Cau'da E-qui'na.* "Horse-tail." The termination of the spinal marrow, giving off a large number of nerves, which, when unravelled, resemble a horse's tail.

Cau'dal. [Lat. **Cauda'lis**; from *cau'da*, a "tail."] Belonging to the tail.

Cau'date. [Lat. **Cauda'tus**; from the same.] Having a tail.

Cau'dex.* The trunk of a tree. In Botany, the stem, or ascending axis of growth, is termed *caudex ascendens;* the root, or descending axis, *caudex descendens.* According to Gray, *caudex* is a sort of trunk, such as that of Palms.

Cau-dic'u-la.* [Diminutive of the Lat. *cau'da*, a "tail."] A prolongation in certain plants in the form of a filament, which bears the masses of pollen; a cau'dicule, or cau'dicle.

Cau'dle. [Fr. *Chaudeau*, shō'dō'; literally, "warm water."] A nourishing gruel given to women in the childbed state. It is composed of gruel, egg, sugar, wine, and nutmeg.

Caul. The epiplōon, or omentum:—sometimes applied to a portion of the amnion which occasionally envelops the child's head at birth.

Cau-lĕs'çent. [Lat. **Caules'cens**; from *cau'lis*, a "stem," and *-esco*, a Latin termination signifying to "grow."] Growing to a stem; having an obvious or evident stem.

Cau-lic'u-lus.* [Diminutive of the Lat. *cau'lis*, a "stem."] The intermediary part of the embryo which has germinated between the cotyledons and the root; a cau'licule, or cau'licle.

Cau-lĭ-flo'rus.* [Lat. **Cauliflo'rus**; from *cau'lis*, a "stem," and *flos*, a "flower."] Having flowers on the stem.

Cau'lĭ-flŏw-er. A variety of the *Brassica Oleracea.*

Cau'liflower Ex-crĕs'çence. A disease of the os uteri, supposed by Gooch to be encephalosis.

Cau'lĭ-form. [Lat. **Caulifor'mis**; from *cau'lis*, a "stem."] Formed like a stem.

Cau-lig'e-nous. Arising from the stem of a plant.

Cau'līne. [Lat. **Cauli'nus**; from *cau'lis*, a "stem."] Belonging to a stalk or stem:—applied to leaves which arise directly from the stem.

Cau'lis.* A stem or ascending axis of a plant.

Cau-lo-car'pous. [Lat. **Caulocar'peus**; from *cau'lis*, a "stem," and the Gr. *κάρπος*, "fruit."] Having persistent stems, frequently bearing fruit.

Cau-lo'ma.* A name given to the stem of a palm-tree.

Cau-lo-phўl'lum.* "Caulophyllum." The Pharmacopœial name (U.S. 1880) for the rhizome and rootlets of the *Caulophyllum thalictroides.* It is reputed to be emmenagogue and diaphoretic.

Caulophyl'lum Tha-lic-tro-i'dēs.* Blue Cohosh, or Pappoose Root, an American plant, of the order *Berberidaceæ.* Its root is said to be diaphoretic.

Cau'ma, a*tis.* [From the Gr. *καίω*, to "burn."] The burning heat of fever.

Cause, Final. See FINAL CAUSE.

Cause of Disease. See ÆTIOLOGY.

Caus'tic. [Lat. **Caus'ticus**; from the Gr. *καίω*, to "burn."] Possessing causticity; biting or burning in taste. As a noun (Lat. *Caus'ticum*), the term denotes a substance which, by its chemical properties, destroys the texture of organized bodies; such are the pure alkalies, the concentrated mineral acids, lunar caustic, etc.

Caus'tic Al'ka-li. An alkali comparatively pure, or one which has not lost its caustic properties by combination with another substance, as, for example, with carbonic acid, or with oil.

Caustic, Lunar. See LUNAR CAUSTIC.

Caustic Potash. See POTASSA.

Caus-tiç'ĭ-tў. [Lat. **Caustiç'itas, a*tis;*** from *caus'ticus.*] The quality which distinguishes caustic substances. See CAUSTIC.

Caus'tĭ-cum A-çer'rĭ-mum* (the superlative degree of *a'cer*, "sharp"). The old name for caustic potash,—the strongest common caustic.

Cau'sus.* [Gr. *καῦσος*, a "burning heat."] A variety of malignant remittent fever:—so named on account of its excessive heat. It has been termed *fe'bris ar'dens*, "ardent" or "burning fever."

Cau-ter-ĭ-zā'tion. [Lat. **Cauteriza'tio, o*nis.***] The act of applying the cautery.

Cau'ter-ў. [Lat. **Caute'rium**; from the Gr. *καίω*, to "burn," or more directly from *καυτήριον*, a "red-hot iron" or "branding-iron."] The application of a caustic substance, or of a hot iron; also, the hot iron or substance thus applied.

Cau'tery, Ac'tu-al. [Lat. **Caute'rium Actua'le.**] The employment of actual burning (*i.e.*, heated iron, fire, etc.) for the cure or removal of a diseased part. See ACTUAL CAUTERY.

Cau'tery, Po-ten'tial. [Lat. **Caute'rium Potentia'le.**] The application of caustic substances, as potassa, lunar caustic, etc.

Cava Vena.* See VENA CAVA.

Cav'er-nous. [Lat. **Caverno'sus**; from *caver'na*, a "cavern."] Having cells or caverns.

Cavernous Bodies. See CORPORA CAVERNOSA.

Cav'ernous Si'nus. A sinus on the base of the cranium.

Caviare, kav-e-air', or **Cav-ĭ-ar'.** The salted roe of the sturgeon, which is extensively used as food in Russia and on the shores of the Caspian Sea.

Cawk. A name sometimes given to the sulphate of barytes, or heavy spar.

Cayenne (kā-yĕn') **Pep'per.** The ground pods and seeds of the *Capsicum annuum;* Guinea pepper.

C. C. = *Cucurbit'ula Cruen'ta.** A cupping-glass.

C. C. = *Cor'nu Cer'vi.** Hartshorn.

C. C. U. = *Cor'nu Cer'vi Us'tum.** Burnt hartshorn.

Ce-a-no'thus.* A genus of ornamental shrubby plants, of the order *Rhamnaceæ*, comprising many species, natives of the United States. They bear beautiful flowers.

Ceanothus Americanus.* See RED ROOT.

Ceano'thus Thŷr-sĭ-flo'rus.* An ornamental tree, a native of California, bearing blue flowers.

Cebadilla, så-bå-deel'yå. (Sp.) The seeds of the *Asagræa officinalis*, a plant of the order *Melanthaceæ*. See VERATRIA.

Ce'cal. [Lat. **Cæca'lis.**] Belonging to the cæcum. See CÆCAL.

Ce-cro'pĭ-a Pel-ta'ta.* The Trumpet-Tree, a tree of the order *Artocarpaceæ*, a native of the West Indies and tropical South America. Its bark, root, and milky juice are astringent. Musical instruments are made of its hollow branches.

Cecum. See CÆCUM.

Ce'dar. The popular name of several species of evergreen trees of the order *Coniferæ*. The Red Cedar is *Junip'erus Virginia'na*, which see. The White Cedar is *Cupres'sus thyoi'des*. The Cedar of Lebanon is *Ce'drus Lib'ani*. All of these afford durable and valuable timber.

Cedrelaceæ,* sed-re-la'she-ē. An important natural order of trees (including *Cedrela*, *Soymida*, and *Swietenia*, or Mahogany) found in the tropics of America and India. In general, the bark is a powerful astringent, and the wood fragrant. The bark of the *Cedre'la too'na* and of Mahogany is febrifugal: the former is astringent, and a tolerably good substitute for Peruvian bark in intermittent fevers.

Ce'dron. The common name of the *Sima'ba Ce'dron*, a tree of the order *Simarubaceæ*, growing in South and Central America. The seeds are considered to be a remedy for snake-bites and other animal poisons. The raspings of the wood have been used in intermittents as a substitute for quinine. The seed and other parts of the tree are intensely bitter.

Celandine. See CHELIDONIUM.

Celastraceæ,* sel-as-tra'she-ē. [From *Celas'trus*, one of the genera.] A natural order of shrubs, which have acrid properties, sometimes stimulant. The *Euonymus* (Burning Bush) is an example. This order comprises the *Catha edulis*, and about two hundred and eighty species, natives of Asia, Europe, the United States, and South Africa.

Ce-las'trus.* The name of a genus of plants of the class *Pentandria*, natural order *Celastraceæ*.

Celas'trus Scan'dens.* The "Climbing Celastrus;" sometimes called the *Climbing Staff-Tree* and *False Bitter-Sweet*. A climbing shrub common in the United States. The bark is said to possess narcotic as well as emetic and diaphoretic properties.

Çē'lē.* [Gr. *κήλη*.] A word formerly used for *hernia;* now, added as a suffix to another word, it signifies a tumor caused by protrusion of some soft part or parts denoted by the first portion of the term, as *Enterocele*, *Epiplocele*, etc.; also, swelling of a part, as *Sarcocele;* or its enlargement by the presence of fluid, as *Hydrocele*. When forming the termination of a word, *cele* is usually pronounced in one syllable,—*seel:* as in *Sarcocele*, *Hydrocele*, etc.

Celery. See APIUM GRAVEOLENS.

Cel'es-tīne, or **Cel'es-tīte.** [From the Lat. *cœ'lum*, the "sky."] Sulphate of strontian:—so named from its frequently presenting a blue color. It occurs crystallized in transparent rhombic prisms or tabular forms; also massive.

Cell. [Lat. **Cel'la**; supposed to be derived from *ce'lo*, to "conceal."] Literally, a "cellar" or "cavity;" hence, any hollow space. In Botany, the term is applied to the cavity or cavities of a pericarp in which the seeds are lodged. According to the number of these cavities, a pericarp is termed *one-celled*, *two-celled*, etc. It also denotes the cavity of an anther, ovary, etc. In Physiology, a cell or cellule constitutes the origin or commencement of every plant and animal, and the elementary form of every tissue. In fact, the entire organized body, whether animal or vegetable, may be considered to be made up of a congeries of cells, each set having its own appropriate function, as nutrition, secretion, absorption, etc.

Cell-Nucleus. See CYTOBLAST.

Cell-The'o-rў. The theory that there exists one general principle for the formation of all organic productions,—*i.e.*, the formation of cells; also, the conclusions drawn from this theory.

Cellula.* See CELLULE.

Cell'u-lar. [Lat. **Cellula'ris**; from *cel'lula.*] Having, or consisting of, cells. See CELLULAR TISSUE.

Cell'ular Plants [termed in Latin **Cellula'res**]. A name sometimes applied to cryptogamous plants.

Cell'ular Tis'sue. [Lat. **Te'la Cellula'ris**, and **Te'la Cellulo'sa**; Fr. *Tissu cellulaire*, tĕ'sü' sĕl'ü'laiR'.] Called also **Cell'ular Mem'brane.** The most common of all the organic tissues, constituting the net-work which connects the minute parts of most of the structures of the body. It has also been called **Are'olar Tis'sue,** on account of the *areolæ*, or interstices, with which it abounds. See AREOLAR.

Cell'ūle. [Lat. **Cel'lula**, the diminutive of *cel'la*, a "cell."] A little cell. See CELL.

Cell-u-lī'tis.* A term applied to inflammation of the cellular or loose connective tissue. The same as ETHMYPHITIS, which see.

Cell'u-loid. [From *cellulose*, vegetable fibrin, and the Gr. *εἶδος*, a "form" or "resemblance."] An artificial substance, composed mainly of cellulose or vegetable fibrin. This is converted by acids to gun-cotton. Camphor is added to the gun-cotton, and the mixture is condensed in cylinders by a hydraulic pressure of two thousand pounds to the square inch. Celluloid is used as a substitute for ivory and bone, and is manufactured into shirt-collars and various articles. It is white and elastic, and in appearance resembles ivory.

Cell'u-lōse. [From the Lat. *cel'lula.*] The substance of which vegetable tissue—viz., the

walls of the cells—is made. It forms the framework or skeleton of all plants, and is the most abundant substance in the vegetable kingdom except water. It is insoluble in water or alcohol. It is composed of carbon, hydrogen, and oxygen, twelve parts of the former, and ten of each of the others. It is nearly identical with starch in composition, but is very different in properties.

Ce-lot'o-mȳ. [Lat. **Celoto'mia**; from the Gr. *κήλη*, a "tumor," "hernia," and *τέμνω*, to "cut."] The operation for hernia.

Cel'tis Oc-cĭ-den-ta'lis.* The Hackberry, or Sugar-Berry, a tree of the order *Urticaceæ*, a native of the United States. Its berries are astringent.

Cem'bra Pine. The *Pi'nus Cem'bra*, a noble forest-tree of Europe and Asia, which affords a fragrant turpentine called *Carpathian Balsam*. Its nuts or seeds are edible.

Ce'ment. [Lat. **Cæmen'tum.**] Any substance used for cementing together what may have been broken, as lute, solder, etc. Also, a composition by which metals are changed. See TOOTH.

Cem-en-tā'tion. [Lat. **Cæmenta'tio, o'nis**; from *cæmen'tum.*] A process by which metals are purified or changed in their qualities by heat without fusion, by means of a composition, called a cement, with which they are covered.

Çe-not'ĭ-cạ.* [From the Gr. *κένωσις*, "evacuation."] Morbid [fluid] evacuations or discharges. The name of an order in Dr. Good's class *Genetica*.

Çen-o-zo'ic, or **Kain-o-zo'ic.** [From the Gr. *καινός*, "recent," and *ζωή*, "life."] In Geology, a term denoting the age in which the Tertiary strata were deposited, because these give evidence in their fossils of *recent* life. It is contrasted with *paleozoic*, referring to *ancient* life. See PALEOZOIC.

Cen-tau'rĭ-i Cạ-cu'mĭ-nạ.* The tops of the *Erythræa centaurium*, directed for use by the Colleges of London and Edinburgh. See ERYTHRÆA.

Cen-tau'rĭ-um.* [From the Gr. *κένταυρος*, a "centaur."] A name of the *Erythræa centaurium*, the medicinal properties of which are similar to those of gentian.

Cen-tau'rў, A-mer'ĭ-can. The popular name of the *Sabbatia angularis*.

Cen-tĭ-fo'lĭ-ous. [Lat. **Centifo'lius**; from *cen'tum*, a "hundred," and *fo'lium*, a "leaf."] Having a hundred leaves, or a great number of leaves or petals.

Cen'tĭ-grāde. [Lat. **Centig'radus**; from *cen'tum*, a "hundred," and *gra'dus*, a "grade."] Having a hundred grades or degrees:—applied to a French thermometer thus divided.

Centigramme, sen'te-grăm (French pron. sôN'-tĕ'grăm'). [From the Lat. *cen'tum*, a "hundred," and *gram'ma*, a "gramme."] The hundredth of a gramme, equal to 0.154 of a grain avoirdupois, or one-sixth of a grain troy.

Centilitre, sôN'tĕ'lĕtr'. [Fr. *cent*, a "hundred," and *li'tre.*] The one-hundredth part of a litre, equal to 0.6102 of an English cubic inch.

Centimetre, sĕn-te-me'tr, or sôN'tĕ-mȧtr'. [Fr. *cent*, a "hundred," and *mètre.*] The one-hundredth part of a metre, equal to 0.394, or two-fifths, of an English inch.

Cen'tĭ-pēde. [Lat. **Cen'tipes, p'edis**; from *cen'tum*, a "hundred," and *pes*, a "foot."] Having a hundred feet, or many feet. The name of an animal having many feet.

Cen'trad. [From the Lat. *ad*, "to" or "towards," and *cen'trum*, the "centre."] A term applied the same as CENTRAL used adverbially.

Cen-trạ-di-aph'ạ-nēs.* [From the Gr. *κέντρον*, "centre," *α*, priv., and *διαφανής*, "transparent."] Cataract caused by obscurity of the central portion of the crystalline lens.

Cen'tral. [Lat. **Centra'lis**; from *cen'trum*, the "centre."] A term applied by Dr. Barclay to the body and organs generally, as meaning towards the centre.

Cen'tre of Grav'ĭ-tў. That point in a body about which all the parts exactly balance one another, so that, if that point is supported, every part is *in æquilibrio* and the whole body is at rest.

Cen'tres, Ner'vous. The brain, spinal cord, and sympathetic ganglia.

Cen-trif'u-gal. [Lat. **Centrif'ugus**; from *cen'trum*, the "centre," and *fu'gio*, to "fly."] Flying from the centre:—applied to inflorescence in which the flowers expand in succession from the centre outwards, as a cyme.

Centrif'ugal Force. That force by which a body moving in a circular orbit, and striving (according to the laws of forces) to proceed in a straight course, tends to fly off from the centre in a tangent to the orbit.

Cen-trip'e-tal. [Lat. **Centrip'etus**; from *cen'trum*, the "centre," and *pe'to*, to "seek."] Tending towards the centre. Inflorescence is centripetal when the flowers farthest from the centre expand first, as in the umbel.

Centrip'etal Force. That force by which a body moving round another tends or is impelled to the centre.

Cen-tro-stăl'tic. [Lat. **Centrostal'ticus**; from *cen'trum*, the "centre," and *stal'ticus*, "sending" or "setting in motion."] A term applied by M. Hall to the action of the *vis nervosa* in the spinal centre.

Cen'trum.* [Gr. *κέντρον*; from *κεντέω*, to "prick" or "pierce."] Literally, a "centre." A term applied by Owen, in Comparative Anatomy, to the homologues of the body of a vertebra.

Cen'trum Com-mu'ne.* Literally, the "common centre" [of nerves or of ganglia]. The solar plexus.

Cen'trum O-va'le* (of Vicq d'Azyr). See VICQ D'AZYR, etc.

Centrum Ovale* (of Vieussens). See VIEUSSENS, etc.

Çeph-ạ-e'lis.* A Linnæan genus of the class *Pentandria*, natural order *Cinchonaceæ*.

Çephaë'lis Ip-e-cac-u-an'ha.* The plant from which ipecacuanha is obtained. It is an herb, a native of Brazil.

Çeph-ạ-læ'ạ.* [From the Gr. *κεφαλή*, the "head."] A term for diseases of the head.

Çeph'a-læ-ma-to'ma,* or **Çeph'a-lo-hæ-ma-to'ma.*** [From the Gr. *κεφαλή*, the "head," and *αἷμα*, "blood," and the affix *-oma.*] A sanguineous tumor sometimes occurring in new-born children.

Çeph-a-læ'mĭ-a.* [From the Gr. *κεφαλή*, the "head," and *αἷμα*, "blood."] Congestion of the head or of the brain.

Çe-phal'a-gra.* [From the Gr. *κεφαλή*, the "head," and *ἄγρα*, a "seizure."] Severe pain in the head, gouty or rheumatic; especially gout in the head.

Çeph-a-lăl'ġĭ-a.* [From the Gr. *κεφαλή*, the "head," and *ἄλγος*, "pain."] Headache, or pain in the head; ceph'alalgy.

Çeph-a-lan'thus Oc-çĭ-den-ta'lis.* The Button-Bush, an ornamental American shrub of the order *Rubiaceæ*. The bark of the root has been used in medicine as a tonic and laxative.

Çe-phal'ic. [Lat. **Cephal'icus**; from the Gr. *κεφαλή*, the "head."] Belonging to the head.

Çephal'ic Vein. The anterior vein of the arm,—formerly opened in disorders of the head.

Cephalitis.* See ENCEPHALITIS.

Çeph'a-lo-. [From the Gr. *κεφαλή*, the "head."] This prefix, in compound names of muscles, etc., denotes connection with the head.

Çeph'a-lo-dўn'ĭ-a.* [From the Gr. *κεφαλή*, the "head," and *ὀδύνη*, "pain."] Headache; pain in the head.

Çeph'a-lo-ġen'e-sis.* [From the Gr. *κεφαλή*, the "head," and *γένεσις*, "generation," or "creation."] The doctrine or theory of the formation of the brain.

Çeph-a-log'ra-phў. [Lat. **Cephalogra'phia**; from the Gr. *κεφαλή*, the "head," and *γράφω*, to "write."] A description of the head; or a description of heads, as in craniography.

Cephalohæmatoma.* See CEPHALÆMATOMA.

Çeph'a-loid. [Lat. **Cephaloi'des**; from the Gr. *κεφαλή*, the "head," and *εἶδος*, a "form" or "resemblance."] Resembling the head.

Çeph-a-lol'o-ġў. [Lat. **Cephalolo'gia**; from the Gr. *κεφαλή*, the "head," and *λόγος*, a "discourse."] A treatise on the head; the science of the head considered in its anatomical and physiological aspects.

Çeph-a-lo'ma.* [From the Gr. *κεφαλή*, the "head," and the affix *-oma.*] A medullary tumor; a morbid product resembling brain, sometimes called *encephaloid*, or *cerebriform tumor*, *medullary sarcoma*, etc.

Çeph-a-lo-men-in-ġi'tis.* [From the Gr. *κεφαλή*, the "head," and *μῆνιγξ*, a "membrane."] Inflammation of the membranes of the brain:—called also *Meningocephali'tis.*

Çeph-a-lom'e-ter. [Lat. **Cephalom'etrum**; from the Gr. *κεφαλή*, the "head," and *μέτρον*, a "measure."] An instrument for ascertaining the size of the fœtal head during parturition.

Ceph'a-lo-phăr-ўn-ġæ'us.* [From the Gr. *κεφαλή*, the "head," and *φάρυγξ*, the "pharynx."] A designation of the *constrictor superior pharyngis* muscle.

Çeph-a-loph'o-ra.* [From the Gr. *κεφαλή*, the "head," and *φέρω*, to "bear;" because supported by their heads.] See CEPHALOPODA.

Cephalop'oda,* or **Ceph'alopods.** See CEPHALOPODUS.

Çeph'a-lop'o-dus.* [From the Gr. *κεφαλή*, the "head," and *πούς*, a "foot."] Cephalop'odous:—applied in the neuter plural (*Cephalop'oda*, or Ceph'alopods) to a class of Mollusks in which the strong fleshy members by means of which they crawl proceed from the head,—in other words, the head is situated between the body and the feet.

Çeph'a-lot. [From the Gr. *κεφαλή*, the "head."] A peculiar fat found in the brain, containing phosphorus and sulphur.

Çeph'a-lo-tho'rax.* [From the Gr. *κεφαλή*, the "head," and *θώραξ*, the "chest."] The first segment of the *Arachnida* and *Crustacea*, including in one what in insects is divided into head and thorax.

Çeph'a-lo-tōme. [Lat. **Cephalot'omus**; from the Gr. *κεφαλή*, the "head," and *τέμνω*, to "cut."] An instrument for cutting or breaking down the head of the fœtus. There are various forms and adaptations of it.

Çeph-a-lot'o-mў. [Lat. **Cephaloto'mia**; from the Gr. *κεφαλή*, the "head," and *τέμνω*, to "cut."] Dissection of the head; also, the cutting or breaking down of the fœtal head.

Çeph'a-lo-trībe. [From the Gr. *κεφαλή*, the "head," and *τρίβω*, to "wear down," to "crush."] An instrument intended to supersede the crotchet and perforator in the operation of craniotomy.

Çeph-a-lo-trip'sў. [Lat. **Cephalotrip'sis**; same etymology as the preceding.] Crushing the head of the fœtus to facilitate delivery.

Çeph-a-lo'tus Fol-lic-u-la'ris.* The Australian Pitcher-Plant, a singular herbaceous and carnivorous plant, a native of Australia. It is the only species of the genus, and is a plant of doubtful affinity and position. Some botanists have proposed that it shall constitute a separate order, called *Cephalotaceæ.*

Ce'ra.* [Gr. *κηρός*, "wax;" Fr. *Cire*, sēr.] "Wax." The Latin name of bleached yellow wax; also a membrane covering the base of the beak of birds in which the nostrils are pierced.

Ce'ra Al'ba.* "White Wax." The Pharmacopœial name (U.S. 1870, 1880) for yellow wax bleached.

Ce'ra Fla'va.* "Yellow Wax." Bees'-wax in its natural state; "a peculiar concrete substance prepared by *Apis mellifica*" (U.S. 1870, 1880).

Ce-rā'ceous. [Lat. **Cera'ceus**; from *ce'ra*, "wax."] Of the appearance or consistence of wax.

Ceramiaceæ,* se-ram-e-a'she-ē. [From *Cera'mium*, one of the genera.] A natural order of cryptogamous plants, consisting of sea-weeds (*Algæ*). It includes several species which are gelatinous and valuable for food. Among these are the Dulse of the Scots, and Carrageen moss. The esculent nests of the Chinese swallow are supposed to derive their value from a plant of this order.—(LINDLEY.)

Cĕr'a-sus.* A synonyme of the cherry-tree. See PRUNUS CERASUS.

Cérat, sä'rä'. The French term for CERATE. See CERATUM.

Ce-ra'ta.* The plural of CERATUM, which see.

Cerate. See CERATUM.

Çer-a-ti'tis.* [From the Gr. *κέρας*, a "horn," or the "cornea."] The same as KERATITIS, which see.

Çĕr'a-to-. [From the Gr. *κέρας*, a "horn."] A prefix denoting connection with the *cornu* or horn of the hyoid bone, or with the cornea.

Çĕr'a-to-bran'chĭ-al. [Lat. **Ceratobranchia'lis**; from *cer'ato*, and the Gr. *βράγχια*, the "gills."] A term applied in Comparative Anatomy to the longer bent pieces, supported by the bones, which form the lower extremities of the branchial arches in fishes.

Çĕr'a-to-çēle.* [From the Gr. *κέρας*, a "horn," and *κήλη*, a "tumor."] A hernia of the cornea.

Çĕr'a-to-glos'sus.* [From the Lat. *cera'to*, and the Gr. *γλῶσσα*, the "tongue."] A name for the *hyo-glossus* muscle; cer'atoglossal.

Çĕr'a-to-hy'al. [Lat. **Ceratohya'lis**; from the Gr. *κέρας*, a "horn," and the Lat. *hyoi'des*, "hyoid."] A term applied by Owen to the lower and larger of the two principal parts of the *cornu* of the hyoid bone.

Çĕr'a-toid. [Lat. **Ceratoi'des**; from the Gr. *κέρας*, a "horn," and *εἶδος*, a "form" or "resemblance."] Resembling a horn.

Ceratoma.* See KERATOMA.

Ceratonia,* or **Ceratonia Siliqua.*** See CAROB.

Ceratonyxis.* See KERATONYXIS.

Ceratophyllaceæ,* sĕr'a-to-fil-la'she-ē, or **Çe-rat'o-phyl'le-æ.*** A natural order of plants, consisting of one genus, *Ceratophyllum*, a weed found in ditches and constantly submerged.

Çĕr'a-to-plas'tĭ-ca.* [From the Gr. *κέρας*, a "horn," and *πλάσσω*, to "form."] The artificial formation of the cornea; cer'atoplasty.

Çĕr-a-to'sus.* [From the Gr. *κέρας*, a "horn."] Having, or containing, horn; full of horn.

Çĕr'a-to-tōme'. [Lat. **Ceratot'omus**; from the Gr. *κέρας*, a "horn," and *τέμνω*, to "cut."] A knife for dividing the cornea.

Çĕr-a-tot'o-mў. [Lat. **Ceratoto'mia**; from the Gr. *κέρας*, a "horn," and *τέμνω*, to "cut."] Cutting of the cornea.

Ce-ra'tum,* plural **Ce-ra'ta.** [From the Lat. *ce'ra*, "wax."] "Ce'rate." A compound ointment in which wax predominates as an ingredient:—also applied to compounds of a similar consistence, though not containing wax. Also the Pharmacopœial name (U.S. 1880) for a solid, fatty, pharmaceutical preparation made by heating together thirty parts of white wax and seventy parts of lard. It is of a consistence firmer than an ointment, and is generally used as a dressing.

Cera'tum Ad'ĭ-pis.* "Cerate of Lard." The name for simple cerate. See CERATUM SIMPLEX.

Cera'tum Cam'pho-ræ.* "Camphor Cerate." The Pharmacopœial name (U.S. 1880) for a mixture of three parts of camphor liniment, twelve parts of olive oil, and eighty-five parts of cerate.

Cera'tum Can-thăr'ĭ-dis.* "Cerate of Cantharides." The common blistering plaster (or salve) of the shops. It is composed of twelve parts of powdered cantharides, seven parts each of yellow wax and resin, and ten parts of lard. Also the Pharmacopœial name (U.S. 1870, 1880) for a blistering cerate containing 35 per cent. of powdered cantharides.

Cera'tum Cetacei* (se-ta'she-i). "Spermaceti Cerate." The Pharmacopœial name (U.S. 1870, 1880) for a cerate containing 10 per cent. of spermaceti.

Cera'tum Ex-trac'ti Canthar'idis.* "Cerate of Extract of Cantharides." The Pharmacopœial name (U.S. 1870, 1880) for a cerate containing the extract from 30 per cent. of cantharides.

Cera'tum Plum'bi Sub-aç-e-ta'tis.* "Cerate of Subacetate of Lead." The Pharmacopœial name (U.S. 1870, 1880) for what is commonly called GOULARD'S CERATE, which see.

Cera'tum Re-si'næ.* "Cerate of Resin." The Pharmacopœial name (U.S. 1870, 1880) for what is popularly known as Basilicon Ointment. It contains thirty-five parts of resin, fifteen parts of yellow wax, and fifty parts of lard. See BASILICON.

Cera'tum Sa-bi'næ.* "Savine Cerate." The Pharmacopœial name (U.S. 1870, 1880) for a cerate made by incorporating the extract from twenty-five parts of fluid extract of savine with ninety parts of resin cerate.

Cera'tum Sim'plex.* "Simple Cerate." A cerate prepared by melting together eight parts of lard and four of white wax, and stirring the mixture until it is cool. Formerly much used as a mild and emollient application to inflamed surfaces; recently replaced by such new preparations as vaseline, cosmoline, etc.

Cer'be-ra.* [From *Cer'berus*, the dog of Pluto.] A genus of trees of the order *Apocynaceæ*, comprising several species, natives of tropical Asia. They have a poisonous milky juice.

Cer'bera Tan'ghin,* or **Tan-ghin'ĭ-a Ven-e-nif'er-a.*** A tree of the order *Apocynaceæ*, a native of Madagascar. The kernel of its fruit is a deadly poison.

Cerchnus,* serk'nŭs. [Gr. *κέρχνος*; from *κέρχω*, to "render hoarse."] A noisy respiration; wheezing.

Ce're-al. [Lat. **Cerea'lis**; from *Ce'res*, the goddess of corn.] Pertaining to edible grain or bread-stuffs. Graminaceous plants, as wheat, barley, maize, are called cereal plants.

Ce-re-a'lĭ-a.* [From the Lat. *cerea'lis*, "belonging to *Ceres*."] All sorts of grain of which bread or any nutritious substance is made.

Ce-re'a-lin. [Lat. **Cereali'na**; from *Ceres*, the goddess of corn.] A term for the nutritious principle of flour.

Cĕr-e-bel-li'tis.* [From the Lat. *cerebel'lum.*] Inflammation of the cerebellum.

Cĕr-e-bel'lum.* [Diminutive of the Lat. *cer'ebrum*, the "brain."] (Fr. *Cervelet*, sĕrv'lā'.) The little brain, situated at the lower and back

part of the cranium. It was considered by Gall to be the seat of venereal desire; but this view is contradicted by many facts.

Cĕr'e-bral. [Lat. **Cerebra'lis**; from *cer'ebrum*, the "brain."] Belonging to the brain; brain-like.

Cĕr-e-brā'tion. [Lat. **Cerebra'tio**; from *cer'ebrum*, the "brain."] The action of the brain during any mental operation.

Cĕr-e'bric. [Lat. **Cereb'ricus**; from *cer'ebrum*, the "brain."] A term applied to a fatty acid existing in the brain in combination with soda.

Cerebric Acid. See preceding article.

Cĕr-e'brĭ-form. [Lat. **Cerebrifor'mis**; from *cer'ebrum*, the "brain," and *for'ma*, a "form."] Like the form or substance of the brain; encephaloid.

Cĕr'e-brin, or **Cĕr'e-brĭne.** [Lat. **Cerebri'na**; from *cer'ebrum*, the "brain."] A reddish, fatty substance found in the brain.

Cĕr-e-brī'tis.* [From the Lat. *cer'ebrum*, the "brain."] Inflammation of the brain. See ENCEPHALITIS.

Cĕr'e-bro-. A prefix in compound terms denoting connection with the cerebrum.

Cĕr'e-bro-Spi'nal Fe'ver, or **Ep-ĭ-dem'ic Cĕr'e-bro-Spi'nal Men-in-ġi'tis.** An acute epidemic fever, characterized by sudden invasion, with extreme nervous shock, vomiting, excessive pain, referred to the back of the neck and spine, spasmodic contraction of the muscles, and frequently delirium; accompanied by purpuric eruptions, and frequently by vesicular eruptions, usually of herpetic character. It is generally believed not to be contagious. This disease is liable to be confounded with typhus fever, on account of the petechial rash, but is distinguished from typhus by the rash appearing suddenly without any previous mottling of the skin.

Cĕr'e-broid. [Lat. **Cerebroi'des**; from *cer'ebrum*, the "brain," and the Gr. εἶδος, a "form" or "resemblance."] Resembling brain.

Cĕr'e-brot. [From the Lat. *cer'ebrum*, the "brain."] The same as CEPHALOT.

Cĕr'e-brum.* [From the Gr. κάρα, the "head."] (Fr. *Cerveau*, sĕr'vō', and *Cervelle*, sĕr'vĕl'.) The brain proper, occupying the entire upper portion of the cranium, and separated from the cerebellum by the *tentorium*. It is divided on its upper surface, by a deep median cleft, into two equal portions, called hemispheres, which are united at the base by a hard body, called the *corpus callosum*, or *commissura magna*. The lower surface of the cerebrum is divided into three lobes, called anterior, middle, and posterior.

The brain is primarily composed of two substances, the one white, medullary, and fibrous, constituting the interior portion; the other gray, or cineritious, situated chiefly on the surface.

Ce're-us.* [From the Lat. *ce'ra*, "wax."] Having the consistence and appearance of wax.

Ce'reus.* A genus of plants of the order *Cactaceæ*, remarkable for the singularity of their forms and the beauty of their flowers. The *Cereus giganteus* is a native of the arid regions of Mexico and New Mexico. It sometimes attains a height of sixty or seventy feet. It bears an edible fruit.

Cerevisia,* sĕr-e-vish'e-a. Any liquor brewed from corn; ale; beer.

Cerevis'iæ Fer-men'tum.* "Leaven or Yeast of Beer." Yeast, or barm.

Cĕr'ic Aç'id. [From the Lat. *ce'ra*, "wax."] An acid produced by the action of the fixed alkalies on wax.

Ce'rĭ-i Ox'a-las.* "Oxalate of Cerium." The Pharmacopœial name (U.S. 1870, 1880) for a white, slightly granular powder, containing oxalic acid and cerium, insoluble in water or in alcohol, but soluble in hydrochloric acid. It is a nervine tonic and sedative.

Ce'rin, or **Ce'rĭne.** [Lat. **Ceri'na**; from *ce'ra*, "wax."] A component of common wax which dissolves in sixteen times its weight of boiling alcohol and has properties almost exactly the same as those of wax.

Ce-ri'nus.* The color of yellow wax.

Ce'rĭ-um.* A rare white metal found in a Swedish mineral called *cerite*, also in *allanite*. It is very brittle, and almost infusible. Its specific gravity is 6.7. It is never found isolated or in a metallic state. The oxalate of cerium is used in medicine.

Cer'nu-ous. [Lat. **Cer'nuus**; from *cer'nuo*, to "bow downward."] Nodding, stooping, or drooping:—applied to certain flowers.

Ce-ro'ma.* [From the Gr. κηρός, "wax."] Another name for CERATE:—sometimes applied to an adipose tumor of the brain, from its waxy appearance. Called also *Lardaceous Degeneration*.

Cĕr'u-lin. [Lat. **Cæruli'na**; from *cæru'leus*, "blue."] The name given to the coloring-matter of a peculiar substance obtained from indigo by the action of sulphuric acid.

Ce-ru'men,* gen. **Ce-ru'mi-nis.** [From the Lat. *ce'ra*, "wax."] Ear-wax. The wax-like secretion of the ear, given out by follicles of the inner surface of the *meatus auditorius externus*.

Ce-ru'mĭ-nous. [Lat. **Cerumino'sus**; from *ceru'men*.] Belonging to the cerumen; of the nature of cerumen.

Ce'rūse, or **Ce'russe.** [Lat. **Cerus'sa** (perhaps from the Gr. κήρ, "death," "plague," or "disease," on account of its poisonous qualities).] White lead; the subcarbonate of lead.

Ce'ru-site, or **Ce'rus-site.** [From the Lat. *cerus'sa*, "white lead."] Native carbonate of lead, identical in chemical composition with the white lead of commerce. It occurs crystallized in right rhombic prisms of the trimetric system, also massive. It has an adamantine lustre.

Cerveau, Cervelle. See CEREBRUM.

Cervelet. See CEREBELLUM.

Cer'vĭ-cal. [Lat. **Cervica'lis**; from *cer'vix*, the "neck."] Belonging to the neck.

Cer'vĭ-dæ.* [From the Lat. *cer'vus*, a "stag."] A family of animals having the *Cervus* for their type.

Cer'vĭne. Literally, "deer"-colored. Deep tawny, such as the dark part of a lion's hide.

Cer'vix, i'cis.* The neck, more particularly the back part:—also applied to those parts of organs that are narrowed like a neck.

Cervoise, sĕr'vwâz'. The French term for "beer." See CEREVISIA.

Cer'vus.* [From the Gr. *κέρας*, a "horn."] A "stag." Also the name of a genus of *Mammalia Ruminantia.*

Cer'vus El'e-phas.* The systematic name of the stag, the horns of which afford some valuable medicines. See CORNU.

Ces'pĭ-tōse. [Lat. **Cespito'sus**; from *ces'pis, ces'pitis*, a "turf."] Producing many stems from one root, forming a tuft or turf.

Ces'trum.* A genus of plants of the order *Solanaceæ*, comprising many species, natives of Brazil. Their fruits contain a poisonous juice. Some of them are used in medicine as diuretics, etc.

Cetacea,* se-ta'she-ạ, or **Cetaceans,** se-tā'shŭns. [From the Lat. *ce'tus*, a "whale."] An order of *Mammalia* living in the sea, including the whale, dolphin, porpoise, etc. They breathe air, have warm blood, and can remain but a limited time under water. As they are often compelled to come to the surface for air, to facilitate their ascent and descent they are furnished with a horizontal tail fin, and are thus obviously distinguished from the true fishes, in which the tail-fin is vertical.

Ce-tā'ceous. [Lat. **Ceta'ceus**; from *ce'tus*, a "whale."] Belonging to the whale; of the nature of the whale.

Cetaceum,* se-ta'she-ŭm. [From the Lat. *ce'tus*, a "whale."] The Pharmacopœial name (U.S. 1870, 1880) of spermaceti, a peculiar concrete, fatty substance obtained from the *Physe'ter macroceph'alus.* It is an ingredient of many ointments and cerates.

Cet'ic Aç'id. A supposed peculiar acid resulting from the saponification of cetin, found to be only a mixture of margaric acid and cetin.

Ce'tin. [Lat. **Ceti'na**; from *ce'tus*, a "whale."] Another name for spermaceti.

Ce-tra'rĭ-ạ.* The Pharmacopœial name (U.S. 1870, 1880) of the *Cetraria Islandica*, or Iceland moss.

Cetra'ria Is-lan'dĭ-cạ.* The systematic name of Iceland moss, otherwise called *Lichen Islandicus* and *Lichen Cetraria.* It is demulcent, tonic, and nutritious.

Ce-trā'rin. [Lat. **Cetrari'na.**] The bitter principle of the *Cetraria Islandica.*

Ce-vad'ic Aç'id. An acid produced by the saponification of the oil of the *Veratrum Sabadilla* or *Cevadilla*:—sometimes called *Sabadillic Acid.*

Cevadilla. See SABADILLA.

Ceylon Moss. See JAFNA MOSS.

Chaff. A dry, thin membrane:—applied to the glumes of grasses, and to the bracts on the receptacle of the *Compositæ.* See PALEA.

Chaf'fy. Furnished with chaff, or of the texture of chaff; paleaceous.

Chailletiaceæ,* kīl-le-te-a'she-ē. [From *Chaille'tia*, the name of one of the genera.] A natural order of exogenous trees or shrubs, found in hot climates.

Chair. See FLESH.

Cha-la'sis.* [From the Gr. *χαλάω*, to "relax."] Relaxation:—also the name given by Sauvages to the porcine species of scrofula.

Cha-la'za.* [Gr. *χάλαζα*, a "hail-stone."] A small tumor or tubercle found chiefly on the eyelid. (See CHALAZION.) In Botany, applied to an enlargement of the *raphé*, where it joins the base of the nucleus. In the plural (*Chala'zæ*) it denotes two spiral bodies, situated one at each end of the egg, the apex of each adhering to the yelk.

Cha-la'zĭ-on,* **Cha-la'zĭ-um.*** [From the same.] A small, transparent tubercle on the edge of the eyelid:—called also *Chalaza.*

Cha-la-zo'sis.* [Gr. *χαλάζωσις.*] The same as CHALAZA and CHALAZION.

Chăl-can'thum.* [From the Gr. *χαλκός*, "brass," or "bronze," and *ἄνθος*, a "flower."] The "flowers of brass," or the sulphate of zinc; Pliny's term for copperas, or the sulphate of iron.

Chăl-çed'o-nous, or **Chăl-çe-do'nĭ-ous.** [Lat. **Chalced'onus, Chalcedon'icus.**] Having the external characters or appearance of chalcedony.

Chăl-çed'o-nў (or kăl'se-do-ne). [From *Chalce'don*, a town of Asia Minor, where it was originally found.] A silicious stone, much used in jewelry; a translucent variety of quartz, which occurs amorphous or under imitative forms, as globular, etc.

Chaleur, shă'lŭr'. The French word for "caloric" or "heat." See CALORIC.

Chalk, chawk. [Lat. **Cre'ta**; Fr. *Craie*, krĕ.] Carbonate of lime; whitening; a variety of calcite. It is soft, white, earthy, destitute of lustre, insipid, inodorous, and insoluble. "Most chalk was made chiefly out of the shells of Rhizopods."—(DANA.)

Chalk, Black. Drawing-slate; a bluish-black clay, containing about 12 per cent. of carbon.

Chalk, Red. A species of argillaceous iron-ore; a variety of hematite.

Chalk, Span'ish. Steatite, or soapstone.

Chalk'-Stone. [Lat. **Cal'culus Arthrit'icus,** or **Cal'culus Podag'ricus.**] A concretion deposited in the hands and feet of those afflicted with gout, resembling chalk, though chemically different; gout-stone. Chalk-stones consist chiefly of uric acid and soda, sometimes, though rarely, of urate of lime.

Cha-lўb'e-ate. [Lat. **Chalybea'tus**; from the Gr. *χάλυψ*, gen. *χάλυβος*, "iron" or "steel."] Containing iron; impregnated with iron.

Chalyb'eate Wat'ers. Mineral waters whose predominating or active principle is iron. There are two kinds: the *carbonated*, containing carbonate of the protoxide of iron; and the *sulphurated*, containing sulphate of iron. Some of the latter contain sulphate of alumina, and are called *aluminous sulphated chalybeates.*

Chamaceæ,* ka-ma'she-ē, or **Chamaceans,** ka-ma'shans. [From the Lat. *cha'ma*, a "clam."] A family of acephalous Mollusks, of which the common clam is the type.

Cha-mæ'le-on.* A name given to certain thistles, from the variety and uncertainty of their colors, like the changing hues of the chameleon.

Cha-mæ'le-on'ī-dæ.* [From the Lat. *chamæ'leon.*] A family of *Reptilia Sauria*, having the chameleon for its type.

Chamælianciaceæ,* ka-me-le-an-se-a'she-ē. A natural order of plants, allied to the Myrtle-blooms, found in Australia. They are bushes with fragrant leaves.

Cham-æ-me'lum.* [From the Gr. *χαιμαί*, "on the ground," and *μῆλον*, an "apple;" so named, according to some, probably on account of its globe-like flowers, or perhaps from its fragrance being supposed to resemble that of apples.] Literally, "ground-apples." One of the names of the *An'themis nob'ilis*, or chamomile.

Chamæme'lum Nob'ī-le.* The *Anthemis nobilis.*

Chambers of the Eye. See CAMERA.

Cha-me'le-on Min'er-al. A combination of black oxide of manganese and potash, which gives a green color to water, passes gradually through all the shades of the prism, and at last becomes colorless.

Cham'o-mīle. [See CHAMÆMELUM.] The popular name for the *An'themis nob'ilis.* An infusion of the flowers of this plant forms an excellent bitter tonic.

Cham-o-mil'la Ro-ma'na.* Another name for the *An'themis nob'ilis.*

Champagne (shăm-pān') **Wine.** A famous French wine, produced in the former province of Champagne. There are varieties of this wine called red, white, still, and sparkling.

Champignon, shŏm'pĕn'yŏn'. The French for "mushroom."

Chancre, shank'ẹr; Fr. pron. shŏNkr. [A French corruption of the Latin *can'cer.*] A sore or ulcer arising from the direct application of the syphilitic poison.

Chancroid, shăng'kroid. [From the Lat. *chancre*, and the Gr. *εἶδος*, a "form" or "resemblance"] (Fr. *Chancroïde*, shŏN'kRo-ĕd'.) Chancre-like:—also used to denote soft chancre.

Chan'doo'. An extract of opium prepared by the Chinese for smoking.

Change of Life. In popular language, the constitutional disturbance often attending the cessation of the menstrual discharge in females.

Chan'nel. [Lat. **Cana'lis.**] A long cavity; a strait or narrow sea. In Botany, a longitudinal groove.

Chan'nelled. Having longitudinal grooves; canaliculate.

Chanvre. See CANNABIS SATIVA.

Characeæ,* ka-ra'she-ē. [From *Cha'ra*, one of the genera.] A natural order of cryptogamous, aquatic plants, remarkable for the distinctness with which the rotation of their fluids may be seen under a microscope. See CHARA HISPIDA.

Char'ac-ter. In Botany, the brief description or enumeration in scientific terms of the principal distinctive marks of a species, genus, order, or other group, is called its character.—(GRAY.)

Chăr'ac-ters, Chem'ī-cal, or **Chem'ical Sym'bols.** Various systems of these have been introduced, but are now almost entirely discarded from use. Formerly the principal metals were often represented by characters or signs: thus, gold, symbolized by the sun, was indicated by this sign, ☉; silver (the moon), by ☽. In like manner, copper (Venus), iron (Mars), tin (Jupiter), and lead (Saturn) were represented by the signs used for those planets. But now abbreviations are mostly employed instead. See Appendix, page 839.

Cha'ra His'pĭ-da.* A submersed, leafless, aquatic plant, of the order *Characeæ*, interesting to the physiologist as displaying the special circulation in plants, and as being analogous in Botany to the frog in Zoology.

Char'coal. This term commonly denotes coal from burnt wood (or *carbo ligni*), but is often used indefinitely for the residue of any animal or vegetable and of many mineral substances when heated to redness in close vessels. There are several varieties of charcoal, termed gas-carbon, lamp-black, wood-charcoal, coke, and ivory-black.

Charpie, shar-pee'. (Fr.) Lint, a substance obtained by scraping old linen cloth, or by unravelling old linen, and used for dressing wounds, etc.

Char'ta,* plural **Char'tæ.** The name of a Pharmacopœial preparation. See CHARTA CANTHARIDIS, etc.

Char'ta Can-thar'ī-dis.* "Cantharides Paper." The Pharmacopœial name (U.S. 1870, 1880) for a preparation made of wax, spermaceti, olive oil, Canada turpentine, and cantharides, spread thinly, when hot, on paper, and used as a blistering plaster.

Char'ta Po-tas'sĭ-i Ni-tra'tis.* "Nitrate of Potassium Paper." The Pharmacopœial name (U.S. 1880) for a preparation sometimes called *asthma paper*, made by dissolving nitrate of potassium in distilled water and immersing strips of white unsized paper in the solution.

Char'ta Sĭ-na'pis.* "Mustard Paper." Mustard Leaves. The Pharmacopœial name (U.S. 1870, 1880) for a preparation made of black mustard, benzin, and solution of gutta-percha, and applied by a brush to one side of a piece of rather stiff well-sized paper. It is used as a substitute for mustard plaster.

Char-ta'ceous. [From the Lat. *char'ta*, "paper."] Resembling paper or parchment in texture:—applied to parts of plants.

Chartreux, Poudre de, poodr dẹh shăR'tRUh'. See KERMES MINERAL.

Chaste Tree. See VITEX AGNUS-CASTUS.

Châtaigne. See CHESTNUT.

Chaton. See CATKIN.

Chaul-moo'gra. The *Gynocar'dia odora'ta*, a genus of plants belonging to the natural order *Capparidaceæ.* It is a native of India. The oil from the seeds is regarded as a remedy against leprosy. It is used both internally and externally.

Chav'ī-ca.* A genus of plants of the order *Piperaceæ*, comprising several species, natives of India, which yield betel pepper and long pepper.

Chav'ica Be'tel.* A plant, a native of India, producing the betel pepper, the leaf of which is wrapped around the areca-nut and chewed.

Chav'ica Rox-burgh'ĭ-i.* The plant which furnishes the long pepper of commerce. It is cultivated in India.

Chāy Root, or **Cha'yạ Root.** The root of the *Oldenlan'dia umbella'ta*, used for giving the beautiful red of the Madras cottons.

Cheek. See BUCCA, GENA, MALA.

Cheek'-Bone. The *os juga'le, os ma'læ*, or *os zygomat'icum.*

Cheese. [Lat. **Ca'seus**; Fr. *Fromage*, fro'-mäzh'.] A substance prepared from milk, composed chiefly of casein mixed with a small but variable proportion of oil (butter). See CASEIN.

Cheese Ren'net. The popular name for GALIUM VERUM, which see.

Cheiloplastic, kī-lo-plas'tik. [Lat **Cheiloplas'ticus.**] Belonging to the operation of cheiloplasty.

Cheiloplasty, kī'lo-plas-te. [Lat. **Cheiloplas'tice**; from the Gr. *χείλος*, the "lip," and *πλάσσω*, to "form."] The operation of supplying deficiencies of the lips by appropriating a sufficient portion of the neighboring healthy substance to that purpose.

Cheīr-an'thus Cheī'ri.* The systematic name of the Wall-Flower, a plant of the order *Cruciferæ*. It is a native of Southern Europe, growing on old walls, on sea-cliffs, and in quarries. It has fragrant flowers, which in a wild state are yellow.

Cheīr-ap'sĭ-a.* [From the Gr. *χείρ*, the "hand," and *ἅπτω*, to "touch," to "seize upon."] The act of rubbing or scratching,—a common symptom in cutaneous affections.

Cheiroptera.* See CHEIROPTERUS.

Cheiropterus,* kī-rop'ter-ŭs. [From the Gr. *χείρ*, the "hand," and *πτερόν*, a "wing."] Literally, "hand-winged,"—that is, having both wings and hands; cheirop'terous:—applied in the plural neuter (*Cheirop'tera*) to a family of *Mammalia* that have a fold of skin extending from the neck between their fore-feet and toes, enabling certain of them to fly, as the bat tribe.

Chela.* [Gr. *χηλή.*] A Latin word signifying "claw," but found in the Roman writers only in the plural (*Che'læ*). It is applied in Natural History especially to the claws of the crab, lobster, and other Crustaceans.

Chelæ Cancrorum.* See CANCRORUM LAPILLI and CANCRORUM CHELÆ.

Che-liç'er-a.* [From the Lat. *che'la*, a "claw," and the Gr. *κέρας*, a "horn."] A term applied in the plural (*Cheliç'eræ*) to the prehensile organs of certain *Arachnides*, terminated by two fingers, or by a single one resembling a hook or claw.

Chel-ĭ-do'nĭ-um.* [From the Gr. *χελιδών*, a "swallow," because its flowering coincides in time with the appearance of the swallow.] The Celandine (sel'an-dīn), a genus of plants belonging to the Linnæan class *Polyandria*, natural order *Papaveraceæ.*

Chelido'nium.* "Chelidonium." The Pharmacopœial name (U.S. 1880) for the *Chelidonium majus*, or Celandine. It is an acrid purgative, and has diuretic properties.

Chelido'nium Ma'jus.* The "Greater Celandine," an herb, the yellow juice of which has been employed as an escharotic to destroy warts.

Che-lif'er-ous. [Lat. **Chelif'erus**; from *che'la*, a "claw," and *fe'ro*, to "bear."] Bearing, or having, claws, or pincers.

Chel'ĭ-form. [Lat. **Chelifor'mis**; from *che'la*, a "claw."] Formed like a claw.

Che'loid. [Lat. **Cheloi'des**; from the Gr. *χέλυς*, a "tortoise," and *εἶδος*, a "form" or "resemblance."] Resembling the tortoise:—applied to a skin-disease.

Che-lo'nē [from the Gr. *χελώνη*, a "tortoise"] **Gla'bra.*** A plant of the order *Scrophulariaceæ*, a native of the United States. Its leaves are bitter and tonic. Its popular names are Shell-Flower and Turtle-Head.

Che-lo'nĭ-a,* or **Che-lo'nĭ-anș.** [From the Gr. *χελώνη*, a "tortoise"] An order of *Reptilia*, including the several varieties of the tortoise. See TESTUDO.

Chelo'nia My'das.* The systematic name of the green turtle, so prized by epicures as an article of food.

Chem'ĭ-cal. [Lat. **Chem'icus**; from *che'mia.*] Of, or belonging to, chemistry.

Chemical Characters. See CHARACTERS, CHEMICAL.

Chemico-Histology. See ORGANIC CHEMISTRY.

Chem'is-trў. [Lat. **Che'mia, Chi'mia,** or **Chy'mia**; supposed by some to be derived from the Greek *χύω*, to "pour out," or to "melt;" others derive it from the Arabic.] (Fr. *Chimie*, shē'mē'.) "The science which investigates the composition of natural substances, and the permanent changes of constitution which their mutual actions produce." The study of the properties of the elements, of the compounds formed by their union, and of the laws which regulate the combination of the elements with one another, and to which their compounds are subject in their mutual actions. This science comprises two primary divisions, *organic* and *inorganic* chemistry. Chemistry is in a pre-eminent degree a science of quantity and quality, and is the science which depends most entirely on experiment.

Che-mo'sis,* or **Chў-mo'sis.*** [From the Gr. *χήμη*, an "aperture," or *χυμός*, a "humor."] Inflammation of the conjunctiva, with lymph or blood effused in the cellular substance connecting it with the eyeball, so that it is greatly elevated and the cornea seems to form the bottom of a cavity.

Chêne, shạn. (Fr.) See QUERCUS.

Chenopodiaceæ,* ke-no-po-de-a'she-ē. [From *Chenopo'dium*, one of the genera.] The *Atriplices* of Jussieu, a natural order of exogenous plants, comprising spinage, beet, and many weeds found in nearly all parts of the world.

Che-no-po'dĭ-um.* [From the Gr. *χήν*, a "goose," and *ποῦς, ποδός*, a "foot."] A plant

called Goosefoot, belonging to the Linnæan class *Pentandria*, natural order *Chenopodiaceæ*. Several species of this genus possess anthelmintic properties.

Chenopo'dium.* "Chenopodium." The Pharmacopœial name (U.S. 1870, 1880) for the fruit of *Chenopodium ambrosioides*, var. *anthelminticum*. It is anthelmintic.

Chenopo'dium An-thel-min'tĭ-cum.* Wormseed, a plant growing in different parts of the United States. The seeds are given in powder, as a remedy for worms, in the dose of one or two teaspoonfuls to a child three or four years old. Of the oil, the dose is from four to eight drops.

Cherimoyer. See ANONA.

Cher'ry. A fruit-tree of the genus *Prunus* and the order *Rosaceæ*. The Wild Cherry (*Pru'nus serot'ina*) is a native of the United States.

Cher'ry-Lau'rel. The *Pru'nus Lau'ro-cer'asus*, a tree which is a native of Asia Minor, and is extensively cultivated in Europe. The leaves yield on distillation with water a peculiar volatile oil, along with hydrocyanic acid. The oil resembles that of bitter almonds. It has been employed to flavor liquors and various culinary preparations; but, as it is very poisonous, it must be used, if used at all, with great caution. The water distilled from the leaves is employed in medicine for the same purposes as hydrocyanic acid.

Cher'vil. (Fr. *Cerfeuil*, sĕr'fŭl'.) The popular name of the *Chærophyl'lum sati'vum*, a plant of the order *Umbelliferæ*, a native of Europe. Its leaves are aromatic.

Chest. One of the great splanchnic cavities, containing the heart and lungs. See THORAX.

Chest-Measurer. See STETHOMETER.

Chest'nut. (Fr. *Châtaigne*, shă'tăñ'.) The *Casta'nea ves'ca*, a noble forest-tree, of the order *Cupuliferæ*, a native of Asia, Europe, and the United States. It is said to be "the most magnificent tree which reaches perfection in Europe." —(Lindley's "Treasury of Botany.") It attains a great size in France, Italy, etc. Its wood is light, but durable, and valuable for fences. The nuts form an important article of food in France, Italy, and Spain.

Chest'nut Brown. Pure brown or reddish brown, like a chestnut. It is one of the fundamental colors of Mineralogy.

Chevestre, shę vĕs'tr; Fr. pron. shęh-vêtr'. [Lat. **Capis'trum,** *i.e.*, a "halter."] A double roller applied to the head in cases of fracture or luxation of the lower jaw.

Cheveu, shęh-vuh'. The French for HAIR.

Chew'ing Balls. Masticatories used in farriery, composed of the wood of the bay and juniper trees, assafœtida, liver of antimony, and pellitory of Spain.

Chewing the Cud. See RUMINATION.

Chĭ-as'ma, a*tis.* [From the Gr. *χιαζω*, to "make a cross like the letter X."] Chi'asm; the crossing of the fibres of the optic nerve. See INTRICATURA.

Chiaster,* ke-as'tęr. A bandage for stopping hemorrhage from the temporal artery, and named from its being shaped like a cross or the Greek letter X (*chi*):—written also *Kiaster*.

Chick'en-Brĕast'ed. A term applied to that form of the chest which occurs in the affection known as LORDOSIS, which see.

Chick'en-Pox. The popular English name for *varicella*.

Chicory. See CICHORIUM.

Chigre, chig'gęr, **Chigo,** chee'go. (Fr. *Chique*, shĕk.) A small sand-flea of the West Indies, which insinuates itself into the soft and tender parts of the fingers and toes, causing great irritation.

Chil'blain. [Lat. **Per'nio, o'nis.**] (See BLAIN.) A painful inflammatory swelling on the fingers, toes, or heels, consequent on exposure to severe cold; a kibe.

Childbed Fever. See PUERPERAL FEVER.

Chĭ-maph'ĭ-la.* [From the Gr. *χεῖμα*, "winter," and *φιλέω*, to "love."] A Linnæan genus of the class *Decandria*, natural order *Ericaceæ*. Also the Pharmacopœial name (U.S. 1870, 1880) for the leaves of the *Chimaphila umbellata*, or Pipsissewa. It is diuretic, tonic, and astringent.

Chimaph'ila Um-bel-la'ta.* The systematic name of the Pipsissewa, a native of nearly all parts of the United States. It is diuretic and tonic.

Chimie, shĕ'mĕ'. The French term for CHEMISTRY, which see.

Chim'ney-Sweep'ers' Can'cer. [Lat. **Can'cer Mundito'rum.**] See CANCER SCROTI.

Chĭ'na Glaze. A preparation for printing blue frit, made from ten parts of glass, two parts of lead, and three or more parts of blue calx.

Chi'na Grass. The popular name of the fibre of BÖHMERIA NIVEA, which see.

China Nova,* ke'nă no'vă. The name given in Germany to the red bark known in France as *Quinquina nova* (or *Quinquina rouge*): it is the produce of the *Cinchona oblongifolia*. It is very different from the red bark of English commerce, though they have been confounded by the London College.—(HOBLYN.)

Chinchina,* kin-kee'na. Cinchona, or Peruvian bark.

Chinchona.* See CINCHONA.

Chin-Cough. See PERTUSSIS.

Chi-nese' Worm'wood. The *Artemisia Chinensis*.

Chĭ-noi'din. [Lat. **Chinoidi'na**; from *chi'na*, "Peruvian bark," and the Gr. *εἶδος*, a "form" or "resemblance."] A substance containing a small portion of amorphous quinine.

Chĭ-noi'dĭ-num.* "Chinoidin." The Pharmacopœial name (U.S. 1880) for a mixture of alkaloids, mostly amorphous, obtained as a by-product in the manufacture of the crystallizable alkaloids from cinchona. It is antiperiodic.

Chin'qua-pin, or **Chink'a-pin.** The popular name of the *Casta'nea pu'mila*, an American tree which bears an edible nut.

Chĭ-o-nan'thus.* [From the Gr. *χιών*, "snow," and *ἄνθος*, "flower."] A genus of shrubs

of the order *Oleaceæ*. The *Chionan'thus Virgin'ica*, or Fringe-Tree, is an ornamental shrub. An infusion of the root has been used as a tonic.

Chī'ra-gra,* or **Cheīr'a-gra.*** [From the Gr. *χείρ*, the "hand," and *ἄγρα*, a "seizure."] Gout in the joints of the hand.

Chi-ra'ta.* "Chiretta." The Pharmacopœial name (U.S. 1880) for the entire plant of *Ophe'lia Chira'ta*, an herb of the order *Gentianaceæ*, a native of India. It is intensely bitter, and is tonic.

Chĭ-ret'ta.* The Pharmacopœial name (U.S. 1870) for the herb and root of the *Agatho'tes Chiray'ta*. *Chiretta* and *Chirata* appear to be different names for the same plant. See CHIRATA.

Chirimoya. See ANONA.

Chī'ro-man-cy. [From the Gr. *χείρ*, the "hand," and *μαντεία*, "divination."] The art of divining by the inspection of the hand.

Chĭ-ro'nĭ-a.* [From *Chi'ron*, the Centaur, fabled to have been a skilful physician.] A Linnæan genus of the class *Pentandria*, natural order *Gentianaceæ*. It comprises several species of herbs or small shrubs, natives of South Africa.

Chiro'nia Cen-tau'rĭ-um.* The former name of the *Erythræa Centaurium*, an herb called the Lesser Centaury. (Fr. *Centaurée petite*, sŏN'-tō'rà' pęh-tĕt'.) The tops (*Centau'rii cacu'mina*) are aromatic and tonic.

Chī-rop'o-dist. [From the Gr. *χείρ*, the "hand," and *πούς, ποδός*, a "foot."] Strictly speaking, one who treats diseases of the hands and feet; but commonly applied to one who professes to remove corns and bunions.

Chī-ro-the'ca.* [From the Gr. *χείρ*, the "hand," and *θήκη*, a "case."] A bandage for the hand.

Chirurgeon. See SURGEON.

Chī-rur'ger-y. [Lat. **Chirur'gia**; from the Gr. *χείρ*, the "hand," and *ἔργον*, a "work."] Literally, a "manual operation:" hence that part of medicine which heals with the hand, without, however, excluding other remedies. See SURGERY.

Chī-rur'gĭ-cal. [Lat. **Chirur'gicus**; from *chirur'gia*, "surgery."] Belonging to surgery; surgical.

Chī-rur'gus.* [From the Gr. *χείρ*, the "hand," and *ἔργον*, a "work."] A surgeon, or chirurgeon.

Chĭ-ti'na.* [From the Gr. *χιτών*, a "doublet."] The hard crust forming the outward integument —especially the *elytra*—of certain insects; the chitine.

Chlænaceæ,* kle-na'she-ē. [From the Gr. *χλαῖνα*, a "cloak," and, hence, an "involucrum," all plants of this order having involucra.] A small natural order of exogenous trees and shrubs, found in Madagascar. Many of them have showy flowers. Sometimes written *Chlenaceæ*.

Chlo-as'ma, a'tis.* [From the Gr. *χλοάζω*, to "be green or greenish yellow."] A cutaneous affection exhibiting spots and patches of a yellowish-brown color:—sometimes called *Mac'ulæ hepat'icæ* ("liver-spots"), from a supposition that they are caused by disease of the liver. The *Pityriasis versicolor* of Willan.

Chlo'ra Per-fo-lĭ-a'ta.* An herbaceous plant, of the order *Gentianaceæ*, a native of England. It bears yellow flowers. The whole plant is very bitter, and is tonic.

Chlor-a-cet'ic Ac'id. A remarkable acid, in which the three atoms of the hydrogen of acetic acid are replaced by three atoms of chlorine.

Chlo'ral. This term, derived from the first syllables of the words *chlorine* and *alcohol*, has been applied by Liebig to a liquid compound of chlorine, carbon, hydrogen, and oxygen, prepared by the mutual action of alcohol and chlorine. The term is applied to two things,—anhydrous chloral and the hydrate of chloral. The anhydrous chloral is not used in medicine. *Chloral* is the Pharmacopœial name (U.S. 1870, 1880) for the hydrate of chloral, which occurs in rhomboidal, colorless, and transparent crystals, slowly evaporating when exposed to the air, having an aromatic, penetrating odor, a bitterish, caustic taste, and a neutral reaction. It is used in medicine as an anodyne and hypnotic. In excessive doses it is a fatal poison. In spasmodic affections it is one of the most powerful of remedies.

Chloranthaceæ,* klo-ran-tha'she-ē. [From *Chloran'thus*, one of the genera.] A natural order of exogenous plants, found in the hot parts of India and America. They have stimulating properties of great importance. The root of *Chloran'thus officina'lis* is prized in Java as a remedy for typhus fever. This order includes only two known genera,—*Chloranthus* and *Hedyosmum*.

Chlo'rāte. [Lat. **Chlo'ras, a'tis**; from *chlor'icum* ac'idum.] A combination of chloric acid with a base.

Chlorate of Potash. See POTASSÆ CHLORAS.

Chlor'ic. [Lat. **Chlor'icus**; from *chlo'rium*, "chlorine."] Derived from chlorine; of the nature of chlorine.

Chlor'ic E'ther. Under this name two compounds have been confounded. One of these results from the action of chlorine on olefiant gas, and is generally known as the *oil of the Dutch chemists*. The other is obtained by passing hydrochloric acid gas into alcohol to saturation and distilling the product: this is generally called *hydrochloric ether*.

Chlo'rĭde. [Lat. **Chlor'idum**; from *chlo'rium*, "chlorine."] (Fr. *Chlorure*, klo'rür'.) A combination of chlorine with different substances. Among the numerous chlorides are common salt, calomel, and chloride of lime.

Chloride of Mercury. See HYDRARGYRI CHLORIDUM.

Chlo'rĭne. [Lat. **Chlo'rium**; from the Gr. *χλωρός*, "green."] An elementary body, formerly called oxy-muriatic acid. It is a yellowish-green gas, with a suffocating odor, and is incombustible. It is a powerful disinfectant, and has the property of discharging colors from cotton, linen, etc. It is one of the essential constituents of the human body. Its compounds are numerous and important. An aqueous solution of chlorine is used as a stimulant and antiseptic.

Chlo-rī'o-dāte. [Lat. **Chlori'odas, a'tis**; from *chloriod'icum* ac'idum.] A combination of chloriodic acid with a base.

Chlo-rĭ-od'ic. [Lat. **Chloriod'icus**; from *chlo'rium*, "chlorine," and *iodin'ium*, "iodine."] Belonging to chlorine and iodine:—applied to an acid obtained from this compound.

Chlo'ro-. A prefix in compound terms, meaning that chlorine is one of the components of the substance denoted, or is employed in its preparation.

Chlo-ro-car-bon'ic. [Lat. **Chlorocarbon'icus**; from *chloro-*, and *carbo'nium.*] A term applied to an acid obtained from chlorine and carbon. See PHOSGENE GAS.

Chlo'ro-dyne. The name of a secret nostrum used chiefly as an anodyne.

Chlo'ro-form, or **Chlo-ro-for'myle.** [Lat. **Chlorofor'mum**; from *chlo'rine*, and *for'myle.*] A colorless, volatile liquid, varying in specific gravity from 1.45 to 1.49, obtained by distilling a mixture of chloride of lime and alcohol. It is a powerful anæsthetic agent. It is usually administered in the form of vapor, being inhaled into the lungs. It is sometimes taken into the stomach, as an anodyne or soporific, in which case a fluidrachm is equivalent to about thirty-five drops of laudanum.

Chlo-ro-for'mum Pu-rĭ-fĭ-ca'tum.* "Purified Chloroform." The Pharmacopœial name (U.S. 1880) for a heavy, clear, colorless, diffusive liquid, of a characteristic pleasant ethereal odor, a burning, sweet taste, and a neutral reaction. It is largely used as an anæsthetic.

Chlorofor'mum Ve-na'le.* "Commercial Chloroform." The Pharmacopœial name (U.S. 1870, 1880) for unpurified chloroform. It should contain at least 98 per cent. of chloroform, and is used as a solvent, as a menstruum, or as an addition to liniment.

Chlo-rom'e-ter. [Lat. **Chlorom'etrum**; from *chlo'rium*, "chlorine," and the Gr. *μέτρον*, a "measure."] An apparatus for estimating the quantity of chlorine in combination with water or a base, but especially for ascertaining the bleaching power of a solution of chlorine, or chloride of lime, etc. See next article.

Chlo-rom'e-trў, or **Chlo-rim'e-trў.** [From the same.] The process of estimating the bleaching power of chloride of lime by the quantity of a solution of sulphate of indigo which a known weight of the chloride can discolor or render yellow.

Chlo'ro-phўll. [From the Gr. *χλωρός*, "green," and *φύλλον*, a "leaf."] The green coloring-matter of leaves; a peculiar green matter lying loose in the cells in the form of grains:—written also *Chlorophylle.*

Chlo-ro'sis.* [From the Gr. *χλωρός*, "green."] A disease peculiar to young females under retention or suppression of the menstrual discharge; green-sickness. A genus of the order *Adynamiæ*, class *Neuroses*, of Cullen's nosology. Chlorosis is also a disease to which plants are subject. It consists in a pallid condition of the plant, in which the tissues are weak and the cells are more or less destitute of chlorophyll.

Chlo-rot'ic. [Lat. **Chlorot'icus.**] Belonging to chlorosis.

Chlo'rous Aç'id. The peroxide of chlorine, because approaching to an acid in its nature.

Chlo-rox'ў-lon Swie-te'nĭ-a.* The Satin-Wood of India, a tree of the order *Cedrelaceæ*, a native of India and Ceylon. It furnishes a handsome light-colored hard wood called satin-wood.

Chlōr'ū-ret. [Lat. **Chlorure'tum**; from *chlo'rium*, "chlorine."] (Fr. *Chlorure*, klo'rür'.) A combination of chlorine with a metal or an inflammable body. See CHLORIDE.

Chlor-y'dric (or **Chlor-hy'dric**) **Aç'id.** The name given by Thenard to muriatic—now called hydrochloric—acid.

Choc'o-late. (Fr. *Chocolat*, sho'ko'lä'.) A dried paste prepared from the seeds or kernels of the *Theobroma Cacao*, mixed with sugar and flavored with vanilla or spices. It is much used in confectionery. When used as a beverage it is dissolved in hot water or milk.

Choke'-Cher'rў. The popular name of the *Pru'nus Virginia'na.*

Choke'-Damp. [Ger. *Dampf*, a "vapor."] A name applied by miners to all irrespirable gases, but more especially to carbonic acid gas.

Cho-læ'mĭ-a.* [From the Gr. *χολή*, "bile," and *αἷμα*, "blood."] The presence of bile-pigment in the blood.

Chol'a-gŏgue. [Lat. **Cholago'gus**; from the Gr. *χολή*, "bile," and *ἄγω*, to "lead or carry off."] A medicine which has the property of increasing the evacuation of bile.

Cho'le.* [Gr. *χολή.*] Bile. See BILIS.

Cho'le-āte. [Lat. **Cho'leas, a'tis.**] A combination of choleic acid with a base.

Cho-le-çўs-tec'to-mў. [From the Lat. *cholecys'tis*, the "gall-bladder," and the Gr. *ἐκ*, "out," and *τομή*, a "cutting."] The operation of cutting gall-stones out of the gall-bladder.

Cho-le-çўs'tis.* [From the Gr. *χολή*, "bile," and *κύστις*, "bladder."] The gall-bladder.

Cho-le-çўs-ti'tis, i*dis.* [From the Lat. *cholecys'tis*, the "gall-bladder."] Inflammation of the gall-bladder.

Choledoch. See CHOLEDOCHUS.

Cho-led'o-chus.* [From the Gr. *χολή*, "bile," and *δέχομαι*, to "receive."] (Fr. *Cholédoque*, ko'lä'dok'.) Receiving gall or bile. See DUCTUS COMMUNIS CHOLEDOCHUS.

Cho-le'ic. [Lat. **Chole'icus**; from the Gr. *χολή*, "bile."] Relating to bile:—applied to an acid obtained from bile.

Cho-le'in. [Lat. **Cholei'na**; from the Gr. *χολή*, "bile."] The peculiar principle of bile.

Cho-le-me'sĭ-a.* [From the Gr. *χολή*, "bile," and *ἔμεσις*, "vomiting."] The vomiting of bile.

Chol-e-pўr'rhin. [Lat. **Cholepyrrhi'na**; from the Gr. *χολή*, "bile," and *πυῤῥός*, a "yellowish red."] A term synonymous with *Biliphein.*

Chol'er-a.* [From the Gr. *χολή*, "bile," and *ῥέω*, to "flow;" or *χολάς*, the "intestines," and *ῥέω*, to "flow."] A vomiting and purging of bile (this is true at least respecting European cholera), with painful griping, and spasm of the muscles of

the abdomen and calves of the legs, etc. A genus of the order *Spasmi*, class *Neuroses*, of Cullen's nosology.

CHOL'ERA, ASIAT'IC. [*Chol'era Asiat'ica.**] A remarkable epidemic disease, consisting in a malignant form of cholera, in which all the symptoms are much more severe and rapid in their progress to a too generally fatal issue.

CHOL'ERA BILIO'SA.* "Bilious Cholera." Copious and frequent vomiting, at first of the alimentary and fæcal matters, with redundancy of bile, and spasms of the legs and thighs. This is nothing more than a form or variety of European cholera.

CHOL'ERA, EUROPE'AN.* [*Chol'era Europæ'a.*] A name given to cholera as it usually appears in Europe when not epidemic, to distinguish it from the epidemic and malignant form of the disease known as Asiatic cholera.

CHOL'ERA INFAN'TUM.* "Cholera of Infants." A name applied to a disease common among children in the United States during the summer months, and hence called the "summer-complaint." It is attended with vomiting and purging of green or yellow matter, often mixed with slime or blood.

CHOL'ERA MOR'BUS.* A common name of non-epidemic cholera. See CHOLERA, EUROPEAN.

Chol-e-rā'ic. [Lat. **Cholera'icus.**] The same as CHOLERICUS.

Cho-lĕr'ĭ-cus.* (Fr. *Cholérique*, ko'lā'rĕk'.)[3] Belonging to cholera; also bilious.

Chol'er-ine. The first stage of epidemic cholera:—sometimes applied to a light form of sporadic cholera characterized by a sudden uneasiness, frequent stools, watery alvine dejections, and moderate fever.

Chol'er-oid. [Lat. **Choleroi'des**; from *chol'era*, and the Gr. εἶδος, a "form" or "resemblance."] Resembling cholera:—applied to diseases of this character.

Chol'er-o-pho'bĭ-a.* [From the Lat. *chol'era*, and the Gr. φόβος, "fear."] A dread of cholera.

Chol'er-o-pho'ne.* [From the Lat. *chol'era*, and the Gr. φωνή, the "voice."] The *vox choler'ica*, or faint whispering voice of choleraic patients.

Cho-le-ste-a-to'ma, a*tis.* [From the Gr. χολή, "bile," and the Lat. *steato'ma.*] A fatty tumor, laminated and pearly, principally composed of crystals of cholesterin.

Cho-les-ter-æ'mĭ-a.* [From the Lat. *cholesteri'na*, and the Gr. αἷμα, "blood."] A term applied to a morbid excess of cholesterin in the blood, resulting from non-excretion.

Chol-es-tĕr'ic Aç'id. An acid formed by the action of nitric acid on cholesterin.

Cho-lĕs'ter-in, or Cho-lĕs'ter-ine. [Lat. **Cholesteri'na**; from the Gr. χολή, "bile,"[3] and στερεός, "firm," or "solid."] A pearl-like, fatty substance, of which human biliary calculi are chiefly composed.

Chol'ic. [Lat. **Chol'icus**; from the Gr. χολή, "bile."] Belonging to bile; bilious.

Chol'ic Aç'id. [Lat. **Aç'idum Chol'icum.**] A peculiar acid obtained from bile.

Chol'ĭ-nāte. [Lat. **Chol'inas, a*tis.**] Cholinic acid combined with a base.

Cho-lin'ic Aç'id. [Lat. **Aç'idum Cholin'icum.**] A peculiar substance obtained from bile.

Chololic. See CHOLIC.

Chol-o-lith'ic. [Lat. **Chololith'icus**; from *cholol'ithus.*] Belonging to a gall-stone.

Cho-lol'ĭ-thus.* [From the Gr. χολή, "bile," and λίθος, a "stone."] A gall-stone, or biliary calculus.

Cho-lo'sis.* [From the Gr. χολή, "bile."] In the plural (*Cholo'ses*), biliary diseases.

Chon-do-den'dron.* A genus of climbing shrubs of the order *Menispermaceæ.*

Chondoden'dron To-men-to'sum.* The systematic name of the plant from which *Pareira brava* is obtained. It is a climbing vine, a native of Brazil and Peru. See PAREIRA.

Chon-drăl'ġĭ-a.* [From the Gr. χόνδρος, "cartilage," and ἄλγος, "pain."] Pain (rheumatic, arthritic, or inflammatory) of the cartilages.

Chon'drin, or Chon'drine. [Lat. **Chondri'na**; from the Gr. χόνδρος, "cartilage."] Gelatin obtained from the permanent cartilages, cornea, etc. See CHONDROGEN.

Chon-drī'tis. [From the Gr. χόνδρος, "cartilage."] Inflammation of cartilage.

Chon'dro-ġen. [From the Gr. χόνδρος, "cartilage," and γεννάω, to "produce."] The base of true cartilage and of the cornea. By boiling it is resolved into CHONDRIN.

Chon-dro-ġen'e-sis.* [From the same.] The formation of cartilage.

Chon-dro-glos'sus.* A small muscle, or rather fasciculus of muscular fibres, running from the cartilage of the *os hyoides* to the tongue. It may be considered as a part of the *hyoglossus.*

Chon-drog'ra-phy. [Lat. **Chondrogra'phia**; from the Gr. χόνδρος, "cartilage," and γράφω, to "write."] A history or description of the cartilages.

Chon'droid. [Lat. **Chondroi'des**; from the Gr. χόνδρος, "cartilage," and εἶδος, a "form" or "resemblance."] Resembling cartilage.

Chon-drol'o-ġy. [Lat. **Chondrolo'gia**; from the Gr. χόνδρος, "cartilage," and λόγος, a "discourse."] A dissertation on the nature and structure of cartilages; the science of cartilages.

Chon-dro'ma, a*tis.* [From the Gr. χόνδρος, "cartilage."] A cartilaginous growth.

Chon-drop-te-rўġ'ĭ-us.* [From the Gr. χόνδρος, "cartilage," and πτερύγιον, a "little wing."] "Cartilage-finned:"—applied in the plural masculine (*Chondropteryg'ii*) to a tribe or series of fishes.

Chondros.* See CARTILAGE.

Chon-dro'sis.* The progress of chondroma; the formation of cartilage.

Chon-drot'o-mў. [Lat. **Chondroto'mia**; from the Gr. χόνδρος, "cartilage," and τέμνω, to "cut."] Dissection or division of cartilage.

Chon'drus.* "Chondrus." Carrageen. The Pharmacopœial name (U.S. 1870, 1880) for *Chondrus crispus* and *Chondrus mammilosus*. It is nutritive and demulcent.

Chon'drus Cris'pus.* Carrageen, or Irish Moss, a plant belonging to the natural order *Algaceæ*.

Chor'da.* [Gr. χορδή, an "intestine," a "chord."] A cord; originally, the string of a harp: hence, any string; a sinew, or nerve. In Geometry, the term is applied to a right line extending from one extremity of an arc to another.

Chor'da Dor-sa'lis.* "Dorsal Cord." A name applied by some writers to the rudiment of the spinal column existing in the fœtus.

Chor'da Mag'na.* "Great Cord, or Sinew." The *tendo Achillis*.

Chor'da Tym'pa-ni.* "Cord of the Tympanum." A branch of the seventh pair of nerves, distributed on the tympanum.

Chor'da Ven-tric'u-li.* "Nerve of the Stomach." A designation of the gastric plexus of the *par vagum*.

Chor'dæ Ten-din'e-æ.* "Tendinous Cords." Attachments connecting the *carneæ columnæ* of the ventricles to the auricular valves of the heart.

Chor'dæ Vo-ca'lēs.* "Vocal Cords." The thyro-arytenoid ligaments of the larynx, or the inferior ligaments of the glottis:—so named because they were supposed to produce the voice.

Chordæ Willisii.* See WILLIS, CHORDS OF.

Chor-dap'sus.* [From the Gr. χορδή, "intestine," and ἅπτω, to "bind," to "seize," to "attack."] A kind of violent spasmodic colic, in which the large intestines seem as it were twisted into knots.

Chor-dee'. [Lat. **Chorda'ta**; Fr. *Chordé*, kor'dā'; literally, "corded," or "twisted"?] A painful tension and downward curvature of the penis, experienced in gonorrhœa.

Cho-re'a,* or **St. Vi'tus' Dance.** [From the Gr. χορεία, a "dancing."] A convulsive disease, characterized by irregular and involuntary movements of the limbs.

Cho-re'ic. Pertaining to chorea.

Cho'rĭ-on.* [Gr. χορίον, "skin," "leather."] The second or most external membrane involving the fœtus. Also the *membra'na putam'inis*, or membrane of the shell of the egg. In Botany, a carpel.

Cho'rĭ-um,* or **Cho'rĭ-on.*** [From the same.] The dermis, or innermost layer of the skin; the true skin.

Cho'roid. [Lat. **Choroi'des**; from *cho'rion*, and the Gr. εἶδος, a "form" or "resemblance."] Resembling the chorion.

Cho'roid Mem'brane. [Lat. **Membra'na Choroi'des.**] The second membrane of the eyeball, immediately beneath the sclerotic coat. Also the *ve'lum interpos'itum*, or choroid membrane of the brain.

Cho'roid Plex'us. [Lat. **Plex'us Choroi'des.**] A plexus of vessels, or fold of thin vascular membrane, derived from the *pia mater*, situated in the lateral ventricles of the brain.

Cho-roi-di'tis.* Inflammation of the choroid membrane of the eye.

Cho-roi-do-i-ri'tis.* Inflammation of the choroid membrane and of the iris.

Cho-roi-do-ret-ĭ-ni'tis.* Inflammation of the choroid membrane and of the retina.

Christ'mas Rose. The *Helleb'orus ni'ger*.

Chro'māte. [Lat. **Chro'mas, a'tis.**] A combination of chromic acid with a base.

Chro-mat'ic. [Lat. **Chromat'icus**; from the Gr. χρῶμα, χρῶματος, "color."] Relating to color or colors; having color. See ACHROMATIC.

Chromatic Aberration. See ABERRATION, and CHROMATISM.

Chro'ma-tĭsm. [Lat. **Chromatis'mus**; from the same.] The prismatic aberration of the rays of light,—or, in other words, the aberration of refrangibility,—caused by the different kinds of rays being refracted unequally.

Chro'ma-toġ'e-nous. [Lat. **Chromatoġ'enus**; from the Gr. χρῶμα, "color," and γεννάω, to "generate."] Generating or forming color:—applied chiefly to the functions of the *derma*.

Chro-ma-tol'o-ġy. [Lat. **Chromatolo'gia**; from the Gr. χρῶμα, "color," and λόγος, a "discourse."] The science of colors.

Chro'ma-top'sy. [Lat. **Chromatop'sia**; from the Gr. χρῶμα, "color," and ὄψις, "vision."] Colored vision.

Chro'ma-trōpe. [Lat. **Chromat'ropus**, or **Chromatro'pium**; from the Gr. χρῶμα, "color," and τρέπω, to "turn."] An instrument for exhibiting, on the principle of the magic lantern, a variety of colors producing, by a rapid revolving motion, beautiful and highly pleasing figures.

Chro-ma-tu'rĭ-a.* [From the Gr. χρῶμα, "color," and οὖρον, "urine."] The secretion of urine of an unnatural color.

Chrōme. A metal. See CHROMIUM.

Chrome Al'um. A crystallizable double salt, formed of the sulphates of chromium and of potash.

Chrome Green. Sesquioxide of chromium, a beautiful bright green pigment.

Chrome Yel'low. The chromate of lead, much used as a pigment.

Chrom'ic, or **Chro'mic.** [Lat. **Chrom'icus.**] Belonging to chromium. See CHROMIC ACID.

Chrom'ic (or **Chro'mic**) **Aç'id.** [Lat. **Aç'idum Chrom'icum.**] A teroxide of chromium, forming a valuable escharotic for the removal of morbid growths, especially those of syphilitic origin. It has been assigned a place in the Materia Medica in the U.S. Pharmacopœia for 1880.

Chro-mĭ-dro'sis.* [From the Gr. χρῶμα, "color," and ἱδρόω, to "sweat."] Abnormal coloration of the perspiration.

Chro'mĭ-um*, or **Chrōme.** [From the Gr. χρῶμα, "color."] A metal extracted from native chromate of lead or of iron. It is whitish, brittle, and very difficult to fuse. Its specific gravity is 5.5. It is so hard as to scratch glass. The oxide of chromium is a green pigment.

Chro'mo-ġen. [Lat. **Chromoge'nium**; from the Gr. *χρῶμα*, "color," and *γεννάω*, to "generate."] Vegetable coloring-matter, which, acted on by acids and alkalies, produces red, yellow, or green tints.

Chro'mo-phy-to'sis.* [From the Gr. *χρῶμα*, "color," and *φυτόν*, a "plant."] An affection of the skin, characterized by yellowish-brown maculæ, usually occurring on the upper part of the thorax. See PHYTOSIS.

Chromopsy. See CHROMATOPSY.

Chro'mo-sphere. [From the Gr. *χρῶμα*, "color," and *σφαῖρα*, a "sphere."] The lower part of the sun's atmosphere which rests directly on the solid part of the sun. It is a sheet of flame several thousand miles deep, surrounding the sun. The spectroscope reveals that the chromosphere consists of the burning vapors of iron, lead, sodium, and about twenty more elements which are found in our planet.

Chro'mule, or, better, **Chro'mŭle.** [From the Gr. *χρῶμα*, "color," and *ὕλη*, "material," "substance."] Another name for *chlorophyll*, or the coloring-matter of plants:—applied especially to that which is liquid and not green.

Chron'ic. [Lat. **Chron'icus**; from the Gr. *χρόνος*, "time."] A term applied to diseases long continued:—opposed to *acute*.

Chro-niç'ĭ-tў. The state of a chronic malady.

Chron'o-ther'mal. [Lat. **Chronotherma'lis**; from the Gr. *χρόνος*, "time," and *θέρμη*, "heat."] Relating to time and temperature:—applied to a theory that all diseases have periodic intermissions, with alternate chills and heats.

Chro-op'sĭ-a,* written also **Chrup'sĭ-a** (by a contraction of the Greek *χροοψία* into *χρυψία*, which in Latin becomes *Chrupsia*). The same as CHROMATOPSIA. See CHROMATOPSY.

Chrot'ic. [Lat. **Chrot'icus**; from the Gr. *χρώς*, "skin."] Of or belonging to the skin.

Chrўs'a-lis, *id'is.** [From the Gr. *χρυσός*, "gold."] The second stage in the metamorphosis of insects. See AURELIA.

Chrўs-an'the-mum.* [From the Gr. *χρυσός*, "gold," and *ἄνθεμον*, a "flower."] See CALENDULA OFFICINALIS.

Chrўs-a-ro-bi'num.* "Chrysarobin." The Pharmacopœial name (U.S. 1880) for a mixture of proximate principles (commonly misnamed Chrysophanic Acid) extracted from Goa powder, a substance found deposited in the wood of the trunk of *Andira Araroba*. It is a pale orange-yellow, crystalline powder, permanent in the air, odorless and tasteless, almost insoluble in water. It is a gastro-intestinal irritant. It has been long used in India as a remedy for skin diseases.

Chrysobalanaceæ,* kris-o-băl-a-na'she-ē. [From *Chrysobal'anus*, one of the genera.] A natural order of shrubs and trees, related to the *Rosaceæ*. They are natives of tropical regions. Several species produce esculent stone-fruits. The *Couepia*, a fruit-tree of South America, belongs to this order, which many botanists consider as only a tribe of the order *Rosaceæ*.

Chrўs'o-băl'a-nus.* [From the Gr. *χρυσός*, "gold," and *βάλανος*, an "acorn."] Literally, the "golden acorn" or "nut." A name sometimes given to the nutmeg.

Chrysobal'anus I-ca'co.* A tree or shrub, a native of the West Indies. It bears an edible, astringent fruit, called *American myrobalan*.

Chrўs'o-bĕr'ўl. [From the Gr. *χρυσός*, "gold," and *βήρυλλος*, "beryl."] A beautiful gem, of a pale yellow or green color, consisting of glucina and alumina.

Chrўs'o-col'la.* [From the Gr. *χρυσός*, "gold," and *κόλλα*, "glue."] "Glue for Gold." The Greek name for borax. It does not appear, however, that borax was known to the ancients: their chrysocolla is said to have been a very different substance, composed of the rust of copper triturated with urine. The name *chrysocolla* is now applied to a hydrated silicate of copper.

Chrўs'o-līte. [From the Gr. *χρυσός*, "gold," and *λίθος*, a "stone."] A mineral composed chiefly of silicate of magnesia and iron. It is of a green or a golden-yellow color, and is used in jewelry.

Chrў-som'e-la.* [From the Gr. *χρυσός*, "gold," and *μέλας*, "black."] A genus of coleopterous insects, named from the brilliant metallic hues, mostly of green and gold, with which their wing-covers are adorned.

Chrўs'o-me'lĭ-a.* [From the Gr. *χρυσός*, "gold," and *μῆλον*, a "apple."] The Seville orange (*Ci'trus Auran'tium*).

Chrўs'o-mĕl'ĭ-dæ.* A family of coleopterous insects, of which the *Chrysom'ela* is the type.

Chrўs-o-phўl'lum.* [From the Gr. *χρυσός*, "gold," and *φύλλον*, a "leaf."] A genus of plants of the order *Sapotaceæ*.

Chrysophyl'lum Glўç-ў-phlœ'um.* A tree, a native of Brazil, yielding a valuable drug called MONESIA, which see.

Chthonophagia,* tho'no-fa'je-a. [From the Gr. *χθών*, "earth," and *φάγω*, to "eat."] A disease not uncommon among the negroes of the South, accompanied by a strong desire to eat dirt or earthy matter. Also called *Cachex'ia Africa'na*.

Chŭr'rus. An extract obtained from Indian hemp. See CANNABIS INDICA.

Chўle. [Lat. **Chy'lus**; from the Gr. *χυλός*, "juice."] The milk-like liquor from which the blood is formed, occupying the lacteal vessels and thoracic duct.

Chў-lif'er-ous. [Lat. **Chylif'erus**; from *chy'lus*, "chyle," and *fe'ro*, to "bear," to "carry," to "convey."] Bearing or conveying chyle:—applied to the lacteal vessels.

Chў-lĭ-fĭ-cā'tion. [Lat. **Chylificatio, o'nis**; from *chy'lus*, "chyle," and *fa'cio*, to "make."] The process by which the chyle is separated from the chyme.

Chў-lo-poi-et'ic. [Lat. **Chylopoiet'icus**; from *chy'lus*, "chyle," and the Gr. *ποιέω*, to "make."] Connected with the formation of chyle.

Chў-lo'sis.* [From the Gr. *χυλός*, "juice."] The same as CHYLIFICATION.

Chȳ-lu'rĭ-a.* [From the Lat. *chy'lus*, "chyle," and the Gr. *οὖρον*, "urine."] A discharge of chyle with the urine.

Chȳme. [Lat. **Chy'mus**; Gr. *χυμός*, "juice."] The pulpy mass formed by the food in its first great change in the process of digestion.

Chymia.* See CHEMISTRY.

Chȳm-ĭ-fĭ-cā'tion. [Lat. **Chymifica'tio, o'nis**; from *chy'mus*, "chyme," and *fa'cio*, to "make."] The conversion of the food into chyme.

Chymistry. See CHEMISTRY.

Cibatio,* se-ba'she-o. [From the Lat. *ci'bus*, "food."] The act of taking food.

Cic-a-tric'u-la.* [Diminutive of the Lat. *cica'trix.*] The blastoderm.

Ci-ca'trix, i'cis.* [From the Lat. *cicatri'co*, to "heal, leaving a scar."] The scar or seam of a healed wound, sore, or ulcer. In Botany, the scar left by the fall of a leaf or other organ.

Cic-a-trĭ-zā'tion. [Lat. **Cicatriza'tio, o'nis**; from the same.] The process by which a cicatrix is formed.

Cic-a-trĭ-za'tus.* [From the same.] Cicatrized; scarred. In Botany, having a scar, or the appearance of a scar.

Cic'a-trize. [From the same.] Literally, to "form a scar;" hence, to heal, or skin over.

Ci'cer.* The classical Latin name of a species of pulse or vetch. Also the name of a genus of plants of the order *Leguminosæ*. *Cicer Arietinum*, Chick Pea, or Egyptian Pea, is a native of India and Southern Europe, where it is largely cultivated for its edible seeds.

Cichoraceæ,* sik-o-ra'she-ē. [From *Cicho'rium*, one of the genera.] The Jussieuan name of a natural order of plants, or of a section of the order *Compositæ*. It includes lettuce, endive, etc.

Ci-cho'rĭ-um.* A genus of plants of the order *Compositæ*, comprising the *Cichorium Intybus* (chicory or succory), the root of which is mixed with coffee or used as a substitute for coffee. The endive (*Cicho'rium Endivi'a*) is used as a salad.

Ci-cu'ta.* A Latin name for the CONIUM MACULATUM, which see. The *Cicu'ta macula'ta*, however, of modern botanists, is a different plant. It belongs to the order *Umbelliferæ*, and is called Spotted Cow-bane. Its root is a deadly poison. It is a native of the United States, and is common in many States.

Cicu'ta Vĭ-ro'sa,* or **Cicu'ta A-quat'ĭ-ca.*** "Water Hemlock," an umbelliferous plant, a native of Europe. Its root is a deadly poison.

Cicutin. See CONEIN.

Ci'der. The juice of apples used as a beverage.

Cil'ĭ-a.* [The plural of **Cil'ĭ-um**, which see.] The eyelashes, or hairs on the eyelids:—sometimes applied to minute, slender objects attached to certain animals, that have a vibratile motion. In Botany, hairs arranged like eyelashes along the margin of a surface.

Cil'ĭ-a-rȳ. [Lat. **Cilia'ris**; from *cil'ium*, the "eyelash."] Belonging to the *cilium*, or eyelash:—also applied to several parts corresponding to the junction of the cornea to the sclerotic coat.

Cil'ĭ-ate. [Lat. **Cilia'tus**; from *cil'ium*, the "eyelash."] Having *cilia*; fringed with parallel hairs; having hairs, or a species of pubescence, on the margin of a leaf or petal.

Cil'iate-Ser'rate. Having serratures resembling *cilia*:—applied to leaves, etc.

Cil'ĭ-o-Spi'nal Cen'tre. A term applied to a part of the cervico-dorsal portion of the spinal cord presiding over the contraction of the iris.

Cil'ĭ-um.* [Perhaps from the Lat. *cil'lo*, to "stir," to "twinkle."] A term denoting the eyelid, or rather the edge of the eyelid out of which the hairs grow; also the eyelash. It is used mostly in the plural. See CILIA.

Cil-lo'sis.* [From the same.] Spasmodic trembling or agitation of the eyelids.

Cim-ĭ-cif'u-ga.* [From the Lat. *ci'mex, cim'icis*, a "bug," or "louse," and *fu'go*, to "put to flight."] The Pharmacopœial name (U.S. 1870, 1880) of the rhizome and rootlets of the *Cimicif'uga racemo'sa* (Black Snake-root), otherwise called *Actæ'a racemo'sa*, a plant of the natural order *Ranunculaceæ*, and common in the United States. It is a tonic and powerful antispasmodic, and has been employed with great success in cases of chorea and uterine convulsions.

Cĭ-mo'lĭ-a Ter'ra.* "Cimolian Earth." The same as CIMOLITE, which see.

Cim'o-lite [from *Cimo'lus*, an island where it was found, and the Gr. *λίθος*, a "stone"], or **Cĭ-mo'lĭ-an Earth.** A celebrated variety of fuller's earth, consisting, it is said, of silex, alumina, oxide of iron, and water.

Cin-cho'na.* [Named from the Countess *del Chinchon* or *Cinchon*, signally cured by its use.] A Linnæan genus of the class *Pentandria*, natural order *Cinchonaceæ* or *Rubiaceæ*. Some recent writers insist that the proper spelling of the word is *Chinchona*. This genus comprises many species of evergreen trees, all natives of South America, and found mostly on the Cordillera in Peru and Bolivia. *Cinchona* is also a general term for the various species of Peruvian bark, including the following kinds:

CINCHO'NA FLA'VA.* "Yellow Cinchona." See below.

CINCHO'NA PAL'LIDA.* "Pale Cinchona." The bark of *Cincho'na Condamin'ea* and of *C. micran'tha*.

CINCHO'NA PURPU'REA,* the produce of which is termed in commerce "Brown Bark" and "Huamilies Bark."

CINCHO'NA RU'BRA. "Red Cinchona." See below.

The virtues of Peruvian bark, the discovery of which forms an era in the science of medicine, are due to a number of different principles, among which the alkaloids *quinia* and *cinchonia* are the most important. Both of these are in a high degree tonic and febrifuge; but they are especially remarkable for their efficacy against diseases of a periodical character, as tertians, quartans, etc. Hence those alkaloids, as well as the bark in substance, have been termed *antiperiodics*.

Cincho'na.* "Cinchona." The Pharmacopœial name (U.S. 1870, 1880) for the bark of any species of *Cinchona*, containing at least 3 per cent. of its peculiar alkaloids. It is tonic and febrifuge.

Cincho'na Fla'va.* "Yellow Cinchona." The Pharmacopœial name (U.S. 1870, 1880) for the bark of the trunk of *Cinchona Calisaya*, containing at least 2 per cent. of quinine.

Cincho'na Ru'bra.* "Red Cinchona." The Pharmacopœial name (U.S. 1870, 1880) for the bark of the trunk of *Cinchona succirubra*, containing at least 2 per cent. of quinine.

Cinchonaceæ,* sin-ko-na'she-ē. [From *Cincho'na*, the most important of the genera.] A large natural order of exogenous plants, mostly trees or shrubs, found in hot climates, including, besides the Cinchona, the Coffee-tree, the *Cephaëlis Ipecacuanha*, and other important plants. Powerful febrifugal properties in the bark, or emetic in the roots, are the great features of this order, the most valuable products of which are cinchona and ipecacuanha. The beauty or fragrance of the flowers of some plants of this order (for example, the *Gardenias* and the *Ixoras*) is unsurpassed in the vegetable kingdom. Gray and many other botanists include the Cinchona under *Rubiaceæ*.

Cin-cho-nā'ceous. [Lat. **Cinchona'ceus.**] Having an arrangement as in the *Cinchona*. See CINCHONACEÆ.

Cin-cho'nĭ-a.* Another name for CINCHONINE.

Cin-chon'ic. [Lat. **Cinchon'icus**; from *Cincho'na*.] Belonging to *Cinchona*:—applied to an acid obtained from all the species. See KINIC ACID.

Cin-cho-nĭ-di'næ Sul'phas.* "Sulphate of Cinchonidine." The Pharmacopœial name (U.S. 1880) for the neutral sulphate of the alkaloid cinchonidine, which is prepared from certain species of cinchona, chiefly red cinchona. It occurs in white, silky, lustrous needles, or thin quadratic prisms, odorless, and having a very bitter taste. It acts on the system like quinine, but is less powerful.

Cin'cho-nin, or **Cin'cho-nĭne.** [Lat. **Cinchoni'na**; from *Cincho'na*.] A peculiar vegetable principle, or alkali, discovered in the *Cinchona Condaminea*.

Cin-cho-ni'na.* "Cinchonine," or "Cinchonia." The Pharmacopœial name (U.S. 1880) for an alkaloid prepared from different species of cinchona. It occurs in white, somewhat lustrous prisms or needles, permanent in the air, odorless, at first nearly tasteless, but developing a bitter after-taste, and having an alkaline reaction. The physiological action of cinchonine is similar to that of quinine, but less powerful.

Cinchoni'næ Sul'phas.* "Sulphate of Cinchonine." The Pharmacopœial name (U.S. 1870, 1880) for a substance containing sulphuric acid and cinchonine. It is in the form of white shining prisms, which are odorless, but have an intensely bitter taste. It has the same remedial properties as the sulphate of quinine.

Cinchonism. See QUININISM.

Cin-e-ra'ceous. Ash-gray; the same as CINEREUS:—applied to parts of plants.

Cin'er-ēs.* [The plural of **Ci'nis.**] "Ashes:"—usually applied to potash or pearl-ash.

Cin'eres Clav-el-la'ti.* [From the Lat. *ci'nis*, plural *cin'eres*, and *cla'vus*, a "nail," a "wedge."] Pearl-ash, or the *potassa impura*. The name is derived from the little wedges or billets into which the wood was cut to make potash.

Ci-ne're-us.* Ash-grayish; of the color of wood-ashes. The same as CINERITIOUS, which see.

Cineritious, sin-e-rish'ŭs. [Lat. **Cineri'tius**; from *ci'nis*, *cin'eris*, the ashes of any burnt substance.] Belonging to or resembling ashes in color:—applied to the cortical substance of the brain, etc.

Çi-net'ĭ-cus.* [From the Gr. κινέω, to "move."] Cinet'ic:—applied in the plural neuter (*Cinet'ica*) to an order of the *Neurotica* of Dr. Good, including diseases which affect the muscles.

Ci'nis,* gen. **Cin'er-is.** The Latin term for "ash," or "ashes." See CINERES.

Çin'na-bar. [Lat. **Cinnab'aris,** or **Cinnab'ari**; from the Gr. κιννάβαρι.] The red sulphide or bisulphuret of mercury:—also applied to a resinous substance of a bright red color obtained from the juice of an Indian tree. Pulverized cinnabar is called *vermilion*, and is used as a pigment. Nearly all the mercury of commerce is obtained from cinnabar.

Cin'na-bar-ĭne. [Lat. **Cinnabari'nus.**] Belonging to cinnabar; containing cinnabar:—also used to denote the color of scarlet tinged with orange.

Cinnabre, sē'năbr'. The French for CINNABAR, which see.

Cin-nam'ic Aç'id. An acid procured from the oil of cinnamon.

Cin-na-mo-den'dron.* A genus of trees of the order *Canellaceæ* or *Magnoliaceæ*. *Cinnamoden'dron axilla're* has an aromatic bark which is used as a tonic.

Cin-na-mo'me-us.* The color of cinnamon.

Cin-na-mo'mum,* or **Cin'na-mon.** [From the Arabic *kinamon.*] The Pharmacopœial name (U.S. 1880) for the inner bark of the shoots of the *Cinnamo'mum Zeylan'icum*, or the bark of the shoots of one or more undetermined species of *Cinnamomum*. Cinnamon is a most grateful and efficient aromatic. It is warm and cordial to the stomach, carminative and astringent, and is well adapted to relieve nausea and flatulence.

Cinnamo'mum Cam'pho-ra.* A name of the tree from which camphor is obtained.

Cinnamon. See CINNAMOMUM.

Cin'na-mon Su'et. A product of the cinnamon-tree, used in Ceylon for making candles. According to Dr. Christison, it contains 8 per cent. of a fluid oil not unlike olive oil: the remainder is a waxy principle, which answers very nearly to cerin.

Cin'namon-Tree. The *Cinnamo'mum Zeylan'icum*, a tree of the order *Lauraceæ*, a native of Ceylon. A volatile oil is obtained from it. See OLEUM CINNAMOMI.

Cin'namon-Tree, Wild. The *Laurus cassia*.

Çi-o-ni'tis, i*dis*.* [From the Gr. κιονίς, the "uvula."] Inflammation of the uvula.

Çi-o-nor-rha'phĭ-a.* [From the Gr. *κιονίς*, the "uvula," and *ῥάφη*, a "seam."] The same as STAPHYLORRHAPHY, which see.

Çī-o-not'o-mȳ. [Lat. **Cionoto'mia**; from the Gr. *κιονίς*, the "uvula," and *τέμνω*, to "cut."] The cutting off of a part of the uvula when too long.

Cip'o-lin. [From *cipol'la*, the Italian word for "onion;" named in allusion to the zones, supposed to resemble the layers of an onion.] A green marble, with white zones, brought from Rome. It gives fire with steel, though with difficulty.

Cĭ-prin'ĭ-dæ.* [From the Lat. *cypri'nus*, a "carp-fish."] A family of *Malacopterygii Abdominales*, having the *Cyprinus* for its type.

Cir-çæ'a Lu-te-tĭ-a'na.* Enchanter's Nightshade, an herbaceous plant of the order *Onagraceæ*, a native of the United States.

Cir-cĭ-na'lis.* Bent like the head of a crosier. The same as CIRCINATE.

Cir'cĭ-nate. [Lat. **Circina'tus**; from *cir'cino*, *circina'tum*, to "compass about," to "make into a circle."] Literally, "made into a circle." A term applied in Botany to leaves rolled inwards from the top or apex to the base.

Cir'cĭ-nus.* [From the Gr. *κίρκινος*, a "circle."] A term applied to a form of erysipelas which surrounds the body like a girdle, and is hence sometimes called *zona ignea* ("fiery zone").

Cir'cle. [From the Lat. *cir'culus*, a "ring."] A plane figure bounded by a curved line, to which all the right lines that can be drawn from a point in the middle of it, called the centre, are equal.

Cir-cu-lā'tion. [Lat. **Circula'tio**; from *cir'culus*, a "circle;" *cir'culo*, *circula'tum*, to "move round," to "move in a circle," to "circulate."] That vital action by which the blood is sent from the heart through the arteries, diminishing in calibre till they end in minute ramifications on the entire surface, where they are connected to correspondingly minute veins, which, increasing in size, return the blood to the heart. The blood of man traverses the whole circuit in about half a minute.

Cir'cu-lus.* (Fr. *Cercle*, sĕRkl.) A circle, or ring:—applied to any part of the body which is round or circular,—*e.g.*, *cir'culus oc'uli*, the "orb of the eye." It is sometimes used to denote a connection of parts through which there is a circulation; as the *Cir'culus Willis'ii* ("Circle of Willis"), an anastomotic circle formed by the anterior and posterior cerebral arteries connected by the arteries of Willis.

Cir'culus Ar-te-rĭ-o'sus Irĭ-dis.* "Arterial Circle of the Iris." An artery of the eye which encircles the iris.

Cir'cum. A Latin preposition signifying "round," or "about," and forming the prefix of a number of compound words.

Cir'cum-a-gen'tēs.* [The present participle of *circuma'go*, to "drive or move round."] A term applied to the oblique muscles of the eye.

Cir-cum-cĭs'ion. [Lat. **Circumci'sio**, *o'nis*; from *circumci'do*, *circumci'sum*, to "cut about."] The operation of cutting off a circular piece of the prepuce.

Cir-cum-duc'tion. [Lat. **Circumduc'tio**, *o'nis*; from *cir'cum*, "about," and *du'co*, *duc'tum*, to "lead."] Circular movement of a limb.

Cir'cum-flex. [Lat. **Circumflex'us**; from *cir'cum*, "about, and *flec'to*, *flex'um*, to "bend."] Bent about; curved like a bow or part of a circle:—applied in Anatomy to various arteries, veins, etc. It is also used to designate a particular accent represented in Latin and French by this sign [^], as *musâ*, *tempête*, the term denoting that the accent, instead of being straight like the other accents, is bent over or around the letter.

Cir-cum-ğў-rā'tion. [Lat. **Circumgyra'tio**, *o'nis*; from *cir'cum*, "about," and *gy'rus*, a "circle."] Movement in a circle.

Cir-cum-sçis'sĭle. [Lat. **Circumscis'silis**; from *cir'cum*, "about," "around," and *scin'do*, *scis'sum*, to "cleave," to "divide."] A term applied to dehiscent fruits, divided by a circular line round the side, so that the upper part opens like a lid.

Cir-cum-sçis'sus.* [From the same.] "Cleft, or cut around;" circumscissed:—applied in Botany to parts having a circular cut or fissure.

Cir-cum-scrip'tion. [Lat. **Circumscrip'tio**; from *cir'cum*, "around," and *scri'bo*, *scrip'tum*, to "write," to "draw lines."] The general outline of a thing; also limitation.

Cire, sĕR. The French for "wax." See CERA.

Çir-rhon'o-sus.* [From the Gr. *κιῤῥός*, "tawny," and *νόσος*, a "disease."] A golden-yellow appearance of the pleura, peritoneum, etc., in the fœtus.

Cirrhopoda.* See CIRROPODA.

Çĭr-rho'sis.* [From the Gr. *κιῤῥός*, "reddish yellow" or "tawny."] A name proposed for granulated or tuberculated liver, as designative of the appearance of the organ in that diseased state:—also applied to a disease of the kidney.

Cir'ri,* the plural of **Cir'rus**, which see.

Cĭr-rif'er-ous, or **Cĭr-rig'er-ous.** [Lat. **Cirrif'erus**, or **Cirrig'erus**; from *cir'rus*, and *fe'ro*, or *ge'ro*, to "bear."] Bearing or producing *cirri*:—applied to certain plants.

Cĭr'rĭ-grāde. [Lat. **Cirrig'radus**; from *cir'rus*, and *gra'dior*, to "walk."] Progressing by means of *cirri*. See CIRROPODA.

Cĭr-rĭ-pe'dĭ-a,* or **Cĭr'rĭ-peds.** [From the Lat. *cir'ri*, and *pes*, *pe'dis*, a "foot."] The same as CIRROPODA, which see.

Cĭr'rĭ-pēs, p'edis,* or **Cĭr'rĭ-ped.** [From the Lat. *cir'rus*, and *pes*, *pe'dis*, a "foot."] The same as CIRROPODUS.

Cĭr-rop'o-da,* or **Cĭr'rĭ-pods.** [See CIRROP'ODUS.] A class of aquatic animals, closely allied to the Crustaceans, having multivalve shells, and furnished with a number of long, curled, articulated, setigerous processes (called *cirri*) analogous to the feet of the Crustaceans. Barnacles afford a familiar example of animals of this class.

Cĭr-rop'o-dus.* [From the Lat. *cir'rus*, and the Gr. *πούς*, a "foot."] Cirrop'odous; fringe-footed:—applied to a class of animals having *cirri* instead of feet. See preceding article.

Cĭr'rous, or **Cĭr'rōse.** [Lat. **Cirro'sus;** from *cir'rus,* a "tendril."] Having *cirri,* or full of *cirri;* bearing tendrils:—sometimes improperly written *Cirrhosus* and *Cirrhose.*

Cĭr'rus,* plural **Cĭr'ri.** A Latin term signifying a "lock of curled hair," a "fringe:" applied to a peculiar set of organs found in certain aquatic animals. (See CIRROPODA.) In Botany, a clasper or tendril, one of the *fulcra* of plants:—also termed *Clavicula.* The term *cirrus* is also applied to thin fleecy clouds, floating in the atmosphere at a great elevation.

Çir'so-çēle.* [From the Gr. *κιρσός,* a "varicose vein," and *κήλη,* a "tumor."] A varicose enlargement of the spermatic vein.

Çir'soid. [Lat. **Cirsoi'des;** from the Gr. *κιρσός,* a "varicose vein," and *εἶδος,* a "form" or "resemblance."] Resembling a varix:—applied to spermatic veins.

Çir-som'pha-los.* [From the Gr. *κιρσός,* a "varicose vein," and *ὀμφαλός,* the "navel."] A varicose condition around the navel.

Çir-soph-thăl'mĭ-a.* [From the Gr. *κιρσός,* a "varicose vein," and *ὀφθαλμός,* the "eye."] A varicose condition of the eye; cir'sophthal'my.

Çir'sos. [Gr. *κιρσός.*] A varix, or dilated vein.

Çir-sot'o-mў. [Lat. **Cirsoto'mia;** from the Gr. *κιρσός,* a "varicose vein," and *τέμνω,* to "cut."] Extirpation of a varix.

Çis-sam'pe-los.* [From the Gr. *κισσός,* "ivy," and *ἄμπελος,* a "vine."] A Linnæan genus of the class *Diœcia,* natural order *Menispermaceæ.* Several species of this genus possess valuable medicinal properties.

Cissam'pelos Ça-pen'sis.* A species of *Cissampelos* found in Cape Colony. The root is used by the inhabitants as a cathartic and emetic.

Cissam'pelos Pareira* (pa-rā'ra). The *Pareira brava,* or American wild vine. Under the name of *Pareira brava* there are three distinct drugs met with in our market. The rarest of these is the product of the *Cissampelos Pareira,* a native of South America. See PAREIRA.

Cistaceæ,* sis-ta'she-ē. [From *Cis'tus,* one of the genera.] A natural order of shrubs or herbaceous plants, including the *Helian'themum* (rock-rose). They are natives of Europe, Africa, and the United States. The *Cistus Creticus* produces a resinous balsamic substance called *Lada'num.*

Cis'ti,* the plural of **Cis'tus,** forming the Jussieuan name of a natural order of plants. See CISTACEÆ.

Cis'tus.* A genus of the natural order *Cistaceæ,* comprising several species, natives of the Levant. The *Cis'tus Ladanif'erus* is one of the plants from which *Lada'num* is obtained. It is an evergreen shrub, bearing showy flowers.

Cis'tus Cret'ĭ-cus.* The name of the plant which produces a sort of gum-resin called *Lada'num,* or *Labda'num.* This substance has a warm and bitter taste and an agreeable odor. It is sometimes used as an ingredient in plasters.

Cit'rāte. [Lat. **Ci'tras, a'tis.**] A combination of citric acid with a base.

Cit'ric Aç'id. [Lat. **Aç'idum Cit'ricum;** from *ci'trus.*] An acid obtained from the juice of lemons, limes, etc. It is used in medicine as antiseptic and refrigerant.

Cit'rĭne Oint'ment. [Named from its fine yellow or citrine color.] The common name of the *Unguentum Hydrargyri Nitratis* of the Pharmacopœias. It is used as a stimulant and alterative application in psoriasis and other cutaneous affections.

Cĭ-trĭ'nus.* Lemon-colored.

Cit'ron. [Lat. **Ci'tro, o'nis;** **Cedrom'ela.**] The fruit of the citron-tree, the *Citrus medica,* a native of India. It bears a large fruit, the thick rind of which has a delicious odor and flavor and is used for preserves.

Cĭ-trul'lus Cŏl-o-cўn'this.* A name of the *Cucumis Colocynthis.*

Citrul'lus Vul-ga'ris.* The systematic name of the watermelon.

Ci'trus.* [From the Gr. *κιτρία,* the "lemon," or "citron."] A Linnæan genus of the class *Polyadelphia,* natural order *Aurantiaceæ* or *Rutaceæ.*

Ci'trus Auran'tium* (au-ran'she-ŭm). The systematic name of the orange-tree, which is supposed to be a native of China and India. It is an evergreen tree, bearing fragrant white flowers simultaneously with the ripened fruit. See ORANGE, and AURANTII FLORES.

Ci'trus Big-a-ra'dĭ-a.* Another name for the *Citrus Aurantium,* or orange-tree.

Ci'trus Lĭ-met'ta Ber-ga'mĭ-um.* The tree from the rind of whose fruit oil of bergamot is obtained.

Ci'trus Lĭ-mo'num,* Ci'trus Med'ĭ-ca.* Names of the plants which bear the *Limones* (lemons, or limes) of the Pharmacopœia. See LEMON.

Citrus Vulgaris.* See CITRUS AURANTIUM.

Civ'et. [Lat. **Civet'ta.**] An unctuous substance collected in a bag under the tail of the civet-cat, and used as a perfume.

Clad-ras'tis Tinc-to'rĭ-a,* or **Vir-gil'ĭ-a Lu'te-a.*** The Yellow-Wood, an ornamental tree of the order *Leguminosæ,* a native of the United States. Its bark is cathartic. It bears ample-panicled racemes of showy white flowers.

Clāir-voy'ance. [See CLAIRVOYANT.] Literally, "clear-sightedness," or "clear vision." A term applied to a condition of the mind or the "mind's eye," usually induced by mesmeric influence, in which, it is alleged, the mesmerized person can see not only in the dark, but the most intricate internal arrangements of his own or of another's body, and even the remotest objects, though separated from the clairvoyant by interposing walls or mountains.

Clāir-voy'ant. [Fr. *clair,* "clear," and *voyant,* "seeing," from *voir,* to "see."] Literally, "seeing clearly;" hence, having the power of clairvoyance. As a noun, the term signifies one who is endowed with clairvoyance.

Clammy. See VISCOSUS.

Clap. [Old Fr. *clapises*, public shops of infamous character.] A term for *Gonorrhœ'a impu'ra.*

Clăr'et. (Fr. *Vin de Bordeaux.*) The name given by the English and the people of the United States to red French wines made near Bordeaux. It has a deep purple color and a delicate taste, in which the vinous flavor is blended with some acidity and astringency.

Clăr-ĭ-fĭ-cā'tion. [Lat. **Clarifica'tio**, *o'nis*; from *cla'rus*, "clear," and *fa'cio*, to "make."] The purifying or freeing of a fluid from heterogeneous matter or impurities. The removal from a liquid of solid particles which it holds in suspension.

Clasper. See CIRRUS, and CLAVICLE.

Class. [Lat. **Clas'sis.**] A primary division of bodies having some general resemblance to one another, but further divisible into distinctive orders.

Clas-sĭ-fĭ-cā'tion. [From the Lat. *clas'sis*, a "class," and *fa'cio*, to "make."] The systematic arrangement into classes, orders, etc., of natural productions and phenomena, including the diseases of the animal body. The part of Botany which treats of classification is called *taxonomy.*

Clath'rate. [Lat. **Clathra'tus**; from *clath'rus*, a "bar," or "lattice."] Latticed. The same as CANCELLATE.

Claus-tro-pho'bĭ-a.* [From the Lat. *claus'trum*, an "enclosure," and the Gr. *φόβος*, "fear."] A peculiar form of mental disease, in which there is a morbid fear of being shut up in an enclosed place.

Claus'trum.* [From the Lat. *clau'do*, *clau'sum*, to "enclose."] Literally, "that which encloses." A thin lamina of gray matter outside the external capsule of the brain.

Clav'ate. [Lat. **Clava'tus**; from *cla'va*, a "club."] Club-shaped; clubbed; growing larger towards the summit.

Clavatio,* kla-va'she-o. [From the Lat. *cla'vus*, a "nail."] The same as GOMPHOSIS.

Clav'el-late. [Lat. **Clavella'tus** and **Clavello'sus**; from *cla'va*, a "club."] Having clubs, or formed like clubs.

Clav'ĭ-cle. [Lat. **Clavic'ula**, or **Clavic'ulus**; the diminutive of *cla'vis*, a "key."] The collar-bone. In Botany, a tendril, clasper, or *cirrus.*

Clav-ĭ-cor'nate. [Lat. **Clavicor'nis**; from *cla'va*, a "club," and *cor'nu*, a "horn."] A term applied to a family of coleopterous insects, in which the antennæ are thick at the extremity, frequently forming a solid club.

Cla-vic'u-lar. [Lat. **Clavicula'ris**; from *clavic'ula*, the "collar-bone."] Belonging to the clavicle, or collar-bone.

Cla-vic'u-late. [Lat. **Clavicula'tus**; from *clavic'ula*, the "clavicle."] Having clavicles, as man and the *Simiæ.*

Clav'ĭ-form. [Lat. **Clavifor'mis**; from *cla'va*, a "club."] Club-shaped. The same as CLAVATE.

Clavo, klä'vo. The Spanish term for CLOVE, which see.

Cla'vus.* Literally, a "nail" or "spike:"—applied to a corn, or horny round cutaneous formation, the effect of continued pressure, generally on the prominent parts of the toes. Also a very acute pain confined to a small part of the head, as if a nail were being driven into it:—called *Cla'vus hyster'icus.* Also condyloma of the uterus. Likewise, a tubercle on the white of the eye.

Claw. [Lat. **Un'guis.**] The nail or talon of birds and other animals. In Botany, the lower, narrow part of some petals, as of *Dianthus* and *Ceanothus*; the taper base of a petal of a polypetalous corolla.

Claw-Hand. See MAIN-EN-GRIFFE.

Clay. *Argil'la*, or argillaceous earth.

Clay, Pure. The earth called *alumina.*

Cleans'ings. The same as LOCHIA, which see.

Clēav'age. A tendency to cleave in one or more directions, or a facility of splitting or separating into natural layers in certain directions; also the process of separating the laminæ of a crystal. The planes along which cleavage takes place are called *cleavage-joints.*

Cleav'ers. The popular name of the *Ga'lium Apari'ne*, a plant of the order *Rubiaceæ.* It is diuretic.

Cleft. [Lat. **Fis'sus.**] In Botany, split or divided about half-way from the margin to the mid-rib or base:—applied to leaves, etc.

Clēi'do- [from the Gr. *κλείς*, *κλειδός*, a "key," the "clavicle"], in compound names of muscles, etc., denotes attachment to or connection with the clavicle.

Cleīs'a-gra.* [From the Gr. *κλείς*, "clavicle," and *ἀγρα*, a "seizure" or "attack."] The gout in the articulation of the clavicles.

Clem'a-tis.* [From the Gr. *κλῆμα*, a "tendril."] The Virgin's Bower, a genus of apetalous plants of the order *Ranunculaceæ.* Though without petals, the colored calyx resembles a corolla. Several species have beautiful flowers. The *Clematis vitalba* has acrid leaves, which are used in medicine.

Clem'atis Flam'mu-la.* A plant, a native of Europe, cultivated for ornament in the United States. Its leaves are very acrid.

Clem'atis Rec'ta.* Upright Virgin's Bower, a native of Europe, cultivated in the United States. It has acrid leaves, which have been used in medicine as diuretic and diaphoretic.

Clep-sȳ'dra.* [From the Gr. *κλέπτω*, to "steal," and *ὕδωρ*, "water;" named in allusion to the water stealing away so gradually as to be almost unperceived.] An instrument for measuring time, by allowing water to drop through a small hole from one vessel to another.

Clergymen's Sore Throat. See DYSPHONIA CLERICORUM.

Clī-mac'ter,* plural **Cli-mac-te'rēs.** [Gr. *κλιμακτήρ*, the "round of a ladder."] Literally, the "step of a stair" or a "ladder;" hence applied to the stages of human life, reckoned by periods of seven years.

Clĭ-mac'ter-ic, or klim-ak-tĕr'ik. [Lat. **Climacter'icus**; from the same.] A term applied to a particular epoch of the ordinary term of life, marked by periods of seven years, at which the body was by the ancients supposed to be peculiarly affected and to suffer considerable change. The ninth period, or the sixty-third year, at which the most decided change takes place, was regarded as the "grand climacteric."

Climac'teric Dis-ease'. That sudden change which occurs in many instances of advanced life, generally at the grand climacteric,—that is, about the end of the sixty-third year, sixty-three being nine times seven. See CLIMACTERIC.

Climac'teric Teeth'ing. The production of teeth at a very late period of life, after the loss of the permanent teeth by accident or natural decay, —commonly between the sixty-third and the eighty-first year, or the interval which fills up the two grand climacteric years of the Greek physiologists.

Climat, klĕ'mā'. The French for CLIMATE, which see.

Clī'mate. [Lat. **Cli'ma, Clim'atis**; Gr. *κλίμα*, a "region," "clime," or "climate."] In a hygienic point of view, the term denotes peculiarities in temperature, quality of air, etc., with respect to which different countries or regions differ from one another in their effects upon the health of those who inhabit them. Among the various influences which tend to promote health or produce disease, there is perhaps none more deserving the attention of the medical student than the peculiarities and varieties of climate. But the limits of the present volume will permit only a few general remarks: for a thorough consideration of the subject in all its details, the reader is referred to more extensive and elaborate works.

In recommending a change of residence on account of ill health, the judicious physician will take into consideration not only the character of the disease, but the peculiarities of the patient's constitution. In general terms, it may be stated that diseases of the lungs or pleura require a mild or warm climate, and fevers, especially when complicated with visceral derangement, a cool or cold one: yet it will often be found that persons laboring under lung-complaints are more injured than benefited by a warm climate; for, though a mild air and unchecked perspiration are very decided advantages in themselves, the debility resulting from a less bracing atmosphere will frequently prove more than a counterbalance to those advantages. Mountain air, which is generally pure, light, and exhilarating, will be found beneficial in certain cases, while sea air, which is less rarefied and less dry, will be better adapted to others. The air of a small island completely surrounded by a wide expanse of sea, like Madeira or the Bermudas, possesses the great advantage of having a more equable and uniform temperature than perhaps can ever be found on a continent or on any extensive tract of land; at the same time it must not be forgotten that the moisture which is necessarily contained in the atmosphere of a small island may prove in some cases a serious objection to such a climate. It is scarcely necessary to remark that the purity or impurity of the air must, in an especial manner, never be overlooked. Yet it is said that the impure air of certain districts where tertians are common has been found eminently beneficial in some forms of pulmonary disease. Where an equable temperature, combined with a dry atmosphere, is especially indicated, there is perhaps no more desirable spot on the globe than Saltillo, in Northern Mexico. See SALTILLO, CLIMATE OF.

Clī-ma-tog'ra-phy. [Lat. **Climatogra'phia**; from *cli'ma*, "climate," and the Gr. *γράφω*, to "write," to "describe."] A description of climates.

Clī-ma-tol'o-ġy. [Lat. **Climatolo'gia**; from *cli'ma*, "climate," and the Gr. *λόγος*, a "discourse."] A treatise on climate; the science of climates.

Climb'ing, or **Scan'dent.** A term applied to stems (of plants) which rise by clinging to other objects for support, either by tendrils, as the Pea, by twisting leaf-stalks, as the Virgin's Bower, or by rootlets, as the Ivy.

Clĭ-nan'drĭ-um.* [From the Gr. *κλίνη*, a "bed," and *ἀνήρ*, a "male."] The part of the column of fructification of the *Orchideæ* in which the anther is fixed.

Clin'ĭ-cal. [Lat. **Clin'icus**; from the Gr. *κλίνη*, a "bed."] (Fr. *Clinique*, klĕ'nēk'.) Pertaining to a bed; as clinical lectures, which are those delivered by medical attendants at the bedside.

Clinique, klĕ'nēk'. The French term for CLINICAL, which see. As a noun, it is used for a clinical school, thus: *La Clinique de la Charité* (lȧ klĕ'nēk' dẹh lȧ shȧ'rĕ'tȧ') signifies "The Clinical School of [the Hospital] La Charité."

Clī'noid. [Lat. **Clinoi'des**; from the Gr. *κλίνη*, a "bed," and *εἶδος*, a "form" or "resemblance."] Resembling a bed:—applied to four processes of the sphenoid bone.

Clĭ-nom'e-ter. [Lat. **Clinom'etrum**; from the Gr. *κλίνω*, to "incline," and *μέτρον*, a "measure."] An apparatus for measuring the inclination of a line in relation to a horizontal plane:—used for ascertaining the *dip* of geological strata.

Cli-no-met'ric. [From the same.] A term in Crystallography applied to certain systems of crystals in which the axes cross each other obliquely, not at right angles. There are three clinometric systems,—namely, the *monoclinic*, *diclinic*, and *triclinic*.

Clis-e-om'e-ter. [Lat. **Cliseom'etrum**; from the Gr. *κλίσις*, "inclination," and *μέτρον*, a "measure."] An instrument for measuring the angle which the axis of the female pelvis makes with that of the body.

Clit'-Bur. The *Arctium lappa*:—also called *Clot-bur*.

Clit'o-ris,* gen. **Clĭ-tŏr'ĭ-dis.** [Gr. *κλειτορίς*; from *κλείω*, to "shut up," to "enclose;" because concealed by the *labia pudendi*.] A small, elongated, glandiform body at the anterior part of the vulva, resembling in its internal structure the *corpus cavernosum* of the penis.

Clit-o-ris'mus.* Morbid swelling of the clitoris.

Clit-o-ri'tis, i*dis*.* [From the Lat. *clit'oris*.] Inflammation of the clitoris.

Clo-a'ca.* [From the Lat. *clu'o*, an antique form for *col'luo*, to "wash," to "scour," or "make clean."] Literally, a "sink" or "sewer." In Zoology, a cavity in birds and certain other animals, in which the oviducts terminate. In the plural (*Cloa'çæ*), the openings through the new bony shell (in cases of necrosis of a long cylindrical bone) into the *sequestrum*, or enclosed dead bone, by which the matter formed in the interior is discharged.

Cloaque, klo'āk'. The French for CLOACA, which see.

Clon'ic. [Lat. **Clon'icus**; from the Gr. *κλόνος*, "tumult," "commotion."] Relating to *clonus*:—applied to spasms in which contractions and relaxations are alternate, as in epilepsy.

Clo'nus.* [See preceding article.] A term denoting an irregular convulsive movement or agitation of the muscles.

Clot. [From the Belgian *klot*, a "mass of thickened fluid."] The *crassamentum* of the blood.

Clot-Bur. See CLIT-BUR.

Clou. See CLOVE.

Cloud'ed. Having colors unequally blended together; variegated with dark veins or spots:—applied to parts of plants.

Cloud'ў Swell'ing. A term applied to a change which takes place in the protoplasm during the process of nutrition.

Clōve. [From the Lat. *cla'vus*, a "nail" or "spike;" so called from its resemblance to a nail.] (Fr. *Clou*, kloo, Sp. *Clavo*, klä'vo, both signifying originally a nail or spike.) The calyx, or unexpanded flower, of the *Caryophyl'lus aromat'icus*, otherwise called *Euge'nia caryophylla'ta*. The clove is a warm, pungent, and highly-stimulating aromatic. It is sometimes employed to relieve nausea or vomiting; but it is chiefly used to assist or modify the action of other medicines.

Clove-Ģil'lĭ-flŏw-er, Clove-Pink. The *Dian'thus caryophyl'lus*.

Clove'-Tree. The *Caryophyl'lus aromat'icus* (or *Euge'nia caryophylla'ta*). A tree of the order *Myrtaceæ*, a native of the Moluccas.

Clo'ven Spine. The same as SCHISTORRHACHIS, which see.

Clo'ver. The popular name of several species of *Trifolium*, which are cultivated for hay and pasture. See TRIFOLIUM.

Club-Foot. See TALIPES.

Club-Shaped. See CLAVATE.

Clu-pe'ĭ-dæ.* [From *Clu'pea*, a small fish of the herring kind.] A family of fishes having the *Clupea* for their type.

Clu'sĭ-a.* [Named in honor of *Clusius*, an eminent botanist.] A genus of trees or shrubs, natives of tropical America, comprising over thirty species. The *Clusia grandiflora* bears large and beautiful white flowers. The *Clusia galactodendron* (Cow-Tree), a native of Venezuela, yields a nutritious milky juice. The *Clusia alba*, *Clusia flava*, and *Clusia rosea* yield a tenacious resin.

Clusiaceæ,* klu-ze-a'she-ē, or **Gut-tif'er-æ.*** A natural order of exogenous trees and shrubs, found in the tropics, including the *Clu'sia*, the *Calophyl'lum*, the Mangosteen, and other excellent fruits. Many species of this order secrete an acrid, purgative gum-resin, as gamboge. Several are natives of tropical America, and afford balsams which are medicinal.

Cluster. See RACEMUS, and THYRSUS.

Clus'tered. A term applied to leaves, flowers, etc., aggregated or collected into a bunch; collected in parcels.

Clўp'e-al. [Lat. **Clypea'lis**; from *cly'peus*, a "shield."] Belonging to a shield; shield-like:—a term applied to the thyroid cartilage.

Clўp'e-ate. [Lat. **Clypea'tus**; from the same.] Bearing a shield, or formed like a shield or buckler:—applied to parts of plants.

Clўs'sus.* [From the Gr. *κλύζω*, to "dash," to "wash."] A term formerly used to denote the vapor produced by the detonation of nitre with any inflammable substance.

Clўs'ter.* [Gr. *κλυστήρ*; from *κλύζω*, to "wash away."] An injection into the rectum; an en'ema; a glyster.

C. M. = *Cras ma'ne.** "To-morrow morning."

C. N. = *Cras noc'te.** "To-morrow night."

Cni'cus Ben-e-dic'tus,* or **Cen-tau're-a Ben-e-dic'ta.*** "Blessed Thistle." A composite plant, regarded as "blessed" on account of its medicinal virtues. It contains a brown, bitter principle, called *cnicin*.

Co. See CON.

Co-a-cer'vate. [From the Lat. *co*, "together," and *acer'vus*, a "heap."] The same as CLUSTERED.

Co-ad'u-nate. [Lat. **Coaduna'tus**; from *coadu'no*, to "join together."] Clustered. In Botany, united; the same as CONNATE.

Co-ag'u-la-ble. [Lat. **Coagulab'ilis**; from *coag'ulo*, *coagula'tum*, to "curdle."] Having the property of coagulation.

COAG'ULABLE LYMPH. A term applied to the fibrin of the blood.

Co-ag-u-lā'tion. [Lat. **Coagula'tio, o'nis**; from the same.] The thickened state of the albuminous portion of certain animal and vegetable fluids on applying acids or heat.

Co-ag'u-lum.* [From the same.] The jelly-like consistence assumed by albuminous substances, blood, etc., when acted on by heat.

Coal (Min'er-al). A combustible mineral, consisting of two principal varieties,—*anthracite* and *bituminous coal*. The former burns with little or no smoke or flame; in the latter, as its name implies, bitumen is an important ingredient, producing vapor and gas when exposed to heat.

Coal Oil. See PETROLEUM.

Coal Tar. A dark-colored, semi-liquid substance, a product of the dry distillation of bituminous coal. From it are derived many valuable

commodities and medicines,—namely, aniline, anthracene, benzole, carbolic acid, creasote, etc.

Co-ạ-lĕs'cence. [From the Lat. *coales'co*, to "grow together."] Concretion; the act of growing together; the union of parts previously separated.

Co-ạ-lĕs'çent. [Lat. **Coales'cens**; from the same.] Growing together.

Co-ạ-lĭ'tion. [Lat. **Coali'tio**; from *coale'o*, *coali'tum*, to "grow together."] The growing of one thing to another. The same as COALESCENCE.

Co-ap-tā'tion. [Lat. **Coapta'tio, o'nis**; from *co* for *con*, "together," and *ap'to*, *apta'tum*, to "fit."] The fitting together of the ends of a fractured bone.

Co-arc'tate. [Lat. **Coarcta'tus**; from *co-arc'to*, *coarcta'tum*, to "tighten" or "straiten."] Pressed close together; contracted.

Co-arc-tā'tion. [Lat. **Coarcta'tio, o'nis**; from the same.] A straitening, or pressing together:—applied to strictures of the intestine or urethra.

Coat. See TUNICA.

Coat'ed. (Fr. *Enduit*, ôN'dwē'.) A term applied to the condition of the tongue as indicative of visceral disturbance, more especially in fever.

Cobalt, ko'bault. [Lat. **Cobal'tum**; from the German *Ko'bold*, a "goblin" or "demon;" so called because its discovery was regarded by miners as an ill omen,—*i.e.*, as unfavorable to the presence of more valuable metals.] A metal generally found in combination with arsenic. Specific gravity about 8.5. It is unaltered in air and water at ordinary temperatures, and is one of the few metals that are attracted by the magnet. Several compounds of cobalt are used as pigments and enamels. Among these is *smalt*, or azure blue, a double silicate of cobalt and potassium. The salts of cobalt are irritant poisons. The oxide is employed to impart a blue color to porcelain and glass.

Co-bâl'tic. [Lat. **Cobal'ticus.**] Belonging to cobalt.

Co-ba'lus.* The same as *Kobold*, the demon of miners, from which cobalt is said to have been named.

Cobra de Capello, ko'brā dā kā-pĕl'lo. "Snake with a Hood." The Portuguese name for the hooded snake, the *Na'ja vulga'ris* (otherwise called the *Na'ja tripu'dians*), a very poisonous serpent common in India.

Cob'web. [Lat. **Ara'neum.**] The web of the *Aranea*, or spider.

Cob'web-bў. Like cobweb; bearing hairs like cobweb or gossamer. The same as ARACHNOID.

Co'ca, called also **Ypada,** e-pā'dā. The leaf of the *Erythrox'ylon Co'ca*, a plant in extensive use among the Indians of the Andes as a stimulant. It is used as a medicine, and as a substitute for tea, coffee, tobacco, and opium. It is intoxicating when taken to excess. See ERYTHROXYLON COCA.

Co'ca-ĭne, Hў-dro-ehlo'rate of. A new medicinal preparation, the base of which (Cocaine, or Cocai'na) is an alkaloid obtained from the leaves of the *Erythrox'ylon Co'ca*. This plant belongs to the natural order *Violaceæ*, and grows wild on the eastern slopes of the Andes, in Peru, Bolivia, and Chili. The dried leaves are used as a masticatory. The effect is a gentle excitement, not unlike that produced by tea or coffee. It is said that those who chew the leaves can work or travel a long time without food and without feeling fatigue or exhaustion. The active principle of the plant resides in the alkaloid cocaine, the hydrochlorate of which is usually employed for medical purposes. It has the remarkable property, when applied to the mucous membrane of the eye or other mucous membranes, of producing complete insensibility to pain in the part to which it is applied, so that by means of it the surgeon can perform, without pain or discomfort to the patient, operations which otherwise would cause intense suffering; but its influence does not seem to pass deeply into the tissues. (See an article on the Hydrochlorate of Cocaine, in the *American Journal of Pharmacy* for December, 1884.)

Coc'çi,* the plural of **Coc'cus.** A name for cochineal insects. In Botany, the carpels of a dry fruit which are separable from one another.

Cocciferous, kok-sif'er-ŭs. [Lat. **Coccif'erus**; from *coc'cus*, a "berry," and *fe'ro*, to "bear."] Bearing berries, or objects like them.

Coccinella,* kok-se-nel'la. [Diminutive of the Lat. *coc'cus*, a "berry."] The cochineal insect; cochineal. (See COCCUS CACTI.) Also a genus of coleopterous insects; the lady-bird, or lady-bug.

Coccinel'la Sep-tem-punc-ta'ta* (*i.e.*, "having seven points or spots"), or **Lady-Bug.** This insect, if bruised upon an aching tooth, was formerly supposed to be a cure for it.

Coc-cĭ-nel'lin. [Lat. **Coccinelli'na.**] The coloring principle of cochineal; carmine.

Coc-cin'e-us.* Scarlet,—a color produced by the union of carmine and yellow.

Coc-cin'ĭ-a In'dĭ-ca.* A climbing shrub, of the order *Cucurbitaceæ*, a native of India, bearing a red fruit. The leaves and other parts are used in medicine.

Coc-co-lo'ba U-vif'er-a. Sea-side Grape, a tree of the order *Polygonaceæ*, a native of the West Indies. The perianth becomes pulpy, and has an agreeable flavor. An astringent extract, called *Jamaica Kino*, is obtained from it.

Coc'cu-lus.* [Diminutive of the Lat. *coc'cus*, a "berry."] A genus of plants of the class *Diœcia*, natural order *Menispermaceæ*. The Latin name for the fruit of the *Anamirta cocculus*, or *Cocculus Indicus*.

Coc'culus An-a-mir'ta.* The plant which produces *Cocculus Indicus*. See ANAMIRTA.

Coc'culus In'di Ar-o-mat'ĭ-cus,* or (plural) **Coc'cu-li In'di Ar-o-mat'ĭ-çi.** Other names for the *Myrtus pimenta*, or Jamaica pepper.

Coc'culus In'dĭ-cus.* The berries of the *Anamir'ta coc'culus* (the *Menispermum cocculus* of Linnæus). The kernels of these berries are whitish and oily, and have an intensely bitter taste. They contain a peculiar bitter principle called *picrotoxin*, which is very poisonous. The

Cocculus Indicus belongs to the acro-narcotic class of poisons. As a medicine it is never administered internally. In India it is employed to stupefy fish in order that they may be more easily caught. It is said that the fish thus taken are not poisonous. An ointment made of the powdered berries is sometimes used in certain cutaneous diseases.

Coc'culus Pal-ma'tus.* The plant which affords Calumba, Colomba, or Columbo-root:—called, also, *Jateorrhiza palmata.*

Coc'cum.* [See Coccus.] A kind of seed-vessel, the sides of which, being elastic, project the seeds with great force, as in the *Euphorbiæ.*

Coc'cum Baph'ĭ-cum.* The kermes berry.

Coc'cus.* "Cochineal." [From the Gr. κόκκος, a "grain" or "kernel;" also an "insect."] The Pharmacopœial name (U.S. 1870, 1880) for the dried female of the *Coccus cacti.* In Botany, a capsule or a carpel which separates with elasticity from an axis common to itself and others. In Entomology, the name of a genus of hemipterous insects.

Coc'cus Cac'ti.* "Coccus of the Cactus." The *Coccinella*, or cochineal insect, a native of Mexico, Central America, etc., feeding on plants of the Cactus family. It is also cultivated in the West Indies, the Canaries, etc.

Coc'cus In-fec-to'rĭ-us.* The insect which produces the kermes grains or berries.

Coc'cus Lac'ca.* The insect which by stinging the bark of certain trees causes the resin known as *lac* to exude.

Coc-çў-ăl'ġĭ-a.* [From the Lat. *coc'cyx*, and the Gr. ἄλγος, "pain."] The same as Coccyodynia, which see.

Coc-çў-ġec'to-mў. [Lat. **Coccygecto'mia**; from *coc'cyx*, and the Gr. ἐκτομή, "excision."] Excision of the coccyx.

Coc-çўġ'e-us* (or kok-se-je'ŭs). [From the Lat. *coc'cyx*, *coccyg'is.*] Belonging to the coccyx; coccўġ'eal.

Coc-çў-o-dўn'ĭ-a.* [From the Lat. *coc'cyx*, and the Gr. ὀδύνη, "pain."] Pain in the coccyx, occurring especially in women.

Coc'çўx,* gen. **Coc-çy'ġis.** [From the Gr. κόκκυξ, the "cuckoo;" because like its bill.] The small triangular bone appended to the point of the sacrum.

Coch'ĭ-nēal. [Lat. **Coccinel'la**; from *coccinel'la*, probably derived through the Italian *coccinìglia*, pronounced kot-che-nēl'yȧ; Sp. *Cochinilla*, ko-che-neel'yȧ.] The *Coccus cacti*, *Coccinella*, or cochineal insect, brought from South America as a reddish grain. Cochineal is thought by some to possess anodyne and antispasmodic properties, and has been recommended for the hooping-cough and other nervous affections. In Pharmacy it is used to color tinctures, ointments, etc. It affords a brilliant purple-red coloring-matter called *carminic acid*, and the red pigments carmine and lake.

Cochinillin, kotch'e-nil'in. [See Cochineal.] The former name of carminic acid, a coloring-matter obtained from cochineal. It is a constituent of carmine.

Cochl. Ampl., Cochl. Mag. Abbreviations for *Cochlea're am'plum** or *mag'num,** a "tablespoon."

Cochl. Med. = *Cochlea're me'dium.** A "dessert-spoon."

Cochl. Min. = *Cochlea're min'imum.** A "teaspoon."

Coch'le-a.* Literally, a "shell," a "snail-shell;" hence, any thing of a spiral form. A conical cavity of the internal ear.

Coch-le-a're.* [From the Lat. *coch'lea*, a "shell," more especially a "snail-shell."] A "spoon;" so named from its resemblance to a shell. The term is commonly used in medical prescriptions for "spoonful."

Coch-le-a'rĭ-a.* [From the Lat. *cochlea're*, a "spoon."] A Linnæan genus of the class *Tetradynamia*, natural order *Cruciferæ.*

Cochlea'ria Armora'cia* (ar-mo-ra'she-ą). The horseradish plant. The root of this plant (*Armoraciæ Radix*) is pungent and powerfully stimulant. Its virtues depend on an essential oil which is dissipated by drying.

Coch-le-ăr'ĭ-form. [Lat. **Cochlearifor'mis**; from *cochlea're*, a "spoon."] Formed like a spoon:—applied to parts of plants.

Coch'le-ate. [Lat. **Cochlea'tus**; from *coch'lea*, a "snail-shell."] In Botany, spiral, or coiled or shaped like a snail-shell.

Cocoa, ko'ko. The fruit of *Theobroma Cacao.* See Chocolate.

Cocoa-Nut, ko'ko-nut. The fruit of the *Cocos nucifera*, a species of palm, which is cultivated in several tropical countries. This tree affords various useful products. The nut is an important article of food, and yields a valuable oil. The sap of the tree (partly fermented) is a popular beverage, called *toddy*, or palm-wine.

Co-coon'. [Etymology uncertain.] The silken case of certain *Arachnides*, etc., in which they deposit their eggs, change their teguments, or retire for the winter.

Co'cos Bu-tў-ra'ce-a.* A species of palm, a native of the United States of Colombia. Its seeds yield a semi-solid oil, called palm-oil.

Cocos Nucifera.* See Cocoa-Nut.

Coc'tion. [Lat. **Coc'tio**; from *co'quo*, *coc'tum*, to "cook," to "digest."] The process of reducing the aliment to chyle.

Codaga-Pala Bark. See Nerium Antidysentericum.

Co'de-āte. [Lat. **Co'deas, a'tis**; from *code'icum* aç'idum.] A combination of codeic acid with a base.

Co-de'ic. [Lat. **Code'icus.**] A term applied to an acid obtained from codeine.

Co-de-i'na.* "Codeine." The Pharmacopœial name (U.S. 1880) for an alkaloid prepared from opium. It occurs in white or yellowish-white, more or less translucent, rhombic prisms, somewhat efflorescent in warm air, and having a slightly bitter taste. It has narcotic properties.

Co'de-ĭne, Co'de-in, or **Co-de'ĭa.*** [From the Gr. κωδία or κωδεία, a "poppy-head."] An alkaloid discovered by Robiquet in opium. As a

soporific it is considered to possess about half the strength of morphia.

Co'dex.* A collection of laws. Also a collection of approved medical formulæ, with directions for the preparation of the compounds used in medicine.

Cod'-Liv'er Oil, or **Cod'fish Oil.** [Lat. **Mor'rhuæ O'leum.**] An oil obtained from the liver of the *Ga'dus mor'rhua*, or codfish. See OLEUM MORRHUÆ.

Cœcum.* See CÆCUM.

Co-ef-fiç'ient. In Chemistry, as in Algebra, a figure placed before a term or a chemical formula to indicate how many times one must multiply the term, etc.

Cœlia,* sē'le-a. [Gr. *κοιλία*, the "belly;" from *κοῖλος*, "hollow."] The belly, especially the lower portion; also the stomach.

Çœ'lĭ-ac. [Lat. **Cœli'acus**; from *cœ'lia*, the "belly."] Belonging to the belly.

Cœ'liac Pas'sion. [Lat. **Pas'sio Cœli'aca.**] A chronic flux, in which the aliment is discharged half digested; the *Diarrhœ'a cœli'aca* of Cullen.

Cœ'liac Plex'us. A name for the SOLAR PLEXUS, which see.

Çœ-li'a-ca.* [Neuter plural of the Lat. *cœli'acus*. See CŒLIAC.] The first class of Dr. Good's nosology, embracing diseases of the digestive organs:—sometimes applied to medicines which act on those organs.

Cœliacus.* See CŒLIAC.

Çœ-lĭ-a-del'phus.* [From the Lat. *cœ'lia*, the "belly," and the Gr. *ἀδελφός*, "brother."] A monstrosity in which two bodies are united at the abdomen.

Çœ-lĭ-a'gra,* or **Çœ-li'a-gra.** [From the Lat. *cœ'lia*, the "belly," and the Gr. *ἀγρα*, a "seizure."] Gout in the abdomen.

Çœ-lĭ-ăl'ğĭ-a.* [From the Lat. *cœ'lia*, the "belly," and the Gr. *ἄλγος*, "pain."] Pain in the belly.

Cœ'lĭ-o-my-ăl'ğĭ-a.* [From the Lat. *cœ'lia*, the "belly," and the Gr. *μῦς*, a "muscle," and *ἄλγος*, "pain."] Pain in the muscles of the abdomen.

Cœnæsthesis,* sĕn-ĕs-the'sis. [From the Gr. *κοινός*, "common," and *αἴσθησις*, "perception," "feeling," or "sensibility."] A term expressive of the general feeling or consciousness in the entire body; consciousness of existence. Some writers have termed it a sixth sense, not limited, like the other senses, to one particular part, but common to the whole system.

Çœ-nu'rus.* [From the Gr. *κοινός*, "common," and *οὐρά*, a "tail" or "hinder part."] A *cœ'nure*, or hydatid, containing several animals (*Entozoa*) grouped together and adhering to its sides, which thus form a common base or termination of many heads and bodies.

Cœ-ru'le-us.* Blue; a pale indigo color.

Cœruleus Lapis.* See BLUE-STONE.

Cœruleus Morbus.* See CYANOSIS.

Cœ'sĭ-us.* Lavender-color.

Co-e-ta'ne-ous. [From the Lat. *con*, "with," and *æ'tas*, "age."] Of the same age as another. In Botany, appearing at the same time with the leaves:—applied to flowers.

Cœur, KUR. The French word for "heart." See COR, and HEART.

Cof'fe-a.* [See CAFFEA.] A Linnæan genus of the class *Pentandria*, natural order *Cinchonaceæ* (according to Lindley, though ranked by Gray and others with the *Rubiaceæ*.)

Cof'fe-a A-rab'ĭ-ca.* The plant which affords coffee. See CAFFEA ARABICA.

Cof'fee. [Lat. **Caf'fea**, or **Cof'fea**; Fr. *Café*, kâ'fâ'.] The seed of the *Caf'fea Arab'ica*, a tree from fifteen to thirty feet in height, growing native in Southern Arabia and Abyssinia, and cultivated extensively in Java, Ceylon, and other parts of the East Indies, also in South America, Mexico, and the West India islands. The infusion of the roasted seeds is exhilarating and tonic, and has been used, it is said, with the most beneficial results in cases of poisoning with opium, and in chronic asthma. See CAFFEIN.

Co-hab-ĭ-tā'tion. [Lat. **Cohabita'tio**, *o'nis*; from *co* for *con*, "together," and *hab'ito*, *habita'tum*, to "dwell."] In Medical Jurisprudence, the dwelling together of two persons of opposite sexes, including the habit of venereal congress, without the sanction of marriage.

Co-he'rent. In Botany, the same as CONNATE.

Co-he'sion. [Lat. **Cohe'sio**, *o'nis*; from *co* for *con*, "together," and *hæ'reo*, *hæ'sum*, to "stick."] Cohesive attraction which unites the molecules of homogeneous bodies. (See MOLECULAR ATTRACTION.) The power by which the particles of bodies adhere to one another. In Botany, the union or superficial incorporation of one organ with another.

Co-ho-bā'tion. [Lat. **Cohoba'tio**, *o'nis*; from *co'hob*, a word used by Paracelsus to signify *repetition*.] The pouring of a fluid again and again on the matter from which it was distilled, and as often distilling it, to render it more efficacious.

Coitio,* ko-ish'e-o, or **Co-ĭ'tion.** The same as COITUS, which see.

Co'ĭ-tus.* [From the Lat. *co* for *con*, "together," and *e'o*, *i'tum*, to "go" or "come."] The coming together of male and female in the act of procreation. In Chemistry, the union of substances by incorporation or mixture.

Coke. The charcoal obtained by heating bituminous coal with imperfect access of air, or by its distillation. The former is usually called *oven coke*, the latter *gas coke*, being abundantly produced in gas-works. The weight of coke usually amounts to between sixty and seventy per cent. of the coal employed. Coke is a valuable fuel for many purposes in the arts.

Col. A French word signifying "the neck." See COLLUM.

Col'a-to'rĭ-um.* [From the Lat. *co'lo*, *cola'tum*, to "strain."] A strainer; a sieve.

Col-a-tu'ra.* [From the same.] Any filtered or strained liquor.

Col'chĭ-çi Cor'mus.* The Latin name for the bulbs of the *Col'chicum autumna'le*.

Col'chici Ra'dix.* "Colchicum Root." The Pharmacopœial name (U.S. 1870, 1880) for the corm of the *Col'chicum autumna'le*. It is narcotic, diuretic, and cathartic.

Col'chici Se'men.* "Colchicum Seed." The Pharmacopœial name (U.S. 1870, 1880) for the seed of the *Col'chicum autumna'le*.

Col'chici Sem'ĭ-na.* "Seeds of Colchicum." The Latin name for the seeds of the *Col'chicum autumna'le*.

Colchicia,* kol-chĭs'e-ạ. The same as COLCHICIN.

Col'chĭ-cin, or **Col'chĭ-cĭne.** [Lat. **Colchici'na.**] An alkaloid substance obtained from the *Col'chicum autumna'le*, of which it is believed to be the active principle.

Colchicum,* kŏl'che-kŭm. [From *Col'chis*, a country of Asia.] A Linnæan genus of the class *Hexandria*, natural order *Melanthaceæ*. The name is often used as synonymous with *Col'chicum autumna'le*, including the various preparations of the root and seeds.

Col'chi-cum Au-tum-na'le.* The Meadow Saffron, a native of Europe. The root and the seeds appear to possess similar medicinal properties. The former is narcotic, diuretic, and cathartic. From its sedative effects, it has often proved very useful in gout and rheumatism. In an overdose, however, it sometimes produces excessive nausea, vomiting and purging, and sinking of the pulse, attended with extreme prostration, and may prove fatal.

Col'co-thar. A mixture of red oxide of iron and the persulphate, used as a paint, etc.

Cold. [Lat. **Fri'gus, Frig'oris, Catar'rhus.**] Properly, the privation of heat. In popular language, it denotes a catarrh, cough, or other effects from exposure to cold. Cold is a potent exciting cause of disease. A fall in the temperature in winter below the average standard is followed by a corresponding rise in the death-rate. Cold is employed in medicine as a refrigerant and sedative.

Cold Af-fu'sion. In administering this, the patient is unclothed, seated in a tub, and four or five gallons of cold water are thrown over him. In cases of fever, where the skin is burning hot and dry, and in cases of collapse during fever, this practice is found very beneficial. But if the patient is damp and chilly, or if the fever is complicated with any visceral inflammation, such affusion is dangerous, and should be avoided.

Co-le-op'ter-ạ.* An order of insects. See next article.

Co-le-op'ter-us.* [From the Gr. κολεός, a "sheath," and πτέρον, a "wing."] Coleop'terous:—applied in the neuter plural (*Coleop'tera*) to an order of insects in which the inferior wings are covered by others like sheaths or cases. The order includes all beetles.

Co-le-o-rhi'za.* [From the Gr. κολεός, a "sheath," and ῥίζα, a "root."] In Botany, a kind of case which envelops certain radicles.

Co'lēs.* [Essentially the same word as the Lat. *cau'lis*; both are derived from the Gr. καυλός, a "stalk," or "stem."] Originally, a stalk; but used by Celsus as a designation of the penis.

Col'ic. [See COL'ICA.] (Fr. *Colique*, ko'lĕk'.) Acute pain in the abdomen, aggravated at intervals:—so named from its having been supposed to have its seat in the colon.

Col'ĭ-cạ.* [From the Lat. *col'icus*, "pertaining to the colon," *pas'sio*, "suffering," or "pain," being usually understood. See COLICA PASSIO.] Literally, pain in the colon, or large intestine. The colic, or belly-ache. A genus of the order *Spasmi*, class *Adynamiæ*, of Cullen's nosology.

COL'ICA ACCIDENTA'LIS.* Colic induced by particular articles of diet. This may also be flatulent colic. See COLICA FLATULENTA.

COL'ICA BILIO'SA.* Bilious colic, occasioned by an excess of bile in the intestines.

COL'ICA CALCULO'SA.* [From the Lat. *cal'culus.*] Colic caused by intestinal calculi.

COL'ICA FLATULEN'TA.* [From the Lat. *fla'tus*, "wind."] Flatulent colic, caused by wind in the intestines.

COL'ICA MECONIA'LIS.* Colic resulting from retention of the meconium in infants.

COL'ICA METAL'LICA.* Another name for saturnism, or painter's colic.

COL'ICA PAS'SIO* (pash'e-o). Another name for colic. See COLICA.

COL'ICA PIC'TONUM.* The "colic of the Pictones," a name for the people of Poitou, where it is said to have been an endemio:—otherwise called dry belly-ache; Devonshire colic; painter's colic (*Col'ica picto'rum*); also *Col'ica saturni'na*, as being produced by the poison of lead.

COL'ICA PICTO'RUM.* [From the Lat. *pic'tor*, a "painter."] "Painter's Colic." See COLICA PICTONUM.

COL'ICA STERCO'REA.* [From the Lat. *ster'cus*, *ster'coris*, "fæces."] Colic arising from an excessive accumulation of the contents of the bowels.

Colic-Root. See ALETRIS FARINOSA.

Col'ĭ-cus.* Belonging to the colon.

Col-ĭ-for'mis.* [From the Lat. *co'lum*, a "colander" or "strainer," a "sieve."] Col'iform; resembling a sieve, or sieve-like:—applied to the ethmoid bone (*os colifor'me*).

Colique. See COLIC.

Co-li'tis.* (Fr. *Colite*, ko'lĕt'.) Inflammation of the mucous coat of the colon.

Col'la Pis'cium* (pish'e-ŭm). "Glue of Fishes." See ICHTHYOCOLLA.

Col'la-ġen. [From the Gr. κολλά, "glue," and γεννάω, to "produce."] The chief constituent of bone, cartilage, ligaments, tendons, etc. By boiling it forms glue or gelatin.

Col-lapse'. [Lat. **Collap'sus**; from *col'labor*, *collap'sus*, to "fall down."] A state of extreme depression or complete prostration of the vital powers, such as occurs in Asiatic cholera, etc.

Col'lar. [Lat. **Colla're**; from *col'lum*, the "neck."] The *prothorax*, or anterior segment of the trunk, in insects.

Col'lar-Bone. The clavicle.

Col-lat'er-al. [From the Lat. *con*, "together," and *la'tus*, a "side."] Placed by the side of another. In Botany, side by side; on the same side.

Col-lect'ive, or **Mul'tĭ-ple, Fruits.** Masses of fruits resulting from several or many blossoms aggregated into one body, as the pine-apple and the mulberry.

Colles's Frac'ture. A name applied to a fracture of the radius.

Col-le'sis.* [From the Gr. *κολλάω*, to "glue."] An old term for AGGLUTINATION.

Collet, ko'lā'. A French term signifying "a collar." See NECK.

Col-lic'u-lus.* [Diminutive of the Lat. *col'lis*, a "hill" or "elevation."] A little hill, or eminence:—applied in Anatomy to various small elevations or protuberances.

Collic'ulus Ner'vi Æth-mo-ĭ-da'lis.* "Protuberance of the Ethmoid Nerve." The same as the CORPUS STRIATUM, which see.

Collic'ulus Ner'vi Op'tĭ-ci.* "Protuberance of the Optic Nerve." The optic thalamus.

Collic'ulus Sem-ĭ-na'lis.* "Seminal Protuberance." A small elevation in the prostate gland.

Col-lin-so'nĭ-a Can-a-den'sis.* Rich-Weed, a plant of the order *Labiatæ*, a native of the United States. It has diuretic properties.

Col-li'nus.* [From the Lat. *col'lis*, a "hill."] Growing on low hills.

Col-liq-ua-men'tum.* [From the Lat. *colliq'ueo*, to "melt;" so called, probably, in allusion to its exceeding softness, or its want of firm consistency.] A term applied by Harvey to the first rudiments of the embryo in generation.

Col-liq'ua-tīve. [Lat. **Colliquati'vus**; from *colliq'ueo*, to "melt."] A term applied to any excessive discharge or evacuation.

Col-lo'dĭ-um.* "Collodion." [From the Gr. *κόλλα*, "glue."] The Pharmacopœial name (U.S. 1870, 1880) for a solution of gun-cotton (pyroxylin) in stronger ether and alcohol. It is a transparent, colorless liquid, of a syrupy consistence and ethereal smell, and is used as an external application in abrasions, burns, wounds, etc. When the ether and alcohol evaporate, a transparent film is left upon the surface of the part to which it is applied. It is sometimes called *liquid adhesive plaster*. It is used in photography. (For particular directions in its preparation, see U.S. Pharmacopœia, 1880, page 83.)

Collo'dium cum Can-thăr'ĭ-de.* "Collodion with Cantharides." The Pharmacopœial name (U.S. 1870, 1880) for a preparation made of cantharides, flexible collodion, and commercial chloroform. It is used externally for producing vesication.

Collo'dium Flex'ĭ-le.* "Flexible Collodion." The Pharmacopœial name (U.S. 1870, 1880) for a mixture composed of ninety-two parts of collodion, five of Canada turpentine, and three of castor oil. Its uses are nearly the same as those of ordinary collodion; in some cases it is preferred, because of the greater flexibility of the film, which permits its application to parts of the body where slight motion cannot well be avoided.

Collo'dium Styp'tĭ-cum.* "Styptic Collodion." The Pharmacopœial name (U.S. 1880) for a preparation made of tannic acid, alcohol, stronger ether, and collodion. It is used externally, and is beneficial where an astringent effect is desired without access of air.

Col'loid. [Lat. **Colloi'des**; from the Gr. *κόλλα*, "glue" or "gelatin," and *εἶδος*, a "form" or "resemblance."] Resembling glue:—applied to a peculiar morbid formation generated in certain diatheses. *Colloid* is also the name of a form of morbid tissue resulting from cancer, so called from its jelly-like appearance.

Col-lo-ne'ma, a*tis.** [From the Gr. *κόλλα*, "glue."] A very soft tumor, containing a clear, grayish-yellow substance like gelatin or fresh glue.

Col'lum.* [Diminutive of the Lat. *colum'na*, a "pillar" ?] (Fr. *Col*, kol, and *Cou*, koo.) The neck:—applied to any part which, from its situation, form, or connection, resembles a neck. In Botany, the point of junction between the radicle and the plumule.

Col'lum,* or **Col'lar.** The neck or line of junction between the stem and root of a plant.

Col-lu-to'rĭ-um.* [From the Lat. *col'luo, collu'tum*, to "wash."] A gargle; a liquid applied to the mouth or throat for local purposes.

Col-lўr'ĭ-um.* [Gr. *κολλύριον*, a "little cake;" diminutive of *κολλύρα*, a "small loaf" or "roll of bread."] Originally, an eye-salve made up in small cakes, or any salve. The term is now usually applied to a wash or lotion for the eyes.

Co-lo-bo'ma, a*tis.** [From the Gr. *κολοβόω*, to "mutilate."] A mutilation, or defect.

Colobo'ma Ir'ĭ-dis.* "Mutilation of the Iris." A name applied to fissures of the lower portion of the iris with a prolongation of the pupil to the edge of the cornea.

Colocynth. See COLOCYNTHIS.

Col-o-cўn'this, i*dis.** [From the Gr. *κολόκυνθα*, a "gourd."] "Col'ocynth." The Pharmacopœial name (U.S. 1870, 1880) for the fruit of *Citrullus colocynthis* deprived of its rind; the bitter cucumber:—also called *Coloquin'tida*. The pulp of colocynth is a powerful hydragogue cathartic, and, as such, is sometimes given in dropsy. In large doses, however, it is a dangerous poison. It is most frequently administered in combination with other medicines.

Co-lom'ba.* The former Pharmacopœial name (U.S.) of the root of the *Coc'culus palma'tus*. See CALUMBA, and COLUMBO.

Colo-Enteritis.* See COLITIS.

Co'lon.* [Gr. *κῶλον*.] That portion of the large intestine extending from the cæcum to the rectum.

Co-lo-ni'tis.* The same as COLITIS, which see.

Co-loph'o-nў. [Lat. **Colopho'nia**; from *Col'ophon*, a city of Ionia, whence it was originally obtained.] A dark-colored resin, prepared from the distillation of rough turpentine without water.

Coloquinte, ko'lo'kânt'. The French term for "colocynth." See COLOCYNTHIS.

Coloquintida.* See COLOCYNTHIS.

Col'or, kŭl'ẹr. [Lat. **Co'lor**; Fr. *Couleur*, koo'lUR'; Gr. *χρῶμα.*] The impression which the light reflected by the surface of bodies makes on the organ of sight. The seven primitive prismatic colors, according to Newton, are red, orange, yellow, green, blue, indigo, and violet. According to more recent authorities, there are three primary colors, red, blue, and yellow, and three secondary colors, green, purple, and scarlet The combination of these in various proportions produces an infinite variety of tints or shades. Color is not an inherent property of bodies, but depends on reflected light. One body appears red because it reflects the red rays and absorbs all the others. A body which absorbs all the rays appears black, and that which reflects all is white, which is not a color, but a mixture of all colors. (White, however, is considered a color in Botany.) Some authors apply the term *tertiary* to a color produced by the union of a secondary with a primary color. Red or scarlet is the warmest color.

Col'ored. [Lat. **Colora'tus**; from *colo'ro, colora'tum*, to "color."] A term applied in Botany to objects of any other color than green.

Col-o-rif'ic. [Lat. **Colorif'icus**; from *co'lor*, and *fa'cio*, to "make."] Making or producing colors:—applied to the luminous rays.

Col'or-ing Mat'ter. A coloring principle existing in vegetable substances. Colors are termed *substantive* when they adhere to the cloth without a basis; *adjective*, when they require a basis or mordant.

Col-os-trā'tion. [Lat. **Colostra'tio, o'nis.**] A term for the diseases of new-born infants, caused by the colostrum.

Co-los'tric. [Lat. **Colos'tricus.**] Belonging to the colostrum.

Colos'tric Flu'id. The imperfect secretion of milk before the mother has recovered from delivery, on account of the presence of colostrum:—popularly, "green milk."

Co-los'trous. [Lat. **Colostro'sus**; from *colos'trum.*] Having colostrum, or full of colostrum.

Co-los'trum.* [Perhaps from the Gr. *κολόν*, "food."] A substance in the first milk after delivery, giving to it a greenish or yellowish color.

Co-lot'o-mў. [Lat. **Coloto'mia**; from *co'lon*, and the Gr. *τέμνω*, to "cut."] Cutting into the colon.

Col'po-çēle.* [From the Gr. *κόλπος*, the "womb" or "vagina," and *κήλη*, a "tumor."] *Her'nia vagina'lis*, or hernia in the vagina.

Col-pop-to'sis.* [From the Gr. *κόλπος*, the "womb" or "vagina," and *πτῶσις*, a "falling."] Falling down, or *prolapsus*, of the vagina.

Col-por-rha'ğĭ-ạ.* [From the Gr. *κόλπος*, the "vagina," and *ῥήγνυμι*, to "burst forth."] Hemorrhage from the vagina.

Col-por'rha-phў. [From the Gr. *κόλπος*, the "vagina," and *ῥάφη*, a "suture" or "seam."] The same as ELYTRORRHAPHY, which see.

Col-por-rhœ'a.* [From the Gr. *κόλπος*, the "vagina," and *ῥεω*, to "flow."] The same as LEUCORRHŒA.

Colt's Foot. See TUSSILAGO FARFARA.

Col'u-ber Be'rus.* The systematic name for the viper, a poisonous snake common in Europe.

Co-lum'bic Aç'id. An acid obtained by fusing the ore of columbium with the carbonate or the bisulphate of potassa; a soluble columbate of potassa is obtained, and the acid is precipitated in the form of a white hydrate.

Columbine. See AQUILEGIA.

Co-lum'bĭ-um* [from *Colum'bia*, one of the names of America], or **Ni-o'bĭ-um.*** A metal first found (in 1801) in a mineral discovered in Massachusetts. It has since been found in a Swedish mineral called tantalite; but its ores are extremely rare.

Co-lum'bo.* The common name for the root of the *Jateorrhiza Calumba.* (See CALUMBA.) This root is one of the most valuable of the mild tonics. Being without astringency, it is generally acceptable to the stomach, and is an excellent remedy in cases of simple debility of the digestive organs or of the alimentary canal, resulting from whatever cause.

Columbo, American. See FRASERA.

Columella.* See COLUMNELLA.

Columelliaceæ,* kol-u-mel-le-a'she-ē. [From *Columel'lia*, one of the genera.] An obscure and small natural order of exogenous shrubs and trees, found in Mexico and Peru.

Col'umn. [Lat. **Colum'na.**] In Botany, a term applied to the united stamens, as in the mallow, or to the stamen and pistil united into one body, as in the Orchis family; also the axis or central pillar of a capsule.

Co-lum'na,* plural **Co-lum'næ.** (Fr. *Colonne*, ko'lon'.) Literally, a "column" or "pillar." A term applied in Anatomy to parts supposed to resemble a column, as those of the *velum palati*, and the *columnæ carneæ*, or muscular fasciculi of the internal walls of the heart.

Colum'na Na'si.* "Column of the Nose." The fleshy termination of the septum of the nose.

Colum'na O'ris.* "Column of the Mouth." The uvula.

Colum'na Ver-te-bra'lis.* "Vertebral Column." The spinal column.

Columnæ Bertini.* See COLUMNS OF BERTIN.

Co-lum'næ Car'ne-æ.* "Fleshy Columns." (Fr. *Colonnes charnues*, ko'lon' shaR'nü'.) The muscular projections in the ventricles of the heart.

Co-lum'nar. [Lat. **Columna'ris**; from *colum'na*, a "pillar."] Belonging to a pillar or column; pillar-like; having the form of a column, as the stamens of the mallow.

Col-um-nel'la,* or **Col-u-mel'la.*** [Diminutive of the Lat. *colum'na*, a "column."] A term applied in Botany to a substance passing through the capsule, connecting the several partitions and seeds, or the axis to which the carpels of a compound pistil are sometimes attached.

Col-um-nif'er-ous. [Lat. **Columnif'erus**; from *colum'na*, a "column," and *fe'ro*, to "bear."] A term applied in Botany to plants that have the

stamens and pistil like a column in the middle of the flower.

Col'umns of Ber'tin. [Lat. **Colum'næ Berti'ni.**] A name applied to processes in the cortical portion of the kidney.

Columns of Gall. See CUNEIFORM COLUMNS.

Co-lum'nu-la.* [Diminutive of the Lat. *colum'na*, a "column."] The filament which passes through the middle of the capsule of frondose mosses.

Coluvrine de Virginie, ko'lü'vrĕn' dẹh vĕr'zhĕ'nē'. The French for Virginia Snake-root. See ARISTOLOCHIA.

Col'za Oil. A liquid extracted from the grain of the *Bras'sica arven'sis*, and used in making soft soap.

Co'ma, a*tis,* plural **Com'a-ta.** [Gr. κῶμα, "deep sleep."] A state of lethargic drowsiness, produced by compression of the brain and other causes.

Co'ma.* [Gr. κόμη, the "hair of the head."] Literally, a "head of hair." A term applied in Botany to the hairs at the end of some seeds; a tuft of long, soft hairs, such as are found in the pod of the milk-weed.

Co'ma-Vig'il.* "Wakeful Coma." The lethargic condition of the patient in which he is wakeful and muttering in delirium, mostly observed in bad cases of typhus; continuous insomnia associated with partial unconsciousness. When occurring in typhus it is almost invariably a fatal symptom.

Com'a-ta,* the plural of **Co'ma.** A term applied to soporose diseases. An order of the class *Neuroses* of Cullen's nosology.

Co'ma-tōse. [Lat. **Comato'sus;** from *co'ma.*] Having a constant propensity to sleep; full of sleep.

Com-bĭ-nā'tion. [Lat. **Combina'tio, o*nis;*** from *combi'no, combina'tum*, to "set in couples together" (from *con*, "together," and *bi'nus*, "two by two").] A true chemical union of two or more substances, as opposed to mere mechanical mixture. The result is a compound which has properties different from those of its components, and its smallest parts contain the components in the same proportion as the total mass.

Combretaceæ,* kom-bre-ta'she-ē. [From *Combre'tum*, one of the genera.] A natural order of exogenous shrubs and trees, all natives of the tropics, mostly astringents. Some species of it produce valuable dyestuffs. It comprises the *Termina'lia Chebu'la*, which produces a fruit called *myrob'alan*, and the *Termina'lia Catap'pa*, which grows in Florida and India.

Comb-Shaped. The same as PECTINATE.

Com-bus'tĭ-ble. [For etymology see next article.] Capable of being burned:—applied to a body that will combine with oxygen so as to produce fire or heat.

Com-bus'tion. [Lat. **Combus'tio, o*nis;*** from *combu'ro, combus'tum*, to "burn."] Burning. The evolution of heat and light during chemical action, by absorbing oxygen from atmospheric air. The combination of one body with another, which is effected with the evolution of light and heat. The quantity of heat produced is equivalent to the loss of chemical energy suffered by the bodies which combine.

Combustion, Preternatural; Combustion, Spontaneous. See SPONTANEOUS COMBUSTION.

Com-e-do'nēs,* plural of **Com'e-do.** [From the Lat. *com'edo*, to "eat;" literally, an "eater;" hence, a "worm."] A term applied to the minute worm-like appearances on the face and neck, etc., when the skin is squeezed. They are simply the contents of the sebaceous follicles.

Com'et. [Lat. **Come'ta,** or **Come'tes;** from the Greek κομήτης, "long-haired;" from the stream of light usually appended to them, like a tail.] The name of a heavenly body, supposed to form a part of our system. The orbits of many comets are ellipses. These comets return periodically. Others move in a hyperbola or parabola, and never return.

Commander's Balsam. See TINCTURA BENZOINI.

Com-me-ly'na.* [Named in honor of the Dutch botanists J. and G. *Commelyn.*] A genus of herbaceous plants of the order *Commelynaceæ*, comprising numerous species, natives of India, tropical America, and the United States. Several of them are cultivated for ornament. The rhizomes of *Commelyna medica* are employed by the Chinese as a remedy in cough.

Commelynaceæ,* or **Commelinaceæ,*** kom-me-le-na'she-ē. [From *Commely'na*, one of the genera.] A natural order of endogenous herbaceous plants, including the Spider-wort, or *Tradescantia.*

Com'mĭ-nūt-ed. [Lat. **Comminu'tus;** from *commin'uo, comminu'tum*, to "break" or "crush into small pieces."] A term applied to fractures in which the bone is broken into several pieces.

Com-mis-su'ra.* [From the Lat. *con*, "together," and *mit'to, mis'sum*, to "put."] A joining together; something which joins together; a com'missure.

Commissu'ra Mag'na.* "Great Commissure." The *corpus callosum* of the brain.

Commissu'ra Mol'lis.* "Soft Commissure." The name of the gray mass uniting the thalami of the brain.

Com'mis-sure. In Botany, the line of junction of two carpels or other bodies. See COMMISSURA.

Com'mon. In Botany, "general," in contradistinction to "partial." Thus, the axis of a raceme is called the *common peduncle*, and the stalk of each flower is a *pedicel* or *partial peduncle.*

Common Integuments. See INTEGUMENTS.

Com-mu'nĭ-cans,* plural **Com-mu-nĭ-can'tēs.** [Present participle of the Lat. verb *commu'nico, communica'tum*, to "communicate."] Communicating; that which establishes communication.

Commu'nicans Tib'ĭ-æ.* "Communicating [Nerve] of the Tibia." The external saphenal branch of the tibial nerve.

Commu'nicans Wil-lis'ĭ-i.* "Communicating [Artery] of Willis." A branch of the inter-

nal carotid artery, passing to the posterior cerebral artery.

Com-mu-nĭ-can'tēs Ar-te'rĭ-æ.* "Communicating Arteries." Of these there are two within the cranium, the principal of which is the COMMUNICANS WILLISII.

Co'mōse. [From the Lat. *co'ma*, or the Gr. *κόμη*, "hair."] Tufted; bearing a tuft of hairs; having a cottony or silky tuft.

Com-pact'. [From the Lat. *compin'go, compac'tum*, to "join firmly together."] Condensed or pressed together; dense; solid.

Comparative Anatomy. See ANATOMY, COMPARATIVE.

Com-pla'nate. [From the Lat. *compla'no*, to "make level," to "flatten."] Flattened:—applied to parts of plants.

Com-plete'. A term applied in Botany to those flowers which have both calyx and corolla.

Com'plex. [For etymology see next article.] Compound; intricate; complicated.

Com-plex'us.* [From the Lat. *con*, "together," and *plec'to, plex'um*, to "plait," to "weave."] Literally, "woven together:"—applied to a muscle situated at the back part of the neck. It is so named from the intricate mixture of its muscular and tendinous parts. It is attached to the occipital bone, and to the cervical and upper dorsal vertebræ. In Botany, applied to a tissue.

Com'plĭ-cate. [For etymology see next article.] In Botany, folded upon itself.

Com'plĭ-cāt-ed. [Lat. **Complica'tus**; from *con*, "together," and *pli'co, plica'tum*, to "fold," to "knit."] A term applied to fractures that are combined with other circumstances that make their treatment difficult,—as a wounded artery, dislocation, injury of the viscera, etc.

Com-plĭ-cā'tion. [Lat. **Complica'tio, o'nis;** from the same.] The coexistence of two or more diseases, which modify each other, without being in their nature inseparable.

Compositæ,* kom-poz'e-tē. [From the Lat. *con*, "together," and *po'no, pos'itum*, to "put."] An order of exogenous plants, mostly herbs. The largest of all known natural groups of plants:—so called because the old botanists who invented the name regarded the flower-heads as compound flowers. It answers to the *Syngenesia polygamia* of Linnæus. It comprises the *Aster, Bellis, Chrysanthemum, Dahlia*, etc., which are prized for the beauty of their flowers, and many medicinal plants, among which are the *Ar'nica* and the *An'themis*. This order is characterized by having capitate flowers, syngenesious anthers, and an inferior ovary, with a single erect ovule. It includes about one thousand genera and nine or ten thousand species.

Com-poś'ĭte. [From the same.] Compound:—applied to a plant or flower of the order *Compositæ*.

Com-po-sĭ'tion. [From the same.] The act of composing, or that which is composed; the state of being compounded. In Botany, the arrangement of organs, or their order of development, etc. In Printing, the act of setting types. In Literature, the act of inventing or combining ideas and expressing them in words. In Mineralogy, the quality and proportion of the component parts or elements of a mineral.

Com-poś'ĭ-tus.* [From the same.] Compound:—opposed to *simple*:—applied in the plural feminine to a natural order of plants. See COMPOSITÆ.

Compote, kom'pŏt'. (Fr.; a contraction of the Lat. COMPOSITUS, which see.) Fruits preserved with sugar,—generally stone-fruits.

Com'pound. [A corruption of *componed*, passive participle from the obsolete verb *compone*, to "put together," to "arrange." See COMPOSITUS.] (Fr. *Composé*, kŏm'po'zā'.) A term applied in Mineralogy to a form contained under planes not equal, similar, and equally disposed to each other. In Pharmacy and Chemistry, applied to a mixture or substance composed of two or more ingredients or elements. In Botany, it signifies composed of similar simple parts. Thus, a compound umbel is divisible into several parts, each of which is a simple umbel. A leaf is compound when the lamina consists of two or more separate parts (leaflets) borne on a common petiole.

Compound Blowpipe. See BLOWPIPE.

Com'pound Flŏw'er. A name given by early botanists to a dense cluster or head of florets of the order *Compositæ*.

Com'pound Frac'ture. A term in Surgery denoting a case wherein the fracture of the bone is accompanied with laceration of the integuments, causing an external wound. See FRACTURE.

Com'press. [Lat. **Compres'sus**; from *con*, "together," and *pre'mo, pres'sum*, to "press."] Literally, "something pressed together." A portion of folded linen, lint, or other material, made into a kind of pad to be placed over parts which require particular pressure.

Com-pressed'. [Lat. **Compres'sus**; from the same.] Flattened in a lateral direction; flattened on two opposite sides, so that the width is greater than the thickness, as the pod of a pea.

Com-pres-sĭ-bil'ĭ-tў. [From the same.] A property of masses of matter, by which it is capable of being pressed into a smaller space. All bodies are compressible in consequence of their porosity. Solids and gases are more compressible than liquids. Bodies which recover their former bulk on removal of the compressing cause are termed *elastic*.

Com-pres'sion. [Lat. **Compres'sio, o'nis;** from the same.] The act of compressing, or pressing together. An action exerted on a body by a power which is external, and which tends to diminish its volume and increase its density:—applied to an abnormal state of a part produced by something pressing upon it; generally used in reference to the brain. The effects of compression consist, in general, either in a stoppage or perturbation of nutrition, ending in atrophy; or in a slow irritation, inducing chronic inflammatory lesions or various degenerations; or in an obstruction of the circulation of liquids, causing mortification and gangrene.

Com-pres'sor, o'ris.* [From the same.] That which compresses:—applied to a muscle

which presses upon any part. In Surgery, it denotes a certain instrument.

Compressor of Dupuytren. See DUPUYTREN, COMPRESSOR OF.

Compres'sor Pros'ta-tæ.* The "Compressor of the Prostate [Gland]." The anterior fibres of the *levator ani*, which embrace the prostate gland.

Con. A Latin particle signifying "together," and sometimes "with." It is usually changed to *com* before *b*, *m*, and *p*, and to *co* before a vowel, or *h*. Hence we have *combine* and *compress*, instead of *conbine* and *conpress*; *coagulate* and *cohabit*, instead of *conagulate* and *conhabit*. Sometimes *con* is intensive, as *concu'tio*, *concus'sum*, to "shake violently."

Co-na'rĭ-um.* [From the Gr. *κῶνος*, a "cone."] Another name for the pineal gland:—so called on account of its conical form.

Con-cat'e-nate. [From the Lat. *con*, "together," and *cate'na*, a "chain."] "Chained together." A term applied to the glands of the neck, presenting in children a kind of knotty cord, extending from behind the ear to the collar-bone.

Con-cau'sa.* [From the Lat. *con*, "together," and *cau'sa*, a "cause."] A cause combined with another; a concause.

Con'cāve. [From the Lat. *con*, intensive, and *ca'vus*, "hollow."] Regularly hollowed out, like the inside of a hollow sphere; presenting a hollow or depressed surface.

Con-cā'vo-con'cāve. [Lat. **Con'cavo-con'cavus.**] Having two concave faces.

Con-cā'vo-con'vex. [Lat. **Con'cavo-con-vex'us.**] Having one face concave, the other convex.

Con-cen'trāte. [From the Lat. *con*, "together," and *cen'trum*, a "centre."] Literally, to "bring together [as an army] towards a common centre:" hence, to condense, to strengthen.

Con-cen-trā'tion. [Lat. **Concentra'tio, o'nis**; from the same.] The act of concentrating and collecting in a common centre:—applied in Chemistry to the operation of rendering a fluid stronger by evaporating a portion of the water it contains.

Con-cen'tric. [Lat. **Concen'tricus**; from *con*, "together" or "with," and *cen'trum*, a "centre."] Having one common centre.

Con-çep'ta-cle. [Lat. **Conceptac'ulum**; from *concip'io*, *concep'tum*, to "conceive."] In Botany, the case or vessel containing the reproductive corpuscles in cryptogamous plants. The conceptacle is also termed *capsule*, *sporangium*, and *spore-case*.

Con-cep'tion. [From the same.] The impregnation of the female *ovulum* in the ovarium by the semen of the male, whence results a new being.

Concep'tion, False. An imperfect impregnation or blighted ovum.

Concha,* konk'a. [Gr. *κόγχη*, a "shell."] Literally, a "shell:"—applied in Anatomy to the hollow portion of the external ear, etc.

Con'chæ Na'rĭ-um.* The "Shells of the Nostrils." The turbinated portion of the ethmoid bone, and the inferior spongy bones.

Con-chif'er-a.* [From the Lat. *con'cha*, a "shell," and *fe'ro*, to "bear," to "carry."] The second class of the *Cyclo-gangliata*, or *Mollusca*, comprising acephalous aquatic animals covered with a bivalve or multivalve shell.

Con-chif'er-ous. [Lat. **Conchif'erus**; from the same.] Bearing, or having, shells:—applied to mollusks.

Con'chĭ-form. [From the Lat. *con'cha*, a "shell," and *for'ma*, a "form."] Shaped like one valve of a bivalve shell or mollusk, as a clam.

Conch'oid. [Lat. **Conchoi'des**; from the Gr. *κόγχη*, a "shell," and *εἶδος*, a "form" or "resemblance."] Resembling a shell.

Con-choi'dal. The same as CONCHOID. A term applied to the fracture of certain minerals, the surfaces of which are concave or convex, as anthracite.

Con-chol'o-ġў. [Lat. **Concholo'gia**; from the Gr. *κόγχη*, a "shell," and *λόγος*, a "discourse."] The science of shells and mollusks; that branch of Natural History which treats of the form, structure, and peculiarities of shells and the animals that live in them.

Conch'us.* [From the Gr. *κόγχη*, a "shell."] The cranium. In the plural (*Con'chi*) it is applied to the cavities of the eye.

Con-chўl-e-om'e-ter. [Lat. **Conchyliom'etrum**; from the Gr. *κογχύλιον*, a "shell," and *μέτρον*, a "measure."] An instrument for measuring shells.

Con-chўl-ĭ-o-lo'ġĭ-a.* [From the Gr. *κογχύλιον*, a "shell," and *λόγος*, a "discourse."] The same as CONCHOLOGY.

Con-coc'tion. [Lat. **Concoc'tio, o'nis**; from *con*, intensive, and *co'quo*, *coc'tum*, to "cook," to "digest."] The changing process which the food undergoes in the stomach and bowels; the same as *Digestion*, though the latter is by some medical writers limited to the process in the stomach.

Con'co-lor.* Of the same color as some other thing:—applied to a leaf when both its surfaces are of the same color:—applied also to animals, as *Felis concolor*.

Con-com'ĭ-tant. [Lat. **Concom'itans**; from *con*, "together," and *comita'ri*, to "accompany."] Accompanying; conjoined with.

Con-crēte', or kong'krēt. [Lat. **Concre'tus**; from *con*, "together," and *cres'co*, *cre'tum*, to "grow."] A term applied to substances converted from a fluid to a more solid consistence. Also the reverse of *abstract*.

Con-cre'tion. [Lat. **Concre'tio, o'nis**; from the same.] The growing together of parts naturally separate, as the fingers or toes. In Medicine, an extraneous, inorganic solid formed either in one of the natural cavities or canals, or in the substance of an organ, by the deposit of certain solid constituents of the fluids of the part. (See CALCULUS.) In Chemistry, the condensation of a fluid, or other substance, into a more solid consistence.

Con-cre'tion-ą-rў Struc'ture. In Geology, the structure of rocks that have the form of, or contain, concretions, which are often spherical or spheroidal, and in concentric layers.

Con-cu'bĭ-tus.* [From the Lat. *con*, "together," and *cu'bo*, *cu'bitum*, to "lie."] The same as COITUS.

Con-cus'sion. [Lat. **Concus'sio, o'nis;** from *concu'tio*, *concus'sum*, to "shake," to "shake violently."] A diseased state, producing alarming symptoms, caused by great violence offered to the head, though no fissure, fracture, or extravasation can be discovered.

Con-den-sā'tion. [Lat. **Condensa'tio, o'nis;** from *con*, "together," and *den'so*, *densa'tum*, to "thicken," to "make thick."] The act of rendering a substance more dense and compact; the process of bringing the component parts of vapor or gas nearer to one another by pressure or cold:—applied to increased density or solidity of the blood or tissues.

Con-den'ser, or **Con-den-sā'tor.*** [From the same.] A vessel or apparatus for condensing gas, vapor, or air. Also an instrument for rendering sensible the weakest quantities of electricity.

Con-dĭ-men'tą.* [The plural of the Lat. *condimen'tum*, a "sauce" or "seasoning;" from *con'dio*, to "season."] Condiments; substances taken with the food to improve its flavor, to promote its digestion, or to correct its injurious qualities. The condiments are acid, aromatic, saline, and saccharine substances, as mustard, pepper, salt, nutmeg, vinegar.

Con-dĭ'tion. [Lat. **Condi'tio**; from *con'do*, *con'ditum*, to "build," to "make."] Mode of existence; state; quality; attribute; disposition; predicament.

Con'dom. [From Dr. *Condom*, the inventor.] A sheath, made from a sheep's intestine, drawn over the penis, prior to coition, to prevent venereal infection.

Con-duc'tion. [Lat. **Conduc'tio, o'nis;** from *condu'co*, *conduc'tum*, to "lead together," to "conduct."] The passing of caloric or electricity from one particle of matter to another, as in an iron rod heated at one end, in which case the caloric is conducted gradually along the particles of the iron.

Con-duc'tor, o'ris.* [From the same.] A term applied to a body which readily transmits electricity or caloric. The metals are the best conductors of electricity.

Conduit, kŏn'dit or kŭn'dit. [From the same.] A vessel, canal, or pipe for conducting water or other fluid; a duct.

Con-du'plĭ-cate. [Lat. **Conduplica'tus;** from *con*, "together," and *duplica'tus*, "doubled."] Folded together, as sheets of paper are usually folded:—applied to leaves in buds.

Con-du-ran'go, or **Cun-du-ran'go.** The popular name of the *Gonol'obus Conduran'go*, a vine or tree of the natural order *Asclepiadaceæ*. It is a native of South America. The bark was once supposed to be a remedy against cancer.

Con'dўle. [Lat. **Con'dylus;** from the Gr. *κόνδυλος*, a "knuckle," a "knob."] The round eminence at the end of a bone in a joint.

Con'dў-loid. [Lat. **Condyloi'des;** from the Gr. *κόνδυλος*, a "knob," a "condyle," and *εἶδος*, a "form" or "resemblance."] Resembling a condyle.

Con-dў-lo'mą, a'tis.* [From the Gr. *κόνδυλος*, a "knob" or "tubercle."] A small, hard tumor, or wart-like excrescence, about the anus and pudendum of both sexes.

Cone. [Lat. **Co'nus;** Gr. *κῶνος*.] A solid formed by the rotation of a right-angled triangle about its perpendicular, called the axis of the cone. Also the fruit of the *Coniferæ*, or Pine family. See CONUS.

Cone-Shaped. See CONICAL.

Co-ne'in, or **Co-ne'ĭne.** [Lat. **Coni'a,** or **Coneia,** ko-nī'ą; from *coni'um*, "hemlock."] The active principle of *Coni'um macula'tum*:—also termed *Cicutin*. It is an alkaloid and a narcotic poison.

Conf. = *Confec'tio.** A "confection."

Confectio,* kon-fek'she-o, plural **Confectiones,** kon-fek-she-o'nēz. (Fr. *Confit*, kŏn'fē'.) A confection,—essentially the same as CONSERVE; something made of sugar, as confectionery. Under this title the London College and U.S. Pharmacopœia comprehend the *Conserves* and *Electuaries* of their former Pharmacopœias.

Confec'tio Ar-o-mat'ĭ-cą.* "Aromatic Confection." The Pharmacopœial name (U.S. 1870) for a confection prepared as follows: Take of aromatic powder, four troyounces; clarified honey, four troyounces, or a sufficient quantity. Rub the aromatic powder with clarified honey until a uniform mass is obtained of the proper consistence.

Confec'tio Auran'tii (au-ran'she-i) **Cor'tĭ-çis.*** "Confection of Orange-Peel." The Pharmacopœial name (U.S. 1870) for a confection prepared as follows: Take of sweet orange-peel, recently separated from the fruit by grating, twelve troyounces; sugar, thirty-six troyounces. Beat the orange-peel with the sugar, gradually added, until they are thoroughly mixed.

Confec'tio O'pĭ-i.* "Confection of Opium." The Pharmacopœial name (U.S. 1870) for a confection prepared as follows: Take of opium, in fine powder, two hundred and seventy grains; aromatic powder, six troyounces; clarified honey, fourteen troyounces. Rub the opium with the aromatic powder, then add the honey, and beat the whole together until thoroughly mixed. It is a stimulant narcotic, useful in atonic gout, flatulent colic, etc.

Confec'tio Ro'sæ.* "Confection of Rose." The Pharmacopœial name (U.S. 1870, 1880) for a semi-solid preparation made of red rose, sugar, clarified honey, and rose-water. Its principal use is as an adjuvant or vehicle for the administration of other remedies.

Confec'tio Sen'næ.* "Confection of Senna." The Pharmacopœial name (U.S. 1870, 1880) for a semi-solid preparation composed of ten parts of senna, six of coriander, sixteen of cassia fistula, ten of tamarind, seven of prune, twelve of fig, bruised, fifty of sugar in fine powder, and sixty

of water. It is an agreeable laxative when given in doses of two drachms to an adult.

Confectiones.* See CONFECTIO.

Con-fer'tus.* [From the Lat. *con*, "together," and *fe'ro*, to "carry" or "bring."] Literally, "brought [close] together." Packed close; crammed; pressed closely round about each other:—applied to parts of plants.

Con-fer'va.* [From the Lat. *confer'veo*, to "boil together," to "boil up;" so named, perhaps, in allusion to its floating like scum on the surface of the water.] The *Confervæ* are chiefly fresh-water plants, composed of jointed capillary tubes, the joints containing granules variously arranged.

Confervaceæ,* kon-fer-va'she-ē. [From *Confer'va*, a genus of aquatic plants.] A natural order of flowerless aquatic plants, common in fresh water. At one period of their existence they have the power of rapid and quasi-voluntary motion.

Con-fig-u-rā'tion. [Lat. **Configura'tio.**] Form depending on the relation or proportion of several parts; the general form of the body.

Con-flā'tion. [Lat. **Confla'tio**; from *con'flo*, *confla'tum*, to "blow together," to "forge," to "melt."] The casting or melting of metal.

Con'flu-ent. [Lat. **Con'fluens**; from *con*, "together," and *flu'o*, to "flow," to "run."] Coherent; blended or running into each other:—applied to the eruption in variola, and in some other exanthematous diseases, when the pustules are so thick as to run together, appearing like one mass of inflammation:—applied in Botany to leaves connected at their base.

Con-form'a-ble. [For etymology see next article.] Having the same form.

Con-for-mā'tion. [Lat. **Conforma'tio, o'nis**; from *confor'mo*, *conforma'tum*, to "shape" or "form together," to "adapt one thing or part to another."] The natural form of a part; the natural structure of the body.

Con-formed'. [From the same.] Similar to another thing it is associated with or compared to; or closely fitted to it, as the skin to the kernel of a seed.

Cong. = *Con'gius.** A "gallon."

Con-ġe-lā'tion. [Lat. **Congela'tio, o'nis**; from *con*, intensive, and *ge'lo*, *gela'tum*, to "freeze."] The process whereby the change of a liquid to a solid body is produced by the abstraction of its heat.

Con'ġe-ner, er'is.* [From the Lat. *con*, "together," and *ge'nus*, *gen'eris*, a "kind," or "race."] (Fr. *Congénère*, kôN'zhā'naiR'.) Literally, "of the same kind with another." A term applied to muscles which perform the same action:—also to genera nearly allied, or to species of the same genus. Animals or plants of the same genus are *congeners*.

Con-ġen'i-tal. [Lat. **Congen'itus**; from *con*, "together," or "with," and *gen'itus*, "begotten," "born."] (Fr. *Congénial*, kôN'zhā'ne-ăl'.) Born with a person; existing from birth; connate.

Con-ġe'rĭ-ēs.* [From the Lat. *con'gero*, to "carry together," to "heap up."] A collection of a number of particles into one mass.

Con-gest'ed. [For etymology see next article.] Crowded very closely:—applied to parts of plants.

Con-ġes'tion. [Lat. **Conges'tio, o'nis**; from *con'gero*, *conges'tum*, to "carry or heap together."] An excessive accumulation of the contents of any of the blood-vessels or ducts.

Con-ġes'tĭve. [Lat. **Congesti'vus**; from the same.] Capable of producing, or tending to produce, congestion.

Con'ġĭ-us.* A "gallon."

Con'glo-bate. [Lat. **Congloba'tus**; from *conglo'bo*, *congloba'tum*, to "gather into a ball."] Formed into a ball, or collected into a ball:—applied to flowers and leaves.

Con'globate Gland [from the Lat. *con*, "together," and *glo'bus*, a "ball"], or **Sim'ple Gland.** A gland subsisting by itself,—as those of the absorbent system.

Con-glom'er-ate. [Lat. **Conglomera'tus**; from *conglom'ero*, *conglomera'tum*, to "wind," as on a ball, to "heap together." See AGGLOMERATE.] Clustered or heaped together; irregularly crowded together.

Conglom'erate Gland [from the Lat. *con*, "together," and *glo'mus*, *glom'eris*, a "heap"], or **Com'pound Gland.** A gland composed of various glands,—as the salivary, parotid, pancreatic, etc.

Conglutinantia,* kon-glu-te-nan'she-a. [From the Lat. *conglu'tino*, to "glue together."] The same as AGGLUTINANTIA. See AGGLUTINANT.

Con-glu'tĭ-nate. [From the same.] Glued together; not organically united:—applied to parts of plants.

Con-gres'sus,* or **Con'gress.** [From the Lat. *congre'dior*, *congres'sus*, to "meet together."] The meeting of the male and female in the act of procreation. The same as COITUS.

Co'ni,* the plural of CONUS, which see.

Co'ni Vas-cu-lo'si.* "Vascular Cones." The conical convolutions of the *vasa efferentia* of the testis. They constitute the *epididymis*.

Co-ni'a.* The same as CONEIN, which see.

Conic. See CONICAL.

Con'ĭ-cal. [Lat. **Con'icus.**] Belonging to a cone; shaped like a cone.

Con'ĭ-cin. [Lat. **Conici'na.**] The same as CONEIN, which see.

Co-nif'er-æ* [from the Lat. *co'nus*, a "cone," and *fe'ro*, to "bear"], or **Pinaceæ,*** pi-na'she-ē. A natural order of exogenous trees and shrubs, found in nearly all parts of the world, and usually evergreen. It includes the pine, cedar, spruce, cypress, juniper, and other trees of great value for timber. No order can be named of more universal importance to man, whether we view it with reference to its timber or its secretions, among which are turpentine, resin, balsam, and pitch. It belongs to the sub-class *Gymnospermæ*, having the seeds naked,—*i.e.*, not enclosed in an ovary or pericarp. The flowers are unisexual, and

destitute of calyx or corolla. The leaves are mostly needle-shaped or awl-shaped.

Co-nif'er-ous. [Lat. **Conif'erus**; from *co'nus*, a "cone," and *fe'ro*, to "bear."] Bearing cones. See CONIFERÆ.

Coniform. See CONOID.

Co-nī'i Fo'lĭ-ą.* "Leaves of Conium." The Pharmacopœial name (U.S. 1870) for the leaves of *Conium maculatum*. See CONIUM.

Coni'i Fruc'tus.* The Pharmacopœial name (U.S. 1870) for the full-grown fruit of *Conium maculatum*.

Co-nĭ-ros'tris.* [From the Lat. *co'nus*, a "cone," and *ros'trum*, a "beak."] Conirostrate: —applied in the plural feminine to a family of birds having a strong conical beak.

Co-ni'um.* [Gr. *κώνειον*.] Called in English **Hemlock.** (Fr. *Ciguë*, sē'gü'.) A Linnæan genus of the class *Pentandria*, natural order *Umbelliferæ*. The Pharmacopœial name (U.S. 1880) of the full-grown fruit of *Conium maculatum*, gathered while yet green. Hemlock is narcotic and sedative. In large doses it causes vertigo, dimness of vision, nausea, numbness in the limbs, convulsions, and death. Sometimes death ensues from paralysis without coma or convulsions. It is employed medicinally as a palliative in cancerous ulcers, painful scrofulous tumors, etc.; also in chronic rheumatism, neuralgia, asthma, and phthisis.

Coni'um Mac-u-la'tum.* The systematic name of the Hemlock, termed *Cicu'ta* by the Latin authors; but it is quite distinct from the *Cicuta maculata* of modern botanists. It is a native of Europe, and is naturalized in the United States.

Conjonctive, kôN'zhôNk'tēv'. The French for "conjunctiva." See CONJUNCTIVUS.

Con'ju-gate. [Lat. **Conjuga'tus**; from *con*, "together," and *ju'go*, *juga'tum*, to "yoke," to "join."] Yoked; joined in pairs:—applied to the leaves of plants.

Conjunctiva.* See CONJUNCTIVUS.

Con-junc-tī-vi'tis, *i'dis.** Inflammation of the conjunctiva.

Con-junc-ti'vus.* [From the Lat. *con*, "together," and *jun'go*, *junc'tum*, to "join."] A term applied to a delicate mucous membrane (*membra'na conjuncti'væ*) which lines both eyelids and covers the external portion of the eyeball.

Connaraceæ,* kon-nạ-ra'she-ē. [From *Con'narus*, one of the genera.] A natural order of exogenous trees and shrubs, found in the tropics. One species, *Omphalobium Lamberti*, a native of Guiana, produces the beautiful zebra-wood of the cabinet-makers.

Con'nate. [Lat. **Conna'tus**; from *con*, "together," and *nas'cor*, *na'tus*, to "be born," to "grow."] Born with one; congenital. In Botany, united or grown together, especially at the base:—applied to leaves.

Con-nec'tive [see next article] **Tis'sue.** The same as CELLULAR TISSUE.

Con-nec-ti'vum.* [From the Lat. *con*, "together," and *nec'to*, to "knit" or "tie."] In Botany, the part of the anther connecting its two cells or lobes.

Con-ni'vens,* plural **Con-nĭ-ven'tēs.** [From the Lat. *con*, "together," and *ni'veo*, to "wink."] Converging, as the eyelids in winking, etc. (See VALVULÆ CONNIVENTES.) In Botany, converging, meeting, or brought close together; meeting or bending towards each other.

Co'noid. [Lat. **Conoi'des**; from the Gr. *κῶνος*, a "cone," and *εἶδος*, a "form" or "resemblance."] Resembling a cone; coniform.

Co'noid Lig'a-ment. [Lat. **Ligamen'tum Conoi'des.**] The ligament which passes from the root of the coracoid process to the clavicle.

Conque, kôNk. (Fr.) See CONCHA.

Con-ser'van-cy. [From the Lat. *conser'vo*, *conserva'tum*, to "preserve."] Preservation.

Con-ser-vā'tion. [From the same.] In Pharmacy, the art of preserving drugs and medicines from alteration and loss, by placing them in vessels and places best adapted to prevent them from losing their properties.

Con-ser'va-to-ry. [From the same.] A glass-covered structure in which exotic tropical plants are cultivated. They are not kept in pots, but grow in the free soil, and are warmed in winter by artificial heat.

Con-ser-va'trix, *i'cis.** [From the same.] Preserving. (Used only in the feminine.) See VIS CONSERVATRIX.

Con'serve. [Lat. **Conser'va.**] A confection; a composition of some vegetable substance and sugar, beaten into a uniform mass.

Conserve of Roses. See CONFECTIO ROSÆ.

Con-sist'ence. [From the Lat. *consis'to*, to "stand fast," to "consist."] Degree of density or rarity; degree of cohesion of a body; permanent state; durability.

Consommé, kôN'som'mā' (Fr.), *i.e.*, "complete," "perfect." [From *consommer*, literally, to "sum up;" hence, to "finish," to "perfect."] A rich broth or soup containing a large proportion of gelatin:—named, it would seem, on account of its summing up, or containing in a concentrated form, all the richest and best ingredients of the meat.

Con'so-nance. [From the Lat. *con*, "together," and *so'no*, to "sound."] Agreement or correspondence in sound:—also applied to the sound caused when one sounding medium of a definite pitch gives out a musical tone when another of the same pitch is sounded near it.

Con'stant. [From the Lat. *con'sto*, to "stand together," to "continue."] Firm; stable; invariable; never failing.

Con-stel-lā'tion. [Lat. **Constella'tio,** *o'nis*; from *con*, "together," and *stel'la*, a "star."] A collection of fixed stars representing an animal or other figure, according to their arrangement; an asterism.

Con-stĭ-pā'tion. [Lat. **Constipa'tio,** *o'nis*; from *con*, "together," and *stī'po*, *stipa'tum*, to "stuff," to "cram close."] Costiveness; tardiness in evacuating the bowels. Infrequent or incomplete alvine evacuation, leading to retention of fæces. The evacuations are solid, deficient in quantity, and defecation is generally difficult or even painful. The general causes of constipation

are: 1. Sluggishness of function, lymphatic temperament, anæmia, or disposition to great activity of the muscular and nervous systems. 2. Certain habits,—namely, sedentariness; too great muscular activity; mental application, excessive or prolonged; habitual neglect of, or hurry in, the act of defecation; the excessive use of alcohol, opium, or tobacco. 3. Dietetic errors,—diet too nutritious, or poor and insufficient.

Con-stit′u-ens.* [Present participle of the Lat. verb *constit′uo*, to "constitute," to "compose," to "make" or "form."] Literally, "that which constitutes" or helps to constitute or form any compound. The vehicle; a constituent part of a medicinal formula, commonly signifying that which furnishes a convenient and agreeable form. See PRESCRIPTION.

Con-stĭ-tu′tion. [Lat. **Constitu′tio,** *o′nis;* from *constit′uo*, *constitu′tum*, to "form," to "constitute" (from *con*, "together," and *stat′uo*, to "set" or "place").] The general habit, temperament, or conformation of the body. A sound constitution may be defined as the harmonious development and maintenance of all the organs and tissues of the body. See DIATHESIS.

Constitu′tion of the Air. That peculiar condition of the air which causes epidemics, or which impresses upon epidemic or sporadic diseases their peculiar character.

Con-stĭ-tu′tion-al. Belonging to, or dependent upon, the constitution. The term *constitutional* is applied to diseases that are hereditary, or diseases generated from within, in the course of the wear and tear, nutrition and waste, of the body, in consequence of inherent or acquired defect.

Con-stric′tor,* plural **Con-stric-to′rēs.** [From the Lat. *con*, "together," and *strin′go*, *stric′tum*, to "draw," to "bind."] A term applied to a muscle that draws together or contracts any opening of the body, such as the pharynx.

Constrictor Ani.* See SPHINCTER ANI.

Constrictor Oris.* See ORBICULARIS ORIS.

Con-stric-to′rēs Pha-rўn′ġis.* "Constrictors of the Pharynx." These are muscles forming a part of the parietes of the pharynx, which they contract.

Constringentia,* kon-strin-jen′she-a. [The neuter plural of the present participle of the Lat. verb *constrin′go*, to "bind together."] Medicines which contract the tissues and check the secretions, etc. The same as ASTRINGENTS, which see.

Con-sul-tā′tion. [Lat. **Consulta′tio**; from *con′sulo*, *consul′tum*, to "consult."] The meeting of two or more physicians to consult or deliberate on a particular case of disease in the presence of the patient.

Con-sump′tion. [Lat. **Consump′tio,** *o′nis;* from *consu′mo*, *consump′tum*, to "consume" or "waste away."] Any wasting away of the body, but usually applied to *phthisis pulmonalis*. See PHTHISIS, and TABES.

Contabescentia,* kon-tab-ĕs-sen′she-a. [From the Lat. *con*, intensive, and *tabes′co*, to "waste away."] Atrophy, or consumption; wasting away of the whole body. See TABES.

Con′tact. [Lat. **Contac′tus**; from *con*, "together," and *tan′go*, *tac′tum*, to "touch."] The state of two bodies that touch each other. Contagious diseases are spread by *direct* or *immediate* contact when a healthy person touches a diseased body. The contact is called *mediate* or *indirect* when the disease is carried by the air or by some material that the sick person has touched.

Con-tā′ġion. [Lat. **Conta′gio,** *o′nis;* from *contin′go*, to "touch," to "affect."] The communication of a disease by contact, or by inhaling the effluvia from one already affected:—often used as synonymous with INFECTION, which see.

Con-tā′ġious. [Lat. **Contagio′sus**; from the same.] A term applied to diseases which are spread by contagion or communicated by contact.

Con-ta′ġĭ-um.* A Latin term applied to the virus, miasm, or minute organisms which are agents in the transmission of contagious diseases.

Con-tĭ-gu′ĭ-tў. [From the Lat *contig′uus*, "contiguous," or from *con*, "with," and *tan′gere*, to "touch."] The state of two things which touch each other; actual contact.

Con-tig′u-ous. [From the same.] Touching; placed in contact or so near as to seem to touch.

Con-tin′ūed Fe′ver. [Lat. **Fe′bris Contin′ua.**] A fever in which the symptoms do not intermit till its termination.

Con-tĭ-nu′ĭ-tў. [Lat. **Continu′itas**; from *contin′uus*. See CONTINUOUS.] A union of parts so complete that they cannot be separated without laceration or fracture.

Continu′ity, So-lu′tion of. The separation, by fracture or laceration, of parts previously continuous.

Con-tin′u-ous. [Lat. **Contin′uus**; from *contin′eo*, to "hold" or "keep together."] The reverse of *interrupted;* without interruption:—applied to stems that have no joints; also to fevers.

Contorsio, or **Contortio** (kon-tor′she-o), *o′nis.** [From the Lat. *con*, intensive, and *tor′queo*, *tor′sum* or *tor′tum*, to "twist."] A twisting or contortion.

Con-tort′. [From the same.] To twist, or twist together: thus, the leaves or petals of certain plants, and sometimes arteries and veins, are said to be *contorted*.

Con-tort′ed. Twisted or obliquely overlapping, as the petals of the oleander.

Con′tra. A Latin preposition, signifying "against," "over against," or "opposite to."

CON′TRA-APERTU′RA.* [From the Lat. *con′tra*, "opposite," and *apertu′ra*, an "aperture."] A counter-opening. An opening made in an abscess opposite to one already existing in it, to facilitate the discharge of matter.

CON′TRA-EXTEN′SIO* (ex-ten′she-o). Counter-extension. The holding of the upper part of a broken limb or a dislocated joint towards the trunk, while extension is being employed with the lower part.

CON′TRA-FISSU′RA.* (Fr. *Contrecoup*, kôNt′r′-koo′, and *Contrefente*, kôNt′r′fôNt′.) A fracture in a part opposite or distant from that in which the blow is received. See FISSURA.

CON′TRA-IN′DICATE. [From the Lat. *con′tra*,

"against," and *indi'co*, to "indicate," to "show."] To indicate that the use of a particular remedy is improper in the circumstances. See next article.

CON'TRA-INDICA'TION. [Lat. *Con'tra-indica'tio, o'nis;* from the same.] That which forbids the use of a particular remedy which otherwise it would be proper to exhibit.

Con-tract'ed. [For etymology see next article.] Narrowed or reduced to a smaller compass:—applied to parts of plants.

Con-trac'tile. [Lat. **Contrac'tilis;** from *con*, "together," and *tra'ho*, *trac'tum*, to "draw."] Having the power or tendency to contract; possessing CONTRACTILITY, which see.

Contractilité. See CONTRACTILITY.

Con-trac-til'ĭ-tў. [Lat. **Contractil'itas, a'tis;** from the same.] (Fr. *Contractilité*, kôN'trăk'tĕ'lĕ'tă'.) A property by which the particles of bodies resume their original position when the power applied to separate them is withdrawn; also that vital property which gives to certain parts (muscles, for example) the power of contracting, by means of which all the various tribes of animals perform their motions.

Contractility is *voluntary* in what are termed the organs of *animal* life (such as the hands, feet, tongue, etc.), and *involuntary* in those of *organic* life (as the heart, the stomach, etc.). Contractility is sometimes used as synonymous with IRRITABILITY, which see.

Con-trac'tion. [Lat. **Contrac'tio, o'nis;** from the same.] The shortening of living fibre on the application of stimulus; also the shortening of a muscle from some morbid cause.

Con-trac-tu'ra.* [From the same.] (Fr. *Contracture*, kôN'trăk'tŭR'.) Literally, "contraction." The name of a genus of the order *Dyscinesiæ*, class *Locales*, of Cullen's nosology. A disease attended with permanent rigidity of the flexor muscles. It is sometimes the result of rheumatism, *colica pictonum*, and other diseases.

Con-tra-jer'va,* or **Con-tra-yer'va.*** A name for the root of the *Dorste'nia contrayer'va*, or *Dorstenia Brasiliensis*. It is probably obtained from several species of *Dorstenia*. It is a stimulant tonic, but it is seldom used in the United States. See DORSTENIA.

Contre-coup, kôNt'r'koo', **Contre-fente,** kôNt'r'fôNt', **Contre-fracture,** kôNt'r'frăk'tŭR'. (Fr.) The same as CONTRA-FISSURA, which see. *Contre-coup* is the shock or effect produced in one part of the body by a shock or blow on another part which is remote or opposite.

Con-tu'sion. [Lat. **Contu'sio, o'nis;** from *contun'do, contu'sum*, to "bruise."] (Fr. *Meurtrissure*, mŭR'trĕ'sür'.) Injury by an obtuse weapon, or by violent collision against a hard body, without breach of the integuments; a bruise.

Co'nus.* [Gr. κῶνος.] A "cone:"—applied in Botany to a particular kind of fructification, as the fir-top. (See STROBILUS.) In Zoology, a genus of Mollusks, many of which are very beautiful.

Con-va-lĕs'çence. [Lat. **Convalescen'tia;** from *convales'co*, to "grow strong" or "well."] The state or period between the removal of actual disease and the full recovery of the strength.

Con-va-lĕs'çent. [Lat. **Convales'cens;** the present participle of the verb *convales'co*, to "grow strong" or "well."] Returning to full health after a disease is removed.

Con-val-la'rĭ-a.* [From the Lat. *conval'lis*, a "valley;" named from its abounding in valleys.] A genus of plants of the order *Liliaceæ*, consisting of a single species, *Convallaria majalis* (Lily of the Valley), a native of Europe, Virginia, and the Carolinas. It bears fragrant milk-white flowers, which are "as perfect emblems of purity and modesty as the floral world can afford." The flowers and root have been employed as an errhine, and the former as a cathartic.

Con-ver'gent. [From the Lat. *con*, "together," and *ver'go*, to "incline," to "bend."] Tending to the same point from different places.

Con-ver'gĭ-nerved. [From the Lat. *conver'go*, to "incline," and *ner'vus*, a "nerve" or "rib."] A term applied to leaves when the ribs describe a curve and meet at the apex or point, as in *Plantago lanceolata*.

Con'vex. [Lat. **Convex'us;** from *con*, "together," and *ve'ho, vec'tum* or *vex'um*, to "carry" or "bring."] Literally, "brought together;" hence, heaped up, swelling up like a heap of grain or like the part of a sphere. Presenting an elevated rounded surface.

Convexo-concavus.* See CONCAVO-CONVEX.

Con-vex'o-con'vex. [Lat. **Convex'o-convex'us.**] Having both surfaces convex.

Con-vo-lu'ta Os'sa.* "Convoluted Bones." A term applied to the upper and lower turbinated bones of the nose. See CONVOLUTUS.

Con-vo-lu'tion. [Lat. **Convolu'tio, o'nis;** from *con*, "together," and *vol'vo, volu'tum*, to "roll," to "wrap."] The act of rolling a thing upon itself, or the form produced by that act; anything which is rolled together or upon itself. Hence the term is applied to the tortuous eminences of the cerebrum; also to the irregular foldings of the intestines.

Con-vo-lu'tus,* Con'vo-lute. [From the same.] Con'voluted; rolled up; rolled into a cylindric form:—applied to leaves, etc.

Convolvulaceæ,* kon-vol-vu-la'she-ē, or **Con-vol'vu-li.*** [From *Convol'vulus*, one of the genera.] A natural order of exogenous plants, which mostly have twining stems and a milky juice. They are abundant in the tropics, and possess purgative qualities in their roots, depending upon a peculiar resin, of which scammony and jalap may be taken as examples. This order comprises the Sweet Potato (*Bata'tas edu'lis*) and the Dodder.

Con-vol-vu-lā'ceous. [Lat. **Convolvula'ceus.**] Having an arrangement like the *Convolvulus*.

Con-vol'vu-li,* the plural of **Convol'vulus,** forming the Jussieuan name of a natural order of plants. See CONVOLVULACEÆ.

Con-vol'vu-lus.* [From the Lat. *convol'vo*, to "wrap together," to "entwine."] Bindweed. A Linnæan genus of the class *Pentandria*, natural order *Convolvulaceæ*. It comprises very numerous species of twining or trailing herbs, which are widely distributed.

Convol'vulus Ja-la'pa.* The name given by Linnæus to the jalap-plant, now referred to the genus *Ipomœa*. See IPOMŒA JALAPA.

Convol'vulus Scam-mo'nĭ-a.* The systematic name of the scammony-plant.

Convulsio.* See CONVULSION.

Convulsio Canina.* See RISUS SARDONICUS.

Convul'sio (kon-vŭl'she-o) **Ha-bit-u-a'lis.*** "Habitual Convulsion." One of the names of chorea, or St. Vitus' Dance.

Con-vul'sion. [Lat. **Convul'sio, o'nis;** from *convel'lo, convul'sum*, to "pull together."] Violent agitation of the limbs or body, generally marked by clonic spasms. See SPASMUS.

Co-or'dĭ-nate. [From the Lat. *con*, "with," and *or'do, or'dinis*, "order," or "rank."] Holding the same rank or authority; not subordinate.

Copahu, ko'pä'ü'. The French term for COPAIBA, which see.

Co-pāi'ba* (Spanish pronunciation ko-pī'bå, almost ko-pī'vå). [From *Copal*, an odoriferous gum, and *i'ba* or *i'va*, a "tree."] A resinous juice, or oleoresin, obtained from the *Copaifera Langsdorff'ii* and other species of *Copaifera*.

Copaiba is gently stimulant, diuretic, and laxative, and in large doses sometimes actively purgative. It is much used as a remedy in gonorrhœa and in other diseases of the mucous membranes, especially those of a chronic character.

Copai'ba.* "Copaiba." The Pharmacopœial name (U.S. 1870, 1880) for the oleoresin of *Copaifera Langsdorffii* and of other species of *Copaifera*.

Copaibæ Oleum.* See OLEUM COPAIBÆ.

Co-pa-if'er-a.* [From *Copai'ba*, and the Lat. *fe'ro*, to "bear."] A Linnæan genus of the class *Decandria*, natural order *Leguminosæ*. It comprises many species, natives of Brazil, Venezuela, etc. The *Copaifera Langsdorffii* is a native of Brazil.

Copaif'era Of-fiç-ĭ-na'lis.* The systematic name of the tree which produces copaiba, growing native in Venezuela, also found in Trinidad and Martinique. It is a handsome tree, with a lofty stem much branched at the top and crowned with a thick canopy of foliage.

Co-pāi'va. The same as COPAIBA, which see.

Co'pal. [Sp. *Copal*, ko-pål'.] A resinous substance obtained from various species of *Hymenæa*, trees growing in Africa and America. Indian copal is obtained from the *Vate'ria In'dica*. Dissolved in alcohol, it has been used as a remedy for spongy gums. It is stimulant, but it is at present chiefly or solely employed as a varnish.

Co-pal'chi Bark. A name given to two drugs. One is the bark of the *Strychnos pseudo-quina*, a native of Brazil. It is febrifuge, and not poisonous. The other is the product of the *Croton pseudo-china*, a native of Mexico. It is an aromatic tonic employed in intermittents by the Mexicans, and has the same properties as cascarilla.

Copernicia,* ko-per-nish'e-a. [Named in honor of *Copernicus*, the astronomer.] A genus of the order *Palmaceæ*, comprising six species, natives of tropical America.

Copernic'ia Ce-rif'er-a.* The Carnahuba or Wax Palm, a native of Brazil, bearing an edible fruit, and affording good timber. The wax obtained from its leaves is an article of commerce.

Co-pho'sis.* [From the Gr. *κωφός*, "deaf."] Deafness.

Copper. See CUPRUM.

Cop'per-as. A name for the sulphate of iron, or green vitriol:—sometimes, but rarely, applied to the sulphates of copper and zinc, called respectively blue and white vitriol.

Cop'per-Nick'el. A native arseniuret of nickel, a copper-colored mineral found in Westphalia.

Cop'per-ȳ. Brownish-red, with a metallic lustre.

Cop-ra-go'gus.* [From the Gr. *κόπρος*, "excrement," and *ἄγω*, to "carry" or "bring away."] Cop'ragogue. A term applied in the plural neuter (*Coprago'ga*) to purgatives,—that is, medicines which bring away the fæces.

Co-prem'e-sis.* [From the Gr. *κόπρος*, "excrement," and *ἔμεσις*, "vomiting."] The vomiting of fæcal matter.

Cop'ro-līte, Cop'ro-lĭth. [Lat. **Coprol'ithus**; from the Gr. *κόπρος*, "excrement," and *λίθος*, a "stone."] A ball of hardened fæces or other hard mass in the bowels:—more frequently applied in fossilology to the petrified dung of animals.

Co-pros'ta-sis.* [From the Gr. *κόπρος*, "fæces," and *ἵστημι*, to "stand," to "be stationary."] Costiveness; undue retention of the fæces in the intestines.

Cop-u-lā'tion. [Lat. **Copula'tio, o'nis;** from *cop'ulo, copula'tum*, to "couple together."] The same as CONGRESSUS, which see.

Co-pȳ-o'pĭ-a,* Co-pĭ-o'pĭ-a.* [From the Gr. *κόπος*, "weariness," and *ὄψις*, "vision," "power of sight."] Fatigue or weariness of vision; weakness of sight.

Cor,* gen. **Cor'dis.** [Gr. *καρδία*; Fr. *Cœur*, KUR.] The Latin term for the heart, the central organ of circulation. See HEART.

Cŏr'a-co-. A prefix denoting attachment to the coracoid process of the scapula.

Cŏr'a-coid. [Lat. **Coracoi'des**; from the Gr. *κόραξ, κόρακος*, a "raven" or "crow," and *εἶδος*, a "form" or "resemblance."] Resembling a crow's beak:—applied to a process of the scapula; also applied by Owen to the homologues of the coracoid process of the scapula.

Cor'acoid Lig'a-ment. [Lat. **Ligamen'tum Coracoi'deum.**] A small ligament extending from the coracoid process across the notch of the scapula, converting the notch into a foramen.

Cor'acoid Proç'ess. [Lat. **Proces'sus Coracoi'deus.**] A projection or process on the anterior and upper margin of the scapula, supposed to resemble the beak of a crow.

Cŏr-a-co-i'de-us.* [From the Lat. *coracoi'des.*] Belonging to the coracoid process of the

scapula. See CORACOID LIGAMENT, and CORACOID PROCESS.

Cŏr'al. [Lat. **Coral'lium** or **Coral'lum**; Gr. *κοράλλιον*; supposed to be derived from *κόρη*, a "daughter," and *ἁλς*, the "sea."] (Fr. *Corail*, ko'râl'.) A stony or calcareous substance growing in the sea, once supposed to be a plant, but now regarded as the skeleton of a congeries of small polypi. The coral is secreted in the inside of the polypi.

Cor-al-lif'er-ous. [Lat. **Corallif'erus**; from *coral'lum*, "coral," and *fe'ro*, to "bear."] Coral-bearing:—applied in the plural masculine (*Corallif'eri*) to an order of *Polypi*.

Co-ral'lĭ-form. [Lat. **Corallifor'mis**; from *coral'lium* or *coral'lum*, "coral," and *for'ma*, "form."] Formed like coral, or resembling coral in general appearance.

Cor-al-lĭg'er-us.* [From the Lat. *coral'lum*, "coral," and *ge'ro*, to "bear."] The same as CORALLIFEROUS.

Cor'al-lin, or **Pæ'o-nin.** A poisonous, red coloring-matter derived from rosolic acid, and formed by exposing that acid and alcoholic ammonia to a heat of 300° F.

Cor'al-li'na,* **Cor'al-līne.** A genus of marine plants of the group *Algæ*, characterized by calcareous rigid fronds. They contain a large proportion of carbonate of lime. The *Corallina officinalis*, which is found along the coasts of Europe and the United States, has been used in medicine.

Cor'al-loid. [Lat. **Coralloi'des**; from *coral'lum*, "coral," and the Gr. *εἶδος*, a "form" or "resemblance."] Resembling coral.

Coralloidal. See CORALLOID.

Cor-al-lo-rhi'za O-don-to-rhi'za.* The systematic name of Coral Root, a plant of the order *Orchidaceæ*, a native of the United States. Its root is diaphoretic.

Cor'ĕho-rus.* A genus of herbs and shrubs of the order *Tiliaceæ*, comprising many species, natives of the tropical and warm parts of Asia and America. The valuable fibre called *jute* is obtained from the *Corchorus capsularis* and *Corchorus olitorius*, natives of India.

Cor'cu-lum.* [Diminutive of the Lat. *cor*, the "heart."] The heart and essence of the seed; the embryo, or germ.

Cor'date. [Lat. **Corda'tus**; from *cor*, *cor'dis*, the "heart."] Heart-shaped, with a sinus at the base:—applied to leaves and other organs of plants.

Cor'date-O'vate, or **Cor-da'to-O'vate.** Ovate, with the base somewhat cordate:—applied to leaves.

Cor'dĭ-a.* A genus of trees of the order *Boraginaceæ* or *Cordiaceæ*, comprising nearly two hundred species. Among their products are edible fruits, valuable timber, and astringent and tonic medicines. Several species of *Cordia* are or have been called *Sebestena*. The dried fruits of *Cordia latifolia* and *Cordia myxa* are called Sebestens. The *Cordia bullata* is an ornamental tree, a native of Florida.

Cordiaceæ,* kor-de-a'she-ē. [From *Cor'dia*, one of the genera.] A natural order of exogenous trees (or rather a tribe of the order *Boraginaceæ*), natives of the tropics.

Cordial, kord'yal. [Lat. **Cordia'lis**; from *cor*, the "heart."] Any stimulating medicine which raises the spirits.

Cor'dĭ-form. [Lat. **Cordifor'mis**; from *cor*, the "heart," and *for'ma*, "form."] Formed like a heart:—applied to leaves, etc.; also sometimes applied to a solid which has the form of a heart.

Cordon Ombilicale, kor'dôN' ôM'bê'lê'kâl'. The French term for FUNICULUS, which see.

Core. [From the Lat. *cor*, the "heart."] The hard portion of sloughy or purulent matter found in boils.

Cor-e-cleĭ'sis.* [From the Gr. *κόρη*, the "pupil," and *κλεῖσις*, a "closing."] A closing or obliteration of the pupil of the eye.

Cor-ec-to'mĭ-a.* [From the Gr. *κόρη*, the "pupil," and *ἐκτέμνω*, to "cut out."] The operation for artificial pupil by removal of a part of the iris; corec'tomy. See CORETOMIA, and IRIDECTOMY.

Cor-ec-to'pĭ-a.* [From the Gr. *κόρη*, the "pupil," *ἐκ*, "out," and *τόπος*, a "place."] A term for the condition when the pupil is not normally placed,—that is, not in the centre of the iris.

Cor-e-dĭ-al'ў-sis.* [From the Gr. *κόρη*, the "pupil," and *διάλυσις*.] The operation for artificial pupil, separating part of the external margin of the iris from the *corpus ciliare*. See IRIDODIALYSIS.

Co-rel'ў-sis.* [From the Gr. *κόρη*, the "pupil," and *λύσις*, a "loosening" or "setting free."] The name of an operation for separating the adhesions between the edge of the pupil and the anterior capsule of the lens.

Cor-e-mor-pho'sis.* [From the Gr. *κόρη*, the "pupil," and *μόρφωσις*, "formation."] An operation for forming an artificial pupil. See CORECTOMIA, and IRIDECTOMY.

Cor-en-cleĭ'sis.* [From the Gr. *κόρη*, the "pupil," and *ἐγκλείω*, to "include."] An operation for artificial pupil by drawing a portion of the iris through an incision in the cornea and cutting it off.

Co-re-on'çĭ-on,* **Co-re-on'cĭ-um,*** or **ko-re-on'she-ŭm.** [From the Gr. *κόρη*, the "pupil," and *ὄγκος*, a "hook."] A kind of hook for the operation for artificial pupil.

Cor'e-plas'tĭ-ca,* **Cor'e-plas'tĭ-çe.*** [From the Gr. *κόρη*, the "pupil," and *πλαστική*, the "art of making images," the "art of forming anything."] Operation for artificial pupil in general; cor'eplasty.

Cor-e-to'mĭ-a.* [From the Gr. *κόρη*, the "pupil," and *τέμνω*, to "cut."] Operation for artificial pupil by simply cutting through the iris; coret'omy. See IRIDITOMIA.

Co-rĭ-ā'ceous. [Lat. **Coria'ceus**; from *co'rium*, "leather."] Of the nature of leather; leathery; tough and leather-like:—applied to leaves and pods.

Co-rĭ-an'drum.* A Linnæan genus of the class *Pentandria*, natural order *Umbelliferæ*. Also the Pharmacopœial name (U.S. 1870, 1880) for the fruit of *Coriandrum sativum*.

Corian'drum Sa-ti'vum.* The coriander-plant. It is aromatic.

Co-rĭ-a'rĭ-a Mŷr-tĭ-fo'lĭ-a.* Currier's Sumach, a shrub of the order *Coriarieæ* (?), a native of Southern Europe. Its fruit and leaves are poisonous. The position of the genus *Coriaria* is uncertain. Some botanists propose to refer it to a separate order called *Coriarieæ*.

Co'rĭ-um.* [Gr. χόριον.] Literally, the "skin or hide of animals." The *cutis*, or true skin.

Cork. The bark of QUERCUS SUBER, which see.

Cor'mus.* [Gr. *κόρμος*, a "trunk" or a "tail."] A corm. The body, or trunk, of a tree; also a solid bulb, as that of a crocus.

Corn. [From the Lat. *cor'nu*, a "horn."] (Fr. *Cor*, KOR.) A horny hardness of the skin, occurring chiefly on the joints of the toes, and caused by continued pressure or friction. Also the English name of wheat or cereal grain.

Cornaceæ,* kor-na'she-ē, or **Cor'ne-æ.*** A natural order of exogenous trees and shrubs, found in temperate climates, including the *Nyssa*, or Tupelo, and the *Cornus*, or Dog-wood, the bark of which is said to rank among the best tonics in North America.

Corne. See CORNU.

Cor'ne-a.* [From the Lat. *cor'nu*, a "horn."] A transparent, convexo-concave, nearly circular substance, forming the anterior part of the eye-ball. It is often termed the *Cornea lu'cida*, or *Cornea transpa'rens*, or the "transparent cornea."

Cor'nea O-pa'ca.* The sclerotic coat of the eye.

Cor-ne-i'tis, i*dis.* [From the Lat. *cor'nea.*] Inflammation of the cornea. The same as KERATITIS, which see.

Cor'nel. The popular name of several species of *Cornus*.

Cor'ne-ous. [Lat. **Cor'neus**; from *cor'nu.*] Belonging to horn; horny; hard and close in texture, as the albumen of many seeds.

Cornicle. See CORNICULUM.

Cor-nic'u-late. [Lat. **Cornicula'tus**; from *cornic'ulum*, a "little horn."] Having horns, or furnished with a little horn or spur:—applied to parts of plants.

Cor-nic'u-lum* [diminutive of the Lat. *cor'nu*, a "horn"], or **Cornic'ulum La-rŷn'gis.*** "Cornicle of the Larynx." A small cartilaginous body surmounting the arytenoid cartilage.

Cor'nĭ-form. [Lat. **Cornifor'mis**; from *cor'nu*, a "horn," and *for'ma*, "form."] Horn-shaped.

Cor-nig'er-ous. [Lat. **Cornig'erus**; from *cor'nu*, a "horn," and *ge'ro*, to "bear."] Having horns:—applied to animals.

Cor'nin, or **Cor'nĭne.** A term applied to a peculiar bitter principle said to have been found in the bark of the *Cornus florida*. Its properties resemble those of quinine.

Cor'nu,* plural **Cor'nu-a.** (Fr. *Corne*, KORN.) A Latin word signifying a "horn:"—applied to a certain kind of warts, on account of their horny hardness. In Botany, a horn-like process, commonly solid. See CORNU CERVI.

COR'NUA U'TERI.* "Horns of the Uterus." The angles of the uterus where the Fallopian tubes are given off.

Cor'nu Am-mo'nis,* Cor'nu A-ri'e-tis.* The appearance like a ram's horn presented by the cortical substance of the cerebrum when the *pes hippocampi* is cut transversely through.

Cor'nu Cer'vi.* "Horn of the Stag." The horn of the *Cervus elephas;* hartshorn. An impure carbonate of ammonia was formerly obtained from burning the shavings of hartshorn; while the residue, called *Cornu ustum* ("burnt horn"), consisting chiefly of phosphate of lime, with a small proportion of free lime, was used as an antacid.

Cor'nu Us'tum.* [From the Lat. *u'ro, us'tum*, to "burn."] A name for the phosphate of lime prepared from horn by fire. See CORNU CERVI.

Cor'nus.* "Cornel." A genus of shrubs or small trees, of the order *Cornaceæ*, comprising many species, natives of the United States and Europe. The bark of *Cornus alternifo'lia* and that of *Cornus panicula'ta* have been used in medicine.

Cor'nus.* "Cornus." The Pharmacopœial name (U.S. 1880) for the bark of the root of *Cornus florida* (Dog-wood). It is tonic and astringent.

Cor'nus Cir-cĭ-na'ta,* and **Cor'nus Se-rĭç'e-a.*** Small trees or shrubs found in the Northern and Middle United States. Their bark possesses medical virtues similar to those of *Cornus florida*.

Cor'nus Flŏr'ĭ-da.* The Dog-wood, a small tree of the Linnæan class *Tetrandria*, natural order *Cornaceæ*. It grows in all the United States east of the Mississippi, but most abundantly in the Middle States. Also the Pharmacopœial name (U.S. 1870) of the bark of the *Cornus florida*, which appears to possess, though in an inferior degree, the tonic and antiperiodic virtues of cinchona.

Cor'nus Mas'cu-la.* The Cornelian Cherry, a shrub, a native of Europe, bearing edible fruits. The bark and fruits are astringent.

Cornus Sericea* (se-rish'e-a). See CORNUS CIRCINATA.

Cor'nute. [Lat. **Cornu'tus**; from *cor'nu*, a "horn."] Having horns; horned; having appendages like horns:—applied to parts of plants.

Corocleisis.* See CORECLEISIS.

Co-rol'la.* [Diminutive of the Lat. *coro'na*, a "crown"] (Fr. *Corolle*, ko-rol'.) Literally, a "little crown." The inner set of the floral envelopes, usually of a delicate texture. It is commonly the most beautiful portion of the flower, and is situated between the calyx and internal organs. When the flower is polypetalous, the separate pieces are called *petals*.

Cor'ol-la-rў. [Lat. **Corolla'rium**; from *co-*

rol'la.] A tendril formed by a petal or segment of a corolla. Also a truth necessarily following from some preçeding truth or demonstration.

Cor'ol-late. Having a corolla.

Cor-ol-lif'er-ous. [Lat. **Corollif'erus**; from *corol'la*, and *fe'ro*, to "bear."] Bearing a corolla.

Co-rol-lĭ-flo'ræ.* A sub-class of exogenous plants, characterized by the petals being united so as to form a gamopetalous corolla inserted below the ovary, and by the stamens being usually attached to the corolla, but sometimes separate and inserted below the ovary. The *Ericaceæ* and *Gentianaceæ* are examples of this sub-class.

Co-rol'lĭ-form. [Lat. **Corollifor'mis**; from *corol'la*, and *for'ma*, "form."] Having the appearance of a corolla:—applied to papillæ of the tongues of animals.

Cor'ol-line. Like a corolla, or belonging to a corolla.

Co-rol'lu-la.* [Diminutive of the Lat. *corol'la.*] The corolla of each floret of a compound flower.

Co-ro'na.* [From the Gr. κορώνη, the "crest" or "summit" of anything.] A "crown:"—applied in Anatomy and Natural History to eminences of bone, or any objects or parts bearing resemblance to a crown. In Astronomy, a luminous crown or a bright cloud like circle of light which surrounds the darkened sun during a total eclipse, and is never seen except during such an eclipse. It extends several hundred thousand miles on all sides. A great part of it is made up of streamers of light extending from the sun in various directions. The spectroscope reveals that the corona is composed mostly of hydrogen, which is the lightest gas known on the earth, and of some unknown gas or vapor. In Botany, a coronet or crown; a circle of petaloid appendages on the throat or inside of a corolla, as in the daffodil; any appendage that intervenes between the corolla and the stamens.

Coro'na Glan'dis.* "Crown of the Glans." The ring or rim running round the base of the *glans penis.*

Coro'na Ven'e-ris.* "Crown of Venus." (Fr. *Couronne de Vénus*, koo'ron' deh vā'nüs'.) Syphilitic blotches which often extend around the forehead, like a crown.

Co-ro'nad. A term applied the same as CORONAL used adverbially.

Co-ro'nal, or kor'o-nal. [Lat. **Corona'lis**; from *coro'na*, a "crown."] A term applied by Dr. Barclay in reference to the aspects of the head; towards the crown of the head.

Coro'nal Su'ture. [Lat. **Sutu'ra Corona'lis.**] The suture formed by the union of the frontal bone with the two parietal bones.

Cor'o-nans.* [The present participle of the Lat. verb *coro'no*, to "crown."] "Crowning." Situated on the top or crown; borne on the apex of anything. Thus, the limb of a calyx may crown an ovary.

Cor'o-na-rў. [Lat. **Corona'rius**; from *coro'na*, a "crown."] (Fr. *Coronaire*, ko'ro'nêR'.) A term applied to vessels, ligaments, and nerves which encircle parts like a crown, as the "coronary arteries of the heart," the "coronary artery of the stomach," etc.

Cor-o-na'tus.* [From the Lat. *coro'no, corona'tum*, to "crown."] Literally, "crowned." Coronate; furnished with a coronet or crown:—applied to certain flowers, as the Narcissus (Jonquil) and Passion-flower.

Co-ro'ne.* [Gr. κορώνη, a "crow," anything curved like a crow's beak.] The acute process of the lower jaw-bone:—so named from its supposed resemblance to a crow's bill.

Cor'o-ner. [From the Lat. *coro'na*, a "crown."] Originally, an officer who had authority from the Crown to make inquest before a jury of twelve, as to the true cause of death, in every case of sudden decease or of death under suspicious circumstances. The word was formerly written *Crowner.*

Cor-o-nil'la.* A genus of annual or perennial plants, of the order *Leguminosæ*, comprising many species, natives of Europe, Asia Minor, and North Africa. The *Coronilla Emerus* (Scorpion Senna) has purgative leaves. The *Coronilla varia*, a perennial plant, a native of Europe, is diuretic.

Cor'o-noid. [Lat. **Coronoi'des**; from the Gr. κορώνη, a "crow," and εἶδος, a "form" or "resemblance."] A term applied to processes of bones in any way like a crow's beak:—applied by Owen to the subdivision in the mandible of reptiles, into which the crotaphite muscle is always more or less inserted.

Co-ron'u-la.* [Diminutive of the Lat. *coro'na*, a "crown."] A coronet or downy tuft surrounding the seeds of certain flowers; a cor'onule.

Cor'po-ra,* gen. **Cor'po-rum,** the plural of CORPUS, which see.

Cor'pora Albican'tia* (ăl-be-kan'she-a). The "Whitish Bodies." (See ALBICANS.) Two small protuberances on the base of the brain:—called also *Mammillary Tubercles* or *Mammillary Bodies*, from their resemblance to a nipple.

Corpora Amylaceæ.* See NEUROGLIA.

Cor'pora Cav-er-no'sa.* "Cavernous Bodies;" so called from the cavities or cells found in them. The *crura* of the penis. Also the same part or parts of the clitoris. As the *corpora cavernosa* are only partly separated, it would perhaps be more correct to use the noun in the singular, and to call this portion of the organ the *corpus cavernosum* ("Cavernous Body").

Cor'pora Ġen-ic-u-la'ta.* [From the Lat. *genicula'tus*, "jointed," or "bent like a knee."] Two tubercles, *internum* and *externum*, on the inferior part of the optic thalami.

Cor'pora Lu'te-a.* "Yellow Bodies." Yellow spots found in the ovaria, in place of ova removed by impregnation or otherwise.

Corpora Mammillaria.* The CORPORA ALBICANTIA, which see.

Cor'pora Ol-ĭ-va'rĭ-a.* "Olive-Shaped Bodies." **Cor'pora O-va'ta.*** "Oval Bodies." The two external oval prominences on the *medulla oblongata.*

Cor'pora Pў-ram-ĭ-da'lĭ-a.* "Pyramidal Bodies." The two anterior eminences of the *medulla oblongata.*

Corpora Quadrigemina.* See TUBERCULA QUADRIGEMINA.

Cor'pora Res-tĭ-for'mĭ-a.* "Rope-like Bodies." The two posterior oval eminences on the *medulla oblongata*.

Corpora Sesamoidea.* See ARANTII CORPORA.

Cor'pora Stri-a'ta.* "Striated Bodies." Two smooth cineritious convexities, one on the fore part of each lateral ventricle of the brain. When cut, a mixture of gray and white matter in alternate layers is exhibited, causing a striated appearance.

Corpulency. See POLYSARCIA.

Cor'pus,* gen. **Cor'po-ris,** plural **Cor'po-ra.** (Fr. *Corps*, KOR.) A Latin word signifying BODY, which see. In Botany, the mass of anything: thus, *Corpus Ligneum* signifies the mass of the woody tissue of a plant.

Cor'pus An-nu-la're.* The *pons Varolii*.

Cor'pus Cal-lo'sum.* "Callous Body" or Substance. The white medullary substance joining the hemispheres of the brain; the *commissura magna*.

Corpus Cavernosum.* See CORPORA CAVERNOSA.

Cor'pus Cĭ-ne're-um.* "Ash-colored Body."

Cor'pus Den-ta'tum.* "Dentated Body." A small oval mass of gray substance seen on a section of either hemisphere of the cerebellum, about an inch from the median line. On its circumference are a number of indentations.

Cor'pus Fim-brĭ-a'tum.* "Fringed Body." A narrow white band along the concave edge of the inferior *cornu* of the lateral ventricle of the brain; the *Tænia hippocampi*.

Cor'pus Glan-du-lo'sum.* "Glandulous Body." A spongy eminence surrounding the orifice of the female urethra:—sometimes called the "female prostate gland" (*glan'dula pros'tata mulie'bris*).

Corpus Mucosum.* See RETE MUCOSUM.

Cor'pus Pam-pĭn-ĭ-for'me.* "Tendril-like Body." A plexus formed by the spermatic veins, above the testis.

Corpus Psaloides.* See FORNIX.

Corpus Pyramidale.* See CORPUS PAMPINIFORME.

Corpus Reticulare,* or **Corpus Reticulare Malpighi.*** See RETE MUCOSUM.

Corpus Rhomboideum.* See CORPUS DENTATUM.

Corpus Spongiosum Penis.* See next article.

Cor'pus Spon-ġĭ-o'sum U-re'thræ.* "Spongy Body [or Substance] of the Urethra." A cellular, vascular, dark-red or purple substance which covers the urethra.

Corpus Striatum.* See CORPORA STRIATA.

Cor'pus Var-ĭ-co'sum.* "Varicose Body." The spermatic plexus.

Cor'pus-cle. [Lat. **Corpus'culum**; diminutive of *cor'pus*, a "body."] A small body; an atom.

Cor-pus'cu-lar. [Lat. **Corpuscula'ris**; from *corpus'culum*, a "corpuscle" or "minute body."] Belonging to a corpuscle, or to the doctrine of atoms.

Cor-re-lā'tion. [From the Lat. *con*, "together," and *ref'ero*, *rela'tum*, to "refer."] A term used in medicine in reference to the etiology of disease, and principally in relation to the zymotic diseases. The phrase "correlation of physical forces" expresses the theory that the several forces may be converted into one another when they act under certain conditions, and that they are related to a common cause. A similar idea is implied by the term "correlation of the zymotic diseases."

Cor'rĭ-ġens.* [The present participle of the Lat. verb *cor'rigo*, *correc'tum*, to "correct."] A constituent part of a medicinal formula,—"that which corrects" its operation. See PRESCRIPTION.

Cor-rob'o-rant. [Lat. **Corrob'orans**; from *corrob'oro*, to "strengthen."] Strengthening, or giving strength.

Cor-ro'sion. [For etymology see next article.] The action or effect of corrosive substances.

Cor-ro'sĭve. [Lat. **Corrosi'vus**; from *cor* for *con*, intensive, and *ro'do*, *ro'sum*, to "gnaw," to "eat away."] Literally, "eating away." Destroying the texture or substance of a body, more especially of a living body, as the mineral acids and the caustic alkalies.

Corrosive Sublimate. See HYDRARGYRI CHLORIDUM CORROSIVUM.

Cor'ru-gāt-ed. [Lat. **Corruga'tus**; from *cor* for *con*, "together," or intensive, and *ru'go*, *ruga'tum*, to "wrinkle."] Wrinkled:—applied to parts that are crumpled irregularly, as the skin of some seeds.

Cor-ru-gā'tion. [Lat. **Corruga'tio**; from the same.] The contraction of the surface of a body into wrinkles.

Cor-ru-ga'tor, o'ris.* [From the same.] Literally, a "wrinkler:"—applied to a muscle which contracts the skin into wrinkles.

Corruga'tor Su-per-cil'ĭ-i.* "Wrinkler of the Brow." The muscle which knits or contracts the brow into wrinkles.

Corselet, kors'let. In Entomology, the *prothorax*, collar, or anterior segment of the trunk.

Cort. = *Cor'tex.** "Bark."

Cor'tex,* gen. **Cor'tĭ-çis.** [As if *Con'tex*; from the Lat. *con'tego*, to "cover over."] (Fr. *Écorce*, å'korss'.) The bark; the outermost covering of the stem and branches of all plants,—analogous to the skin of animals.

Cor'tex Cĕr'e-bri.* The "Cortex, or Cortical Substance, of the Brain." The gray or cineritious substance found on the exterior of the cerebrum and cerebellum, covering the whitish medullary matter beneath as the bark of a tree covers the alburnum.

Cor'tex* Cu-lil'a-wan. The name for the bark of the LAURUS CULILAWAN, which see.

Cor'tex E-leū-the'rĭ-æ.* The bark of the *Croton Eleutheriæ*.

Cor'tĭ-cal. [Lat. **Cortica'lis**; from *cor'tex*, *cor'ticis*, "bark."] Belonging to bark; of the

nature of bark:—applied to that which covers a part, as the cortical portion of the brain or the kidneys.

Cor'tical In-teg'u-ment. The bark or false bark of an endogenous plant.

Cor'tĭ-cate. [Lat. **Cortica'tus**; from *cor'tex*, "bark."] Having bark; harder externally than internally; having a rind, as the orange.

Cor-tĭ-çif'er-ous. [Lat. **Corticif'erus**; from *cor'tex*, "bark," and *fe'ro*, to "bear."] Bearing, or producing, bark.

Cor-tiç'ĭ-form. [Lat. **Corticifor'mis**; from *cor'tex*, "bark," and *for'ma*, "form."] Appearing like bark.

Cor'tĭ-cōse. [Lat. **Cortico'sus**; from *cor'tex*, "bark."] Having bark, or resembling bark:—applied to fruits which have a hard or coriaceous rind.

Co-run'dum.* [Etymology unknown.] A species of mineral, consisting, when pure, of alumina. It is the hardest of all substances except the diamond. It comprises varieties called *adamantine spar*, *emery*, *ruby*, and *sapphire*. Emery is amorphous; the others are crystallized.

Co-rȳd'a-lis Bul-bo'sa.* An herb of the order *Fumariaceæ*. Its root has been used as emmenagogue and vermifuge. *Corydalis tuberosa*, a native of Europe, has similar properties.

Corylaceæ,* kŏr-e-la'she-ē. [From *Cor'ylus*, the "hazel-tree"] A name given by Lindley to a natural order of plants. See CUPULIFERÆ.

Cor'ў-lus.* A genus of shrubs or small trees of the order *Cupilif'eræ*, the fruits of which are filberts and hazel-nuts. The *Cor'ylus Avella'na* is a native of Europe, and is extensively cultivated. The common hazel-nut of the United States is *Cor'ylus America'na*.

Cŏr'ўmb. [Lat. **Corym'bus**; from the Gr. *κόρυς*, the "crown of the head."] A modified raceme in which the main axis is short, the lowest pedicel is about as long as that axis, and each pedicel is longer than the next above it. The length of the pedicels is so graduated that all the flowers are nearly on a level.

Cor'ymb, Com'pound. A branched corymb, each of whose divisions is corymbose.

Cor'ўm-bif'er-æ.* [From the Lat. *corym'bus*, a "corymb," and *fe'ro*, to "bear."] A name given by Jussieu to a division of the order *Compositæ*, including the Aster.

Cor-ўm-bif'er-ous. [Lat. **Corymbif'erus**; from *corym'bus*, a "corymb," and *fe'ro*, to "bear."] Bearing corymbs:—applied to plants.

Cor-ўm-bose'. Approaching the form of a corymb; arranged in corymbs.

Cor'ў-phą Ce-rif'er-ą.* A species of wax-palm, a native of Brazil. Its root, called *Carnaulia root*, contains tannic acid, and is said to resemble sarsaparilla in its action.

Co-ry'zą.* [Supposed to be derived from the Gr. *κάρα*, the "head," and *ζέω*, to "boil."] A limpid, ropy, mucous defluxion from the nostrils.

Cos-çin'ĭ-um Fen-es-tra'tum.* A plant of the order *Menispermaceæ*, a native of Ceylon. Its wood, bark, and root are used as tonics.

Co-se'cant. The secant of the complement of an arc. See SECANT.

Cos-met'ic. [Lat. **Cosmet'icus**; from the Gr. *κοσμέω*, to "adorn."] A term applied to medicines supposed to have the power of removing freckles and blotches. Many substances used as cosmetics—such as lead, bismuth, and arsenic—sometimes give rise to cutaneous affections, and often cause a permanent deterioration in the texture of the skin.

Coṡ-mog'o-nў. [Lat. **Cosmogo'nia**; from the Gr. *κόσμος*, the "universe," and *γονή*, "birth," "origin."] That science which treats of the origin of the universe.

Coṡ-mog'ra-phў. [Lat. **Cosmogra'phia**; from the Gr. *κόσμος*, the "universe," and *γράφω*, to "write."] A description of the universe.

Cosmoline. See VASELINE.

Coṡ-mol'o-ğў. [Lat. **Cosmolo'gia**; from the Gr. *κόσμος*, the "universe," and *λόγος*, a "discourse."] The doctrine or science of the universe, its formation and arrangement.

Cos'tą.* (Fr. *Côte*, kōt.) A rib. The ribs are twenty-four in number,—twelve on each side. The spaces between them are called intercostal spaces. The ribs are divided into—

1. The *true*, or *sterno-vertebral*,—the first seven pairs; so called because they are united by their cartilages to the sternum. These are called *custo'des*, or "preservers" of the heart.

2. The *false*, or *vertebral*,—the remaining five pairs, which are successively united to the lowest true rib and to each other.

The vertebral extremity of a rib is called the *head;* the contracted part which adjoins it forms the *neck;* at the back of the rib is the *tubercle;* farther outward the bone bends forward, producing the *angle*, from which proceeds the *body*, which passes forward and downward to the sternal extremity.

The term *costa*, or rib, is applied in Botany to the tapering, nerve-like substance extending from the base to the apex of a leaf, also called *midrib*.

Cos'tal. [Lat. **Costa'lis**; from *cos'ta*, a "rib."] Belonging to a rib or ribs.

Cos'tate. [Lat. **Costa'tus**; from *cos'ta*, a "rib."] Furnished with nerves or ribs:—applied to a leaf which has only one rib,—*i.e.*, the midrib.

Cos'tĭ-form. [Lat. **Costifor'mis**; from *cos'ta*, a "rib," and *for'ma*, a "form."] Formed like a rib:—applied to certain apophyses.

Costiveness. See CONSTIPATION.

Cos'to-. [From the Lat. *cos'ta*, a "rib."] A prefix in compound names, denoting connection with a rib or ribs.

Cotangent. See TANGENT.

Côte. See COSTA.

Co-to-ne-as'ter.* A genus of hardy ornamental shrubs, of the order *Rosaceæ*, natives of Europe and Northern India. It comprises several species, desirable for the beauty of their flowers, fruit, and foliage. Some of these are evergreen. *Cotoneaster affinis* and *C. frigida* bear fruits of an intense scarlet color, which are very ornamental in winter.

Cotoneas'ter Vul-ga'ris.* An ornamental shrub, a native of Europe, containing amygdalin.

Cot'ton. (Fr. *Coton*, ko'tôN'.) A valuable textile commodity, the hairy or fibrous appendage of the seeds of several species of *Gossypium*, especially *G. herbaceum*, *G. album*, *G. arboreum*, and *G. religiosum*. They have been cultivated from time immemorial in India, Africa, and America. A valuable oil is obtained from cotton-seed.

Cotton-Plant. See GOSSYPIUM.

Cot'ton-Seed Oil. A fixed oil expressed from the seed of *Gossypium herbaceum*. It is a pale-yellow, oily liquid, having a bland, nut-like taste. It is used in the preparation of woollen cloth, and for lubricating machinery. It is an excellent substitute for almond and olive oil in most pharmaceutical preparations. See OLEUM GOSSYPII SEMINIS.

Cotton-Tree. See BOMBAX.

Cot'ton-Wood. The popular name of the *Populus monilifera*, a native of the United States.

Cotula.* See MAYWEED.

Cotunnii Aquæductus,* or **Cotunnius, Aqueduct of.** See AQUEDUCT OF THE VESTIBULUM.

Co-tun'nĭ-us, Nerve of. The naso-palatine nerve.

Cotun'nius, Wâ'ter of. A fluid within the membrane lining the vestibule and semicircular canals of the internal ear. (Cotunnius was a celebrated Italian anatomist.)

Cot-ў-le'don, o'nis.* [Gr. *κοτυληδών*; from *κοτύλη*, a "cavity."] In Botany, the seed-lobe, or seminal leaf, of the embryo or young plant. In dicotyledonous plants (in the bean, for example) the cotyledon consists of one-half of the seed, which, on germinating, divides into two equal parts.

Cot-ў-led'on-ous. [Lat. **Cotyledo'neus, Cotyled'onus**; from *cotyle'don.*] Belonging to cotyledons; having cotyledons.

Cot'ў-loid. [Lat. **Cotyloi'des**; from the Gr. *κοτύλη*, a "small drinking-cup."] Resembling an ancient drinking-cup.

Cot'yloid Cav'ĭ-tў. The same as ACETABULUM, which see.

Cou, koo. A French word signifying "neck." See COLLUM.

Couch Grass. See TRITICUM REPENS.

Couche, koosh. [From the Fr. *coucher*, to "lie down," to "go to bed;" also, to "put to bed."] A French term signifying "childbed," "confinement," or "delivery:" e.g., *une couche heureuse*, ün koosh uh'ruz', a "happy delivery."

Couch'ing. [From the Fr. *coucher*, to "put to bed," to "cause to lie down;" because the lens is pushed down from its upright position.] The operation of putting down or displacing the opaque lens in cataract.

Couch'ing-Nee'dle. The instrument used in couching.

Cou-e'pĭ-a.* A genus of trees of the order *Rosaceæ* or *Chrysobalanaceæ*, comprising many species, natives of South America. Several of them bear edible fruits.

Cough, kof, or kawf. [Lat. **Tus'sis**; Fr. *Toux*, too.] A sonorous and violent expulsion of air from the lungs. It is a symptom rather than a disease, and is caused by the presence of an irritant, mechanical or sympathetic, affecting the surface of the air-tubes or the nerves that supply them.

Couleur, koo'lur'. The French word for COLOR, which see.

Coumarin, or **Coumarine,** koo'ma-rin. The odoriferous principle of the Tonka bean, the produce of the *Dip'terix odora'ta*, or *Coumarou'na odora'ta*. It is also found in the *Melilotus*. In large doses it is poisonous.

Cou-ma-rou'na O-do-ra'ta.* A tree of the order *Leguminosæ*, a native of Cayenne. Its fruit is the Tonka bean, which see.

Counter-Extension. See CONTRA-EXTENSIO.

Counter-Fissure. See CONTRA-FISSURA.

Counter-Indication. See CONTRA-INDICATIO.

Coun'ter-Ir-rĭ-tā'tion. [Lat. **Con'tra-Irrita'tio.**] The application of a blister or other irritating substance to one part for the purpose of relieving pain in another part, usually beneath or adjacent to the irritated surface. The substances thus employed are called *counter-irritants*, and may be classified as follows, according to their degree of action: 1. Rubefacients; 2. Epispastics, Vesicants, or Blisters; 3. Pustulants.

Counter-Opening. See CONTRA-APERTURA.

Counter-Stroke. See CONTRE-COUP.

Coup de Sang, koo dẹh sôN. Blood-stroke:—a term used by some French physicians to designate an instantaneous and universal congestion without any escape of blood from the vessels. (See APOPLEXY.) Some authors have applied this name to hemorrhages occurring in different parts of the body.

Coup de Soleil, koo dẹh so'lêl' (or so'lâl'). (Fr.) A "Stroke of the Sun." Generally, any affection produced by a scorching sun.

Coup de Vent, koo dẹh vôN. (Fr.) A "Stroke of the Wind." An affection caused by exposure to a keen wind, extremely cold, or with rain or sleet.

Couperosé, koop'ro'zā'. (Fr.) "Copper-colored." A term applied to the *Acne rosacea* (or carbuncled face):—so named from the redness of the spots.

Courap, koo'rāp'. A form of impetigo peculiar to India, described by Sauvages under the term *Scabies Indica*.

Couronne, koo'ron'. The French word for "crown." See CORONA, and CROWN.

Cours'es. A popular English term for the *menses*, or *catamenia*.

Couveuse, koo'vuz'. [From the Fr. *couver*, to "brood," to "incubate," to "cherish."] A name applied to an arrangement or apparatus designed for the preservation and development of infants prematurely born. For this purpose, three great objects are especially to be kept in view: 1, to furnish an ample supply of perfectly pure air; 2, to preserve an absolutely uniform temperature near that of the healthy human body; and, 3, to

provide the nourishment best adapted to infants in that feeble state which necessarily results from an imperfect pulmonary circulation. For the last-named object the milk of a perfectly healthy woman, when obtainable, is doubtless to be preferred.

It is said that some French physicians have succeeded in realizing the above requirements and conditions so fully as to preserve alive, and develop into comparatively healthy children, no inconsiderable number of infants that would formerly have been pronounced *non-viables*. Called also *Incubator*.

Couvrechef, koov'r'shĕf'. (Fr.) Literally, "head-cover." A name given to certain forms of bandage applied to the head.

Covolam. See ÆGLE MARMELOS.

Cow-Berry. See VACCINIUM VITIS IDÆA.

Cow'hage, Cow'-Itch. The down covering the pods of the *Dol'ichos pru'riens*, now called *Mucu'na pru'riens*. See MUCUNA.

Cow'-Pox. [Lat. **Vacci'nia.**] Pustules of a peculiar character on the teats of the cow, from which the vaccine virus derives its origin.

Cow'-Tree. A name of several species of South American trees which yield a milky juice, as the *Brosimum galactodendron* (which see), the *Tabernæmontana utilis*, and the *Clusia galactodendron*.

Cowper's Glands. See ANTIPROSTATÆ GLANDULÆ.

Cox'a,* plural **Cox'æ.** (Fr. *Hanche*, hŏNsh.) The hip, haunch, or hip-joint; also, the ischium and coccyx. Applied in Zoology to the first articulation of the feet of the *Crustacea*, *Arachnides*, and *Insecta*.

Cox-æ-lu'vĭ-um.* [From the Lat. *cox'a*, the "hip," and *la'vo*, or *lu'o*, to "wash."] A bath for the lower portion of the body; a hip-bath.

Cox-ăl'ğĭ-a.* [From the Lat. *cox'a*, the "hip," and the Gr. ἄλγος, "pain."] Pain in the hip-joint; hip-joint disease, or *mor'bus coxa'rius*.

Cox-a'rĭ-us.* [From the Lat. *cox'a*, the "hip."] Belonging to the hip-joint.

Cox-a'rum,* the genitive plural of COXA, which see.

COXA'RUM MOR'BUS.* "Disease of the Hips." A caries of the head of the *os femoris*, causing a permanent shortening of the limb, and often accompanied with spontaneous luxation of the bone.

Cox'o-. A prefix denoting connection with the ischium.

Crab. [Lat. **Can'cer.**] The popular name of several species of animals of the class *Crustacea*, which are used for food. Some of them are aquatic, and are found in the sea near the shore in many parts of the world. The common edible crab of the United States is the *Lupea dicantha*, or *Callinectes hastatus*.

Crab-Ap'ple. The *Py'rus corona'ria*, a tree of the order *Rosaceæ*, a native of many of the United States. It bears small fruits which are very fragrant, and are edible in the form of preserves.

Crab-Louse. See PEDICULUS PUBIS.

Crabs' Claws and **Crabs' Stones.** See CANCRORUM CHELÆ and CANCRORUM LAPILLI.

Crack-Wil'low. See SALIX FRAGILIS.

Cra'dle. [Lat. **Ar'culus.**] A kind of frame for keeping the bedclothes off a wounded or fractured limb.

Crameria.* See KRAMERIA.

Cramp. [Low Latin **Cram'pus**; Ger. *Krampf*.] Spasmodic, involuntary, and painful contraction of muscles, especially of those of the leg. Cramp in the leg occurs mostly in the night, and ceases when the foot is pressed upon the ground. See SPASMUS.

Cran'ber-rў. The popular name of several species of shrubs of the order *Ericaceæ*. The American cranberry is the *Vaccin'ium macrocar'pon*, a trailing plant which is a native of the Middle and Northern United States. It grows in bogs, and bears acid red berries which are excellent for sauce, jelly, and tarts.

Crâne. The French term for "skull."

Cranes'bill. A popular name of several species of *Geranium*.

Crā'nĭ-al. [Lat. **Crania'lis.**] Belonging to the cranium.

Crā-nĭ-og'ra-phў. [Lat. **Craniogra'phia**; from *cra'nium*, the "skull," and the Gr. γράφω, to "write."] A description of the skull.

Crā-nĭ-ol'o-ğў. [Lat. **Craniolo'gia**; from *cra'nium*, the "skull," and the Gr. λόγος, a "discourse."] The science which treats of skulls in regard to their variety of shape, size, proportions, etc.

Crā-nĭ-om'e-ter. [Lat. **Craniom'etrum**; from *cra'nium*, the "skull," and the Gr. μέτρον, a "measure."] An instrument for measuring the cranium.

Cra'nĭ-o-plas'tў. [From the Lat. *cra'nium*, the "skull," and the Gr. πλάσσω, to "form."] A term applied to operations for restoring, or supplying the place of, the bones and soft parts of the cranium.

Crā-nĭ-ot'o-mў. [Lat. **Cranioto'mia**; from *cra'nium*, "the skull," and the Gr. τέμνω, to "cut."] The opening of the fœtal head, where necessary, to effect delivery.

Cra'nĭ-um.* [Gr. κρανίον; from κάρα, or κάρηνον, the "head."] The skull, or upper part of the head, containing the brain and its connections, and consisting of eight bones.

Craquement Pulmonaire, krăk'mŏN' pül'mo'nêR'. (Fr.) A crackling sound often heard at the top of the lungs in the early stage of phthisis.

Cras. = *Cras'tinum*,* or *Cras'tinus*.* "For to-morrow."

Crass. [Lat. **Cras'sus**, "thick."] Gross; coarse; something thicker than usual:—applied to parts of plants.

Cras-sa-men'tum.* [From the Lat. *cras'sus*, "thick."] The soft, almost solid, mass, of a deep brownish red, formed by venous blood soon after it has been extracted.

Crassulaceæ,* kras-su-la'she-ē [from *Cras'sula*, one of the genera], or **Sem-per-vi'væ.***

A natural order of exogenous plants, growing in dry situations, remarkable for the succulent nature of their stems and leaves. The *Sedum majus*, or *Sempervivum* ("Live-forever"), is a good example of this order.

Cra-tæ'gus.* [Gr. *κράταιγος.*] The Thorn, or Hawthorn, a genus of ornamental thorny shrubs or small trees of the order *Rosaceæ*, comprising a great number of species, natives of Europe, Asia, the United States, etc. They generally bear fragrant white flowers and red fruits, some of which are edible. The *Cratægus oxyacantha* (English hawthorn) is one of the most beautiful of the genus.

Cra'ter, e'ris.* [Gr. *κρατήρ*, a "bowl."] Literally, a "cup" or "bowl:"—usually applied to the mouth of a volcano.

Cra-tĕr'i-form. [Lat. **Craterifor'mis**; from the same.] Formed like a bowl or goblet; broadly cup-shaped:—applied to certain flowers.

Craw. The crop of a bird. See CROP.

Craw'-Fish, or **Cray'-Fish.** The *Cancer astacus*, or *Cancer fluviatilis.*

Crēam. [Lat. **Cre'mor**; Fr. *Crême*, krȧm.] The oily part of milk which rises to the surface, and is composed of butter, serum, and casein.

Cream of Lime. A mixture of lime and water used for purifying coal gas, by its property of absorbing or combining with the contaminating gases.

Cream of Tar'tar. [Lat. **Cre'mor Tar'tari.**] Bitartrate, or supertartrate, of potash. See POTASSÆ BITARTRAS.

Cream'er-y. A factory or place where butter and cheese are made on a large scale.

Cre'a-sōte, or **Kre'a-sōte.** [Lat. **Creaso'tum**; from the Gr. *κρέας*, "flesh," and *σώζω*, to "preserve."] A colorless, brilliantly transparent liquid, obtained from crude pyroligneous acid, and from wood tar. It is irritant, narcotic, styptic, powerfully antiseptic, and somewhat escharotic. Its use internally has been recommended in cholera, sea-sickness, and other affections of the stomach and bowels. In large doses it is a dangerous poison. It has been employed externally with great advantage in some cutaneous affections, and especially in malignant ulcers. The editor of this work has used it with the happiest effects in indolent and malignant ulcers resulting from chilblain, after all the other remedies usually recommended in such cases had failed.

Creasote Plant. See LARREA MEXICANA.

Creasote Water. See AQUA CREASOTI.

Cre-a-so'tum.* "Creasote." The Pharmacopœial name (U.S. 1870, 1880) for a product of the distillation of wood tar. It is an almost colorless or yellowish oily liquid, having a penetrating, smoky odor, a burning, caustic taste, and a neutral reaction. It is antiseptic.

Cre'a-tin, or **Cre'a-tĭne.** [Lat. **Creati'na**; from the Gr. *κρέας, κρέατος*, "flesh."] A nitrogenized crystallizable substance. A neutral body obtained from a fluid produced by mixing chopped animal muscle with an equal bulk of water, and subjecting this, in a bag, to strong pressure. It does not combine with either acids or alkalies. Also spelled *Kreatin.*

Cre-at'ĭ-nin, or **Cre-at'ĭ-nĭne.** [Lat. **Creatini'na.**] An alkaline base into which creatin is changed by heating with hydrochloric or other acids. Also spelled *Kreatinin.*

Creep'ing, or **Re'pent.** A term applied in Botany to a stem that grows prostrate on or beneath the ground, to which it is attached by roots at several points.

Creep'ing Sick'ness. (Ger. *Kriebelkrankheit*, kree'bel-krȧnk'hīt.) The name by which the gangrenous form of ergotism is known in Germany. See ERGOTISM.

Cre-mas'ter.* [From the Gr. *κρεμάω*, to "suspend."] A muscle which supports and compresses the testicle and spermatic vessels. See SPERMATIC CORD.

Cre-mā'tion. [Lat. **Crema'tio**; from *cre'mo, crema'tum*, to "burn."] The practice or act of burning dead bodies. This mode of disposing of the dead was practised by the ancient Romans and Greeks, and is used by the Hindoos at the present day.

Crem'o-carp. [From the Gr. *κρεμᾶσθαι*, to "be suspended," and *καρπός*, "fruit."] A term applied to such fruits as those of the *Umbelliferæ*, consisting of two or more indehiscent, inferior, one-seeded carpels adhering round a distinct and separable axis.

Cre'mor, o'ris.* [Allied perhaps to the Gr. *κρίμνον*, the "thick juice of barley."] Cream; any substance skimmed from the surface of a fluid; also a thick decoction of barley.

Cre'nate. [Lat. **Crena'tus**; from *cre'na*, a "notch."] Notched; scolloped into rounded teeth; notched on the edge, with the segments rounded:—applied to leaves.

Cre-na'to-Ser'rate. A term applied to leaves, etc., when the serratures are convex and not straight.

Crenelled. The same as CRENATE.

Cren'u-lāt-ed. [Lat. **Crenula'tus**; from *cren'ula*, a "little notch."] Having small notches; finely crenate.

Cre'o-sol, or **Cre'a-sol.** A colorless, oily liquid, of an agreeable odor and a burning taste, and insoluble in water. It exists in creasote, and is obtained by the action of dilute sulphuric acid on the creosolate of potassium.

Crep'ĭ-tant. [Lat. **Crep'itans**; see next article.] Crackling, or rattling.

Crep-ĭ-tā'tion. [Lat. **Crepita'tio, o'nis**; from *crep'ito, crepita'tum*, to "crackle."] The sound caused by pressing any portion of cellular tissue, in which air is collected, between the fingers. Also the noise produced by the act of grating the ends of a fractured bone together. See CREPITUS.

Crep'ĭ-tus.* [From the Lat. *cre'po, crep'itum*, to "make a noise."] The discharge of gas or flatus from the bowels. The crackling noise occasioned by pressing a part when air is collected in the cellular tissue. The grating sensation produced by the ends of a fractured bone being rubbed against each other.

Crescentiaceæ,* krĕs-sen-she-a'she-ē or krĕs-sen-te-a'she-ē, or **Crĕs-çen-tin'e-æ.** A natural order of exogenous trees, natives of the tropical regions of Asia, Africa, and America. Some botanists include them under *Bignoniaceæ*. The chief plant of this order is the Calabash-tree, *Crescen'tia* (krĕs-sen'she-ạ) *Cujete*, producing an esculent fruit in a shell which is used as a bottle.

Cres-cen'tĭ-a Cu-je'te.* The Calabash-Tree, a tree which grows in the tropical parts of America. Its fruit is used in medicine. The shell of the fruit is very hard, and is used as a substitute for pottery in the form of basins, pails, kettles, cups, etc.

Crest. [Lat. **Cris'ta.**] A term applied to appendages or objects which surmount others.

Crest'ed. [Lat. **Crista'tus.**] Having a crest, or an elevated appendage somewhat like a cock's comb:—applied to seeds and other parts of plants.

Cre'ta.* [From *Cre'ta*, the island of Crete.] (Fr. *Craie*, krĀ.) "Chalk." The Latin name for native friable carbonate of lime.

Cre'ta Præp-a-ra'ta.* "Prepared Chalk." The Pharmacopœial name (U.S. 1870, 1880) for native friable carbonate of calcium, freed from most of its impurities by elutriation. It is an excellent antacid, and is admirably adapted to diarrhœa accompanied with acidity.

Cre-tā'ceous. [Lat. **Creta'ceus**; from *cre'ta*, "chalk."] Of the nature of chalk; chalky; very dull white. In Geology this term is applied to the last period of the Mesozoic Age and to the rocks or beds formed during that period. These beds are situated next above the Jurassic and below the Tertiary. The Cretaceous strata of the United States consist of sand, marl, clay, limestone, etc.

Cre'tĭn-ism. [Lat. **Cretinis'mus**; etymology uncertain.] An endemic disease, common in Switzerland and other mountainous countries, characterized by *goître*, stinted growth, swelled abdomen, wrinkled skin, wan complexion, vacant and stupid countenance, misshapen cranium, idiocy, and comparative insensibility. The victims of this affection are called *Cretins*, and sometimes *Cagots*.

Crĭ-brā'tion. [Lat. **Cribra'tio**, o'*nis*; from *cri'bro*, *cribra'tum*, to "sift" (from *crib'rum*, a "sieve").] The act or process of sifting, or passing through a sieve.

Crib'rĭ-form. [Lat. **Cribrifor'mis**; from *crib'rum*, a "sieve," and *for'ma*, a "form."] Perforated, like a sieve, with small apertures:—applied to parts of plants.

Crib'rose. The same as CRIBRIFORM:—applied to parts of plants.

Cri'co-. A prefix denoting attachment to the cricoid cartilage.

Crī'coid. [Lat. **Cricoi'des** and **Cricoi'deus**; from the Gr. *κρίκος*, a "ring," and *εἶδος*, a "form" or "resemblance."] Resembling a ring.

Cri'coid Car'tĭ-lage. [Lat. **Cartila'go Cricoi'des.**] The name given to one of the cartilages of the larynx.

Criminal Abortion. See FŒTICIDE.

Crī'nate. [Lat. **Crina'tus**; from *cri'nis*, "hair."] Having hair:—applied to the fibrous roots of certain plants.

Cri'nis.* The hair of the head, especially of the back part. See CAPILLUS.

Crī'nīte. [Lat. **Crini'tus.**] Bearded with long hairs, or fringed:—applied to flowers.

Crī'noid. [Lat. **Crinoi'des**; from the Gr. *κρίνον*, a "lily," and *εἶδος*, a "form" or "resemblance."] Resembling a lily.

Cri'noids, En'crin-ītes, Crĭ-nid'e-a.* An order of marine radiated animals of the class *Echinodermata*. When the rays were expanded the animal resembled a flower. Fossils of extinct species of Crinoids (called "stone lilies") are found in immense numbers in the Carboniferous limestone.

Crinones.* See MALIS GORDII.

Crī'sis.* [Gr. *κρίσις*; from *κρίνω*, to "distinguish," to "judge," to "decide."] Literally, a "judgment," "decision," or "determination." In the course of a disease, that point or period which determines its favorable or unfavorable termination, or, in common language, its "turning-point."

Crisp. [Lat. **Crispa'tus, Cris'pus**; from *cris'po*, *crispa'tum*, to "curl."] Curled; wavy at the edges:—applied to leaves, petals, etc.

Cris-pa'tion. [From the Lat. *cris'po*, *crispa'tum*, to "curl," to "wrinkle," to "put into a tremulous motion."] A very slight convulsive motion or spasmodic contraction of certain muscles of the body, whether external or internal.

Cris'pa-ture. [From the same.] A term applied to the excessive and irregular division and puckering of the edge of a leaf.

Cris'ta.* A "crest." A term applied in Anatomy to parts or processes of bones resembling a crest:—in Botany, to a peculiar organ of the *Gramineæ*:—in Surgery, to an excrescence about the anus and pudenda.

Cris'ta Gal'li.* "Cock's Crest." The peculiar process on the ethmoid bone to which the *falx cerebri* is attached.

Cris'tate. [Lat. **Crista'tus**; from *cris'ta*, a "crest."] Having a crest; crested:—applied to seeds and other parts of plants.

Crith. [From the Gr. *κριθή*, a "barleycorn," the "smallest weight," a "grain."] The weight *in vacuo* of a litre of hydrogen gas at 0° Centigrade.

Crit'ĭ-cal. [Lat. **Crit'icus**; from *cri'sis*, "decision" or "determination."] Determining the issue of a disease:—also applied to periods of life as decisive of certain changes of constitution, habits, etc. See CRISIS.

Crit'ical Age. [Lat. **Æ'tas Crit'ica.**] That period of female life when the *catamenia* become irregular and ultimately cease. It is often attended with serious constitutional disturbance, and is sometimes the commencement of fatal diseases. See CHANGE OF LIFE.

Cro'ce-ous. Saffron-colored.

Croc-o-dil'ĭ-dæ.* [From the Gr. *κροκόδειλος*, the "crocodile."] A family of saurian reptiles, having the crocodile for their type.

Cro'cus.* [Gr. *κρόκος*, "saffron."] A Linnæan genus of the class *Triandria*, natural order *Iridaceæ* or *Irideæ*, comprising many species, natives of Asia Minor and Europe. They are prized for the beauty of their flowers.

Cro'cus.* Saffron. Spanish Saffron. The Pharmacopœial name (U.S. 1870, 1880) for the stigmas of *Crocus sativus*. Saffron has a peculiar sweetish aromatic odor, a warm, pungent, bitter taste, and a rich, deep orange color. It is used as a stimulant and emmenagogue.

Cro'cus Sa-ti'vus.* The systematic name of the saffron-plant:—also called *Crocus officinalis*.

Crop. [Lat. **Inglu'vies.**] An enlargement of the œsophagus in birds; the craw.

Cross'-Birth. [Lat. **Parodyn'ia Perver'sa.**] In popular language, preternatural labor of any kind.

Cross-Fertiliza'tion of Flowers. A term denoting that which is effected by applying the pollen of one plant or flower to the stigma or ovule of another plant of the same species. This is often done by bees and other insects. "Cross-fertilization is insured in many cases by mechanical contrivances of wonderful beauty."—(DARWIN.)

Cro-ta-la'rĭ-a.* [From the Gr. *κρόταλον*, a "rattle," the loose seeds rattling in the ripe pods.] A genus of plants of the order *Leguminosæ*, comprising more than two hundred and fifty species, natives of the tropics and sub-tropical parts of both hemispheres. The *Crotalaria espadilla*, a native of Venezuela, is a common domestic medicine used in fevers.

Crotala'ria Jun'ce-a.* The Sunn-Hemp of India, or Madras Hemp, a shrubby plant which is cultivated in India and other parts of Asia for the valuable fibre of its inner bark. Cordage and canvas are made of it.

Crot'a-lus.* [From the Gr. *κρόταλον*, a "rattle."] The rattlesnake. A genus of poisonous snakes found in North America.

Crot'a-phe,* or **Cro-ta'phĭ-um.*** [From the Gr. *κρόταφος*, the "temple of the head."] A painful pulsation or throbbing in the temple, accompanied with drumming in the ears.

Crot'chet. [Fr. *Crochet*, kro'shā', a "hook."] A curved instrument for extracting the fœtus.

Cro'ton, o'nis.* [Gr. *κρότων*, the "dog-tick," which the seeds of some plants of this genus are fancied to resemble.] A Linnæan genus of the class *Monœcia*, natural order *Euphorbiaceæ*, comprising numerous species, natives of India, America, etc. Several species of Croton are natives of the Southern United States. Gum lac is obtained from the *Croton lacciferum*, an East Indian tree.

CRO'TON CASCARIL'LA.* The plant formerly believed to afford cascarilla bark.

CRO'TON TIG'LIUM.* The plant from the seeds of which croton oil is obtained. It is a small tree or shrub, growing native in Hindostan and the East India islands. See OLEUM TIGLII.

Cro'ton Băl-sa-mif'er-um.* A shrub, a native of the West Indies, yielding a balsamic juice. A spirituous liquor, called *Eau de Mantes*, is obtained from this plant.

Cro'ton E-leū-the're-a* (or **E-lū-te'rĭ-a***). A shrub or small tree, a native of *Eleuthera* and other Bahama Islands, generally believed to be the source of cascarilla.

Cro'ton Ma-lam'bo.* A shrub, a native of Colombia and Venezuela, having an aromatic bark, called *malambo*, which is employed as a tonic and febrifuge.

Croton Pseudo-China.* See COPALCHI BARK.

Cro'ton-āte. [Lat. **Croto'nas, a'tis.**] A combination of crotonic acid with a base.

Cro-to'ne.* [Gr. *κροτώνη*; from *κροτών*, a "kind of tick."] Originally, a fungous excrescence on trees, caused by an insect (*κροτών*):—now usually applied to small fungous excrescences on the periosteum.

Cro-ton'ic Ac'id. An acid obtained from the acrid matter of croton oil.

Croton Oil. See OLEUM TIGLII.

Crotophus.* See CROTAPHE.

Croup, kroop. [Lat. **Cynan'che Trachea'lis.**] A disease marked by laborious and suffocative breathing, with a stridulous noise, short, dry cough, and expectoration of a concrete membranous sputum.

Crowd'ed. Thick-set; standing in close order:—applied to flowers, fruits, etc.

Crowfoot. See RANUNCULUS.

Crown. In Botany, the same as CORONA, which see. *Crowning*, borne on the apex of anything.

Crown Imperial. See FRITILLARIA.

Crowned. "Coronate" [from the Lat. *coro'no*, to "crown"]; furnished with appendages resembling a crown:—applied to flowers and other parts of plants.

Cru'cial. [Lat. **Crucia'lis**; from *crux*, a "cross."] Belonging to a cross, or shaped like a cross. Also severe, searching, decisive:—applied to tests.

Cru'cial In-cis'ion. Two incisions made to cross each other.

Cru'cĭ-ble. [Lat. **Crucib'ulum.**] A vessel made of baked earth, or metal, or graphite, used as a receptacle for substances to be fused or exposed to a great heat.

Cru-cif'er-æ.* [From the Lat. *crux, cru'cis*, a "cross," and *fe'ro*, to "bear." See next article.] A natural order of Exogens, which are all herbs with a pungent watery juice and six tetradynamous stamens. They are said to possess universally antiscorbutic and stimulant properties, and their seeds abound in a fixed oil. Mustard may be taken as a representative of this order.

Cru-cif'er-us.* [From the Lat. *crux, cru'cis*, a "cross," and *fe'ro*, to "bear."] Crucif'erous. Literally, "bearing a cross." A term applied to plants whose flowers are in the form of a cross. See CRUCIFERÆ.

Cru'cĭ-form [Lat. **Crucifor'mis**; from *crux, cru'cis*, a "cross," and *for'ma*, "form"], or **Cru'cĭ-ate.** Like a cross; having the form of a cross with equal arms:—applied to flowers, ligaments, etc.

Cru'dĭ-tў. [Lat. **Cru'ditas, a'tis;** from *cru'dus*, "raw."] The state or quality of that which is raw, unripe, uncooked, or undigested; bad digestion; rawness.

Cru'els. [Fr. *Écrouelles*, ā'kroo'ĕl', "scrofula."] Popularly, scrofulous swelling of the glands of the neck.

Cru'or, o'ris.* The red or purplish-colored portion of the blood. Also coagulated blood; gore.

Cru'ra,* gen. **Cru'rum,** the plural of CRUS, which see.

Cru'ra Cĕr-e-bel'li.* "Legs or Limbs of the Cerebellum." Two white cords, extending one along the circumference of each hemisphere of the cerebellum.

Cru'ra Cĕr'e-bri.* "Legs or Limbs of the Cerebrum."] Two thick white fasciculi, one from the inferior surface of each hemisphere of the cerebrum.

Cru'ra Di-a-phrag'ma-tis.* "Legs of the Diaphragm." Two appendices situated behind and below the central tendon of the diaphragm.

Cru-ræ'us.* [From the Lat. *crus, cru'ris*, a "leg."] Belonging to the leg. The name of a muscle of the leg.

Cru'ral. [Lat. **Crura'lis;** from *crus, cru'ris*, a "leg."] Belonging to the leg:—applied also to the cruræus muscle.

Cru'ral Arch. Otherwise called Fallopius' or Poupart's ligament. See POUPART'S LIGAMENT.

Crural Hernia. See HERNIA CRURALIS.

Crus,* gen. **Cru'ris,** plural **Cru'ra.** (Fr. *Jambe*, zhôMb.) The leg:—applied to symmetrical projections or appendages, as the *crus* of either hemisphere—in other words, the *crura*—of the cerebrum.

Crŭs'ta.* Literally, a "crust." The external cover or shell in the *Mollusca, Crustacea*, and in certain insects. Also a scab. Also the upper surface of lichens.

Crustacea,* krŭs-ta'she-a, or **Crustaceans,** krŭs-tā'shănz. See next article.

Crustaceus,* krŭs-ta'she-ŭs. [From the Lat. *crus'ta*, a "crust."] Crusta'ceous; having a hard shell:—applied in the plural neuter (*Crusta'cea*) to a class of *Articulata* in which the envelope, or crust, is usually solid and more or less calcareous, as the crab. In Botany, *crustaceous* signifies hard and brittle.

Crў'o-līte. [From the Gr. *κρύος*, "ice," and *λίθος*, a "stone." Literally, "ice-stone;" so called, it is said, because, like ice, it melts at a low temperature.] Fluoride of aluminum and sodium, a white mineral which is found in Greenland, and is extensively employed in the preparation of aluminum, hydrofluoric acid, and other substances.

Crў-oph'o-rus.* [From the Gr. *κρύος*, "cold," and *φέρω*, to "bear," to "produce."] Literally, "cold-producing." An instrument in which water is made to freeze by the cold produced by its own evaporation.

Crypsorchis.* See CRYPTORCHIS.

Crўp'ta,* plural **Crўp'tæ.** [From the Gr. *κρυπτός*, "hidden."] Small round points at the end of the minute arteries of the cortical substance of the kidneys. Also a follicle, or follicular gland.

Crўp-to-ca'rў-a.* A genus of trees of the order *Lauraceæ*, natives of the tropical parts of both hemispheres. The *C. moschata*, a native of Brazil, bears a fruit called *Brazilian nutmeg*.

Cryptoca'rya Pre-tĭ-o'sa,* or **Mes-pĭ-lo-daph'ne Pre-tĭ-o'sa.*** A tree, a native of Brazil, yielding a bark similar to that of cinnamon.

Crўp-to-çeph'a-lus.* [From the Gr. *κρυπτός*, "concealed," "obscure," and *κεφαλή*, a "head."] A monster-fœtus, in which the head is very small and does not project from the trunk.

Crўp-to-ga'mĭ-a.* [See next article.] The twenty-fourth class of plants in the system of Linnæus. It comprises all flowerless plants. In the Natural System these are called *Cryptogamous* plants, which are divided into three classes, *Acrogens, Anophytes*, and *Thallogens*, to which some add a fourth, called *Protophytes*. (See CRYPTOGAMIUS.) All other plants are included under a second grand division, called *Phanerogamia*.

Crўp-to-ga'mĭ-us.* [From the Gr. *κρυπτός*, "hidden" or "obscure" (from *κρύπτω*, to "hide"), and *γάμος*, "nuptials."] Literally, denoting plants "whose marriage is obscure or doubtful:"—applied by Linnæus to a class whose parts of fructification have not been sufficiently ascertained to refer them to any class according to the sexual system.

Crўpt-or'chid-ism. The condition of one who is a cryptorchis.

Crўpt-or'chis,* or **Crўps-or'chis.*** [From the Gr. *κρύπτω*, to "conceal," and *ὄρχις*, a "testicle."] A term applied to one whose testicles have not descended into the scrotum, but are still concealed in the abdomen; also to one who, by congenital defect, is without testicles.

Crўp'tous. [Lat. **Cryp'tus;** from the Gr. *κρυπτός*, "hidden."] Hidden, or concealed.

Crўs'tal. [Lat. **Crystal'lum,** or **Crystal'lus;** Gr. *κρύσταλλος*, "ice;" properly, "clear ice."] (Fr. *Cristal*, krĕs'tăl'.) An inorganic angular solid, bounded by plane faces which are symmetrically arranged around imaginary lines, called *axes*, by cohesion or chemical forces acting on its constituent molecules in their transition from a fluid to a solid state.

Crўs'tal-lin, or **Crўs'tal-līne.** [Lat. **Crystalli'na;** from *crystal'lum*, "crystal."] A peculiar substance forming the basis of the crystalline lens of the eye. Also one of the products of the distillation of indigo.

Crўs'tal-līne. [Lat. **Crystalli'nus;** from the same.] Belonging to crystal; like crystal.

Crys'talline Lens. A transparent, double convex lens situated in the fore part of the vitreous humor of the eye. It was formerly often called the *crystalline humor* of the eye.

Crўs-tal-lĭ-zā'tion. [Lat. **Crystalliza'tio, o'nis;** from *crystal'lum*, "crystal."] The process by which crystals are formed, or the process by which substances passing from a fluid to a

solid state assume definite geometrical or angular forms. The most perfect crystals are formed very slowly. "There is probably no exception to the principle that solidification is crystallization."—(J. D. DANA.)

Crystalliza'tion, Wâ'ter of. That portion of water which combines with salts in the act of crystallizing, and which cannot be removed without destroying their crystalline structure.

Crÿs-tal-log'e-nÿ. [From the Gr. *κρύσταλλος*, "ice," or a "crystal," and *γένεσις*, "production."] The process of crystallization; also the science which treats of the formation of crystals.

Crÿs-tal-log'ra-phÿ. [Lat. **Crystallogra'phia**; from the Gr. *κρύσταλλος*, "ice," or a "crystal," and *γράφω*, to "write."] A description of crystals; also the science which treats of crystals and crystallization.

Crÿs'tal-loid. [Lat. **Crystalloi'des**; from *crystal'lum*, a "crystal," and the Gr. *εἶδος*, a "form" or "resemblance."] Resembling crystal.

Ctenoid, te'noid. [Lat. **Ctenoi'des**; from the Gr. *κτεις*, *κτενός*, a "comb," and *εἶδος*, a "form" or "resemblance."] Resembling a comb:—applied to an order of fishes with dentated scales.

Cūbe. [Lat. **Cu'bus**; Gr. *κύβος*.] A solid bounded by six equal squares. It is one of the five regular solids. In Arithmetic, the cube of a number is its third power, or the product obtained by multiplying a number by its square.

Cu-be'ba.* [From the Arabic *Cuba'bah*.] A genus of shrubs of the order *Piperaceæ*, comprising several species, natives of the tropical parts of Asia and Africa. They have an acrid, hot, aromatic taste. *Cubeba* is also the Pharmacopœial name (U.S. 1870, 1880) for the unripe fruit of *Cubeba officinalis*. It is generally stimulant, with a special direction to the urinary organs.

Cu-be'bæ* ("Cubebs"), the plural of CUBEBA, which see.

Cu-be'bin. [Lat. **Cubebi'na**; from *Cube'ba*.] A crystalline substance obtained from cubebs.

Cu'bebs. In the plural, the English term for the berries of the *Cubeba*. See CUBEBA.

Cu-bĭ-for'mis.* [From the Lat. *cu'bus*, a "cube," and *for'ma*, "form."] Having the form of a cube; cu'biform.

Cu-bĭ-tæ'us.* Pertaining to the *cubit*, or forearm.

Cu'bĭ-tal. [Lat. **Cubita'lis**; from *cu'bitus*.] Belonging to the forearm.

Cu'bĭ-tus.* [From the Lat. *cu'bo*, to "lie down."] (Fr. *Coude*, kood.) The forearm, extending between the elbow and the wrist; also the *ulna*, or *os cubiti*.

Cu'boid. [Lat. **Cuboi'des**; from the Gr. *κύβος*, a "cube," and *εἶδος*, a "form" or "resemblance."] Like a cube:—applied to certain bones.

Cuc'koo-Flŏw'er. The *Cardamine pratensis*.

Cu-cul-la'ris.* [From the Lat. *cucul'lus*, a "hood."] Like a hood.

Cu'cul-late. [Lat. **Cuculla'tus**; from *cucul'lus*, a "hood."] Hooded, or hood-shaped; rolled up like a cornet of paper:—applied to flowers, leaves, etc.

Cu'cum-ber. The fruit of different species of *Cucumis*. The common cucumber is *Cucumis sativus*.

Cu'cumber, Bitter. The fruit of the *Citrullus Colocynthis*. See COLOCYNTHIS.

Cu'cumber, Squirt'ing, Cu'cumber, Wild. The *Momordica Elaterium*. See ELATERIUM.

Cu'cumber-Tree. The popular name of the *Magnolia acuminata*, an ornamental tree, a native of the United States. Its fruit resembles a cucumber in shape.

Cu'cu-mer,* Cu'cu-mis.* A Linnæan genus of the class *Monœcia*, natural order *Cucurbitaceæ*.

Cu'cumis A-gres'tis,* Cu'cumis As-ĭ-nĭ'nus.* The *Momor'dica Elate'rium*, (or *Ecba'lium Elate'rium*).

Cu'cumis Col-o-çÿn'this.* The former name of the plant which yields colocynth:—now called *Citrullus Colocynthis*.

Cucurb. cruent. = CUCURBITULA CRUENTA, which see.

Cu-cur'bĭ-ta.* [From the Lat. *cur'vo*, to "curve," or "bend."] Literally, a "gourd." A distilling-vessel shaped like a gourd; a cu'curbit. Also a cupping-glass. See CUCURBITULA.

Cucurbitaceæ,* ku-kŭr-be-ta'she-ē. [From the Lat. *cucur'bita*, a "gourd."] A natural order of exogenous plants, mostly herbs climbing by tendrils. It comprises the cucumber, gourd, melon, pumpkin, etc. They are most abundant in hot and tropical climates. The fruits of many species of *Cucumis* are powerfully cathartic. *Colocynth* is one of the most valuable medicines derived from this order.

Cu-cur-bĭ-tā'ceous. [Lat. **Cucurbita'ceus**; from *cucur'bita*, a "gourd."] Having an arrangement as in the *Cucurbita*. See CUCURBITACEÆ.

Cu-cur-bit'u-la.* [Diminutive of the Lat. *cucur'bita*, a "gourd."] (Fr. *Ventouse*, vŏN'-tooz'.) A cupping-glass.

Cucurbit'ula Cru-en'ta.* A "Bloody Cupping-Glass," or one intended to draw blood. **Cucurbit'ula cum Fer'ro.*** "Cupping-Glass [armed] with Iron." A cupping-glass with scarification. Names applied to the common cupping-glasses used for drawing blood, as distinguished from those employed in *dry* cupping.

Cucurbit'ula Sic'ca.* A "Dry Cupping-Glass." A cupping-glass used for dry cupping without scarification.

Cud'-weed. The popular name of several species of *Gnaphalium*.

Cu-ĭ-chun-chul'li. A species of *Ionidium*, a native of Peru or Ecuador, belonging to the natural order *Violaceæ*. It is emetic, cathartic, and diuretic, and is commended as a remedy against elephantiasis.

Cuisse, kwèss. (Fr.) See FEMUR.

Cuivre, kwèvr. (Fr.) See CUPRUM.

Cuj. = *Cu'jus.** "Of which."

Cujusl. = *Cujus'libet.** "Of any," or "of which you please."

Cul-de-Sac, kül dẹh săk. (Fr.) A tube or cavity closed at one end.

Cu'lex.* A genus of dipterous insects, comprising the gnat and mosquito.

Cu-lĭl'a-wan, or **Cu-lĭl'a-ban.** An aromatic bark, produced by the *Cinnamomum Culilawan*, or *Laurus Culilawan*, a tree found in the Moluccas and Anam. It is fragrant, and has an agreeable aromatic taste. It is reputed to be tonic, but is little used.

Cu'lĭ-na-rў. [From the Lat. *culi'na*, a "kitchen."] Relating to or used in the kitchen or cookery. The *culinary art* is a synonyme of cookery.

Cŭlm. [Lat. **Cul'mus**; from the Gr. *κάλαμος*, a "reed."] A reed, or straw; the proper hollow-jointed stem of grasses, rushes, etc.

Cŭl-mif'er-ous. [Lat. **Culmif'erus**; from *cul'mus*, "straw," a "culm," and *fe'ro*, to "bear."] Bearing or having culms:—applied to plants.

Cul'mĭ-nāt-ing. [Lat. **Cul'minans**; from *cul'mino*, to "arrive at the top, or highest point."] A term applied particularly to stars when at their highest point in the heavens.

Cul-mĭ-nā'tion. [From the same.] The passage of a heavenly body across the meridian at the upper transit; also the acme of a disease. In Geology, the time of the greatest expansion and development of a type of animals,—the time when they were larger and more numerous than in any other. "The prominent fact in the life of Cenozoic time is the expansion and culmination of the type of Mammals."—(DANA.)

Cul-trĭ-for'mis.* [From the Lat. *cul'ter*, a "knife," and *for'ma*, "form."] Formed like a knife; cul'triform.

Cu-mi'num.* [Gr. *κύμινον*.] Cumin. A Linnæan genus of the class *Pentandria*, natural order *Umbelliferæ*.

Cumi'num Çy-mi'num.* The plant *Cumin*, or *Fœnic'ulum Orienta'le*. Cumin is aromatic and stimulating. It is seldom used in the United States.

Cu'mu-la-tĭve. [From the Lat. *cu'mulus*, a "heap."] Increasing by successive additions:—applied to the action of medicines which finally act with violence or powerful efficacy after several successive doses have been taken with little or no apparent effect.

Cu'mu-lus.* The Latin for "heap," a "pile." In Meteorology, a kind of clouds, common in fair summer days. The grouping of these at the horizon presents the illusion of various images, or likenesses of various objects, such as banks or mountains of snow. They float at a lower level than the *cirrus*.

Cu'ne-al. [Lat. **Cunea'lis**; from *cu'neus*, a "wedge."] Belonging to a wedge.

Cu'ne-ate. [Lat. **Cunea'tus**; from *cu'neus*, a "wedge."] Wedge-shaped:—applied to leaves, etc.

Cu'ne-ĭ-form. [Lat. **Cuneifor'mis**; from *cu'neus*, a "wedge," and *for'ma*, "likeness."] Formed like a wedge.

Cu'neiform Col'umns. Called also **Col'umns of Bur'daeh.** Small wedge-like fibres of white substance in the posterior columns of the spinal cord.

Cuneiform Process. See BASILAR PROCESS.

Cu-ni'la Ma-rĭ-a'na.* The systematic name of Dittany, a plant of the order *Labiatæ*, a native of the United States. It has a warm, pungent taste and a fragrant odor, and is a gently stimulant aromatic.

Cunoniaceæ,* ku-no-ne-a'she-ē. [From *Cuno'nia*, one of the genera.] A natural order of exogenous trees and shrubs, found in India, South America, etc. This group is generally considered only a tribe of the order *Saxifragaceæ*.

Cu'pel. [From the Lat. *cupel'la*, a "cup."] A small vessel in which gold and silver are refined by melting them with lead.

Cu-pel-lā'tion. [Lat. **Cupella'tio**, *o'nis*; from the same.] The process of refining gold and silver by melting them in a cupel with lead.

Cu'po-la.* The dome-like extremity of the canal of the cochlea. See COCHLEA.

Cupped. A term applied to the hollowed surface of the *crassamentum* of blood caused by inflammation.

Cup'ping. The application of *cucurbitulæ*, or cupping-glasses.

Cupping-Glass. See CUCURBITULA.

Cu-pres'sus.* The classical and systematic name of the Cypress, an evergreen tree of the order *Coniferæ*. The Oriental cypress is *Cupres'sus sempervi'rens*. The wood of this tree is good and durable.

Cu'pri A-çe'tas.* "Acetate of Copper." The Pharmacopœial name (U.S. 1880) for deep-green, prismatic crystals containing acetic acid, and having a nauseating, metallic taste and an acid reaction.

Cu-prif'er-ous. [Lat. **Cuprif'erus**; from *cu'prum*, "copper," and *fe'ro*, to "bear."] Bearing or containing copper:—applied to ores.

Cu'prum,* gen. **Cu'pri.** [From the Gr. *Κύπρος*, the island of Cyprus, where the ancients procured the best copper.] (Fr. *Cuivre*, kwêvr.) Copper, a red metal, malleable and ductile. Specific gravity, 8.6. It is often found native,—*i.e.*, in a metallic state,—also combined with oxygen, sulphur, etc. It was used before iron, and was probably the metal of which the first weapons and domestic utensils were made. Its compounds are numerous and important.

CU'PRI ACE'TAS.* Acetate of copper:—improperly called *distilled* or *crystallized verdigris*.

CU'PRI SUBACE'TAS.* "Subacetate of Copper." Verdigris. The *Ærugo* of the London Pharmacopœia. It is sometimes used as an application to malignant ulcers, and as an escharotic for venereal warts.

CU'PRI SUL'PHAS.* The Pharmacopœial name (U.S. 1870, 1880) of sulphate of copper, or *blue vitriol*. Its use in small doses has been recommended in diarrhœa; but it is chiefly employed as an external application for ill-conditioned ulcers and as a styptic for bleeding surfaces.

Cup'-Shaped. Similar in signification to CYATHIFORM, which see:—applied to flowers.

Cu'pu-la.* Literally, a "cup." In Botany, the cup or husk of certain plants,—*e.g.*, the cup of an acorn, or the husk of the hazel-nut:—also called a *cu'pule.*

Cu-pu-lif'er-æ.* [See next article.] A natural order of exogenous trees or shrubs, with monœcious flowers, producing fruit enclosed in a cup or husk. It comprises the oak, beech, chestnut, hazel, etc. They abound in all, or nearly all, temperate climates. An astringent principle pervades all the order. This order is called *Corylaceæ* by Lindley.

Cu-pu-lif'er-us.* [From the Lat. *cu'pula*, and *fe'ro*, to "bear."] Bearing *cupulæ;* cupulif'erous.

Cu'ra-ble. That which is susceptible of cure:—applied to diseases.

Cu-ra're Poi'son, or **Woo-ra'ri.** A most deadly poison, which the South American Indians use to poison their arrows. It appears that there are several sorts of curare. One is obtained from the *Strych'nos toxif'era*, a native of Guiana. Others are the products of the *Strych'nos Guble'ri* and *S. Crevaux'ii.* The drug or poison is the concentrated juice of the plant, containing an active principle called *curarine*, which, according to C. Bernard, is twenty times as strong as curare. Curare has been employed as a remedy against hydrophobia, epilepsy, and tetanus, but the results did not prove that it is constantly efficacious. "As a remedy curare has very little value."—(*U. S. Dispensatory.*)

Curarine. See CURARE.

Curatio,* ku-ra'she-o. [From the Lat. *cu'ro, cura'tum*, to "take care" of, to "cure."] The treatment of a disease or wound.

Cu'ra-tive. Pertaining or tending to the cure of a disease.

Cur'cas Pur'gans,* or **Jat'ro-pha Cur'cas.*** The Physic Nut, a shrub of the order *Euphorbiaceæ*, a native of Brazil, the West Indies, etc. It has a milky juice. Its seeds, sometimes called *Barbadoes nuts*, are cathartic, and yield a fixed oil, which is used in medicine.

Cur-cu'ma.* A Linnæan genus of the class *Monandria*, natural order *Zingiberaceæ.* The root is a stimulant aromatic, somewhat resembling ginger. It is much used in India as a condiment, and is one of the ingredients in curry. Also the Pharmacopœial name (U.S. 1870) for the rhizome of the *Curcu'ma lon'ga.*

Curcu'ma Lon'ga.* The turmeric-plant. It is a native of India and Anam.

Curcu'ma Pa'per. Paper stained with a decoction of TURMERIC, which see.

Cur-cu'min. [From *Curcu'ma lon'ga*, the "turmeric-plant."] The coloring-matter of turmeric obtained in a state of purity by separating it from its combination with oxide of lead.

Curd. The coagulum which separates from milk upon the addition of acid, rennet, or wine.

Cur'rant. The popular name of several species of *Ribes.* The dried currants of the shops are the dried berries of the Corinthian grape.

Cur'sor,* plural **Cur-so'rēs.** [From the Lat. *cur'ro, cur'sum*, to "run."] A term applied to a family of birds which run along the ground and cannot fly, as the ostrich.

Cur-so'rĭ-us.* [From the same.] A term applied in the plural neuter (*Curso'ria*) to a family of orthopterous insects with legs solely adapted for running.

Cur'va-ture. The continuous flexure or bending of a line from a rectilinear direction:—applied to a deformity or contortion of the spine.

Cur'vĭ-nerved. [Lat. **Curviner'vis;** from *cur'vus*, "curved," and *ner'vus*, a "nerve."] A term applied to a leaf when the veins are curved and converge towards the apex.

Cus-cu'ta.* "Dodder." A genus of annual, leafless, parasitic plants of the order *Convolvulaceæ*, with thread-like stems, comprising many species, natives of Europe and the United States. In England the dodders injure the crops of flax, clover, etc., by twining round the stems of the cultivated plants. The *Cuscuta Europæa* has been used in medicine as aperient and diuretic.

Cuscutaceæ,* kŭs-ku-ta'she-ē. A natural order of exogenous parasitical plants, consisting of one genus, *Cuscu'ta*, the Dodder. Gray and others refer the *Cuscuta* to the order *Convolvulaceæ.*

Cusp. [From the Lat. *cus'pis*, a "point."] A stiffish, tapering, sharp point. In Astronomy, a point or horn of the new moon.

Cus-pa'rĭ-a.* A Linnæan genus of the class *Pentandria*, natural order *Rutaceæ.* Also a Pharmacopœial name of the bark of the *Galipea cusparia*, or *G. officinalis.* See GALIPEA.

Cuspa'ria Fe-brif'u-ga.* The tree supposed by some to yield Angustura bark:—also called *Bonplandia trifoliata.* Some refer it to the *Galipea cusparia*, or *G. officinalis.*

Cus-pĭ-da'tus.* [From the Lat. *cus'pis, cus'pidis*, a "point."] Cus'pidate; having a pointed extremity. In Botany, having a sharp, stiff point (cusp), or tapering to a slender, sharp point. Applied in the plural masculine (*Cuspida'ti*) to certain teeth (see DENTES CUSPIDATI).

Cut. In Botany, incised:—applied to any sharp and deep division.

Cu-ta'ne-ous. [Lat. **Cuta'neus;** from *cu'tis*, the "skin."] Belonging to the skin.

Cuta'neous Ab-sorp'tion. A function of the skin by which certain preparations rubbed into the skin have the same action as when given internally, only in a less degree. Thus, mercury, applied in this manner, cures syphilis and excites salivation, tartrate of antimony is said to occasion vomiting, and arsenic produces poisonous effects.

Cu-ta'ne-us Mus'cu-lus.* "Cutaneous Muscle." The *platysma myodes*, a muscle of the neck having the appearance of a very thin fleshy membrane.

Cu'tĭ-cle. [Lat. **Cutic'ula;** diminutive of *cu'tis*, the "skin."] The *epidermis*, or scarf-skin. In Botany, the outer skin or pellicle of a plant.

Cu-tic'u-la Den'tis.* "Cuticle of the Tooth." A term applied to a thin membrane found on the surface of the enamel of an *unworn*

tooth. It is sometimes called *Nasmyth's membrane.*

Cu'tis.* [Allied to the Gr. *κύτος*, *σκυτίς*, or *σκῦτος*, a "skin" or "hide."] The skin, consisting of the *cutis vera*, *rete mucosum*, and *cuticula.*

Cu'tis An-ser-i'na.* "Goose-skin." That condition of the skin, produced by cold and other causes, in which the papillæ become rigid and erect, resembling the skin of a plucked goose.

Cuttle-Fish. See SEPIA.

Cy'a-nāte. [Lat. **Cy'anas, a'tis.**] A combination of cyanic acid with a base.

Cy-a'ne-us,* or **Cy-a-li'nus.*** [From the Gr. *κύανος*, "blue."] Clear bright blue.

Cy-an-hy'dric Ac'id. Another name for HYDROCYANIC ACID, which see.

Cy-an'ic. [Lat. **Cyan'icus.**] A term applied to an acid composed of cyanogen and oxygen.

Cy'a-nide. A compound of cyanogen with a metal.

Cyanide of Mercury. See HYDRARGYRI CYANIDUM.

Cyanide of Potassium. See POTASSII CYANIDUM.

Cy'anide of Zinc. [Lat. **Zin'ci Cyan'idum.**] A white insoluble salt, prepared by adding cautiously a recently filtered solution of cyanide of potassium to a solution of sulphate of zinc. It is employed in chorea and epilepsy, and is said to be anthelmintic.

Cy'a-nite, or **Ky'a-nite.** [From the Gr. *κύανος*, "blue," and *λίθος*, a "stone."] A species of mineral which occurs crystallized in flattened prisms of the triclinic system. It is a silicate of alumina. It usually occurs in blue thin-bladed crystals aggregated together.

Cy-an'o-gen. [From the Gr. *κύανος*, "blue," and *γεννάω*, to "generate."] A colorless, inflammable, permanent gas, composed of nitrogen and carbon. Combined with hydrogen, it forms hydrocyanic acid. It unites with metals, etc., to form an important class of compounds called *cyanides.* The cyanides of mercury and silver are officinal. It is sometimes called *Prussin*, or *Prussine.*

Cy'a-no-pa-thi'a.* [From the Gr. *κύανος*, "blue," and *παθός*, "affection," "disease."] "Blue disease:"—another term for CYANOSIS.

Cy-a-no'sis.* [From the Gr. *κύανος*, "blue."] (Fr. *Cyanose*, sē'ă'nōz'.) A blue color of the skin, resulting from congenital malformation of the heart, by which venous and arterial blood are mixed so as to be not wholly oxygenated; the *morbus cæruleus.*

Cy-an'ū-ret. [Lat. **Cyanure'tum.**] A combination of cyanogen with a base:—the same as CYANIDE.

Cy-a-nū'ric. [Lat. **Cyanu'ricus.**] Belonging to cyanogen and urine:—applied to an acid.

Cy-an'u-rin. [Lat. **Cyanuri'na**; from the Gr. *κύανος*, "blue," and *οὖρον*, the "urine."] A very rare substance deposited as a blue powder by the urine.

Cy-ath'i-form. [Lat. **Cyathifor'mis**; from *cy'athus*, a "cup," and *for'ma*, a "form."] Shaped like a cup:—applied to flowers.

Cy'a-thus.* [From the Gr. *κύαθος*, a "drinking-cup."] In prescriptions, a wineglass.

Cycadaceæ,* sik-a-da'she-ē, or **Cy-ca'de-æ.*** [From *Cy'cas*, *Cyc'adis*, one of the genera.] A small natural order of exogenous trees and shrubs, found in the tropics. Several plants of this order furnish starch and sago which are used for food. The Cycads were formerly classed with the Palms.

Cy'cas Cir-cĭ-na'lis.* An East Indian palm-tree, the central portion of which yields a kind of sago.

Cyc'la-men.* A genus of perennial plants of the natural order *Primulaceæ*, natives of Europe. Several species of it are cultivated for the beauty of the flowers. The root of the *Cyc'lamen Europæ'um* (common cyclamen) is acrid, and is used as a drastic cathartic.

Cyc'la-min, or **Cyc'la-mine.** An active principle obtained from the *Cyclamen Europæum.* It is a glucoside and an amorphous white substance, soluble in water and in hot alcohol. It is poisonous, and resembles curare in its action, but is less violent.

Cy'cle. [Lat. **Cy'clus**; from the Gr. *κύκλος*, a "circle."] A revolution of the sun of twenty-eight years, and of the moon of nineteen years. A continual revolution of numbers which go on without interruption to the last and then return to the first. In Phyllotaxy, one complete turn of a spire.

Cyc'lĭ-cus.* [From the Gr. *κύκλος*, a "circle."] Belonging to a cycle or circle; cyc'lic:—applied in the plural neuter (*Cyc'lica*) to a family of coleopterous insects in which the body is generally orbicular or oval. In Botany, *cyclical* signifies rolled up circularly or coiled into a complete circle.

Cyc-li'tis.* [From the Gr. *κύκλος*, a "circle" or "ring."] Inflammation of the ciliary circle and the adjoining parts of the eye.

Cyc-lo-branch-ĭ-a'tus,* **Cyc-lo-branch'ĭ-us.*** [From the Lat. *cy'clus*, and *branchia'tus*, "having *branchiæ*."] A term applied in the plural neuter (*Cyclobranchia'ta*) to an order of *Mollusca Gasteropoda* in which the *branchiæ* form a circle; cyclobranch'iate; cyclobranch'ious.

Cyc-lo-gan-glĭ-a'ta.* [From the Gr. *κύκλος*, a "circle," and *ganglia'tus*, "furnished with ganglia," or "having ganglia."] A term applied by some naturalists to the fourth sub-kingdom of animals, or *Mollusca*, comprising animals mostly aquatic, slow-moving or fixed, without internal skeleton, covered with a permanent calcareous or cartilaginous shell, and distinguished by the high development of the cerebral ganglia and their circular distribution around the œsophagus. The classes are the *Tunicata, Conchifera, Gasteropoda, Pteropoda*, and *Cephalopoda.* See MOLLUSCA.

Cy'cloid. [Lat. **Cycloi'des**; from the Gr. *κύκλος*, a "circle," and *εἶδος*, a "form" or "resemblance."] Resembling a circle. A plane curve generated by a point in the plane of a circle

when the latter is rolled along a straight line. If the generating point is on the circumference of the rolling circle, the curve is a *common cycloid*. This is the *curve of quickest descent*.

Çȳ'clōne. A rotatory storm, resulting from a disturbance of the equilibrium of the atmosphere considered horizontally. It is not the same as tornado or whirlwind, which has its origin in a vertical disturbance of atmospheric equilibrium. The central space of a cyclone is occupied by a vast ascending current, which rises to a considerable height. The diameter of cyclones is seldom less than six hundred miles. The average rate at which they advance over the earth's surface in America is said to be twenty-four miles in an hour, but the air within moves one hundred miles or more in an hour. They occur in areas of low pressure in many parts of the world, and cause great devastation.

Çȳc-lo-neū'ra.* [From the Gr. *κύκλος*, a "circle," and *νεῦρον*, a "nerve."] A term applied by some writers to the first sub-kingdom of animals, or *Radiata*, on account of the circular form of the nervous axis in this division.

Çȳc-lo-neū'rus.* [From the same.] Having a circular nervous arrangement. See preceding article.

Çȳ-clo'sis.* [Gr. *κύκλωσις*.] The circulation of sap in the closed cells or vessels of plants. Each living cell carries on a circulation of its own, at least when young and active.

Çȳc-los'to-mus.* [From the Gr. *κύκλος*, a "circle," and *στόμα*, a "mouth."] "Round-mouthed." A term applied in the plural masculine (*Cyclos'tomi*) to a family of fishes; also named *Suctorii*.

Çȳ-do'nĭ-a.* [From *Cy'don*, in Crete, where it is said to be native.] A Linnæan genus of the class *Icosandria*, natural order *Rosaceæ*.

Çydo'nia Vul-ga'ris.* Another name for the *Pyrus Cydonia*, or quince-tree.

Çȳ-do'nĭ-um.* The Pharmacopœial name (U.S. 1870, 1880) for the seeds of *Cydonia vulgaris* (or Quince), which are sometimes used in medicine for their mucilage.

Çydo'nium Ma'lum.* "Cydonian Apple." The quince; the fruit of the *Pyrus Cydonia*.

Çȳl-e-cot'o-mȳ. [From the Gr. *κύλιξ*, a "cup," and *τομή*, a "cutting."] The division of the cup-shaped or ciliary muscle of the eye.

Cȳl-in-dra'ceous. Approaching to the cylindrical form:—applied to parts of plants.

Cȳ-lin'drĭ-cal. [Lat. **Cylin'dricus.**] Shaped like a cylinder. In Botany, the term is applied to stems, etc., that are round and not tapering.

Cȳ-lin-drĭ-for'mis.* [From the Lat. *cylin'drus*, a "cylinder," and *for'ma*, a "form."] Shaped like a cylinder.

Cȳl'in-droid. [Lat. **Cylindroi'des**; from *cylin'drus*, a "cylinder," and the Gr. *εἶδος*, a "form" or "resemblance."] Resembling a cylinder.

Cȳm'bĭ-form. [Lat. **Cymbifor'mis**; from *cym'ba*, a "boat," and *for'ma*, a "form."] Shaped like a boat. See NAVICULARIS, and SCAPHOID.

Çȳme, or Çȳ'ma.* [Gr. *κῦμα*, a "stem of colewort."] A cluster of definite centrifugal inflorescence where the flowers are all from terminal buds, and where the primary axis before terminating in a flower gives off one or more lateral unifloral axes which repeat the process. The elder and viburnum are examples of the compound cyme. The most simple cyme is a cluster of three flowers.

Çȳ-mi'num.* A name for the fruit of the *Cuminum Cyminum*.

Çȳ'mose. Furnished with cymes, or like a cyme:—applied to plants.

Çȳ-nan'che.* [From the Gr. *κύον*, a "dog," and *ἄγχω*, to "strangle."] (Fr. *Angine*, ŏN'zhēn'.) Inflammation of the throat; sore throat. A genus of the order *Phlegmasiæ*, class *Pyrexiæ*, of Cullen's nosology.

Cynanche Laryngea.* See CROUP.

Çynan'che Mą-lig'ną.* Putrid sore throat,—often an attendant on scarlatina.

Çynan'che Păr-o-tid'e-ą.* The same as PAROTITIS.

Cynanche Pharyngea.* See PHARYNGITIS.

Çynan'che Strep-ĭ-to'rĭ-ą,* Cynan'che Strid'u-lą,* Cynan'che Suf-fo-ca-tĭ'vą.* Names for croup.

Çynan'che Ton-sil-la'ris.* *Tonsilli'tis phlegmono'des*, or quinsy.

Çynan'che Tra-che-a'lis.* The croup; otherwise called *Cynanche laryngea*. See CROUP.

Cynanche Ulcerosa.* See TONSILLITIS MALIGNA.

Çȳ-nan'chum.* A genus of plants of the order *Asclepiadaceæ*, comprising several species, which are used in medicine. The *Cynanchum Monspeliacum*, a native of Europe, yields a gum-resin which is purgative. The *Cynanchum oleæfolium*, or *Solenostemma Argel*, is a native of Egypt and Nubia. Its leaves are mixed with senna.

Çȳn-an-thro'pĭ-ą.* [From the Gr. *κύων*, a "dog," and *ἄνθρωπος*, a "man."] A kind of *melancholia* in which the patient fancies himself changed into a dog and imitates its bark and actions.

Çȳn'ą-rą Scol'ȳ-mus.* The botanical name of the garden artichoke, a thistle-like plant growing in the south of Europe and cultivated for the fleshy sweet receptacle of its flowers. It belongs to the Linnæan class *Syngenesia*, natural order *Compositæ*. The juice of the leaves mixed with wine is sometimes given in dropsies.

Çȳn'ĭ-cus.* [From the Gr. *κύων*, a "dog."] Like a dog; cyn'ic. See CANINE.

Çȳ'nips Quer-çĭ-fo'lĭ-i.* A hymenopterous insect found in the gall of the oak. The gall itself is called *Cyni'phis ni'dus*, or the "nest of the cynips."

Çȳ-no-glos'sum.* Hound's Tongue. A genus of herbaceous plants of the order *Boraginaceæ*, comprising many species, natives of Europe and the United States. The root of *Cynoglossum officinale*, a native of Europe, is reputed to be antispasmodic and narcotic. Some persons consider it a dangerous poison.

Çÿn-o-lis'sa.* [From the Gr. *κύων*, a "dog," and *λύσσα*, "madness."] Canine madness. See HYDROPHOBIA.

Çÿn-o-rex'ĭ-a.* [From the Gr. *κύων*, a "dog," and *ὄρεξις*, "appetite."] Canine appetite.

Cyperaceæ,* sip-er-a'she-ē, or **Çyp'er-o-ĭ'de-æ.*** [From *Cype'rus*, one of the genera.] The Sedges. A natural order of endogenous grass-like plants, found in marshes, ditches, meadows, heaths, etc., from the Arctic to the Antarctic Circle. Some species of it are used as food. The Egyptian *Papyrus* belongs to this order.

Çÿp-er-o-ĭ'de-æ.* The Jussieuan name of a natural order of plants. See CYPERACEÆ.

Cypress. See CUPRESSUS.

Çÿp-rĭ-pe'dĭ-um.* [From the Gr. Κύπρις, a name of Venus, and *πέδιον* or *πόδιον*, a "slipper."] "Venus's Slipper," popularly called "Lady's Slipper." A beautiful genus of plants of the order *Orchidaceæ*, comprising numerous species, natives of India, Europe, Siberia, Mexico, the United States, etc. Also the Pharmacopœial name (U.S. 1870, 1880) for the rhizome and rootlets of the *Cypripe'dium pubes'cens* and of the *Cypripe'dium parviflo'rum*, both indigenous plants of the order *Orchidaceæ*. It is a gentle nervous stimulant, and antispasmodic.

Çypripe'dium A-cau'le.* The Moccason-Flower, a beautiful orchid, a native of New Jersey, Pennsylvania, etc. Its root is said to be narcotic.

Çypripe'dium Spec-tab'ĭ-le.* An orchidaceous plant, a native of many parts of the United States. It is considered by some persons the most beautiful of the genus. Its root is reputed to be antispasmodic.

Cyprus Powder. See ABELMOSCHUS.

Cȳ'prus Tur'pen-tīne. A limpid, fragrant substance obtained from the *Pistacia terebinthinus*.

Cyrillaceæ,* sĭr-il-la'she-ē. A natural order of evergreen shrubs, natives of North America, including the *Cyrilla* and two other genera.

Çyr-to'sis.* [From the Gr. *κυρτός*, "curved."] A term denoting among the ancients a recurvation of the spine, or posterior crookedness. It has more recently been termed *Cyrton'osus* or *Mor'bus incur'vus*.

Cyst. See CYSTIS.

Çÿs-tăl'ġĭ-a.* [From the Gr. *κύστις*, the "bladder," and *ἄλγος*, "pain."] Painful spasmodic affection of the bladder.

Cystectasy. See LITHECTASY.

Çys'tic. [Lat. **Cys'ticus**; from the Gr. *κύστις*, the "bladder."] Belonging to the urinary or gall bladder.

Çys'tic Duct. [Lat. **Duc'tus Cys'ticus.**] The duct which proceeds from the gall-bladder and, uniting with the hepatic duct, forms the *ductus communis choledochus*.

Cystic Oxide. See CYSTIN.

Çÿs-tĭ-çer'cus.* [From the Gr. *κύστις*, a "bladder," and *κέρκος*, a "tail."] The tailed bladder-worm:—applied to a genus of *Entozoa Parenchymata*, otherwise termed *Hydatids*. See HYDATID.

Cystidoparalysis.* See CYSTOPARALYSIS.

Çÿs-tĭ-fel-le-ot'o-mȳ. [Lat. **Cystifelleoto'mia**; from the Gr. *κύστις*, a "bladder," *τέμνω*, to "cut," and the Lat. *fel*, the "gall."] The operation by which a gall-stone is extracted from the gall-bladder.

Çÿs'tin. [Lat. **Cysti'na**; from the Gr. *κύστις*, the "bladder."] A peculiar substance, very rare, in a urinary calculus:—also termed *Cystic Oxide*.

Çÿs-tir-rha'ġĭ-a.* [From the Gr. *κύστις*, the "bladder," and *ῥήγνυμι*, to "burst forth."] A discharge from the bladder, whether of blood or of mucus.

Çÿs-tir-rhœ'a.* [From the Gr. *κύστις*, the "bladder," and *ῥέω*, to "flow."] A mucous discharge from the bladder; vesical catarrh:—also spelled *Cystorrhœa*.

Çÿs'tis,* gen. **Cys'tĭ-dis.** [Gr. *κύστις*, the "bladder."] A bladder, or sac; specially, the *Vesi'ca urina'ria*. The membranous bag in which any morbid substance is contained; a cyst.

Çÿs-ti'tis, *i'dis.* [From the Gr. *κύστις*, the "bladder."] Inflammation of the bladder. A genus of the order *Phlegmasiæ*, class *Pyrexiæ*, of Cullen's nosology.

Çÿs'tĭ-tōme. [Lat. **Cystit'omus**; from the Gr. *κύστις*, a "bladder," or "sac," and *τέμνω*, to "cut."] An instrument for opening the capsule or sac of the crystalline lens.

Çys'to-blast. [From the Gr. *κύστις*, a "bladder," or "cyst," and *βλαστός*, a "bud," or "germ."] The same as CYTOBLAST, which see.

Çÿs'to-bu-bon'o-çēle.* [From the Gr. *κύστις*, the "bladder," *βουβών*, the "groin," and *κήλη*, a "tumor."] A rare kind of hernia, in which the urinary bladder protrudes through the inguinal opening.

Çÿs'to-çēle.* [From the Gr. *κύστις*, the "bladder," and *κήλη*, a "tumor."] Hernia in which the urinary bladder is protruded; *hernia vesicalis*.

Çÿs-to-dÿn'ĭ-a.* [From the Gr. *κύστις*, the "bladder," and *ὀδύνη*, "pain."] Pain in the bladder.

Çÿs'toid. [Lat. **Cystoi'des**; from the Gr. *κύστις*, the "bladder," and *εἶδος*, a "form" or "resemblance."] Resembling a cyst or bladder:—applied to tumors and to certain worms.

Çÿs-to-lĭ-thi'a-sis.* [From the Gr. *κύστις*, the "bladder," and *λίθος*, a "stone."] Urinary calculous disease.

Çÿs-tol'ĭ-thus.* [From the same.] A urinary calculus; a cys'tolith.

Çys'to-pa-răl'ÿ-sis,* or **Çys'tĭ-do-pa-răl'ÿ-sis.*** Paralysis of the urinary bladder. See CYSTIS.

Çÿs-to-plas'tic. [Lat. **Cystoplas'ticus.**] Belonging to cystoplasty.

Çÿs'to-plas-tÿ. [Lat. **Cystoplas'tia**; from the Gr. *κύστις*, the "bladder," and *πλάσσω*, to "fabricate."] Operation for vesico-vaginal fistula, consisting in uniting a flap taken from the external labium, by suture, to the newly-pared edges of the sore.

Çÿs-to-ple'ğĭ-a.* **Cÿs-to-plex'ĭ-a.*** [From the Gr. *κύστις*, the "bladder," and *πλήσσω*, to "strike."] Paralysis of the bladder.

Çÿs-top-to'sis.* [From the Gr. *κύστις*, the "bladder," and *πίπτω*, to "fall."] Relaxation of the internal coat of the bladder, which protrudes into the urethra.

Çÿs-tor-rha'ğĭ-a.* [From the Gr. *κύστις*, the "bladder," and *ῥήγνυμι*, to "break" or "burst forth."] Hemorrhage from the bladder.

Çÿs-tor-rhœ'a.* The same as CYSTIRRHŒA.

Çÿs-to-spas'tic. [Lat. **Cystospas'ticus**; from the Gr. *κύστις*, the "bladder," and *σπάω*, to "draw."] Belonging to spasm of the bladder.

Çÿs'to-tōme. [Lat. **Cystot'omus**; from the Gr. *κύστις*, the "bladder," and *τέμνω*, to "cut."] A knife or instrument employed in cystotomy.

Çÿs-tot'o-mÿ. [Lat. **Cystoto'mia**; from the Gr. *κύστις*, the "bladder," and *τέμνω*, to "cut."] The operation of cutting into the bladder. See LITHOTOMY.

Çytinaceæ,* sit-e-na'she-ē. [From *Cyt'inus*, one of the genera.] A small natural order of parasitical plants found in Southern Europe and at the Cape of Good Hope.

Çÿt'ĭ-nus Hy-po-çys'tis.* A parasitic plant, a native of France, having astringent properties.

Çÿt'ĭ-sin. [Lat. **Cytisi'na.**] A bitter principle found in the seeds of the *Cytisus Laburnum*. It is poisonous, and resembles emetin in its action.

Çÿt'ĭ-sus.* [Gr. *κύτισος*.] A Linnæan genus of the class *Diadelphia*, natural order *Leguminosæ*. It comprises many species of shrubs or trees, natives of Europe, etc. Some of them are cultivated for ornament.

Çyt'isus Sco-pa'rĭ-us.* One of the names of the broom-plant, a native of Europe, cultivated in American gardens for its showy yellow flowers. It is diuretic and cathartic.

Cytitis.* See DERMATITIS.

Çÿt'o-blast. [Lat. **Cytoblas'ta**; from the Gr. *κυτος*, a "cavity," a "cell," and *βλαστός*, a "bud," or "germ" (from *βλαστάνω*, to "bud" or "burst forth").] The nucleus of cellular or elementary corpuscles in all vegetable and animal tissues; the *areola*, or cell-nucleus. Also the nucleus of those cells, growing within cells by a generative power of their own, which constitute the parenchyma or substance of morbid growths.

Çÿt-o-blas-te'ma, a'tis.* The fluid or mother-liquid in which the cells containing the nucleus, or *cytoblast*, originate.

Çÿt-o-ğen'e-sis.* [From the Gr. *κύτος*, a "cavity," or "cell," and *γίνομαι*, to "be produced."] The generation of cavities or cells; cell-development.

D.

D. = *Do'sis.** A "dose."

Dac'rÿ-ad-en-ăl'ğĭ-a.* [From the Gr. *δάκρυ* or *δάκρυον*, a "tear," *ἀδήν*, a "gland," and *ἄλγος*, "pain."] Pain in the lachrymal gland.

Dac'rÿ-ad-en-i'tis,* or **Dac'rÿ-o-ad'en-i'tis, i*dis.*** [From the Lat. *dac'ryo*, and *adeni'tis*, "inflammation of a gland."] Inflammation of the lachrymal gland.

Dac'rÿ-çÿs-tăl'ğĭ-a,* **Dac'rÿ-o-çÿs-tăl'ğĭ-a.*** [From the Gr. *δάκρυον*, a "tear," *κύστις*, a "sac," and *ἄλγος*, "pain."] Pain in the lachrymal sac.

Dac-rÿ-ğe-lo'sis.* [From the Gr. *δακρύω*, to "weep," and *γελάω*, to "laugh."] A form of insanity in which the patient weeps and laughs at the same time.

Dac'rÿ-o-çÿst. [Lat. **Dacryocys'tis**; from the Gr. *δάκρυον*, a "tear," and *κύστις*, a "bag," or "sac."] The lachrymal sac.

Dac'rÿ-o-çÿs-ti'tis, i*dis.* [From the same.] Inflammation of the lachrymal sac.

Dac'rÿ-o-çÿs'to-blen-nor-rhœ'a.* [From the Gr. *δάκρυον*, a "tear," and the Lat. *blennorrhœ'a*, a "flow of mucus."] A discharge of mucus from the lachrymal sac.

Dac-rÿ-o'dēs.* [From the Gr. *δάκρυον*, a "tear."] Tearful, or weeping:—applied to a sore.

Dac'rÿ-o-hæm-or-rhœ'a.* [From the Gr. *δάκρυον*, a "tear," and the Lat. *hæmorrhœ'a*, a "flow of blood."] Sanguineous lachrymation, or a flow of tears mingled with blood.

Dac'rÿ-o-līte. [Lat. **Dacryoli'tes**; from the Gr. *δάκρυον*, a "tear," and *λίθος*, a "stone."] A calculous secretion in the lachrymal passage.

Dac-rÿ-o'ma, a*tis.* [From the Gr. *δακρύω*, to "weep."] An obstruction in one or both of the *puncta lachrymalia*, causing an overflow of tears.

Dac'rÿ-o-pœ'us.* [From the Gr. *δάκρυον*, a "tear," and *ποιέω*, to "make" or "cause."] Causing tears, as horseradish, etc.

Dac'rÿ-or-rhœ'a.* [From the Gr. *δάκρυον*, a "tear," and *ῥέω*, to "flow."] A morbid flow of tears.

Dac'rÿ-o-so'len.* [From the Gr. *δάκρυον*, a "tear," and *σωλήν*, a "canal" or "duct."] The lachrymal canal or duct.

Dac'rÿ-o-so-len-i'tis.* [See preceding article.] Inflammation of the lachrymal duct.

Dac-tÿ-lif'er-us.* Bearing dates. See DACTYLUS.

Dac-tÿl'ĭ-on,* or **Dac-tÿl'ĭ-um.*** [From the Gr. *δάκτυλος*, a "finger."] Union of the fingers with each other, called "webbed fingers."

Dac-tў-lol'o-ġў. [From the Gr. *δάκτυλος*, a "finger," and *λόγος*, a "discourse."] Discourse carried on by means of the fingers.

Dac'tў-lus.* [From the Gr. *δάκτυλος*, a "finger;" a "date," from its resemblance to a small finger.] The same as DIGITUS. Also the date, or fruit of the *Phœnix dactylifera*.

Dæ'mo-no-ma'nĭ-a.* [From the Gr. *δαίμων*, the "devil," and *μανία*, "madness."] A variety of *melancholia* in which the patient fancies himself possessed by devils.

Dăf'fo-dil. The popular name of the *Narcissus pseudo-Narcissus*.

Daguerreotype, dą-ġĕr'ro-tīp. [From M. *Daguerre*, dă'gair', the discoverer, and the Lat. *ty'pus*, a "likeness" or "figure" of anything.] The system or process of producing pictures by the action of light on certain prepared metallic plates, introduced into France by M. Daguerre. Also applied to a picture made by this process. See PHOTOGRAPHY.

Dah'lĭne. A vegetable principle discovered in the dahlia, similar to starch.

Dāi'sў. The *Bel'lis peren'nis*, a plant of the order *Compositæ*, a native of Europe, remarkable for its modest and simple beauty.

Dăl-ber'ġĭ-ą.* A genus of forest trees and shrubs of the order *Leguminosæ*, comprising many species, natives of tropical Asia.

Dalber'gia La-tĭ-fo'lĭ-ą.* The East Indian Rosewood, a large and magnificent tree, a native of India. Its wood is of a dark purplish color, heavy, close-grained, and susceptible of a fine polish: it is used for furniture.

Dâl'bў's Car-min'ą-tĭve. A popular empirical carminative for children, composed of the carbonate of magnesia, with a small quantity of the tincture of assafœtida, tincture of opium, oil of peppermint, aniseed, and other aromatic oils.

Dâl'ton-ĭsm. [Lat. **Daltonis'mus.**] Inability to distinguish colors, which Dalton, the celebrated chemist, labored under.

Dam'ask Rose. The *Rosa Damascena*.

Da-mĭ-a'ną. A remedy recently introduced from Mexico, and stated to be a powerful aphrodisiac, useful in cases of sexual atony. There are two sorts of damiana in the market, one of which is the product of *Bigelovia veneta*, or *Aplopappus discoideus*, a plant of the order *Compositæ*. The other is supposed to be the leaves of a species of *Turnera*.

Dam'mar, or **Dam'mą-rĭne.** A fine transparent resin and varnish obtained from the *Dammara orientalis*, a native of the Moluccas.

Dam'mą-rą.* A genus of large trees of the order *Coniferæ*, comprising several species, natives of the East Indian islands, etc. The *Dam'mara australis* (kauri pine), a native of New Zealand, yields a hard resin or gum like copal. See DAMMAR.

Damp. [Ger. *Dampf*, "vapor."] A term applied to noxious gases found in mines. See CHOKE-DAMP, and FIRE-DAMP.

Dam'son. [A corruption of the Lat. *Damasce'num*, "belonging to Damascus."] The fruit of a variety of the *Prunus domestica*.

Dan-de-lī'on. [Fr. *Dent-de-lion*, dŏN'-dęh'lĕ'ŏN', like *Leontodon*, signifying "Lion's Tooth."] The *Tarax'acum dens-leo'nis*. See TARAXACUM.

Dan'driff. [Lat. **Fur'fur, ur'is.**] The disease *pityriasis capitis*.

Danse de Saint-Guy, dŏNs dęh sĂN ġĕ. The French name for chorea.

Daph'ne.* [Gr. Δάφνη.] A Linnæan genus of the class *Octandria*, natural order *Thymeleaceæ*. Several species of it bear beautiful and fragrant flowers. The species are widely distributed, being found in Europe and the tropical and temperate parts of Asia, America, and Australia.

Daph'ne Al-pi'ną.* A dwarf species of *Daphne*, from which has been obtained an acrid alkaline principle called DAPHNIN, which see.

Daph'ne Can-nab'ĭ-ną.* A shrub, a native of India or Nepaul, which has a tough fibrous inner bark which is used in India for the manufacture of paper. This paper is durable, and is used for deeds and records.

Daph'ne Gnid'ium* (nid'e-ŭm). The bark of this tree is employed in France as a vesicatory, under the name of *Daphné Garou* (dăf'nā' gă'roo').

Daphne Mezereon.* See next article.

Daph'ne Me-ze're-um (or **Mez-e-re'um**).* The plant which affords mezereon bark. See MEZEREON.

Daph'ne Thy-me'le-ą.* A plant, the leaves of which are purgative.

Daph'nin, or **Daph'nĭne.** [Lat. **Daphni'na.**] An acrid, volatile, alkaline principle obtained from the bark of the *Daph'ne Alpi'na*. It is this principle (as is supposed) to which the different species of *Daphne* owe their vesicating power.

Dar-ling-to'nĭ-ą.* [Named in honor of William *Darlington*, an eminent botanist.] A genus of plants of the order *Sarraceniaceæ*, consisting of a single species, *Darlingtonia Californica*, a curious perennial herb found only in California. It is one of the carnivorous plants called Pitcher-Plants. It has handsome purple flowers and pitcher-shaped leaves, which are adapted for catching and drowning insects.

Darnel. See LOLIUM TEMULENTUM.

Dar'tos.* [Gr. *δαρτός*, "skinned," or, perhaps, "made like skin," "resembling skin;" from *δέρας*, a "skin."] The cellular tissue subjacent to the skin of the scrotum, by the contractility of which, during life, the latter is corrugated.

Dartre, dĂRtr. (Fr.) Often indefinitely applied by French authors to different cutaneous diseases: it seems, however, to agree pretty nearly with *herpes*.

Das'ў-mą, or **Dą-sў'mą.*** [From the Gr. *δασύς*, "rough," "shaggy."] Roughness on the internal surface of the eyelid. See TRACHOMA.

Dāte. [Lat. **Dac'tylus**; Fr. *Datte*, dăt.] The fruit of the date palm, or *Phœ'nix dactylif'era*, a native of Northern Africa, etc. It is well adapted to grow in arid regions, where other trees will not thrive. The fruit is an important article

of food for large populations in Asia and Africa. It contains about 50 per cent. of sugar. The unripe date is astringent. The date-tree grows to the height of seventy feet or more. Its wood is employed for building houses, and its sap is used as a stimulating beverage.

Datiscaceæ,* dat-is-ka'she-ē. A small natural order of exogenous plants, found in Europe, India, and Asia Minor. It includes the *Datis'ca*, which is used as a purgative in fevers, and two other genera.

Datte. See DATE.

Da-tu'ra.* A Linnæan genus of the class *Pentandria*, natural order *Solanaceæ*.

Datu'ra Stra-mo'nĭ-um.* The thorn-apple, or Jamestown weed. See STRAMONIUM.

Da-tu'rin. [Lat. **Datu'ria.**] An alkaline principle discovered in the *Datura Stramonium*. It is poisonous.

Dau'çi Ra'dix.* "Root of the Carrot." See DAUCUS CAROTA.

Dau'cus.* [Gr. *δαῦκος*.] A Linnæan genus of the class *Pentandria*, natural order *Umbelliferæ*.

Dau'cus Ca-ro'ta.* The systematic name of the common garden-carrot (variety *sati'vus*).

Da'vў-um.* A new metal, of a silver-white color, malleable when hot, and easily dissolved by *aqua regia*. Density, 9.388.

Day-Blindness. See NYCTALOPIA.

Day'-Flŏw'er. A popular name for the *Commelyna*.

Day'-Mare. [Lat. **In'cubus Vigilan'tium.**] A species of incubus occurring during wakefulness, and attended with that distressing pressure on the chest which characterizes nightmare.

Day-Sight. See HEMERALOPIA.

D. D. = *De'tur ad.** "Let it be given to."

De. A Latin particle usually signifying "down" or "from;" frequently it is *intensive*, and occasionally *privative*, or *negative*, having sometimes nearly the force of the English particle *un*: e.g., *decoquo*, to "boil down," to "boil thoroughly;" *deform* [from *for'ma*, "form," "grace," "beauty"], to "deprive of grace or beauty;" *decompose*, to "*un*compound."

Dead'ly Night'shade. The *At'ropa Belladon'na*.

Deaf. See SURDUS.

Deaf-Dumb'ness, or **Deaf-Mu'tĭsm.** Dumbness arising from congenital or early deafness. See MUTITAS SURDORUM.

Dēal. The wood of various species of fir and pine.

De-ăl'bate. [From the Lat. *de*, intensive, and *al'bo*, *alba'tum*, to "whiten."] Bleached; whitened. In Botany, covered with a very opaque white powder.

Dealbatio,* or **Dealbation.** See BLEACHING.

Death. [Lat. **Mors**; Fr. *Mort*, MOR.] Extinction of life; cessation of all the vital functions. The proximate cause of death, whether resulting from old age, disease, or violence, is either cessation of the circulation or cessation of respiration.

Death-Rate. See MORTALITY.

Deaur. pil. = *Deaur'etur pil'ula.** "Let the pill be gilded."

De-bil'ĭ-tant. [From the Lat. *deb'ilis*, "weak."] Inducing debility; tending to diminish the energy of organs.

De-bil'ĭ-tў. [Lat. **Debil'itas**; from *deb'ilis*, "weak."] (Fr. *Faiblesse*, fā'blĕss'.) Weakness, or feebleness; decay of strength, either of mind or body.

Débris, dā'brē'. A French word signifying "ruins," "rubbish." In Geology, fragments of rocks, boulders, gravel, etc., detached from the summit and sides of a mountain and piled at the base.

Deb. Spiss. = *Deb'ita spissitu'do*,* "a due thickness or consistence," or *Deb'itæ spissitu'dinis*, "of a due consistence."

Dec. = *Decan'ta.** "Pour off."

Decafid. See DECEMFIDUS.

Dec'a-gon. [Lat. **Decago'num**; from the Gr. *δέκα*, "ten," and *γωνία*, an "angle."] A figure having ten equal angles and sides.

Dec-ag'o-nal. [Lat. **Decago'nus.**] Belonging to a decagon; having the form of a decagon.

Decagramme, dek'a-grăm. [Lat. **Decagram'ma, a***tis*; Fr. *Décagramme*, dā'kā'grăm'; from the Gr. *δέκα*, "ten," and the Fr. *gramme*.] Ten grammes, equal to 154.34 grains troy.

Decagynia.* See DECAGYNIUS.

Dec-a-ġўn'ĭ-us.* [From the Gr. *δέκα*, "ten," and *γυνή*, a "woman" or "female."] Having ten pistils:—applied to a Linnæan order comprising plants with ten pistils.

Decalitre, dek'a-lē'tr. [Fr. *Décalitre*, dā'kā'lĕtr'; from the Gr. *δέκα*, "ten," and the Fr. *litre*.] Ten litres, equal to 610.28 English cubic inches.

Decametre, dek'a-mē't'r. [Fr. *Décamètre*, dā'kā'mătr'; from the Gr. *δέκα*, "ten," and the Fr. *mètre*.] Ten metres, equal to 393.71 English inches, or about thirty-two and three-quarters English feet.

De-can'drĭ-a.* [From the Gr. *δέκα*, "ten," and *ἀνήρ, ἀνδρός*, a "man" or "male."] A class of plants in the Linnæan system, characterized by having ten stamens.

De-can'drĭ-ous, or **De-can'drous.** [Lat. **Decan'drius.**] Having ten stamens. See DECANDRIA.

De-can-tā'tion. [Lat. **Decanta'tio.**] The pouring off of clear fluid from sediments. An operation by which a liquid is poured gently from a vessel which is gradually inclined more and more.

Dec-a-pet'a-lous. [Lat. **Decapet'alus**; from the Gr. *δέκα*, "ten," and *πέταλον*, a "petal."] Having ten petals:—applied to flowers.

Dec-a-phўl'lous. [Lat. **Decaphyl'lus**; from the Gr. *δέκα*, "ten," and *φύλλον*, a "leaf."] Having ten leaves:—applied to an organ or leaf composed of ten leaflets.

Decapitation. See DECOLLATION.

De-cap'o-da,* or **Dec'a-pods.** [From the Gr. *δέκα*, "ten," and *πούς, ποδός*, a "foot."] A

name given by Cuvier to an order of Crustaceans having ten thoracic feet:—also applied to a tribe of Cephalopods having ten locomotive and prehensile appendages proceeding from the head, two of which, called *tentacles*, are always longer than the rest.

De-cap'o-dous. [Lat. **Decap'odus**; from the Gr. *δέκα*, "ten," and *πούς, ποδός*, a "foot."] Literally, "having ten feet." See DECAPODA.

De-cem'fĭ-dus.* [From the Lat. *de'cem*, "ten," and *fin'do*, to "cleave."] Cleft into ten parts; decem'fidous:—applied to a calyx or corolla.

De-cem-loc'u-lar. [Lat. **Decemlocula'ris**; from *de'cem*, "ten," and *loc'ulus*, a "little pocket."] Having ten cells or little compartments.

De-cid'u-a.* [See DECIDUUS.] A spongy membrane, or *chorion*, produced at the period of conception, and thrown off from the uterus after parturition.

Decid'ua Mem-bra'na (or **Tu'nĭ-ca**) **Re-flex'a.*** The same as DECIDUA REFLEXA, which see.

Decid'ua Membra'na (or **Tu'nica**) **U'te-ri.*** "Deciduous Membrane of the Uterus." The same as DECIDUA VERA.

Decid'ua Re-flex'a.* That portion of the decidua which is reflected over, and surrounds, the ovum.

Decid'ua Ve'ra.* That portion of the decidua which lines the interior of the uterus.

De-cid'u-us.* [From the Lat. *dec'ido*, to "fall down," to "fall off."] Falling off; decid'uous:—applied to a calyx and corolla that fall before the fruit forms; also to leaves that fall in autumn. Trees that are not evergreen are also called deciduous.

Decigramme, des'se-grăm. [Fr. *Décigramme*, dă'sĕ'grăm'; from the Lat. *dec'imus*, "tenth," and the Fr. *gramme*.] The tenth part of a gramme, equal to 1.544 grains avoirdupois, or one and a half grains troy.

Decilitre, dess'e-lē't'r. [Fr. *Décilitre*, dă'sĕ'lĕtr'; from the Lat. *dec'imus*, "tenth," and the Fr. *litre*.] The tenth part of a litre, equal to 6.1028 English cubic inches.

Decimetre, dess'e-mē't'r. [Fr. *Décimètre*, dă'sĕ'mătr'; from the Lat. *dec'imus*, "tenth," and the Fr. *mètre*.] The tenth part of a metre, equal to 3.937, or nearly four, English inches.

De-clī'nal. [From the Lat. *decli'no*, to "bend downwards."] A term applied to the slope of strata from an axis.

Dec'lĭ-nate, or **De-clīned'.** [Lat. **Declina'tus**; from the same.] Bending down; turned or curved downwards, or turned to one side:—applied to the stamens and stems of certain plants.

Dec-lĭ-nā'tion. [Lat. **Declina'tio**; from the same.] In Astronomy, the angular distance of a heavenly body from the equinoctial or celestial equator; the distance of a star north or south of the equator.

Declina'tion of the Needle. The deviation of the axis of the magnetic needle from the astronomical meridian. This is greater at some places than at others, and is variable at different times in the same locality.

De-clīne'. [From the same.] That period or stage of a disease or paroxysm in which the symptoms begin to abate in violence. *Decline* is also a popular term for a wasting disease, especially pulmonary consumption.

Declined. See DECLINATE.

De-cli'vis.* [From the Lat. *de*, "down," and *cli'vus*, the "descent of a hill."] Descending.

Decoct. = *Decoc'tum.** A "decoction."

De-coc'ta,* the plural of DECOCTUM.

Décocté, dă'kok'tă'. The French for DECOCTUM, which see.

De-coc'tion. [Lat. **Decoc'tum**, or **Decoc'tio**, *o'nis*; from *de*, "down," and *co'quo*, *coc'tum*, to "boil."] A continued ebullition with water, to separate such parts of bodies as are soluble only at that degree of heat. A medicine made by boiling some medicinal substance in a watery fluid. In this latter signification it corresponds to DECOCTUM, which see.

Decoc'tum,* plural **De-coc'ta.** [From the same.] A "decoction." The Pharmacopœial term for a medicinal preparation made by boiling a drug in water for the purpose of extracting the soluble ingredients, then straining and cooling.

Decoc'tum Ce-tra'rĭ-æ.* "Decoction of Cetraria." The Pharmacopœial name (U.S. 1870, 1880) for an aqueous preparation made by boiling Cetraria with water, straining, and cooling. According to the Pharmacopœia of 1870, it is prepared as follows: Take of Iceland moss half a troyounce; water, a sufficient quantity. Boil the Iceland moss in a pint of water for fifteen minutes, strain with compression, and add sufficient water through the strainer to make the decoction measure a pint.

Decoc'tum Ehĭ-maph'ĭ-læ.* "Decoction of Pipsissewa." The Pharmacopœial name (U.S. 1870) for a decoction made as follows: Take of pipsissewa, bruised, a troyounce; water, a sufficient quantity. Boil the pipsissewa in a pint of water for fifteen minutes, strain, and add sufficient water through the strainer to make the decoction measure a pint.

Decoc'tum Cin-eho'næ Fla'væ.* "Decoction of Yellow Cinchona." The Pharmacopœial name (U.S. 1870) for a decoction made as follows: Take of yellow cinchona, bruised, a troyounce; water, a sufficient quantity. Boil the yellow cinchona in a pint of water for fifteen minutes, strain, and add sufficient water through the strainer to make the decoction measure a pint.

Decoc'tum Cin-eho'næ Ru'bræ.* "Decoction of Red Cinchona." The Pharmacopœial name (U.S. 1870) for a decoction made as follows: Take of red cinchona, bruised, a troyounce; water, a sufficient quantity. Boil the red cinchona in a pint of water for fifteen minutes, strain, and add sufficient water through the strainer to make the decoction measure a pint.

Decoc'tum Cor'nûs Flor'ĭ-dæ.* "Decoction of Dog-wood." The Pharmacopœial name (U.S. 1870) for a decoction made as follows: Take of dog-wood, bruised, a troyounce; water, a sufficient quantity. Boil the dog-wood in a pint

of water for fifteen minutes, strain, and add sufficient water through the strainer to make the decoction measure a pint.

Decoc'tum Dul-ca-ma'ræ.* "Decoction of Bittersweet." The Pharmacopœial name (U.S. 1870) for a decoction made as follows: Take of bittersweet, bruised, a troyounce; water, a sufficient quantity. Boil the bittersweet in a pint of water for fifteen minutes, strain, and add sufficient water through the strainer to make the decoction measure a pint.

Decoc'tum Hæm-a-tox'y-li.* "Decoction of Logwood." The Pharmacopœial name (U.S. 1870) for a decoction made as follows: Take of logwood, rasped, a troyounce; water, two pints. Boil down to a pint, and strain.

Decoc'tum Hor'de-i.* "Decoction of Barley." The Pharmacopœial name (U.S. 1870) for a decoction made as follows: Take of barley two troyounces; water, a sufficient quantity. Having washed away the extraneous matters which adhere to the barley, boil it with half a pint of water for a short time, and throw away the resulting liquid. Then, having poured on it four pints of boiling water, boil down to two pints, and strain.

Decoc'tum Quer'cûs Al'bæ.* "Decoction of White-Oak Bark." The Pharmacopœial name (U.S. 1870) for a decoction made as follows: Take of white-oak bark, bruised, a troyounce; water, a sufficient quantity. Boil the white-oak bark in a pint of water for half an hour, strain, and add sufficient water through the strainer to make the decoction measure a pint.

Decoc'tum Sar-sa-pa-ril'læ Com-pos'i-tum.* "Compound Decoction of Sarsaparilla." The Pharmacopœial name (U.S. 1880) for a preparation made by boiling sarsaparilla and guaiacum-wood in water for half an hour, then adding sassafras, glycyrrhiza, and mezereum, and macerating for two hours. It is used as a gentle diaphoretic and alterative in secondary syphilis, in chronic rheumatism, etc. According to the Pharmacopœia of 1870, it is prepared as follows; Take of sarsaparilla, sliced and bruised, six troyounces; bark of sassafras-root, sliced, guaiacum-wood, rasped, liquorice-root, bruised, each a troyounce; mezereon, sliced, one hundred and eighty grains; water, a sufficient quantity. Boil in four pints of water for fifteen minutes, then digest for two hours in a covered vessel at about 200°, strain, and add sufficient water through the strainer to make the decoction measure four pints.

Decoc'tum Sen'e-gæ.* "Decoction of Seneka." The Pharmacopœial name (U.S. 1870) for a decoction made as follows: Take of seneka, bruised, a troyounce; water, a sufficient quantity. Boil the seneka in a pint of water for fifteen minutes, strain, and add sufficient water through the strainer to make the decoction measure a pint.

Decoc'tum U'væ Ur'si.* "Decoction of Uva Ursi." The Pharmacopœial name (U.S. 1870) for a decoction made as follows: Take of uva ursi a troyounce; water, a sufficient quantity. Boil the uva ursi in a pint of water for fifteen minutes, strain, and add sufficient water through the strainer to make the decoction measure a pint.

Dec'o-don Ver-ti-cil-la'tum,* or **Ne-sæ'a Ver-ti-cil-la'ta.*** A plant of the order *Lythraceæ*, a native of New York, New Jersey, etc. It is said to be emmenagogue.

De-col-lā'tion. [From the Lat. *de*, priv., and *col'lum*, the "neck."] A term applied to the removal of the head of the child in cases of difficult parturition.

De-com-pos'ite. The same as DECOMPOUND.

De-com-po-si'tion. [Lat. **Decomposi'tio, o'nis;** from *de*, negative, or "from," and *compo'no, compos'itum*, to "put together."] The separation of compound bodies into their constituent parts or principles; analysis. Many organized bodies, when deprived of life, undergo spontaneous decomposition.

De-com-pound'. [Lat. **Decompos'itus;** from the same.] In Botany, several times compounded; having various compound divisions or ramifications. If a palmately compound leaf has twenty-seven leaflets, it is *tri-ternate;* if it has more, it is *ternately decompound*, as the meadow-rue, which has eighty-one leaflets to each leaf.

De-cor-ti-cā'tion. [Lat. **Decortica'tio, o'nis;** from *de*, priv., or "from," and *cor'tex, cor'ticis*, "bark."] The removal of bark, husk, or shell from plants, fruits, etc.

Dec're-ment. [Lat. **Decremen'tum;** from *decres'co*, to "grow less."] Decrease; the proportion in which anything is lessened. The quantity lost by gradual diminution. In Crystallography, a successive diminution of the laminæ of molecules.

De-crep'it. [Lat. **Decrep'itus;** see DECREPITUDE.] Broken down with age.

De-crep-i-tā'tion. [Lat. **Decrepita'tio, o'nis;** from *decrep'ito, decrepita'tum*, to "crackle" or "explode."] The crackling noise produced by certain bodies, as common salt, etc., when heated or thrown on the fire.

De-crep'i-tude. [Lat. **Decrepitu'do;** etymology uncertain, perhaps from *de*, "down," and *crep'itus*, "broken:" compare Virgil's Æneid, Book V., line 206.] The feebleness and imbecility of old age; the last stage of old age and of human life.

Decub. = *Decu'bitus,** or *Decu'bitu.** "Lying down," or "On lying down" (*i.e.*, on going to bed).

De-cu'bi-tus.* [From the Lat. *decum'bo, decu'bitum*, to "lie down."] A lying down, or reclining in the horizontal position. An important symptom in certain diseases is to be observed from the manner of lying in bed.

De-cum'bent. [Lat. **Decum'bens;** from the same.] Lying down; reclining:—applied to stems (of plants) that are reclined on the ground, but the base is erect and the summit tends to rise.

De-cur'rent. [Lat. **Decur'rens;** from *decur'ro, decur'sum*, to "run down."] A term applied to leaves which run down the stem, or are prolonged down the stem below the insertion.

De-cur'sive. [Lat. **Decursi'vus;** from the same.] A term applied to leaves that run down the stem, attached by their middle nerve only.

De-cus'sate. [From the Lat. *decus'so, decussa'tum*, to "cross" (from *decus'sis*, the number "ten," represented by a cross, X).] To cross

each other. As an adjective, leaves are *decussate* when they are arranged in pairs which successively cross each other.

Dec-us-sā'tion. [Lat. **Decussa'tio, o'nis;** from the same.] The crossing or running of one portion athwart another, as in the case of the optic nerves, which cross each other within the cranium.

De-cus-so'rĭ-um.* [From the Lat. *decu'tio, decus'sum*, to "strike or put down."] An instrument for depressing the dura mater after trephining.

De D. in D. = *De di'e in di'em.** "From day to day."

De-duc'tion. [Lat. **Deduc'tio;** from *de-du'co, deduc'tum*, to "draw out," to "lead out."] The act of drawing inferences; a process by which we pursue laws into their remote consequences:—the reverse of *induction*. It is a process by which, without resorting to observation or experiment, we draw from axioms a series of propositions which are dependent on each other and connected like links of a chain.

Défaillance, dā'fā'yŏnss'. The French term for "fainting." Like the Latin *defectio*, its primary signification is a "failing" of the strength.

Def-e-cā'tion. [Lat. **Defæca'tio, o'nis;** from *defæ'co, defæca'tum*, to "deprive of the dregs" (fæces), to "strain through a sieve."] A series of vital operations by which the residue of aliments, composed of substances not susceptible of assimilation, and accumulated in the rectum, is rejected out of the economy. Also the removal of fæces, lees, or sediment from anything; clarification. The act of discharging the fæces.

Defectio,* de-fek'she-o. [From the Lat. *defi'cio, defec'tum*, to "lack" or "fail."] A failing; a failing of heart, strength, or courage.

Defec'tio An'ĭ-mi.* Literally, the "failing of the mind;" hence, fainting. The same as DELIQUIUM ANIMI.

Def'er-ens,* plural neuter **Deferen'tia,** def-er-en'she-a. [From the Lat. *def'ero*, to "carry down," to "convey."] Conveying; def'erent. See VAS DEFERENS.

Def'er-ent. [Lat. **Def'erens.**] In Botany, conveying anything downwards.

De-fer-vĕs'çence. [Lat. **Defervescen'tia;** from *de*, "down," or negative, and *ferves'co*, to "be hot."] The period during which the morbid heat of fever is cooling down to the healthy standard.

De-fib'rĭ-na-ted, or **De-fib'rĭ-nized.** [From the Lat. *de*, priv., and the Eng. *fi'brin.*] Deprived of fibrin.

De-fib-rĭ-nā'tion. The act of depriving of fibrin.

Def'ĭ-nĭte. In Botany, a term applied to stamens, etc., when the number is uniform or constant and not much above twelve.

Defla-grā'tion. [Lat. **Deflagra'tio, o'nis;** from *defla'gro, deflagra'tum*, to be "set on fire," to "be utterly consumed."] Rapid combustion, with flame and violent motion or explosion. The burning of an inflammable substance or metal with nitre, chlorate of potash, etc.

De-flect'ed, or **De-flexed'.** [From the Lat. *deflec'to, deflex'um*, to "bend down."] Bent downwards:—applied to parts of plants.

De'flex. [Lat. **Deflex'us;** from the same.] Bending a little downwards; deflected.

De-flo'rate. [Lat. **Deflora'tus;** from *deflo'ro, deflora'tum*, to "deflower."] A term applied to anthers that have shed their pollen, and plants, their flowers.

Def-lo-rā'tion. [Lat. **Deflora'tio, o'nis;** from the same.] In Medical Jurisprudence, connection without violence, in contradistinction from rape. Loss of the marks of virginity by connection with a male.

Defluxion, de-flŭk'shŭn. [Lat. **Deflux'io, o'nis;** from *de*, "down," and *flu'o, flux'um* or *fluc'tum*, to "flow."] A flowing of humors downwards.

De-fo-lĭ-ā'tion. [Lat. **Defolia'tio, o'nis;** from *de*, priv., and *fo'lium*, a "leaf."] The fall of leaves, as contradistinguished from frondescence, or their renovation.

De-for-mā'tion. [Lat. **Deforma'tio, o'nis;** from *defor'mo, deforma'tum*, to "mar" or "disfigure."] Distortion of any part, or general deformity of the body. In Botany, an alteration in the usual form of an organ, by accident or otherwise.

De-ġen-er-ā'tion. [Lat. **Degenera'tio, o'nis;** from *degen'ero, degenera'tum*, to be "worse than one's ancestors."] (Fr. *Dégénérescence*, dā'zhā'nā'rĕs'sŏnss'.) Deterioration:—applied in Pathology to a morbid change in the structure of parts, such as LARDACEOUS DEGENERATION.

Deg-lu-tĭ'tion. [Lat. **Degluti'tio, o'nis;** from *deglu'tio, degluti'tum*, to "swallow down."] The act of swallowing.

Deg-ra-dā'tion. [From the Lat. *de*, "down," and *gra'dus*, a "step."] The state of being degraded or degenerate; loss of dignity. In Botany, a change consisting in the abstraction, loss, abortion, or non-development of the usual organs.

De-gree'. [Lat. **Gra'dus,** a "step," or "rank."] The three-hundred-and-sixtieth part of a circle. Also the rank or title of Bachelor, Master, or Doctor, conferred by the faculty of a university or college. (See DOCTOR.) *Degree* in general signifies quantity of quality, or of measure or extent, determined by given relations; proportions.

De-gus-tā'tion. [From the Lat. *de*, intensive, and the Eng. *gusta'tion.*] The act of tasting; the perception of sapid qualities by the organs of taste.

De-his'çence. [Lat. **Dehiscen'tia;** from *dehis'co*, to "gape" or "burst open."] A bursting open. The mode in which a pod or pericarp opens regularly at maturity; or the act of splitting into regular parts.

De-his'çent. [From the same.] Opening or splitting by regular dehiscence, as the capsules of certain plants.

De-hȳ-drā'tion. [From the Lat. *de*, "from," and the Gr. *ὑδωρ*, "water."] The removal of water from any compound which contains it.

Del'hi (dĕl'le) **Sore** or **Boil.** An indurated, indolent, and very intractable sore, papular in the early stages, encrusted or fungating in the advanced stages, and spreading by ulceration of the skin. It occurs in India, Arabia, etc.

Del-ĭ-quĕs'çent. In Chemistry, having a tendency to become liquid. In Botany, applied to stems (of trees) which are branched so that the main axis or trunk is lost in ramifications, being *dissolved*, as it were, into the successively divided branches, as in the elm and the oak.

Dej. Alv. = *Dejectio'nes alvi'næ.** "Alvine dejections."

De-jec'tion. [Lat. **Dejec'tio, o'nis;** from *deji'cio, dejec'tum*, to "throw down."] The discharge of any excrementitious matter; also the matter discharged; a stool, or evacuation of the bowels. Also mental depression, exhaustion, or prostration.

Délayant, dā'lā'yŏN'. The French term for DILUENT, which see.

Del-e-te'rĭ-ous. [Lat. **Delete'rius;** from *de'leo, dele'tum*, to "destroy."] Literally, "destroying."] Injurious; poisonous.

Del-ĭ-gā'tion. [Lat. **Deliga'tio, o'nis;** from *del'igo, deliga'tum*, to "bind up."] The act of applying a bandage.

Del-ĭ-quĕs'çence. [From the Lat. *deliques'co*, to "grow moist or liquid."] The liquescent state assumed by certain saline bodies in consequence of their attracting water from the air.

Deliquium,* de-lik'we-ŭm. [From the Lat. *delin'quo*, to "fail."] A failing; a fainting or swooning.

Deliq'uium An'ĭ-mi.* "Failing of the Mind." Swooning or fainting; syn'cope:—also called *Defectio Animi.*

De-lĭr'ĭ-um.* [From the Lat. *deli'ro*, to "rave."] (Fr. *Délire*, dā'lēR'.) A symptom consisting in fitful and wandering talk. A derangement of mind or of consciousness characterized by incoherent speech.

Delir'ium Tre'mens.* "Trembling Delirium." (Fr. *Délire tremblant*, dā'lēR' trŏM'blŏN'.) An affection resulting from an excessive indulgence in strong liquors, or opium. See MANIA A POTU.

Del-ĭ-tĕs'çence. [From the Lat. *delites'co*, to "lie hidden."] A term used principally by the French physiologists to express a more sudden disappearance of the symptoms of inflammation than occurs in resolution.

De-liv'er-y. [From the Fr. *délivrer*, dā'lē'vRĀ', to "free," to "deliver."] The expulsion of a child by the mother, or its extraction by the obstetrical practitioner. The expulsion of the placenta and membranes, however, is necessary to complete the delivery.

Del-phin'ic Aç'id. An acid procured from the oil of the *Delphi'nus del'phis*, or dolphin.

Del-phĭn'ĭne, or **Del-phin'ĭ-a.*** A peculiar alkaloid found in the seeds of the *Delphinium staphisagria*, of which it is the active principle. It is white, pulverulent, and soluble in alcohol and ether, but sparingly soluble in water. It is a violent poison. Externally, it acts like veratrine, and is employed in neuralgia, rheumatism, and paralysis.

Del-phin'ĭ-um.* [From the Gr. *δελφίν*, the "dolphin."] Larkspur. A Linnæan genus of the class *Polyandria*, natural order *Ranunculaceæ*. It comprises many species of herbs, natives of Europe, China, and the United States. Also the Pharmacopœial name (U.S. 1870) for the seed of the *Delphinium consolida*. As a diuretic, it is sometimes given in dropsy.

Delphin'ium Con-sol'ĭ-da.* The Larkspur, an herbaceous plant which is a native of Europe, and is naturalized in the United States, where it has been cultivated for its showy flowers. Its seeds are diuretic, and in large doses emetic and cathartic.

Delphin'ium Staph-ĭ-sa'grĭ-a.* The systematic name of the Stavesacre, a native of Europe. Its seeds are cathartic and vermifuge. An alkaloid (*delphinia*) obtained from this plant is very acrid, and is used in paralysis, neuralgia, and rheumatism.

Del'ta. [Applied to other rivers from the example of the Nile, whose delta is nearly triangular, like the fourth Greek letter, Δ.] A tract of alluvial formation at the mouths of certain rivers, as the Ganges and the Nile. It is intersected by a net-work of water-channels.

Del'toid. [Lat. **Deltoi'des;** from the Greek triangular letter Δ, and *εἶδος*, a "form" or "resemblance."] Shaped like the Greek letter Δ (*delta*). The name of a large triangular muscle covering the shoulder-joint. In Botany, triangular in outline. Also a solid the transverse section of which has a triangular outline.

Del-to-i'de-us.* [From the Lat. *deltoi'des.*] Belonging to the deltoid muscle.

De-lu'sion. [From the Lat. *delu'do, delu'sum*, to "deceive."] A hallucination; an erroneous belief, of the falsity of which the patient cannot be persuaded, either by his own experience, by the evidence of his senses, or by the declarations of others.

De-mag'net-ĭ-zā'tion. [From the Lat. *de*, priv., and the Eng. *mag'netize.*] Depriving of magnetism.

Dementia,* de-men'she-a. [From the Lat. *de*, priv., and *mens*, the "mind."] (Fr. *Démence*, dā'mŏNss'; Ger. *Blödsin*, blöt'sin.) A weakness or want of intellect. Acute dementia is usually limited to *young* persons of both sexes. It may come on without any apparent cause. Under proper treatment it can generally be completely cured. Chronic dementia may occur at various times of life. A prominent symptom of this affection is weakness or loss of memory. This form of dementia is a very common attendant of extreme old age. Dementia differs from ordinary insanity in being a weakness or deficiency rather than an aberration of the intellect. Dotage is the dementia caused by senile decay. See IDIOCY.

Demersed. See DEMERSUS.

De-mer'sus.* [From the Lat. *demer'go, demer'sum*, to "dip in water."] Demersed; buried beneath water; growing beneath the surface of water:—applied to leaves naturally so situated.

Demi-Bain, dmē bȧN. "Half-Bath." The French term for a hip-bath.

Dem'o-dex.* [From the Gr. *δέμας*, "body," and *δῆξ*, a sort of worm.] The name applied to a kind of *acarus* found in the follicles of the hair: hence it is sometimes ca led *Ac'arus follico'rum* ("Acarus of the Follicles").

De-mog'ra-phy. [From the Gr. *δῆμος*, the "people," and *γράφω*, to "write."] That department of anthropology which treats of the statistics of health and disease, of the physical, intellectual, and economical aspects of births, marriages, and mortality. It has intimate relations with the medical sciences, especially hygiene and mesology. It aims to estimate the force of the principal social and physiological phenomena which are presented by nations and populations.

De-mo-no-ma'nĭ-a.* [From the Latinized Greek *dæ'mon* and *ma'nia*.] A form of insanity in which the patient imagines himself possessed of demons or devils.

Dem-on-strā'tor [from the Lat. *demon'stro, demonstra'tum*, to "show" or "exhibit"] **of A-nat'o-mȳ.** A teacher of practical anatomy.

Demours (dẹh-moor'), **Mem'brane of.** The delicate membrane which envelops the aqueous humor of the eye.

De-mul'çents. [Lat. **Demulcentia,** de-mŭlsen'she-ạ; from *demul'ceo*, to "soothe."] (Fr. *Adoucissants*, ȧ'doo'sĕ'sȯN'.) "Soothing [medicines]." Medicines of a mucilaginous or oily consistence.

Den'drĭ-form. [Lat. **Dendrifor'mis;** from the Gr. *δένδρον*, a "tree," and the Lat. *for'ma*, a "form."] Formed like a tree.

Den'drīte. [Lat. **Dendri'tes;** from the Gr. *δένδρον*, a "tree."] Any figure of a tree (or portion of a tree) or shrub observed in fossils and minerals.

Den-drit'ic. [Lat. **Dendrit'icus;** from the Gr. *δένδρον*, a "tree."] Belonging to a tree, or tree-like in form or appearance. The same as DENDROID. The term is also applied to a form of cancer.

Den-drog'ra-phy. [Lat. **Dendrogra'phia;** from the Gr. *δένδρον*, a "tree," and *γράφω*, to "write."] A history of trees and shrubs.

Den'droid. [Lat. **Dendroi'des;** from the Gr. *δένδρον*, a "tree," and *εἶδος*, a "form" or "resemblance."] Resembling a tree or shrub:—applied to mosses and other small plants divided at the top into branches.

Den'dro-līte. [Lat. **Dendroli'tes;** from the Gr. *δένδρον*, a "tree," and *λίθος*, a "stone."] A petrified tree or shrub.

Den-drol'o-gy. [Lat. **Dendrolo'gia;** from the Gr. *δένδρον*, a "tree," and *λόγος*, a "discourse."] A treatise on trees; the science of trees.

Den-drom'e-ter. [Lat. **Dendrom'etrum;** from the Gr. *δένδρον*, a "tree," and *μέτρον*, a "measure."] An instrument for measuring trees.

Dengue, dĕn'gā. (Sp.) An infectious eruptive fever, commencing suddenly, and characterized by severe pain in the head and eyeballs, swelling and pain in the muscles and joints, catarrhal symptoms, and sore throat. It occurs epidemically and sporadically in India, Egypt, Persia, the West Indies, etc.

Den-ĭ-grā'tion. [Lat. **Denigra'tio;** from the Lat. *deni'gro, denigra'tum*, to "blacken."] Another term for *melanosis*, derived from its black appearance. See MELANOSIS.

Dens,* gen. **Den'tis.** [Sanscrit, *dântă*; Gr. *ὀδούς, ὀδόντος*.] A tooth. See TOOTH.

Dens Le-o'nis.* "Lion's Tooth." The same as Dandelion, the *Tarax'acum dens-leo'nis*.

Dense. [Lat. **Den'sus.**] Close; compact; crowded.

Den'sĭ-tȳ. [Lat. **Den'sitas;** from *den'sus*, "thick," "crowded."] The state of being dense or compact:—a term used to denote the quantity of matter in a given bulk or space. It is the reverse of *rarity*, and is used as synonymous with *specific gravity*.

Dent, dȯN. The French for "tooth." See DENS.

Den'ta-gra.* [From the Lat. *dens*, and the Gr. *ἀγρα*, a "seizure."] The same as ODONTALGIA. Also a kind of forceps, or tooth-key, for extracting teeth.

Dentaire. See DENTAL.

Den'tal. [Lat. **Denta'lis;** from *dens, den'tis*, a "tooth."] (Fr. *Dentaire*, dȯN'tair'.) Pertaining to teeth.

Den-ta'rĭ-a.* A genus of plants of the order *Cruciferæ*, comprising many species, natives of Europe and the United States. *Dentaria bulbifera* and *Dentaria pinnata* are said to be carminative.

Den-ta'ta.* The name of the second vertebra:—so called from its projecting tooth-like process.

Den'tate. [Lat. **Denta'tus;** from *dens*, a "tooth."] Toothed; edged with projections like saw-teeth:—applied to leaves when such teeth point outward, not forward.

Dentato-Crenate. The same as CRENATO-DENTATE.

Den'tēs,* gen. **Dentium,** den'she-ŭm, the plural of the Lat. DENS, a "tooth." See TEETH.

Den'tes Cus-pĭ-da'ti,* or simply **Cuspida'ti.*** Four pointed teeth, two in each jaw, situated adjoining and posterior to the lateral incisors. The two cuspidati of the upper jaw are in popular language called *eye-teeth*.

Den'tes Sapien'tiæ,* sap-e-en'she-ē. The "Teeth of Wisdom," or wisdom-teeth. A name given to the last grinder teeth, because they come in mature years.

Den-tic'u-late, or **Den-tic'u-lāt-ed.** [Lat. **Denticula'tus;** from *dentic'ulus*, diminutive of *dens*, a "tooth."] Having little teeth; having very fine marginal teeth:—applied to leaves.

Den'tĭ-frĭce. [Lat. **Dentifri'cium;** from *dens*, a "tooth," and *fri'co*, to "rub."] A medicinal powder for the teeth; tooth-powder.

Den-tĭg'er-ous. [Lat. **Den'tiger;** from *dens*, a "tooth," and *ge'ro*, to "carry," to "bear."] A term applied to the cysts in which the teeth are formed or developed.

Den'tĭ-nal. Relating to DENTINE, which see.

Den'tĭne, or **Den'tin.** [Lat. **Denti'na**; from *dens*, a "tooth."] The bone-like substance forming the inner part of the body, neck, and roots of the teeth.

Den-tĭ-ros'tris,* plural **Den-tĭ-ros'trēs.** [From the Lat. *dens*, a "tooth," and *ros'trum*, a "beak."] Dentiros'trate :—a term applied in the plural to a family of birds having a tooth-like beak.

Den-tĭ-scăl'pĭ-um.* [From the Lat. *dens*, a "tooth," and *scal'po*, to "scrape."] An instrument for scaling teeth.

Dentist. See SURGEON DENTIST.

Den-tĭ'tion. [Lat. **Denti'tio, o'nis;** from *den'tio, denti'tum*, to "breed or produce teeth."] The first appearing of the teeth in infancy; teething. The first dentition, or the appearance of the first *milk-tooth*, often occurs about seven months after birth, sometimes earlier.

Dentium.* See DENTES.

Den'tĭ-um Cor'tex.* "Bark or Rind of the Teeth." A name applied to the enamel which forms the most important part of the covering of the teeth. See ENAMEL.

Den'tium Do'lor.* "Pain of the Teeth." See ODONTALGIA.

Den'toid. [Lat. **Dentoi'des**; from *dens*, a "tooth," and the Gr. *εἶδος*, a "form" or "resemblance."] Resembling a tooth.

De-nu'date. [Lat. **Denuda'tus**; from *denu'do, denuda'tum*, to "make bare."] Made bare; deprived of hair, etc.

Den-u-dā'tion. [Lat. **Denuda'tio, o'nis;** from the same.] The laying bare of any part of an animal or plant. In Geology, *denudation* and *erosion* are synonymous, and are applied to the action of running water and glaciers, which remove strata and lay bare the subjacent rocks, or to the removal of portions of land or rock by such agencies. The deep channels excavated by many rivers, and the deep valleys occupied by many lakes, are called *valleys of denudation.*

De-nu-trĭ'tion. [From the Lat. *de*, negative, and *nutritio*, "nourishment."] The opposite of nutrition.

De-ob'stru-ent. [Lat. **Deob'struens**; from *de*, "from," and *ob'struo*, to "obstruct."] A medicine for removing obstructions.

De-o-dar'. [Lat. **Ce'drus deoda'ra**; probably from the Sanscrit *dâ'va*,* a "god," and *dâ'ru*, a "tree,"—*i.e.*, the "tree of the gods;" so called on account of its beauty and grandeur.] The Indian Cedar, an ornamental tree of the order *Coniferæ*, a native of Nepaul and the Himâlayas. It affords durable and valuable timber; also a turpentine which is used in medicine. It is sometimes found fourteen or fifteen feet in diameter, and nearly one hundred and fifty feet high.

De-o'do-rant. [From the Lat. *de*, "from," and *o'dor*, "smell."] Literally, "that which takes from a substance its odor :"—a term applied to a substance that destroys offensive odors. Deodorants are classified as *volatile* and *non-volatile.* Among the former are chlorine, ozone, nitrous, acid, sulphurous acid, and peroxide of hydrogen. Among the latter are charcoal, lime, earth, etc.

De-o-do-rĭ-zā'tion. [Lat. **Deodoriza'tio, o'nis;** from *de*, priv., and *o'dor*, a "smell."] The correcting of any foul or unwholesome effluvia by means of chemical substances.

De-on-tol'o-ġў. [From the Gr. *δέοντα*, "things needing to be done," "requisite," the plural participle from the verb *δέω*, to "need," to "require," and *λόγος*, a "discourse."] The science of things requisite, or of duties.

MEDICAL DEONTOLOGY treats of the duties and rights of physicians, including medical etiquette.

De-ox-ĭ-dā'tion. [Lat. **Deoxida'tio, o'nis;** from *de*, priv., and *ox'ygen.*] The driving off or removal of oxygen from any substance.

Dep. = *Depura'tus.** "Purified."

De-pau'per-āt-ed, or **De-pau'per-ate.** [From the Lat. *de*, intensive, and *pau'per*, "poor."] In Botany, imperfectly developed; impoverished or stunted, as from scanty nutriment.

De-phleg-mā'tion. [Lat **Dephlegma'tio, o'nis;** from *de*, priv., and *phleg'ma*, "phlegm" or "humor."] The separating of the water from chemical liquors.

Deph-lo-ġis'tĭ-cāt-ed. [From the Lat. *de*, priv., and *phlogis'ton.*] Deprived of phlogiston, —in other words, oxidized. See PHLOGISTON.

Dephlogis'ticated Air. Oxygen gas.

Dephlogis'ticated Ma-rine' Aç'id. The name given by Scheele to chlorine.

De-pil'a-to-rў. [Lat. **Depilato'rius**; from *de*, priv., and *pi'lus*, the "hair."] Removing hair from any part.

Déplétif. See DEPLETORY.

De-ple'tion. [Lat. **Deple'tio, o'nis;** from *dep'leo, deple'tum*, to "empty."] The act of emptying or lightening the blood-vessels by means of venesection, cathartics, abstinence, etc. :—also applied to excessive evacuation, causing exhaustion, as in severe diarrhœa.

Dep'le-to-rў. [From the same.] (Fr. *Déplétif*, dă'plă'tĭf'.) Causing or promoting depletion.

Dep-lu-mā'tion. [From the Lat. *deplu'mis*, "without feathers," "callow;" from *de*, priv., and *plu'ma*, a "feather."] Literally, "plucking of the feathers." A term applied to a disease of the eyelids in which the eyelashes fall off.

De-poś'it. [Lat. **Depos'itum**; from *de*, "down," and *po'no, pos'itum*, to "put," "place," or "throw."] The substance thrown down from a liquid in which it has been suspended. In Pathology, the term is applied to inorganic material which is different from the elements of a tissue in which it is found, when there is reason to believe that this material has been brought to the tissue by the circulating fluid and there deposited. Such are the *calcareous* deposits which occur in several parts of the body, as in the walls of arteries, in tendons, and in the valves of the heart. In Geology, *deposit* is a bed or stratum of sedimentary rock formed in a sea or lake.

Dep-ra-vā'tion. [Lat. **Deprava'tio, o'nis;** from *depra'vo, deprava'tum*, to "vitiate" or "deprave."] Deterioration, or change for the worse; morbid perversion.

* *Deva* becomes *deo* in modern Hindostanee.

De-pressed'. [Lat. **Depres'sus**; see DEPRESSION.] A botanical term signifying "pressed down, flattened, or as if pressed down." *Depressed globose* denotes a body like an oblate spheroid flattened at base and apex, or at each pole.

De-pres'sion. [Lat. **Depres'sio, o'nis;** from *dep'rimo, depres'sum*, to "press down."] Lowness of spirits; diminution of vital activity in part or all of the economy. The state of a part which is pressed down. Also a term for couching, one of the operations for cataract.

De-pres'sor, o'ris.* [From the same.] A term applied to a muscle which draws or presses down.

De-pres'sor An'gu-li O'ris.* "Depressor of the Corner of the Mouth." A muscle whose office is indicated by its name.

Dep'rĭ-mens.* [See DEPRESSION.] Pressing down.

Dep'rimens Oc'u-li.* The "Depressing [Muscle] of the Eye." A name given to the *rectus inferior*, from the action of this muscle in drawing down the eyeball.

De-pu'rans.* [From the Lat. *depu'ro, depura'tum*, to "purify."] Purifying.

Depurantia,* de-pu-ran'she-ạ (the neuter plural of DEPURANS, which see). A term applied to medicines supposed to have the power of purifying the blood.

Dep'u-rants, or **De-pu'ra-tives.** [Lat. **Depuran'tia**; Fr. *Dépuratifs*, dā'pü'rā'tēf'.] Medicines employed to purify the blood. They are purgatives, diaphoretics, and diuretics.

Dep-u-rā'tion. [Lat. **Depura'tio, o'nis;** see DEPURANS.] The clarifying of a liquid; defecation. The removal of impurities from the fluids of the body.

Dĕr-ad-en-i'tis.* [From the Gr. *δερή*, or *δειρή*, the "neck," and *ἀδήν*, a "gland."] Inflammation of a gland of the neck.

Der'bў-shĭre Neck. Another name for BRONCHOCELE.

Derbyshire Spar. See FLUOR SPAR.

De-riv'a-tĭve. [Lat. **Derivati'vus**; from *de*, "from," and *ri'vus*, a "stream;" *deri'vo, deriva'tum*, to "draw off water," as from a stream or river.] Diverting from one part to another:—applied to blisters, rubefacients, epispastics, etc., appliances or remedies which lessen a morbid process in one part of the body by producing a flow of blood or lymph to another part.

Der'ma, a*tis.* [Gr. *δέρμα.*] The skin, or *cu'tis ve'ra.*

Der'mad. A term applied the same as DERMAL used adverbially.

Der'mal. [From the Lat. *der'ma*, the "skin."] A term applied by Dr. Barclay as meaning "towards the skin."

Der-măl'ğĭ-a,* or **Der-ma-tăl'ğĭ-a.*** [From the Gr. *δέρμα, δέρματος*, the "skin," and *ἄλγος*, "pain."] Neuralgia of the skin; pain of the skin.

Der-ma-ti'tis,* or **Çў-ti'tis.*** [From the Gr. *δέρμα*, or *κύτος*, "skin."] Inflammation of the skin:—applied especially to acute inflammation, attended with exfoliation of the cuticle and copious desquamation.

Der-ma-tog'ra-phў. [Lat. **Dermatogra'phia**; from the Gr. *δέρμα, δέρματος*, the "skin," and *γράφω*, to "write."] A description of the skin.

Der'ma-toid, or **Der'moid.** [From the Gr. *δέρμα*, the "skin," and *εἶδος*, a "form" or "resemblance."] Resembling skin:—often applied to morbid growths.

Der-ma-tol'o-ğў. [Lat. **Dermatolo'gia**; from the Gr. *δέρμα*, the "skin," and *λόγος*, a "discourse."] The consideration (or science) of the skin, its nature and qualities.

Der'ma-to'ma.* A morbid or perverted growth of the skin.

Der'ma-tor-rhœ'a.* [From the Gr. *δέρμα*, the "skin," and *ῥέω*, to "flow."] A morbid and excessive increase of perspiration.

Der'ma-to'sis.* A disease of the skin. In the plural, *Dermatoses* is a general term for cutaneous affections.

Der'ma-to-sўph'ĭ-lis.* [From the Gr. *δέρμα*, the "skin," and the Lat. *syph'ilis.*] A term for syphilitic exanthematous affections.

Der-ma-tot'o-mў. [Lat. **Dermatoto'mia**; from the Gr. *δέρμα*, the "skin," and *τέμνω*, to "cut."] Dissection or cutting of the skin.

Der-ma-tro'phĭ-a.* Atrophy of the skin.

Dermography. See DERMATOGRAPHY.

Dermoid. See DERMATOID.

Dermology. See DERMATOLOGY.

Der-mo-skel'e-ton. [Lat. **Dermoscel'eton**; from the Gr. *δέρμα*, the "skin," and *σκελετόν*, a "skeleton."] The outward covering of many invertebrate animals, such as the lobster, the beetle, etc.; also of certain vertebrated animals, as the tortoise, the armadillo, etc.

Derosne's Salt. See NARCOTINE.

Descemet, Membrane of. See DEMOURS, MEMBRANE OF.

De-sçen'dens No'ni.* A branch of the hypoglossal nerve. See HYPOGLOSSUS.

De-sçend'ing. [From the Lat. *descen'do*, to "descend."] Tending gradually downwards:—applied to parts of plants.

De-sçen-so'rĭ-um.* [From the Lat. *descen'do, descen'sum*, to "move downwards."] The apparatus in which distillation by descent is performed.

De-sçen'sus,* accusative **De-sçen'sum.** [From the same.] Distillation *per descensum* is performed by placing the fire upon and around the vessel or apparatus (*descensorium*), the orifice of which is at the bottom.

Descriptive Anatomy. See ANATOMY, DESCRIPTIVE.

Descriptive Botany. See PHYTOGRAPHY.

Des-ic-cā'tion. [Lat. **Desicca'tio, o'nis;** from *de*, intensive, and *sic'co, sicca'tum*, to "dry."] The act of drying.

De-sic'ca-tĭve. [Lat. **Desiccati'vus**; from the same.] A term applied to substances that dry or lessen the moisture of a wound or sore.

Des-mid-ĭ-a'ce-æ.* The Des'mids, a natural order of green-spored *Algæ* or Protophytes, occurring in pools and streams of fresh water. The typical species consist of a chain of connected joints, and are increased by the addition of two half-joints in the middle. Many microscopic fossil desmids are found in the flint of the chalk.

Des-mi'tis, i*dis.* [From the Gr. *δεσμός*, a "ligament."] Inflammation of a ligament.

Des-mo'dĭ-um.* A genus of perennial herbs or shrubs of the order *Leguminosæ*, comprising more than one hundred species, natives of India, South America, the United States, etc. *Desmo'dium gy'rans*, a native of India, is remarkable for the rotatory motion of its leaflets, which move in nearly all conceivable ways. More commonly the lateral leaflets move up or down, either steadily or by jerks. It is described by Dr. Gray as "one of the most extraordinary plants known."

Des-mo-dўn'ĭ-a.* [From the Gr. *δεσμός*, a "ligament," and *ὀδύνη*, "pain."] Pain in a ligament, or in the ligaments; desmod'yny.

Des-mog'ra-phў. [Lat. **Desmogra'phia**; from the Gr. *δεσμός*, a "ligament," and *γράφω*, to "write."] A history or description of the ligaments.

Des'moid. [Lat. **Desmoi'des**; from the Gr. *δέσμη*, a "bundle," and *εἶδος*, a "form" or "resemblance."] A term applied to certain fibrous tumors which on section present numerous white fibres arranged in bundles. Also resembling a ligament [from the Gr. *δεσμός*, a "ligament"].

Des-mol'o-gў. [Lat. **Desmolo'gia**; from the Gr. *δεσμός*, a "ligament," and *λόγος*, a "discourse."] A treatise on the ligaments; the science of the ligaments.

Des-mot'o-mў. [Lat. **Desmoto'mia**; from the Gr. *δεσμός*, a "ligament," and *τέμνω*, to "cut."] The part of anatomy which teaches the dissection of ligaments.

Des-pu-mā'tion. [Lat. **Despuma'tio, o'*nis*;** from *despu'mo*, *despuma'tum*, to "clarify."] The process of clarifying any fluid; defecation; depuration.

Des-pu-ma'tus.* [From the same.] Freed from impurities:—applied to liquids.

Des-quą-mā'tion. [Lat. **Desquama'tio, o'*nis*;** from *desqua'mo*, to "remove scales," to "scale fishes."] The separation of *laminæ* or scales from the skin or bones; exfoliation.

Desquamative Nephritis. See NEPHRITIS.

Dest. = *Destil'la.** "Distil."

Destillatio.* See DISTILLATION.

Desudatio (de-su-da'she-o), **o'*nis.*** [From the Lat. *de*, intensive, and *su'do*, *suda'tum*, to "sweat."] Excessive sweating; also an eruption in children. See SUDAMEN.

Desvauxiaceæ,* dă-vo-ze-a'she-ē. A small natural order of endogenous herbaceous plants, found in Australia and the Pacific islands.

Det. = *De'tur.** "Let it be given."

De-ter'gent. [Lat. **Deter'gens**; from *de*, intensive, and *ter'geo*, *ter'sum*, to "wipe," to "cleanse."] A term applied to medicines which cleanse wounds and ulcers; also to substances which cleanse the skin, as warm water, soap, and alkalies.

De-ter'mĭ-nate. [Lat. **Determina'tus**; from *deter'mino*, *determina'tum*, to "terminate," to "limit."] Definite:—applied to an inflorescence in which the flowers are from terminal buds, as the cyme. See CYME.

De-ter-mĭ-nā'tion. [Lat. **Determina'tio, o'*nis*;** from the same.] A flowing or rushing to a particular part, as blood to the head. In Botany, Zoology, and Anatomy, the diagnosis or precise exposition of the characters proper to each species of plant, animal, or anatomical element or tissue.

Det-o-nā'tion. [Lat. **Detona'tio, o'*nis*;** from *det'ono*, *detona'tum*, to "thunder."] Instantaneous combustion with loud explosion; the noise produced in very rapid chemical combinations or decompositions, or when a body suddenly changes its state or volume without a change of chemical properties. See FULMINATION.

Det'ra-hens.* [From the Lat. *det'raho*, to "draw away," to "draw from."] Drawing away.

De-tri'tal. [Lat. **Detri'tus**; from *det'ero*, *detri'tum*, to "wear down," or "wear away."] Relating to DETRITUS.

De-tri'tus.* [From the same.] The waste substance formed by the action of rivers on their banks. It is a general term for earth, sand, mud, alluvium, etc., which rivers carry down. "All the rivers entering an ocean bring in more or less detritus."—(DANA.)

De-tru'sor, o'*ris.* [From the Lat. *detru'do*, *detru'sum*, to "thrust down" or "force out."] A term applied to the muscular coat of the bladder, by the contractile power of which the urine is expelled.

Detru'sor U-ri'næ.* "Expeller of the Urine." The aggregate of the muscular fibres of the bladder which expel the urine.

Deū'ter-o-path'ic. [Lat. **Deuteropath'icus.**] Belonging to deuteropathy.

Deū-ter-op'a-thў. [Lat. **Deuteropathi'a**; from the Gr. *δεύτερος*, "second," and *πάθος*, "disease."] A sympathetic affection, or one consequent upon another.

Deū-tox'ide. [Lat. **Deutox'idum**; from the Gr. *δεύτερος*, "second," and the Lat. *ox'idum*, an "oxide."] A substance which is in the *second degree* of oxidation. This term is often used to denote a compound of three atoms of oxygen with two of metal, as in deutoxide of manganese, of lead, etc.

De-văl'gate. [Lat. **Devalga'tus**; from *de*, intensive, and *val'gus*, "bow-legged."] Having bowed legs; bandy-legged.

De-vel'op-ment. [From the Fr. *développer*, to "unfold."] Evolution; the organic change from the embryo state to maturity; growth; a progress from the homogeneous to the heterogeneous, from the simple to the complex. The progress of the earth from a state of chaos to its present state is the result of the universal law of development.

De-vel-op-men'tal. [Lat. **Metamor'phicus.**] Belonging to, or connected with, development:—applied to certain diseases connected with the growth or development of the individual.

De-vĭ-ā'tion. [From the Lat. *de'vius*, "erroneous," "out of the way."] Variation or departure from an established rule or standard; an improper direction of certain parts of the system.

Devil-Tree. See ALSTONIA SCHOLARIS.

De-vo'nĭ-an Age. In Geology, the age which came next after the Silurian and preceded the Carboniferous. The rocks formed in this age are called the *Devonian Formation*. Fishes were the dominant type of the Devonian Age.

Devonshire Colic. See COLICA PICTONUM.

Dew. [Lat. **Ros, Ro'ris**; Fr. *Rosée*, ro'zā'.] Moisture precipitated at night from the atmosphere upon the surface of bodies whose temperature has been diminished by the absence of the sun. Clouds prevent the fall of dew, because the radiation of heat, by which bodies become colder than the surrounding air, does not take place to any great extent unless the sky is clear. Though dew may fall on a windy night, it is soon absorbed by the fresh dry air continually coming in contact with the moist surface of bodies.

Dew'ber-rў. The common name of the *Rubus Canadensis*.

Dew'berry Plant. The common name of the RUBUS CÆSIUS, which see.

Dewlap. See PALEAR LAXUM.

Dew'-Point. The temperature of the atmosphere at which the moisture begins to condense and deposit itself as dew.

Dex'ĭ-o-car'dĭ-a.* [From the Gr. *δεξιός*, "right," and *καρδία*, the "heart."] A case in which the heart, either from disease or congenital malformation, beats on the right side.

Dex-tral'ĭ-tў. The state or circumstance of being on the right side, as opposed to the left; also of being right-handed.

Dex'trin. [Lat. **Dextri'na.**] Mucilaginous starch, prepared by boiling a solution of starch with a few drops of sulphuric acid. Its name is derived from its property of turning the plane of the polarization of light to the right hand. Dextrin resembles gum arabic in appearance and properties, but may be distinguished from that gum by the fact that it does not afford mucic acid by the action of nitric acid. It is soluble in water, and forms a mucilaginous solution which is extensively sold and used under the name of mucilage. Large quantities of dextrin are employed for various purposes in the arts, under the name of *artificial gum*.

Dex'tro-ġў'rate. [From the Lat. *dex'ter*, "right," and *gy'ro, gyra'tum*, to "turn about."] (Fr. *Dextrogyre*, dĕx'tro'zhĕR'.) A term applied to a substance which, in polarization, turns rays to the right.

Dex'trorse. Turned to the right hand.

Dex'trose. Another name for GLUCOSE, which see.

Dhak'-Tree. A native name of the *Butea frondosa*.

Di. The same as DIS, which see.

Dī'a (*διά*). A Greek particle signifying "through," "by means of," and sometimes "apart," "between." Words compounded with *διά* often imply separation.

Dī-a-be'tēs.* [From the Gr. *διά*, "through," and *βαίνω*, to "go."] An immoderate and morbid flow of urine. It is termed *insip'idus* ("tasteless") where the urine retains its usual taste, and *melli'tus* ("honeyed") where the saccharine state is the characteristic symptom. A genus of the order *Spasmi*, class *Neuroses*, of Cullen's nosology.

Dī-a-bet'ic. [Lat. **Diabet'icus.**] Belonging to diabetes.

Diabetic Sugar. See GLUCOSE.

Dī-a-caus'tic. [Lat. **Diacaus'ticus**; from *διακαίω*, to "burn."] A term applied to a double convex lens used to cauterize parts of the body.

Dī-aç'e-tate of Cop'per. *Ærugo*, or verdigris.

Dī-aeh'ў-lon. [From the Gr. *διά*, "by means of," and *χυλός*, "juice."] A name formerly given to plasters prepared from expressed *juices*:—now applied to the *Emplastrum Plumbi*, or *Emplastrum Lithargyri*.

Dī-a-co'dĭ-um.* [From the Gr. *κωδία*, a "poppy-head."] The old name of the *Syrupus Papaveris*, or syrup of poppies.

Di-ac'rĭ-sis.* [From the Gr. *διακρίνω*, to "distinguish."] The distinguishing of diseases by a consideration of their symptoms. See DIAGNOSIS.

Di-a-del'phĭ-a.* [From the Gr. *δίς*, "twice," and *ἀδέλφος*, a "brother."] The seventeenth class of plants in Linnæus's system, in which the filaments of the stamens are united in two parcels or brotherhoods. Such stamens are called *diadelphous*.

Diæresis,* dī-ĕr'e-sis. [Gr. *διαίρεσις*; from *διαιρέω*, to "take apart," to "divide."] A division of parts resulting from a wound, ulcer, or burn, or the like; a solution of continuity.

Diæretic, dī-ę-ret'ik. [Lat. **Diæret'icus**; from the same.] Having power to divide, dissolve, or corrode; escharotic; corrosive.

Diæta.* See DIET.

Dī-ag-no'sis.* [From the Gr. *διαγινώσκω*, to "discern."] The art or science of signs or symptoms, by which one disease is distinguished from another. Also the result obtained. *Diagnosis*, in Botany, is a short distinguishing character or descriptive phrase.

Diagno'sis, Dif-fer-en'tial. The determining of the distinguishing features of a malady when nearly the same symptoms belong to two different classes of disease, as rheumatism and gout, etc.

Dī-ag-nos'tĭ-cate, or **Dī'ag-noše.** To discriminate or recognize a disease.

Dī'a-grăm. [From the Gr. *διά*, "through, and *γράμμα*, a "letter" or "figure."] A figure drawn for the illustration or demonstration of a geometrical proposition. Also an outline or sketch drawn to explain or illustrate anything.

Dī-ag'o-nal. [Lat. **Diagona'lis**; from the Gr. *διά*, "through," and *γωνία*, an "angle."] A term applied to a right line drawn between any two opposite angles of a four-sided figure.

Diagrydium.* See SCAMMONY.

Di-a-grȳd'ĭ-um,* or **Diagryd'ium Çy-donĭ-a'tum.*** A medicine composed of one part of quince juice and two parts of scammony:—formerly used as a purgative.

Di-a'lĭ-um.* A genus of trees of the order *Leguminosæ*, comprising several species, natives of tropical India, Africa, and Brazil. They bear edible fruits. Among them are the *Dia'lium acutifo'lium*, the Velvet Tamarind of Sierra Leone; the *Dia'lium floribun'dum* of Brazil; and the *Dia'lium in'dum* (Tamarind Plum) of India, the fruit of which has a delicious pulp.

Di-al-ȳ-pet'a-lous. The same as POLYPETALOUS, which see.

Di-al-ȳ-phȳl'lous. [From the Gr. *διαλύω*, to "dissolve," and *φύλλον*, a "leaf."] The same as POLYSEPALOUS, which see.

Di-al'ȳ-sēs,* the plural of DIALYSIS. Solutions of continuity. An order of the class *Locales* of Cullen's nosology.

Di-al'ȳ-sis.* [From the Gr. *διαλύω*, to "dissolve."] Weakness of the limbs, as if from a dissolving of their firmer parts. The term is also applied to *analysis by liquid diffusion*, advantage being taken of the different degrees of diffusibility of different substances in solution to produce separation.

Dī-a-mag'net-ĭsm. [Lat. **Diamagnetis'mus**; from the Gr. *διά*, "through," or "across," and *μάγνης*, a "magnet."] A term employed by Faraday to denote a force or influence discovered by him in magnetic bodies, which tends to cause non-magnetic substances, such as bismuth, phosphorus, wood, etc., to arrange themselves *across* the *axial* line of a magnet, while small magnetic substances, as iron, nickel, etc., place their lengths *in* or parallel to the axial line.

Di-am'e-ter. [Lat. **Diam'etrus**, or **Diam'etros**; from the Gr. *διά*, "through," and *μέτρον*, a "measure."] A right line drawn through the centre of a circle and terminated on both sides by the circumference. The central and shortest dimension of a sphere or cylinder.

Dī'a-mond. [Fr. *Diamant*, dē'ȧ'môN', a corruption of ADAMANT, which see.] A precious stone; the crystallized and pure state of carbon; the hardest and most brilliant of all substances. Specific gravity, 3.5. It is not soluble in any acid or liquid, but it is combustible. It scratches every body, and is not scratched by any. Its primary form is a regular octahedron. It has a perfect cleavage and an adamantine lustre. Many diamonds are colorless; others are red, blue, green, orange, black, etc.

Di-a-mo-to'sis.* [From the Gr. *διά*, "through," or "between," and *μοτός*, "lint."] Dressing a wound or an ulcer by the insertion of lint.

Di-an'drĭ-a.* [From the Gr. *δίς*, "twice" or "two," and *ἀνήρ*, *ἀνδρός*, a "man" or "male."] The name of a Linnæan class having flowers with two stamens. Such flowers are called *dian'drous*.

Di-an'drous. [From the same.] Having two stamens.

Di-an'thus.* [Etymology doubtful.] The Pink. A Linnæan genus of the class *Decandria*, natural order *Caryophyllaceæ*. It comprises many species, natives of Europe and Asia. They are commonly cultivated for ornament.

Dian'thus Căr-ȳ-o-phȳl'lus.* The Clove-Pink, or Clove-Gilliflower. The flowers of this plant are used for flavoring syrup employed as a vehicle for other medicines.

Dī-a-pā'son. [From the Gr. *διά*, "through," and *πασῶν*, genitive plural of *πᾶς*, "all,"—*i.e.*, "all tones."] In Music, a chord which includes all tones. Also applied by some French writers to a tuning-fork, a steel instrument with two branches which vibrate when one of them is struck against a hard body. Vidal de Cassis has employed this instrument in the diagnosis of diseases of the ear.

Di-a-pe-de'sis.* [From the Gr. *διά*, "through," and *πηδάω*, to "leap," to "go."] The oozing of blood through the skin:—also applied to the passage of corpuscles through the walls of the blood-vessels. See HÆMIDROSIS.

Diapensiaceæ,* di-a-pen-she-a'she-ē. [From *Diapen'sia*, one of the genera.] A small natural order of exogenous under-shrubs, found in Europe and North America. It includes, besides *Diapensia*, *Galax* and *Pyxidanthera*.

Dī-a-pha-ne'ĭ-tȳ. [See next article.] The property which many bodies have of transmitting light, or permitting more or less light to pass through them. *Transparency* is the highest degree of diaphaneity. Other degrees are denoted by the terms *semi-transparent*, *translucent*, and *sub-translucent*.

Dī-aph'a-nous. [Gr. *διαφανής*; from *διά*, "through," and *φαίνω*, to "shine."] Transparent or translucent; shining through, or permitting light to shine through.

Dī-a-pho-rē'sis.* [From the Gr. *διαφορέω*, to "carry through," to "carry off."] Literally, a "carrying off through [the pores]," or by perspiration. A state of perspiration.

Dī-a-pho-ret'ic. [Lat. **Diaphoret'icus.**] A term applied to medicines having power to produce diaphoresis, or remedies which increase the secretion of sweat, as a vapor-bath, warm drinks, etc. When they are so powerful as to occasion sweating, they have been called *Sudorifics*.

Diaphragm, dī'a-frăm. [Lat. **Diaphrag'ma, atis**; from the Gr. *διαφράσσω*, to "divide in the middle by a partition."] A thin muscular and tendinous septum or partition found in all mammals, separating the thorax and abdomen; the midriff.

Dī-a-phrag-măl'ğȳ. [Lat. **Diaphragmal'gia**; from *diaphrag'ma*, the "diaphragm," and the Gr. *ἄλγος*, "pain."] Pain in the diaphragm.

Dī-a-phrag-mat'ic. [Lat. **Diaphragmat'icus.**] Belonging to the diaphragm. In Botany, having a transverse membrane.

Diaphragmat'ic Gout. A term applied to *angina pectoris*.

Di-ą-phrag-mą-ti'tis, i*dis*.* [From the Lat. *diaphrag'ma*, the "diaphragm."] Inflammation of the diaphragm:—a term sometimes applied to that variety of partial pleurisy in which the effused fluid exists between the base of the lung and the diaphragm.

Di-ą-phrag-mat'o-çēle.* [From the Lat. *diaphrag'ma*, the "diaphragm," and the Gr. *κήλη*, a "tumor."] Hernia, or tumor, from some portion of the viscera escaping through the diaphragm.

Di-ą-phrag'mo-dўn'ĭ-ą.* [From the Lat. *diaphrag'ma*, the "diaphragm," and the Gr. *ὀδύνη*, "pain."] Pain in the diaphragm.

Di-aph'ў-sis,* plural **Di-aph'ў-sēs.** [From the Gr. *διαφύω*, to "be produced between."] The cylindrical or prismatic shaft of the long bones between the epiphyses. Also a fissure.

Di-ą-poph'ў-sis.* [From the Gr. *διά*, "between," and *ἀποφύω*, to "arise from."] A term applied by Owen to the homologue of the upper transverse process of a vertebra.

Di-a'rĭ-us.* [From the Lat. *di'es*, a "day."] Lasting one day; ephemeral:—applied to fevers.

Di-ar-rhœ'a.* [From the Gr. *διά*, "through," and *ῥέω*, to "flow."] A purging, looseness, or too frequent passing of the fæces. A frequent and profuse discharge of loose or fluid alvine evacuations, without tenesmus. It is divisible into two forms, the *acute*, or occasional, and the *chronic* diarrhœa. A genus of the order *Spasmi*, class *Neuroses*, of Cullen's nosology.

Diarrhœ'a Car-no'są.* Dysentery in which flesh-like portions are voided.

Diarrhœ'a Chy-lo'są.* A name sometimes applied to the ILIAC PASSION, which see.

Di-ar-thro'dĭ-al. [Lat. **Diarthrodia'lis.**] Belonging to *diarthrosis*.

Di-ar-thro'sis,* plural **Di-ar-thro'sēs.** [From the Gr. *διά*, "through," as implying no impediment, and *ἄρθρον*, a "joint."] An articulation permitting the bones to move freely on each other in every direction, like the shoulder- and hip-joints.

Diary Fever. [Lat. **Fe'bris Dia'ria.**] See EPHEMERA.

Di-as-cor'dĭ-um.* [From the Gr. *διά*, "by means of," and *σκόρδιον*, the "water germander."] An electuary so named because this plant forms one of the ingredients.

Di-ą-stăl'tic. [Lat. **Diastal'ticus**; from the Gr. *διά*, "apart," and *στέλλω*, to "contract" or "dispose."] A term applied by M. Hall to the reflex action of the excito-motory system of nerves, because performed through the spinal marrow.

Diastal'tic Arc. A term applied by M. Hall to the course of the *vis nervosa* in complete or uninterrupted reflex or diastaltic action:—also called *Reflex Arc*.

Diastal'tic Ner'vous Sўs'tem. A term substituted by M. Hall for his former one of the *Spinal System*.

Dĭ'ą-stāse. [From the Gr. *διίστημι*, to "set apart," to "cause division or separation."] Literally, that which produces separation or decomposition. A substance produced during the germinating of seeds, having the property of converting starch into dextrin and glucose. It may be extracted from malt. It is a white, insipid, amorphous solid, soluble in water. It performs an important part in the fermentation of barley, and in the germination of seeds. Its characteristic property is to cause a special modification of starch without suffering any appreciable change itself. One part of diastase suffices to transform one hundred parts of starch into dextrin.

Di-as'tą-sis.* [From the same.] A forcible separation of bones without fracture.

Di-ą-ste'mą, a*tis*.* [From the same.] A space or cleft:—used in many terms like the following.

Di-as-tem-ą-te-lўt'rĭ-ą.* [From the Lat. *diaste'ma*, and the Gr. *ἔλυτρον*, the "vagina."] A malformation consisting in a longitudinal fissure of the vagina.

Di-as'to-le.* [From the Gr. *διαστέλλω*, to "dilate."] The dilatation of the heart, by which, with its alternate contraction (*Systole*), the circulation of the blood is carried on.

Di-ą-ther'mą-nous. [From the Gr. *διαθερμαίνω*, to "warm through."] A term denoting free permeability to heat.

Di-ą-ther-man'sis.* [From the same.] The transit of the rays of heat.

Di-ath'e-sis.* [From the Gr. *διατίθημι*, to "arrange," to "dispose."] A particular habit or disposition of the body: thus, we say, "an inflammatory diathesis,"—*i.e.*, a habit of body peculiarly susceptible to inflammatory diseases.

Di-ą-thet'ic. [Lat. **Diathet'icus.**] Belonging to diathesis.

Diatomaceæ,* di-ą-to-ma'she-ē. [From *Diat'oma*, one of the genera.] A natural order of microscopic *Algæ* or Protophytes,—*i.e.*, cryptogamous plants,—which occur in all parts of the world and abound in the deep sea. Each diatom consists of a single cell, the walls of which are silicious shields or *frustules*. These present beautiful forms and markings, which can be seen only with a powerful microscope. Tripoli and bergmehl consist chiefly of fossil diatoms, which form extensive deposits in many places. A stratum of their frustules, about thirty feet thick, and several miles in extent, underlies Richmond, Virginia. See TRIPOLI.

Dī-ą-tom'ic. [From the Lat. *dī*, "two," and *at'omus*, an "atom."] In Chemistry, containing or composed of two atoms, as a molecule. Most of the elementary molecules are diatomic. The term is also applied to an element of which two atoms are required to saturate one of hydrogen.

Di-at'o-mous. [Lat. **Diat'omus**; from the Gr. *διά*, "through," and *τέμνω*, to "cut."] Cleavable throughout:—applied to *cleavage*.

Di-cen'trą Can-ą-den'sis.* Squirrel Corn, an herbaceous plant of the order *Fumariaceæ*, a native of the United States.

Di-cęph'ą-lus.* [From the Gr. *δι* for *δίς*, "two," and *κεφαλή*, "head."] A fœtal monster having two heads.

Di-ehlam-ȳd'e-us.* [From the Gr. *δίς*, "twice" or "two," and *χλαμύς*, a "short cloak."] A term applied to plants the flowers of which have both calyx and corolla.

Di-eho-ga'mĭ-a.* [From the Gr. *δίχα*, "double," and *γάμος*, "marriage."] A mode of fecundation of unisexual plants of which the male and female flowers are not developed simultaneously. In some cases the fecundation requires the aid of insects.

Di-ehog'a-mous. [From the same.] A term applied to a plant when the florets of the inflorescence are of two separate sexes.

Di-ehot'o-mous. [Lat. **Dichot'omus**; from the Gr. *δίχα*, "double," and *τέμνω*, to "cut."] Forked; regularly divided and subdivided into two equal branches:—applied to stems or veins which bifurcate, or are repeatedly divided into pairs.

Di-ehot'o-mȳ. [Lat. **Dichoto'mia**; from the same.] A classification which proceeds regularly by two branches. In Logic, the distribution of ideas by pairs. In Botany, a mode of division of certain stems which are dichotomously forked.

Dieh'ro-a Feb-rif'u-ga.* A plant of the order *Lythraceæ*, a native of Anam or Cochin China. It is used as a febrifuge.

Dī'ehro-izm. [Lat. **Dichrois'mus**; from the Gr. *δίς*, "twice" or "two," and *χρόα*, "color."] The property by which some minerals, when examined by transmitted light, exhibit different colors, according to the direction in which the rays of light pass through them.

Di-clī'nous. [From the Gr. *δίς*, "twice," and *κλίνη*, a "bed."] Having the stamens and pistils in distinct flowers:—applied to both monœcious and dicœcious plants or flowers.

Dī-coc'cous. [Lat. **Dicoc'cus**; from the Gr. *δίς*, "twice" or "two," and *κόκκος*, a "berry."] A term applied to a fruit that splits into two *cocci* or closed carpels.

Di-cot-ȳ-le'don,* plural **Di-cot-ȳ-led'o-nēs.** [From the Gr. *δίς*, "twice" or "two," and *κοτυληδών*, a "cotyledon."] One of a class of plants having two cotyledons, or seed-lobes:—applied to a Jussieuan division of plants.

Dī-cot-ȳ-led'o-nous. [Lat. **Dicotyle'donus, Dicotyledo'neus**; from the same.] Belonging to the division of plants termed *Dicotyledones*; also called *Exogenous*. See EXOGENOUS PLANTS.

Di-cræ'us.* [From the Gr. *δίς*, "twice" or "two," and *κεραία*, a "horn."] Having two horns; also bifid; cloven.

Dī-crot'ic. [Lat. **Dicrot'icus**; from the Gr. *δίς*, "twice," and *κροτέω*, to "strike."] A term applied to the pulse when there is a rebounding like a double pulsation.

Dicrotous. See DICROTIC.

Dic-tam'nus.* [From *Dic'te*, a mountain of Crete.] Dittany. A genus of the class *Decandria*, natural order *Rutaceæ*. It comprises the *Dictamnus fraxinella*, an attractive plant cultivated in gardens for its handsome flowers and fragrant leaves. It secretes an oil so volatile that the surrounding air becomes inflammable in hot weather.

Dic'tȳ-o-ġens. [Lat. **Dictyoġ'enæ**; from the Gr. *δίκτυον*, a "net," and *γένω*, to "be born."] A term applied by Lindley to a sub-class of endogens characterized by having net-veined leaves. This sub-class comprises the natural orders *Dioscoreaceæ*, *Smilaceæ*, *Philesiaceæ*, *Roxburghiaceæ*, and *Trilliaceæ*.

Di-del'phys.* [From the Gr. *δι*, "two," and *δελφύς*, "uterus."] The same as DIHYSTERIA, which see. *Didelphys* is also the generic name of the opossum. From the same word come *Didel'phidæ* and *Didel'phia*, terms used to denote the family or order of marsupial animals.

Did-ȳ-măl'ġĭ-a.* [From the Gr. *δίδυμος*, "testicle," and *ἄλγος*, "pain."] Pain in the testicles.

Did'ȳ-mi,* the plural of DIDYMUS:—applied to the testicles.

Di-dȳm'ĭ-um.* [From the Gr. *δίδυμος*, "twin."] The name of a rare metal discovered united with oxide of cerium, and so called from its being as it were the twin brother of lantanium, or lanthanum, which was previously found in the same substance. Specific gravity, 6.5.

Did'ȳ-mus.* [From the Gr. *δίδυμος*, "double," "twin."] By two and two; did'ymous. In Botany, twin. As a noun, the term in Physiology denotes the testis.

Did-ȳ-na'mĭ-a.* [From the Gr. *δίς*, "twice" or "twofold," probably meaning "of two kinds," and *δύναμις*, "power."] The fourteenth class of Linnæus's system of plants, characterized by the presence of four stamens, of which two are long and two short. Such plants and stamens are *didyn'amous*.

Di-dȳn'a-mous. [From the same.] Having two long and two short stamens.

Dieb. alt. = *Die'bus alter'nis.** "On alternate days."

Dieb. tert. = *Die'bus ter'tiis.** "Every third day."

Di-er-vil'la.* [Named in honor of M. *Dierville*.] A genus of shrubs of the order *Caprifoliaceæ*.

Diervil'la Trif'ĭ-da.* The Bush Honeysuckle, a low shrub, a native of the Northern United States. It is said to be diuretic, astringent, and antisyphilitic.

Di'ēs.* A Latin word signifying "day." It is often used in giving directions for taking medicines. The cases most used are the accusative singular, *Di'em*, ablative singular, *Di'e*, nominative plural, *Di'es*, ablative plural, *Die'bus*. See Appendix.

Di'et. [Lat. **Diæ'ta**; from the Gr. *διαιτάω*, to "feed in a certain manner," to "regulate."] The food proper for invalids. Also the regulation of food to the requirements of health and the cure of disease. Diet should consist of proper proportions of—1, *nitrogenous* principles; 2, *non-nitrogenous* principles, as fat, starch, sugar, and other carbo-hydrates; 3, *inorganic* matter, as water and salt. Milk and eggs contain all these principles, and are, so far, perfect foods. A mixed diet of animal and vegetable food appears to produce the greatest vigor of body and mind. Animal food is most easily assimilated, appeases

hunger more thoroughly, and satisfies longer. *La Diète*, lȧ dē'ȧt', as used by French physicians, signifies extreme abstinence.

Di'et Drink. A popular name for the *Decoctum Sarsaparillæ Compositum* ("Compound Decoction of Sarsaparilla") of the Pharmacopœias.

Di'e-ta-rў. [Lat. **Vic'tûs Ra'tio**, or "plan of living."] A system or course of diet; a regulated allowance of food given to each person daily in the army, the navy, in hospitals, prisons, etc. An average man of active habits requires, daily, about three pounds of solid food, of which nearly one-fourth should be animal. The daily ration of a British soldier has been one and three-quarter pounds of bread and one pound of meat.

Di-e-tet'ic. [Lat. **Diætet'icus**; see DIET.] Belonging to the taking of proper food, or to diet.

Di-e-tet'ics. [Lat. **Diætet'ica**; from the same.] The consideration (or science) of regulating the food or diet.

Differential Diagnosis. See DIAGNOSIS, DIFFERENTIAL.

Differential Thermometer. See THERMOMETER, DIFFERENTIAL.

Difficulty of Breathing. See DYSPNŒA.

Dif-for'mis.* [From the Lat. *di* for *dis*, implying "difference," and *for'ma*, "shape."] Of different shapes; irregularly formed.

Dif-frac'tion. [Lat. **Diffrac'tio, o'nis**; from *dis*, "apart" or "aside," and *fran'go*, *frac'tum*, to "break."] The deflection which the rays of light undergo when they pass very near an opaque body. See REFRACTION.

Diffuse. See DIFFUSUS.

Dif-fu'si-ble. [Lat. **Diffusib'ilis**; from *diffun'do*, *diffu'sum*, to "pour about," to "spread."] Capable of being spread in all directions. Diffusible stimulants are those which have a transient effect, and one that is not followed by a prolonged or well-marked period of depression, such as ether and ammonia. Diffusible substances are odorous, inflammable, and volatile.

Dif-fu'sion. [From the same.] Dispersion; the act of spreading. A property which certain bodies possess of dispersing or mixing themselves with the medium which surrounds them. Gases and liquids are very diffusible.

Diffu'sion Tube. An instrument for determining the rate of diffusion for different gases. It is simply a graduated tube closed at one end by plaster of Paris, a substance, when moderately dry, possessed of the requisite porosity.

Diffu'sion Vol'ume. A term used to express the different dispositions or tendencies of gases to interchange particles: the diffusion volume of air being 1, that of hydrogen is 3.33.

Dif-fu'sus.* [From the Lat. *diffun'do*, *diffu'sum*, to "spread."] Widely spread; diffused. In Botany, *diffuse* signifies spreading widely and irregularly:—applied to stems or branches.

Dig. = *Digera'tur.** "Let it be digested."

Dī-gas'tric. [Lat. **Digas'tricus**; from the Gr. δίς, "twice" or "two," and γαστήρ, a "belly."] Having two bellies. The name of a muscle attached to the *os hyoïdes*: it is sometimes called *biven'ter maxil'læ inferio'ris*.

Digas'tric Groove. [See DIGASTRIC.] A longitudinal depression of the mastoid process, so called from its giving attachment to the muscle of that name.

Di-ġen'e-sis.* [From the Gr. δίς, "twice," and γένεσις, "generation."] The reproduction proper to certain animals and plants which have two modes of birth,—one by eggs and sperm, the other, without sexes, by germs or buds. The latter is subsequent to the first. In many species of parasites an embryo issues from an egg, and, before it has acquired sexual organs, generates one or many embryos, and dies without attaining the adult or sexual age.

Diġ'er-ens.* [From the Lat. *diġ'ero*, *diges'tum*, to "digest."] Digesting; digestive:—applied in the neuter plural (*Digerentia*, dij-ẹr-en'she-ạ) to medicines which, when applied to a sore, promote the secretion of healthy pus, such as basilicon ointment.

Dĭ-ġest'er. [From the same.] A strong iron or copper kettle, with a safety-valve, for subjecting bodies to vapor at a high temperature and under great pressure.

Dĭ-ġest'ĭ-ble. [From the same.] Easily digested.

Dĭ-ġes'tion. [Lat. **Diges'tio, o'nis**; from the same.] The slow action of matters on each other by subjection to heat. The conversion of food into chyle in the stomach, or the conversion of insoluble amyloids, fats, and proteids into soluble and diffusible substances. The principal agent in digestion is the gastric juice which the stomach secretes. The function of digestion is of a physico-chemical nature, being compounded of certain muscular acts and of certain chemical processes.

Dĭ-ġes'tĭve. [Lat. **Digesti'vus**; from the same.] Belonging to digestion:—also applied to substances which promote suppuration, as cerates, poultices, etc.

Diges'tive Salt of Sўl'vĭ-us. A salt discovered by Sylvius, since named muriate of potash, and now chloride of potassium.

Diġ'it. [From the Lat. *diġ'itus*, a "finger."] The twelfth part of the sun's or moon's diameter, employed to denote the extent of an eclipse. See DIGITUS.

Digital. See DIGITALIS.

Diġ'ĭ-tạ-lin, or **Diġ'ĭ-tạ-lĭne** (or dĭj-ĭ-tal'in). [Lat. **Digitali'na**; from *Digita'lis*, the "foxglove."] A substance supposed to be the active principle of the *Digitalis purpurea*. It is an active poison. Three varieties of digitalin are named:—1, the *amorphous* and *insoluble*, called *French digitalin*, which has therapeutic properties nearly identical with those of the plant itself; 2, *crystallized digitalin*, soluble in alcohol and chloroform, but insoluble in water; 3, the *amorphous* and *soluble* variety, called *German digitalin*. The amorphous digitalin is said to be one hundred times more powerful than digitalis.

Diġ-ĭ-tạ-li'num.* "Digitalin." The Pharmacopœial name (U.S. 1870) for a preparation containing, of digitalis, in moderately fine powder, forty-eight troyounces; of stronger alcohol, six pints; of acetic acid, half a fluidounce; of

purified animal charcoal, one hundred and eighty grains; of tannic acid, two hundred grains, or a sufficient quantity; of oxide of lead, in fine powder, one hundred and twenty grains; of stronger ether, a fluidounce; of water of ammonia, diluted alcohol, and distilled water, each a sufficient quantity.

Dig-ĭ-ta'lis.* [From the Lat. *dig'itus*, a "finger."] Belonging to a finger; dig'ital.

Digita'lis.* [From the Lat. *digita'le*, the "finger of a glove."] "Foxglove." A Linnæan genus of the class *Didynamia*, natural order *Scrophulariaceæ*. Also the Pharmacopœial name (U.S. 1870, 1880) of the leaves of the *Digitalis purpurea*, collected from plants of the second year's growth.

Digitalis is narcotic, sedative, and diuretic. It has a remarkable sedative effect on the heart, reducing the force, and especially the frequency, of the pulse: hence it is frequently given to moderate the action of the heart and arteries in phthisis, and especially in cases of hemorrhage. As a diuretic, it is sometimes found very useful in dropsy. In large doses it is poisonous, producing vertigo, nausea and vomiting, syncope, convulsions, and death. For dose, see Appendix.

Digita'lis Pur-pu're-a.* The systematic name of the plant called foxglove, a native of Europe. It bears handsome flowers, and is cultivated in the United States for ornament and for medical use.

Dig'ĭ-ta-lose. A white crystalline substance contained in digitalis. It is inodorous, insipid, insoluble in water, but soluble in alcohol and ether.

Dig'ĭ-tate. [Lat. **Digita'tus**; from *dig'itus*, a "finger."] Having fingers:—applied to the leaves of plants so divided as to have the appearance of fingers. When the leaflets of a compound leaf are connected with the apex of the petiole, the leaf is *digitate;* also called *palmate*, as the horse-chestnut. The term is not used when the number of leaflets is less than four.

Dig'ĭ-ti,* gen. **Dig-ĭ-to'rum.** The plural of DIGITUS, which see.

Dig'iti Pe'dis,* gen. **Digito'rum Pe'dis.** The plural of DIGITUS PEDIS, which see.

Dig'ĭ-tĭ-form. [Lat. **Digitifor'mis**; from *dig'itus*, a "finger," and *for'ma*, "likeness."] Formed like a finger:—applied to various objects.

Dig'ĭ-tĭ-grāde. [Lat. **Digitig'radus**; from *dig'itus*, a "finger" or "toe," and *gra'dus*, a "step."] A term applied to carnivorous mammals which when standing or walking have the heel elevated, as the lion, tiger, and cat.

Dig'ĭ-tĭ-nerved [Lat. **Digitiner'vus**; from *dig'itus*, a "finger," and *ner'vus*, a "nerve"], or **Dig'ĭ-tate-lў Veined.** The same as PALMATELY VEINED and RADIATE-VEINED.

Dig-ĭ-tox'in. A poisonous principle which is regarded by some as the most important and active principle of digitalis. It occurs in the form of yellowish crystals soluble in alcohol. In alcoholic solution it is decomposed by dilute acids, and then affords *toxiresin*, an uncrystallizable substance.

Dig'ĭ-tus,* plural **Dig'ĭ-ti.** (Fr. *Doigt*, dwȧ.) A finger (or a toe). The fingers of the hand are the *in'dex*, or fore-finger; the *me'dius*, or middle finger; the *annula'ris*, or ring-finger; and the *auricula'ris*, or little finger. The bones of the fingers are called *phalanges*. (See PHALANX, and FINGER.) In Botany, *digitus* denotes a linear measure equal to the index finger.

Dig'itus Ma'nûs.* "Finger of the Hand." A finger.

Dig'itus Pe'dis.* "Finger of the Foot." A toe.

Dī-ğўn'ĭ-a.* [See next article.] A Linnæan order of plants having two styles.

Dī-ğўn'ĭ-ous, or **Dig'ў-nous.** [Lat. **Digyn'ius**; from the Gr. *δίς*, "two," and *γυνή*, a "woman" or "female." Having two styles:—applied to a Linnæan order. See DIGYNIA.

Dī-hўs-te'rĭ-a.* [From the Gr. *δι* for *δίς*, "two," and *ὑστέρα*, the "uterus."] A malformation with a double uterus.

Dil. = *Dil'ue,** "dilute," or *Dilu'tus,** "diluted."

Dĭ-lā'tą-bil'ĭ-tў. The property which bodies have generally to augment their volume under the influence of heat.

Dil-a-tā'tion. [Lat. **Dilata'tio**, *o'nis;* from the Lat. *dila'to*, *dilata'tum*, to "enlarge."] An enlargement or expansion, as of the heart, etc. The increase of volume which heat causes in bodies without changing their constitution. Caloric, or heat, dilates bodies generally. In Surgery, the term is applied to an enlargement of any of the cavities, tubes, or orifices of the body.

Dilatation of any of the cavities, tubes, or orifices of the body may arise from two conditions or causes: either from increased pressure acting from within, or from a diminished power of resistance in the walls of those cavities, tubes, etc. The increased pressure may result from an accumulation of fluid in consequence of obstruction: thus, it sometimes happens that when an artery is stopped up by a clot of blood (embolus), the accumulation of blood above the obstruction presses with such force against the inside of the artery that an aneurism is gradually developed; and instances have occurred in which a ligature put upon a perfectly healthy artery has been followed by a similar result.

A diminished power of resistance in the walls of a vessel may arise from the deterioration or disintegration of the tissues composing those walls. This deterioration takes various forms, as, for example,—1. That of *fatty* or *atheromatous degeneration*, in which case the inner coats of the artery become irregularly thickened, and present in patches a *mealy* appearance (whence the term *atheroma*), with disintegration, so that the walls may give way under a very slight pressure. 2. That of *calcification*, in which there is a deposit of calcareous matter, mostly in the muscular fibre-cells of the middle coat. This not only impairs the elasticity and strength of the walls of the artery, but often causes them to crack in places, and thus leads to what is termed *dissecting aneurism*, in which the blood forces itself between the different coats, splitting them apart. 3. A softening of the arterial tunics sometimes results from acute

endarteritis, which may leave the tissues of the vessel in a diseased condition, with a tendency to disintegration.

A not uncommon cause of aneurism is a wound breaking one or more coats of the vessel, which is then unequal to resisting the internal pressure. Aneurisms resulting from a wound are said to be *traumatic* (from the Lat. *trau'ma*, a "wound"). (See TRAUMATIC.) Sometimes an artery and a vein are involved in one aneurismal swelling, which is then termed an *arterio-venous* aneurism.

What has been termed *compensating* (or *collateral*) *dilatation* sometimes takes place when a tube is required to transmit an increased quantity of fluid, in consequence of the stoppage of other passages. Thus, when one ureter is obstructed, the other, having to perform double duty, may become greatly enlarged.

DILATA'TION OF THE HEART (or widening or enlargement of the cavities of the organ) is to be carefully distinguished from *hypertrophy*, which, though occasionally attended with dilatation, is usually enlargement, with a thickening of the walls, sometimes attended with a diminution of the cavities. In simple hypertrophy, when this is excessive, the heart often beats with greatly increased force, or even with violence. In simple dilatation the walls are frequently much thinner than natural, and there is always a diminution of force in its beatings.

DILATA'TION OF THE VEINS. See VARIX.

Di-la-ta'tor, o'ris.* [From the same.] The same as DILATOR, which see.

Di-lāt'ed. [Lat. **Dilata'tus**; from the same.] Enlarged; expanded; made wider:—applied to parts of plants.

Di-la'tor.* [From the Lat. *di*, "apart," and *fe'ro, la'tum*, to "carry."] Literally, that "which carries or draws apart." A term applied to muscles whose office is to dilate certain parts, such as the inspiratory muscles, which dilate or expand the chest; also to instruments used for dilating wounds, canals, etc.

Dill. The English name of the *Ane'thum grav'eolens*.

Dil-le'nĭ-a.* [Named after *Dillen*, or *Dillenius*, a German botanist.] A genus of trees, natives of India and the Malay Peninsula.

Dille'nia Spe-cĭ-o'sa.* An ornamental tree, a native of India, is cultivated there for its beautiful flowers and edible fruit.

Dilleniaceæ,* dil-le-ne-a'she-ē. [From *Dille'nia*, one of the genera.] A natural order of exogenous plants, mostly trees, found in hot climates, in India, Australia, and South America. Some species of this order are remarkable for the beauty of their flowers, and others afford excellent timber. Their properties are generally astringent.

Diluc. = *Dilu'culo.** "At daybreak."

Dil'u-ent. [Lat. **Dil'uens, en'tis**; from *dil'uo, dilu'tum*, to "dilute."] (Fr. *Délayant*, dā'lā'yŏN'.) A term applied to substances that increase the fluidity of the blood. Water, and liquids containing it, are the only real diluents.

Dĭ-lūt'ed, or **Dĭ-lute'.** [Lat. **Dilu'tus**; from the same.] Mixed; weak; reduced in strength; rendered weaker by the addition of water.

Dĭ-lu'vĭ-al. [Lat. **Diluvia'lis**; from *dilu'vium*, a "flood."] Belonging to a flood, or to the Deluge.

Dim. = *Dimid'ius.** "One-half."

Dim'er-ous. [From the Gr. *δίς*, "two," and *μέρος*, a "part."] Having two parts in each whorl:—a term used in Botany. See TRIMEROUS.

Dĭ-mid'ĭ-ate. [Lat. **Dimidia'tus**; from *dimid'ius*, the "half."] Halved, as if one-half had been cut off.

Dimness of Sight. See CALIGO.

Dī-mor'phism. [Lat. **Dimorphis'mus**; from the Gr. *δίς*, "twice" or "two," and *μορφή*, a "form."] The property of many solid bodies to assume two distinct crystalline forms, as sulphur, carbon, etc.

Dī-mor'phous. [From the same.] Having two forms. A mineral is called dimorphous when it forms crystals according to two distinct systems of crystallization. See DIMORPHISM.

Dim-ў-a'rĭ-a.* [From the Gr. *δίς*, "twice" or "two," and *μῦς, μυός*, a "muscle."] An order of bivalve mollusks having shells marked by two impressions or indentations for the attachment of muscles.

Din'ğў. Dusky; obscure; dirty; of a dull, soiled, or leaden-brown color.

Din'ĭ-cal. [Lat. **Din'icus**; from the Gr. *δῖνος*, "giddiness."] Belonging to giddiness:—applied to medicines that remove giddiness.

Di'nus.* [Gr. *δῖνος*; from *δινέω*, to "whirl round."] Vertigo; dizziness; giddiness.

Di-o-don-çeph'a-lous. [Lat. **Diodonceph'alus**; from the Gr. *δίς*, "twice," "double," *ὀδούς*, a "tooth," and *κεφαλή*, a "head."] A monster with double rows of teeth.

Dicœcia,* di-ē'shę-a. The name of a Linnæan class of plants having dicœcious flowers. See DICŒCIOUS.

Dicœcious, di-e'shŭs, or **Di-oi'cous.** [Lat. **Dicœ'cius**; from the Gr. *δίς*, "twice" or "two," and *οἰκία*, a "house" or "habitation."] Literally, "having two houses," because the male and female, instead of forming one family, occupy separate habitations:—a term applied by Linnæus to plants having male flowers on one and female flowers on another plant.

Dī-oğ'en-ēs' Cup. A name applied to the cup-like cavity of the hand formed or occasioned by bending the metacarpal bone of the little finger:—so called because Diogenes is said to have thrown away his drinking-cup and used only his hand, for the sake of greater simplicity.

Di-oi'co-Po-lўg'a-mous, or **Di-oi'cous-lў Polyg'amous.** A term applied to a dicœcious plant which bears some perfect or hermaphrodite flowers, or to a species which has the perfect and imperfect flowers on different plants.

Dioicous. See DICŒCIOUS.

Di-o-næ'a Mus-çip'u-la.* [From the Lat. *mus'ca*, a "fly," and *ca'pio*, to "take" or "catch."] Venus's Fly-Trap, a unique and carnivorous plant of the order *Droseraceæ*, found only in the eastern parts of North and South Carolina. It is the only species of the genus, and is remarkable for its habit of catching insects and digesting them.

Prof. Gray considers it "the most extraordinary of all the plants of this country," and Linnæus called it *miraculum naturæ* (a "miracle of nature").

Di-op'tra.* [From the Gr. *διόπτομαι*, to "see through."] An instrument for measuring the height and distance of objects.

Di-op'tric, Di-op'trĭ-cal. [Lat. **Diop'tricus**; from the same.] Belonging to Dioptrics.

Di-op'trics. [Lat. **Diop'trica**; from the same.] The branch of Optics which treats of refracted light, as contradistinguished from Catoptrics, which treats of reflected light.

Di-or-tho'sis.* [From the Gr. *διορθόω*, to "regulate."] The restoration of parts to their proper situation:—one of the ancient divisions of Surgery.

Di-os-co-re'a.* [Named in honor of *Dioscorides*, an ancient Greek botanist.] A genus of perennial herbs or undershrubs, with twining stems, mostly natives of the tropics. It comprises about one hundred and fifty species. Several of the species are cultivated in tropical regions for their edible tuberous roots, called yams.

Dioscore'a Ba-ta'tas.* Chinese or Japanese Yam. This has been cultivated in England as a substitute for the potato, and succeeds well there when properly managed, but the roots penetrate the soil to a great depth, and it is difficult to extract them.

Dioscore'a Vil-lo'sa.* Wild Yam Root, a twining herb, a native of the United States. Its root is said to be diaphoretic, and in large doses emetic.

Dioscoreaceæ,* de-os-ko-re-a'she-ē, or **Di-osco're-æ.*** A natural order of endogenous plants, found in the tropics. It includes the *Dioscorea* (Yam), the farinaceous tuber of which forms an important article of food, and the *Tamus*.

Di-os'ma.* [From the Gr. Διός, "of Jove," and *ὀσμή*, an "odor," the compound signifying "divine odor or fragrance."] A Linnæan genus of the class *Pentandria*, natural order *Rutaceæ*. The former Pharmacopœial name of *Buchu* leaves,—now said to be from the *Barosma crenulata* and *B. serratifolia*.

Dios'ma Cre-na'ta.* The plant the leaves of which were called buchu.

Di-os'me-æ.* The former name of a tribe of dicotyledonous plants. See RUTACEÆ.

Di-os'pў-ros.* [From the Gr. Διός, "of Jove," and the Lat. *pyrus*, a "pear-tree."] The Persimmon; the Pharmacopœial name (U.S. 1870) of the unripe fruit of the *Dios'pyros Virginia'na*. It is very astringent, and contains tannic acid.

Dios'pyros.* A genus of trees of the order *Ebenaceæ*, comprising over one hundred species, natives of Asia, Africa, and America, mostly tropical. Ebony-wood is obtained from several species of this genus. Among the other products of the genus are edible fruits.

Dios'pyros* Ka'ki. The Date Plum, or Persimmon, a tree, a native of China and Japan. It bears an excellent fruit.

Dios'pyros Quæ-si'ta.* A large tree, a native of Ceylon, which produces CALAMANDER WOOD, which see.

Dios'pyros Vir-ġin-ĭ-a'na.* The Persimmon, a small tree, a native of New Jersey, Virginia, etc. It bears an edible astringent fruit. Its bark is bitter, and is said to be febrifugal.

Dī-ox'ide. [From the Gr. *δίς*, "twice" or "two," and the Eng. *ox'ide*.] According to one theory, the electro-chemical, the elements of a compound may in relation to each other be considered oppositely electric; the equivalents of the *negative* element may then be distinguished by Latin numerals, those of the *positive* by Greek: thus, a *bin*oxide denotes a compound which contains two equivalents of the negative element oxygen, whereas a *di*oxide indicates that one equivalent of oxygen is combined with two of some *positive* body. And so of the *bi*chloride, *di*chloride, etc.

Dī-pet'a-lous. [Lat. **Dipet'alus**; from the Gr. *δίς*, "twice" or "two," and *πέταλον*, a "petal."] Having two petals, or consisting of two petals.

Diph-the'rĭ-a.* [From the Gr. *διφθέρα*, "skin," "leather," or "membrane."] A disease of the throat and glands, in which false membranes are formed. Great prostration of strength is an almost invariable attendant of this disease.

Diph-the-ri'tis, i*dis.* [From the same.] A supposed variety of pharyngitis, in which a false membrane is formed, and for which the word *Diphtheria* has of late been very generally substituted, it having been discovered that the disease is not inflammatory. See the affix ITIS.

Dī-phўl'lous. [Lat. **Diphyl'lus**; from the Gr. *δίς*, "twice" or "two," and *φύλλον*, a "leaf."] Having two leaves or leaflets.

Dip'lo-car'dĭ-ac. [From the Gr. *διπλόος*, "double," and *καρδία*, a "heart."] Having a double heart, pulmonic and systemic, like mammals and birds.

Dip'lo-e.* [From the Gr. *διπλόω*, to "double."] The cellular osseous tissue between the two tables of the skull.

Dip'lo-gang-lĭ-a'ta.* [From the Gr. *διπλόος*, "double," and *γάγγλιον*, a "nerve-knot."] A term applied by Dr. Grant to the third sub-kingdom of animals, consisting chiefly of articulated animals, the *Insects* of Linnæus, having their nervous columns arranged in the same relative position as the Diploneura, with the ganglia increased in size. See INSECTS.

Dĭ-plo'ma, a*tis.* [From the Gr. *διπλόω*, to "fold," to "double."] Literally, a "folding" or "doubling," "something doubled." A double vessel; a water-bath. The charter (originally a folded letter) by which the physician or surgeon is declared qualified to practise his profession. Also a certificate of graduation given to every one who has successfully passed through a university or collegiate course.

Dip-lo-my-e'lĭ-a.* [From the Gr. *διπλόος*, "double," and *μυελός*, "marrow."] Congenital division of the spinal marrow lengthwise.

Dip'lo-neū'ra.* A term applied by Dr. Grant to the second sub-kingdom of animals, or *Helminthoïda*, comprising the various forms of worms in which the nervous columns have their ganglionic enlargements very slightly developed.

Dip-lo'pĭ-a.* [From the Gr. *διπλόος*, "double," and *ὄπτομαι*, to "see."] An affection in which objects appear double; dip'lopy.

Dip-lop'ter-ous. [Lat. **Diplop'terus**; from the Gr. *διπλόος*, "double," and *πτέρον*, a "wing."] A term applied to insects having doubled or folded wings.

Dip-lo-tax'is Mu-ra'lis.* A cruciferous plant, said to be antiscorbutic.

Dip'pel's Oil. An animal oil procured by the destructive distillation of animal matter, especially of albuminous and gelatinous substances.

Dipsacaceæ,* dip-sa-ka'she-ē, or **Dipsaceæ,*** dip-sa'she-ē. A natural order of herbaceous plants, including the *Dip'sacus* (Teasel), used by fullers.

Dip'sa-cus.* [From the Gr. *δίψα*, "thirst."] A name formerly given to diabetes, from the thirst accompanying that affection.

Dip'sacus Ful-lo'num.* "Fullers' Teasel." A prickly herbaceous plant, a native of Europe. Its flower-heads, furnished with hooked scales, are used by fullers to raise the nap on cloth.

Dip-so-ma'nĭ-a.* [From the Gr. *δίψα*, "thirst," and *μανία*, "madness."] An irritability of the nervous system, characterized by a craving, generally periodic, for alcoholic and other stimulants. This morbid condition may be caused by a course or habit of intemperate drinking, but it sometimes occurs in persons who have not previously been intemperate. It may be symptomatic of epilepsy, or it may be traced to an hereditary defect of constitution.

Dip-so'sis.* [From the Gr. *δίψα*, "thirst."] Morbid thirst; excessive or impaired desire to drink.

Dip'ter-a.* An order of insects. See DIPTERUS.

Dipteraceæ,* dip-tĕr-a'she-ē. [From *Dipterocar'pus*, one of the genera.] A natural order of exogenous plants, consisting mostly of gigantic trees, found in India, and abounding in resinous juice. It includes the *Dryobalanops camphora*, which yields the hard camphor of Sumatra. A species of this order (the *Shorea robusta*) produces the *Saul*, or *Sal*, the best and most extensively used timber of India.

Dip'ter-ix O-do-ra'ta.* A tree of the order *Leguminosæ*, a native of Cayenne and Guiana. It produces the fragrant seed called *Tonga Bean*, which is used for scenting snuff.

Dipterocarpeæ.* See DIPTERACEÆ.

Dip-ter-o-car'pus.* [From the Lat. *dip'terus* (see below), and the Gr. *καρπός*, "fruit."] A genus of East Indian trees of the order *Dipteraceæ*, comprising several species of noble trees. The wood of *Dipterocar'pus turbina'tus* is hard and durable. It yields a fragrant oil or resin, which is used in medicine. The *Dipterocarpus alatus*, *Dipterocarpus incanus*, and *Dipterocarpus lævis* also furnish the balsam of *gurjun*, which is used as a substitute for copaiba.

Dipterocar'pus Læ'vis.* A tree, a native of Pegu and the Malay Islands, yields a thin liquid balsam, called *wood-oil* or *gurjun*, which is employed for painting ships and houses. It is exported to Europe, and is there used in medicine as a substitute for copaiba, to which it is nearly equal in virtue.

Dip'ter-us.* [From the Gr. *δίς*, "twice" or "two," and *πτέρον*, a "wing."] Having two wings; dipterous:—applied in the plural neuter (*Dip'tera*) to an order of two-winged insects, such as the common fly, mosquito, etc.

Dir'ca Pa-lus'tris.* Leatherwood, an American shrub of the order *Thymeleaceæ*. Its bark is emetic, and its fruit is said to be poisonous.

Di-rec'tor, o'ris.* [From the Lat. *dir'igo*, *direc'tum*, to "guide."] A grooved instrument for guiding a bistoury, etc., in certain surgical operations.

Dĭr'ĭ-gens.* [From the same.] An ancient constituent in a prescription, meaning that which directs the operation of the associated substances: thus, *nitre* in conjunction with *squill* is diuretic; with *guaiacum* it is diaphoretic.

Dir. Prop. = *Directio'ne pro'priâ.** "With a proper direction."

Dirt-Eating. See CHTHONOPHAGIA.

Dis, or **Di.** A Latin particle, usually signifying "apart," implying separation or division, as in *divellent*. It is sometimes negative or privative, as in *displease* (Lat. *displi'ceo*).

Dis (*δίς*), or **Di** (*δι*), is also a Greek particle signifying "two" or "twofold," "twice."

Dis'çĭ-form. [Lat. **Discifor'mis**; from *dis'cus*, a "disk."] Resembling a disk; discoid; flat and circular:—applied to parts of plants.

Dis'coid. [Lat. **Discoi'des**; from the Gr. *δίσκος*, a "quoit," and *εἶδος*, a "form" or "resemblance."] Resembling a quoit, or disk; quoit-shaped; disciform. The term *discoid* is applied to a head of composite flowers which has no ray florets, but has a disk without rays.

Dis-coid'al. Orbicular with perceptible thickness, slightly convex, and a rounded border:—applied to parts of plants.

Dis'co-lor.* A term applied to parts having one surface of one color and the other of another color, especially to leaves.

Dis-crete'. [Lat. **Discre'tus**; from *discer'no*, *discre'tum*, to "separate."] A term applied to pustules that are distinct from each other:—opposed to *confluent*; for example, *discrete* smallpox.

Discus.* See DISK.

Dis-cuss'. [From the Lat. *discu'tio*, *discus'sum*, literally, to "strike apart;" hence, to "scatter," to "dissipate."] To promote or effect the resolution of tumors, etc.

Discutient, dis-ku'shent. [Lat. **Discu'tiens**; from the same.] A term applied to substances having the property of promoting the resolution of tumors.

Dis-ease'. [From the French *dés*, negative, and *aise*, "ease." Lat. **Mor'bus**; Fr. *Maladie*, mă'lă'dē'.] Any departure from the state of health.

DISEASES OF PLANTS. Plants, like animals, are subject to diseases, both functional and organic. They arise from various causes, being often constitutional and hereditary, and frequently

induced by impure atmosphere, parasitic animals, fungi, etc.

Dis-in-fec'tants. [From the Lat. *dis*, negative, and *infi'cio*, *infec'tum*, to "corrupt," to "infect."] This term should not be confounded with *antiseptics* or *deodorizers*. It is properly applied to agents which destroy the causes of infection, acting on the specific poison of communicable diseases in such a way as to prevent their spreading; also which act on organic substances in such a manner as to render them less liable to undergo change and decomposition, or which destroy the noxious products of the metabolism of dead organic matter, which products consist chiefly of gases or vapors. (See Class XXIV. in Appendix.) Among these agents, heat, carbolic acid, chlorine, and cleanliness are the most efficient.

Dis-in-fect'ing. [Lat. **Disinfi'ciens**; from the same.] Purifying the atmosphere from contagious influences.

Dis-in-fec'tion. [Lat. **Disinfec'tio, o'nis**; from the same.] The act of purifying the atmosphere from contagious influences by renewing the air, or by chemical action.

Dis-in-te-grā'tion. [From the Lat. *dis*, "apart," and *in'teger*, "entire."] The separation of the integrant parts or particles of a body.

Disk. [Lat. **Dis'cus**; from the Gr. δίσκος, a "quoit."] The face of the sun or of any apparently flat body; the round, central part of a compound flower; also the whole surface of a leaf; also a part of the receptacle (or growth from it) which is under or around the ovary of plants.

Dis-lo-cā'tion. [Lat. **Disloca'tio, o'nis**; from *dis*, "division," and *lo'co*, *loca'tum*, to "place."] Displacement of a bone of a movable articulation from its natural situation; luxation.

Dis-or'der. A synonyme for disease.

Dis-or-gan-ĭ-zā'tion. (Fr. *Désorganisation*, dā'zor'gă'nĕ'zā'se-ôN'.) The act of disorganizing or destroying organic structure. A profound alteration in the texture of an organ, which causes the loss of most or all of its characters. Also the result or state induced by this alteration.

Dispensaire. See DISPENSARY, and DISPENSATORY.

Dis-pen'sa-rў. [Lat. **Dispensa'rium**; from *dispen'so*, *dispensa'tum*, to "dispense," to "distribute."] (Fr. *Dispensaire*, dè'spôN'sêR'.) A place where medicines are prepared and dispensed:—generally applied to a charitable institution for the sick poor of large communities.

Dis-pen'sa-to-rў. [Lat. **Dispensato'rium**; from the same.] (Fr. *Dispensaire*, dè'spôN'sêR'.) A book which describes the various articles of the Materia Medica and gives directions for preparing and compounding medicines.

Dī-sper'ma-tous, or **Dī-sper'mous.** [Lat. **Disper'matus**; from the Gr. δίς, "twice" or "two," and σπέρμα, a "seed."] Having two seeds.

Dis-per'sion. [From the Lat. *dis*, "apart," and *spar'go*, *spar'sum*, to "scatter."] Diffusion; the act of scattering. The angular separation of the rays of light when decomposed by the prism.

Dis-plāce'ment. A process applied to pharmaceutical preparations, and founded on the long-known fact that any quantity of liquid with which a powder may be saturated, when put into a proper apparatus, may be displaced by an additional quantity of that or of another liquid.

Dis-sect'ed. [Lat. **Dissec'tus**; see DISSECTION.] Incised; cut. In Botany, cut deeply into many lobes or segments.

Dis-sec'tion. [Lat. **Dissec'tio, o'nis**; from *dis*, "apart," and *se'co*, *sec'tum*, to "cut."] The cutting up of an animal or vegetable in order to ascertain its structure.

Dis-sem'ĭ-nāt-ed. In Mineralogy, scattered through a rock or gangue.

Dis-sem-ĭ-nā'tion. [Lat. **Dissemina'tio**; from *dis*, "apart," and *sem'ino*, *semina'tum*, to "sow."] The act of scattering; the natural dispersion of seeds on the surface of the ground.

Dis-sep'ĭ-ment. [Lat. **Dissepimen'tum**; from *disse'pio*, to "separate."] A partition that divides the cells of a capsule or fruit.

Dis-sil'ĭ-ent. [From the Lat. *dissil'io*, to "burst" or "shiver."] Bursting open with a spring:—applied to the capsules or pods of certain plants.

Dis-so-cĭ-ā'tion. The decomposition of chemical compounds by heat or mechanical pressure, without the agency of chemical reagents.

Dissoluble. The same as SOLUBLE.

Dis-so-lu'tion. [Lat. **Dissolu'tio**; from *dissol'vo*, *dissolu'tum*, to "dissolve."] The act of dissolving or liquefying; also decomposition; death. In French it signifies *solution*.

Dis'tant. [From the Lat. *dis'to*, to "differ."] Remote in place, time, or nature. In Botany, having a larger intervening space than usual.

Dis-tem'per. A synonyme for disease.

Dis-ten'tion. [Lat. **Disten'tio**; from *dis*, "apart," and *ten'do*, *ten'tum* or *ten'sum*, to "stretch."] The dilatation of a hollow viscus by too great accumulation of its contents.

Dis-tieh'ĭ-a,* **Dis-tĭ-ehi'a-sis.*** [From the Gr. δίς, "twice" or "two," and στίχος, a "row."] An affection in which the tarsus has a double row of eyelashes, one inwards against the eye, the other outwards.

Dis'tĭ-ehous. [Lat. **Dis'tichus**; from the same.] Double ranked; ranged in two opposite rows along a common axis and in the same plane, as the leaves of *Taxodium distichum* and the leaves of certain grasses.

Distillatio per Descensum.* See DESCENSUS.

Dis-til-lā'tion. [Lat. **Distilla'tio**, or, more correctly, **Destilla'tio**; from *distil'lo*, *distilla'tum*, to "drop by little and little," or *destil'lo*, *destilla'tum*, to "drop down" or "fall in drops."] The process of separating the volatile from the more fixed parts by heat.

Distilla'tion, De-struc'tive. The decomposition of bodies by strong heat in one vessel, and collection of the products in another.

Dis-tinct'. [From the Lat. *distin'guo*, *distinc'tum*, to "separate," to "distinguish."] In Botany, not united. The petals of a flower are

distinct when they are not connected or united with each other.

Dis-to'çĭ-a.* [From the Gr. *δίς*, "two," and *τόκος*, "birth."] Birth of twins.

Dis'to-ma.* [From the Gr. *δι* for *δίς*, "two," and *στόμα*, a "mouth."] An animal of the class *Entozoa*. See next article.

Dis'toma He-patĭ-cum.* [From the Gr. *δίς*, "twice" or "two," *στόμα*, a "mouth," and *ἡπατικός*, "belonging to the liver."] The fluke (Fr. *Douve*, doov), a worm sometimes found in the liver and gall-bladder of man, but more commonly in those of sheep, goats, etc. It is an obovate flat worm, nearly an inch in length and about one-third of an inch broad. From the gall-bladder it occasionally passes into the intestinal canal.

Dis-tor'tion. [Lat. **Distor'tio**, *o'nis*; from *dis*, "apart" or "awry," and *tor'queo*, *tor'tum*, to "twist."] Unnatural direction or disposition of parts, as curvature of the spine, etc.

Dis-tor'tor.* [From the same.] That which distorts. See next article.

Distor'tor O'ris.* "Distorter of the Mouth." A name given to one of the zygomatic muscles, from its action in distorting the mouth in rage, grinning, etc.

Dis-trich'ĭ-a.* The same as DISTICHIA.

Dis'trix.* [From the Gr. *δίς*, "twice" or "double," and *θρίξ*, the "hair."] Forky hair; a disease of the hair in which it splits at the end.

Dittany. See CUNILA, and DICTAMNUS.

Di-u-re'sĭ-æs-the'sis.* [From the Gr. *διούρησις*, the "passing of urine," and *αἴσθησις*, "perception," "feeling."] A badly-formed word used to signify the desire to pass urine.

Dī-u-re'sis.* [From the Gr. *διά*, "through," and *οὐρέω*, to "pass water."] Increased discharge of urine, from whatever cause.

Dī-u-ret'ic. [Lat. **Diuret'icus**; from the same.] Belonging to diuresis; causing diuresis.

Dī-ur'nal. [Lat. **Diur'nus**; from *dies*, a "day."] Belonging to the daytime:—applied to a family of rapacious birds which fly chiefly by day, to distinguish them from others, such as owls, that fly by night:—also applied to a family of insects. In Botany, applied to a flower that endures only a day, as the *Tigridia*.

Dī-ur-nā'tion. [From the Lat. *diur'nus*, "daily."] A term introduced by M. Hall to express the state of some animals—the bat, for example—during the day, contrasted with their activity at night.

Div. = *Div'ide.** "Divide."

Dī-văr'ĭ-cate. [Lat. **Divarica'tus**; from *divar'ico*, *divarica'tum*, to "stride" or "straddle."] Straddling; straggling; diverging at an obtuse angle. Branches are called divaricate when they form an obtuse angle with the stem above.

Dī-văr-ĭ-cā'tion. [From the same.] The bifurcation, or separating into two, of an artery, a nerve, etc.

Dĭ-vel'lent. [Lat. **Divel'lens**; from *dis*, "apart," and *vel'lo*, *vul'sum*, to "pluck," to "pull."] Pulling asunder, or separating.

Divellent Affinity. See AFFINITY, DIVELLENT.

Dĭ-ver'gent. [From the Lat. *di*, "apart," and *ver'go*, to "bend" or "incline."] Spreading widely:—applied to branches that make an angle nearly equal to a right angle with the stem. Also tending in various directions from one point or a common centre.

Di-ver-sĭ-flo'rus.* [From the Lat. *diver'sus*, "different," and *flos*, a "flower."] Having different flowers; diversiflo'rate:—applied to a plant which presents flowers of different forms on the same capitulum or on the same umbel.

Di-ver-tic'u-lum.* [From the Lat. *diver'to*, to "turn aside."] A variation or departure from the natural conditions; a malformation.

Di-vīd'ed. A term applied to leaves when the incisions extend to the midrib or to the base.

Dĭ-vis-ĭ-bil'ĭ-tў. [From the Lat. *div'ido*, *divi'sum*, to "divide."] The property of being divisible, of being separated into parts which can be reduced to smaller parts until the particles are so small that we have no instruments fine enough to divide them. It is one of the general properties of matter.

Dĭ-vul'sion, or **Divul'sio,*** di-vul'she-o. [See DIVELLENT.] In Surgery, the forcible separation or laceration of a part.

Dizziness. See DINUS, and VERTIGO.

Dobereiner's (do'be-rī'nĕrz) **Lamp.** A method of producing an instantaneous light by throwing a jet of hydrogen gas upon recently prepared spongy platinum; the metal instantly becomes red-hot, and then sets fire to the gas. This discovery was made by Professor Dobereiner, of Jena, in 1824.

Doç-ĭ-ma'sĭ-a.* [From the Gr. *δοκιμάζω*, to "test," to "examine," to "prove."] Doç'imacy; the art of examining or assaying minerals or metallic ores in order to ascertain the quantity of metal they contain.

Docima'sia Pul-mo'num,* or **Docima'sia Pul-mo-na'lis.*** "Testing of the Lungs." In Medical Jurisprudence, the testing of the lungs of a dead new-born child in order to ascertain whether it has ever respired,—in other words, whether it was born alive or dead.

Doç-ĭ-mas'tic. [Lat. **Docimas'ticus.**] Belonging to *docimasia*.

Docimas'tic Art. The art of assaying.

Dock. The popular name of several species of *Rumex*.

Dock, Sour. The common name for the *Ru'mex aceto'sa*.

Dock, Wâ'ter. The common name for the *Ru'mex hydrolap'athum*.

Doc'tor, o'ris.* [From the Lat. *do'ceo*, *doc'tum*, to "teach."] Literally, a "teacher" or "instructor." A degree or title conferred by the medical faculty of a university, or college, on "those who have *successfully undergone previous examination and trial*," constituting them physicians; also a title conferred on those who have received the highest degree in law or divinity. The appellation originally implied that he who bore it was so thoroughly conversant with his art or profession as to be qualified to teach it.

Dod'der. The popular name of several species of *Cuscuta*, natives of Europe and the United States. They are leafless, parasitic plants. See CUSCUTA.

Do-dec'a-gon. [Lat. **Dodecago'num**; from the Gr. *δώδεκα*, "twelve," and *γωνία*, an "angle."] A figure having twelve equal sides and angles.

Do-dec-ag'o-nal. [Lat. **Dodecago'nus.**] Belonging to a dodecagon.

Do-de-cag'y-nous. [From the Gr. *δώδεκα*, "twelve," and *γυνή*, a "woman" or "female."] Having twelve pistils or styles.

Do'dec-a-he'dral. [Lat. **Dodecahe'drus.**] Belonging to a dodecahedron.

Do'dec-a-he'dron. [From the Gr. *δώδεκα*, "twelve," and *ἕδρα*, a "base."] A solid figure of twelve equal faces or sides. It is one of the five regular solids.

Do-de-can'drĭ-a.* [From the Gr. *δώδεκα*, "twelve," and *ἀνήρ*, a "man" or "male."] The eleventh class of plants in the Linnæan system, characterized by the presence of from twelve to nineteen stamens.

Do-de-can'drĭ-ous. [Lat. **Dodecan'drius**; from the Gr. *δώδεκα*, "twelve," and *ἀνήρ, ἀνδρός*, a "man" or "male."] Dodecan'drous; having twelve stamens. See DODECANDRIA.

Do-do-næ'a Thun-ber-ğĭ-a'na.* A shrub of the order *Sapindaceæ*, a native of South Africa. It is purgative, and is used in fevers.

Dogbane. See APOCYNUM.

Dog-Rose. The *Rosa canina*, or hip-tree.

Dog-wood. See CORNUS FLORIDA.

Dog-wood, Jamaica. See PISCIDIA ERYTHRINA.

Do-lab'rĭ-form. [Lat. **Dolabrifor'mis**; from *dolab'ra*, a "hatchet" or "axe," and *for'ma*, a "form."] Having the form of a hatchet; axe-shaped:—applied to a fleshy leaf that is nearly straight, somewhat terete at base, compressed or flat towards the upper end, one border thick and straight, the other enlarged, convex, and thin.

Do'li Ca'pax.* "Capable of Deceit." A term applied in Medical Jurisprudence to a criminal for whom insanity is pleaded in excuse when inquiry is made as to his mental capacity when the crime was committed.

Dol'ĭ-ceho-çe-phal'ic. [From the Gr. *δολιχός*, "long," and *κεφαλή*, "head."] Having a long head, measuring from front backwards:—applied to certain races, as Germans, Celts, and others, whose cerebral lobes cover the cerebellum.

Dol'ĭ-ceho-çeph'a-lous. [Lat. **Dolicho-ceph'alus.**] The same as DOLICHOCEPHALIC, which see.

Dol'ĭ-chos.* [Gr. *δολιχός*, "long."] A Linnæan genus of the class *Diadelphia*, natural order *Leguminosæ*. It comprises about sixty species, natives of tropical and temperate parts of Asia, Africa, and America. Some of them have edible seeds or pods. They are mostly herbaceous.

Dol'ichos Pru'rĭ-ens.* "Itching Dolichos." The cowhage, or cow-itch, now called *Mucu'na pru'riens.*

Dol'o-mīte. [From *Dolomieu*, a French geologist.] The systematic name of magnesian limestone. It is a carbonate of magnesia and lime, and is a common rock in many parts of the United States. It occurs crystallized, and also massive, and is used for building and for making lime. Much of the white marble used in building is dolomite, which also comprises pearl-spar and Parian marble.

Do'lor,* plural **Do-lo'rēs.** [From the Lat. *do'leo*, to "be in pain," to "ache."] (Fr. *Douleur*, doo'lŭr'.) Pain.

Do'lor Cap'ĭ-tis.* "Pain of the Head." See CEPHALALGIA.

Do'lor Den'tium.* "Pain of the Teeth." See ODONTALGIA.

Do'lor Fa-cĭ-e'i.* "Pain of the Face." See NEURALGIA.

Dom-bey'a.* [Named in honor of *Dombey*, a French botanist.] A genus of ornamental shrubs or small trees of the order *Sterculiaceæ*. It comprises many species, natives of Africa, Madagascar, etc.

Dombey'a Ex-çel'sa.* A tree growing in South America, and yielding the glutinous, milk-like fluid known as *Dombeya turpentine.*

Do-mes-tĭ-cā'tion. [From the Lat. *domes'ticus*, "pertaining to the house or home," "familiar."] The act of taming animals or rendering them domestic. It is not an accidental fact, but is facilitated by the instinctive sociability of domestic animals. The transmission of hereditary characters is a constant sign of domesticity. The number of domesticated species is probably not more than forty.

Doo'ra, or **Dou'ra.** A synonyme of the *Sorghum vulgare.*

Do-re'ma, a*tis.** [Gr. *δόρημα*, a "gift."] A Linnæan genus of the class *Pentandria*, natural order *Umbelliferæ.*

Dore'ma Am-mo-ni'a-cum.* The systematic name of the plant which produces *ammoniacum*, or gum-ammoniac. It is a native of Persia.

Dor'mant. [From the Lat. *dor'mio*, to "sleep."] Sleeping; inactive; quiescent; suspended; concealed.

Dor'mĭ-tĭve. [Fr. *Dormitif*, doR'mĕ'tĕf'; from the same.] A medicine that promotes sleep. The same as HYPNOTIC.

Do-ron'ĭ-cum Mon-ta'num.* Another name for ARNICA MONTANA.

Doron'icum Par-dal-ĭ-an'ehēs.* Leopard's Bane, a plant of the order *Compositæ*, a native of Europe. It is said to have medicinal virtue like that of *Arnica.*

Dor'sad. The same as DORSAL (used adverbially).

Dor'sal. [Lat. **Dorsa'lis**; from *dor'sum*, the "back."] Belonging to the back:—applied by Dr. Barclay as meaning "towards the back." In Botany, the outer suture (the suture farthest from the centre) of a pistil or carpel is the *dorsal* suture.

Dor'si,* the genitive of DORSUM, which see.

Dor'sĭ-branch-ĭ-a'tus.* [From the Lat. *dor'sum*, the "back," and *bran'chiæ*, "lungs."] Dorsibran'chiate:—applied in the plural neuter

(*Dorsibranchia'ta*) to an order of *Articulata* having branchiæ equally distributed along the body.

Dor-sĭf'er-ous. [From the Lat. *dor'sum*, the "back," and *fero*, to "bear."] Bearing something on the back:—applied to parts of plants.

Dor'so-. A prefix denoting connection with the back: as, *dor'so-cos'tal*, having connection with the back and ribs.

Dor-ste'nĭ-a.* A genus of herbaceous plants of the natural order *Urticaceæ*, natives of Mexico and South America. The root of *Dorstenia Contrayerva* is tonic and stimulant. The genus comprises thirty-six species.

Dorste'nia Bra-sĭl-ĭ-en'sis.* A native of Brazil, one of the plants from which contrayerva is obtained. The same drug is said to be obtained from *D. Houstonia*, which grows near Campeachy.

Dor'sum,* gen. **Dor'si.** [Gr. *νῶτος*; Fr. *Dos*, dō.] The back of man or beast; the superior surface of other parts, as of the foot, the hand, etc. In reference to the parts of a flower, it denotes that surface which looks towards the outside.

Dōse. [Lat. **Do'sis**; from the Gr. *δίδωμι*, to "give."] Literally, "anything given" or "administered." The determinate quantity of a medicine prescribed or given to patients at one time. It is obvious that the same quantity of any medicine should not be given to an infant as to an adult. The difference of sex, peculiarities of constitution, and the previous habits of the patient must also be taken into consideration by the judicious physician. It may be stated, in a general way, that the dose for an infant one year old should not be more than about one-twelfth part of a dose for a grown person; for a child three years of age, one-sixth; for one seven years old, one-third; and for one of twelve years, one-half as much as for an adult. Women usually require smaller doses of medicine than men. For a table of doses, see APPENDIX.

Dosologie. A French term equivalent to POSOLOGY.

Dos'sil. A small roll or pledget of lint for introduction into wounds, etc.

Doth-in-en-ter-i'tis,* or, more properly, **Do-thĭ-en-en-ter-i'tis.*** [From the Gr. *δοθιήν*, a "boil," and *ἔντερον*, an "intestine."] Enlargement and inflammation of the glandular follicles of the intestinal canal.

Dots. See DOTTED.

Dot'ted. Covered with dots or small elevated points, or furnished with transparent receptacles of oil looking like dots:—applied to leaves, etc.

Dot'ted Ducts. Tubes which are common in wood or vascular tissue, the walls of which are apparently riddled with holes. Their cut ends make the visible porosity of oak wood.

Doŭb'ler. An instrument used in electrical experiments, and so contrived that, by executing certain movements, very small quantities of electricity communicated to part of the apparatus may be continually doubled until it becomes perceptible by means of an electroscope.

Doŭb'le Flŏw'ers. A name of flowers which have been changed by cultivation so that the essential organs are transformed into petals.

Double Refraction. See REFRACTION.

Doŭb'lў. Having a form or structure repeated: for example, doubly toothed signifies that the teeth themselves are dentate, or toothed:—applied to leaves.

Douce-Amère, dooss ă'mair'. [From *doux*, "sweet," and *amer*, "bitter."] The French for DULCAMARA, which see.

Douche, doosh. (Fr.) Literally, a "pumping," as at the bath. The sudden descent of a stream or column of water, usually cold, on the head, or other part. A jet of water propelled against some part of the body through a pipe. The douche is often found to be an excellent means of taming a furious maniac. It is best adapted to cases of chronic disease.

Doŭg'las's Cul-de-Sac. The name of a cul-de-sac of the uterus.

Douleur. See DOLOR.

Dou'ra, or **Doo'ra.** A synonyme of the *Sorghum vulgare*.

Douve, doov. The French name for the fluke, an intestinal worm. See DISTOMA HEPATICUM.

Do'ver's Pŏw'der. The *Pulvis Ipecacuanhæ Compositus*.

Dove'tail (dŭv'tāl) **Joint.** The suture of serrated articulation, as of the bones of the head.

Dŏwn. In Botany, soft pubescence.

Dŏwn'ў. Clothed with soft, short hairs.

Dra-çæ'na.* A genus of plants or trees of the order *Liliaceæ*, remarkable for the elegant palm-like character assumed by most of the species.

Dracæ'na Dra'co.* The Dragon-Tree, a native of Teneriffe. It has a tree-like stem which attains a gigantic size. Humboldt described one which had a diameter of sixteen feet. This species produces a resinous exudation called *dragon's blood*.

Drach. = *Drach'ma.** A "drachm."

Drachm, drăm. [Lat. **Drach'ma**; from the Gr. *δραχμή*, a Greek weight of about sixty-six grains avoirdupois.] In Pharmacy, a weight of sixty grains, or three scruples, or the eighth part of an ounce.

Draç'ine. [From the Lat. *dra'co*, a "dragon."] A precipitate formed by mixing cold water with a concentrated alcoholic solution of dragon's blood.

Dra-co-çeph'a-lum.* [From the Gr. *δράκων*, a "dragon," and *κεφαλή*, the "head."] A genus of herbs of the order *Labiatæ*.

Dracoceph'alum Ca-na-rĭ-en'se.* An aromatic plant, a native of the Canaries and America. It has been used as a tonic and antispasmodic.

Dracoceph'alum Mol-dav'ĭ-cum.* An annual herb, a native of Europe. It has been used as an antispasmodic.

Dracontium,* dra-kon'she-ŭm. A genus of plants of the Linnæan class *Tetrandria*, natural

order *Araceæ*. Also the Pharmacopœial name (U. S. 1870) of the root of the *Dracontium fœtidum*, *Ictodes fœtidus*, or *Symplocarpus fœtidus*. It is stimulant, antispasmodic, and narcotic; and it has been highly recommended in asthma.

Dracon'tium Fœt'idum* (fet'e-dŭm). A name of the *Symplocarpus fœtidus*, or skunk-cabbage, a plant growing abundantly in many parts of the Northern and Middle United States. See preceding article.

Drą-cunc'u-lus.* [Diminutive of the Lat. *dra'co*, a "dragon;" Gr. *δράκων*.] The Guinea-Worm, which breeds under the skin, and is common among the natives of Guinea. It is also termed the *Dracunculus gordius*. See GUINEA-WORM.

Drą-gan'tin, or **Drą-gan'tĭne.** A mucilage obtained from gum tragacanth.

Drag'on's Blood. [Lat. **San'guis Draco'nis.**] The dark, concrete, resinous substance obtained from the *Calamus Rotang*, or, according to some writers, the *Dracæna draco*, *Pterocarpus draco*, *Pterocarpus santalinus*, etc.

Dragon-Tree. See DRACÆNA DRACO.

Drain'ąge. The removal of an excess of water from soil; also the act of gradually drawing off purulent fluids from abscesses of the body. Drainage is one of the sanitary measures used to purify the atmosphere of marshy districts and to prevent malarial fever. It also renders the soil more fertile.

Dras'tic. [Lat. **Dras'ticus**; from the Gr. *δραστικός*, "working," "active," "efficacious."] A term applied to purgative medicines which are powerful or violent in their operation.

Draught, drâft. [Lat. **Haus'tus.**] A potion, or what a person drinks at once.

Drench. A form of medicine used in farriery, analogous to a draught.

Dress'ing. [Fr. *Pansement*, pŏNs'mŏN'; from *panser*, to "dress."] The methodical application of a remedy, or bandage or other appliance, to a wound or diseased part; also the remedy or thing applied.

Dri'mўs.* [From the Gr. *δριμύς*, "pungent."] A Linnæan genus of trees of the class *Dodecandria*, natural order *Magnoliaceæ*. They are natives of South America, Borneo, New Zealand, etc.

Dri'mys Win-te'ri,* called also **Dri'mys Ar-o-mat'ĭ-ca.*** The systematic name of the tree which produces the Winter's bark. It is a native of Chili. See WINTERA.

Drink. [Lat. **Po'tio**; Fr. *Boisson*, bwâ'sŏN'.] Any liquid introduced into the stomach to quench thirst.

Dri'pax,* or **Al-so-de'ĭ-a.*** A genus of woody plants of the order *Violaceæ*, natives of Madagascar and Timor. They are emetic.

Driv'el-ling. Involuntary flow of the saliva, as in old age, infancy, and idiocy; slavering.

Drogue. The French for DRUG.

Droguiste. The French for DRUGGIST.

Droit, drwâ. "Right," or "straight." The French term for *Rectus*, applied to various muscles of the body.

Drop. [Lat. **Gut'ta.**] The smallest quantity of a liquid. See MINIM.

Drop Serene. See GUTTA SERENA.

Drop'sy. [Lat. **Hy'drops**; Gr. *ὑδρωψ*, from *ὕδωρ*, "water."] The accumulation of serous fluid in the subcutaneous cellular tissue, or in a serous cavity,—that is, a cavity lined with a serous membrane, as the thorax or abdomen. The disease is variously distinguished according to the part affected.

Dropsy of the Belly. See ASCITES.

Dropsy of the Brain. See HYDROCEPHALUS.

Dropsy of the Chest. See HYDROTHORAX.

Dropsy of the Flesh. See ANASARCA.

Dropsy of the Joints. See HYDROPS ARTICULI.

Dropsy of the Spine. See HYDRORACHITIS.

Dropsy of the Testicle. See HYDROCELE.

Dropsy of the Uterus. See HYDROMETRA.

Drŏs'e-rą Ro-tun-dĭ-fo'lĭ-ą.* [From the Gr. *δροσερός*, "dewy."] The Round-leaved Sundew, a native of the United States. From the glands of its leaves drops of clear viscid fluid exude, and are utilized in catching insects.

Droseraceæ,* drŏs-er-a'she-ē. [From *Dros'era*, one of the genera.] The Sundews. A natural order of exogenous herbaceous plants, found in nearly all parts of the world where there are marshes. It includes the *Dionæa* (Fly-Catcher), remarkable for the irritability of the hairs with which its leaves are bordered. The *Dionæa* and *Drosera* are insectivorous.

Drŏwn'ing. [Lat. **Submer'sio.**] Suffocation from immersion in water. When death has resulted from submersion in water, the face is either pale or more or less livid. If the body has lain in the water many hours, the face is often bloated. When the submersion is complete, death usually takes place within two minutes; but many cases have occurred of resuscitation after a much longer period. Hence, when any doubt, even the smallest, remains as to life being utterly extinct, efforts to resuscitate should be made. First of all, before any attempts at resuscitation are made by means of artificial respiration, the mouth and nostrils should be freed from water and froth, by holding for a short time the head somewhat low, with the face downwards. In addition to the employment of artificial respiration, it is of the utmost importance to apply, if practicable, even when the temperature of the air is comparatively high, artificial warmth by means of warm blankets, bottles of hot water, or hot bricks wrapped in flannel. See RESPIRATION, ARTIFICIAL.

Drowsiness. See LETHARGY, and SOMNOLENTIA.

Drug. [Probably from the Anglo-Saxon *drugan*, to "dry," or from essentially the same root in some cognate language, as a large majority of drugs are vegetable substances that have been dried in order to preserve them.] (Fr. *Drogue*, drog.) A term originally, and still most frequently, applied to medicines in their simple form, but also used to include all substances which are employed as medicines.

Drug'gist. A person who sells drugs and medicines.

Drum of the Ear. See TYMPANUM.

Drunkenness. See TEMULENTIA.

Drupaceæ,* dru-pa'she-ē. [See next article.] A natural order of exogenous trees and shrubs, found in cold and temperate climates, including the peach, plum, almond, and cherry. Many botanists include these under *Rosaceæ*. Prussic or hydrocyanic acid abounds in the leaves and kernels of the fruit.

Dru-pā'ceous. [Lat. **Drupa'ceus**; from *dru'pa*, a "drupe."] Having drupes; like or pertaining to a drupe. See DRUPACEÆ.

Drupe. [Lat. **Dru'pa**; from the Gr. *δρύππα*, a "ripe olive."] A fleshy fruit containing a stone or nut, as the cherry, etc.

Dru'pel, or **Dru'pe-ole.** A little drupe; a constituent portion of a compound berry, as that of *Rubus*.

Dru'sy. A term applied in Mineralogy to a surface coated with a number of minute crystals.

Dry Bel'ly-Ache. The *colica pictonum*.

Dry Cup'ping. The application of the cupping-glass *without scarification*, in order to produce revulsion of blood from any part of the body.

Dry Pile. The name of a galvanic apparatus, formed without any acid or liquid, usually constructed with pairs of metallic plates separated by layers of farinaceous paste mixed with common salt.

Dry Rot. A species of decay to which wood is subject. The wood loses all its cohesion, and becomes friable, and fungi generally appear on it. The first destructive change is probably of a chemical kind.

Dry-o-băl'a-nops Ar-o-mat'ĭ-ca.* A tree of the order *Dipteraceæ*, yielding a liquid called *camphor oil* and a crystalline solid termed *Sumatra* or *Borneo camphor*. It is a native of Sumatra and Borneo.

Dryobal'anops Cam'pho-ra.* Another name for the *Dryobalanops aromatica*. The tree which affords camphor in greatest quantity.

Du-al'ĭ-ty. [Lat. **Dual'itas, a'tis;** from *dua'lis*, "pertaining to two."] A term used in reference to a theory that the two hemispheres of the brain are capable of acting independently of each other.

Dualm, dwăm. A term used in Scotland for a sudden sickness or fainting-fit.

Du-boi'sĭ-a.* A genus of shrubs or trees of the order *Solanaceæ*, or *Scrophulariaceæ*, natives of Australia and New Caledonia.

Du-boi'sine, or **Du-boi'sĭ-a.*** The active principle of the *Duboi'sia myoporoi'des*, a shrub or small tree which is a native of Australia. Its medical properties in some respects bear a close resemblance to those of belladonna.

Duck-Bill. See ORNITHORHYNCHUS.

Duct. [Lat. **Duc'tus**; from *du'co, duc'tum*, to "lead" or "convey."] A tube or canal by which a fluid is conveyed:—applied in Botany to tubular vessels found in the tissue of wood. They generally contain air, but in spring they are often gorged with sap. Several varieties of these are called *annular, dotted,* and *spiral ducts*.

Duct of Ste'no. The excretory duct of the parotid gland.

Duct of Whar'ton. [Lat. **Duc'tus Whartonia'nus; Duc'tus Saliva'ris Infe'rior.**] The excretory duct of the submaxillary gland. These two last, with the sublingual, constitute the *salivary* ducts.

Duc-til'ĭ-ty. [Lat. **Ductil'itas, a'tis;** from *du'co, duc'tum*, to "draw."] A property by which bodies can be drawn out as into wire:—applied mostly to metals. Gold, platinum, and silver are the most ductile metals.

Ducts of Bellini (bel-lee'ne). [Lat. **Duc'tus Bellinia'ni.**] The orifices of the uriniferous canals of the kidneys.

Ducts of Cu'vier. The name of certain ducts found in the embryo of some animals.

Ducts of Mül'ler, or **Canals of Mül'ler.** Two canals found in the embryo, on the outer border of the Wolffian bodies.

Duc'tus,* plural **Duc'tus.** See DUCT.

Duc'tus ad Na'sum.* "Duct [leading] to the Nose." Otherwise called **Lach'rў-mal Duct.** A duct extending from the lachrymal sac and opening into the inferior meatus of the nose.

Duc'tus A-quo'sĭ.* "Watery Ducts." Lymphatic vessels; the aqueous ducts.

Duc'tus Ar-te-rĭ-o'sus.* "Arterial Duct." A blood-vessel peculiar to the fœtus, communicating directly between the pulmonary artery and the aorta.

Duc'tus Com-mu'nis Cho-led'o-chus.* "Common Bile-receiving Duct." The bile-duct formed by the junction of the cystic and hepatic ducts. It conveys the bile from the liver into the duodenum.

Duc'tus Cys'tĭ-cus.* "Cystic Duct." The excretory duct which leads from the neck of the gall-bladder to join the hepatic, forming with it the *ductus communis choledochus*.

Duc'tus Def'er-ens.* Another name for the VAS DEFERENS, which see.

Duc'tus E-jac-u-la-to'rĭ-us* (plural **Duc'tus E-jac-u-la-to'rĭ-i**). "Ejaculatory Duct." A duct within the prostate gland, opening into the urethra, into which it conveys the semen: it is about three-fourths of an inch long.

Duc'tus Gal-ac-tof'er-i or **Lac-tif'er-i.*** "Milk-bearing or Milk-conveying Ducts." Milk-ducts arising from the glandular grains of the mamma and terminating in sinuses near the base of the nipple.

Duc'tus He-pat'ĭ-cus.* "Hepatic Duct." The duct which is formed by the union of the proper ducts of the liver. See DUCTUS COMMUNIS CHOLEDOCHUS.

Duc'tus In-ci-so'rĭ-us.* A continuation of the *fora'men incisi'vum* between the palatine processes into the nose.

Ductus Lachrymalis.* See DUCTUS AD NASUM.

Duc'tus Lym-phat'ĭ-cus Dex'ter.* "Right Lymphatic Duct." A duct formed by the lymphatics of the right side of the thorax, etc., and opening into the junction of the right jugular and subclavian veins.

Duc'tus Pan-cre-at'ĭ-cus.* "Pancreatic Duct." The pancreatic duct, which joins the gall-duct at its entrance into the duodenum. Near the duodenum this duct is joined by a smaller one, called *ductus pancreaticus minor* ("lesser pancreatic duct").

Duc'tus Pro-stat'ĭ-çi.* "Prostatic Ducts." The ducts of the prostate gland, from twenty to twenty-five in number, opening into the prostatic urethra on each side of the *veru montanum.*

Duc'tus Sal-ĭ-va'ris In-fe'rĭ-or.* "Inferior Salivary Duct." See DUCT OF WHARTON.

Ductus Thoracicus.* See THORACIC DUCT.

Duc'tus Tho-raç'ĭ-cus Dex'ter.* "Right Thoracic Duct." A designation of the right great lymphatic vein, formed of lymphatic vessels arising from the axillary ganglia of the right side.

Duc'tus Ve-no'sus.* "Venous Duct." A blood-vessel peculiar to the fœtus, communicating from the *vena cava ascendens* to the *venæ portæ.*

Duelech, dü'lĕk. A term employed by Van Helmont to denote the state in which the spirit of urine is precipitated when it forms calculous concretions.

Du-gong'. A marine mammalian animal of the genus *Halicore,* allied to the *Cetacea.* It is referred by some writers to the order *Sirenia.* It lives in the shallow parts of the East Indian Sea, and feeds on herbs. The oil obtained from it is used as a substitute for cod-liver oil.

Dul-ca-ma'ra.* [From the Lat. *dul'cis,* "sweet," and *ama'rus,* "bitter."] (Fr. *Douce-Amère,* dooss ă'maiR'.) "Bitter-Sweet." The Pharmacopœial name (U.S. 1870, 1880) of the young branches of the *Solanum dulcamara.* Dulcamara possesses narcotic, diuretic, and diaphoretic properties. It is chiefly employed as a remedy in diseases of the skin, such as psoriasis, lepra, etc.

Dul-çe'do.* [From the Lat. *dul'cis,* "sweet."] Sweetness. See next article.

Dulce'do Spu-to'rum.* [See SPUTA.] Literally, "sweetness of the sputa, or spittle." The name given by Frank to that form of ptyalism in which the saliva has a sweet or mawkish taste.

Dul'cis.* A Latin word signifying "sweet," "pleasant," "fresh" (applied to water). In Botany it is used to denote any taste which is not acrid or sour.

Dumb. See MUTE.

Dumb'ness. [Gr. *ἀφωνία*; Lat. **Mu'titas**; Fr. *Mutisme,* mü'tĕsm'; Ger. *Stummheit,* stōōm'hīt.] A word which, in its largest signification, denotes loss of speech, from whatever cause. Inability to speak may arise from congenital deafness, in which case, as the child hears no articulate or definite sound, he can utter no definite sound, speech in children being simply the imitation of the sounds they hear. Loss of speech may also arise from an organic defect in the vocal organs, or from some deficiency of nerve-power, resulting, perhaps, from paralysis or from some powerful emotion of the mind. In the latter case it usually ceases when the emotion which has caused it has passed away.

That form of speechlessness known as *aphasia* is usually limited to an inability to express one's thoughts, resulting from some mental defect or cerebral lesion. See APHASIA.

Du-me-ril'ĭ-a Al-a-ma'ni,* or **Pe-re'zĭ-a Fru-tĭ-co'sa.*** A perennial Mexican plant of the order *Compositæ.* From its root is prepared a curious chemical product called *Pipitzahuac,* which is said to be a powerful drastic and useful as a dye.

Du-me'tum.* A place overgrown with bushes or brambles.

Du-mōse'. [From the Lat. *du'mus,* a "bush."] Bushy or shrubby.

Du'mus.* A thorn-bush, a bramble, or a grove. In Botany, a low, branching shrub.

Du-o-de-ni'tis.* (Fr. *Duodénite,* dü'o'dă'nĕt'.) Acute inflammation of the DUODENUM, which see.

Du-o-de'num.* [From the Lat. *duode'ni,* "twelve."] The first portion of the small intestine, its length being about twelve fingers' breadth.

Du'plĭ-cate. [Lat. **Duplica'tus**; from *du'plico, duplica'tum,* to "double."] Doubled. In Botany, growing in pairs. As a noun it signifies a copy, a counterpart, an original instrument repeated.

Du'plĭ-ca-ture, or **Du-plĭ-cā'tion.** [From the same.] The act of folding or doubling:—applied to a malformation where a part is doubled or folded.

Du'plum.* [From the Lat. *du'o,* "two," and *plī'ca,* a "fold."] The double of anything. As a prefix, *duplo* signifies "twofold;" as, *duplo*carburet, twofold carburet.

Dupuytren (dü'pwĕ'trŏN'), **Com-pres'sor of.** An instrument invented by Dupuytren for compressing the femoral artery.

Du'ra Ma'ter.* The "Hard Mother." (Fr. *Dure Mère,* dür maiR.) The tough external membrane of the brain, once supposed to give origin to all the other membranes of the body.

Du-ra'men.* [From the Lat. *du'ro, dura'tum,* to "harden," or *du'rus,* "hard."] The interior, more deeply colored, and harder portion of the trunk and branches of trees, commonly called *heart-wood,* as distinguished from the exterior portion, alburnum or sap-wood.

Du'rĭ-an, or **Du'rĭ-on.** The fruit of the *Du'rio Zibethi'nus* [the specific name is from *zibe'thum,* the Latin of "civet," referring to the odor], a large tree of the order *Sterculiaccæ,* a native of the peninsula of Malacca. The fruit, which is ten inches in diameter, is an important article of food of the Malays. It has a creamy pulp, which is the edible part, and has a perfectly unique flavor, combined with an offensive odor.

Dust. [Lat. **Pul'vis**; Fr. *Poussière,* poo'se-aiR'.] A collective name for the solid corpuscles which are contained in the air. Their density, or weight, greater than that of the air, is diminished by a gaseous layer adhering by capil-

larity to their surface, so that they are easily raised by currents, and float in the air until they are deposited where the air is calm. Dust is composed of—1, particles of mineral matter, especially calcareous and siliceous; 2, of fragments of anatomical elements, vegetable tissues, fibres, and cellules, grains of pollen, and hairs of plants; 3, of fragments of animal tissues, such as scales of insects, hairs of insects, barbs of feathers, skeletons of infusoria, etc. Dust is important, in a hygienic and pathologic point of view, as a thing to be most carefully avoided in certain affections of the lungs.

Dutch Gold. An alloy of copper and zinc, in which the zinc is in greater proportion than it exists in brass. It is allied to *tombac* and *pinchbeck*.

Dutch Liq'uid. The chloride of olefiant gas:—also called *Dutch oil*.

Dutch Min'er-al. Metallic copper beaten out into very thin leaves.

Dutch Oil. See DUTCH LIQUID.

Dutch Pink. Chalk, or whiting, dyed yellow with a decoction of birch leaves, French berries, and alum.

Dwalm. See DUALM.

Dye. See DYES.

Dyers' Alkanet. See ANCHUSA TINCTORIA.

Dyers' Broom, or **Dyers' Weed.** See GENISTA TINCTORIA.

Dyers' Oak. See QUERCUS TINCTORIA.

Dyes, or **Dye'stuffs.** Coloring-matters, whether vegetable, animal, or mineral, used to impart to cloth, yarn, etc., a color different from that which they already possess.

Dȳ-na'mĭ-a.* [From the Gr. *δύναμις*, "power."] Vital power, or strength.

Dȳ-nam'ic. [Lat. **Dynam'icus**; from the same.] Belonging to the vital power, or strength.

Dȳ-nam'ĭ-cal Ge-ol'o-ġy. That part of geology which treats of the causes of events in the earth's geological progress. A treatise on the agencies or forces that have produced geological changes, and of the laws and methods of their action.—(DANA.)

Dȳ-nam'ics. [Lat. **Dynam'ica**; see DYNAMIC.] The science of the forces of bodies in relation to each other. The science of force and motion, or the science of motion as produced and modified by force. *Vital Dynamics* is the science which treats of vital forces.

Dȳn'a-mīte, or **Giant Powder.** An explosive compound used for the sudden development of immense force. It consists of nitro-glycerin, absorbed by some porous inert solid which renders it more manageable. One of the best absorbing materials is a silicious infusorial earth, composed of microscopic organisms called *diatoms*. Dynamite is less liable to spontaneous explosion and to detonation from moderate shocks than nitro-glycerin.

Dȳ-nam'o-graph. [From the Gr. *δύναμις*, "power," and *γράφω*, to "write."] An instrument devised for marking or registering the muscular power of an individual.

Dȳn-am-om'e-ter. [Lat. **Dynamom'etrum**; from the Gr. *δύναμις*, "power," and *μέτρον*, a "measure."] An instrument by which to measure strength and power; to measure and accurately record the strength of the hand-grasp; and also to measure the traction-power capable of being exerted by other groups of muscles.

Dȳn-am-os'co-pȳ. [From the Gr. *δύναμις*, "power" or "force," and *σκοπέω*, to "examine."] (Fr. *Dynamoscopie*, dē'nă'mos'ko'pē'.) A system of auscultation applied to the prognostic and appreciation of forces. It is called *mediate* or *immediate*, according as it is practised with or without the dynamoscope.

Dys. [Gr. *δύς*.] A Greek particle signifying "difficult," or "with difficulty," "bad," or "badly," "painfully," etc.

Dȳs-æs-the'sĭ-a.* [From the Gr. *δύς*, "difficult," and *αἰσθάνομαι*, to "perceive."] Dulness of any of the senses, particularly touch:—applied to an order of the class *Locales* of Cullen's nosology.

Dȳs-cat-a-po'sĭ-a.* [From the Gr. *δύς*, "difficult," and *κατάποσις*, the "act of swallowing."] Difficulty of swallowing liquids:—a term applied by Dr. Mead to hydrophobia.

Dȳs-çĭ-ne'sĭ-a.* [From the Gr. *δύς*, "difficult," and *κινέω*, to "move."] Diminution of the power of motion:—applied in the plural (*Dyscine'sia*) to an order of the class *Locales* of Cullen's nosology.

Dȳs-cra'sĭ-a.* [From the Gr. *δύς*, "bad," and *κρᾶσις*, a "tempering" or "temperament."] Dys'crasy; a faulty state of the constitution; a morbid condition of blood. This term signifies more than a disposition to disease. It implies the presence of some general disease, exerting its pernicious effects upon the blood.

Dȳs-e-co'ĭ-a.* [From the Gr. *δύς*, "difficult," and *ἀκοή*, "hearing."] Diminished or impaired hearing; deafness. A genus of the order *Dysæsthesiæ*, class *Locales*, of Cullen's nosology.

Dȳs'en-tĕr-ȳ. [Lat. **Dysente'ria**; from the Gr. *δύς*, "difficult," or "painful," and *ἔντερον*, a "bowel."] A disease marked by much griping, tenesmus, and stools consisting chiefly of mucus, often mixed with blood. A specific febrile disease, characterized by considerable nervous prostration and inflammation of the glands of the large intestine, sometimes ending in resolution, but frequently terminating in ulceration, always accompanied by tormina and tenesmus; stools at first more or less feculent, afterwards yielding blood, mucus, slime, etc., with little if any feculence. Dysentery prevails in almost all places where malarious fevers abound, as in the vicinity of the swamps and sluggish rivers of tropical and subtropical countries. Where such fevers have been prevented by improved drainage, dysentery also ceases to be prevalent. There would therefore seem to be some intimate connection between the causation of dysentery and intermittent or remittent fevers. Unwholesome drinking-water is a prolific exciting cause of dysentery, which may also be produced by bad or indigestible food. This disease may be divided into two forms, *acute* and *chronic*, and is sometimes epidemic.

Dŷs-la'lĭ-ạ.* [From the Gr. *δύς*, "difficult," and *λαλέω*, to "talk."] Slow or difficult speech.

Dŷs-lo'ĕhĭ-ạ.* [From the Gr. *δύς*, "difficult," and the Lat. *lo'chia*.] Decrease or suppression of the LOCHIA, which see.

Dŷs'lŷs-in. [From the Gr. *δύς*, "difficult," and *λύσις*, "solution."] Literally, "difficult of solution." A term applied to an ingredient of bilin which remains undissolved as a resinous mass during the solution and digestion of bilin in dilute hydrochloric acid.

Dŷs-men-or-rhœ'ạ.* [From the Gr. *δύς*, "difficult," *μήν*, a "month," and *ῥέω*, to "flow."] (Fr. *Dysménorrhée*, dès'mā'no'rā'.) Difficult menstruation.

Dysmnesia,* dis-nee'she-ạ. [From the Gr. *δύς*, "difficult," and *μνήσιος*, "relating to memory."] Defective memory.

Dŷs-o'dēs.* [From the Gr. *δύς*, "bad," and *ὄζω*, to "smell."] Having a bad smell:—a term applied by Hippocrates to a fetid disorder of the small intestines.

Dŷs-o-o-to'cĭ-ạ.* [From the Gr. *δύς*, "difficult," and *ᾠοτοκέω*, to "lay or produce eggs."] A term proposed to denote difficult ovulation.

Dŷs-op'sĭ-ạ,* or **Dŷs-o'pĭ-ạ.*** [From the Gr. *δύς*, "difficult," or "painful," and *ὄψις*, "vision."] Painful or defective vision. A genus of the order *Dysæsthesiæ*, class *Locales*, of Cullen's nosology.

Dysop'sia or **Dyso'pia Lat-er-a'lis.*** A term for a defect of vision in which an object can only be seen correctly when it is placed obliquely.

Dŷs-o-rex'ĭ-ạ.* [From the Gr. *δύς*, "bad," or "difficult," and *ὄρεξις*, "appetite."] Depraved appetite:—applied in the plural to an order of the class *Locales* of Cullen's nosology.

Dŷs-os'mĭ-ạ.* [From the Gr. *δύς*, "difficult," and *ὀσμή*, "smell."] Defective or imperfect sense of smell.

Dŷs-os-phre'sĭ-ạ.* [From the Gr. *δύς*, "difficult," and *ὀσφρησις*, "smell."] Impaired condition of the sense of smell.

Dŷs-par-eū'nĭ-ạ.* [From the Gr. *δύς*, and *πάρεννος*, a "bedfellow."] See DYSSYNODUS.

Dŷs-pep'sĭ-ạ.* [From the Gr. *δύς*, "difficult," and *πέπτω*, to "concoct."] Indigestion; dyspep'sy. A genus of the order *Adynamiæ*, class *Neuroses*, of Cullen's nosology.

Dŷs-pha'gĭ-ạ.* [From the Gr. *δύς*, "difficult," and *φάγω*, to "eat."] Dys'phagy; difficulty in swallowing. A genus of the order *Dyscinesiæ*, class *Locales*, of Cullen's nosology. See ACATAPOSIS.

Dŷs-pho'nĭ-ạ.* [From the Gr. *δύς*, "difficult," and *φωνή*, "voice."] Difficulty of speaking:—also applied to a depraved voice, or one harsh from disease.

Dyspho'nia Cler-ĭ-co'rum.* "Dysphonia of Clergymen." A term used to denote a weakness or hoarseness of voice frequent in those who speak much in public, and especially in clergymen.

Dŷs-pho'rĭ-ạ.* [From the Gr. *δύς*, "difficult," and *φέρω*, to "bear."] Inquietude; a difficulty of enduring one's self. It embraces the affections of *anxiety* and *fidgets*.

Dyspnœa,* dĭsp-nē'ạ. [From the Gr. *δύς*, "difficult," and *πνέω*, to "breathe."] (Fr. *Dyspnée*, dès'pnā'.) Difficult or labored breathing. A genus of the order *Spasmi*, class *Neuroses*, of Cullen's nosology.

Dŷs-sper-ma'sĭ-ạ,* **Dŷs-sper-ma-tis'mus.*** [From the Gr. *δύς*, "difficult," and *σπέρμα*, "seed."] Difficult or imperfect discharge of semen; dyssper'matism. A genus of the order *Epischeses*, class *Locales*, of Cullen's nosology.

Dŷs-syn'o-dus.* [From the Gr. *δύς*, "difficult," and *σύνοδος*, "meeting," "union."] Difficult coition.

Dŷs-thet'ĭ-ca.* [From the Gr. *δύς*, "bad," and *τίθημι*, to "place," to "make," to "constitute."] The name of an order in Dr. Good's nosology, denoting diseases dependent upon a bad habit or constitution of the body.

Dŷs-u'rĭ-ạ.* [From the Gr. *δύς*, "difficult," and *οὖρον*, the "urine."] Difficult or painful and incomplete discharge of urine. A genus of the order *Epischeses*, class *Locales*, of Cullen's nosology.

Dŷs'u-rў. The same as DYSURIA.

E.

E, or Ex. A Latin particle signifying "out," "out of." It is sometimes privative. See Ex.

Ear. [Lat. **Au'ris**; Fr. *Oreille*, o'rĕ'.] The organ of hearing, comprehending the external, middle, and internal ear.

Ear, Inflammation of. See Otitis.

Ear-Ache. See Otalgia.

Ear-Wax. See Cerumen.

Eared. See Auriculate.

Earth [Lat. **Ter'ra**], in popular language denotes the friable matter or soil on the surface of the globe which we inhabit:—often applied to the globe itself.

In Chemistry, the *earths* are solid, incombustible substances, entering largely into the composition of the mineral strata, and not convertible into metals by any of the ordinary methods of reduction. Many of them, such as lime, magnesia, baryta, and strontia, like alkalies, combine with acids to form what in Chemistry are termed salts. The four here named are called alkaline earths, as they have an alkaline taste and change vegetable blues to green.

Earth, Japan. See Acacia Catechu.

Earth of Alum. A preparation used in making paints, and procured by precipitating the alumina from alum disolved in water, by adding ammonia or potassa.

Earth of Bone, or **Bone-Earth.** A phosphate of lime, sometimes called *bone phosphate*, existing in bones after calcination.

Earth-Bath. [Lat. **Arena'tio.**] A remedy consisting literally of a bath of earth or sand (usually hot) with which the patient is covered.

Earth-Clos'et. An arrangement for the same purpose as a water-closet, in which the excrementitious matter is received in earth, which has, it is affirmed, a great power of absorbing impurities and offensive gases.

Earth-Treat'ment. A name for a method of treating wounds with clay (or clayey earth) dried and finely powdered. It is applied to the wound as a deodorizing agent, tending at the same time to prevent or arrest putrefaction.

Earth'quāke. [Ger. *Erdbeben*, ĕRd'bā-bĕn. Neither the Latin nor the French has any single word to denote an earthquake: the former uses *ter'ræ mo'tus*, a "movement of the earth;" the latter has *tremblement de terre*, trŏm'bl-mŏn' dĕh tair, a "trembling of the earth."] A vibration of the solid crust of the earth, attended with appalling convulsions and phenomena. Among these are fractures of the earth, sometimes of great extent; subsidences or elevations of extensive tracts, and draining of lakes; destruction of cities and their populations. The vibration sometimes traverses a region several hundred miles in extent at the rate of thirty miles in a minute. "If the earth's crust suffer an abrupt fracture somewhere in its depths where tension has long been increasing and has finally forced a relief, the vibration may move on through a hemisphere, and will be almost regardless of the mountains on the surface."—(Dana.) A great earthquake which occurred at Lisbon, November 1, 1755, destroyed about sixty thousand inhabitants of that city. It shook all Western Europe and Northern Africa, and was even felt in the West Indies.

Eau, ō. The French term for "water." The name of a distilled water.

Eau de Babade, ō dĕh bă'băb'. A liquor manufactured in Barbadoes from lemon-peel.

Eau de Cologne, ō dĕh ko-lōn' (or ko'loñ'). [Lat. **A'qua Colonien'sis.**] Cologne-water; a perfume, and an evaporating lotion often used in headache, fever, etc. See Spiritus Odoratus.

Eau de Javelle, ō dĕh zhă'vĕl'. Bleaching liquid, or the *A'qua Alkali'na Oxymuriat'ica* of the Dublin Pharmacopœia.

Eau de Luce, ō dĕh lüss. The *Tinctura Ammoniæ Composita* of the Pharmacopœias. The French name is derived from that of an apothecary of Lille.

Eau de Naphre, ō dĕh năfr'. A bitter aromatic water, prepared by distilling the leaves of the Seville orange with water.

Eau de Rabel, ō dĕh ră'bĕl'. [Lat. **A'qua Rabellia'na.** So named from its inventor, the empiric *Rabel.*] A preparation consisting of one part of sulphuric acid and three parts of rectified spirit of wine, constituting a sort of sulphuric ether.

Eau de Vie. [Lat. **A'qua Vi'tæ.**] See Brandy.

Eau Médicinale d'Husson, ō mă'dĕ'sĕ'năl' düs'sŏn'. A celebrated remedy for gout, prepared as follows: Macerate two ounces of the root of colchicum, cut in slices, in four fluidounces of Spanish white wine, and filter.

Eau Sédative, ō să'dă'tĕv'. "Sedative Water." A lotion consisting of a solution of ammonia, spirits of camphor, chloride of sodium, and water.

Ebenaceæ,* eb-e-na'she-ē. [From the Lat. *eb'enum*, "ebony."] A natural order of exogenous trees and shrubs, mostly tropical, natives of India, China, Australia, Africa, and North America. Some species are remarkable for the hardness and blackness of the wood, as ebony. This order comprises the Persimmon (*Dios'pyros*). The Jussieuan name of this order is *Guaiacanæ.*

Eb'la-nin, or **Eb'la-nĭne.** Pyroxanthin, a substance obtained from raw pyroxylic spirit.

Eb'o-nў. [Lat. **Eb'enum.**] A hard, heavy, black wood, the heart-wood of several species of *Diospyros*, especially of *Dios'pyros Eb'enum*, which abounds in Ceylon, *Diospyros Ebenaster*, and *Diospyros melanoxylon*, a native of India.

E-brac'te-ate. [Lat. **Ebractea'tus**; from *e*, priv., and *brac'tea*, a "floral leaf."] Destitute of bracts; without a floral leaf.

E-brĭ'e-tў. [Lat. **Ebri'etas.**] Drunkenness:—sometimes used to denote a state of giddiness which precedes intoxication.

Eb-ul-lĭ'tion. [Lat. **Ebulli'tio, o'nis;** from *ebul'lio*, to "bubble up" or "boil up."] The act or state of boiling; a violent motion of a liquid subjected to the action of caloric. It is produced by bubbles formed in the lower strata of the liquid, which, exposed to the greatest heat, are reduced to the state of vapor. The levity of the bubbles causes them to rise to the surface, where they burst. In order that ebullition may take place in a liquid, it is necessary that air or gas should be present in its mass. During all the duration of the ebullition the temperature remains the same. A given liquid placed in the same conditions begins to boil at a constant temperature. Thus, pure water heated in an open vessel near the level of the sea boils at 212° F.

Eb-ur-nā'tion. [From the Lat. *e'bur*, "ivory."] A state of the osseous system in which there is an increased and morbid deposit of phosphate of lime, especially on the cartilages of the joints:—also applied to the incrustation of a tumor by phosphates and carbonates of lime.

E-bur'ne-us.* [From the Lat. *e'bur*, "ivory."] Of the color of ivory.

Eburnification. See EBURNATION.

E'bur Us'tum Ni'grum* ("Ivory Burnt Black"), called *Cologne-black*, or *Ivory-black.* Charcoal prepared from charred ivory shavings.

Ec (ἐκ), and **Ex** (ἐξ) before a vowel. A Greek preposition signifying "out," "out of," "from," etc.

Écaille, ā'kăl'. The French term for SCALE, and for SHELL, which see.

E-căl'ca-rate. [Lat. **Ecalcara'tus;** from *e*, priv., and *cal'car*, a spur."] Without a spur, or horn:—applied to plants.

E-cau'date. [Lat. **Ecauda'tus;** from *e*, priv., and *cau'da*, a "tail."] Without a tail:—applied to parts of plants.

Ec-băl'lĭ-um A-gres'tē,* or **Ecbal'lium El-a-te'rĭ-um.*** The Squirting Cucumber, a plant of the order *Cucurbitaceæ*, a native of Europe, bearing a prickly fruit, which, when ripe, forcibly ejects the seeds with a mucilaginous juice. This juice is the source of ELATERIUM, which see.

Ecbal'lium Of-fĭç-ĭ-na'le.* Another name for the *Momor'dica Elate'rium*, or wild cucumber.

Ec-bol'ic. [Lat. **Ecbol'icus;** from the Gr. ἐκβάλλω, to "cast out."] A term applied to medicines which induce abortion.

Ec-cen'tric. [Lat. **Eccen'tricus;** from *ex*, "out of," "from," and *cen'trum*, the "centre."] Deviating from the centre or from the true line of a circle. In Geometry, applied to circles that are not *concentric*, that have not a common centre.

Ec-cen-triç'ĭ-tў. [Lat. **Eccentriç'itas, a'tis;** from the same.] In Astronomy, the distance between the centre of a planet's orbit and the centre of the sun.

Ec-çeph-a-lo'sis.* [From the Gr. ἐκ, "out of," "from," and κεφαλή, the "head."] The name of an operation in which the brain of the child is removed to facilitate delivery.

Ec-chў-mo'ma, a'tis.* [From the Gr. ἐκχυμόω, to "pour out."] A soft blue swelling from a bruise; extravasation of blood into the cellular tissue. A genus of the order *Tumores*, class *Locales*, of Cullen's nosology.

Ec-chў-mo'sis.* The same as ECCHYMOMA, which see.

Ec-co-prot'ic. [Lat. **Eccoprot'icus;** from the Gr. ἐκ, "out," and κόπρος, "dung."] Evacuating the contents of the bowels:—usually applied to mild purgatives or laxatives.

Ec-crĭ-nol'o-gў. [Lat. **Eccrinolo'gia;** from the Gr. ἐκκρίνω, to "secrete," and λόγος, a "discourse."] The doctrine or science of the secretions.

Ec-crit'ĭ-ca.* [From the Gr. ἐκκρίνω, to "strain off."] Diseases of the excernent function. The name of a class in Dr. Good's nosology.

Ec-çў-e'sis.* [From the Gr. ἐκ, "out" or "without," and κύησις, "gestation."] Extra-uterine fœtation.

Ec-çўl-ĭ-o'sis.* [From the Gr. ἐκ, "out," and κυλίω, to "roll," and the termination *osis.*] A disease of unfolding or development; that is, a disorder resulting from the process of development.

Ec'dў-sis.* [From the Gr. ἐκδύω, to "put off," to "unclothe."] Putting off the skin, as of serpents.

Échancrure, ā'shŏN'krŪR'. A French term denoting a depression or notch in the bones. See NOTCH.

Écharpe, ā'shārp'. The French for the surgical apparatus called a SLING, which see.

E-chĭ-na'ce-a Pur-pu're-a.* The Purple Cone-Flower, a plant of the order *Compositæ*, a native of Ohio, Indiana, Kentucky, etc. Its root is aromatic.

Ech'ĭ-nate, or **E-chī'nate.** [Lat. **Echina'tus;** from the Gr. ἐχῖνος, the "hedgehog."] Beset with prickles or rigid hairs, as the fruit or involucre of the chestnut.

Échine, ā'shēn'. See SPINE.

E-chin-o-coc'cus.* [From the Gr. ἐχῖνος, the "hedgehog," and κόκκος, a "berry."] A species of hydatid; a scolex or embryo of the *Tænia nana*, a parasite that infests the human body.

E-chin'o-der'ma-ta.* [See ECHINODERMATUS.] The fourth class of the *Cycloneura*, or *Radiata*, consisting of simple aquatic animals covered with a spiny shell or a coriaceous skin.

E-chin'o-der'ma-tus.* [From the Gr. ἐχῖνος, the "hedgehog," and δέρμα, the "skin."] Echinoder'matous. Having a skin like the *Echinus*:—applied to a class of *Radiata*. See ECHINODERMATA.

Ech'in-oph-thal'mĭ-a.* [From the Gr. ἐχῖνος, the "hedgehog," and the Lat. *ophthal'mia.*] A form of ophthalmia in which the eyelashes project like the quills of a hedgehog.

E-chin-o-rhŷn'chus.* [From the Gr. *ἐχῖνος*, the "hedgehog," and *ῥύγχος*, a "beak."] The name for a genus of *Entozoa*, order *Acanthocephaliæ* of Rudolphi.

E-chi'nus.* [From the Gr. *ἐχῖνος*, the "hedgehog," also the "sea-urchin."] A sea-urchin:—also applied to petrifactions of the sea-urchin.

Éclair. The French for "lightning."

Ec-lamp'sy. [Lat. **Eclamp'sia, Eclamp'sis**; from the Gr. *ἐκλάμπω*, to "shine."] Literally, "flashing of light," "effulgence." A convulsive disease of infancy; also the appearance of flashes of light, forming one of its symptoms. The term is sometimes applied to a form of puerperal convulsions resembling epilepsy in severity.

Ec-lec'tic. [Lat. **Eclec'ticus**; from the Gr. *ἐκ*, "out," and *λέγω*, to "gather" or "choose."] Selected, or chosen from among others:—applied to an ancient sect of physicians (as well as to a school of philosophy), who held that we ought not to confine ourselves to one single system or school, but to select what is best from all the different systems. It was at its acme about the beginning of the second century. The name is also applied to a modern school of recent origin.

Ec-leg'ma,* or **Ec-leĭg'ma.*** [Gr. *ἐκλείγμα*; from *ἐκλείχω*, to "lick up."] (Fr. *Looch*, lōk.) A pharmaceutical preparation of a certain consistence and of a sweet flavor. See LINCTUS.

E-clĭpse'. [Lat. **Eclip'sis**; Gr. *ἔκλειψις*; from *ἐκλείπω*, to "fail."] In Astronomy, the obscuration of the light of one heavenly body by the intervention of another.

E-clip'tic. [Lat. **Eclip'ticus.**] Belonging to an eclipse:—applied to an imaginary circle in the heavens, which the sun appears to describe in the course of the year; so named because eclipses happen only when the moon is in the same plane or very near it. It crosses the equator at an angle of 23½°. This angle, which is termed the *obliquity of the ecliptic*, is the cause of the change of the seasons.

Éclisse, ā'klēss'. The French for SPLINT, which see.

E-con'o-mȳ. [Lat. **Œcono'mia**; from the Gr. *οἶκος*, a "house," and *νέμω*, to "distribute," to "arrange."] (Fr. *Économie*, ā'ko'no'mē'.) Literally, "household order or arrangement:"—applied to order or proper management in doing anything.

ANIMAL ECONOMY denotes collectively all the laws or arrangements which are necessary to the animal system, or the totality of the parts which constitute an organized being.

RURAL ECONOMY is nearly synonymous with agriculture.

Ecorce, ā'korss'. The French term for "bark." See CORTEX.

E-cos'tate. [From the Lat. *e*, priv., and *cos'ta*, a "rib."] Destitute of a central or strongly-marked rib:—applied to leaves.

Ec'phlȳ-sis.* [From the Gr. *ἐκφλύζω*, to "bubble up."] Vesicular eruption confined in its action to the surface. This term comprehends the several species of *pompholyx*, *herpes*, *rhypia*, and *eczema*. Compare EMPHLYSIS.

Ec-phro'nĭ-a.* [From the Gr. *ἔκφρων*, "out of one's mind."] Insanity; craziness; a term comprising melancholy and madness.

Ec-phy'ma.* [From the Gr. *ἐκφύω*, to "spring out."] A cutaneous excrescence, including the several species *verruca*, *caruncula*, *clavus*, *callus*.

Ec-pў-e'sis.* [From the Gr. *ἐκπυέω*, to "suppurate."] Humid scall, including the species *impetigo*, *porrigo*, *ecthyma*, and *scabies*. Compare EMPYESIS.

Écraseur, ā'krā'zur'. (Fr., from *écraser*, to "crush.") Literally, a "crusher." A kind of steel chain tightened by a screw, used for removing piles, polypi, or malignant growths.

Écrouelles, ā'kroo'ĕl'. The French term for SCROFULA, which see.

Ecstasis.* See ECSTASY.

Ec'sta-sȳ. [Lat. **Ec'stasis**; from the Gr. *ἐξίσταμαι*, "to be out of one's senses."] A total suspension of sensibility, voluntary motion, and for the most part of mental power,—the body erect and inflexible, the pulsation and breathing not affected. This term is applied to certain morbid states of the nervous system, in which the attention is absorbed exclusively by one idea, and the cerebral control is in part withdrawn from the lower cerebral and certain reflex functions.

Ec'ta-sis.* [From the Gr. *ἐκ*, "out," and *τείνω*, to "stretch."] Extension or expansion.

Ec-thy'ma, a*tis.* [From the Gr. *ἐκθύω*, to "break out."] An eruption of phlyzacious pustules, without fever.

Ec-to-car'dĭ-a.* [From the Gr. *ἐκτός*, "out" or "without," and *καρδία*, the "heart."] A malformation in which the heart is out of its normal position.

Ec'to-derm. [From the Gr. *ἐκτός*, "without," "outer," and *δέρμα*, "skin."] The outer layer or coat of simple organisms.

Ec-to'pĭ-a.* [From the Gr. *ἔκτοπος*, "out of place."] Protrusion, or displacement:—applied in the plural to an order of the class *Locales* of Cullen's nosology.

Ecto'pia Cor'dis.* "Displacement of the Heart." A term applied to any case where the heart is out of its proper place or in an unnatural position.

Ec-top-tĕr'ў-goid. [Lat. **Ectopterygoi'des**; from the Gr. *ἐκτός*, "without," and *πτερυγοειδής*, "pterygoid."] A term proposed by Owen for Cuvier's *transverse* bone in reptiles.

Ec-to-zo'on,* plural **Ec-to-zo'a.** [From the Gr. *ἐκτός*, "without," and *ζῶον*, an "animal."] Those parasitic insects (such as lice) that infest the surface of the body, in contradistinction from the *Entozoa*, which are found within the body.

Ec-tro'pĭ-um.* [From the Gr. *ἐκ*, "out," and *τρέπω*, to "turn."] Eversion of the eyelid or eyelids.

Ec-trot'ic. [Lat. **Ectrot'icus**; from the Gr. *ἐκτιτρώσκω*, to "cause a miscarriage."] A term applied to the treatment by which the development of disease is hindered.

Ec'ze-ma, a*tis.* [From the Gr. *ἐκζέω*, to "boil up."] A smarting eruption of small pustules, generally crowded together, without fever,

and not contagious. According to Hebra and Erasmus Wilson, it is a superficial affection of the skin or mucous membrane, the commencement of which may be marked by various elementary lesions, in which the vesicles or pustules may not be present, and of which the principal characters are redness, a serous or sero-purulent secretion, and an exfoliation of the cuticle. There are seven varieties of eczema, according to some dermatologists.

Ec-zem′a-tous. [Lat. **Eczem′atus.**] Belonging to *eczema*.

E-den-ta′ta.* [See next article.] Toothless animals; quadrupeds without front teeth, as the armadillo, ant-eater, and sloth.

E-den′tate. [Lat. **Edenta′tus,** which see.] Destitute of teeth:—applied to parts of plants.

E-den-ta′tus.* [From the Lat. *e*, priv., and *dens*, a "tooth."] Without teeth; eden′tate:—applied to an order of *Mammalia*. See EDENTATA.

E-den′tu-lous. [Lat. **Eden′tulus**; from the same.] A term applied to one who has the congenital defect of being without teeth.

Edged. A term applied in Botany when one color is surrounded by a very narrow rim of another.

E-dul-co-rā′tion. [From the Lat. *dul′cis*, "sweet."] The sweetening of any medicinal preparation. Also the process of freeing an easily soluble substance from one that is soluble with difficulty, by means of distilled water.

E-dul-co-rā′tor. [From the same.] A dropping-bottle. An instrument for supplying small quantities of sweetened liquid, water, etc., to any mixture, or to test-tubes, watch-glasses, etc.

E-du′lis.* A Latin word signifying "edible," good for food:—applied as the specific name of certain plants.

Eel Oil. An oil procured from eels by roasting,—employed as an ointment for stiff joints, and by ironmongers for preserving steel from rust.

Ef′fer-ens, en′tis.* [From the Lat. *ef′fero*, to "carry out."] Ef′ferent; carrying or conveying out:—applied in the plural to certain vessels of the testis. See VASA EFFERENTIA.

Ef-fer-vĕs′çence. [Lat. **Effervescen′tia**; from *efferves′co*, to "boil over."] The agitation produced on mixing certain substances, caused by the sudden escape of a gas. Sometimes it is the result of a diminution of pressure, as when we uncork a bottle of beer or mineral water charged with carbonic acid. The gas dissolved in the liquid resumes its elastic state when the pressure is removed.

Ef-fer-vĕs′çing Draught. Dissolve a scruple of carbonate of soda or potassa in an ounce of water; mix two drachms of cinnamon-water with a drachm and a half of syrup of orange-peel; add to these a tablespoonful of fresh lemon-juice, and drink the mixture immediately. The *Mistura Potassii Citratis*, which is officinal, is also called *effervescing draught*. It is an excellent refrigerant diaphoretic.

Ef-fē′te′. Past bearing:—applied to anthers that have lost their pollen.

Ef-flo-rĕs′çence. [Lat. **Efflorescen′tia**; from *efflores′co*, to "flower," to "flourish."] The blooming of flowers; the time of flowering. In Chemistry, the spontaneous conversion of crystals to powder in consequence of the loss of their water of crystallization. Also a morbid redness of the skin.

Ef-flo-rĕs′çent. [From the same.] A term applied to a salt which loses its water of crystallization, becomes opaque, and falls to powder. In Botany, beginning to bloom.

Ef-flu′vĭ-a,* the plural of EFFLUVIUM, which see.

Ef-flu′vĭ-um,* plural **Ef-flu′vĭ-a.** [From the Lat. *ef′fluo*, to "flow out."] (Fr. *Effluve*, ā′flüv′.) A term applied to exhalations or vapors (especially those of a morbific character) proceeding from any body. It is also frequently applied to animal or vegetable odors. Some writers restrict the term to vapors which contain decomposed vegetable matter, emanating from places covered with stagnant water or from marshy soil.

Ef-fo-lĭ-ā′tion. The removal of leaves.

Ef′fort. [Lat. **Ni′sus**; Fr. *Effort*, ā′fɔr′, from *efforcer*, to "endeavor strongly," to "strive."] Intense muscular contraction, intended to resist an exterior power or to perform a natural function which has become accidentally difficult. In every effort there is an energetic contraction of certain muscles, and as these, directly or indirectly, are inserted on the trunk or on parts which are attached to it, they must find a fixed point on the bones of the trunk. For this purpose one makes a great inspiration which dilates the thorax, so that it is maintained immovable and serves as a fixed point for the muscles.

Ef-fu′sion. [Lat. **Effu′sio, o′nis**; from *ef-fun′do, effu′sum*, to "pour out."] The escape of any fluid out of its natural vessel, or viscus, into another cavity, or into the cellular texture or substance of parts.

Egesta.* See EGESTUS.

E-ġes′tus.* [From the Lat. *eg′ero, eges′tum*, to "carry out," or "cast out."] A term applied in the plural neuter (*Eges′ta*) to the natural excretions or evacuations of the body, such as the urine, fæces, etc.

Egg. See OVUM.

Egg′-Plant, or **Au′ber-ġĭne.** The popular name of *Solanum Melongena*, an annual herb, a native of India and Africa. It is cultivated for food in New Jersey, etc.

Egg-Shaped. See OVAL, OVATE, and OVOID.

E-glan′du-lous, or **E-glan′du-lose.** [Lat. **Eglandulo′sus**; from *e*, priv., and *glans*, a "gland."] Deprived or destitute of glands:—applied to parts of plants.

Eg′lan-tīne. A popular name of the *Rosa rubiginosa*, or sweet-brier.

Egophony. See ÆGOPHONY.

Ehretiaceæ,* ā-re-te-a′she-ē. [From *Ehre′tia*, one of the genera.] A natural order of exogenous plants, mostly tropical trees or shrubs. It includes the Peruvian Heliotrope.

Ei′der-Down. [Fr. *Édredon*, ā′dr-dɔ̃n′; Ger. *Eiderdunen*, ī′dẹr′doo′nẹn.] The down of the

Eider Duck (*A'nas mollis'sima*), an important article of commerce. It is of the softest and lightest quality. Coverings made of it are especially valuable to patients requiring a warm and at the same time a very light covering.

Eighth Pair of Nerves. See PNEUMOGASTRIC.

E-jac'u-lans.* [From the Lat. *e*, "out," and *jac'ulor, jacula'tus*, to "throw" or "cast."] Throwing forth, or casting out. See EJACULATORY.

E-jac-u-la'tor, o'ris.* [From the same.] A term applied to a muscle of the penis. See ACCELERATOR.

E-jac'u-la-to-rỹ. [Lat. **Ejaculato'rius**; from the same.] Ejecting, or having power to eject.

Ejaculatory Ducts. See DUCTUS EJACULATORIUS.

E-jec'tion. [Lat. **Ejec'tio, o'nis**; from *eji'cio, ejec'tum*, to "throw or thrust out."] The act or process of discharging anything from the body.

Ek. See EC.

E-lab-o-rā'tion. [From the Lat. *elab'oro, elabora'tum*, to "work," to "labor."] The act of improving by labor or successive operations:—a term used to denote the various changes which substances undergo in the process of assimilation, in animals and plants. The crude sap of plants is *elaborated* in the leaves, and rendered more nutritious, for the leaves exhale water and inhale carbon.

Elæagnaceæ,* el-ē-ag-na'she-ē, or **El-æ-ag'ni.*** A small natural order of exogenous trees and shrubs, dispersed through the whole Northern hemisphere. It includes the *Elæagnus*, or Oleaster, and the *Shepherdia argentea*, a native of the United States, which bears an edible fruit called *buffalo berry*.

El-æ-ag'ni,* the plural of **El-æ-ag'nus** ("Oleaster"), forming the Jussieuan name of a natural order of plants. See ELÆAGNACEÆ.

El-æ-o-den'dron Rox-burgh'ĭ-i.* A tree or shrub of the order *Celastraceæ*, a native of India. Its root is said to be powerfully astringent. Its bark and root are used externally in cases of swelling.

El-æ-op'ten. [From the Gr. ἔλαιον, "oil," and πτηνός, "flying" or "fleeting," hence "volatile."] The liquid portion of a volatile oil. The concrete portion is called *stearopten*. The volatile oils when exposed to cold generally separate into a solid and a liquid portion, showing that they are mixtures of two oils differing in fluidity.

El-æ-o-sac'cha-ra.* [From the Gr. ἔλαιον, "oil," and *sac'charum*, "sugar."] The mixtures or compounds of volatile oils and sugar.

El'a-in. [Lat. **Elai'na**; from the Gr. ἔλαιον, "oil."] The oily principle of solid fats:—also called *Olein*.

El-ai-om'e-ter. [Lat. **Elaiom'etrum.**] An instrument for detecting the adulteration of olive oil.

El'a-is Guineen'sis* (gĭn-e-ĕn'sis). The Guinea palm-tree, which yields the palm oil, and, it is said, the best kind of palm wine. The oil is obtained from the outer coat or rind of the fruit, and is extensively used in making soap.

Elaopten. See ELÆOPTEN.

E-las'tic. [Lat. **Elas'ticus**; see ELASTICITY.] Having the property of elasticity, or springiness. The property of bodies which resume their original state or form when the mechanical cause which altered their form or volume has ceased to act.

Elastic Gum, or Indian Rubber. See CAOUTCHOUC.

E-las'tĭ-cin. [Lat. **Elastici'na**; from *elas'ticus*, "elastic."] The peculiar solid material of the elastic tissue. It is remarkable for its insolubility in all ordinary menstrua.

El-as-tiç'ĭ-tỹ. [From the Gr. ἐλαύνω, to "drive," to "strike" or "impel," as the string of a bow impels the arrow.] A property by which bodies return forcibly and of themselves to the same form or dimensions they possessed before their displacement or compression by external force. "Cohesion and elasticity appear to be *ultimate phenomena*, and referable to the direct action of causes,—viz., an attractive and a repulsive force."—(SIR J. HERSCHEL.)

El'a-ter.* [From the Gr. ἐλαύνω, to "drive," to "strike."] A genus of beetles of the order *Coleoptera* and the family *Elater'idæ*, often called snap-bugs. If one falls on its back, it throws itself into the air and recovers its feet, with a clicking sound. *Elater* is also a botanical term for threads mixed with the spores of liverworts.

E-lat'er-in. [Lat. **Elateri'na.**] A crystallizable matter found in the juice of *Elaterium*. It is the active principle of that drug. See ELATERINUM.

El-a-te-ri'num.* "Elaterin." The Pharmacopœial name (U.S. 1880) for a neutral principle extracted from elaterium, a substance deposited by the juice of the fruit of the *Ecbal'lium Elate'rium*. It occurs in small, colorless, shining, hexagonal scales or prisms, permanent in the air, odorless, and having a bitter and somewhat acrid taste. See next article.

El-a-te'rĭ-um.* [From the Gr. ἐλαύνω, to "drive," to "drive through," referring to its violent action on the alimentary canal.] The Pharmacopœial name (U.S. 1870) for a substance deposited by the juice of the fruit of the *Momor'dica Elate'rium*, otherwise called the *Ecbal'lium officina'rum* (or *officina'le*), or *Ecballium agreste*. Elaterium is a powerful hydragogue cathartic. In over-doses it operates with extreme violence both on the stomach and bowels, and sometimes causes death.

Elatinaceæ,* el-a-tĭ-na'she-ē. A natural order of annual plants, found in marshes in the four quarters of the globe. It includes *Elati'ne* (Water-Pepper).

Elatio,* e-la'she-o. [From the Lat. *ef'fero, ela'tum*, to "carry out," to "carry beyond bounds," to "transport."] Excessive elation of spirits; quixotism; a species of mental extravagance.

El'a-ỹl. [From the Gr. ἔλαιον, "oil," and ὕλη, "material."] The name given by Berzelius

to hydruret of acetyl, otherwise called *olefiant gas* and *etherine*.

El'bōw. [Lat. **Cu'bitus**; Fr. *Coude*, kood.] Originally, the angle formed by the arm when bent on the forearm:—commonly applied to the articulation of the arm with the forearm. More particularly it denotes the projection of the olecranon. See ANCON, and OLECRANON.

Elcosis.* See HELCOSIS.

Elder. See SAMBUCUS.

Elecampane. See INULA HELENIUM.

Elect. = *Electua'rium.** An "electuary."

Elective Affinity. See AFFINITY.

E-lec-triç'ĭ-tў. [Lat. **Electriç'itas, a'tis**; from the Gr. *ἤλεκτρον*, "amber," in which it was first observed.] A subtile fluid or principle produced by the friction of certain substances, such as glass, amber, sealing-wax, etc. It is one of the fundamental forces of nature, and one of the universal powers which nature seems to employ in the most important and secret operations. There are three forms of it,—viz., *Frictional Electricity*, *Galvanism*, and *Magnetism*. Electricity has been highly recommended as a stimulant in cases of paralysis, rheumatism, amaurosis, etc., and has sometimes proved very useful in such affections.

Electricity, Galvanic or **Voltaic.** See GALVANISM.

E-lec'trĭ-fy. [From Eng. *electric*, and the Lat. *fa'cio*, to "make" or "render."] To render electric; to affect by an electric shock; to affect with thrilling emotions or sensations.

E-lec'tro-Ċhem'ĭ-cal Ac'tion. Chemical action induced by electrical arrangements.

E-lec'trode. [From the Gr. *ἤλεκτρον*, "amber," and *ὁδός*, a "way."] In electro-chemical action the electrodes are the surfaces by which the electricity passes into or out from other media, they being regarded as the roads or ways along which the electric fluid travels. The poles of the voltaic battery are also termed electrodes.

E-lec'tro-Dў-nam'ics. The science which treats of the effects or phenomena of electricity in motion.

E-lec-tro-ġen'e-sis.* [From the Gr. *ἤλεκτρον*, "amber," and *γένω*, to "be born."] The production of electricity.

E-lec-tro-ġen'ic. [Lat. **Electrogen'icus.**] Belonging to electrogenesis.

E-lec-tro-ġe'nĭ-um.* [From the Gr. *ἤλεκτρον*, "amber," and *γεννάω*, to "produce."] The unknown cause of the phenomena of electricity; elec'trogen.

E-lec-trol'o-ġў. [Lat. **Electrolo'gia**; from the Gr. *ἤλεκτρον*, "amber," and *λόγος*, a "discourse."] A treatise on electricity; the science of electricity.

E-lec-trol'ў-sis.* [From the Gr. *ἤλεκτρον*, "amber," and *λύω*, to "loosen," to "dissolve."] Chemical decomposition by electricity.

E-lec'tro-lўtes. [From the same.] A term applied to bodies which can be decomposed directly by electricity.

E-lec'tro-Mag'net-ism is, properly, magnetism produced or intensified by galvanic electricity. Thus, when a bar of non-magnetic iron is surrounded by an insulated coil of wire, and a galvanic current is passed through the wire, the enclosed bar becomes strongly magnetic, but loses its magnetism as soon as the current ceases.

E-lec-trom'e-ter. [Lat. **Electrom'etrum**; from the Gr. *ἤλεκτρον*, "amber," and *μέτρον*, a "measure."] An instrument for ascertaining the quality and quantity of electricity in an electrified body.

E-lec'tro-Neg'a-tive. A term applied to a body which, in electrolysis, goes to the positive pole of the voltaic pile, as oxygen and acids.

E-lec-troph'o-rus.* [From the Gr. *ἤλεκτρον*, "amber," and *φορέω*, to "bear."] An "electricity-bearer." An apparatus employed in electric experiments, or an instrument used to obtain electricity by means of induction.

E-lec'tro-Phўs-ĭ-ol'o-ġў. The physiology of the phenomena which have for cause or result the production of electricity in the body of a person or animal. The therapeutic effects obtained by the aid of electricity are caused by the commotion or contraction excited by a Leyden jar or a galvanic current.

E-lec'tro-Plāt'ing. The art of covering articles formed of German silver or other cheap metal with a thin plate or coat of gold, silver, etc., by means of the electric current.

E-lec'tro-Pos'ĭ-tive. A term applied to a body which, in electrolysis, goes to the negative pole of the voltaic pile, as hydrogen and the salifiable bases.

E-lec'tro-punc'ture. An operation that consists in inserting into the part affected two or more wires which are connected with the electrodes of an electric or galvanic apparatus.

E-lec'tro-scope. [Lat. **Electros'copus, or Electrosco'pium**; from the Gr. *ἤλεκτρον*, "amber," and *σκοπέω*, to "inspect" or "examine."] An instrument for ascertaining the presence of electricity.

E-lec'tro-Thĕr-a-peu'tics. The employment of electricity as a therapeutic agent. It is founded on the principle that the application of electricity produced externally can either stimulate the action of our tissues when pathologically diminished, or cause the perturbation, diminution, or cessation of the same. Physicians employ, according to the necessity of the case,—first, either the *induction currents*, which excite the muscular contractility, and which cause an excitation, more or less vivid, of the nervous system. According to the case, the current of the first helix or the current of the second helix should be employed, for they have a different action on the tissues. The current of the second helix excites more vividly the cutaneous sensibility, and provokes more easily the contraction of the deep-seated muscles, while the current of the first helix excites more vividly the sensibility of the glandular organs situated under the skin. The number of interruptions should also be varied according to the pathological cases: it is only to produce a vivid excitation of the skin, or a tetanic contraction of the muscles, that we should employ quickly repeated shocks. Secondly, *continuous currents* (galvanic currents) may be employed so as to cause them to traverse a limb

or a particular part of the body. Exerting an influence on the walls of the capillaries, they modify the afflux of materials in the organs traversed, so as to produce physiological effects that are slow, but remarkable. These currents may even be called *sedative*, on account of the manner in which they allay neuralgic pains, those of lumbago, chronic rheumatism, etc.

By changing the direction of the current which traverses the organs, one can produce, on the contrary, congestive effects. They require the employment of piles composed of many elements, little active individually, but which by their great number develop a great electric *tension*, so that the currents can traverse the parts which are the worst conductors, as the epidermis and other tissues. This method is applicable to a greater number of affections than the preceding. Its effects are especially useful in treating internal affections, neuralgia, etc. The induction currents should be employed in affections of peripheric organs, and when it is desirable to provoke a localized excitation: the continuous currents can be used with great advantage in maladies of the central nervous system. The electric currents are very useful in cases of asphyxia, syncope, and chloroformic accidents. With the induction currents, artificial respiration is produced by electrifying the inspiratory muscles. The continuous currents have a more marked influence on the movements of the heart and the action of the nervous system, especially when the current is caused to ascend from the rectum to the mouth. In a general way, it may be stated that the induction currents, which physically may be defined as a molecular shock, should be preferred whenever one wishes to cause a powerful stimulation of the nerves or muscles, for they change abruptly and energetically the normal state of these tissues, while the continuous currents have an influence not of molecular shock, but of intimate chemical action. These last penetrate more deeply in the tissues, diffuse themselves with greater facility, and exert a more persistent influence; for after their cessation currents of polarization supervene. Their action on the nutrition of all the tissues is thus more energetic, and it may be affirmed that they constitute one of the most powerful means of modifying the nutritive conditions of the different tissues of the organism.

E-lec'tro-thĕr'a-pў. [From Eng. *electricity* and the Gr. *θεραπεία*, the "art or act of curing."] Treatment of diseases by means of electricity. See preceding article.

E-lec-trot'o-nus.* [From Eng. *electricity* and the Gr. *τόνος*, a "stretching."] A term applied to the condition of a motor nerve when a galvanic current is passed through it.

E-lec'tro-tўpe. [From the Gr. *ἤλεκτρον*, "amber" or "electricity," and *τύπος*, a "model" or "mould."] The process by which fac-simile medals are executed in copper by means of electricity. It consists in preparing for a negative plate models or moulds of objects to be copied, and in so arranging a battery or apparatus which generates the voltaic current as to deposit the metals in a compact form on the surface of the mould. *Electrotype* is also used as a verb.

E-lec'tro-Vī'tal (or **Neū'ro E-lec'tric**) **Cur'rents.** The name of two electric currents supposed to exist in animals,—the one external and cutaneous, moving from the extremities to the cerebro-spinal axis, the other internal, going from the cerebro-spinal axis to the internal organs.

E-lec'trum.* [Gr. *ἤλεκτρον.*] A term used by the ancients for *amber;* also for a mixture of four parts of gold and one part of silver.

Electuarium Aromaticum.* See CONFECTIO AROMATICA.

Electuarium Opii.* See CONFECTIO OPII.

Electuarium Sennæ.* See CONFECTIO SENNÆ.

E-lec'tu-a-rў. [Lat. **Electua'rium**; from *el'igo, elec'tum*, to "choose" or "pick out," because some agreeable substance is chosen as a vehicle for the medicine.] (Fr. *Électuaire*, ā'lĕk'tü'ĕr'.) A confection, or conserve. See LINCTUS.

El-e-men'ta-rў. [From the Lat. *elemen'tum*, an "element" or "principle."] Simple; having only one principle; rudimental; primary; relating to an element; explaining elements or first principles.

El'e-ments. [Lat. **Elemen'ta.**] Rudiments, or first principles; simple substances; substances which cannot be further decomposed. The number of chemical elements is about sixty-four. They are divided into two classes, *metals* and *metalloids*. In Astronomy, *elements* are the data required in order to compute the place or orbit of a planet, comet, etc. The elements which are essential constituents of the human body are oxygen, hydrogen, nitrogen, carbon, sulphur, phosphorus, fluorine, chlorine, sodium, potassium, calcium, magnesium, silicon, and iron.

El-e-men'tum,* plural **El-e-men'ta.** See ELEMENTS.

El'e-mi.* The name of a concrete resinous exudation from the *Canarium commune*,—chiefly imported from Manilla. Elemi has properties analogous to those of the turpentines, but is exclusively applied to external use. The Brazilian elemi is obtained from the *Icica Icicariba*.

El-e-phan-ti'a-sis.* [From the Gr. *ἐλέφας, ἐλέφαντος*, an "elephant."] A term applied to two distinct diseases of quite different character, now designated as *Elephantiasis Arabum* and *Elephantiasis Græcorum*.

ELEPHANTI'ASIS AR'ABUM,* the "Elephantiasis of the Arabians," otherwise called BUCNE'MIA, BARBA'DOES LEG, and EL'EPHANT-LEG. A disease characterized by the leg being much swollen and misshapen, and thus supposed to resemble that of an elephant.

ELEPHANTI'ASIS GRÆCO'RUM.* "Elephantiasis of the Greeks." An affection nearly allied to leprosy, if not the same disease. It is said to be characterized by shining tubercles on the face, ears, and extremities, with a thickened, rugous state of the skin, whence it has been termed *Elephant-skin;* also *Le'pra Ar'abum*.

El-et-ta'rĭ-a.* [From the Malay *Elettari*, the "lesser cardamom."] The name of a genus

of plants of the class *Monandria*, natural order *Zingiberaceæ*.

Eletta'ria Car-da-mo'mum.* The Lesser Cardamom-Plant, formerly referred to the genus *Alpinia*. It is a native of tropical India.

Élévateur, ā'lā'vā'tuR'. "Elevator." The French for LEVATOR, which see.

El-e-vā'tor,* or **El-e-va-to'rĭ-um.*** [From the Lat. *el'evo, eleva'tum*, to "lift or raise up."] (Fr. *Élévatoire*, ā'lā'vā'twāR'.) An instrument for raising depressed portions of bone.

E-lim'ĭ-nāte. [From the Lat. *e*, "out of" or "out from," and *li'men*, a "threshold."] Literally, to "put out" or "expel;" hence, to "send forth," to "throw off," to "set free." In Algebra, to cause a quantity or letter to disappear from an equation.

El-ĭ-quā'tion. [Lat. **Eliqua'tio, o'*nis*;** from *el'iquo, eliqua'tum*, to "melt down" or "melt out."] The process by which one substance more fusible than another is separated from it by applying heat in a sufficient degree.

E-lix'ir. [Said to be derived from the Arabic *El-ekser*, or *Al-eksir*, "quintessence."] A preparation similar to a compound tincture. Also an extract, or quintessence.

Elix'ir Auran'tii* (aw-ran'she-ī). "Elixir of Orange." The Pharmacopœial name (U.S. 1880) for a preparation made of oil of orange, sugar, alcohol, and water. It is a very agreeable vehicle for the administration of other remedies.

Elix'ir Păr-e-gŏr'ic. The *Tinctu'ra Cam'phoræ Compos'ita*. See PAREGORIC.

El-lipse'. [Gr. *ἔλλειψις*.] One of the conic sections, made by cutting a cone by a plane passing obliquely through its opposite sides; an oblong curve so made that the sum of the distances from any point of it to two fixed points (called *foci*) is always the same.

El-lip'soid. [From the Gr. *ἔλλειψις*, an "ellipse," and *εἶδος*, "form" or "resemblance."] A solid body of which all the plane sections are ellipses. Resembling an ellipse. In Botany, approaching an elliptical figure.

El-lip-soid'al. [From the same.] Resembling an ellipse, or an ellipsoid.

El-lip'tic, or **El-lip'tĭ-cal.** [From the Gr. *ἔλλειψις*, an "ellipse."] Oval or oblong, with the ends regularly rounded; oblong, with a flowing outline and the two ends alike in width.

Elm. [Lat. **Ul'mus.**] A genus of ornamental trees of the order *Urticaceæ* or *Ulmaceæ*, comprising several species which are natives of the United States. The common or White Elm (*Ulmus Americana*) is a noble tree with drooping, pendulous boughs.

E-lon'gate, or **E-lon'gāt-ed.** Lengthened or stretched out; exceeding the usual or average length.

E-lon'gāt-ing. In Botany, becoming gradually and finally elongated.

E-lu-trĭ-ā'tion. [Lat. **Elutria'tio, o'*nis*;** from *elu'trio, elutria'tum*, to "wash out," to "pour off."] The process of pulverizing metallic ores or other substances and mixing them with water, so that the lighter parts are separated from the heavier.

Elytra.* See ELYTRON.

El'ў-tra-tre'sĭ-a.* [From the Gr. *ἔλυτρον*, the "vagina," and *ἄτρητος*, "imperforate."] Imperforation of the vagina.

El-ў-tri'tis, *i'dis.** [From the Gr. *ἔλυτρον*, the "vagina."] Inflammation of the vagina.

El'ў-trœ-de'ma.* [From the Gr. *ἔλυτρον*, the "vagina," and *οἴδημα*, a "swelling" or "tumor."] Œdema of the vagina.

El'ў-tron,* plural **El'ў-tra.** [Gr. *ἔλυτρον*; from *ἑλύω*, to "wrap up," to "cover" or "conceal."] A sheath; the hard case or shell which covers the wings of coleopterous insects. Also the vagina.

El'ў-tro-plas'tic. [Lat. **Elytroplas'ticus.**] Belonging to elytroplasty.

El'ў-tro-plas-tў. [Lat. **Elytroplas'tia**; from the Gr. *ἔλυτρον*, the "vagina," and *πλάσσω*, to "form."] The operation of closing a vesico-vaginal fistulous opening by borrowing a flap from the labia or nates.

El-ў-trop-to'sis.* [From the Gr. *ἔλυτρον*, the "vagina," and *πτῶσις*, a "falling down."] Inversion of the vagina.

El'ў-tror-rha'ġĭ-a.* [From the Gr. *ἔλυτρον*, the "vagina," and *ῥήγνυμι*, to "burst forth."] Hemorrhage from the vagina.

El-ў-tror'rha-phў. [Lat. **Elytrorrha'phia**; from the Gr. *ἔλυτρον*, the "vagina," and *ῥάφη*, a "seam" or "suture."] The operation of closing the vagina by a suture in a case of prolapsus uteri.

El'ў-trum,* plural **El'ў-tra.** The same as ELYTRON, which see.

Emaciation, e-mā-she-ā'shŭn. [Lat. **Emacia'tio, o'*nis*;** from *ema'cio, emacia'tum*, to "make lean."] The state of being or becoming lean. See ATROPHIA, and MARASMUS.

Email, ā'māl'. The French term for ENAMEL, which see.

Em-a-nā'tion. [Lat. **Emana'tio, o'*nis*;** from *e*, "out" or "from," and *ma'no, mana'tum*, to "flow."] That which flows or proceeds from any substance; effluvium.

Emansio,* e-man'she-o. [From the Lat. *ema'neo, eman'sum*, to "remain out" or "absent."] Literally, "absence," or "staying away." See next article.

Eman'sio Men'sium* (men'she-ŭm). Retention of the catamenia. See AMENORRHŒA.

E-mar'cid. [From the Lat. *emarces'co*, or *emar'ceo*, to "wither away."] In Botany, flaccid; wilted.

E-mar'ġĭ-nate. [Lat. **Emargina'tus**; from *emar'gino*, to "take away the edge."] Having a notch at the margin, or notched at the summit:—applied to leaves and other organs.

E-mas'cu-late. [Lat. **Emascula'tus**; from *emas'culo, emascula'tum*, to "make impotent." See MAS.] Deprived of virility; incapable of generating.

E-mas-cu-lā'tion. [Lat. **Emascula'tio, o'*nis*;** from the same.] The act of rendering im-

potent by injury or removal of the generative organs.

Em-balm'ing. [From the Fr. *en*, "in," and the Eng. *balm*, a word used somewhat vaguely for any "fragrant ointment" or "aromatic substance."] A process by which a dead body is preserved against putrefaction. This process originally consisted in impregnating the body with balsams or spices.

Em-be'lĭ-a Ba-sâl' (or **Basaal**).* A shrub of the order *Myrsinaceæ*, a native of India. Its leaves and fruit are used in medicine by the Hindoos.

Em'blĭ-ca.* A genus of trees of the order *Euphorbiaceæ*. The only species of it is *Em'blica officina'lis*, or *Phyllan'thus Em'blica*, a native of India, the acid fruit of which is edible and is used in medicine. The wood of this tree is hard and valuable. Its fruit, called *myrobalan*, is used as a remedy for cholera and diarrhœa.

Emboîtement, ŏm'bwât'mŏn'. [Fr., from *boîte*, a "box."] The situation of one box within another:—a term used by Bonnet to designate that theory of generation by which thousands of individuals are supposed to lie one within the other, each possessing a complete series of organized parts.

Em-bo'lĭ-a.* [From the Gr. *ἐν*, "in" or "into," and *βάλλω*, to "throw," to "thrust."] A term employed by Virchow to denote the obstruction of an artery or vein in consequence of a piece or clot of coagulated blood being lodged in it. See EMBOLUS, and THROMBOSIS.

Em-bol'ic. [Lat. **Embol'icus.**] Pertaining to embolia.

Em'bo-lism. [Lat. **Embolis'mus.**] The same as EMBOLIA, which see.

Em'bo-lus.* [See EMBOLIA.] Literally, "anything thrown or thrust in," as a wedge or stopper:—applied to a piece of coagulum which has been formed in the large vessels in certain morbid conditions, and has afterwards been forced into one of the smaller arteries so as to obstruct the circulation. See THROMBUS.

Embonpoint, ŏm'bŏn'pwĂn'. (Fr.) Plumpness or fulness of flesh; the state of a person or animal in which the fulness of flesh or the quantity of fat is amply proportioned to the size or stature.

Em-brā'cing. In Botany, clasping with the base; amplexicaul.

Em-branch'ment. A term of French origin, used to denote a grand division in one of the kingdoms of nature, formed by the union of classes, as the *Vertebrates* among animals, and the *Cryptogams* among plants.

Em-bro-cā'tion. [Lat. **Embroca'tio, o'nis**; from the Gr. *ἐμβρέχω*, to "soak."] A fluid application for rubbing on any part; liniment.

Em'brў-o, o'nis.* [Gr. *ἔμβρυον*; from *ἐν*, "within," and *βρύω*, to "swell as buds," to "grow."] (Fr. *Embryon*, ŏm'brè'ŏn'.) Literally, "that which grows within." The fœtus *in utero* before the fifth month of pregnancy. Also the germ of a plant; the essential part of a seed. In many seeds the kernel is all embryo; in others part of it is albumen. The embryo consists of several parts,—the *radicle*, one or more *cotyledons*, and the *plumule*.

Em-brў-oc'to-nў. [From the Gr. *ἔμβρυον*, a "fœtus," and *κτείνω*, to "kill."] The same as EMBRYOTOMY.

Em-brў-og'e-nў. [From the Gr. *ἔμβρυον*, a "fœtus," and *γένω*, to "be born or produced."] The formation or production of an embryo.

Em-brў-og'ra-phy. [Lat. **Embryogra'phia**; from the Gr. *ἔμβρυον*, a "fœtus," and *γράφω*, to "write."] A description of the fœtus.

Em-brў-ol'o-gў. [Lat. **Embryolo'gia**; from the Gr. *ἔμβρυον*, a "fœtus," and *λόγος*, a "discourse."] A treatise on the fœtus, or embryo; the science which treats of the development of the embryo.

Em'brў-o-nate. [Lat. **Embryona'tus**; from *em'bryo*.] Having an embryo, germ, or *corculum*.

Em-brў-ot'o-mў. [Lat. **Embryoto'mia**; from the Gr. *ἔμβρυον*, a "fœtus," and *τέμνω*, to "cut."] The destruction or separation of any part or parts of the fœtus *in utero*, where circumstances exist to prevent delivery in the natural way.

Em-brў-ul'cĭ-a.* [From the Gr. *ἔμβρυον*, a "fœtus," and *ἕλκω*, to "draw."] Embryul'cy; the drawing or extracting of the fœtus, generally by destructive instruments, in order to effect delivery.

Em'er-ald. [Fr. *Émeraude*, ăm'rōd'; Gr. *σμάραγδος*.] A precious stone, a variety of beryl, a silicate of alumina and glucina. It occurs in six-sided prisms of a beautiful green color and vitreous lustre. It is harder than quartz. The finest modern emeralds are found in Colombia, South America, near Bogota and Muzo.

E-mer'sus.* [From the Lat. *emer'go, emer'sum*, to "rise out," as from water.] Emersed; raised up out of water:—applied to leaves and flowers of aquatic plants.

Em'er-ў. A variety of corundum. The powder, attached to brown paper, called *emery-paper*, is used for polishing, for preparing razor-strops, etc. Emery pulverized to grains of various degrees of fineness is used to grind or polish glass mirrors. Lapidaries, cutlers, and others use it in the form of "solid emery-wheels," which revolve with great velocity.

Em'e-sis,* or **E-me'sĭ-a.*** [From the Gr. *ἐμέω*, to "vomit."] The act of vomiting.

E-met'ic. [Lat. **Emet'icus**; from the same.] (Fr. *Émétique*, ă'mă'tĕk'.) Having power to excite vomiting. Also a medicine which causes vomiting. The principal emetics are tartar emetic, ipecacuanha, sulphate of zinc, alum, common salt, sulphate of copper, carbonate of ammonia, apomorphia, chamomile, and mustard.

E-met-ĭ-co-lo'gĭ-a.* [From the Lat. *emet'icus*, "emetic," and the Gr. *λόγος*, a "discourse."] A treatise on emetics.

Em'e-tin, or **Em'e-tĭne.** [Lat. **Emeti'na**; from *emet'icus*, "emetic."] The principle on which the emetic virtues of ipecacuanha depend. It is an alkaloid. Pure emetine is a white powder, inodorous, bitter, permanent in the air, very fusible, sparingly soluble in cold water, very soluble

in alcohol and chloroform. It is readily soluble in ether and the bisulphide of carbon. Emetine has been used in medicine for the same purposes as ipecac, but its operation is more violent, and if given in overdoses it is dangerous, and may be fatal.

Émétique. See EMETIC.

E-me'to-Ca-thar'tic. A medicine which produces vomiting and purging or defecation.

Em-e-tol'o-ğy. The doctrine or science of emetics.

E-mis'sion. [Lat. **Emis'sio, o'nis;** from *e*, "out" or "forth," and *mit'to, mis'sum*, to "send" or "throw."] A sending forth.

Em-men'a-gogue. [Lat. **Emmenago'gus;** from the Gr. *ἐμμήνια*, the "menses," and *ἄγω*, to "lead or carry away."] Having power to excite the discharge of the catamenia. Emmenagogues are agents which stimulate or restore the normal menstrual function of the uterus or cause expulsion of its contents. Among these agents are rue, borax, savin, myrrh, apiol, quinia, and ergot.

Em-me'nĭ-a.* [Gr. *ἐμμήνια*; from *ἐν*, "in," "at," "by," and *μήν*, a "month."] The menses, or catamenial discharge.

Em-me-nol'o-ğy. [Lat. **Emmenolo'gia;** from the Gr. *ἐμμήνια*, the "menses," and *λόγος*, a "discourse."] That branch of Physiology which treats of menstruation.

Em-me-tro'pĭ-a.* [From the Gr. *ἔμμετρος*, "in proper measure," "proportional" (from *ἐν*, "in," and *μέτρον*, a "measure"), and *ὄψις*, "vision."] The condition of a healthy eye, in which the refracting powers are in just measure, or proportion, to the position (distance) of the retina, and hence there is neither myopia nor presbyopia, but perfect vision.

E-mol'lĭ-ent. [Lat. **Emol'liens,** neuter plural **Emollien'tia;** from *emol'lio*, to "soften."] Softening or soothing an irritated surface, or one harsh from dryness. Emollient applications consist chiefly of oils, fomentations, poultices, vaseline, glycerin, etc.

E-mo'tion. [From the Lat. *emo'veo, emo'tum*, to "move out," to "disturb."] Mental excitement; agitation of the sensibilities or passions; perturbation:—an acceleration or irregularity of the circulation and respiration caused by a painful or agreeable impression.

Em-pa-the'ma, a*tis.* [From the Gr. *ἐμπαθής*, "in a passion or violent emotion."] Ungovernable passion,—including excitement, depression, and hare-brained passion, or the *manie sans délire* of Pinel.

Empetraceæ,* em-pe-tra'she-ē. A small natural order of exogenous shrubs, found in Europe and America. It comprises the *Em'petrum* and the *Core'ma*.

Em'phlў-sis.* [From the Gr. *ἐν*, "in" or "on," and *φλύσις*, an "eruption."] A vesicular tumor or eruption on the skin.

Em-phrax'is.* [From the Gr. *ἐμφράσσω*, to "block" or "stop up."] Obstruction; infarction.

Em-phy'ma, a*tis.* [From the Gr. *ἐν*, "in" or "within," and *φύω*, to "produce," to "grow."] A tumor originating below the integuments.

Em-phў-se'ma, a*tis.* [From the Gr. *ἐμφυσάω*, to "inflate."] A collection of air in the cellular tissue under the skin, or beneath the pleural and interlobular cellular tissue of the lungs. Subcutaneous emphysema is the distention of the spaces of the areolar tissue with air or any other gas. There is thus produced a swelling, in extreme cases extending to the subcutaneous tissue of the whole body. Unless the tension is great, the swelling is slightly lobulated: it is elastic, and, although the finger sinks readily into it, no lasting impression is left. The most common cause of this emphysema is a wound of the lungs from a broken rib or from a stab.

Em-phў-sem'a-tous. [Lat. **Emphysemato'sus;** from *emphyse'ma.*] Of the nature of emphysema. In Botany, bladdery; like a bladder.

Em-pĭr'ic. [Lat. **Empir'icus;** from the Gr. *ἐμπειρικός*, "experienced," "experimental."] A practitioner whose skill is the result of mere experience:—generally used synonymously for a quack.

Em-pĭr'ĭ-cal. [Lat. **Empir'icus.**] Belonging to an empiric, or to a quack.

Em-pĭr'ĭ-çiśm. [Lat. **Empiricis'mus;** from the Gr. *ἐμπειρία*, "experience."] (Fr. *Empirisme*, ŏm'pĕ'rĕzm'.) The knowledge of physic acquired by experience alone, as contradistinguished from that in which a thorough acquaintance with general principles (such as the great laws of physiology, chemistry, etc.) is combined with the knowledge derived from experience:—commonly applied, however, to quackery.

Em-plas'trum,* plural **Em-plas'tra.** [Gr. *ἔμπλαστρον*; from *ἐν*, "on," and *πλάσσω*, to "form," to "mould," to "spread."] (Fr. *Emplâtre*, ŏm'plâtr'.) An adhesive solid pharmaceutical preparation intended to be spread upon leather, muslin, etc., and applied externally to produce medicinal effects. It should be adhesive at the ordinary temperature of the human body.

Emplas'trum Ac-o-ni'ti.* "Aconite Plaster." The Pharmacopœial name (U.S. 1870) for a plaster made as follows: Take of aconite root, in fine powder, sixteen troyounces; alcohol, resin plaster, each a sufficient quantity. Moisten the aconite root with six fluidounces of alcohol, and pack it in a conical percolator; cover the surface with a disk of paper, and pour upon it ten fluidounces of alcohol. When the liquid begins to drop, cork the percolator, and, having closely covered it to prevent evaporation, set it aside in a moderately warm place for four days. Then remove the cork, and gradually pour on alcohol until two pints of tincture have been obtained, or the aconite root is exhausted. Distil off a pint and a half of alcohol, and evaporate the residue to a soft uniform extract by means of a water-bath. Add to this sufficient resin plaster, previously melted, to make the mixture weigh sixteen troyounces, and then mix them thoroughly. This plaster may be used when it is desired to produce a very powerful local anodyne effect.

Emplas'trum Ad-hæ-si'vum.* The EMPLASTRUM RESINÆ, which see.

Emplas'trum Am-mo-ni'a-ci.* "Ammoniac Plaster." The Pharmacopœial name (U.S. 1870, 1880) for a plaster made with ammoniac

and diluted acetic acid. It is stimulant. According to the Pharmacopœia of 1870, it is prepared as follows: Take of ammoniac, five troyounces; diluted acetic acid, half a pint. Dissolve the ammoniac in the diluted acetic acid, and strain, then evaporate the solution by means of a water-bath, stirring constantly until it acquires the proper consistence.

Emplas'trum Ammoni'aci cum Hy-drar'-gў-ro.* "Ammoniac Plaster with Mercury." The Pharmacopœial name (U.S. 1870, 1880) for a plaster containing ammoniac, mercury, olive oil, sublimed sulphur, and diluted acetic acid. This plaster unites with the stimulant power of ammonia the specific properties of the mercury.

Emplas'trum An-tĭ-mo'nĭ-i.* "Antimonial Plaster." The Pharmacopœial name (U.S. 1870) for a plaster made as follows: Take of tartrate of antimony and potassium, in fine powder, a troyounce; Burgundy pitch, four troyounces. Melt the pitch by means of a water-bath, and strain; then add the powder, and stir them well together until the mixture thickens on cooling. It is employed as a counter-irritant, and affords one of the most convenient methods of obtaining the local pustulating effects of tartar emetic.

Emplas'trum Ar'nĭ-çæ.* "Arnica Plaster." The Pharmacopœial name (U.S. 1880) for a plaster made as follows: Take of extract of arnica root, fifty parts; of resin plaster, one hundred parts. Add the extract to the plaster, previously melted by means of a water-bath, and mix them thoroughly. It is supposed to be useful in sprains and bruises. According to the Pharmacopœia of 1870, it is prepared as follows: Take of alcoholic extract of arnica, a troyounce and a half; resin plaster, three troyounces. Add the extract to the plaster, previously melted by means of a water-bath, and mix them.

Emplas'trum As-ą-fœt'ĭ-dæ.* "Asafetida Plaster." The Pharmacopœial name (U.S. 1880) for a plaster made of asafetida, thirty-five parts; lead plaster, thirty-five parts; galbanum, fifteen parts; yellow wax, fifteen parts; alcohol, one hundred and twenty parts. This plaster may be advantageously applied over the stomach or abdomen in cases of hysteria attended with flatulence. According to the Pharmacopœia of 1870, it is prepared as follows: Take of assafœtida, lead plaster, each, twelve troyounces; galbanum, yellow wax, each, six troyounces; alcohol, three pints. Dissolve the assafœtida and galbanum in the alcohol by means of a water-bath, strain the liquid while hot, and evaporate to the consistence of honey; then add the plaster and wax, previously melted together, stir the mixture well, and evaporate to the proper consistence.

Emplas'trum Bel-la-don'næ.* "Belladonna Plaster." The Pharmacopœial name (U.S. 1870, 1880) for a plaster made of belladonna root, alcohol, and resin plaster. It is a useful anodyne application in neuralgic and rheumatic pains, and in dysmenorrhœa. According to the Pharmacopœia of 1870, it is prepared as follows: Take of belladonna root, in fine powder, sixteen troyounces; alcohol, resin plaster, each, a sufficient quantity. Moisten the belladonna root with six fluidounces of alcohol, pack it in a conical percolator, and, having covered the surface with a disk of paper, pour on ten fluidounces of alcohol. When the liquid begins to drop from the percolator, close the lower orifice with a cork, and, having closely covered the percolator, set it aside for four days; then remove the cork, and gradually pour on alcohol until two pints of tincture have slowly passed. Distil off by means of a water-bath a pint and a half of alcohol; introduce the residue into a two-pint capsule, and evaporate on a water-bath to a soft uniform extract; ascertain its weight, and, having added sufficient resin plaster to make the whole weigh sixteen troyounces, mix them thoroughly.

Emplas'trum Cap'sĭ-çi.* "Capsicum Plaster." The Pharmacopœial name (U.S. 1880) for a plaster made of resin plaster and oleoresin of capsicum. Melt the resin plaster at a gentle heat, spread a thin and even layer of it on muslin, and allow it to cool; then, having cut off a piece of the required size, apply a thin coating of oleoresin of capsicum by means of a brush. It is used as a rubefacient.

Emplas'trum Fer'ri.* "Iron Plaster." The Pharmacopœial name (U.S. 1880) for a plaster made of hydrated oxide of iron dried at a temperature not exceeding 80° C. (176° F.), Canada turpentine, Burgundy pitch, and lead plaster. It is used as a strengthening plaster. According to the Pharmacopœia of 1870, it is prepared as follows: Take of subcarbonate of iron, three troyounces; lead plaster, twenty-four troyounces; Burgundy pitch, six troyounces. To the lead plaster and Burgundy pitch, previously melted together, add the subcarbonate of iron, and stir constantly until the mixture thickens on cooling.

Emplas'trum Gal'ba-ni.* "Galbanum Plaster." The Pharmacopœial name (U.S. 1880) for a plaster made of galbanum, sixteen parts; turpentine, two parts; Burgundy pitch, six parts; lead plaster, seventy-six parts. To the galbanum and turpentine, previously melted together and strained, add first the Burgundy pitch, then the lead plaster, melted over a gentle fire, and mix the whole thoroughly. It acts as an excellent local stimulant in chronic scrofulous enlargements of the glands and joints.

Emplas'trum Gal'bani Com-pos'ĭ-tum.* "Compound Galbanum Plaster." The Pharmacopœial name (U.S. 1870) for a plaster prepared as follows: Take of galbanum, eight troyounces; turpentine, a troyounce; Burgundy pitch, three troyounces; lead plaster, thirty-six troyounces. To the galbanum and turpentine, previously melted together and strained, add first the Burgundy pitch, and then the lead plaster, melted over a gentle fire, and mix the whole together. This is the same as the *Emplastrum Galbani* of 1880, except that the latter contains 4 per cent. more of lead plaster.

Emplas'trum Hy-drar'gў-rĭ.* "Mercurial Plaster." The Pharmacopœial name (U.S. 1880) for a plaster made of mercury, thirty parts; olive oil, ten parts; resin, ten parts; and lead plaster, fifty parts. Melt the olive oil and resin together, and, when the mixture has become cool, rub the mercury with it until the globules of the metal cease to be visible. Then gradually add the lead

plaster, previously melted, and mix the whole thoroughly. According to the Pharmacopœia of 1870, it is prepared as follows: Take of mercury, six troyounces; olive oil, resin, each, two troyounces; lead plaster, twelve troyounces. Melt the oil and resin together, and, when they have become cool, rub the mercury with them until globules of the metal cease to be visible. Then gradually add the lead plaster, previously melted, and mix the whole together. There is 30 per cent. of mercury in the mercurial plaster of 1880, and only 27.3 per cent. in that of 1870.

Emplas'trum Ieh-thy̆-o-col'læ.* "Isinglass Plaster." The Pharmacopœial name (U.S. 1880) for court-plaster, made of isinglass, ten parts; alcohol, forty parts; glycerin, one part; and water and tincture of benzoin, each, a sufficient quantity. It is used as a means of drawing small wounds together.

Emplas'trum O-pĭ'i.* "Opium Plaster." The Pharmacopœial name (U.S. 1880) for a plaster made of extract of opium, six parts; Burgundy pitch, eighteen parts; lead plaster, seventy-six parts; and water, eight parts. It is intended to relieve rheumatic and other pains in the parts to which it is applied. According to the Pharmacopœia of 1870, it is prepared as follows: Take of extract of opium, a troyounce; Burgundy pitch, three troyounces; lead plaster, twelve troyounces; water, a sufficient quantity. Mix the extract with three fluidounces of water, and evaporate by means of a water-bath to a fluidounce and a half. Add this to the Burgundy pitch and lead plaster, melted together by means of a water-bath, and continue the heat for a short time, stirring constantly, that the moisture may be evaporated.

Emplas'trum Pi'cis Bur-gun'dĭ-çæ.* "Burgundy Pitch Plaster." The Pharmacopœial name (U.S. 1870, 1880) for a plaster made of Burgundy pitch, ninety parts; and yellow wax, ten parts. Melt them together, strain the mixture, and stir constantly until it thickens on cooling. According to the Pharmacopœia of 1870, it is prepared as follows: Take of Burgundy pitch, seventy-two troyounces; yellow wax, six troyounces. Melt them together, strain, and stir constantly until they thicken on cooling.

Emplas'trum Pi'cis Can-a-den'sis.* "Canada Pitch Plaster." The Pharmacopœial name (U.S. 1880) for a plaster made as follows: Take of Canada pitch, ninety parts; of yellow wax, ten parts. Melt them together, strain the mixture, and stir constantly until it thickens on cooling. According to the Pharmacopœia of 1870, the directions for preparing this plaster, and the proportion of the ingredients, are the same as the preceding, with the single exception that Canada pitch is substituted for Burgundy pitch.

Emplas'trum Pi'cis cum Can-thăr'ĭ-de.* "Pitch Plaster with Cantharides." The Pharmacopœial name (U.S. 1880) for a plaster made of Burgundy pitch, ninety-two parts; and cerate of cantharides, eight parts. It is an excellent rubefacient, more active than Burgundy pitch. The proportion of cantharides in the present formula is less than in that of 1870. According to the Pharmacopœia of 1870, it is prepared as follows: Take of Burgundy pitch, forty-eight troyounces; cerate of cantharides, four troyounces. Heat the cerate as nearly as possible to 212° in a water-bath, and, having continued the heat for fifteen minutes, strain the cerate, add the pitch, and, melting them together by means of a water-bath, stir constantly until the mixture thickens on cooling.

Emplas'trum Plum'bi.* "Lead Plaster." The Pharmacopœial name (U.S. 1870, 1880) for a plaster made of oxide of lead, in very fine powder, thirty-two parts; olive oil, sixty parts; and water, a sufficient quantity. It is used chiefly in the preparation of other plasters. According to the Pharmacopœia of 1870, it is prepared as follows: Take of oxide of lead, in fine powder, thirty troyounces; olive oil, fifty-six troyounces; water, a sufficient quantity. Rub the oxide of lead with half its weight of the oil; add the mixture to the remainder of the oil, contained in a suitable vessel of a capacity equal to twice the bulk of the ingredients. Then add half a pint of boiling water, and boil the whole together until a plaster is formed, adding from time to time during the process a little boiling water, as that first added is consumed.

Emplas'trum Re-si'næ.* "Resin Plaster." The Pharmacopœial name (U.S. 1880) for adhesive plaster: Take of resin, in fine powder, fourteen parts; lead plaster, eighty parts; yellow wax, six parts. To the lead plaster and wax, melted together over a gentle fire, add the resin, and mix them. According to the Pharmacopœia of 1870, it is prepared as follows: Take of resin, in fine powder, six troyounces; lead plaster, thirty-six troyounces. To the lead plaster, melted over a gentle fire, add the resin, and mix them. It is much employed for retaining the sides of wounds in contact, and is popularly known by the name of *Adhesive Plaster*.

Emplas'trum Sa-po'nis.* "Soap Plaster." The Pharmacopœial name (U.S. 1880) for a plaster made as follows: Take of soap, dried, and in coarse powder, ten parts; of lead plaster, ninety parts; and of water, a sufficient quantity. Rub the soap with the water until brought to a semi-liquid state; then mix it with the lead plaster, previously melted, and evaporate to the proper consistence. Soap plaster is reputed to be discutient. According to the Pharmacopœia of 1870, it is prepared as follows: Take of soap, sliced, four troyounces; lead plaster, thirty-six troyounces; water, a sufficient quantity. Rub the soap with the water until brought to a semi-liquid state; then mix it with the lead plaster, previously melted, and boil to the proper consistence.

Emplâtre, ŏm'plâtr'. The French word for "plaster." See EMPLASTRUM.

Em-pres'ma, *atis.* [From the Gr. ἐν, "within," and πρήθω, to "burn."] Internal inflammation:—a term employed in its simple sense by Hippocrates, and revived by Dr. Good as a generic term for all those visceral inflammations generally distinguished by the suffix *-itis*.

Em-pros-thot'o-nos.* [From the Gr. ἐμπροσθεν, "forward," and τείνω, to "stretch."] Literally, "a stretching or bending forward." A variety of tetanus.

Em-pỹ-e'ma, *atis.* [From the Gr. ἐν, "within," and πύον, "pus."] A collection of pus in the cavity of the chest. This term is often conventionally used to denote any inflammatory effu-

sion in that situation which has assumed a chronic character.

Em-pў-e′sis.* [From the Gr. *ἐμπυέω*, to "suppurate."] A genus of diseases characterized by phlegmonous pimples, which gradually fill with purulent fluid, as *variola*, *varicella*, etc.

Em′pў-o-çēle.* [From the Gr. *ἐν*, "in," *πύον*, "pus," and *κήλη*, a "tumor."] A collection of pus within the scrotum.

Em-pў-om′pha-lus.* [From the Gr. *ἐν*, "in," *πύον*, "pus," and *ὀμφαλός*, the "navel."] A collection of pus about the navel.

Em-pў-reū′ma, a*tis.* [From the Gr. *ἐμπυρεύω*, to "kindle."] A peculiar disagreeable smell of animal and vegetable matter when burned in close vessels.

Em-pў-reū-mat′ic. [Lat. **Empyreumat′icus.**] Belonging to empyreuma.

E-mul′gent. [Lat. **Emul′gens, en′*tis*;** from *emul′geo*, *emul′sum*, to "milk out," to "strain" or "drain out."] Straining out:—applied to the vessels of the kidneys, supposed to strain the serum through the kidneys.

E-mul′sin, or **E-mul′sĭne.** [From the same.] The same as AMYGDALIN, which see.

E-mul′sion. [Lat. **Emulsio, o′*nis*;** from the same.] The expressed oil of seeds, or kernels, diffused through water by the medium of the sugar, mucilage, and fecula which they contain.

E-munc′to-rў. [Lat. **Emuncto′rius**; from *emun′go*, *emunc′tum*, to "blow the nose," to "cleanse."] A term applied to the excretory ducts of the body.

E′mys.* [Gr. Ἐμύς.] A genus of reptiles of the order *Chelonia*, comprising several species which are found in the United States and are called *Terrapins*, or turtles. The salt-water terrapin (*Emys palustris*) is prized by epicures.

En (*ἐν*). A Greek preposition signifying "in," or "within." Before *b*, *m*, and *p*, it is changed to *m*; as, *embolus*, something which is "thrown into" the arteries, veins, etc.

En-æ-o-re′ma, a*tis.* [From the Gr. *ἐναιωρέομαι*, to "float."] The *nubecula* which floats, or is suspended, in the middle of the urine.

En-am′el. [Fr. *Émail*, ā′mâl′.] A glass having an appearance like porcelain. *Enamel* is also a name of several opaque or semi-opaque vitreous materials used in glazing pottery, metals, and jewelry. Enamels are composed of metallic oxides combined with some fusible salt, or "flux." The term is also applied to the very hard, compact, white substance investing the crown of the teeth. See TOOTH.

En-an-the′sis.* [From the Gr. *ἐν*, "in," and *ἀνθύω*, to "blossom."] Rash exanthem, including scarlet fever, measles, and nettle-rash.

En-ar-thro′sis.* [From the Gr. *ἐν*, "in," and *ἄρθρον*, a "joint."] The ball-and-socket joint. A variety of the class *Diarthroses*.

En-can′this.* [From the Gr. *ἐν*, "in," and *κάνθος*, the "angle of the eye."] A small red excrescence on the *caruncula lachrymalis* and the semilunar fold of the conjunctiva.

Encanthus.* See ENCANTHIS.

En-çeph-a-la′ta.* [From the Gr. *ἐγκέφαλος*, the "brain."] A name sometimes applied to the *Vertebrata*, or highest of the grand divisions of animals, comprising such as have a brain enclosed in a case of bone.

En-çeph-a-li′tis, i*dis.* [From the Gr. *ἐγκέφαλος*, the "brain."] Inflammation of the brain and its membranes.

En-çeph′a-lo-çēle.* [From the Gr. *ἐγκέφαλος*, the "brain," and *κήλη*, a "tumor."] Protrusion of a portion of the brain through a preternatural opening in the skull; *hernia cerebri*.

En-çeph′a-loid. [Lat. **Encephaloi′des**; from the Gr. *ἐγκέφαλος*, the "brain," and *εἶδος*, a "form" or "resemblance."] Resembling the substance of the brain. *Encephaloid* is also the name of a kind of cancer, so called from its resemblance to brain-tissue. See CANCER.

En-çeph-a-lo-lo′ğĭ-a.* [From the Gr. *ἐγκέφαλος*, the "brain," and *λόγος*, a "discourse."] A description of the brain; also the science of the brain; encephalol′ogy.

En-çeph-a-lo′ma, a*tis.* [From the Gr. *ἐγκέφαλος*, the "brain."] *Hernia cerebri*.

En-çeph′a-lon.* [Gr. *ἐγκέφαλον*; from *ἐγκέφαλος*, the "brain."] The brain; the contents of the skull, consisting of the cerebrum, cerebellum, medulla oblongata, and membranes.

En-çeph-a-lo′sis.* The progress of encephaloma.

En-chon-dro′ma, a*tis.* [From the Gr. *ἐν*, "in" or "within," and *χόνδρος*, a "cartilage."] A cartilaginous tumor or growth proceeding from the bones, and, therefore, deep "within."

En-chon′drus.* [From the Gr. *ἐν*, "in," and *χόνδρος*, a "cartilage;" also a "grain."] Cartilaginous; enchon′drous. Also having grains; granular.

Enceinte, ŏN′sănt′. [From *enceindre*, to "surround."] The French term for PREGNANT.

En-çўst′ed. [From the Gr. *ἐν*, "in," and *κύστις*, a "bladder," a "sac" or "cyst."] Enclosed in a cyst, or sac:—applied to tumors; also to the *Trichina spiralis*.

En-dan′ğĭ-um* (or en-dan-jī′um). [From the Gr. *ἔνδον*, "within," and *ἀγγεῖον*, a "vessel."] The name of the serous membrane lining the inside of the blood-vessels.

En-dar-te-ri′tis.* [From the Gr. *ἔνδον*, "within," and *ἀρτηρία*, an "artery."] Inflammation of the internal coat of an artery:—written also *Endarteriitis*.

En-de-caġ′ў-nous. [From the Gr. *ἐνδεκα*, "eleven," and *γυνή*, a "woman," or "female."] Having eleven pistils or styles.

En-dec-an′drous. [From the Gr. *ἐνδεκα*, "eleven," and *ἀνήρ*, a "man," or "male."] Having eleven stamens.

En-de′mĭ-a.* [Fr. *Endémie*, ŏN′dā′mē′.] An endemic disease; a disease that prevails in a particular district either all the time, or at intervals, under the influence of a local cause, permanent or temporary.

En-dem'ic, En-de'mĭ-al. [Lat. **Endem'icus**, or **Ende'mius**; from the Gr. *ἐν*, "in," and *δῆμος*, a "people," a "district."] Belonging to a particular district:—applied to diseases that prevail in particular districts and which are due to special etiological conditions existing there. Plants that are indigenous to an island, state, etc., and are not found elsewhere, are called *endemic* with reference to that island or state.

En-der'mic, En-der-mat'ic. [Lat. **Ender'micus**, or **Endermat'icus**; from the Gr. *ἐν*, "in" or "on," and *δέρμα*, the "skin."] A term applied to the method of rubbing medicines into the skin, or sprinkling them on the denuded surface where a blister has previously been formed. The hypodermic syringe has rendered the endermic method almost obsolete.

En-do-ar-te-ri'tis.* The same as ENDARTERITIS, which see.

En-do-bran-ehĭ-a'tus.* [From the Gr. *ἔνδον*, "within," and *βραγχία*, "gills."] Endobran'chiate:—applied in the plural neuter (*Endobranchia'ta*) to a family of *Anellata* which have no external branchiæ.

En-do-car'dĭ-al. [Lat. **Endocardia'lis**; from the Gr. *ἔνδον*, "within," and *καρδία*, the "heart."] Within the heart.

En-do-car-di'tis, i*dis*.* [From the same.] Inflammation of the lining membrane of the heart. It may be either *acute* or *chronic*. It generally occurs in association with acute rheumatism; less frequently with the other acute specific febrile diseases, such as scarlet fever, erysipelas, etc. The physical signs of acute endocarditis are increased extent and frequency of the visible and palpable impulse, and peculiar murmurs and variations of the cardiac sounds.

En-do-car'dĭ-um.* [From the same.] The lining membrane of the heart.

En'do-carp. [Lat. **Endocar'pus**; from the Gr. *ἔνδον*, "within," and *καρπός*, "fruit."] In Botany, the inner layer of a pericarp; the *putamen*. The stone of a cherry is an endocarp.

En'do-ehrome. [From the Gr. *ἔνδον*, "within," and *χρῶμα*, "color."] The coloring-matter of plants, especially of the *Algæ and Fungi*:—sometimes applied to simple structures in phanerogamous plants.

En'do-derm. [From the Gr. *ἔνδον*, "within," and *δέρμα*, the "skin."] The inner layer of simple organisms.

En-do-gas-tri'tis, i*dis*.* [From the Gr. *ἔνδον*, "within," and *γαστήρ*, the "stomach."] Inflammation of the lining membrane of the stomach.

En'do-ġen. An endogenous plant.

En-doġ'e-nous. [Lat. **Endoġ'enus**; from the Gr. *ἔνδον*, "within," and *γένω*, to "be born," to "grow."] A term applied to stems which grow by the addition of new matter to the inside, so that the surface or outside is the oldest and hardest part. Such stems have no distinct bark or pith, and no concentric annual layers or rings. Endogens have only one cotyledon (hence called *monocotyledonous*), and mostly have leaves with parallel veins. They constitute the second class of phanerogamous plants. The palm-tree is an example of an endogenous plant.

En-do-lym'pha.* [From the Gr. *ἔνδον*, "within," and the Lat. *lym'pha*, "water."] The small portion of fluid in the labyrinth of the ear; en'dolymph.

En'do-me-tri'tis.* [From the Gr. *ἔνδον*, "within," and *μήτρα*, the "uterus."] Inflammation of the inner lining membrane of the uterus.

En'do-ne-phri'tis.* [From the Gr. *ἔνδον*, "within," and *νεφρός*, the "kidney."] Inflammation of the lining membrane of the pelvis of the kidney.

En'do-phle-bi'tis.* [From the Gr. *ἔνδον*, "within," and *φλέψ*, a "vein."] Inflammation of the inner coat of a vein.

En-do-phlœ'um.* [From the Gr. *ἔνδον*, "within," and *φλοίος*, "bark."] The *liber* of bark; the inner layer containing woody tissue.

En-do-phyl'lous. [From the Gr. *ἔνδον*, "within," and *φύλλον*, a "leaf."] Formed from within a sheathing leaf, as the young leaves of endogenous plants.

En'do-plast. [Lat. **Endoplas'ta**; from the Gr. *ἔνδον*, "within," and *πλάσσω*, to "form."] The contents of animal and vegetable cells, consisting of vesicular bodies, into which much nitrogen enters.

En-do-pleū'ra.* [From the Gr. *ἔνδον*, "within," and *πλευρά*, the "side."] The innermost skin of a seed-coat.

En-do-rhi'zous. [Lat. **Endorhi'zus**; from the Gr. *ἔνδον*, "within," and *ῥίζα*, a "root."] Having the radicle enclosed in a sheath.

En'do-scope. [From the Gr. *ἔνδον*, "within," and *σκοπέω*, to "examine."] An instrument designed to examine the interior of cavities which have a narrow orifice, such as the urethra, the bladder, the neck of the uterus, and accidental cavities. It consists—1, of a tube enclosing a metallic mirror inclined at 45° on the axis of the instrument, and perforated in its centre; this tube terminates at one end by a socket which serves to adapt it to the sounds which are introduced in the organs, and at the other end by a diaphragm pierced with a central aperture; 2, of a gasogen lamp placed in a lantern, connected with the preceding piece by a lateral tube; the light of this lamp, reflected by a concave reflector, falls on the inclined mirror, which directs it towards the objects placed at the end of the sound; 3, of a lens by which the luminous rays are converged on the object which we wish to illuminate.

En'do-Skel'e-ton. [From the Gr. *ἔνδον*, "within," and *σκελετόν*, a "skeleton."] The ordinary skeleton of *Vertebrata*.

En-dos'mic. [Lat. **Endos'micus.**] Belonging to endosmose.

En-dos-mom'e-ter. [Lat. **Endosmom'etrum**; from *endosmo'sis*, and the Gr. *μέτρον*, a "measure."] An instrument for showing the gradual progress of endosmose.

En-dos-mose'. [Lat. **Endosmo'sis**; from the Gr. *ἔνδον*, "in" or "within," and *ὠσμός*, "impulsion."] A peculiar movement in liquids separated by a membrane, by which the rarer

fluid passes through the membranous partition into the cavity containing the denser fluid. "The rise of the sap [of plants] into the leaves apparently is to a great degree the result of a mode of diffusion called *endosmose*."—(GRAY.)

En'do-sperm. [Lat. **Endosper'ma, a***tis;* from the Gr. *ἔνδον*, "within," and *σπέρμα*, a "seed."] The albumen of a seed; the albumen between the integuments and the embryo of a plant.

En-dos'te-um.* [From the Gr. *ἔνδον*, "within," and *ὀστέον*, a "bone."] Literally, that which is within the bones. Medullary membrane.

En'dos-tome. [Lat. **Endos'toma, a***tis;* from the Gr. *ἔνδον*, "within," and *στόμα*, a "mouth."] The inner opening of the ovule of a plant; the orifice in the inner coat of an ovule.

En'dos-tome. [Lat. **Endos'toma, a***tis;* from the Gr. *ἔνδον*, "within," and the Lat. *oste'ma*.] A chronic tumor within a bone.

En-do-the'lĭ-um.* [See EPITHELIUM.] A term applied to the essential constituent of a blood-vessel, believed to be a cell-membrane similar to the epithelial membrane.

End'-Plates, Mo-to'rĭ-al. A term applied to the small bodies in which the nerves of motion terminate. They consist essentially of an expansion of the nerve-fibre.

Enduit. See COATED.

Enecia,* e-ne'she-a. [From the Gr. *ἠνεκής*, "continuous."] A generic term employed by Dr. Good to denote continued fever.

En'e-ma, a*tis.** [From the Gr. *ἐνίημι*, to "inject."] A medicine thrown into the rectum; a clyster, or glyster; an injection.

En-ep-ĭ-der'mic. [From the Gr. *ἐν*, "on," and the Lat. *epider'mis*, the "cuticle."] A term denoting the application of medicines, such as plasters, blisters, etc., to the skin. See ENDERMIC.

En'er-ġy. [Lat. **Energi'a**; Gr. *ἐνεργεία* (from *ἐνεργέω*, to "be active").] The force exercised by any power; as, *nervous energy, vital energy*, etc. Power to operate; vigor; inherent power and ability to effect physical changes and overcome resistance. The phrase *transmutation of energy* is employed to express the theory that any one of the physical forces or fundamental powers of nature may be converted into one of the others. The voltaic arc is an example of the conversion of electricity into radiant heat and light.

E-ner'vāt-ing (or en'er-vāt-ing). [Lat. **Ener'vans**; from *ener'vo, enerva'tum*, to "weaken."] Destroying the energy of the nervous system.

E-ner'vis,* E-ner'vĭ-us.* [From the Lat. *e*, negative, and *ner'vus*, a "nerve."] Having no rib, or nerve; ener'vious :—applied to leaves.

Enfant, Enfance. See INFANT, and INFANCY.

Engelure, ôNzh'lüR'. The French term for CHILBLAIN, which see.

En-gorġe'ment. [From the French *engorger*, to "choke up."] A state of vascular congestion. OBSTRUCTION, which see.

En-ne-a-ġyn'ĭ-ous, or **En-ne-aġ'yn-ous.** [Lat. **Enneagyn'ius**; from the Gr. *ἐννέα*, "nine," and *γυνή*, a "woman" or "female."] A term applied to an order of plants having nine pistils.

En-ne-an'drĭ-a.* [From the Gr. *ἐννέα*, "nine," and *ἀνήρ*, a "man" or "male."] The ninth class of plants in Linnæus's system, comprising those which have nine stamens. These plants are called *enneandrous*.

En-ne-a-pet'a-lous. [Lat. **Enneapet'alus**; from the Gr. *ἐννέα*, "nine," and *πέταλον*, a "petal."] Having nine petals.

Ennui, ån'wē'. (Fr.) Weariness; irksomeness; languor of mind from the lack of occupation.

E-node'. [Lat. **Eno'dis**; from *e*, negative, and *no'dus*, a "knot."] Having no knots, or joints :—applied to the stems of certain plants.

En-os-to'sis.* [From the Gr. *ἐν*, "in," and *ὀστέον*, a "bone."] A tumor occurring in the medullary canal of a bone.

Ens.* [The present participle of the Lat. *es'se*, to "be."] A term in Chemistry denoting a substance supposed to contain in a small compass all the virtues of the ingredients from which it is extracted.

Ens Mar'tis,* Fer'rum Am-mo-nĭ-a'tum.* Ammoniated iron, or martial flowers of the muriate of ammonia and iron.

Ens Pri'mum.* The "primal essence." A name given by the alchemists to a tincture which they supposed to have the power of transmuting the baser metals to gold.

Ens Ven'e-ris.* [From *Ve'nus*, an alchemical name for "copper."] The ancient designation of the muriate of ammonia and copper.

En-sa'tæ.* [The plural feminine of the Lat. *ensa'tus;* see next article.] A name given by Linnæus to a natural order of endogenous plants, including the *Iris, Gladiolus, Ixia*, etc.

En'sate. [Lat. **Ensa'tus**; from *en'sis*, a "sword."] Having the form of a sword :—applied to the leaves of plants.

En'sĭ-form. [Lat. **Ensifor'mis**; from *en'sis*, a "sword," and *for'ma*, a "form."] Like a sword; sword-shaped, as the leaves of the *Iris*. The same as ENSATE.

En'siform Car'tĭ-laġe. The cartilaginous extremity of the sternum, or breast-bone.

En-tan'gled. Intermixed in so irregular a manner as not to be readily disentangled, such as the hairs, roots, and branches of many plants.

En-ta'sĭ-a.* [From the Gr. *ἔντασις*, a "violent straining."] A term applied by Good as a generic name for trismus, tetanus, etc.

En'ta-sis.* [From the Gr. *ἐντείνω*, to "stretch."] A term denoting tension, and applied by Good to constrictive spasm, cramp, locked-jaw, etc.

En'ter-a.* [From the Gr. *ἔντερα*, the plural of *ἔντερον*, an "intestine."] The bowels, or intestines.

En-ter-ăl'ġĭ-a.* [From the Gr. *ἔντερον*, an "intestine," and *ἄλγος*, "pain."] En'teralgy; colic; nervous pain in the bowels. The terms

enteralgia and *colic*, generally regarded as synonymous, include all forms and degrees of paroxysmal intestinal pain in cases where there is no febrile disorder.

En-tĕr'ic. [Lat. **Enter'icus**; from the Gr. *ἔντερον*, an "intestine."] (Fr. *Entérique*, ɔN'tà'rĕk'.) Belonging to the intestines.

En-tĕr'ĭ-ca.* [From the same.] An order in Good's nosology, comprising diseases of the alimentary canal.

En-ter-i'tis, *i*dis.* [From the same.] Inflammation of the bowels. A genus of the order *Phlegmasiæ*, class *Pyrexiæ*, of Cullen's nosology. Under this term are included all those structural changes in the mucous membrane of the intestinal tract which follow the application of an abnormal irritant, provided that the irritant be not sufficiently intense to cause absolute destruction of tissue. Such changes will involve more or less all the tissue-elements of the mucous membrane, and may extend to the muscular, or even to the peritoneal, coat. As a rule, the term *enteritis* is restricted to inflammation of the small intestines.

En'ter-o-çēle.* [From the Gr. *ἔντερον*, an "intestine," and *κήλη*, a "tumor."] Hernia in which a portion of intestine is protruded.

En'ter-o-co-lī'tis.* [From the Gr. *ἔντερον*, an "intestine," and the Lat. *co'lon*.] Inflammation of the (small) intestines and colon.

En'ter-o-dўn'ĭ-a.* [From the Gr. *ἔντερον*, an "intestine," and *ὀδύνη*, "pain."] Pain in the intestines.

En'ter-o-e-pip'lo-çēle.* [From the Gr. *ἔντερον*, an "intestine," *ἐπίπλοον*, the "omentum," and *κήλη*, a "tumor."] Hernia of the intestine and omentum.

En-ter-og'ra-phў. [Lat. **Enterogra'phia**; from the Gr. *ἔντερον*, an "intestine," and *γράφω*, to "write."] A description of the intestines.

En'ter-o-hў'dro-çēle.* [From the Gr. *ἔντερον*, an "intestine," and the Lat. *hy'drocele*.] Ordinary hernia complicated with hydrocele.

En'ter-o-lĭ-thi'a-sis.* [From the Gr. *ἔντερον*, an "intestine," and *λιθίασις*, "formation of stone."] The formation of intestinal concretions.

En-ter-ol'ĭ-thus.* [From the Gr. *ἔντερον*, an "intestine," and *λίθος*, a "stone."] Any kind of concretion generated in the stomach and bowels.

En-ter-ol'o-ġў. [Lat. **Enterolo'gia**; from the Gr. *ἔντερον*, an "intestine," and *λόγος*, a "discourse."] That branch of science (anatomical or physiological) which treats of the intestines.

En-ter-om'pha-lus.* [From the Gr. *ἔντερον*, an "intestine," and *ὀμφαλός*, the "umbilicus."] Umbilical intestinal hernia.

En'ter-o-pa-răl'ў-sis.* [From the Gr. *ἔντερον*, an "intestine," and the Lat. *paral'ysis*.] Paralysis of the intestines.

En'ter-o-plas'tў. [From the Gr. *ἔντερον*, an "intestine," and *πλάσσω*, to "form."] A term applied to operations for restoring an intestine.

En'ter-or-rha'ġĭ-a.* [From the Gr. *ἔντερον*, an "intestine," and *ῥήγνυμι*, to "burst forth."] Intestinal hemorrhage.

En-ter-or'rha-phў. [Lat. **Enterorrha'phia**; from the Gr. *ἔντερον*, an "intestine," and *ῥαφή*, a "suture."] The stitching or sewing together of the divided edges of an intestine.

En'ter-or-rhœ'a.* [From the Gr. *ἔντερον*, an "intestine," and *ῥέω*, to "flow."] Undue increase of the mucous secretion of the intestines.

En-ter-os'che-o-çēle.* [From the Gr. *ἔντερον*, an "intestine," *ὄσχεον*, the "scrotum," and *κήλη*, a "tumor."] Scrotal hernia.

En'ter-os-te-no'sis.* [From the Gr. *ἔντερον*, an "intestine," and *στενώσις*, "straitening" or "stricture."] Stricture of the intestines.

En-ter-ot'o-mў. [Lat. **Enteroto'mia**; from the Gr. *ἔντερον*, an "intestine," and *τέμνω*, to "cut."] Any cutting operation on the intestines.

En'ter-o-zo'on.* [From the Gr. *ἔντερον*, an "intestine," and *ζῶον*, an "animal."] An animal living in the intestines.

En-thet'ic. [Lat. **Enthet'icus**; from the Gr. *ἐν*, "in," and *τίθημι*, to "place."] A term applied to diseases arising from a morbific virus being implanted in the system, as syphilis, leprosy, etc.

En-tire'. [Lat. **In'teger**; Fr. *Entier*, ɔN'tę-à'.] In Botany, a term applied to leaves, etc., the margin of which is an even line not toothed, notched, or incised.

En'tĭ-tў. [From the Lat. *esse*, to "be," and *ens*, *en'tis*, "being."] A being or existence; a reality.

En-to-mog'ra-phў. [Lat. **Entomogra'phia**; from the Gr. *ἔντομον*, an "insect," and *γράφω*, to "write."] A description of insects.

En'to-moid. [Lat. **Entomoi'des**; from the Gr. *ἔντομον*, an "insect," and *εἶδος*, a "form" or "resemblance."] Resembling an insect.

Entomoline. See CHITINA.

En-to-mol'o-ġў. [Lat. **Entomolo'gia**; from the Gr. *ἔντομον*, an "insect," and *λόγος*, a "discourse."] The science of insects; that department of Zoology which treats of insects.

En-to-mom'e-ter. [Lat. **Entomom'etrum**; from the Gr. *ἔντομον*, an "insect," and *μέτρον*, a "measure."] An instrument for measuring the parts of insects.

En-to-moph'a-gous. [Lat. **Entomoph'agus**; from the Gr. *ἔντομον*, an "insect," and *φάγω*, to "eat."] Eating, or feeding on, insects.

En-to-mos'tra-cous. [Lat. **Entomos'tracus**; from the Gr. *ἔντομον*, an "insect," and *ὄστρακον*, a "shell."] Insects with shells:—applied to a class or division of *Crustacea*.

En-to-mot'o-mў. [Lat. **Entomoto'mia**; from the Gr. *ἔντομον*, an "insect," and *τέμνο*, to "cut."] The dissection of insects.

En'to-phўte. [For etymology see next article.] A name given to parasitic plants which grow in the interior of the body of an animal, especially in the intestines. Some species of *Algæ* live only in the intestines. The term is also applied to a plant which grows within another plant, as some fungi.

En-toph'ў-tous. [Lat. **Entoph'ytus**; from the Gr. *ἐντός*, within," and *φυτόν*, a "plant."] Growing within a plant:—applied to parasitical fungi.

En-top-tĕr'ў-goid. [Lat. **Entopterygoi'des**; from the Gr. *ἐντός*, "within," and the Lat. *pterygoi'des*.] A term applied by Owen to the internal pterygoid process of the sphenoid bone.

En-top'tic. [Lat. **Entop'ticus**; from the Gr. *ἐντός*, "within," and *ὀψις*, "sight," "vision."] Relating to the sight of objects within the eye itself, as of the blood-vessels in the retina.

Entorse, ŏN'tORSS'. [From the Fr. *en*, "in" or "upon," and the Lat. *tor'queo, tor'tum*, to "twist."] The French term for a SPRAIN, which see.

En-to-zo'a,* the plural of ENTOZOON.

En-to-zo'on.* [From the Gr. *ἐντός*, "within," and *ζῶον*, an "animal."] An animal that lives within another:—applied in the plural (*Entozo'a*) to a class or division of articulated animals. Among the most important and common Entozoa are the *Tæ'nia so'lium* (the ordinary tape-worm), the *As'caris lumbricoi'des*, the *As'caris vermicula'ris* (or thread-worm), the *Dis'toma hepat'icum*, and the *Trichi'na*.

En'trails. [Fr. *Entrailles*, ŏN'trâl'; Gr. *ἐντερον*, an "intestine."] The viscera enclosed in the splanchnic cavities, especially those in the abdomen.

En-tro'pĭ-um.* [From the Gr. *ἐν*, "in," and *τρέπω*, to "turn."] A disease in which the eyelash and eyelid are turned in towards the eyeball.

E-nu'cle-ate. [Lat. **Enuclea'tus**; from *e*, "out of," and *nu'cleus*, a "kernel."] A term applied to tumors taken from the substance in which they were embedded, like a kernel from its shell.

En-u-re'sis.* [From the Gr. *ἐνουρέω*, to "be incontinent of urine."] Incontinency of urine. A genus of the order *Apocenoses*, class *Locales*, of Cullen's nosology.

En'vel-ope. A covering; a wrapper. In Botany, a protecting organ. The calyx and corolla are the *floral envelopes*.

E'o-cēne. [From the Gr. *ἠώς*, the "dawn," and *καινός*, "recent."] The lower Tertiary strata, regarded as the beginning or dawn of the existing (or recent) condition of creation, on account of the small proportion of living species of animals found in them. (Some authorities, however, state that there are no living species to be found in them.)

Epacridaceæ,* e-pak-re-da'she-ē. A natural order of Exogens, mostly shrubs, found in Australia and Polynesia, and remarkable for the beauty of the flowers. It comprises the *Ep'acris*, several species of which are very beautiful and are cultivated in European greenhouses.

Ep-an'e-tus.* [From the Gr. *ἐπανίημι*, to "relax," to "remit."] A term denoting "remittent," and applied by Dr. Good to remittent fever, including the mild form, the malignant form, and hectic fever.

Épaule, ā'pōl'. The French for SHOULDER.

Ep-en-çe-phal'ic. [Lat. **Epencephal'icus**; from the Gr. *ἐπί*, "upon," and *ἐγκέφαλος*, the "brain."] Situated on or over the contents of the head or the brain:—the same as NEUROCCIPITAL.

Ep-en'dў-ma, a*tis.** [From the Gr. *ἐπενδύω*, to "clothe upon," to "cover."] Literally, an "upper garment." The lining membrane of the ventricles of the brain; also that of the cerebro-spinal axis.

E-per'u-a.* A genus of trees of the order *Leguminosæ*, consisting of a single species, the *Eper'ua falca'ta*, a large timber-tree of Guiana. Its bark is bitter, and is used as an emetic by the Indians.

Eph'e-lis,* plural **E-phel'ĭ-dēs.** [From the Gr. *ἐπί*, "upon," and *ἥλιος*, the "sun."] Freckles; sunburn. See ÆSTATES.

E-phem'er-a.* [From the Gr. *ἐπί*, "in," "for," and *ἡμέρα*, a "day."] A fever which runs its course of the cold, hot, and sweating stages in twelve hours. *Ephemera* is also the name of a genus of insects (popularly called the "day-fly"), the entire period of whose existence in their perfect state is only about twenty-four hours.

E-phem'er-al. [Lat. **Ephem'erus**; from the same.] Enduring one day or less:—applied to fevers and flowers. See EPHEMERA.

E-phem'er-is,* plural **Eph-e-mĕr'ĭ-dēs.** [From the Gr. *ἐπί*, "in," "for," and *ἡμέρα*, a "day."] A nautical almanac; a table which assigns the place of a celestial body at noon for a number of days. An ephemeris of a fixed star is a table of its apparent right ascension and declination at equal intervals of time. The "American Ephemeris and Nautical Almanac" is published annually by the government of the United States.

Eph-ĭ-al'tēs.* [From the Gr. *ἐφάλλομαι*, to "leap upon."] Nightmare, or incubus; a distressing state of feeling during sleep, as of fright, and inability to call for help, not unfrequently attended with a sense of suffocation; *Oneirodyn'ia gra'vans*.

Eph-ĭ-dro'sis.* [From the Gr. *ἐπί*, intensive, and *ἱδρόω*, to "sweat."] Violent, morbid perspiration. A genus of the order *Apocenoses*, class *Locales*, of Cullen's nosology.

Ephippium.* See SELLA TURCICA.

Ep'ĭ. A Greek preposition signifying "on" or "upon," "over," "at," "by," "for," "after." It is sometimes intensive. The final *i* is generally dropped before a word beginning with a vowel or with *h*, as *epencephalic* for *epiencephalic*; *ephidrosis* for *epihidrosis*, etc.

Ep'ĭ-an. The same as FRAMBŒSIA, which see.

Ep-ĭ-bran'chĭ-al. [Lat. **Epibranchia'lis**; from the Gr. *ἐπί*, "upon," and the Lat. *branchia'lis*, "branchial."] A term applied by Owen to the upper portion of the branchial arch.

Ep-ĭ-can'thus.* [From the Gr. *ἐπί*, "upon," and *κανθός*, the "corner of the eye."] A fold of skin covering the inner canthus.

Ep'ĭ-carp. [Lat. **Epicar'pus**; from the Gr. *ἐπί*, "upon," and *καρπός*, "fruit."] The outermost layer of the fruit or pericarp, commonly called the *skin* of fruits. It corresponds with the under surface of the carpellary leaf. See LEAF.

Ep-ĭ-car'pĭ-um.* The same as EPICARP, which see.

Ep-ĭ-chro'sis.* [From the Gr. *ἐπί*, "upon," and *χρώζω*, to "paint."] A macular or spotted

state of the skin, or a simple discoloration of its surface.

Ep-ĭ-cli'nal. [From the Gr. *ἐπί*, "upon," and *κλίνη*, a "bed."] Placed upon the disk or receptacle of a flower.

Ep-ĭ-col'ic. [Lat. **Epicol'icus**; from the Gr. *ἐπί*, "upon," and *κῶλον*, the "colon."] Over the course of the colon on each side.

Ep-ĭ-con'dyle. [Lat. **Epicon'dylus**; from the Gr. *ἐπί*, "upon," and *κόνδυλος*, a "condyle."] The external protuberance of the inferior end of the *os humeri*.

Ep-ĭ-co-rol'le-us.* [From the Gr. *ἐπί*, "upon," and the Eng. *corol'la*.] A term applied to monopetalous, dicotyledonous plants, in which the stamens are epigynous, or inserted upon the ovary.

Ep-ĭ-crā'nĭ-al. [Lat. **Epicra'nius.**] Situated on the cranium; belonging to the epicranium.

Ep-ĭ-cra'nĭ-um.* [From the Gr. *ἐπί*, "upon," and *κρανίον*, the "cranium."] The integuments, aponeurosis, and muscular expansion upon the cranium; the scalp.

Ep-ĭ-cra'nĭ-us.* A name sometimes given to the *occipito-frontalis* muscle, from its covering the cranium.

Ep-ĭ-dem'ic. [Lat. **Epidem'icus**; from the Gr. *ἐπί*, "upon," and *δῆμος*, a "people."] (Fr. *Épidémique*, ā'pĕ'dā'mĕk'.) A term applied to any disease which seems to be upon the entire population of a country at one time, as distinguished, on the one hand, from *sporadic* disease (or that which occurs in insulated cases), and, on the other, from *endemic* disease, or that which is limited to a particular district. Medical writers do not always agree in their definitions of *epidemic*. Cholera and small-pox are epidemics.

Ep-ĭ-dem-ĭ-og'ra-phy. [Lat. **Epidemiogra'phia**; from *epide'mia*, "epidemic diseases," and the Gr. *γράφω*, to "write."] A description of epidemic diseases.

Ep-ĭ-dem-ĭ-ol'o-ġy. [Lat. **Epidemiolo'gia**; from *epide'mia*, "epidemic diseases," and the Gr. *λόγος*, a "discourse."] A dissertation on epidemic diseases; the science of epidemic diseases.

Ep'ĭ-dem-y. [Lat. **Epide'mia**; from the Gr. *ἐπί*, "upon," and *δῆμος*, a "people."] (Fr. *Épidémie*, ā'pĕ'dā'mĕ'.) An epidemic disease.

Ep-ĭ-den'drum.* [From the Gr *ἐπί*, "upon," and *δένδρον*, a "tree."] A vast genus of orchids, natives of South America and Mexico, mostly epiphytes on trees. It comprises more than three hundred species, many of which are prized for the beauty of their flowers.

Ep-ĭ-der'mic [Lat. **Epider'micus**], or **Ep-ĭ-der'mal.** Belonging to the epidermis.

Epidermidoid. The same as EPIDERMOID.

Ep-ĭ-der'mis, *i.dis.** [From the Gr. *ἐπί*, "upon," and *δέρμα*, the "skin."] The external covering of the body; the cuticle, or scarf-skin: —applied in Botany to the skin of a plant, a layer or a thin membrane covering every part of the plant.

Ep-ĭ-der'moid. [Lat. **Epidermoi'des**; from *epider'mis*, and the Gr. *εἶδος*, a "form" or "resemblance."] Resembling the epidermis.

Ep-ĭ-did'ў-mis, *i.dis.** [From the Gr. *ἐπί*, "upon," and *δίδυμοι*, the "testicles."] An oblong substance formed by numerous convolutions of the *vas deferens*, attached to the upper part of the testicle by vessels and the reflected layer of the *tunica vaginalis*.

Ep-ĭ-did-ў-mi'tis.* Inflammation of the epididymis.

Ep-ĭ-ġæ'ą (or **Ep-ĭ-ġe'ą**) **Re'pens.*** The Trailing Arbutus, an evergreen plant of the order *Ericaceæ*, a native of Pennsylvania and other Atlantic States. Its flowers are beautiful and fragrant; the leaves are diuretic. It blooms in early spring.

Ep-ĭ-gas-trăl'ġĭ-ą.* [From the Lat. *epigas'trium*, and the Gr. *ἄλγος*, "pain."] Pain in the epigastrium.

Ep-ĭ-gas'tric. [Lat. **Epigas'tricus.**] Belonging to the epigastrium.

Ep-ĭ-gas'trĭ-um.* [From the Gr. *ἐπί*, "upon," and *γαστήρ*, the "stomach."] That part of the abdomen immediately over the stomach and below the diaphragm.

Ep-ĭ-gas'tro-çēle.* [From the Lat. *epigas'trium*, and the Gr. *κήλη*, a "tumor."] Hernia occurring in the epigastric region. The term is also sometimes used in the sense of GASTROCELE, which see.

Ep-ĭ-ġæ'ous, Ep-ĭ-ġe'ąn, or **Ep-ĭ-ġe'al.** [Lat. **Epige'us**; from the Gr. *ἐπί*, "upon" or "above," and *γῆ*, the "earth."] Growing on the earth or close to the ground:—applied to certain plants; also to cotyledons that make their way above ground and appear like leaves.

Ep-ĭ-ġen'e-sis.* [From the Gr. *ἐπί*, "at," "on," or "after," and *γίνομαι*, to "be born," implying that the existence of the new being commences at or after the act of conception; while the pre-existence of the germ is implied in the other theories stated below.] The theory that the embryo is the joint production of both sexes, as distinguished either from the doctrine that the male parent furnishes the germ and the female simply the *nidus*, or resting-place, in which it is nourished, or from the theory that the female furnishes the germ, which is merely quickened by the influence of the male. See GENERATION.

Ep-ĭ-glot'tic. [Lat. **Epiglot'ticus.**] Belonging to the epiglottis.

Ep-ĭ-glot-tĭd'e-us.* [From the Lat. *epiglot'tis*.] The same as EPIGLOTTIC, which see.

Ep-ĭ-glot'tis, *i.dis.** [From the Gr. *ἐπί*, "upon," and *γλωττίς*, the "glottis," or "entrance to the windpipe."] The cartilage at the root of the tongue which forms a lid or cover for the aperture of the windpipe.

E-pig'ў-nous. [Lat. **Epig'ynus**; from the Gr. *ἐπί*, "above," and *γυνή*, a "female;" referring to the female portion of the flower.] A term applied to stamens when inserted on the ovary or at its summit.

Ep-ĭ-hў'al. [From the Gr. *ἐπί*, "upon" or "above," and the Lat. *hyoi'des*, "hyoid."] A

term applied by Owen to a triangular piece of bone, pretty constant in fishes, which articulates above to the *stylo-hyal.*

Epilampsis,* or **Epilampsia.*** See ECLAMPSIA.

Ep-ĭ-lep'sy. [Lat. **Epilep'sia**; Gr. *ἐπιληψία*, and *ἐπίληψις* (from *ἐπιλαμβάνω*, to "seize upon").] (Fr. *Épilepsie*, ā'pĕ'lĕp'sē'.) A disease which attacks persons suddenly, consisting of convulsions, with coma, and generally frothing at the mouth; the falling sickness. A genus of the order *Spasmi*, class *Neuroses*, of Cullen's nosology. A chronic apyretic nervous affection, characterized by seizures of loss of consciousness, with tonic or clonic convulsions. Of these two symptoms, muscular spasms and loss of consciousness, neither is alone sufficient to establish the existence of epilepsy. The ordinary duration of a fit is five to twenty minutes. The frequency of the attacks or fits varies immensely. In some cases they occur daily, and in others at intervals of ten years or more.

Ep-ĭ-lep'tic. [Lat. **Epilep'ticus.**] Belonging to epilepsy. Also a person affected with epilepsy.

Epilepticæ Auræ.* See AURA EPILEPTICA.

Ep-ĭ-lep-tĭ-for'mis.* [From the Lat. *epilep'sia.*] Like epilepsy; epilep'tiform.

Ep-ĭ-lep'toid. [Lat. **Epileptoi'des**; from *epilep'sia*, "epilepsy," and the Gr. *εἶδος*, a "form" or "resemblance."] Resembling epilepsy.

Ep-ĭ-lo'bĭ-um An-gus-tĭ-fo'lĭ-um.* The Willow Herb, a plant of the order *Onagraceæ*, a native of the United States and Europe, bearing showy pink-purple flowers. Its root is emollient.

Ep-ĭ-me'rus.* [From the Gr. *ἐπί*, "upon," and *μηρός*, the "thigh."] One of the lateral pieces of the thorax in insects.

Épine, ā'pēn'. (Fr.) See SPINE.

Ep-ĭ-nyc'tis,* plural **Ep-ĭ-nyc'tĭ-dēs.** [From the Gr. *ἐπί*, "on," "at," or "by," and *νύξ*, *νυκτός*, "night."] Eruptions which appear on the skin by night and disappear during the day.

Ep-ĭ-pet'a-lous. [Lat. **Epipeta'leus, Epipet'alus**; from the Gr. *ἐπί*, "upon," and *πέταλον*, a "petal."] Situated on the petals; inserted or growing on the petals or corolla.

Ep-ĭ-phe'gus.* [From the Gr. *ἐπί*, "upon," and *φηγός*, the "beech."] A genus of parasitic plants of the order *Orobanchaceæ.* The *Epiphegus Virginiana* (Beech Drops), a native of the United States, growing on the roots of the beech-tree, and rarely if ever found anywhere else.

Ep-ĭ-phlœ'um.* [From the Gr. *ἐπί*, "upon," and *φλοιός*, "bark."] The layer of bark next to the epidermis.

E-piph'o-ra.* [From the Gr. *ἐπιφέρομαι*, to "be borne upon," to "rush upon as a flood."] A superabundant secretion of tears. A genus of the order *Apocenoses*, class *Locales*, of Cullen's nosology. Also an overflowing of tears in consequence of an obstruction of the lachrymal duct.

Ep-ĭ-phrag'ma, a*tis.** [From the Gr. *ἐπί*, "upon," and *φράγμα*, a "partition."] The slender membrane which sometimes shuts the *peristoma* of mosses.

Ep-ĭ-phyl-lo-sper'mous. [Lat. **Epiphyllosper'mus**; from the Gr. *ἐπί*, "upon," *φύλλον*, a "leaf," and *σπέρμα*, a "seed."] Having seeds on the leaves.

Ep-ĭ-phyl'lous. [Lat. **Epiphyl'lus**; from the Gr. *ἐπί*, "upon," and *φύλλον*, a "leaf."] Inserted on a leaf:—applied to flowers which grow on the surface of a leaf, and also to parasitical fungi on the leaves of other plants.

E-piph'y-sis,* plural **E-piph'y-sēs.** [From the Gr. *ἐπί*, "upon," and *φύω*, to "produce," to "grow."] A piece of bone growing upon another, as the bulky extremities of long bones, which are in early life separated by cartilage from the shaft.

E-piph'y-ta.* [See EPIPHYTE.] Plant-like organisms, or fungi, found on the human skin and its appendages, or on mucous surfaces; the so-called *vegetable parasites*, originating certain diseases, such as *tinea.*

E-piph'y-tal, or **Ep-ĭ-phyt'ic.** Relating to epiphytes.

Ep'ĭ-phyte. [Lat. **Epiph'yton**; from the Gr. *ἐπί*, "upon," and *φυτόν*, a "plant."] A plant which grows on other plants, but is not nourished by them. See AIR-PLANTS.

E-pip'lo-çēle.* [From the Gr. *ἐπίπλοον*, the "omentum," and *κήλη*, a "tumor."] Hernia in which a portion of the omentum is protruded.

Ep-ĭ-plo'ic. [Lat. **Epiplo'icus.**] Belonging to the epiplōon, or omentum.

E-pip-lo-is'ehĭ-o-çēle.* [From the Gr. *ἐπίπλοον*, the "omentum," *ἰσχίον*, the "ischium," and *κήλη*, "hernia."] Hernia in which the omentum protrudes through the ischiadic foramen.

Ep-ĭ-plo-i'tis, i*dis.** [From the Gr. *ἐπίπλοον*, the "omentum."] Inflammation of the epiplōon:—also termed *Omentitis.*

E-pip-lo-mĕr'o-çēle.* [From the Gr. *ἐπίπλοον*, the "omentum," *μηρός*, the "thigh," and *κήλη*, "hernia."] Femoral hernia with protrusion of the omentum.

Ep-ip-lom'pha-lo-çēle.* [From the Gr. *ἐπίπλοον*, the "omentum," *ὀμφαλός*, the "navel," and *κήλη*, "hernia."] Hernia with protrusion of the omentum at the navel.

E-pip'lo-on.* [Gr. *ἐπίπλοον*, that which is "folded upon" the intestines; allied to *ἁπλοος*, "without fold," and *διπλόος*, "twofold."] The omentum, or epiplōon. See OMENTUM.

Ep-ĭ-plos'ehe-o-çēle.* [From the Gr. *ἐπίπλοον*, the "omentum," *ὄσχεον*, the "scrotum," and *κήλη*, "hernia."] Hernia with a portion of omentum in the scrotum.

E-pis'ehe-sis,* plural **E-pis'ehe-sēs.** [Gr. *ἐπίσχεσις*; from *ἐπέχω*, to "hold up," to "check," to "restrain."] A suppression of excretions. An order of the class *Locales* of Cullen's nosology.

Ep-ĭ-seĭ-on'cus.* [From the Gr. *ἐπίσειον*, the "region of the pubes," and *ὄγκος*, "swelling," "tumor."] Swelling of the pubes, especially of the labia pudendi.

Ep-ĭ-seĭ-or-rha'ğĭ-a.* [From the Gr. *ἐπίσειον*, the "pubes," and *ῥήγνυμι*, to "break" or "burst forth."] Hemorrhage from the pubes or from the labia pudendi.

Episeiorrhaphy. See ELYTRORRHAPHY.

Episioncus.* See EPISEIONCUS.

Ep-ĭ-spa'dĭ-as.* [From the Gr. *ἐπί*, "upon," and *σπάζω*, to "pierce through."] An unnatural perforation of the penis, the urethra terminating on the upper part of it.

Ep-ĭ-spas'tic. [Lat. **Epispas'ticus**; from the Gr. *ἐπισπάω*, to "draw upon," or simply to "draw."] (Fr. *Épispastique*, ā'pĕ'spȧs'tēk'.) Literally, "drawing." Producing a serous or puriform discharge by exciting previous inflammation, on the principle of derivation or revulsion.

Épispastique. See EPISPASTIC.

Ep'ĭ-sperm. [Lat. **Episper'ma, a***tis*; from the Gr. *ἐπί*, "upon," and *σπέρμα*, a "seed."] The whole integuments of a seed taken together; also the skin of a seed, especially the outer coat.

Ep-ĭ-staph-ў-lĭ'nus.* [From the Gr. *ἐπί*, "upon," and *σταφυλή*, the "uvula."] Belonging to the uvula; epistaph'yline.

Ep-ĭ-stax'is.* [From the Gr. *ἐπιστάζω*, to "distil."] Bleeding at the nose. A genus of the order *Hæmorrhagiæ*, class *Pyrexiæ*, of Cullen's nosology. It is sometimes a salutary process and subsides spontaneously. Epistaxis is either *traumatic* or *idiopathic*. The *traumatic* form may be occasioned by violent sneezing, by snuffing up irritating substances, or by direct violence. The *idiopathic* form often occurs in children, particularly boys, just before or about the age of puberty.

Ep-ĭ-ster'nal. [Lat. **Episterna'lis**; from the Gr. *ἐπί*, "upon," and *ster'num*, the "breast-bone."] Upon or above the sternum.

Ep-is-thot'o-nus.* [From the Gr. *ἐπίσθεν*, "forward," and *τείνω*, to "stretch."] See EMPROSTHOTONUS.

Ep-ĭ-the'lĭ-al. [Lat. **Epithe'lius.**] Belonging to the epithelium.

Ep-ĭ-the-lĭ-o'ma.* [From the Lat. *epithe'lium.*] A kind of cancer consisting chiefly of epithelial elements.

Ep-ĭ-the'lĭ-um.* [From the Gr. *ἐπί*, "upon," and *θηλή*, the "nipple."] The cuticle covering the nipple, or any mucous membrane. Its character varies somewhat in different parts of the body. What is called *pavement* or *tessellated* epithelium (Fr. *Epithelium pavimenteux*) is found on the serous and synovial membranes, the lining of blood-vessels, and portions of the mucous membranes, as those of the mouth, eye, and vagina. *Columnar* or *cylindrical* epithelium covers the inner surface of the intestinal canal and the urinary passages. In Botany, epithelium is an epidermis consisting of young thin-sided cells, filled with homogeneous, transparent, colorless sap.

Ep'ĭ-them. [Lat. **Epith'ema, a***tis*; from the Gr. *ἐπί*, "upon," and *τίθημι*, to "place."] A term applied to any kind of external application not comprised under the head of ointments or blisters, such as poultices, fomentations, etc.

Ep-ĭ-tўm'pa-nic. [Lat. **Epitympan'icus**; from the Gr. *ἐπί*, "upon," and the Lat. *tym'panum.*] A term applied by Owen to the uppermost subdivision of the tympanic pedicle which supports the mandible in fishes.

Ep-ĭ-zo'on,* plural **Ep-ĭ-zo'a.** The same as ECTOZOON, which see.

Ep-ĭ-zo-ot'ic. [Lat. **Epizoot'icus**; from the Gr. *ἐπί*, "upon" or "against," and *ζῶον*, an "animal."] A term applied to a contagious disease attacking numbers of cattle at the same time and place.

Ep-ĭ-zo'o-tў. [Lat. **Epizöo'tia.**] Epizōotic disease.

Éponge, ā'pŏnzh'. The French term for SPONGE, which see.

Ep'som Salts. The sulphate of magnesia. See MAGNESIÆ SULPHAS.

Ep-u'lis, *idis.** [From the Gr. *ἐπί*, "upon," and *οὖλα*, the "gums."] A small swelling on the gums.

Ep-u-lot'ic. [Lat. **Epulot'icus**; from the Gr. *ἐπούλωσις*, "cicatrization."] Having power to cicatrize; promoting cicatrization.

Épurge, ā'pürzh'. The French term for EUPHORBIA LATHYRIS, which see.

E'qual. [From the Lat. *æ'quus.*] (Fr. *Égale*, ā'gȧl'.) In Botany, the same as *regular*; of the same extent, or measure, or number.

E'qual-lў Pin'nate. A term applied to pinnate leaves having an even number of leaflets. It is the same as EVEN-PINNATE.

E-qua'tion. [From the Lat. *æ'quo, æqua'tum*, to "equalize."] The act of bringing things to an equality. The difference between mean and apparent time. *Chemical equation* is that which represents in one part the chemical substances proper to produce a reaction, and in the other part the substances produced by this reaction: thus, $So^3BaO + 4C = SBa + 4CO$.

E-quā'tor. [Lat. **Æqua'tor, o'ris**; from *æ'quo, æqua'tum*, to "make equal."] A great circle of the earth, equidistant from the two poles, and separating the globe into northern and southern hemispheres.

Eq'uĭ-dæ.* [From the Lat. *e'quus*, a "horse."] A term applied to a family of mammals having the horse for its type.

E-quĭ-lib'rĭ-um. [Lat. **Æquilib'rium**; from *æ'què*, "equally," and *li'bro*, to "balance."] Equipoise:—often applied to the equality of temperature which all bodies on the earth are constantly tending to attain (see CALORIC), and to the equal distribution of the electric fluid in its natural undisturbed state.

E-quĭ'nĭ-a.* [From the Lat. *e'quus*, a "horse."] (Fr. *Morve*, MORV.) A disease of horses called Farcy, or Glanders. See FARCY.

E-quĭ-noc'tĭal. [Lat. **Æquinoctia'lis.**] Belonging to the equinox.

E'quĭ-nox. [Lat. **Æquinoc'tium**; from *æq'uus*, "equal," and *nox*, "night."] The time when the days and nights are of equal length all over the earth. This occurs twice every year. The *vernal equinox* is about March 21, and the *autumnal* about September 22.

Equisetaceæ,* ek-we-se-ta'she-ē. A natural order of cryptogamous plants, found in ditches and moist places. It includes the *Equise'tum* (Horse-tail), which is rendered useful for polish-

ing furniture by a large quantity of silex in the cuticle.

Eq-uĭ-se-tā'ceous. [Lat. **Equiseta'ceus.**] Resembling the *Equisetum*. See EQUISETACEÆ.

Eq'uĭ-tant. [Lat. **Eq'uitans**; from *eq'uito, equita'tum*, to "ride on a horse."] Literally, "riding astraddle," or on horseback:—applied to leaves that present their tips to the sky and are folded together lengthwise, so that each leaf covers or bestrides the next younger one, as in the *Iris*.

Eq-uĭ-tā'tion. [Lat. **Equita'tio, o'nis**; from the same.] Exercise on horseback; riding. It favors muscular development by the agitation of the body and by the repeated and moderate contractions which it excites in nearly all the muscles of the trunk and limbs.

E-quiv'a-lent. [From the Lat. *æ'quus*, "equal," and *va'leo*, to "be worth."] Equal in value, power, weight, or effect; having the same import or meaning. In Chemistry, an equivalent is a ponderable and invariable quantity of a body required to replace a certain fixed weight of another body in combinations.

E-quiv'a-lents. [Lat. **Æquivalen'tia**; from *æquiva'leo*, to "be of like value."] The system of definite ratios in which elements always combine, referred to a common standard reckoned as unity,—*i.e.*, hydrogen. Thus, 1 is the equivalent number of hydrogen, 8 of oxygen, 28 of lime, 20 of magnesia, 48 of potash, 54 of nitric acid, and 40 of sulphuric acid: hence, if hydrogen combines with oxygen, it is always in the proportion of 1 to 8, or 1 to 16; so if nitric acid is saturated with lime, the compound (nitrate of lime) will be in the proportion of 54 of the acid to 28 of the lime; the nitrate of magnesia, in the proportion of 54 of the acid to 20 of magnesia, etc.; so likewise when sulphuric acid combines with magnesia, it is always in the proportion of 40 to 20; if with potash, of 40 to 48, etc. The equivalent is the same as the atomic weight.

Érable, ā'rȧbl'. The French name of the MAPLE.

Er'bĭ-um.* A rare metal, occurring along with yttria, and obtained from gadolinite in the form of an oxide called *erbia*. It is not found or used in a separate metallic state. Its properties are not well known.

E-rec-thi'tēs Hi-e-raçĭ-fo'lĭ-a.* Fireweed, an herbaceous plant of the order *Compositæ*, a native of the United States. It is said to be tonic and astringent.

E-rec'tĭle Tis'sue. [Lat. **Te'la Erec'tilis.** See next article.] A peculiar tissue, susceptible of erection, or rapid turgescence, by an increased flow of blood to the part. It is chiefly composed of arteries and veins, the latter greatly predominating, with cells or minute cavities communicating with one another.

E-rec'tor, o'rĭs.* [From the Lat. *er'igo, erec'tum*, to "erect."] That which erects:—applied to certain muscles.

Er-e-ma-cau'sis.* [From the Gr. *ἠρέμα*, "by degrees," and *καῦσις*, a "burning."] The slow combustion, oxidation, or decay to which organic bodies are liable.

Er'e-thism. [Lat. **Erethis'mus**; from the Gr. *ἐρεθίζω*, to "irritate."] The state of increased sensibility and irritability attending the early stage of acute diseases or the excessive use of mercury.

Er-e-this'mus Trop'ĭ-cus.* "Tropical Erethism." A name applied by recent writers to that morbid condition of the system which results from a sunstroke.

Ergot. See ERGOTA.

Er-go'ta.* [From the French *Ergot*, ĕr'go', "spurred rye."] "Er'got." The Pharmacopœial name (U. S. 1870, 1880) of the sclerotium of *Claviceps purpurea*, displacing the grain of *Seca'le cerea'le*, or rye. (Formerly called SECALE CORNUTUM, which see.) Ergot has the remarkable property of exciting powerfully the contractile force of the uterus, and it is chiefly employed for this purpose. Its long-continued use, however, is highly dangerous. Bread made of flour containing ergot has not unfrequently occasioned, in Europe, fatal epidemics, usually attended with dry gangrene.

Er'go-tin. The extract of ergot, or the active principle of *Secale cornutum*, said to be a good hæmostatic. It causes contraction of the smaller blood-vessels, and contraction of the uterus.

Er'got-ism. [Lat. **Ergotis'mus.**] A term applied to the poisonous effects of ergot of rye.

E-ri'ca.* "Heath." A genus of shrubby plants, the type of the order *Ericaceæ*, comprising numerous species, natives of Europe and Africa. Many of them are cultivated for the beauty of their flowers, the form of which is a study for the modeller. Some of the species are gregarious, and cover a large tract of land, called a *heath*.

Ericaceæ,* ĕr-e-ka'she-ē, or **E-ri'çæ.*** A large natural order of exogenous shrubs or undershrubs, found in Europe, Asia, America, and South Africa. It includes the *Arbutus*, *Azalea*, *Erica* (Heath), *Kalmia*, *Rhododendron*, *Clethra*, *Epigæa*, *Ledum*, and other genera prized for the beauty of their flowers. The plants of this order are generally astringent and diuretic. It comprises about nine hundred species.

Er-ĭ-ġen'teś [from the Lat. *er'igo*, to "erect"] **Ner'vi.*** "Erecting Nerves," or those causing erection. A name applied to certain nerves of the hypogastric plexus, distributed to the organs of generation, to the bladder, etc.

E-riġ'er-on.* [From the Gr. *ἦρ*, "spring," and *γέρων*, an "old man;" because it is hoary in spring."] Fleabane. The Pharmacopœial name (U.S. 1870) for the herb of *Eriġ'eron heterophyl'lum* and of *Eriġ'eron Philadel'phicum*. Also a genus of plants of the order *Compositæ*, comprising many species natives of the United States.

Eriġ'eron An'nu-um or **Het-er-o-phyl'lum.*** The Daisy Fleabane, or Sweet Scabious, a very common weed, a native of the United States. It is diuretic, tonic, and astringent.

Eriġ'eron Bel-lid-ĭ-fo'lĭ-um.* Robin's Plantain, a plant, a native of the United States.

Eriġ'eron Can-a-den'se.* Canada Fleabane. The Pharmacopœial name (U.S. 1870) for

the herb of *Erigeron Canadense*. It is diuretic, tonic, and astringent.

Erig'eron Het-e-ro-phyl'lum.* A synonyme of *Erigeron annuum*.

Erig'eron Phil-a-del'phi-cum.* The common Fleabane, a plant of the order *Compositæ*, a native of the Middle United States. It is diuretic.

Eriobotrya.* See LOQUAT.

Eriocaulaceæ,* e-re-o-kau-la'she-ē, or **E-ri-o-cau-lo'ne-æ.*** [From *Eriocau'lon*, one of the genera.] A natural order of endogenous plants, found in marshes in Australia and tropical America.

E-ri-o-çeph'a-lus Um-bel-lu-la'tus.* A plant of the order *Compositæ*, a native of South Africa. It is said to be diuretic.

E-ri-o-den'dron.* [From the Gr. *ἔριον*, "wool," and *δένδρον*, a "tree."] A genus of trees of the natural order *Sterculiaceæ*, or *Malvaceæ*, natives of the tropical parts of Asia and South America. Some of the species have beautiful flowers and afford medicinal substances.

E-ri-o-dic'tyon Glu-ti-no'sum.* A shrub or herb of the order *Hydrophyllaceæ*, a native of California. It is a stimulating expectorant, and is reputed to be useful in asthma and chronic bronchitis.

E-ris'ma Ja-pu'ra.* A large tree of the order *Vochyaceæ*, a native of Brazil. It bears yellow flowers and edible fruit.

E-ro'ded. [Lat. **Ero'sus**; from *e*, "out," "away," and *ro'do*, *ro'sum*, to "gnaw."] A botanical term signifying "notched," having the margin irregularly toothed, as if gnawed:—applied to leaves, etc.

E-ro'dent. [Lat. **Ero'dens**; from the same.] Eating out, or eating away.

E-ro'di-um.* A genus of plants of the order *Geraniaceæ*, natives of Europe. They are reputed to be tonic and hæmostatic.

Erose. The same as ERODED.

E-ro'sion. [Lat. **Ero'sio, o'nis**; from the same.] An eating or gnawing away:—similar to ULCERATION. In Geology, *erosion* is nearly synonymous with DENUDATION, which see.

E-ros'trate. [From the Lat. *e*, priv., and *ros'trum*, a "beak."] Destitute of a beak:—applied to parts of plants.

E-rot'ic. [Lat. **Erot'icus**; from the Gr. *ἔρως*, *ἔρωτος*, "sexual desire" or "love."] Pertaining to sexual love; arising from love.

E-ro-to-ma'ni-a.* [From the Gr. *ἔρως*, "sexual love," and *μανία*, "madness."] Melancholy, or madness, caused by love.

Er-rat'ic. [Lat. **Errat'icus**; from *er'ro*, *errā'tum*, to "wander."] Wandering; moving from one place to another:—applied to pains, eruptions, and other morbid phenomena when they shift from place to place.

Erreur de Lieu. See ERROR LOCI.

Er'rhine. [Lat. **Errhi'nus**; from the Gr. *ἐν*, "in," and *ῥίν*, the "nose."] A medicine which increases the natural secretion of the membrane lining the nose; sternutatory.

Er'ror Lo'ci.* "Mistake of Place or Position." (Fr. *Erreur de Lieu*, ĕr'rŭr' dĕh le-ŭh'.) A term formerly applied to certain derangements in the capillary circulation. Boerhaave conceived that the vessels for the circulation of blood, lymph, and serum were of different sizes, and that when the larger-sized globules passed into the smaller vessels the obstruction caused inflammation.

E-ru'ca Sa-ti'va.* An herbaceous plant of the order *Cruciferæ*, a native of Europe. It has an acrid taste, and is stimulant and antiscorbutic.

E-ruc-tā'tion. [Lat. **Eructa'tio, o'nis**; from *eruc'to*, *eructa'tum*, to "belch."] Any sudden burst of wind, or liquid, from the stomach, by the mouth.

E-rupt'. [See next article.] To burst through, as a tooth through the gum.

E-rup'tion. [Lat. **Erup'tio, o'nis**; from *e*, "out," and *rum'po*, *rup'tum*, to "burst" or "break."] A discoloration, or breaking out of pimples, on the skin. A pathological manifestation in the skin, sometimes marked by color, sometimes by prominence, more frequently by both. When it is sudden and hyperæmic, it is called *exanthema*. The term is also applied to a flow of lava from a volcano.

E-rup'tive Fe'vers. A designation applied by Dr. Good to diseases belonging to his order *Exanthematica*.

Er-va-len'ta.* A powder of farina obtained from *Ervum lens*, or the common Lentil. The dietetical use of it is said to prevent constipation.

Er'vum Lens.* The common Lentil, an herbaceous plant of the order *Leguminosæ*, cultivated for food in Egypt, Syria, India, etc.

Er-y-çib'e-æ.* [From *Eryç'ibe*, the only genus.] A natural order of climbing shrubs, natives of tropical Asia, nearly related to the *Convolvulaceæ*. The order has been established for the reception of the anomalous genus *Erycibe*, and comprises only seven species.

E-ryn'gĭ-um.* "Eryn'go." A genus of plants of the natural order *Umbelliferæ*, natives of Europe and the United States. The roots of *Eryngium aquaticum* and *Eryngium maritimum* have been used in medicine.

E-ryn'go. The candied root of the *Eryn'gium campes'tre*, regarded by Boerhaave as the first of aperient diuretic roots. It is now but little used.

Er-y-sip'e-las, a'tis.* [Gr. *ἐρυσίπελας*, from *ἐρυθρός*, "red," and *πέλλα*, a "skin."] (Fr. *Érysipèle*, ā'rĕ'zĕ'pĕl'.) Redness or inflammation of some part of the skin, with fever, inflammatory or typhoid, and, generally, vesications on the affected part, and symptomatic fever. It is also called *St. Anthony's Fire*, *Ig'nis Sa'cer* ("Sacred Fire"), *the Rose*, and other names.

Er-y-sĭp-e-lat-o-i'dēs.* [From the Lat. *erysip'elas*, and the Gr. *εἶδος*, , a "form" or "resemblance."] Resembling erysipelas; erysip'elatoid.

Érysipèle. See ERYSIPELAS.

Er-y-the'ma, a'tis.* [From the Gr. *ἐρυθαίνω*, to "redden."] (Fr. *Érythème*, ā'rĕ'tĕm'.) Red-

ness of the part; a superficial inflammation of the skin; a mere rash or efflorescence not accompanied by swelling, vesication, or fever.

Érythème. See ERYTHEMA.

Er-ȳ-thræ'a.* [From the Gr. *ἐρυθραῖος*, "red."] A genus of plants of the class *Pentandria*, natural order *Gentianaceæ*. It comprises many species, natives of Europe, the United States, etc.

Erythræ'a Cen-tau'rĭ-um.* The common Centuary, or *Chironia centaurium*, a native of Europe. It has been used as a tonic.

E-rȳth'ric Aç'id. [From the Gr. *ἐρυθρός*, "red."] An acid obtained by the action of nitric acid on lithic acid, yellow at first, but becoming red by being exposed to the sun's rays.

Er'ȳth-rin, or **Er'ȳth-rĭne.** [Lat. **Erythri'na**; from the Gr. *ἐρυθρός*, "red."] The coloring-matter of the *Lichen roccella*. See ARCHIL.

Er-ȳth'ro-ġen. [Lat. **Erythroge'nium**; from the Gr. *ἐρυθρός*, "red," and *γεννάω*, to "generate."] Literally, "that which produces red." A peculiar animal principle, considered as the base of the coloring-matter of the blood. Also a variety of *chromogen* (the coloring-matter of vegetables), which produces a red color with acids.

Er'ȳ-throid. [Lat. **Erythroi'des**; from the Gr. *ἐρυθρός*, "red," and *εἶδος*, a "form" or "resemblance."] Of a red color; reddish.

Er'ythroid Coat. The vaginal coat of the testis.

Er'ythroid Ves'ĭ-cle. An enlargement of the (future) umbilical cord in the embryo of most of the *Ruminantia*, and of the pig.

Er-ȳ-thro'nĭ-um A-mer-ĭ-ca'num.* Adder's Tongue, a plant of the order *Liliaceæ*, a native of the United States. It has emetic properties. Its flower is yellow and handsome.

Erythro'nium Dens Ca'nis.* The Dog's Tooth Violet, a plant, a native of Europe. It has handsome purple flowers.

Er-ȳ-thro-phle'ĭne. A poisonous alkaloid obtained from the *Erythrophlæum Guineense*, of which it is the active principle. It is a crystalline solid, soluble in water and in alcohol.

Er-ȳ-thro-phlœ'um Guin-e-en'se.* A tree of the order *Leguminosæ*, a native of Western Africa. Its poisonous bark, called *Mancona*, or *Sassy bark*, is employed by the natives as an ordeal in trials for witchcraft and as a medicine in cases of dysentery, colic, etc. See ERYTHROPHLEINE.

E-rȳth'ro-phȳll, or **Er'ȳ-thro-phȳlle,** called also **Er'ȳ-thro-phȳl'lin.** [From the Gr. *ἐρυθρός*, "red," and *φύλλον*, a "leaf."] A term applied by Berzelius to the red coloring-matter of fruits and leaves in autumn.

Er-ȳ-thro'sis.* [From the Gr. *ἐρυθρός*, "red."] *Pletho'ra arterio'sa*, a form of plethora in which the blood is rich in fibrin and in bright red pigment; a state corresponding in some measure with what has been termed the "arterial constitution."

Erythroxylaceæ,* ĕr-e-throx-e-la'she-ē. [From *Erythrox'ylon*, the only genus of the order.] A natural order of exogenous trees and shrubs, found in South America and the West Indies.

Er-ȳ-throx'ȳ-lon.* [From the Gr. *ἐρυθρός*, "red," and *ξύλον*, "wood."] A genus of shrubs or small trees, natives of Peru, the West Indies, Madagascar, etc. It comprises about seventy species, and is the only genus of the order to which it gives name.

Erythrox'ylon.* "Erythroxylon." The Pharmacopœial name (U. S. 1880) for the leaves of *Erythroxylon Coca*. It is a powerful nervous stimulant. It is probable that it acts similarly to tea and coffee, but more powerfully. The sustaining powers of coca have been strongly confirmed by several observers. It is reputed to impart increased vigor to the intellect as well as to the muscles. Used in moderation, it induces, it is said, a forgetfulness of all care.

Erythrox'ylon Co'ca.* A shrub growing in South America, the leaves of which (known by the name of *coca*) are a powerful nervous stimulant, so that those who chew them can work or travel a whole day without food. A powerful anæsthetic known as *cocaine* is obtained from this shrub. See COCAINE.

Escalloniaceæ,* es-kal-lo-ne-a'she-ē. [From *Escallo'nia*, one of the genera.] A natural order of exogenous shrubs, found in temperate climates, in South America and Australia.

Es'ehar. [Lat. **Es'chara**; from the Gr. *ἐσχαρόω*, to "scab over."] The hard, black, or gray slough caused by caustic or cautery.

Es-eha-rot'ic. [Lat. **Escharot'icus.**] A term applied to a substance which forms an eschar.

Es'cu-lent. [Lat. **Esculen'tus**; from *es'co*, to "feed upon a thing."] Fit for food.

Esculin. See ÆSCULIN.

Es-en-beck'ĭ-a Feb-rif'u-ga,* or **E-vo'dĭ-a Febrif'uga.*** A tree or shrub of the order *Rutaceæ*, a native of Brazil. Its bark is tonic, and is used to adulterate Angustura bark.

Es-e'rĭ-a,* or **Es'er-ĭne.** The alkaloid which forms the active principle of the ORDEAL NUT, which see.

Es'o-en-ter-i'tis.* [From the Gr. *ἔσω*, "within," and the Lat. *enteri'tis*, "inflammation of the bowels."] Inflammation of the mucous membrane of the intestines.

Es'o-gas-tri'tis.* [From the Gr. *ἔσω*, "within," and the Lat. *gastri'tis*.] Inflammation of the mucous membrane of the stomach.

Es-o-tĕr'ic. [Lat. **Esoter'icus**; from the Gr. *ἐσώτερος*, "within."] A term applied to a series of phenomena or changes resulting from causes internal and proper to the organism.

E-spath'ate. Destitute of a spathe.

Espèce, ĕs'pĕss'. The French for SPECIES, which see.

Esprit, ĕs'prē'. The French term for "spirit" or "essence." Any subtile and volatile product of distillation.

Es'sence. [Lat. **Essen'tia**; from *es'se*, to "be."] The chief properties or virtues extracted from any substance; the nature or essential qualities of anything. The term is sometimes used as synonymous with *simple tincture*. It is a generic name of substances, mostly oily, always volatile and aromatic, which can be obtained by distilling parts of vegetables with water.

Es'sence of Su'gar. Oxalic acid.

Essen'tia (es-sen'she-a) **Ab-i'e-tis.*** Essence of Spruce,—prepared by boiling in water the young tops of some coniferous plant, as the *Abies nigra*, or Black Spruce, and concentrating the decoction by evaporation.

Essen'tia Bi'na.* A substance used to color brandy, porter, etc.,—prepared by boiling coarse sugar till it is black and bitter, then making it into a syrup with lime-water.

Es-sen'tial Oils. Oils obtained by distillation from odoriferous vegetable substances. They are also called *volatile oils*.

Essen'tial Or'gans (of Flowers). A term applied, in Botany, to the stamens and pistils.

Essen'tial Salt of Lem'ons. A mixture of cream of tartar and binoxalate of potash.

Es'se-ra.* [From the Arabic.] Another name for nettle-rash, or the *Urticaria* of Willan.

Es'tĭ-val. [From the Lat. *æstas*, "summer."] Happening in summer; pertaining to summer:—applied to summer diseases.

Estivation. See ÆSTIVATIO.

Estomac, ĕs'to'mȧk'. The French term for STOMACH, which see.

Étage, ȧ'tȧzh'. The French term for STAGE, which see.

Étain, ȧ'tȧN'. The French term for TIN (or pewter), which see.

E'thal. A peculiar oily substance obtained from spermaceti:—also termed *hydrate of oxide of cetyl*. The term is formed of the first syllables of *ether* and *alcohol*.

E'ther. [Lat. **Æ'ther, er**is;* from the Gr. *αἰθήρ*, "air."] The name of a fluid of inconceivable tenuity, supposed to fill all space, by the undulations of which the rays of light and heat are transmitted from one object to another, sometimes through immeasurable distances. More usually applied to a volatile liquor obtained from alcohol and a concentrated acid. It is a general name of numerous compounds, which are mostly volatile, fragrant, and inflammable. The ether that is most commonly used and is often designated by the single word *ether* is sulphuric ether.

Ether, Hydrobromic. See HYDROBROMIC ETHER.

E'ther, Ni'trous. [Lat. **Æ'ther Nitro'sus.**] The ether obtained by distilling equal weights of alcohol and concentrated nitric acid.

E'ther, Rec'tĭ-fied. [Lat. **Æ'ther Rectifica'tus.**] Sulphuric ether freed from the small portion of alcohol and sulphurous acid which it contains, by the process of rectification.

E'ther, Sulphu'ric, or **Æ'ther Sul-phu'rĭcus.*** A name for ether obtained from a mixture of rectified spirit and sulphuric acid:—also called *Æther vitriolicus*, and, more properly, *Ethylic Ether*, as it does not contain any sulphur. It is a fragrant, transparent, volatile liquid, much used in medicine and surgery. See SPIRITUS ÆTHERIS SULPHURICI.

Éthéré. See ETHEREAL.

E-the're-al. [Lat. **Æthe'reus,** or **Æthe'rius**; from *æ'ther*.] (Fr. *Éthéré*, ȧ'tȧ'rȧ'.) Consisting of ether, or pertaining to ether:—applied to any highly rectified essential oil or spirit.

Ethe'real Oil. The *Oleum Vini*, found in the residuum of sulphuric ether, and forming the basis of Hoffman's celebrated anodyne.

E-ther-if-ĭ-cā'tion. [From the Lat. *æ'ther*, and *fa'cio*, to "make."] A name for the phenomena which attend the transformation of alcohol into ether, or the process by which an acid and alcohol are united together and distilled so as to form ether. The agents used in this process are sulphuric and hydrochloric acids, the chlorides, bromides, iodides, etc.

Eth'er-in, or **Eth'er-ĭne.** A term synonymous with olefiant gas, elayl, or hydruret of acetyl.

E-ther-ĭ-zā'tion. [Lat. **Ætheriza'tio, o'nis.**] The inhaling of the fumes of ether, to produce insensibility to pain. The most simple mode of administering ether is to pour it on a large sponge placed under the nostrils.

Eth'er-ole. A carbo-hydrogen, commonly known as *light oil of wine*.

Eth'ics, Med'ĭ-cal. The duties and rights of medical practitioners.

E-thĭ-on'ic Aç'id. An acid formed by the action of sulphuric acid on ether and alcohol.

Ethiops Mineral. See ÆTHIOPS MINERAL.

Eth'moid. [Lat. **Ethmoi'des**; from the Gr. *ἠθμός*, a "sieve," and *εἶδος*, a "form" or "resemblance."] Resembling a sieve; cribriform.

Eth'moid Bone. [Lat. **Os Ethmoi'deum**; Fr. *Os cribleux*, ō krĕ'blŭh'.] One of the bones composing the cranium:—so named because its upper plate is pierced with a number of small holes, through which pass the filaments of the olfactory nerves. In Comparative Anatomy, the term is restricted by Owen to the part of the bone directly concerned in supporting the membrane and cells of the olfactory organ.

Eth-moi'dal. [Lat. **Ethmoida'lis.**] Belonging to the ethmoid bone.

Eth'mŏ-phē.* [From the Gr. *ἠθμός*, a "sieve," and *ὑφή*, "web" or "tissue." A name for cellular tissue.

Eth-mŏ-phi'tis.* Inflammation of the cellular tissue, or cellular membrane.

Eth-nog'ra-phy. [Lat. **Ethnogra'phia**; from the Gr. *ἔθνος*, a "nation," and *γράφω*, to "write."] The history of the manners, customs, origin, etc., of nations.

Eth-nol'o-gy. [Lat. **Ethnolo'gia**; from the Gr. *ἔθνος*, a "nation," and *λόγος*, a "discourse."] The science which treats of the different nations and races of men, their correlation, their anatomical, physiological, and mental peculiarities, etc.

Eth'yl, or **Eth'ÿle.** [From the Gr. *αἰθήρ,* "ether," and *ὕλη,* "material."] A name of the organic radical of ether and alcohol, composed of carbon and hydrogen. It is an invisible gas, which burns with a brilliant flame, and is soluble in alcohol.

Eth'yl Bro'mide, or **Hy-dro-bro'mic E'ther.** A colorless, volatile liquid, of an ethereal odor, and a hot, saccharine taste. It is obtained by the action of hydrobromic acid on ethylic alcohol. It has been used as an anæsthetic, but it is not considered safe. It appears to be more dangerous than chloroform.

E-thyl'a-mĭne, or **Éthyliaque,** ā'tē'lē-āk'. An artificial alkaloid obtained by heating iodide of ethyl with an aqueous solution of ammonia. It is a mobile liquid, soluble in water, alcohol, and ether. Although more caustic than ammonia, it has essentially the same properties.

Eth'ÿ-lene. Olefiant Gas, a colorless, inflammable gas, a compound of carbon and hydrogen. It is also called *Bicarburetted Hydrogen.* It is an important and essential part of the gas used in illuminating houses and streets. Density, 0.97. It is deleterious to those who breathe it.

E-tĭ-o-lā'tion. [Lat. *Ætiola'tio, o'nis;* Fr. *Étiolement,* ā'tē'ol'mŏN', from *étiolé,* "blanched."] The state of being blanched:—applied to certain plants from which the light is excluded as much as possible: these are termed *etiolated.*

Étiolement. See ETIOLATION.

Etiology. See ÆTIOLOGY.

Étouffement, ā'toof'mŏN'. The French term for SUFFOCATION, which see.

Étourdissement, ā'toor'dēss'mŏN'. The French term for VERTIGO, which see.

Étranglement, ā'trŏN'g'l'mŏN'. The French term for STRANGULATION, which see.

Et'ÿ-mon.* [From the Gr. *ἔτυμον,* the neuter of *ἔτυμος,* "true."] The true origin of a word; the radical word or root: hence, ETYMOLOGY, the science which explains or treats of the derivation of words.

Eū-ca-lÿp'tol. The active principle of the leaves of *Eucalyp'tus glob'ulus.* It is a colorless liquid, of an aromatic odor, and is soluble in alcohol:—applied locally it is a powerful irritant.

Eū-ca-lÿp'tus.* A genus of trees of the natural order *Myrtaceæ,* including numerous species, natives of Australia and Tasmania. Several species attain an immense height. They are called "gum-trees" on account of the gum which exudes from their trunks. They constitute a remarkable feature of the peculiar vegetation of Australia. The *Eucalyp'tus gigante'us,* which is said to attain the height of four hundred and fifty feet or more, affords excellent timber. The *Eucalyp'tus glob'ulus,* called *Fever-Tree* and *Blue Gum,* is nearly as high as the last-named. Its timber is excellent for ship-building, and its leaves are used as a febrifuge and antiperiodic. It is supposed that its roots have a tendency to prevent malarial fever, by draining the soil in marshy tracts. The *Eucalyp'tus resinif'era* yields a gum called *Botany-Bay Kino.*

Eucalyp'tus.* "Eucalyptus." The Pharmacopœial name (U.S. 1880) for the leaves of *Eucalyptus globulus,* collected from rather old trees. Eucalyptus is astringent and tonic, and reputed to be febrifuge. Whatever medical virtues it possesses besides astringency reside in the volatile oil (*eucalyptol*). It has been used as a stimulant and diaphoretic, and has been extolled as antispasmodic in asthma.

Eucalyp'tus Gun'ni.* The Tasmanian Cider-Tree, a native of Tasmania, yielding a cool refreshing beverage from incisions in its bark.

Eū'ehlo-rĭne. [From the Gr. *εὖ,* "fine," and *χλωρός,* "green."] The name given by Davy to the protoxide of chlorine, on account of its deep yellow-green color.

Eū-ehres'ta.* A genus of shrubs of the order *Leguminosæ. Euchresta Horsfieldii,* the only known species, is a native of Java and Formosa. The whole plant is intensely bitter, and is highly prized by the natives for its medicinal virtues. They employ the seeds as an antidote for poison taken into the stomach.

Eū-ehron'ic Aç'id. [From the Gr. *εὖ,* "fine," and *χρόα,* "color."] An acid procured by the decomposition of the neutral mellitate of ammonia by heat. It forms a blue compound with zinc, called *euchrone.*

Eū-dĭ-om'e-ter. [Lat. **Eudiom'etrum;** from the Gr. *εὐδία,* "fine weather," also "goodness of the air," and *μετρέω,* to "measure."] An instrument for measuring the purity of the air or of any gaseous compound, or the quantity of oxygen contained in it.

Eū-dĭ-om'e-trÿ. [Lat. **Eudiome'tria;** from the same.] The method by which the purity of atmospheric air is ascertained.

Eū-ġe'nĭ-a.* [From Prince *Eugene* of Savoy.] A Linnæan genus of the class *Icosandria,* natural order *Myrtaceæ.* It comprises many species, natives of the East and West Indies, Brazil, Florida, etc., some of which bear delicious fruits. The *Euge'nia Jam'bos,* a native of India, called Rose-Apple, is cultivated in several tropical countries for its fruit, which is a large berry.

Euge'nia Căr-ÿ-o-phÿl-la'ta.* The tree which produces the clove:—otherwise called the *Caryophyl'lus aromat'icus.*

Euge'nia Pi-men'ta.* The name of the tree which yields pimenta. It is cultivated in the West Indies.

Eū-ġen'ic Aç'id. [Lat. **Aç'idum Eugen'icum;** from *Euge'nia caryophylla'ta,* one of the names of the clove-tree.] An acid found in cloves, along with a neutral salt:—called also *Caryophyllic Acid,* and *Heavy Oil of Cloves. Eu'genin* is a crystallizable compound, found also in cloves, and said to be isomeric with eugenic acid. *Caryophyl'lin* is another of these compounds.

Eū'nueh. [Lat. **Eunu'chus;** from the Gr. *εὐνή,* a "couch," and *ἔχω,* to "keep," to "guard."] (Fr. *Eunuque,* ūh'nük'.) A man in whom the spermatopoietic or entire genital organs have been removed:—so named because commonly employed in the East, from a remote antiquity, to guard the harem of princes.

Eunuque. See EUNUCH.

Eū-on′ў-mus.* [From the Gr. *εὖ*, "good," and *ὄνομα*, a "name."] A genus of shrubs of the order *Celastraceæ*, natives of Europe and the United States. It comprises the *Euon′ymus America′nus*, or Strawberry Bush, a native of the United States.

Euon′ymus.* Wahoo, or Burning Bush. The Pharmacopœial name (U.S. 1870, 1880) for the bark of *Euon′ymus atropurpu′reus*. It is recommended as a remedy in dropsy, and is said to combine the virtues of a tonic with those of a hydragogue cathartic and diuretic.

Euon′ymus At-ro-pur-pu′re-us.* Burning Bush, an ornamental shrub, a native of the United States. Its bark, called *Wahoo*, is used as a remedy for dropsy.

Eupatoire. See EUPATORIUM.

Eū-pa-to′rĭ-um.* A genus of herbs of the order *Compositæ*, comprising many species, natives of the United States, etc.

Eupato′rium.* (Fr. *Eupatoire*, ŭh′pȧ′twȧR′.) Thoroughwort. The Pharmacopœial name (U.S. 1870, 1880) for the tops and leaves of the *Eupato′rium perfolia′tum*, or Boneset. It is tonic and diaphoretic, and in large doses emetic.

Eupato′rium A-ġer-a-to-i′dēs.* White Snake-Root, a plant, a native of the United States.

Eupato′rium Can-nab′ĭ-num.* Hemp Agrimony, an herb, a native of Europe. It is said to be emetic and purgative.

Eupato′rium Pur-pu′re-um.* Joe Pye Weed, or Gravel Root, a native of the United States, bearing purple flowers. It is said to be diuretic.

Eū′pho-nў. [From the Gr. *εὖ*, "good" or "fine," and *φωνή*, "voice" or "sound."] An agreeable sound; also a normal or agreeable voice. See DYSPHONIA.

Euphorbe. See EUPHORBIA.

Eū-phor′bĭ-a.* [From *Euphor′bus*, the name of a noted physician.] (Fr. *Épurge*, ā′pürzh′, or *Euphorbe*, ŭh′fORb′.) A Linnæan genus of the class *Dodecandria* (or *Monœcia*, according to some botanists), natural order *Euphorbiaceæ*. More than fifty species of *Euphorbia* are natives of the United States. They have a poisonous milky juice. The seeds of *Euphor′bia Lath′yris*, or Caper Spurge, are cathartic. The *Euphor′bia capita′ta* of Brazil is astringent.

Euphor′bia Cor-ol-la′ta.* Large-flowering Spurge. The Pharmacopœial name (U.S. 1870) for the root of *Euphorbia corollata*. It is emetic.

Euphor′bia Hy-pĕr′ĭ-çi-fo′lĭ-a.* An herbaceous plant, a native of the United States and West Indies. It is astringent and tonic. It is very common in cultivated ground and open places.

Euphor′bia Ip-e-cac-u-an′ha.* Ipecacuanha Spurge. The Pharmacopœial name (U.S. 1870) for the root of *Euphorbia Ipecacuanha*. It is emetic.

Euphor′bia Of-fiç-ĭ-na′lis,* Euphor′bia Of-fiç-ĭ-na′rum.* "Euphorbia of the Shops." The plant which produces euphorbium.

Euphor′bia Res-in-if′er-a.* A plant, a native of Morocco. It is one of the sources of the resinous substance called euphorbium.

Euphorbiaceæ,* ū-for-be-a′she-ē. [From *Euphor′bia*, one of the genera.] A very large natural order of exogenous plants, found in nearly all parts of the globe. It includes the *Ricinus* (castor-oil plant), *Siphonia* (the Caoutchouc, or India-Rubber tree), and *Croton*, which yields croton oil. A large proportion of the plants of this order are poisonous. The root of *Jatropha Manihot*, or Cassava, which when raw is a virulent poison, becomes a wholesome nutritious food when roasted. It comprises about two thousand six hundred species, which mostly have an acrid milky juice.

Eū-phor-bĭ-ā′ceous. [Lat. **Euphorbia′ceus.**] Resembling the *Euphorbia*. See EUPHORBIACEÆ.

Eū-phor′bĭ-um,* or **Eū-phor′bĭ-æ Gum′mi Re-si′na.*** A resinous substance obtained from *Euphorbia resinifera*, and perhaps other species. *E. officinarum* and *E. antiquorum* are supposed to be sources of it. Euphorbium has an acrid, burning taste, and is soluble in alcohol and oils. It is a drastic purgative, too violent to be taken internally. Externally it is used as a rubefacient and vesicant.

Eū-phra′si-a Of-fiç-ĭ-na′lis.* [From the Gr. *ἐυφρασία*, "cheerfulness."] Euphrasy, an annual herb of the order *Scrophulariaceæ*. It is found on the alpine summits of mountains in New Hampshire.

Eū′pĭ-on.* [From the Gr. *εὖ*, "well," or "fine," and *πίων*, "fat."] A colorless liquid, obtained by distillation from the tar of animal matters, and so named from its great limpidity.

Eū-plas′tic. [From the Gr. *εὖ*, "well," and *πλάσις*, "formation."] A term applied by Lobstein to the elaborated organizable matter by which the tissues of the body are renewed. The same writer speaks of another animal matter, the tendency of which is softening and disorganization: this he terms *cacoplastic*.

Eupnœa,* yoop-ne′a. [From the Gr. *εὖ*, "good," "easy," and *πνέω*, to "breathe."] Easy respiration.

Eū-pўr′ĭ-on.* [From the Gr. *εὖ*, "easy," and *πῦρ*, "fire."] Any contrivance for obtaining an instantaneous light, as the phosphorus-bottle, etc.

Eū-ry-a-lē Fe′rox.* An aquatic plant of the order *Nympheaceæ*, a native of India. It has circular leaves, from two to four feet in diameter, and farinaceous seeds, which are esculent. The Hindoos say that they possess medicinal virtues.

Eū-stā′chĭ-an Tube. (Fr. *Trompe* [or *Conduit*, kôN′dwē′] *d'Eustache*, trôMp dus′tȧsh′.) A tube or canal extending from behind the soft palate to the tympanum of the ear, first described by Eustachius.

Eusta′chian Valve. The semilunar fold of the lining membrane of the heart, anterior to the opening of the inferior *vena cava*.

Eū-tha-na′sĭ-a.* [From the Gr. *εὖ*, "well," and *θάνατος*, "death."] An easy death.

Eū-thȳm'ĭ-a.* [From the Gr. *εὖ*, "good," and *θυμός*, "mind."] Ease or tranquillity of mind; a good condition of the mental faculties.

E-vac'u-ant. [Lat. **Evac'uans**; from *evac'uo*, *evacua'tum*, to "empty."] Having the property of increasing discharges from the bowels, bladder, etc. The principal evacuants are emetics, cathartics, diuretics, diaphoretics, and expectorants.

E-vac-u-ā'tion. [Lat. **Evacua'tio, o'nis**; from the same.] The act of discharging the contents of the bowels, or defecation; also the discharge itself; a dejection or stool.

Ev-a-nĕs'çent. [From the Lat. *evanes'co*, to "vanish."] Transitory; vanishing; disappearing:—applied to parts of a flower.

Évanouissement, ā'vā'nwĕss'mŏN'. The French term for SYNCOPE, which see.

E-vap'o-rate. To become a vapor; also to convert into vapor.

E-vap-o-rā'tion. [Lat. **Evapora'tio, o'nis**; from *e*, "out," and *vapo'ro*, *vapora'tum*, to "steam," to "send out vapor."] The conversion of a liquid into vapor. In Medicine, the transformation of a liquid into vapor in order to obtain the fixed matters contained in it in a dry and separate state. Heat is the principal cause of evaporation. The evaporation of volatile liquids, such as ether, produces an intense degree of cold.

E'ven-Pin'nate. A term applied to a leaf having the leaflets all in pairs or *equally pinnate*.

E-ven-trā'tion. [Lat. **Eventra'tio, o'nis**; from *e*, "out of," and *ven'ter*, the "belly."] The condition of a monster-fœtus in which the abdominal viscera are extruded from the natural cavity and enclosed in a projecting membranous sac.

E-ven-tu-al'ĭ-tȳ. The phrenological term for the faculty of observing and recollecting events, occurrences, etc.

Ev'er-green. [Lat. **Sempervi'rens.**] A term applied to trees and shrubs which are not destitute of foliage in winter, but have persistent leaves which remain on the tree until new leaves appear. The leaves of evergreens are changed more gradually than those of deciduous trees.

Eversion of Eyelid. See ECTROPIUM.

E-vĭs-çer-ā'tion. [Lat. **Eviscera'tio**; from *e*, "out," and *vis'cus*, *vis'ceris*, a "bowel."] Taking the bowels out of the body.

Evodia.* See ESENBECKIA.

Ev-o-lu'tion. [Lat. **Evolu'tio, o'nis**; from *e*, "out," and *vol'vo*, *volu'tum*, to "roll;" whence *evol'vo*, to "roll out," or "unfold."] Synonymous, generally, with DEVELOPMENT, which see.

Evolu'tion, Spon-ta'ne-ous. A term applied to obstetrical cases where, in the presentation or protrusion of the arm and shoulder, spontaneous turning takes place, and the case thus becomes one of breech-presentation.

E-vul'sion. [Lat. **Evul'sio, o'nis**; from *e*, "out," and *vel'lo*, *vul'sum*, to "pluck," to "pull."] The act or process of drawing out forcibly.

Ex, or **E.** A Latin preposition signifying "out," or "forth," "out of," "from," "beyond." It often has the force of "up;" as, *exsiccation*, a "drying up." Sometimes it is privative. *Ex* is usually changed to *f* before a word beginning with *f*; as, *efferens* for *ex ferens*. Before the liquids, *l*, *m*, *n*, *r*, and also before *b* and *v*, *e* is used instead of *ex*.

Ex (*ἐξ*). A Greek preposition, signifying "out." See EC.

Ex-aç-er-bā'tion. [Lat. **Exacerba'tio, o'nis**; from *exacer'bo*, *exacerba'tum*, to "become severe or sharp."] An increased force or severity of the symptoms of a disease.

Exæresis,* ex-ĕr'e-sis. [From the Gr. *ἐξαιρέω*, to "take away," to "remove."] One of the old divisions of Surgery, implying the removal of parts.

Ex-ăl-bu'mĭ-nous, or **Ex-ăl-bu'mĭ-nose.** [Lat. **Exalbu'minus**; from *ex*, "without," and *albu'men*.] Without albumen or perisperm:—applied to seeds.

Ex-an-ġeĭ'a,* or **Ex-an-ġi'a.*** [From the Gr. *ἐξ*, "out," and *ἀγγεῖον*, a "vessel."] A term sometimes applied to diseases in which the large vessels are ruptured or unnaturally distended.

Ex-a'nĭ-a.* [From the Lat. *ex*, "out," and *a'nus*.] A prolapsus, or falling down, of the anus. See ARCHOPTOSIS.

Ex-an-the'ma,* plural **Ex-an-them'a-ta.** [From the Gr. *ἐξανθέω*, to "burst forth as flowers," to "bloom," to "break out in pustules."] (Fr. *Exanthème*, ĕx'ŏN'tȧm', or *Élévure*, ā'lā'vür'.) A rash or eruption on the skin; also called *Exanthisma*:—applied in the plural to an order of the class *Pyrexiæ* of Cullen's nosology. This term is restricted to the eruptive fevers called the *Exanthemata*, which are acute, specific, infectious diseases, namely, variola, varicella, dengue, scarlet fever, typhus, typhoid fever, etc. In Botany, applied to skin-diseases, blotches on leaves, etc.

Ex-an-the-mat'ic. [Lat. **Exanthemat'icus.**] Belonging to exanthema; eruptive.

Ex-an-the-mat'ĭ-ca.* [The neuter plural of **Exanthemat'icus.** See EXANTHEMATIC.] A name given by Dr. Good to an order comprising all eruptive fevers.

Ex-an-them-a-tol'o-ġў. [Lat. **Exanthematolo'gia**; from *exanthe'ma*, "eruption," and the Gr. *λόγος*, a "discourse."] The consideration of the exanthemata.

Ex-an-them'a-tous. [Lat. **Exanthemato'sus**; from *exanthe'ma*, "eruption."] Pertaining to exanthemata; having exanthemata.

Exanthème. See EXANTHEMA.

Ex-an-the'sis,* and **Ex-an-this'ma.*** Nearly the same as EXANTHEMA, which see.

Ex-a-ris'tate. [From the Lat. *ex*, "without," and *aris'ta*, "awn."] Destitute of an awn, or beard:—applied to plants.

Ex-ar-thro'sis,* or **Ex-ar-thro'ma.*** [From the Gr. *ἐξ*, "out," and *ἄρθρον*, a "joint."] The same as LUXATION, which see.

Ex-as'per-ate. [From the Lat. *as'per*, "rough."] In Botany, covered with hard, short, stiff points.

Excentric. See ECCENTRIC.

Ex-cĭp′ĭ-ent. [Lat. **Excip′iens**; from *excip′io*, to "receive."] A term applied to the substance used for receiving medicines, or for hiding their nauseous qualities in its more pleasant taste, as the confections, conserves, etc.; a substance in which drugs or medicines are incorporated or dissolved. A liquid excipient is synonymous with *vehicle*.

Ex-cĭs′ion. [Lat. **Excis′io, o′nis**; from *ex*, "out" or "off," and *cæ′do, cæ′sum*, to "cut."] The cutting out, or cutting off, of any part.

Ex-cī-ta-bĭl′ĭ-tȳ. [Lat. **Excitabil′itas, a′tis**; from *ex′cito, excita′tum*, to "call forth," to "raise up."] The capacity of organized beings to be affected by certain agents termed *stimuli*, excitants, or exciting powers.

Ex-cī′tant. [Lat. **Ex′citans**; from the same.] Exciting; stimulating.

Ex-ci′tants. Therapeutic agents which render the tissues more prompt in the exercise of their proper actions. Those that exert influence on the stomach are called *Stomachics*.

Ex-cĭ-tā′tion. [Lat. **Excita′tio, o′nis**; from the same.] The act of rousing, or quickening into active exercise, some power or susceptibility. The effect produced on a part of the nervous system or muscular system by an exciting agent or stimulus.

Ex-cīte′ment. [From the same.] The state of being excited.

Ex-cīt′ing Cause. That which excites, or is the immediate cause of, a disease.

Ex-cī′to-Mo′tor-ȳ (or **Exci′to-Mo′tor**) **Pŏw′er.** A peculiar power or property seated in the spinal system of nerves, by which, if their extremities be excited, the impression is conveyed to the spinal marrow and reflected from it to the part or limb excited.

Ex-co-rĭ-ā′tion. [Lat. **Excoria′tio, o′nis**; from *ex*, "from," and *co′rium*, the "skin."] Abrasion or removal, partial or complete, of the skin.

Ex′cre-ment. [Lat. **Excremen′tum**; from *excer′no, excre′tum*, to "excrete," to "void by stool."] Originally, anything that is excreted (see EXCRETION); usually applied to the alvine fæces, or waste matter discharged from the bowels; dung; ordure.

Excrementitious, ex-kre-men-tish′ŭs. [Lat. **Excrementi′tius.**] Belonging to excrement.

Ex-crĕs′çence. [Lat. **Excrescen′tia**; from *excres′co*, to "grow out of."] (Fr. *Excroissance*, ĕx′krwå′sôNss′.) Any preternatural formation on any part of the body; a tumor formed on the surface.

Ex-cre′tion. [Lat. **Excre′tio, o′nis**; from *excer′no, excre′tum*, to "sift out," to "separate."] The separation of those fluids from the blood which are supposed to be useless, as urine, perspiration, etc.; also any such fluid itself. Also the action by which certain organs, as the bladder and rectum, reject the solid or liquid matters they contain. In Botany, any superfluous matter thrown off by the living plant externally.

Excrétoire. See EXCRETORY.

Ex′cre-to-rў. [Lat. **Excreto′rius**; see EXCRETIO.] (Fr. *Excrétoire*, ĕx′krå′twåR′.) Having the power of separating and throwing off what is superfluous; belonging to excretion.

Ex′cretory Ducts. [Lat. **Duc′tus Excreto′rii.**] Small vessels that conduct the secretion out of a gland.

Ex-cre′tus.* [See EXCRETION.] Thrown off as superfluous or useless.

Excroissance. See EXCRESCENCE.

Ex-cur′rent. [From the Lat. *ex*, "out," and *cur′ro*, to "run."] Running out:—applied in Botany to a midrib which projects beyond the apex of a leaf; also to the trunk of a tree which is not divided into branches, but has a main vertical stem which rises in a direct line, tapering gradually to the top, and cannot be confounded with the branches, which are all small compared with the stem. The fir or spruce is an example of the excurrent stem.

Ex′e-dens.* [From the Lat. *ex′edo*, to "eat out," to "eat as a worm or sore."] Eating; consuming:—applied to certain diseases, as *Lupus exedens*.

Ex-em-brў-o-na′tus.* [From the Lat. *ex*, priv., and *em′bryo*, the "germ of a plant."] Having no embryo:—applied in the plural feminine (*Exembryona′tæ*) to the *Cryptogamia*.

Ex-fœ-tā′tion. [From the Lat. *ex*, "out" or "without," and *fœ′tus*.] Extra-uterine fœtation, or imperfect fœtation in some organ exterior to the uterus. See ECCYESIS.

Ex-fo-lĭ-ā′tion. [Lat. **Exfolia′tio, o′nis**; from *ex*, "from," or "off," and *fo′lium*, a "leaf;" whence *exfo′lio, exfolia′tum*, to "shed the leaf."] The separation or scaling off of a dead piece of bone from the living; also the separation of scales or laminæ from the bark of a tree.

Exhalaison. See EXHALATION.

Ex-hā′lant. [Lat. **Exha′lans**; from *exha′lo, exhala′tum*, to "send forth a breath."] Giving off fumes; exhaling.

Ex-ha-lā′tion. [Lat. **Exhala′tio, o′nis**; from the same.] (Fr. *Exhalaison*, ĕx′ă′lă′zôN′.) A vapor, fume, or steam. A subtile spirit or vapor from the surface of the body. Evaporation of moisture or water by the sun's heat, etc. In Botany, it signifies the evaporation or transpiration of water or vapor which is exhaled from the leaves.

Ex-haus′tion. [From the Lat. *ex*, "out," and *hau′rio, haus′tum*, to "drain."] Privation of energy. It is a phenomenon which all irritable tissues can be made to manifest, and consists in a failure to respond to stimulation. Exhaustion of muscle and nerve is caused by excessive, quickly-repeated, or continuous stimulation. It is promoted by extremes of temperature, by a scanty supply of oxygen, and by an excessive supply of carbonic acid. Exhaustion may be *general* or *local*. General exhaustion is caused by overwork, whether physical or mental, and especially by unremitting and monotonous duties. The symptoms of general exhaustion are insomnia, incapacity for work, headache, languor and lassitude, a rapid, feeble pulse, and an anxious expression of face.

Ex-hib'it. [From the Lat. *exhib'eo, exhib'itum*, to "show" or "exhibit," to "give."] To administer or give to a patient some medicine, or medicinal substance.

Ex-hil'a-rant. [From the Lat. *exhil'aro*, to "make cheerful."] An agent that exhilarates or enlivens.

Exo (ἔξω). A Greek particle, signifying "without."

Ex-o-car'dĭ-al. [Lat. **Exocardia'lis**; from the Gr. ἔξω, "without," and καρδία, the "heart."] External to the heart.

Ex-oc-cĭp'ĭ-tal. [Lat. **Exoccipita'lis**; from the Gr. ἔξω, "without," and the Lat. *occipita'lis*, "occipital."] A term applied by Owen to the lateral part of the occipital bone.

Exoccip'ital Bone. In Anthropotomy, the condyloid process of the occipital bone: its homologue in the archetypal skeleton is called the *neurapophysis*. See VERTEBRA.

Ex-od'ic. [Lat. **Exod'icus**; from the Gr. ἔξω, "without," and ὁδός, a "way."] Proceeding out of the spinal marrow:—a term proposed by Dr. M. Hall as preferable to *Reflex motor*.

Ex'o-ġen. An exogenous plant.

Ex-oġ'en-ous. [Lat. **Exoġ'enus**; from the Gr. ἔξω, "without," and γένω, to "be born," to "grow."] A term applied to stems of plants which increase in diameter by the annual addition of a new layer to the outside of the wood, between it and the bark. These plants have two cotyledons, and are called *Dicotyledonous*. They have netted-veined leaves, and wood in concentric annual layers or rings around a central pith. All the trees and shrubs of the United States are exogenous, except a few in the South. The term is also applied by Owen to those parts, properly called *processes*, of bone, which shoot out as continuations of preceding elements. See AUTOGENOUS.

Exoġ'enous Plants. The name of the first class of phanerogamous plants. The number of the exogenous plants in the world is much greater than that of the Endogens. They are divided by Gray into two sub-classes,— *Angiospermæ* and *Gymnospermæ*. In the system of De Candolle, they are divided into four sub-classes: 1, *Thalamiflorœ*; 2, *Calyciflorœ*; 3, *Corolliflorœ*; and 4, *Monochlamydeœ*.

Ex-o-go'nĭ-um Pur'ga.* One of the names of the jalap-plant. It is a Mexican climbing plant of the order *Convolvulaceæ*. See JALAP.

Ex-om'pha-los,* Ex-om'pha-lus.* [From the Gr. ἐξ, "out," and ὀμφαλός, the "navel."] (Fr. *Hernie ombilicale*, ĕR'nĕ' ôM'bĕ'lĕ'kăl'.) Umbilical hernia. See OMPHALOCELE.

Ex-oph-thăl'mĭ-a,* or **Ex-oph-thăl'mos.*** [From the Gr. ἐξ, "out," and ὀφθαλμός, the "eye."] A swelling and protrusion of the eyeball; the same as OPHTHALMOPTOMA.

Ex-or'mĭ-a.* [From the Gr. ἐξ, "out," and ὁρμή, "rushing."] Literally, a "rushing or breaking out." A term used by the Greeks as synonymous with ecthyma, or papulous skin, comprising gum-rash, etc.

Ex-or-rhi'zous. [Lat. **Exorrhi'zus**; from the Gr. ἔξω, "without," and ῥίζα, a "root."] A term applied to plants having the radicle free and naked,—that is, not enclosed in a sheath.

Ex'o-Skel'e-ton. [Lat. **Exoscel'eton**; from the Gr. ἔξω, "without," and σκελετόν, a "skeleton."] The skeleton in such animals as have a hard or bony case, or external skeleton. See DERMOSKELETON.

Ex-os'mic. [Lat. **Exos'micus.**] Belonging to exosmose.

Ex-os-mose'. [Lat. **Exosmo'sis**; from the Gr. ἔξω, "without," and ὠσμός, "impulsion."] A movement in liquids separated by a membranous partition, by which their principles are interchanged. This term is given to the liquid passing outwards. See ENDOSMOSE.

Ex-o-stem'ma.* A genus of trees or shrubs of the order *Cinchonaceæ*, found in the West Indies, etc. Their bark is febrifuge.

Exostemma Caribæum.* See BARK, CARIBEAN.

Ex-os'to-ma.* [From the Gr. ἔξω, "without," and στόμα, a "mouth."] The same as EXOSTOME.

Exosto'ma.* Nearly the same as EXOSTOSIS, which see.

Ex-os'tome, or **Exos'toma.*** The orifice in the outer coat of the ovule of a plant.

Ex-os-to'sis.* [From the Gr. ἔξω, "without," and ὀστέον, a "bone."] An exuberant growth of bony matter on the surface of a bone; the enlargement of a part or the whole of a bone.

Ex-o-tĕr'ic. [Lat. **Exoter'icus**; from the Gr. ἐξώτερος, the comparative degree of ἔξω.] A term applied to a series of periodic vital phenomena, being such as result from causes external to the organism.

Ex-o-the'çĭ-um.* [From the Gr. ἔξω, "without," and θήκη, a "case."] The name given by Purkinje to the coat of the anther.

Ex-ot'ic. [Lat. **Exot'icus**; from the Gr. ἔξω, "without."] Foreign; belonging to what is without, or beyond the limits of, our own country:—applied to diseases and plants.

Ex-pan-sĭ-bil'ĭ-tў. [Lat. **Expansibil'itas, a'tis**; from *ex*, "out," and *pan'do, pan'sum*, to "spread."] The capability of being expanded or dilated.

Ex-pan'sion. [Lat. **Expan'sio, o'nis**; from the same.] The act of expanding; an increase in the bulk or volume of a solid, a liquid, or a gas, caused by heat; the increase of bulk, or of surface, of which natural bodies are susceptible.

Ex-pec'tant, Ex-pec-tā'tion. [From the Lat. *expec'to*, to "wait for."] These terms are applied to the method of observing the progress of disease without prescribing active remedies,— *i.e.*, leaving the disease almost entirely to the efforts of nature.

Ex-pec'to-rant. [Lat. **Expec'torans**; from *expec'toro, expectora'tum*, to "discharge from the breast" (from *ex*, "out," "from," and *pec'tus*, the "breast").] Facilitating or promoting the ejection of mucus, or other fluids, from the lungs and trachea.

Ex-pec-to-rā'tion. [Lat. **Expectora'tio, o'*nis*;** from the same.] The act of ejecting from the lungs or trachea by spitting; also the substance ejected.

Ex-pel'lent. [Lat. **Expel'lens;** from *ex-pel'lo*, to "drive out."] Driving out.

Ex-pe'rĭ-ence. [Lat. **Experien'tia;** from *expe'rior, exper'tus*, to "make trial."] Knowledge or wisdom acquired by experiment, observation, and patience. "It is the great and only ultimate source of our knowledge of nature and its laws." In Medicine, it is the knowledge acquired chiefly by observation and practice.

Ex-pĕr'ĭ-ment. [Lat. **Experimen'tum;** from the same.] (Fr. *Expérimentation*, ĕx'pā'rē'mŏN'tā'se-ŏN', or *Expérience*, ĕx'pā're'ŏNss'.) A trial; an act or operation performed in order to discover some truth or law of nature. Experiment and observation are the chief methods of acquiring experience and studying science. The sciences which depend on experiment, as Chemistry, are called *experimental sciences*. In Medicine, experiments are made on the lower animals in order to ascertain the effects of poisons and medicinal remedies.

Ex-pert'. [From the same.] A term applied to a physician charged with the duty of making a report on any case of legal medicine; also to any person whose skill and experience render him competent to judge in doubtful questions, and who is summoned as a witness for that reason.

Ex-pĭ-rā'tion. [Lat. **Expira'tio, o'*nis*;** from *expi'ro, expira'tum*, to "breathe forth."] The act of breathing out, or expelling air from the lungs.

Ex'pla-nāte. [From the Lat. *ex*, "out," and *pla'nus*, "level," "flat."] Spread or flattened out:—applied to parts of plants.

Ex-ploi-tā'tion. [From the Fr. *exploiter*, to "use," to "improve," to "cultivate."] The act of utilizing; cultivation (of land); improvement; the extraction of ore or mineral from a mine; the act of using anything so as to render it a source of profit.

Ex-plo-rā'tion. [Lat. **Explora'tio, o'*nis*;** from *explo'ro, explora'tum*, to "search diligently."] The investigation of the *physical signs* attending disease, as distinguished from what are commonly termed the *symptoms*, by means of auscultation, inspection, mensuration, palpation, and percussion.

Ex-plo'sion. [Lat. **Explo'sio;** from *explo'do, explo'sum*, to "strike out," to "explode."] A sudden expansion or bursting with a loud noise; the sudden and violent expansion of a compound or body caused by heat or chemical action.

Ex-plo'sives. [From the same.] A term applied to compounds which are used in war, mining, etc., for the sudden development of immense force. Among them are gunpowder, dynamite, nitro-glycerin, and gun-cotton.

Ex-pressed' Oils. Oils obtained from bodies by pressure. See EXPRESSION.

Ex-pres'sion. [Lat. **Expres'sio, o'*nis*;** from *ex*, "out," and *pre'mo, pres'sum*, to "press."] The process of forcing out the juices and oils of plants by means of a press. Also the manifestation of the feelings by the countenance, attitude, or gesture, or utterance of words. The function of expression is one of the functions of the highest order of animal life, which depends on the brain and manifests itself outwardly by the apparatus of phonation. Among inferior animals expression is but little developed; but the habitual concert of human beings requires a clear and direct transmission of ideas and sentiments. The function of expression can be manifested in three modes,—1, by the voice; 2, by mimicry; 3, by writing. Oral expression, or language, grows and is perfected in proportion to the development of our notions of our own constitution, of that of exterior objects, and of our relations with other species.

Ex-pul'sion. [Lat. **Expul'sio, o'*nis*;** from *ex*, "out," and *pel'lo, pul'sum*, to "drive," to "force."] The act of voiding the bowels or bladder. The delivery of the placenta; also the extrusion of an immature fœtus.

Ex-pul'sĭve. [Lat. **Expel'lens;** from the same.] (Fr. *Expulsif*, ĕx'pül'sĕf'.) A term applied to the pains in the second stage of childbirth, by which the child is expelled:—also applied in Surgery to a bandage so adjusted as to expel pus or other fluid.

Ex-san'guĭne, Ex-san-guĭn'e-ous. [Lat. **Exsanguin'eus;** from *ex*, priv., and *san'guis*, "blood."] Deprived of blood; anæmial; anæmic.

Ex-san-guin'ĭ-tў. [Lat. **Exsanguin'itas, a'*tis*;** from the same.] The state of being without blood; anæmia.

Ex-sert'ed. [Lat. **Exser'tus;** from *ex'sero, exser'tum*, to "thrust out."] Projecting or protruding, as the stamens out of the corolla; projecting beyond the orifice of an organ.

Ex-sic-cā'tion. [Lat. **Exsicca'tio, o'*nis*;** from *exsic'co, exsicca'tum*, to "dry up."] The process of drying moist bodies by applying heat or atmospheric air, or absorbing the moisture by soft spongy substances.

Ex-stip'u-late. [Lat. **Exstipula'tus;** from *ex*, priv., and *stip'ula*, a "stipule."] Without stipules:—applied to plants.

Ex'stro-phў. [Lat. **Exstro'phia**, or **Ec'strophe;** from the Gr. *ἐκ*, "out," and *στρέφω*, to "turn" or "twist."] A congenital malformation in which, from deficiency in the abdominal wall, the bladder appears to be turned inside out, having the internal surface of the posterior *paries* open outwardly above the pubes.

Ex-suc'cous. [From the Lat. *ex*, priv., and *suc'cus*, "juice."] Juiceless.

Exsudation. See EXUDATION.

Extenseur. See EXTENSOR.

Ex-ten'sion. [Lat. **Exten'sio, o'*nis*;** from *ex*, "out," and *ten'do, ten'sum*, to "stretch."] The pulling of a fractured limb in a direction from the trunk, to obviate retraction of the lower fragments; also similar treatment in dislocations. *Extension* is also one of the essential properties of matter,—that property by which it occupies space.

Ex-ten'sor, o'*ris*.* [From the same.] (Fr. *Extenseur*, ĕx'tŏN'sŭR'.) An extender:—applied to several muscles.

Exten'sor Bre'vis Dig-ĭ-to'rum Pe'dis.* "Short Extensor of the Toes." A muscle situated on the back of the foot, having for its office to extend the first four toes.

Exten'sor Com-mu'nis Digito'rum Pe'dis.* "Common Extensor of the Toes." A muscle situated on the anterior part of the leg, and attached to the phalanges of the last four toes, which it extends.

Exten'sor Digito'rum Commu'nis.* "Common Extensor of the Fingers." A muscle of the forearm, the tendons of which are inserted into the phalanges of all the fingers, which it extends.

Exten'sor Pro'prĭ-us Pol'lĭ-cis Pe'dis.* "Extensor Proper of the *Thumb of the Foot*, or *Great Toe*." A muscle on the anterior part of the leg: its office is to extend the toe.

Ex-te'rĭ-or. Outward; situated on the surface or on the outside:—the opposite of *interior*.

Ex-ter'nal. [Lat. **Exter'nus**; Fr. *Externe*, ĕx'tĕrn'.] Outward; extrinsic; the opposite of *internal*:—applied to diseases which attack parts that are visible or superficial, or which are treated by manipulation or topical means.

Exter'nal Cap'sule. A term applied to a thin layer of white matter on the outer aspect of the lenticular nucleus of the brain.

Ex-tinc'tion. [Lat. **Extinc'tio**; from *extin'guo, extinc'tum*, to "quench."] The act of extinguishing or destroying; destruction; extirpation; death. "Creations and extinctions of species were going on through the whole course of the history [of the earth]."—(DANA.)

Ex-tir-pā'tion. [Lat. **Extirpa'tio, o'nis**; from *extir'po, extirpa'tum*, to "root out."] The complete removal or eradication of a part by the knife or caustic.

Ex'tra.* A Latin preposition signifying "without," "on the outside," "beyond," "over and above."

Ex'tract. [Lat. **Extrac'tum**; from *ex*, "out," and *tra'ho, trac'tum*, to "draw."] (Fr. *Extrait*, ĕx'trā'.) Literally, "that which is drawn out or extracted" from anything. The soluble parts of vegetable substances, dissolved in spirit or water, and reduced to the consistence of a syrup or paste by evaporation.

Ex-trac'ta,* plural of EXTRACTUM, which see.

Ex-trac'tion. [Lat. **Extrac'tio, o'nis**; from the same.] The drawing of a tooth, or taking foreign substances out of the body, or a tumor out of its cavity, etc.

Ex-trac'tĭve. [Lat. **Extracti'vus**; from the same.] (Fr. *Extractif*, ĕx'trăk'tĭf'.) A term applied to a peculiar modification of vegetable matter forming one constituent part of common extracts.

EXTRAC'TIVE PRIN'CIPLES. The designation of a variety of compounds, most of which crystallize and have a bitter taste, but cannot be referred to any particular series.

Ex-trac'tum,* plural **Ex-trac'ta.** [From the same.] (Fr. *Extrait*, ĕx'trā'.) An extract. That which is drawn out or extracted. A solid or semi-solid pharmaceutical preparation made by treating a drug with water, alcohol, diluted alcohol, ether, or other solvent, and evaporating the solution until the mass has a pilular consistence.

Extrac'tum Ac-o-ni'ti.* "Extract of Aconite." The Pharmacopœial name (U.S. 1870, 1880) for the alcoholic extract of the root of *Aconi'tum Napel'lus*. The present officinal extract is much stronger than that of 1870, which was prepared from the dried leaves.

Extrac'tum Aconi'ti Flu'ĭ-dum.* "Fluid Extract of Aconite." The Pharmacopœial name (U.S. 1880) for an alcoholic fluid extract of aconite root, one cubic centimetre representing one gramme of the aconite root.

Extrac'tum Al'o-ēs A-quo'sum.* "Aqueous Extract of Aloes." The Pharmacopœial name (U.S. 1880) for a preparation made of aloes and boiling distilled water.

Extrac'tum Ar'nĭ-çæ.* "Extract of Arnica." The Pharmacopœial name (U.S. 1870) for the alcoholic extract of arnica.

Extrac'tum Ar'nicæ Ra-di'cis.* "Extract of Arnica Root." The Pharmacopœial name (U.S. 1880) for an alcoholic extract of arnica root. It represents well the virtues of arnica. It is chiefly employed in the preparation of arnica plaster.

Extrac'tum Ar'nicæ Radi'cis Flu'idum.* "Fluid Extract of Arnica Root." The Pharmacopœial name (U.S. 1880) for an alcoholic fluid extract of arnica root, one cubic centimetre representing one gramme of the arnica root.

Extrac'tum Ar-o-mat'ĭ-cum Flu'idum.* "Aromatic Fluid Extract." The Pharmacopœial name (U.S. 1880) for an alcoholic fluid extract, one cubic centimetre representing one gramme of the aromatic powder. This is an excellent aromatic in a concentrated form.

Extrac'tum Auran'tii (aw-ran'she-i) **A-ma'ri Flu'idum.*** "Fluid Extract of Bitter Orange-Peel." The Pharmacopœial name (U.S. 1880) for an alcoholic fluid extract, one cubic centimetre representing one gramme of bitter orange-peel. It is useful as a tonic.

Extrac'tum Bel-la-don'næ.* "Extract of Belladonna." The Pharmacopœial name (U.S. 1870) for an extract prepared as follows: Take of belladonna leaves, fresh, twelve troyounces. Bruise the leaves in a stone mortar, sprinkling on them a little water, and express the juice; then, having heated this to the boiling point, strain, and evaporate to the proper consistence.

Extrac'tum Belladon'næ Al-co-hol'ĭ-cum.* "Alcoholic Extract of Belladonna." The Pharmacopœial name (U.S. 1870, 1880) for the alcoholic extract of belladonna. It is much used externally.

Extrac'tum Belladon'næ Flu'idum.* "Fluid Extract of Belladonna." The Pharmacopœial name (U.S. 1880) for an alcoholic fluid extract of belladonna root, one cubic centimetre representing one gramme of the belladonna root. This was formerly officinal (1870) under the name of *Extractum Belladonnæ Radicis Fluidum*.

Extrac'tum Belladon'næ Radi'cis Flu'idum.* "Fluid Extract of Belladonna Root." The Pharmacopœial name (U.S. 1870) for an alco-

holic fluid extract of belladonna root, one cubic centimetre representing one gramme of the root.

Extrac'tum Bray-e'ræ Flu'idum.* "Fluid Extract of Brayera." The Pharmacopœial name (U.S. 1880) for an alcoholic fluid extract of brayera, one cubic centimetre representing one gramme of the drug.

Extrac'tum Bu'ɛhu Flu'idum.* "Fluid Extract of Buchu." The Pharmacopœial name (U.S. 1870, 1880) for an alcoholic fluid extract of buchu, one cubic centimetre representing one gramme of the drug. It affords the best means at our command for the exhibition of buchu.

Extrac'tum Cal'a-mi Flu'idum.* "Fluid Extract of Calamus." The Pharmacopœial name (U.S. 1880) for an alcoholic fluid extract of calamus, one cubic centimetre representing one gramme of the calamus.

Extrac'tum Ca-lum'bæ Flu'idum.* "Fluid Extract of Calumba." The Pharmacopœial name (U.S. 1870, 1880) for an alcoholic fluid extract of calumba, one cubic centimetre representing one gramme of calumba. The absence of tannin makes this a desirable tonic in combination with chalybeates.

Extrac'tum Can'na-bis A-mĕr-ĭ-ca'næ.* "Extract of American Hemp." The Pharmacopœial name (U.S. 1870) for an alcoholic extract of American hemp.

Extrac'tum Can'nabis In'dĭ-çæ.* "Extract of Indian Cannabis." The Pharmacopœial name (U.S. 1870, 1880) for an alcoholic extract of Indian cannabis.

Extrac'tum Can'nabis In'dicæ Flu'idum.* "Fluid Extract of Indian Cannabis." The Pharmacopœial name (U.S. 1880) for an alcoholic fluid extract of Indian cannabis, one cubic centimetre representing one gramme of the drug.

Extrac'tum Cap'sĭ-çi Flu'idum.* "Fluid Extract of Capsicum." The Pharmacopœial name (U.S. 1880) for an alcoholic fluid extract of capsicum, one cubic centimetre representing one gramme of capsicum.

Extrac'tum Cas-ta'ne-æ Flu'idum.* "Fluid Extract of Castanea." The Pharmacopœial name (U.S. 1880) for an alcoholic fluid extract of castanea, one cubic centimetre representing one gramme of castanea.

Extrac'tum Ɛhĭ-maph'ĭ-læ Flu'idum.* "Fluid Extract of Chimaphila." The Pharmacopœial name (U.S. 1870, 1880) for an alcoholic fluid extract of chimaphila, one cubic centimetre representing one gramme of chimaphila.

Extrac'tum Ɛhi-ra'tæ Flu'idum.* "Fluid Extract of Chirata." The Pharmacopœial name (U.S. 1880) for a fluid extract made with alcohol and glycerin, one cubic centimetre representing one gramme of chirata.

Extrac'tum Cim-ĭ-cif'u-ġæ Flu'idum.* "Fluid Extract of Cimicifuga." The Pharmacopœial name (U.S. 1870, 1880) for an alcoholic fluid extract of cimicifuga, one cubic centimetre representing one gramme of cimicifuga.

Extrac'tum Cin-ɛho'næ.* "Extract of Cinchona." The Pharmacopœial name (U.S. 1870, 1880) for an alcoholic extract of yellow cinchona. It well represents the virtues of the bark, and is occasionally prescribed as a tonic in combination with other medicines.

Extrac'tum Cincho'næ Flu'idum.* "Fluid Extract of Cinchona." The Pharmacopœial name (U.S. 1870, 1880) for a fluid extract made of yellow cinchona, one hundred grammes; glycerin, twenty-five grammes; one cubic centimetre representing one gramme of the drug. The formula of 1870 directed that it should be made of sixteen troyounces of yellow cinchona and four fluidounces of glycerin.

Extrac'tum Col'ɛhĭ-çi A-cet'ĭ-cum.* "Acetic Extract of Colchicum." The Pharmacopœial name (U.S. 1870) for an extract made of twelve troyounces of colchicum root, in moderately fine powder, and four fluidounces of acetic acid.

Extrac'tum Col'chici Ra-di'cis.* "Extract of Colchicum Root." The Pharmacopœial name (U.S. 1880) for a preparation made of colchicum root, one hundred parts; acetic acid, thirty-five parts.

Extrac'tum Col'chici Radi'cis Flu'idum.* "Fluid Extract of Colchicum Root." The Pharmacopœial name (U.S. 1870, 1880) for a fluid extract of colchicum root, one cubic centimetre representing one gramme of the drug.

Extrac'tum Col'chici Sem'ĭ-nis Flu'idum.* "Fluid Extract of Colchicum Seed." The Pharmacopœial name (U.S. 1870, 1880) for a fluid extract of colchicum seed, one cubic centimetre representing one gramme of the drug. The formula of 1870 directed the use of glycerin, which is omitted in that of 1880.

Extrac'tum Col-o-çÿn'thĭ-dis.* "Extract of Colocynth." The Pharmacopœial name (U.S. 1880) for a preparation made of one hundred parts of colocynth, dried and freed from the seeds, and a sufficient quantity of diluted alcohol. According to the Pharmacopœia of 1870, it was made of forty-eight troyounces of colocynth and a sufficient quantity of diluted alcohol.

Extrac'tum Colocyn'thidis Com-pos'ĭ-tum.* "Compound Extract of Colocynth." The Pharmacopœial name (U.S. 1870, 1880) for a preparation containing colocynth, aloes, cardamom, and scammony. It is an active and safe cathartic.

Extrac'tum Co-nī'i.* "Extract of Conium." The Pharmacopœial name (U.S. 1870) for an extract made as follows: Take of conium leaves, fresh, twelve troyounces. Bruise the leaves in a stone mortar, sprinkling on them a little water, and express the juice; then, having heated this to the boiling point, filter it, and evaporate to the proper consistence, either in a vacuum with the aid of heat, or in shallow vessels, at the ordinary temperature, by means of a current of air directed over the surface of the liquid.

Extrac'tum Coni'i Al-co-hol'ĭ-cum.* "Alcoholic Extract of Conium." The Pharmacopœial name (U.S. 1880) for an extract made of conium (*i.e.*, the fruit), diluted hydrochloric acid, glycerin, and diluted alcohol. An important change in this extract was made by substituting the fruit for the leaves, which were directed in the formula of

1870. The extract has thus been made considerably stronger. The Pharmacopœia of 1870 directed that it should be made of conium leaves recently dried, alcohol, and diluted alcohol.

Extrac'tum Coni'i Flu'idum.* "Fluid Extract of Conium." The Pharmacopœial name (U.S. 1880) for a fluid extract made of conium, diluted hydrochloric acid, and diluted alcohol, one cubic centimetre representing one gramme of conium.

Extrac'tum Coni'i Fruc'tûs Flu'idum.* "Fluid Extract of Conium Seed." The Pharmacopœial name (U.S. 1870) for a fluid extract made of conium seed, glycerin, muriatic acid, and alcohol, one cubic centimetre representing one gramme of conium.

Extrac'tum Cor'nûs Flu'idum.* "Fluid Extract of Cornus." The Pharmacopœial name (U.S. 1880) for an alcoholic fluid extract of cornus, one cubic centimetre representing one gramme of cornus. In the Pharmacopœia of 1870 this extract was named *Extractum Cornus Floridæ Fluidum.*

Extrac'tum Cu-be'bæ Flu'idum.* "Fluid Extract of Cubeb." The Pharmacopœial name (U.S. 1870, 1880) for an alcoholic fluid extract of cubeb, one cubic centimetre representing one gramme of cubeb.

Extrac'tum Cyp-rĭ-pe'dĭ-i Flu'idum.* "Fluid Extract of Cypripedium." The Pharmacopœial name (U.S. 1880) for an alcoholic fluid extract of cypripedium, one cubic centimetre representing one gramme of cypripedium.

Extrac'tum Dĭg-ĭ-ta'lis.* "Extract of Digitalis." The Pharmacopœial name (U S. 1870, 1880) for an alcoholic extract of digitalis. This extract contains all the virtues, and may be used for all the purposes, of the powdered leaves.

Extrac'tum Digita'lis Flu'idum.* "Fluid Extract of Digitalis." The Pharmacopœial name (U.S. 1870, 1880) for an alcoholic fluid extract made of digitalis, recently dried, one cubic centimetre representing one gramme of digitalis. The formula of 1870 contained glycerin, which was abandoned at the last revision.

Extrac'tum Dul-ca-ma'ræ.* "Extract of Bitter-Sweet." The Pharmacopœial name (U.S. 1870) for an alcoholic extract of bitter-sweet.

Extrac'tum Dulcama'ræ Flu'idum.* "Fluid Extract of Dulcamara." The Pharmacopœial name (U.S. 1870, 1880) for an alcoholic fluid extract of dulcamara, one cubic centimetre representing one gramme of dulcamara. The present formula differs from that of 1870 in the absence of glycerin.

Extrac'tum Er-go'tæ.* "Extract of Ergot." The Pharmacopœial name (U.S. 1880) for a preparation made as follows: Take five hundred parts of fluid extract of ergot to make one hundred parts. Evaporate the fluid extract of ergot in a porcelain capsule, by means of a water-bath, at a temperature not exceeding 50° C. (122° F.), constantly stirring, until it is reduced to one hundred parts. This is adapted for use in the hypodermic injection of ergot.

Extrac'tum Ergo'tæ Flu'idum.* "Fluid Extract of Ergot." The Pharmacopœial name (U.S. 1870, 1880) for a fluid extract made from ergot recently ground, one cubic centimetre representing one gramme of ergot.

Extrac'tum E-rĭg-er-on'tis Can-a-den'sis Flu'idum.* "Fluid Extract of Canada Erigeron." The Pharmacopœial name (U.S. 1870) for a fluid extract of Canada erigeron, one cubic centimetre representing one gramme of Canada erigeron.

Extrac'tum Er-ў-throx'ў-li Flu'idum.* "Fluid Extract of Erythroxylon." The Pharmacopœial name (U.S. 1880) for a fluid extract of erythroxylon, one cubic centimetre representing one gramme of erythroxylon.

Extrac'tum Eū-ca-lўp'ti Flu'idum.* "Fluid Extract of Eucalyptus." The Pharmacopœial name (U.S. 1880) for a fluid extract of eucalyptus, one cubic centimetre representing one gramme of eucalyptus.

Extrac'tum Eū-on'ў-mi.* "Extract of Euonymus." The Pharmacopœial name (U.S. 1880) for an alcoholic extract of euonymus.

Extrac'tum Eū-pa-to'rĭ-i Flu'idum.* "Fluid Extract of Eupatorium." The Pharmacopœial name (U.S. 1880) for a fluid extract of eupatorium, one cubic centimetre representing one gramme of eupatorium.

Extrac'tum Fran'gu-læ Flu'idum.* "Fluid Extract of Frangula." The Pharmacopœial name (U.S. 1880) for a fluid extract of frangula, one cubic centimetre representing one gramme of frangula. It is intended to be a laxative, but it is frequently disappointing, as the drug is rarely obtained of uniform good quality.

Extrac'tum Ǧel-se'mĭ-i Flu'idum.* "Fluid Extract of Gelsemium." The Pharmacopœial name (U.S. 1870, 1880) for a fluid extract of gelsemium, one cubic centimetre representing one gramme of gelsemium. It is considered by some very useful as a nervous and arterial sedative. But it cannot be safely relied upon; and in overdoses it is a dangerous poison.

Extrac'tum Ǧen-tĭ-a'næ.* "Extract of Gentian." The Pharmacopœial name (U.S. 1870, 1880) for an aqueous extract of gentian. It is frequently used as a tonic, in the form of pill, either alone or in connection with metallic preparations.

Extrac'tum Gentia'næ Flu'idum.* "Fluid Extract of Gentian." The Pharmacopœial name (U.S. 1870, 1880) for a fluid extract of gentian, one cubic centimetre representing one gramme of gentian. It affords a convenient method of giving to mixtures the tonic properties of gentian when required.

Extrac'tum Ǧe-ra'nĭ-i Flu'idum.* "Fluid Extract of Geranium." The Pharmacopœial name (U.S. 1870, 1880) for a fluid extract of geranium, one cubic centimetre representing one gramme of geranium.

Extrac'tum Glўç-ўr-rhi'zæ.* "Extract of Glycyrrhiza, or Liquorice." The Pharmacopœial name (U. S. 1880) for the commercial extract of the root of *Glycyrrhiza glabra.* It occurs in cylindrical sticks having a glossy fracture and an agreeable sweet taste. It is a useful demulcent, much employed in cough mixtures, and often added to infusions or decoctions.

Extrac'tum Glycyrrhi'zæ Flu'idum.* "Fluid Extract of Glycyrrhiza." The Pharmacopœial name (U. S. 1870, 1880) for a fluid extract of glycyrrhiza, one cubic centimetre representing one gramme of glycyrrhiza. The fluid extract of 1880 differs from that officinal in 1870 in the absence of glycerin in the menstruum and the presence of water of ammonia.

Extrac'tum Glycyrrhi'zæ Pu'rum.* "Pure Extract of Glycyrrhiza." The Pharmacopœial name (U.S. 1880) for an extract made from one hundred parts of glycyrrhiza, fifteen parts of water of ammonia, and distilled water, a sufficient quantity. It is of a soft, pasty consistence, and is used in making pharmaceutical preparations.

Extrac'tum Gos-sўp'ĭ-i Ra-di'cis Flu'idum.* "Fluid Extract of Cotton-Root." The Pharmacopœial name (U.S. 1870, 1880) for an alcoholic fluid extract of cotton-root, one cubic centimetre representing one gramme of cotton-root.

Extrac'tum Grin-de'lĭ-æ Flu'idum.* "Fluid Extract of Grindelia." The Pharmacopœial name (U.S. 1880) for a fluid extract of grindelia, one cubic centimetre representing one gramme of grindelia.

Extrac'tum Gua-ra'næ Flu'idum.* "Fluid Extract of Guarana." The Pharmacopœial name (U.S. 1880) for a fluid extract of guarana, one cubic centimetre representing one gramme of guarana.

Extrac'tum Hæm-a-tox'ў-li.* "Extract of Hæmatoxylon." The Pharmacopœial name (U.S. 1880) for an extract made of one hundred parts of hæmatoxylon, rasped, and one thousand parts of water. Macerate the hæmatoxylon with the water for forty-eight hours. Then boil (avoiding the use of metallic vessels) until one-half of the water has evaporated; strain the decoction while hot, and evaporate to dryness. According to the Pharmacopœia of 1870, it was prepared as follows: Take of logwood, rasped, twelve troy-ounces; water, eight pints. Mix, and, having boiled to four pints, strain the decoction while hot; then evaporate to dryness.

Extrac'tum Ham-a-mel'ĭ-dis Flu'idum.* "Fluid Extract of Hamamelis." The Pharmacopœial name (U.S. 1880) for a fluid extract of hamamelis, one cubic centimetre representing one gramme of hamamelis. It well represents the virtues of witch-hazel.

Extrac'tum Hel-leb'o-ri.* "Extract of Black Hellebore." The Pharmacopœial name (U.S. 1870) for an alcoholic extract of black hellebore.

Extrac'tum Hy-dras'tis Flu'idum.* "Fluid Extract of Hydrastis." The Pharmacopœial name (U.S. 1870, 1880) for a fluid extract of hydrastis, one cubic centimetre representing one gramme of hydrastis. This does not differ materially from that officinal in 1870.

Extrac'tum Hy-os-çy'a-mi.* "Extract of Hyoscyamus." The Pharmacopœial name (U.S. 1870) for an extract prepared as follows: Take of hyoscyamus leaves, fresh, twelve troyounces. Bruise the leaves in a stone mortar, sprinkling on them a little water, and express the juice; then, having heated this to the boiling point, strain, and evaporate to the proper consistence.

Extrac'tum Hyoscy'ami Al-co-hol'ĭ-cum.* "Alcoholic Extract of Hyoscyamus." The Pharmacopœial name (U.S. 1870, 1880) for an extract made from hyoscyamus recently dried.

Extrac'tum Hyoscy'ami Flu'idum.* "Fluid Extract of Hyoscyamus." The Pharmacopœial name (U.S. 1870, 1880) for a fluid extract of hyoscyamus, one cubic centimetre representing one gramme of hyoscyamus. This was improved in the last revision by abandoning the glycerin directed in the former process (1870).

Extrac'tum Ig-na'ti-æ.* "Extract of Ignatia." The Pharmacopœial name (U.S. 1870) for an alcoholic extract of ignatia.

Extrac'tum Ip-e-cac-u-an'hæ Flu'idum.* "Fluid Extract of Ipecac." The Pharmacopœial name (U.S. 1880) for a fluid extract of ipecac, one cubic centimetre representing one gramme of ipecac. This extract was greatly improved in the last revision. Indeed, the process of 1870 was almost inoperative.

Extrac'tum Ir'ĭ-dis.* "Extract of Iris." The Pharmacopœial name (U.S. 1880) for an extract made from iris, or blue flag.

Extrac'tum Ir'idis Flu'idum.* "Fluid Extract of Iris." The Pharmacopœial name (U.S. 1880) for a fluid extract of iris, one cubic centimetre representing one gramme of iris.

Extrac'tum Ja-la'pæ.* "Extract of Jalap." The Pharmacopœial name (U.S. 1870) for an alcoholic extract of jalap. It has all the medical properties of the root, but is not often exhibited alone, being chiefly used as an ingredient of purgative pills.

Extrac'tum Jug-lan'dis.* "Extract of Juglans." The Pharmacopœial name (U.S. 1870, 1880) for an alcoholic extract of juglans.

Extrac'tum Kra-me'rĭ-æ.* "Extract of Krameria, or Rhatany." The Pharmacopœial name (U.S. 1870, 1880) for an aqueous extract of krameria. Its virtues may be considered as in proportion to its solubility. It is much used for all purposes for which the astringent extracts are employed.

Extrac'tum Krame'riæ Flu'idum.* "Fluid Extract of Krameria." The Pharmacopœial name (U.S. 1870, 1880) for a fluid extract of krameria, one cubic centimetre representing one gramme of krameria.

Extrac'tum Lac-tu-ca'rĭ-i Flu'idum.* "Fluid Extract of Lactucarium." The Pharmacopœial name (U.S. 1880) for a fluid extract of lactucarium, one cubic centimetre representing one gramme of lactucarium.

Extrac'tum Lep-tan'dræ.* "Extract of Leptandra." The Pharmacopœial name (U.S. 1880) for an alcoholic extract of leptandra.

Extrac'tum Leptan'dræ Flu'idum.* "Fluid Extract of Leptandra." The Pharmacopœial name (U.S. 1880) for a fluid extract of leptandra, one cubic centimetre representing one gramme of leptandra.

Extrac'tum Lo-be'lĭ-æ Flu'idum.* "Fluid Extract of Lobelia." The Pharmacopœial name

(U.S. 1880) for a fluid extract of lobelia, one centimetre representing one gramme of lobelia. It is used as an emetic and expectorant.

Extrac'tum Lu-pu-li'ni Flu'idum.* "Fluid Extract of Lupulin." The Pharmacopœial name (U S. 1870, 1880) for a fluid extract of lupulin, one cubic centimetre representing one gramme of lupulin. It is identical with that formerly officinal (1870).

Extrac'tum Mal'ti.* "Extract of Malt." The Pharmacopœial name (U.S. 1880) for an extract made of malt, in coarse powder, not finer than No. 12, one hundred parts, and water. a sufficient quantity. It is of the consi tence of thick honey. It has been used as an emulsifying agent.

Extrac'tum Ma-ti'co Flu'idum.* "Fluid Extract of Matico." The Pharmacopœial name (U.S. 1870, 1880) for a fluid extract of matico, one cubic centimetre representing one gramme of matico. It probably contains all the virtues of matico in an excellent form for internal administration.

Extrac'tum Me-ze're-i.* "Extract of Mezereum." The Pharmacopœial name (U.S. 1880) for an alcoholic extract of mezereum.

Extrac'tum Meze'rei Flu'idum.* "Fluid Extract of Mezereum." The Pharmacopœial name (U.S. 1870, 1880) for a fluid extract of mezereum, one cubic centimetre representing one gramme of mezereum. It is too active for internal administration. It is used chiefly as the active ingredient in the stimulating ointments of mezereon.

Extrac'tum Nu'cis Vom'ĭ-çæ.* "Extract of Nux Vomica." The Pharmacopœial name (U.S. 1870, 1880) for an alcoholic extract of nux vomica.

Extrac'tum Nu'cis Vom'icæ Flu'idum.* "Fluid Extract of Nux Vomica." The Pharmacopœial name (U.S. 1880) for a fluid extract of nux vomica, one cubic centimetre representing one gramme of nux vomica.

Extrac'tum O'pĭ-i.* "Extract of Opium." The Pharmacopœial name (U.S. 1870, 1880) for an aqueous extract of opium. It is double the strength of opium.

Extrac'tum Pa-rei'ræ Flu'idum.* "Fluid Extract of Pareira." The Pharmacopœial name (U.S. 1870, 1880) for a fluid extract made of pareira, one cubic centimetre representing one gramme of pareira. The extract of 1880 is practically identical with that of 1870.

Extrac'tum Phȳs-o-stig'ma-tis.* "Extract of Physostigma." The Pharmacopœial name (U.S. 1870, 1880) for an alcoholic extract of physostigma, or Calabar bean. It is recommended as a remedy for tetanus.

Extrac'tum Pi-lo-car'pi Flu'idum.* "Fluid Extract of Pilocarpus." The Pharmacopœial name (U.S. 1880) for a fluid extract of pilocarpus, one cubic centimetre representing one gramme of pilocarpus. It is esteemed the most valuable of the new officinal fluid extracts. It represents jaborandi leaves thoroughly.

Extrac'tum Pod-o-phȳl'li.* "Extract of Podophyllum." The Pharmacopœial name (U.S. 1870, 1880) for an alcoholic extract of podophyllum. It possesses the purgative properties of the root.

Extrac'tum Podophyl'li Flu'idum.* "Fluid Extract of Podophyllum." The Pharmacopœial name (U.S. 1880) for a fluid extract of podophyllum, one cubic centimetre representing one gramme of podophyllum.

Extrac'tum Pru'ni Vir-gin-ĭ-a'næ Flu'idum.* "Fluid Extract of Wild Cherry." The Pharmacopœial name (U.S. 1880) for a fluid extract of wild cherry, one cubic centimetre representing one gramme of wild cherry.

Extrac'tum Quas'sĭ-æ.* "Extract of Quassia." The Pharmacopœial name (U.S. 1870, 1880) for an aqueous extract of quassia. It concentrates a greater amount of tonic power in a given weight than any other extract of the simple bitters.

Extrac'tum Quas'siæ Flu'idum.* "Fluid Extract of Quassia." The Pharmacopœial name (U.S. 1880) for a fluid extract of quassia, one cubic centimetre representing one gramme of quassia. It will probably never be given by itself internally, but is used to form the basis of infusions, etc.

Extrac'tum Rhe'i.* "Extract of Rhubarb." The Pharmacopœial name (U.S. 1870, 1880) for an alcoholic extract of rhubarb.

Extrac'tum Rhe'i Flu'idum.* "Fluid Extract of Rhubarb." The Pharmacopœial name (U.S. 1870, 1880) for a fluid extract of rhubarb, one cubic centimetre representing one gramme of rhubarb.

Extrac'tum Rho'is Gla'bræ Flu'idum.* "Fluid Extract of *Rhus Glabra*." The Pharmacopœial name (U.S. 1880) for a fluid extract of Rhus glabra, one cubic centimetre representing one gramme of Rhus glabra. It is useful as a gargle and a wash for the mouth.

Extrac'tum Ro'sæ Flu'idum.* "Fluid Extract of Rose." The Pharmacopœial name (U.S. 1880) for a fluid extract of red rose, one cubic centimetre representing one gramme of rose. It is useful as an adjuvant and elegant astringent.

Extrac'tum Ru'bi Flu'idum.* "Fluid Extract of Rubus." The Pharmacopœial name (U.S. 1870, 1880) for a fluid extract of rubus, one cubic centimetre representing one gramme of rubus.

Extrac'tum Ru'mĭ-cis Flu'idum.* "Fluid Extract of Rumex." The Pharmacopœial name (U.S. 1880) for a fluid extract of rumex, one cubic centimetre representing one gramme of rumex.

Extrac'tum Sa-bi'næ Flu'idum.* "Fluid Extract of Savine." The Pharmacopœial name (U.S. 1870, 1880) for a fluid extract of savine, one cubic centimetre representing one gramme of savine. This extract of 1880 is identical with that formerly officinal. It is rarely given internally.

Extrac'tum San-guĭ-na'rĭ-æ Flu'idum.* "Fluid Extract of Sanguinaria." The Pharmacopœial name (U.S. 1880) for a fluid extract of sanguinaria, one cubic centimetre representing one gramme of sanguinaria.

Extrac'tum Sar-sa-pa-ril'læ Com-pos'ĭ-tum Flu'idum.* "Compound Fluid Extract of Sarsaparilla." The Pharmacopœial name (U.S. 1870, 1880) for a fluid extract made of sarsaparilla, glycyrrhiza, sassafras bark, mezereum, and glycerin, one cubic centimetre representing one gramme of sarsaparilla.

Extrac'tum Sarsaparil'læ Flu'idum.* "Fluid Extract of Sarsaparilla." The Pharmacopœial name (U.S. 1870, 1880) for a fluid extract of sarsaparilla, one cubic centimetre representing one gramme of sarsaparilla.

Extrac'tum Scil'læ Flu'idum.* "Fluid Extract of Squill." The Pharmacopœial name (U.S. 1870, 1880) for a fluid extract of squill, one cubic centimetre representing one gramme of squill. This differs from the fluid extract of 1870 in containing no glycerin in the menstruum.

Extrac'tum Scu-tel-la'rĭ-æ Flu'idum.* "Fluid Extract of Scutellaria." The Pharmacopœial name (U.S. 1880) for a fluid extract of scutellaria, one cubic centimetre representing one gramme of scutellaria.

Extrac'tum Sen'e-ġæ.* "Extract of Seneka." The Pharmacopœial name (U.S. 1870) for an alcoholic extract of seneka (senega).

Extrac'tum Sen'egæ Flu'idum.* "Fluid Extract of Senega." The Pharmacopœial name (U.S. 1880) for a fluid extract of senega, one cubic centimetre representing one gramme of senega. The addition of ammonia to the menstruum renders this a great improvement over the fluid extract of 1870.

Extrac'tum Sen'næ Flu'idum.* "Fluid Extract of Senna." The Pharmacopœial name (U.S. 1880) for a fluid extract of senna, one cubic centimetre representing one gramme of senna. The present officinal fluid extract is very different from that of 1870, which contained 50 per cent. of glycerin.

Extrac'tum Ser-pen-ta'rĭ-æ Flu'idum.* "Fluid Extract of Serpentaria." The Pharmacopœial name (U.S. 1870, 1880) for a fluid extract of serpentaria, one cubic centimetre representing one gramme of serpentaria. It contains the virtues of the root within a small bulk.

Extrac'tum Spi-ġe'lĭ-æ et Sen'næ Flu'idum.* "Fluid Extract of Spigelia and Senna." The Pharmacopœial name (U.S. 1870) for a fluid extract made as follows: Take of fluid extract of spigelia, ten fluidounces; fluid extract of senna, six fluidounces; oil of anise, oil of caraway, each, twenty minims. Mix the fluid extracts, and dissolve the oils in the mixture.

Extrac'tum Spige'liæ Flu'idum.* "Fluid Extract of Spigelia." The Pharmacopœial name (U.S. 1880) for a fluid extract of spigelia, one cubic centimetre representing one gramme of spigelia. The fluid extract of 1870 contained 50 per cent. of glycerin; this contains none. It is most used in connection with the fluid extract of senna.

Extrac'tum Stil-lin'ġĭ-æ Flu'idum.* "Fluid Extract of Stillingia." The Pharmacopœial name (U.S. 1870, 1880) for a fluid extract of stillingia, one cubic centimetre representing one gramme of stillingia. The glycerin used in the formula of 1870 was abandoned in the last revision.

Extrac'tum Stra-mo'nĭ-i.* "Extract of Stramonium." The Pharmacopœial name (U.S. 1880) for an alcoholic extract of stramonium seed. This is an excellent preparation, stronger and more uniform than any other officinal extract of stramonium. In the Pharmacopœia of 1870 this extract was named *Extrac'tum Stramo'nii Sem'inis.*

Extrac'tum Stramo'nii Flu'idum.* "Fluid Extract of Stramonium." The Pharmacopœial name (U.S. 1880) for a fluid extract of stramonium seed, one cubic centimetre representing one gramme of stramonium.

Extrac'tum Stramo'nii Fo-lĭ-o'rum.* "Extract of Stramonium Leaves." The Pharmacopœial name (U.S. 1870) for an alcoholic extract of stramonium leaves.

Extractum Stramonii Seminis.* See EXTRACTUM STRAMONII.

Extrac'tum Ta-rax'a-ci.* "Extract of Taraxacum." The Pharmacopœial name (U.S. 1880) for an extract made of fresh taraxacum, gathered in September, a convenient quantity, and of water a sufficient quantity.

Extrac'tum Tarax'aci Flu'idum.* "Fluid Extract of Taraxacum." The Pharmacopœial name (U.S. 1870, 1880) for a fluid extract of taraxacum, one cubic centimetre representing one gramme of taraxacum. It is said to be an excellent vehicle for quinine.

Extrac'tum Trit'ĭ-ci Flu'idum.* "Fluid Extract of Triticum." The Pharmacopœial name (U.S. 1880) for a fluid extract of triticum, one cubic centimetre representing one gramme of triticum. It is valuable for its influence on the genito-urinary organs.

Extrac'tum U'væ Ur'si Flu'idum.* "Fluid Extract of Uva Ursi." The Pharmacopœial name (U.S. 1870, 1880) for a fluid extract of uva ursi, one cubic centimetre representing one gramme of uva ursi.

Extrac'tum Va-le-rĭ-a'næ.* "Extract of Valerian." The Pharmacopœial name (U.S. 1870) for an alcoholic extract of valerian.

Extrac'tum Valeria'næ Flu'idum.* "Fluid Extract of Valerian." The Pharmacopœial name (U.S. 1870, 1880) for a fluid extract of valerian, one cubic centimetre representing one gramme of valerian. This is a concentrated tincture, strong both in alcohol and in the virtues of valerian.

Extrac'tum Ve-ra'tri Vir'ĭ-dis Flu'idum.* "Fluid Extract of Veratrum Viride." The Pharmacopœial name (U.S. 1870, 1880) for an alcoholic extract of veratrum viride, one cubic centimetre representing one gramme of veratrum viride.

Extrac'tum Vi-bur'ni Flu'idum.* "Fluid Extract of Viburnum." The Pharmacopœial name (U.S. 1880) for a fluid extract of viburnum, one cubic centimetre representing one gramme of viburnum.

Extrac'tum Xan-thox'ў-li Flu'idum.* "Fluid Extract of Xanthoxylum." The Pharmacopœial name (U.S. 1880) for a fluid extract of xanthoxylum, one cubic centimetre represent-

ing one gramme of xanthoxylum. This new officinal thoroughly represents the virtues of the drug.

Extrac'tum Zin-ġib'er-is Flu'idum.* "Fluid Extract of Ginger." The Pharmacopœial name (U.S. 1870, 1880) for a fluid extract of ginger, one cubic centimetre representing one gramme of ginger.

Ex-tra-fo-lĭ-ā'ceous. [Lat. **Extrafolia'ceus**; from *ex'tra*, "without," and *fo'lium*, a "leaf."] External to the leaf:—applied to stipulæ below the footstalk.

Extrait, ĕx'trā'. A French term for EXTRACT, which see.

Ex-trā'ne-ous. [Lat. **Extra'neus**; from *ex'tra*, "without."] Foreign; not intrinsic. The term *extraneous body* is applied to any solid, liquid, or gaseous matter, animate or inanimate, which is not a proper part of the human body, but occupies in some of the tissues or cavities a place foreign to it.

Ex'tra-U'ter-ĭne. [From the Lat. *ex'tra*, "on the outside," and *u'terus*.] A term applied to those cases of pregnancy in which the fœtus is contained in some organ outside of the uterus.

Ex-trav-a-sā'tion. [Lat. **Extravasa'tio, o'nis**; from *ex'tra*, "without," and *vas*, a "vessel."] The effusion of a fluid out of its proper vessel or receptacle; the escape of any fluid of the body, normal or abnormal, from the vessel, cavity, or canal that naturally contains it, and its diffusion into the surrounding tissues. The result of the effusion is also called *extravasation*.

Ex-trem'ĭ-tў. [Lat. **Extrem'itas, a'tis**; from *extre'mum*, the "outermost part" or "end" of anything.] Any of the four limbs of animals; also the end or termination of anything.

Ex-trorse'. Turned outwards. The anther is extrorse when fastened to the filament on the side next to the pistil.

Ex-tro-ver'sion. [From the Lat. *extror'sum*, "outwards," and *ver'to, ver'sum*, to "turn."] That kind of malformation in which a part is turned inside outwards. The same as EXSTROPHY.

Ex-u'ber-ēs.* [From the Lat. *ex*, priv., and *u'ber*, "pap" or "udder."] A term applied to weaned infants, as opposed to *Sububeres*, or those being suckled.

Ex-u-dā'tion. [Lat. **Exuda'tio, o'nis**; from *exu'do, exuda'tum*, to "sweat out" (contracted from *ex*, "out," and *su'do*, to "sweat").] A sweating; the passing out of any liquid through the walls (or membranes) of the vessel containing it:—also applied to the oozing of the *liquor sanguinis* through the vascular walls; also to gums, resins, etc., which exude from trees.

Ex'u-dā-tĭve. [Lat. **Exudati'vus**; from the same.] Belonging to exudation; promoting exudation.

Ex-ul-cer-ā'tion. [Lat. **Exulcera'tio, o'nis**; from *exul'cero, exulcera'tum*, to "make sore."] A soreness; the early state, or commencement, of ulceration.

Ex-u'vĭ-æ,* gen. **Ex-u-vĭ-a'rum** (found only in the plural). [From the Lat. *ex'uo*, to "strip," to "spoil," to "put off."] The shells, etc., found in particular strata. In Zoology, applied to the slough or cast skins of animals whose nature it is to throw them off at certain seasons.

Ex-u'vĭ-al. [Lat. **Exuvia'lis.**] Belonging to exuviæ.

Eўe. [Lat. **Oc'ulus**; Gr. *ὀφθαλμός*; Fr. *Œil*, ŭl; Ger. *Auge*, owg'ẹh.] The organ of vision. The eyes occupy two cavities, called *orbits*, situated in the lower anterior part of the cranium: they communicate with the brain by means of the optic nerves. The organ consists of a ball or globe containing within itself the iris, the lens, the aqueous and vitreous humors, the retina, etc. This ball moves freely in a socket, and is readily turned at will in every direction by six muscles especially appropriated to this purpose. It is covered anteriorly by a delicate mucous membrane, termed the *conjuncti'va*, and is protected from external injury by the eyelashes and eyelids. At the very front part of the ball is situated a transparent horny membrane, termed the *cornea*. The various parts of the eye will be more particularly noticed each in its alphabetical place. In Botany, the term *eye* is applied to a leaf-bud; also to the centre or central marking of a flower.

Eye of Ty'phon. The mystic name given by the Egyptians to the *Squill*, or sea-onion.

Eyebrow. See SUPERCILIUM.

Eyelash. See CILIUM.

Eyelid. See PALPEBRA.

Eye'-Teeth. The upper *cuspidati*, or canine teeth, the fangs of which reach almost to the orbit of the eye.

F.

F., or **Ft.** = *Fi'at*,* or *Fi'ant.** "Let there be made."

Faba.* See BEAN.

Fa'ba Por-ci'na.* The fruit of *Hyoscy'amus ni'ger.*

Fa'ba Pur-ga'trix.* The bean of *Ricinus communis* (or castor-oil plant).

Fa'ba Sanc'ti Ig-na'tĭ-i.* "Bean of St. Ignatius." See IGNATIA.

Fa'ba Su-il'la.* "Hog Bean." The fruit of *Hyoscyamus niger.*

Fabaceæ.* See LEGUMINOSÆ.

Fa-bā'ceous. [Lat. **Faba'ceus**; from *fa'ba*, a "bean."] Having beans; of the nature of beans.

Face. [Lat. **Fa'cies.**] The anterior and lower part of the head. The term is also applied to the various surfaces, or planes, by which a crystal is bounded.

Face A'gue. A form of neuralgia which occurs in the nerves of the face.

Face Grippée, fȧss grē'pā'. (Fr.) The "pinched or contracted face;" a peculiar expression of features forming one of the symptoms in peritonitis.

Faç'ets, or **Fā'cets.** [From the French *facette*, a "small surface."] The small circumscribed surfaces of a bone:—applied in Zoology to the different bases into which the surface of the compound eyes of the *Arachnidæ*, *Crustacea*, and *Insecta* is divided. Also applied, in Mineralogy, to the planes or faces of a crystal.

Fā'cial. [Lat. **Facia'lis**; from *fa'cies*, the "face."] Belonging to the face.

Facial Angle. See ANGLE, FACIAL.

Fa'cial Nerve. [Lat. **Ner'vus Facia'lis.**] The *portio dura* of the seventh pair.

Fa'cial Pa-ral'ў-sis. Paralysis of the muscles of the face due to disease or injury of the nucleus or fibres of the *portio dura* of the seventh pair of nerves. The most common cause of this affection is damage to the nerve as it passes through the narrow canal in the temporal bone. There the slightest effusion will cause pressure on the nerve. Such effusion may be due to exposure to cold,—"rheumatic,"—caries, or syphilis.

Fa'cial Vein. A vein which commences at the summit of the forehead, crosses the face obliquely, and joins the internal jugular. See ANGULAR VEIN.

Facies,* fa'she-ēz. The general aspect which an organism presents at the first view, before we have studied the details of which that aspect is the result. See FACE.

Fa'cies Hip-po-crat'ĭ-ca.* The peculiar expression of the features immediately before death:—so called because first described by *Hippocrates.*

Fa'cies Ru'bra.* The "red face;" another name for the *Gutta rosacea.* See ACNE.

Fac-tĭ'tious. [Lat. **Facti'tius**; from *fa'cio*, *fac'tum*, to "make."] Made by art; artificial.

Fac'tor. [From the same.] An element, agent, or constituent; also a name of each of several quantities which are multiplied into one another to form the product.

Fac'ul-tў. [Lat. **Facul'tas**; from *fa'cio*, to "do," to "make."] The power or ability by which an action is performed; an original or natural power of the mind or body; an inherent aptitude to manifest or perform something. The term is also employed to denote collectively the medical professors, or those of any other department, in a university. The phrase "medical faculty" is also used in a more general sense, to signify those skilled in the science of medicine.

Fæ'cēs.* [The plural of the Lat. *fæx*, *fæ'cis*, "sediment."] Dregs, or sediment. The alvine excretions or excrements.

Fæcula.* See FECULA.

Fæculent. See FECULENT.

Fa-ga'ra Oc-tan'dra,* or **Am'ў-ris Tomen-to'sa.*** A tree of the order *Amyridaceæ*, a native of Venezuela. A resin called *tacamahac* is obtained from it.

Fa'gin. [Lat. **Fagi'na.**] A narcotic substance obtained from the nuts of the *Fagus sylvatica.*

Fagopyrum.* See BUCKWHEAT.

Fa'gus.* [From the Gr. *φάγω*, to "eat;" in allusion to the esculent nuts.] The classical Latin and the systematic name of a genus of trees of the order *Cupuliferæ*, comprising only a few species. See BEECH.

Fa'gus Cas-ta'ne-a.* A name for the common Chestnut (*Casta'nea vulga'ris*).

Fa'gus Sўl-vat'ĭ-ca.* The systematic name of the common Beech of Europe, a large and handsome tree, bearing edible nuts from which a useful oil is obtained. The Copper Beech is a variety of this species having brownish-red or copper-colored leaves.

Fahrenheit's Thermometer. See THERMOMETER.

Faiblesse. See DEBILITY.

Faim. See FAMES.

Fainting. See DELIQUIUM ANIMI, and SYNCOPE.

Faint'ness. A feeling of great weakness or exhaustion, as if the subject of it were about to faint or become exhausted.

Faisceau, fȧ'sō'. The French term for FASCICULUS, which see.

Faix, fȧ. The French term for FŒTUS, which see.

Făl'cate. [From the Lat. *falx*, *fa'lcis*, a "scythe" or "sickle."] Scythe-shaped; shaped like a sickle:—applied to parts of plants.

Făl'cĭ-form. [Lat. **Falcifor'mis**; for etymology see preceding word.] Resembling a scythe in shape; plane and curved in any degree, with parallel edges; the same as FALCATE:—applied to leaves, pods, etc.; also, in Anatomy, to a ligament.

Fal'ciform Proç'ess. [Lat. **Proces'sus Falcifor'mis.**] A process of the *dura mater*, separating the hemispheres of the brain, and ending in the *tentorium*.

Falling. See PROCIDENTIA, and PROLAPSUS.

Falling Sickness. See EPILEPSY.

Fal-lo'pĭ-an. [Lat. **Fallopia'nus.**] A term applied to certain tubes or canals, and a ligament, first pointed out by the celebrated anatomist Fallopius.

Fallo'pian Lig'a-ment. The round ligament of the uterus.

Fallo'pian Tubes. Two canals enclosed in the peritoneum and extending from the sides of the fundus uteri to the ovaries. See UTERUS.

Fallopius, Aqueduct of. See AQUEDUCT OF FALLOPIUS.

Fâlse. [Lat. **Fal'sus**; from *fal'lo*, *fal'sum*, to "deceive."] (Fr. *Faux*, fō, or *Fausse*, fōss.] A term often applied in medicine to an unnatural or diseased condition of certain parts, as, *false joint*, *false membrane*.

False Aneurism. See ANEURISM.

False Conception. See CONCEPTION, FALSE.

False Joint. See ARTIFICIAL JOINT.

False Mem'brane, or **Ad-ven-tĭ'tious Mem'brane.** Terms applied to membranes formed on a free surface when from inflammation there is exudation of fibrinous matter, as in croup, or on a surface denuded of the skin, in consequence, for example, of a wound or a blister.

False Pas'sage. A passage formed by the laceration or ulceration of the mucous membrane of the urethra from forcible introduction of instruments in a wrong direction.

False Ribs. [Lat. **Cos'tæ Spu'riæ.**] The five inferior ribs, which (except the last two, or floating ribs) are joined anteriorly to each other and to the cartilage of the last *true* rib.

False Vision. See PSEUDOBLEPSIA.

False Wâ'ters. [Fr. *Fausses Eaux*, fōss ō.] A term applied by the French to a serous fluid which accumulates between the chorion and the amnion and is discharged at certain periods of pregnancy. This must not be confounded with the *liquor amnii*, which they term simply the "waters" (*eaux*).

Fâl-sĭ-fĭ-cā'tion. [From the Lat. *fal'sus*, "false," and *fa'cio*, to "make."] The act of counterfeiting; a fraudulent imitation or alteration of food or medicine by the admixture of spurious or inferior articles. The term is often synonymous with *adulteration*, which is practised to an alarming extent.

Fălx Cĕr-e-bel'li.* "Scythe of the Cerebellum." [Fr. *Faux du Cervelet*, fō dü sĕRv'lā'.] A triangular portion of the *dura mater*, separating the two lobes of the cerebellum.

Falx Cĕr'e-bri.* "Scythe of the Cerebrum." [Fr. *Faux du Cerveau*, fō dü sĕR'vō'.] The same as FALCIFORM PROCESS, which see.

Falx Major.* See FALCIFORM PROCESS.

Falx Minor.* See FALX CEREBELLI.

Fa'mēs.* [Fr. *Faim*, făN.] A Latin term signifying "hunger." Hence the terms *cura famis*, abstinence from food (literally, "cure of hunger,"—*i.e.*, "cure [by means] of hunger"), and *fames canina*, voracious or canine appetite. See BULIMIA.

Fa'mes Lu-pi'na.* "Wolfish Hunger." The name given to a form of bulimia in which the patient eats voraciously and passes his food *per anum* very soon after.

Fam'ĭ-lў. [Lat. **Fami'lia**; Fr. *Famille*, fă'mĕl'.] A number of genera having some organic resemblances. In Botany, a family is the same as a natural order.

Fam'ine. [From the Lat. *fa'mes*, "hunger."] General scarcity or destitution of food.

Fang. [From the Ger. *fan'gen*, to "take" or "seize" as prey, to "bite."] The sharp-pointed, perforated tooth in the superior maxillary bone of venomous serpents, through which a poisonous fluid flows into the wound made by it:—applied also to the root of a tooth.

Fan'-Shaped. Plaited like a fan. Also cuneate below and spreading above, like a lady's fan:—applied to leaves.

Fan'-Veined. A term applied to a leaf when its ribs or veins are disposed like the ribs or plaits of a fan.

Far'ad. [From the name of *Faraday*, the celebrated physicist.] A term denoting the *unit of capacity* in galvanic electricity.

Fa-răd'ic. Relating to faradisation.

Făr-a-dĭ-śā'tion, or **Făr-a'dism.** [From *Faraday*.] A term applied to electricity generated by induction, whether voltaic or magnetic; also to a method of treating disease by a localized application of induction currents.

Farcimen.* See FARCY.

Far-cim-ĭ-na'lis.* [From the Lat. *farci'men*, "sausage-meat."] The same as ALLANTOID, which see.

Farc'tus.* [From the Lat. *far'cio*, *farc'tum*, to "stuff."] Stuffed; filled; crammed.

Far'cy, or **Far-ci'men*** (called also **E-quĭn'ĭ-a,*** and **Glan'ders**). [From the Lat. *far'cio*, to "stuff."] A disease in which numerous small tumors suppurate and form ulcers. It occurs in the horse, ass, and mule, and is often communicated by contagion to men attending on those animals. In its aggravated form it is generally fatal. The name appears to have arisen from the idea that the disease was sometimes caused by overfeeding.

Fa-ri'na.* [From the Lat. *far*, all kinds of corn.] Wheat flour. The name for the flour from the seeds of *Triticum vulgare*:—also applied to the pulverized seeds of any cereal or leguminous plant. The farina of wheat is composed of water, starch, gluten, dextrin, and glucose.

Făr-ĭ-nā'ceous. [Lat. **Farina'ceus.**] Belonging to or containing farina; of the nature of farina. In Botany, mealy in texture.

Făr'ĭ-nose. [Lat. **Farino'sus,** "mealy."] Covered with a white mealy substance. The Latin term is used as the specific name of certain plants, as the *Al'etris farino'sa.*

Farr's Clas-sĭ-fĭ-cā'tion. As the Classification of Diseases, by Dr. W. Farr, has been very generally adopted (with comparatively slight modifications) both in this country and in Great Britain, a brief synopsis of it is here given. It is embraced in four classes and eighteen orders, as follows:

CLASS I.

Zymotic Diseases.—*Zymotici.* Diseases that are either epidemic, endemic, or contagious: induced by some specific matter, or by the want of food, or by its quality. In this class are four orders:

Order 1. *Miasmatici.* Examples: Small-pox, Dysentery, Typhus Fever, Hospital Gangrene.
" 2. *Enthetici* (implanted diseases). Examples: Syphilis, Hydrophobia.
" 3. *Dietetici.* Examples: Scurvy, Alcoholism.
" 4. *Parasitici.* Examples: Scabies, Tapeworm.

CLASS II.

Constitutional Diseases.—*Cachectici.* Sporadic diseases affecting several organs of the body.

Order 1. *Diathetici.* Examples: Anæmia, Cancer, Gout.
" 2. *Phthisici.* Examples: Scrofula, Phthisis, Tabes Mesenterica.

CLASS III.

Local Diseases.—*Monorganici* (affections of one organ).

Order 1. Brain Diseases. *Cephalici.* Examples: Apoplexy, Convulsions, Tetanus, Neuralgia.
" 2. Heart Diseases. *Cardiaci.* Examples: Pericarditis, Embolism.
" 3. Lung Diseases. *Pneumonici.* Examples: Bronchitis, Pneumonia, Asthma.
" 4. Bowel Diseases. *Enterici.* Examples: Gastritis, Jaundice, Ascites.
" 5. Kidney Diseases. *Nephritici.* Examples: Nephritis, Ischuria, Diabetes.
" 6. Genetic Diseases. *Genetici* (of organs of reproduction). Example: Ovarian Dropsy.
" 7. Bone and Muscle Diseases. *Myostici.* Example: Synovitis.
" 8. Skin Diseases. *Chrotici.* Examples: Herpes, Psoriasis.

CLASS IV.

Developmental Diseases.—*Metamorphici.*

Order 1. Of Children. *Paidici.* Examples: Cyanosis, Teething.
" 2. Of Women. *Gyniaci.* Example: Paramenia.
" 3. Of the Aged. *Geratici.* Example: Loss of Memory.
" 4. Of Nutrition. *Atrophici.* Example: Atrophy.

Far-Sightedness. See PRESBYOPIA.

Fascia,* fash'e-ạ. [From the Lat. *fas'cis,* a "bundle."] Originally, a "swathe," "bandage," or "roller." The tendinous expansion of muscles; an aponeurosis. In Botany, a cross-band of color.

Fas'cia Crib-rĭ-for'mis.* "Sieve-like Fascia." A web of cellular substance stretched from the lower edge of Poupart's ligament over the inguinal glands:—so called because it is pierced with numerous openings for the transmission of the lymphatic vessels.

Fas'cia I-lĭ'a-cạ.* "Iliac Fascia." A strong fascia which covers the inner surface of the iliac and psoas muscles.

Fas'cia In-fun-dib'u-lĭ-for'mis.* "Funnel-shaped Fascia." A portion of cellular membrane which passes down on the spermatic cord, where it penetrates the *fascia transversalis.*

Fas'cia La'tạ.* "Broad Fascia." A broad tendinous expansion continued from the tendons of the *glutæi* and neighboring muscles, and maintaining in their proper position the various muscles of the thigh.

FASCIA LATA is also the name of a muscle at the upper and exterior part of the thigh. See TENSOR VAGINÆ FEMORIS.

Fas'cia of Ten'on. The name applied to a membrane of the eye connected with the tunica vaginalis.

Fas'cia Pro'prĭ-ạ.* The proper cellular envelope of a hernial sac.

Fas'cia Spi-ra'lis.* "Spiral Roller." A name for the common roller which is wound spirally round a limb.

Fas'cia Su-per-fiç-ĭ-a'lis.* "Superficial Fascia." A very thin layer of cellular membrane which covers the abdominal muscles immediately under the skin.

Fas'cia Tor'tĭ-lis.* A name for the tourniquet.

Fas'cia Trans-ver-sa'lis.* The cellular membrane lining the inner surface of the *transversalis abdominis* muscle.

Fascial, fash'ạl. [Lat. **Fascia'lis.**] Belonging to a fascia.

Fasciate, fash'e-at, or **Fasciated,** fash'e-āt-ed. [Lat. **Fascia'tus;** from *fas'cia.*] Banded or flattened like a little band:—applied to parts of certain plants.

Fasciation, fash-e-ā'shŭn, or **Fasciatio,*** fash-e-a'she-o. [From the Lat. *fas'cia,* a "bandage."] The binding up of a diseased or wounded part:—also a bandage.

Fas'çĭ-cle. A bundle or close cluster. See FASCICULUS.

Fascicled, făs'sĭ-k'ld. Growing in a bundle or tuft, as the leaves of the pine.

Fas-çic'u-lar. [Lat. **Fascicula'ris;** from *fascic'ulus,* a "little bundle."] Bundled together; clustered:—applied to roots.

Fas-çic'u-late. [Lat. **Fascicula'tus;** from *fascic'ulus,* a "little bundle."] Bundled together; clustered. In Botany, growing in bundles from the same or nearly the same point. The same as FASCICLED.

Fas-çic'u-lus,* plural **Fas-çic'u-li.** [Diminutive of the Lat. *fas'cis,* a "bundle."] (Fr. *Faisceau,* fă'sō'.) A term applied to a little bundle of muscular or nervous fibres, etc. In Botany, a fascicle or compact cyme, as in the Sweet William; also a handful of leaves, roots, etc.

Fas-ci'o-la He-pat'ĭ-cạ.* [From the Lat. *fasci'ola,* a "little strip of cloth."] Another name for the DISTOMA, which see.

Fas-tid'ĭ-um Ci'bi.* "Disgust of Food." See ANOREXIA.

Fas-tig'ĭ-ate. [Lat. **Fastigia'tus;** from *fastig'ium,* the "top."] Level-topped:—applied to branches or flowers which rise together to the same height, forming a flat top. Also close, par-

allel, and upright, as the branches of the Lombardy poplar.

Fast'ing. (Fr. *Le Jeûne*, lẹh zhun.) Abstinence from food. Progressive wasting of the body and failure of power are the necessary effects of fasting. The usual duration of life under complete abstinence from food and drink is said to be from eight to ten days.

Fat. [Lat. **A'deps, Pin'gue,** or **Pingue'do;** Fr. *Le Gras*, lẹh grȧ, *La Graisse*, lȧ grȧs.] A soft, whitish, animal substance, insipid, oily, inflammable, insoluble in water, and almost insoluble in alcohol. It consists of proximate principles or acids called *stearin, margarin,* and *olein,* combined with glycerin. An excess of fat diffused beneath the skin and beneath serous membranes, etc., causes the disease *obesity.* Chemically, fats are compounds of carbon and hydrogen, called *hydrocarbons.*

Fatigue, fa-teeg'. [Lat. **Fatiga'tio;** from *fati'go, fatiga'tum,* to "weary," "tire," or "vex."] Weariness; lassitude; the state to which the body is reduced by excessive or long-continued activity.

Fatty Degeneration. See LARDACEOUS DEGENERATION.

Fat'tў In-fil-trā'tion. A term applied to a deposit from the blood of fatty matter in the tissues. It is quite distinct from fatty degeneration, being simply a deposit, and not a morbid change in the tissues themselves.

Fạ-tu'ĭ-tў. [Lat. **Fatu'itas, a'tis;** from *fat'uus,* "silly."] Weakness of understanding, or idiocy. See AMENTIA.

Fau'cēs,* gen. **Faucium,** fau'she-ŭm. [The plural of the Lat. *faux.*] The cavity at the back of the mouth from which the pharynx and larynx proceed.

Fau-ci'tis.* The same as ISTHMITIS, which see.

Fault. [From the Fr. *faute,* an "error" or "defect."] In Geology, a dislocation along a fissure; a complete fracture of the strata along a vertical or inclined plane. The beds on one side of the fracture are uplifted, and on the other depressed.

Fau'nạ.* [From *Fau'nus,* a sylvan deity of the ancient Romans.] The entire assemblage of animals, especially Mammalia, which nature has assigned to a particular country.

Faux,* gen. **Fau'cis.** The gorge, or mouth (see FAUCES) :—applied, by analogy, to the opening of the tube of a monopetalous corol, or the throat of a calyx.

Faux, fō, feminine **Fausse,** fōss. The French for FALSE, which see. *Faux* is also the French term for *Falx.* See next article.

Faux du Cerveau, fō dü sĕr'vō'. The French term for *Falx Cerebri.* See FALCIFORM PROCESS.

Faux du Cervelet, fō dü sĕrv'lȧ'. The French term for FALX CEREBELLI, which see.

Fa-ve'o-late. [From the Lat. *fave'olus,* the diminutive of *fa'vus,* a "honey-comb."] Honeycombed; the same as ALVEOLATE :—applied to parts of certain plants.

Fa-vose'. [Lat. **Favo'sus;** from *fa'vus,* a "honey-comb."] In Botany and Pathology, belonging to, or like, a honey-comb; faveolate.

Fa'vus.* A honey-comb :—applied to a kind of pustule. See PORRIGO.

Fay'nard's Pŏw'der. A celebrated powder for stopping hemorrhage, said to have been nothing more than the charcoal of beech wood, finely powdered.

Feather. See PLUME.

Feather-Veined. See PINNATELY-VEINED.

Feath'er-ў. Consisting of long hairs which are themselves hairy, as the pappus of *Leontodon taraxacum.*

Fe'brēs* (the plural of **Fe'bris,** a "fever"). Fevers. An order of the class *Pyrexiæ* of Cullen's nosology.

Fe-bric'u-la.* [Diminutive of the Lat. *fe'bris,* a "fever."] A slight fever. Simple fever of one or not more than a few days' duration, not preceded by any one known and invariable antecedent, and not attended by any one definite organic lesion.

Fe-brif'er-ous. [Lat. **Feb'rifer;** from *fe'bris,* "fever," and *fe'ro,* to "bear" or "produce."] Fever-producing :—applied to certain unhealthy localities.

Feb'rĭ-fuge. [Lat. **Febrif'ugus;** from *fe'bris,* a "fever," and *fu'go,* to "drive away."] Having the property of moderating or abating the violence of fevers; antipyretic :—applied to external applications or internal remedies which tend to lower the bodily temperature when it has been raised by the processes of fever. The principal febrifuges, given in the order of their activity, are cold baths, cold affusion or wet pack, alcohol and diaphoretics, quinia, digitalis, and aconite.

Feb'rĭle. [Lat. **Febri'lis;** from *fe'bris,* a "fever."] Belonging to fever; feverish.

Fe'bris.* [From the Lat. *fer'veo,* to "be hot."] A fever. See FEVER.

Febure's Lo'tion. A once celebrated remedy for cancer, consisting of ten grains of the white oxide of arsenic dissolved in a pint of distilled water, to which are added one ounce of the *Extractum Conii,* three ounces of the *Liquor Plumbi Subacetatis,* and a drachm of laudanum.

Feces. See FÆCES.

Fécond, fȧ'kôN'. The French term for FECUND, which see.

Fec'u-lạ. [Lat. **Fæc'ula,** the diminutive of *fæx, fæ'cis,* "dregs;" Fr. *Fécule,* fȧ'kül'.] Originally, the grounds or sediment of any liquor; any substance derived by spontaneous subsidence from a liquid. The term was afterwards applied to starch, which was thus deposited by agitating the flour of wheat in water; and, lastly, it denoted a peculiar vegetable principle, which, like starch, is insoluble in cold but completely soluble in boiling water, with which it forms a gelatinous solution.

Fec'u-lence. [Lat. **Fæculen'tia;** from *fæx, fæ'cis,* "dregs."] Dregs; excrement; fæces; also a feculent substance deposited from turbid fluids.

Fec'u-lent. [Lat. **Fæculen'tus**; from the same.] Having dregs or fæces; of the nature of dregs or fæces.

Fe'cund. [Lat. **Fœcun'dus**; Fr. *Fécond*, fā'kôn'.] Fruitful; prolific.

Fec-un-dā'tion. [Lat. **Fœcunda'tio, o'nis**; from *fœcun'do, fœcunda'tum*, to "make fruitful."] In Botany, the action of the pollen on the ovule, which thereby becomes impregnated; fertilization. In Physiology, the act of impregnating, or the state of being impregnated.

Fe-cun'dĭ-tў. [Lat. **Fœcun'ditas, a'tis**; from *fœcun'dus*, "fruitful."] The power of reproducing; fruitfulness.

Feeling. See TOUCH.

Feet, Distortion of. See TALIPES.

Feigned or Sim'u-lāt-ed Dis-eas'es. A term applied to cases in which the patient is an impostor and practises tricks to deceive, as some beggars and criminals; also to diseases which are difficult of diagnosis, and are feigned, not by deliberate deception, but because the patient is unable to resist the vagaries of his morbid nervous system. Hysteria in its protean forms supplies the greater number of these cases. A sudden shock, or the necessity for active exertion, will sometimes rouse and restore one who has been a bedridden hypochondriac for many years.

Fel,* gen. **Fel'lis.** (Fr. *Fiel*, fe-ĕl'.) Gall, or bile; a secretion found in the *cystis fellea*, or gall-bladder. See BILE.

Fel Bo-vi'num,* or **Fel Tau'ri.*** Gall, or bile, of the ox. See BILE.

Fel Bo'vis.* "Ox-Gall." The Pharmacopœial name (U.S. 1880) for the fresh gall of *Bos Taurus*. It is supposed to be tonic and laxative. See BILE.

Fel Bo'vis In-spis-sa'tum.* "Inspissated Ox-Gall." The Pharmacopœial name (U.S. 1880) for an extract made as follows: Take of fresh ox-gall one hundred parts: heat the ox-gall to a temperature not exceeding 80° C. (176° F.), strain it through muslin, and evaporate the strained liquid on a water-bath in a porcelain capsule to fifteen (15) parts.

Fel Bo'vis Pu-rĭ-fĭ-ca'tum.* "Purified Ox-Gall." The Pharmacopœial name (U.S. 1880) for an extract made by precipitating fresh ox-gall with alcohol, filtering and evaporating.

Felĭ-dæ.* [From the Lat. *fe'lis*, a "cat."] A name denoting a family of mammals including the domestic cat, the lion, tiger, panther, leopard, etc.

Fel-lif'lu-a Pas'sio* (pash'e-o). Gall-flux disease,—an ancient name for cholera.

Fel-lif'lu-us.* [From the Lat. *fel*, "bile," and *flu'o*, to "flow."] Flowing with, or discharging, bile. See preceding article.

Fel'lin-ate. [Lat. **Fel'linas, a'tis.**] A combination of fellinic acid with a base.

Fel-lin'ic. [Lat. **Fellin'icus**; from *fel*, "gall," or "bile."] Belonging to bile, or gall.

Fellin'ic Aç'id. A peculiar substance obtained by digesting bilin with dilute hydrochloric acid.

Fe'lo de se.* [Low Latin *fe'lo*, a "felon," *de*, "with respect to," and *se*, "himself."] Literally, "one guilty of felony with respect to himself." A term in Medical Jurisprudence for one who commits suicide.

Fel'on. The name of malignant whitlow, in which the effusion is beneath the periosteum.

Fel'spar, or, less correctly, **Feld'spar.** A term applied to a group of minerals, comprising several species, named *albite, orthoclase, labradorite, oligoclase*, etc. They all contain silica and alumina; but the first has soda in addition, and is called *soda felspar*; the second has potash, and the third has lime.

Fel-spath'ic. Containing felspar as a principal ingredient.

Fe'male Flŏw'ers. A term applied to those flowers which have pistils and no stamens.

Feminine. See FŒMINEUS.

Fem-o-ræ'us.* [From the Lat. *fe'mur, fem'oris*, the "thigh."] Another name for the *crurœus* muscle, an extensor of the leg.

Fem'o-ral. [Lat. **Femora'lis**; etymology same as the preceding.] Belonging to the thigh; crural.

Fem'o-ro-çēle.* [From the Lat. *fe'mur*, the "thigh," and the Gr. *κήλη*, a "tumor."] The disorder termed *hernia cruralis*.

Fe'mur,* gen. **Fem'o-ris.** The thigh. Also the long cylindrical bone of the thigh, or *os femoris*. (Fr. *Os de la Cuisse*, ō dẹh lå kwēss.) Also the second articulation of the feet of the *Arachnides, Crustacea*, and *Insecta*.

Fe-nes'tra.* [From the Gr. *φαίνω*, to "make appear."] A window:—applied to two foramina of the tympanum of the ear. In Botany, an opening through a membrane.

Fe-nes'tral. [Lat. **Fenestra'lis**; from *fenes'tra*, a "window."] Belonging to windows; like windows.

Fe-nes'trate. [Lat. **Fenestra'tus**; from the preceding.] Pierced with holes, or with openings like windows:—applied to parts of certain plants.

Fen'nel. The *Fœniculum vulgare*.

Fen'u-Greek, or **Fen'u-grĕc.** The *Trigonel'la Fœ'num*, a plant forming, it is said, an article of food in Egypt. It grows also in the south of France. It is used chiefly in veterinary medicine.

Fer, fĕR. (Fr.) See IRON.

Fer'ment. [Lat. **Fermen'tum**; Fr. *Ferment*, fĕR'môN'.] A substance which by mere contact with certain matters, called *fermentible*, causes in them the phenomena of fermentation, while its elements do not enter into the composition of the resulting products, which are supplied by the fermentible matter, so that a considerable quantity of this matter is transformed by an almost inappreciable quantity of the ferment.

Fer-men-tā'tion. [Lat. **Fermenta'tio, o'nis**; from *fermen'to, fermenta'tum*, to "leaven."] The spontaneous changes which combinations of animal or vegetable matter undergo when exposed to the air and moisture at an ordinary tem-

perature. The term is applied to various processes, among which are the *vinous* fermentation, which produces wine and alcohol; the *saccharine*, which produces sugar; the *acetous*, which produces vinegar; and the *putrefactive*, which is the decomposition of organic substances containing nitrogen into fetid gas. Compounds which are capable of exciting fermentation are called *ferments*. The theory of fermentation now generally accepted is called the *germ theory*, which attributes the decomposition of the fermenting matter to the vital action of microscopic organisms, called *fungi*, of which yeast consists.

Fer-men'tum.* "Ferment." The substance which excites fermentation. The Pharmacopœial name (U.S. 1870) for "yeast." See preceding article.

Fermen'tum Cerevi'siæ* (sĕr-e-vish'e-ē). The scum or froth of beer during fermentation; barm; yeast.

Fern, Male. See ASPIDIUM FILIX MAS.

Ferns. [Lat. **Fil'ices.**] A natural order of cryptogamous plants of the class *Acrogens*. See FILICES.

Fe-ro'nĭ-a El-e-phan'tum.* [From the Lat. *Fero'nia*, the goddess of groves.] An Indian tree of the order *Aurantiaceæ*, yielding a gum resembling gum arabic. It is the only species of the genus. Its fruit is edible, and its leaves are aromatic and carminative.

Fer-ra'rĭ-a.* A genus of plants of the order *Iridaceæ*, comprising many species, natives of South Africa, Brazil, etc. The *Ferraria cathartica* and *Ferraria purgans*, natives of Brazil, are used as purgatives in that country.

Fer'ri,* the genitive of FERRUM, which see.

Fer'ri Car-bo'nas Sac-cha-ra'tus.* "Saccharated Carbonate of Iron." The Pharmacopœial name (U.S. 1880) for ferrous carbonate preserved with sugar. It is a greenish-gray powder, having a sweetish and ferruginous taste. This is an excellent chalybeate, possessing the advantage of being readily soluble in acids.

Fer'ri Chlor'ĭ-dum.* "Chloride of Iron." The Pharmacopœial name (U.S. 1870, 1880) for ferric chloride. It is in orange-yellow, crystalline pieces, very deliquescent, having a strongly styptic taste and an acid reaction. It is used almost exclusively in the form of tincture or liquor. See TINCTURA FERRI CHLORIDI.

Fer'ri Ci'tras.* "Citrate of Iron." The Pharmacopœial name (U.S. 1870, 1880) for a compound made from citric acid and the hydrate of iron. It is a pleasant chalybeate, and is best given in solution. According to the Pharmacopœia of 1870, it is made thus: Take of solution of citrate of iron a convenient quantity, evaporate the solution at a temperature not exceeding 140° to the consistence of a syrup, and spread it on plates of glass so that the salt, when it is dry, may be obtained in scales.

Fer'ri et Am-mo'nĭ-i Ci'tras.* "Citrate of Iron and Ammonium." The Pharmacopœial name (U.S. 1870, 1880) for a substance made from citric acid, water of ammonium, and the hydrate of iron. It is a pleasant chalybeate. According to the Pharmacopœia of 1870, it is made by mixing a pint of solution of citrate of iron with six fluidounces of water of ammonia.

Fer'ri et Ammo'nii Sul'phas.* "Sulphate of Iron and Ammonium." The Pharmacopœial name (U.S. 1870, 1880) for a substance containing sulphuric acid, iron, and ammonium. It is in the form of pale violet octahedral crystals, efflorescent on exposure to the air, with an acid, styptic taste. It is used as a styptic. According to the Pharmacopœia of 1870, it is made as follows: Take of solution of tersulphate of iron, two pints; sulphate of ammonium, four and a half troyounces. Heat the solution of tersulphate of iron to the boiling point, add the sulphate of ammonium, stirring it until it is dissolved, and set the liquid aside to crystallize. Wash the crystals quickly with very cold water, wrap them in bibulous paper, and dry them in the open air.

Fer'ri et Ammo'nii Tar'tras.* "Tartrate of Iron and Ammonium." The Pharmacopœial name (U.S. 1870, 1880) for a substance containing iron, tartaric acid, and ammonium. It occurs in transparent scales of a garnet-red or yellowish-brown color, with a sweetish taste. It is a mild chalybeate.

Fer'ri et Po-tas'sĭ-i Tar'tras.* "Tartrate of Iron and Potassium." The Pharmacopœial name (U.S. 1870, 1880) for a substance containing tartaric acid, potassium, and iron. It occurs in garnet-red scales, and has a sweetish taste. It is an agreeable chalybeate.

Fer'ri et Quin'ĭ-æ Ci'tras.* The Pharmacopœial name (U.S. 1870) of the citrate of iron and quinia. See FERRI ET QUININÆ CITRAS.

Fer'ri et Quĭ-ni'næ Ci'tras.* "Citrate of Iron and Quinine." The Pharmacopœial name (U.S. 1880) for a substance containing citric acid, quinine, and iron. It occurs in reddish or brownish scales, having a bitter taste. This salt combines the virtues of its two bases.

Fer'ri et Stryeh-ni'næ Ci'tras.* "Citrate of Iron and Strychnine." The Pharmacopœial name (U.S. 1870, 1880) for a substance containing citric acid, strychnine, and iron. It occurs in garnet-red scales, which are deliquescent on exposure to air, and have a bitter taste. It is an efficient tonic. In the Pharmacopœia of 1870 this salt was designated *Ferri et Strychniæ Citras*.

Fer'ri Fer-ro-çy-an'ĭ-dum.* "Ferrocyanide of Iron." The Pharmacopœial name (U.S. 1870) for Prussian blue. It is deemed a tonic, febrifuge, and alterative, but it is seldom used.

Fer'ri Fi'lum.* The Latin name for iron wire; the *Ferrum in fila tractum* of the London Pharmacopœia.

Fer'ri Hy-po-phos'phis.* "Hypophosphite of Iron." The Pharmacopœial name (U.S. 1870, 1880) for a grayish-white substance containing hypophosphorous acid and iron. This salt may be given in states of the system where deficient powers of the cerebral centres are attended with an anæmic state of the blood.

Fer'ri I-od'ĭ-dum Sac-cha-ra'tum.* "Saccharated Iodide of Iron." The Pharmacopœial name (U.S. 1880) for ferrous iodide, a yellowish-white or grayish powder, containing iodine, sugar, and iron, very hygroscopic, odorless, having a

sweetish, ferruginous taste: the presence of the sugar retards oxidation. Its medical properties are identical with those of iodide of iron.

Fer'ri Lac'tas.* "Lactate of Iron." The Pharmacopœial name (U.S. 1870, 1880) for pale, greenish-white, crystalline crusts or grains, containing lactic acid and iron, permanent in the air, odorless, having a mild, sweetish, ferruginous taste. It has the general medical properties of the ferruginous preparations, and has been especially used in chlorosis.

Fer'ri Ox'a-las.* "Oxalate of Iron." The Pharmacopœial name (U.S. 1870, 1880) for a pale-yellow or lemon-yellow crystalline powder containing oxalic acid and iron, permanent in the air, odorless, and nearly tasteless, very slightly soluble in cold or hot water, but soluble in cold concentrated hydrochloric acid. It is a feeble chalybeate.

Fer'ri Ox'ī-dum Hy-dra'tum.* "Hydrated Oxide of Iron," or Sesquioxide of Iron. The Pharmacopœial name (U.S. 1870, 1880) for a brown-red magma made by precipitating a solution of ferric sulphate with water of ammonia. It is wholly soluble in hydrochloric acid, without effervescence. It is important as an antidote to arsenious acid. It should be given in doses of a tablespoonful, to an adult, every five or ten minutes.

Fer'ri Ox'idum Hydra'tum cum Mag-ne'sĭ-â.* "Hydrated Oxide of Iron with Magnesia." The Pharmacopœial name (U.S. 1880) for a preparation made by precipitating a solution of tersulphate of iron with an aqueous mixture of magnesia. It is an efficient antidote for arsenical poisoning.

Fer'ri Phos'phas.* "Phosphate of Iron." The Pharmacopœial name (U.S. 1880) for a preparation containing phosphoric acid and iron. It is in thin, bright green, transparent scales, permanent in dry air when excluded from light, but turning dark on exposure to light, odorless, and having an acidulous, slightly saline taste. This phosphate is very different from the salt formerly officinal. It has been given with advantage in amenorrhœa and dyspepsia. According to the Pharmacopœia of 1870, *Ferri Phosphas* was made as follows: Take of sulphate of iron, five troyounces; phosphate of sodium, six troyounces; water, eight pints. Dissolve the salts separately, each in four pints of the water, then mix the solutions and set aside the mixture until the precipitate has subsided. Lastly, having poured off the supernatant liquid, wash the precipitate with hot water and dry it with a gentle heat.

Fer'ri Py-ro-phos'phas.* "Pyrophosphate of Iron." The Pharmacopœial name (U.S. 1870, 1880) for a preparation containing pyrophosphoric acid and iron, in thin, apple-green, transparent scales, permanent in dry air when excluded from light, but turning dark on exposure to light, odorless, and having an acidulous taste. It is a very good chalybeate, mild, yet efficient. The process now officinal differs materially from that of 1870.

Fer'ri Ra-men'ta.* "Raspings of Iron." A name for iron filings.

Fer'ri Sub-car-bo'nas.* "Subcarbonate of Iron." The Pharmacopœial name (U.S. 1870) for a salt containing carbonic acid and iron, in the form of a reddish-brown powder, insoluble in water, and wholly dissolved by hydrochloric acid. It is a rather feeble ferruginous tonic, nearly free from astringency.

Fer'ri Sul'phas.* "Sulphate of Iron." The Pharmacopœial name (U.S. 1870, 1880) for a preparation containing sulphuric acid and iron. It occurs in large, pale bluish-green prisms, efflorescent and absorbing oxygen on exposure to air, and having a saline, styptic taste. It is a very astringent chalybeate, and is useful as a disinfectant. It is a good remedy for erysipelas applied topically in the form of solution or ointment.

Fer'ri Sul'phas Ex-sic-ca'tus.* "Dried Sulphate of Iron." The Pharmacopœial name (U.S. 1870, 1880) for ferrous sulphate dried at a temperature not exceeding 300°. It is a grayish-white powder, soluble in water except a small residue. It is used for making pills.

Fer'ri Sul'phas Præ-cip-ĭ-ta'tus.* "Precipitated Sulphate of Iron." The Pharmacopœial name (U.S. 1880) for a preparation made by precipitating a solution of ferrous sulphate with alcohol. It is a very pale bluish-green crystalline powder, efflorescent in dry air, but when in contact with moisture becoming gradually oxidized, and having a saline and styptic taste. It does not differ in properties from pure sulphate of iron in crystals.

Fer'ri Sul-phu-re'tum.* "Sulphuret of Iron." The Pharmacopœial name (U.S. 1870) for the protosulphuret of iron, prepared by melting together sublimed sulphur and iron in small pieces.

Ferri Va-le-rĭ-a'nas.* "Valerianate of Iron." The Pharmacopœial name (U.S. 1880) for a preparation containing valerianic acid and iron in the form of a dark tile-red amorphous powder, permanent in dry air, having a faint odor of valerianic acid and a mildly styptic taste. It is rarely used, on account of its insolubility in water.

Ferric Oxide. See SESQUIOXIDE OF IRON.

Fer-rif'er-ous. [Lat. **Ferrif'erus**; from *fer'rum*, "iron," and *fe'ro*, to "bear."] Containing iron in some form, usually in the state of oxide or carbonate.

Fer'ro-. [From the Lat. *fer'rum*, "iron."] A prefix in compound names, denoting connection with iron.

Fer'ro-çȳ-an'ic Ac'id. A compound of cyanogen, metallic iron, and hydrogen. It contains the elements of hydrocyanic acid, but differs from it totally in its properties. Its salts, once termed *triple prussiates*, are now called *ferrocyanates*.

Fer-ro-çȳ'an-īde of Iron. [Lat. **Fer'ri Ferrocyan'idum.**] A compound formed by the union of iron with cyanogen or ferrocyanogen. It is commonly called *Prussian Blue*.

Ferrocyanide of Potassium. See POTASSII FERROCYANIDUM.

Fer-ro-çy-an'o-ġen. A diatomic radical formed by the union of three equivalents of cyanogen with one equivalent of iron.

Fer-ru'ġin-ous, or **Fer-ru-ġin'e-ous.** [Lat. **Ferrugin'eus,** or **Ferrugino'sus**; from *ferru'go,* the "rust of iron."] Containing iron-rust; resembling iron-rust in color; of a yellowish-brown color.

Fer'rum.* "Iron." The Pharmacopœial name (U.S. 1870, 1880) for metallic iron in the form of fine, bright, non-elastic wire. The preparations of iron are eminently tonic, and peculiarly well fitted to improve the quality of the blood when it is impoverished.

Ferrum Oxidatum Hydratum.* See FERRI OXIDUM HYDRATUM.

Fer'rum Re-dac'tum.* "Reduced Iron." The Pharmacopœial name (U.S. 1870) for metallic iron in fine powder, obtained by reducing the carbonate or sesquioxide of iron by hydrogen at a dull red heat.

Fer'rum Re-duc'tum.* "Reduced Iron." The Pharmacopœial name (U.S. 1880) for a very fine, grayish-black, lustreless powder, consisting of metallic iron, permanent in dry air, without odor or taste, and insoluble in water or in alcohol. It is one of the best of chalybeate tonics. This preparation is equivalent to the *Ferrum Redactum* which was officinal in 1870.

Fer'tīle. [Lat. **Fer'tilis**; from *fe'ro,* to "bring forth."] Fruitful:—applied to flowers having a pistil, or producing seeds capable of vegetation; fertilized.

Fer-tĭl-i-zā'tion. In Botany, the process by which pollen causes the embryo to be formed. See CROSS-FERTILIZATION, and FECUNDATION.

Fer'u-la.* [From the Lat. *fe'rio,* to "strike."] Originally, a "rod" for punishing children (SKEAT):—afterwards applied to certain plants with a rod-like stem. A Linnæan genus of the class *Pentandria,* natural order *Umbelliferæ.*

Fer'ula As-a-fœt'ĭ-da.* The plant which yields asafetida.

Fer'vor.* [From the Lat. *fer'veo,* to "boil."] A violent and scorching heat. *Ardor* denotes an excessive heat; *calor,* a moderate or natural heat.

Fessier, fĕs'sē'ā'. [From the Fr. *fesse,* the "buttock."] The French term for GLUTEAL or GLUTÆUS, which see.

Fes'ter. A superficial suppuration resulting from irritation of the skin, the pus being developed in vesicles of irregular figure and extent. *Fester* is also used as an intransitive verb signifying to suppurate superficially.

Fĕs'ter-ing. A word applied to a sore, signifying the discharge either of pus or of a morbid watery fluid.

Fes-tooned' Rings. A popular designation of the fibrous zones or tendinous circles which surround the orifices of the heart.

Fe'tal. [Lat. **Fœta'lis.**] Belonging to the fœtus.

Feticide. See FŒTICIDE.

Fet'id. [Lat. **Fœt'idus**; from *fœ'teo,* to "become putrid," to "stink."] Having a bad or a disagreeable smell.

Fe'tor. [Lat. **Fœ'tor, o'ris**; from *fœ'teo,* to "stink."] A bad smell, or stink.

Feu-il-læ'a Cor-dĭ-fo'lĭ-a.* A climbing herbaceous plant of the order *Cucurbitaceæ,* a native of Jamaica. Its seeds are purgative and emetic, and have an intensely bitter taste. They are used as a remedy for various diseases.

Feuille. The French for LEAF.

Fe'ver. [From the Lat. *fe'bris,* the primary idea of which, according to Skeat, is a "trembling;" many scholars derive *febris* from *fer'veo,* to "boil," which implies the "trembling" of the water; *ferveo* may then suggest both the "shaking" which is the incipient stage of many fevers, and the "heat" or "burning" which forms the second stage; Fr. *Fièvre,* fe-a͡vr'; Ger. *Fie'ber,* fee'bẹr.] The name applied to a class of diseases characterized by a quickened pulse and a rise of the temperature of the body. Generally speaking, the temperature during the dominant stage of the fever furnishes a tolerable measure of the severity of the disease. When very high,—106° F., for example,—it is always an indication of great danger. If it does not exceed 101° or 102°, it indicates a comparatively mild form of fever.

Fevers have been divided into *idiopathic* and *symptomatic.* The latter are merely incidental to some other affection: thus, they may, for example, be a mere accompaniment of a severe wound. Idiopathic or essential fevers exist independently of any other affection.

Idiopathic fevers are further distinguished by names referring to their cause or origin, as *malarial* fevers (those arising from MALARIA, which see), and those which originate in some specific contagion or infection, as small-pox, measles, varicella, etc. These will be noticed in their alphabetical places. So the malarial fevers, as *intermittent, remittent,* etc., will be treated under their respective heads.

Fever, Bilious. See REMITTENT FEVER.

Fever, Hay. See HAY FEVER.

Fever, Intermittent. See INTERMITTENT FEVER.

Fever, Malarial. See MALARIAL FEVER.

Fever, Remittent. See REMITTENT FEVER.

Fever Root. See TRIOSTEUM.

Fever, Slight. See FEBRICULA.

Fever-Tree. See EUCALYPTUS.

Fever, Typhus. See TYPHUS FEVER.

Fever, Yellow. See YELLOW FEVER.

Fe'ver-few. A popular name of the *Matricaria Parthenium;* also called *Pyrethrum Parthenium.*

Fe'ver-ish. [Lat. **Feb'riens**; Fr. *Fièvreux,* fe-a͡'vRUh'.] A term applied to the state of one laboring under fever; also to that which causes fever.

Fi'ber.* The Latin term for the "beaver."

Fi'bre. [Lat. **Fi'bra.**] A term applied to the minute threads or filaments which occur in the structure of parts in animals and vegetables.

Fibres are long and slender anatomical elements. The fibres of the bark are generally longer and tougher than those of the wood, and are called *bast-fibres*. It is these latter that render flax and hemp such valuable materials for the manufacture of textile fabrics. The fibre of which cotton fabrics are made is a hair or appendage of the seed.

Fi'bre, An"ĭ-mal. [Lat. **Fi'bra Anima'lis.**] The filaments which compose the muscular fasciculi, the cellular membrane, etc.

Fi'bre, El-e-ment'ą-rў. In Botany, that thread which is turned round the interior of the tubes that are called spiral vessels.

Fi'bre, Wood'ў. [Lat. **Fi'bra Lig'nea.**] The filaments of which any woody substance is composed:—also called *wood-cells*. These are small tubes commonly between one- and two-thousandths of an inch in diameter. They are united in such a way that their tapering ends overlap one another.

Fibreux, fĕ'brUh'. The French term for FIBROUS, which see.

Fī'bril. [Lat. **Fibril'la**; the diminutive of *fi'bra*, a "fibre."] A term applied in the plural to the extremely slender filaments seen by the microscope, and by the collection of a number of which in a sheath, or *sarcolemma*, a muscular fibre (of animal life) is formed.

Fib-ril-la'tus.* [From the Lat. *fibril'la*, a "little fibre."] Disposed in very delicate filaments:—applied to muscles; also to roots.

Fī'brin, or **Fi'brīne.** [Lat. **Fibri'na**; from *fi'bra*, a "fibre."] A peculiar whitish, solid, insipid, and inodorous compound substance found in animal and vegetable matter. It is an organic ingredient of the blood and chyle, and the only component of the body that coagulates spontaneously. It is insoluble in alcohol, ether, and water.

Fib-rin-oġ'en-ous. [From the Lat. *fibri'na*, "fibrin," and the Gr. *γεννάω*, to "produce."] Producing fibrin:—applied by Virchow to a substance which exists in lymph and is converted into fibrin by exposure to air.

Fi'brin-ous. [From the Lat. *fibri'na*, "fibrin."] Composed of, or containing, fibrin; presenting the character of fibrin:—applied to aliments; also to certain diseases, as *fibrinous pneumonia*.

Fi'bro-. [From the Lat. *fi'bra*, a "fibre."] A prefix denoting a fibrous condition.

Fī'bro-Car'tĭ-laġe. Membraniform cartilage. The substance, intermediate between proper cartilage and ligament, constituting the base of the ear, and determining the form of that part; also composing the rings of the trachea, the epiglottis, etc. By the older anatomists it was termed *ligamentous cartilage*, or *cartilaginiform ligament*. Fibro-cartilages are sometimes formed as the result of a morbid process in different organs.

Fi'bro-Cel'lule. (Fr. *Fibre-Cellule*, fĕ'br sĕl'-ül'.) A term applied to smooth muscular fibres,—anatomical elements in which the narrow and elongated form of fibres is joined with the structure of cellules, inasmuch as they enclose a central nucleus.

Fi'bro-Çў's'tic. Having the character both of fibrous and of cystic matter:—applied to certain tumors.

Fī'bro-Plas'tic. [Lat. **Fi'bro-Plas'ticus**; from *fi'bro-*, and the Gr. *πλάσσω*, to "form."] Forming fibres:—applied to an organized tissue from the corpuscles exuded on sores.

Fi'bro-Vas'cu-lạr. Consisting of woody tissue and spiral or other vessels (of plants).

Fi'broid. [From the Eng. *fi'bre*, and the affix *-oid*.] Resembling fibre.

Fi'broid De-ġen-er-ā'tion. A morbid change of certain tissues (membranous ones especially) into a fibroid material.

Fī-bro'ma.* A fibrous tumor. See -OMA.

Fī-bro-neū-ro'ma.* [From the Eng. *fi'bre*, the Gr. *νεῦρόν*, a "nerve," and the affix *-oma*.] A fibrous tumor consisting chiefly of nerve-filaments, or occurring on a nerve.

Fī-bro'sis.* Fibroid degeneration.

Fī'brous. [Lat. **Fibro'sus**; from *fi'bra*, a "fibre."] (Fr. *Fibreux*, fĕ'brUh'.) Having fibres, or composed of fibres:—applied to tissues of animals and to parts of plants. In Botany, having a large proportion of woody fibres.

Fib'u-la.* Literally, a "clasp." The long bone extending from the knee to the ankle, on the outer side of the leg.

Fib'u-lar. [From the Lat. *fib'ula*.] Belonging to the fibula.

Ficatio,* fi-ka'she-o, or **Fi'cus.*** [From the Lat. *fi'cus*, a "fig."] A fig-like tubercle about the anus or pudenda.

Fī'coid. [Lat. **Ficoi'des**; from *fi'cus*, a "fig," and the Gr. *εἶδος*, a "form" or "resemblance."] Resembling a fig.

Ficoideæ,* fi-ko-i'de-ē. A natural order of plants. See MESEMBRYACEÆ.

Fi'cus.* A Linnæan genus of the class *Polygamia*, natural order *Urticaceæ*. The genus *Ficus* comprises about one hundred and fifty species. Also the Pharmacopœial name (U.S. 1870) for the dried fruit of the *Ficus Carica*, or fig.

*Ficus** is also the name of a fleshy substance, or *condyloma*, resembling a fig. See FICATIO.

Fi'cus.* "Fig." The Pharmacopœial name (U.S. 1870, 1880) for the fleshy receptacle of *Ficus Carica*, bearing fruit upon its inner surface. Figs are nutritious, laxative, and demulcent. Their chief medical use is as a laxative article of diet in constipation.

Fi'cus Car'ĭ-ca.* The fig-tree; also called *F. commu'nis*, *F. sati'va*, and *F. vulga'ris*. It is a native of Asia Minor, and is cultivated in many warm temperate climates. It bears a *multiple* fruit, or a mass of fruits resulting from many blossoms. The dried fruit contains much grape-sugar.

Fi'cus E-las'tĭ-ca.* The tree which affords caoutchouc, or Indian rubber. It is a native of the East Indies, and is cultivated in the United States for its beautiful foliage.

Fi'cus In'dĭ-ca.* The systematic name of the banyan-tree, which yields gum-lac.

Fid'dle-Shaped. Obovate, with a deep recess or indentation on each side; the same as PANDURIFORM:—applied to parts of certain plants.

Fid'gets. [Lat. **Tituba'tio.**] A term denoting general restlessness, with a desire of changing one's position.

Fi-diç-ĭ-na'lēs.* [From the Lat. *fid'icen*, a "harper."] A designation of the *lumbricales* (muscles) of the hand, from their usefulness in playing upon musical instruments.

Fièvre, fe-a̲vr'. The French term for FEVER, which see.

Fièvre Algide. See ALGIDA FEBRIS.

Fièvre Hectique. See HECTIC FEVER.

Fièvre Jaune. See YELLOW FEVER.

Fiévreux. See FEVERISH.

Fifth Pair of Nerves. See TRIGEMINI.

Fig. See FICUS.

Fig'ure. [Lat. **Figu'ra.**] A form; a shape; one of the ten numeral characters, 1, 2, 3, etc. In Geometry, a space bounded by lines or by surfaces. A *plane figure* is a space bounded by a line or lines. A *solid figure* is a space bounded by several faces or surfaces. Figure is one of the general properties of matter.

Fig'ure of 8. A term applied to bandages the parts of which are arranged so as to resemble the figure 8.

Fig'wort Fam'ĭ-lў. A synonyme of the order *Scrophulariaceæ.*

Fil'a-ment. [Lat. **Filamen'tum**; from *fi'lum*, a "thread."] A small, delicate, thread-like substance; a fibre. The thread-like part of a stamen; the stalk of the anther.

Fil-a-men'tose, or **Fil-a-men'tous.** [From the same.] Bearing, or formed of, slender threads or fibres:—applied to parts of plants.

Fi-la'rĭ-a.* [From the Lat. *fi'lum*, a "thread."] A thread-like parasitic worm which infests the cornea of the eye of the horse.

Fila'ria Med-ĭ-nen'sis.* The systematic name of the Guinea-worm.

Fil'bert. The popular name of the *Cor'ylus Avella'na.*

Filicales.* See FILICES.

Filices,* fil'e-sēz, the plural of the Lat. **Fi'lix.** Ferns. A natural order of cryptogamous plants, which abound in temperate and tropical regions, remarkable for their beautiful plumy foliage. They are propagated by *spores*, each of which is a single cell. These are borne on the leaves, which are called *fronds.*

Fil'ĭ-coid. [Lat. **Filicoi'des**; from *fi'lix*, "fern," and the Gr. εἶδος, a "form" or "resemblance."] Fern-like; belonging to ferns.

Fil-ĭ-col'o-ġў. [From the Lat. *fi'lix*, a "fern," and the Gr. λόγος, a "discourse."] The science of ferns; that branch of Botany which treats of ferns.

Fil'ĭ-form. [Lat. **Filifor'mis**; from *fi'lum*, a "thread."] Having the appearance of thread; thread-shaped; long, slender, and terete:—applied to parts of plants and animals.

Fi'lix,* gen. **Fil'ĭ-cis.** The Latin word for "fern:"—applied in the plural to a Linnæan order of *Cryptogamia.* (See FILICES.) Also a Pharmacopœial name of the rhizoma of *Aspidium filix mas.*

Fi'lix Mas.* "Male Fern." The Pharmacopœial name (U.S. 1870) for the rhizoma of ASPIDIUM FILIX MAS, which see.

Film. The popular name for opacity of the cornea. Also a pellicle or thin skin.

Fil'ter. [Lat. **Fil'trum.**] An apparatus of various construction, for the purposes of filtration. Any porous material, as charcoal, flannel, or sand.

Fil'trate. [From the Lat. *fil'trum*, a "filter."] Any liquid strained or filtered.

Fil-trā'tion. [Lat. **Filtra'tio, o'nis**; from *fil'trum*, a "filter."] The process by which a fluid is gradually separated from the particles or impurities that may be floating or suspended in it; straining.

Fil'trum.* Literally, a "filter:"—sometimes applied to the superficial groove across the upper lip from the partition of the nose to the tip of the lip.

Fim'brĭ-a.* [Perhaps from the Lat. *fi'bra*, a "fibre" or "filament."] A border, or fringe:—applied in the plural (*fim'briæ*) to the extremities of the Fallopian tubes, and, in Botany, to fringe-like processes.

Fim'brĭ-ate, or **Fim'brĭ-āt-ed.** [Lat. **Fimbria'tus**; from *fim'bria*, a "fringe."] Fringed; having a fringe, or border:—applied to petals and other parts of plants.

Fi-me-ta'rĭ-ous. [From the Lat. *fi'mus*, "dung."] Growing on or amidst dung:—applied to certain plants.

Fi'nal Cause. The purpose or design for which a thing was created. The doctrine of final causes is termed *Teleology.*

Fin'ger. [Lat. **Dig'itus Ma'nus.**] In anatomical language, one of the five extremities of the hand; in popular parlance, one of the four besides the thumb.

Fingered. See DIGITATE.

Fins. [Lat. **Pin'næ.**] Membranous organs in fishes, somewhat analogous to hands and feet.

Fire'-Damp. A name given by miners to the explosive gas, consisting chiefly of light carburetted hydrogen, found in mines.

First In-ten'tion. Union by the first intention means adhesive inflammation without suppuration, as when the lips of a wound made by a sharp knife are brought into immediate contact, and quickly healed without much inflammation.

Fir-Tree. See ABIES.

Fish-Glue. See ICHTHYOCOLLA.

Fish-Skin. See ICHTHYOSIS.

Fis'sĭle. [Lat. **Fis'silis**; from *fin'do, fis'sum*, to "cleave."] Cleavable; easily cleft or cloven.

Fis-sip'a-rous. [Lat. **Fissip'arus**; from *fin'do, fis'sum*, to "cleave," and *pa'rio*, to "produce."] Producing offspring by portions being separated from the parent individual. See next article.

Fissip'arous Gen-er-ā'tion. That generation which occurs either by spontaneous division of the body of the parent into two or more parts, each part, when separated, becoming a distinct individual, as in the Monad, Vorticella, etc., or by artificial division, as in the Hydra, Planaria, etc. The propagation of plants by slips furnishes another example of this kind of reproduction.

Fis-sĭ-pā'tion. [Lat. **Fissipa'tio, o'nis.**] A faulty term for FISSIPAROUS GENERATION, which see.

Fis-sĭ-ros'tris.* [From the Lat. *fin'do, fis'sum,* to "cleave," and *ros'trum,* a "beak."] A term applied in the plural (*Fissiros'tres*) to a family of birds having a broad beak with an extended commissure; fissiros'trate.

Fis-su'ra Gla-se'rĭ-i.* "Glaser's Fissure." A fissure situated in the deepest part of the glenoid fossa.

Fissu'ra Lon-ġĭ-tu-dĭ-na'lis.* "Longitudinal Fissure." A deep fissure observed in the median line on the upper surface of the brain, occupied by the *falx cerebri* of the *dura mater.*

Fissu'ra Sўl'vĭ-i.* "Fissure of Sylvius." Called also **Fissu'ra Mag'na Syl'vii.*** "Great Fissure of Sylvius." A fissure which separates the anterior and middle lobes of the cerebrum. It lodges the middle cerebral artery.

Fissu'ra Um-bil-ĭ-ca'lis.* "Umbilical Fissure." The groove of the umbilical vein, situated between the large and small lobes, at the upper and fore part of the liver. This groove in the fœtus contains the umbilical vein.

Fis'sure. [Lat. **Fissu'ra;** from *fin'do, fis'sum,* to "cleave."] Any deep extended depression. A crack, or narrow opening; a narrow cleft or fracture. "Most eruptions of volcanoes take place through fissures in the sides of the mountain."—(DANA.) Dikes and veins are fissures that have been filled with metallic ores, lava, etc., ejected from volcanoes.

Fis'sure of the Spleen. The groove which divides the inner surface of the spleen. It is filled by vessels and fat.

Fis'sus.* [From the Lat. *fin'do, fis'sum,* to "cleave."] Divided; cleft. In Botany, divided half-way.

Fist. Armat. = *Fis'tula arma'ta.** "A clyster pipe and bag fit for use."

Fis'tu-la.* Originally, a "pipe." A sinuous ulcer, having an external opening often leading to a larger cavity, and slow to heal. A fistula is termed *blind* when it has but one opening, and *complete* when it has two, communicating with an internal cavity, and with the surface.

Fis'tula in A'no.* "Fistula in the Anus." A fistula in the cellular substance about the anus or rectum.

Fis'tu-lar, or **Fis'tu-lose.** [From the Lat. *fis'tula,* a "pipe."] Hollow and cylindrical, as the leaves of the onion; tubular:—applied to stems, etc., of plants.

Fistule. See FISTULA.

Fis'tu-lous. [Lat. **Fistulo'sus;** from *fis'tula.*] Of the nature of fistula:—also applied to plants having hollow stems, as many *Umbelliferæ.*

Fit. A popular term for a paroxysm or a sudden seizure characterized by a loss or disturbance of consciousness. (See EPILEPSY, CONVULSION, and SYNCOPE.) The term is also applied to a sudden or acute seizure of certain diseases, as ague and gout.

Fixed Air. See CARBONIC ACID.

Fixed Bod'ies. [Lat. **Cor'pora Fix'a.**] Substances which do not evaporate by heat, especially those which cannot be fused or volatilized, as carbon, silicon, etc.

Fixed Oils. See OILS.

Fix'ĭ-tў. [Lat. **Fix'itas, a'tis.**] A property by which bodies withstand the action of heat. See FIXED BODIES.

Fl. = *Flu'idus.** "Fluid."

Flabellate. The same as FLABELLIFORM.

Fla-bel'lĭ-form. [Lat. **Flabellifor'mis;** from *flabel'lum,* a "fan."] Fanlike; fan-shaped; broad, rounded at the summit and narrowed at the base:—applied to leaves, etc.

Flac'çid. [Lat. **Flac'cidus.**] Weak and soft; lax; too limber to support its own weight:—applied to certain plants.

Fla-cour'tĭ-a.* A genus of shrubs and small trees of the order *Flacourtiaceæ,* comprising many species, natives of India and tropical parts of Africa and America. They mostly bear edible and astringent fruits. The leaves of *Flacourtia cataphracta,* a native of India, are astringent and stomachic, and are prescribed for diarrhœa. *Flacourtia sepiaria,* a native of India, bears edible fruits which, when unripe, are very astringent.

Flacourtiaceæ,* flā-koor-te-a'she-ē. [From *Flacour'tia,* one of the genera.] A natural order of exogenous trees and shrubs, natives of the hottest parts of the East and West Indies. It comprises the *Bixa Orellana,* from which arnotto is obtained.

Flag, Sweet-Scented. See ACORUS CALAMUS.

Fla-ġel'lĭ-form. [Lat. **Flagellifor'mis;** from *flagel'lum,* a "little whip."] Flag'ellate; resembling a little whip; long, narrow, and flexible. A botanical term denoting "whip-like."

Fla-ġel'lum.* [Diminutive of the Lat. *fla'grum,* a "whip."] In Botany, a runner which is long and slender, like a whip.

Flake-White. The subnitrate of bismuth.

Flame. [Lat. **Flam'ma.**] The combustion of any substance yielding an inflammable gas; ignited gas in process of combustion. The ordinary flame of a lamp, candle, etc., is the result of the combustion of a hydrocarbon,—*i.e.,* its combination with oxygen.

Flame-Col'ored. [Lat. **Flam'meus.**] Fiery red or very lively scarlet.

Flam'me-us.* Flame-colored.

Flank. [Fr. *Flanc,* flŏN, the "side."] That part of the body between the false ribs and the *ossa innominata.*

Flan'nel. A light fabric of fine wool, which, in hot climates, is worn as an outer garment, because it does not absorb the rays of the sun. Hygienists advise the inhabitants of cold and temper-

ate regions to wear it next to the skin, because it absorbs sweat without hindering transpiration and circulation of air. When it is washed it should not be rubbed, for friction causes it to shrink or become *felted*.

Flash. A preparation used for coloring brandy and rum and giving them a fictitious strength: it consists of an extract of cayenne pepper, or capsicum, with burnt sugar.

Flat'u-lence, or **Flat'u-len-cy.** [Lat. **Flatulen'tia**; from *flatus*, "wind."] A collection of gas or wind in the stomach or bowels, from fermentation or chemical decomposition of the articles of food taken into the stomach; the undue generation of gases in the stomach and intestines. It is a common symptom in dyspepsia, gastritis, enteritis, etc.

Flat'u-lent. [Lat. **Flatulen'tus**; from the same.] Having flatulence, or causing flatulence.

Fla'tus.* [From the Lat. *flo*, *flatum*, to "blow."] Wind, or gas, in the stomach or bowels; flatulency.

Fla-ve'ri-a Con-tra-yer'ba.* A plant of the order *Compositæ*, a native of Peru and Chili. It is used as a vermifuge.

Fla-vĕs'çent, or **Flav'ĭ-dus.*** [From the Lat. *flavus*, "yellow."] Yellowish, or turning yellow; pale yellow.

Fla'vor. Odor, fragrance, or taste; the quality which affects or pleases the taste and smell combined.

Flax. The *Li'num usitatis'simum*, an annual plant generally cultivated in civilized countries for its fibre, which is the raw material of linen, and for its seed, which yields linseed oil.

Flax, Purġ'ing. The *Li'num cathar'ticum*.

Fleabane. See ERIGERON.

Flēam. [Fr. *Flamme*, flăm; related etymologically to PHLEBOTOMY.] An instrument for lancing the gums and for bleeding horses.

Fléchisseur. See FLEXOR.

Flesh. [Lat. **Ca'ro, Car'nis**; Fr. *Chair*, shêr.] The muscles, and generally the soft parts, of an animal:—sometimes applied to the fruit, leaves, etc., of plants, when of a thick consistence, somewhat like flesh.

Flesh, Proud. See PROUD FLESH.

Flesh'ў. See CARNEUS, and CARNOSUS. In Botany, composed of firm pulp or flesh. The term *fleshy plants* is applied to those which are succulent, as the *Cactus*, *Agave*, and *Cereus*.

Fleur, flŭR. The French name for "flower."

Flexible. The same as FLEXILE.

Flex'ĭle. [Lat. **Flex'ilis**; from *flecto*, *flexum*, to "bend."] Flexible; easily bent without breaking.

Flex'ion. [Lat. **Flex'io, o'nis**; from the same.] The act of bending; the state of being bent.

Flex'or, o'ris.* [From the same.] (Fr. *Fléchisseur*, flă'shĕ'sŭR'.) Literally, a "bender:"—applied to muscles.

Flex'or Car'pi Ra-dĭ-a'lis.* "Radial Flexor of the Wrist." See PALMARIS MAGNUS.

Flex'or Lon'gus Diġ-ĭ-to'rum Pe'dis.* "Long Flexor of the Fingers of the Foot." A muscle which arises from the posterior surface of the tibia and is inserted into the phalanges of the last four toes. It bends the toes, and extends the foot upon the leg.

Flex'or Lon'gus Pol'lĭ-cis.* "Long Flexor of the Thumb." A muscle which arises from the anterior part of the radius and interosseous ligament and is inserted into the second phalanx of the thumb. It bends the thumb and hand.

Flex'or Lon'gus Pol'licis Pe'dis.* "Long Flexor of the *Thumb of the Foot*, or *Great Toe*." A muscle which arises from the posterior part of the fibula and is inserted into the second phalanx of the great toe. It bends the toe.

Flex'u-ous, or **Flex'u-ose.** [Lat. **Flexuo'sus**; from the same.] Having many bendings or turnings; bending in opposite directions in a zigzag way:—applied to parts of certain plants.

Flex'ure. [Lat. **Flexu'ra**; from *flecto*, *flexum*, to "bend."] A bending; a fold; a curvature:—applied in Geology to the folds or plications of rocky strata which were originally horizontal, but are now tilted at various angles o rise into folds, forming ridges and valleys.

Flint. [Lat. **Si'lex.**] A silicious mineral, a massive variety of quartz, having a dull color and a conchoidal fracture, with translucent edges. The flint found in beds of chalk is composed partly of silicious infusoria, diatoms, and spiculæ of sponges.

Flint Glass. A compound formed of silex, 38.2; oxide of lead, 43.5; potassa, 11.7; and alumina, 2. It is a material of which lenses are often made.

Flint, Liq'uor of, or **Liq'uor Sil'ĭ-cum.*** A name formerly given to the solution of silicated alkali.

Float'ing. In Botany, swimming on the surface, as many leaves. See NATANS.

Float'ing Ribs. [Lat. **Cos'tæ Fluctuan'tes.**] The last two false ribs, whose anterior extremities are not connected with the rest, or with each other.

Floc'çi,* the plural of the Lat. *floccus*, a "lock or little particle of wool, cotton," etc.

Floc'çi Vol-ĭ-tan'tēs.* The imaginary objects floating before the eyes in cases of depraved sight. See MUSCÆ VOLITANTES.

Floccillatio.* See FLOCCILLATION.

Floc-çil-lā'tion. [Lat. **Floccilla'tio, o'nis**; from *floccus*, a "lock of wool," the "nap of clothes."] The picking of the bedclothes,—a symptom betokening extreme danger in certain fevers. See CARPHOLOGY.

Floc'cose (from the Lat. *floccus*, a "lock of wool,"), or **Floc'cu-lent.** Composed, or bearing tufts, of woolly or long and soft hairs:—applied to certain plants.

Floc'cu-lus,* otherwise called **Lo'bus Ner'vi Pneŭ-mo-gas'trĭ-ci.*** "Lobe of the Pneumogastric Nerve." A term applied to the pneumogastric lobule of the cerebellum: its form is that of a small foliated or lamellated tuft.

Flood'ing. [Lat. **Hæmorrha'gia Uteri'na.**] The popular term for uterine hemorrhage,—more particularly in connection with parturition.

Flo'ra.* [From the Lat. *flos, flo'ris*, a "flower."] (Fr. *Flore.*) Originally, the goddess of Flowers. The Flora of any country (or district) is the entire assemblage of plants which nature has allotted to it; also a systematic description of those plants.

Flo'ral. [Lat. **Flora'lis**; from *flos*, a "flower."] Belonging to flowers, or situated near a flower.

Flo'ral En've-lopes. This term is synonymous with the calyx and corolla of a flower. The floral envelopes are sometimes called the *perianth.*

Floral Leaf. See BRACTEA.

Flor'en-tine Or'ris. The *Iris Florentina.*

Flo'rēs.* [The plural of FLOS, which see.] "Flowers." A term formerly used to denote such bodies as assume a pulverulent form by sublimation or crystallization.

FLO'RES ANTIMO'NII.* "Flowers of Antimony." They consist of small, elongated, and very brilliant crystals of the sesquioxide of antimony.

FLO'RES BISMU'THI.* "Flowers of Bismuth." A yellowish oxide of bismuth.

FLO'RES SUL'PHURIS.* "Flowers of Sulphur." Sublimed sulphur.

FLO'RES ZIN'CI.* "Flowers of Zinc." Oxide of zinc, or philosophical wool.

Flo-rĕs'çence. [Lat. **Florescen'tia**; from *flores'co*, to "flower," to "flourish."] The act of flowering, in plants; also the season of flowering.

Flo'ret. A diminutive flower:—applied especially to each of the flowers which are crowded in the head of the *Compositæ.* See FLOSCULUS.

Florideæ.* See CERAMIACEÆ.

Flo-rif'er-ous. [Lat. **Florif'erus**; from *flos*, a "flower," and *fe'ro*, to "bear."] Bearing flowers:—applied to a part of a plant, *i.e.*, a flowering branch.

Flos,* gen. **Flo'ris.** (Fr. *Fleur*, FLUR.) A "flower." That part of a plant which comprises the organs of reproduction, the essential parts of which are stamens and pistils. These in a complete flower are surrounded by two envelopes, of which the inferior, or exterior, is called the *calyx*, or *cup*; the superior, or interior, is termed the *corolla.* Flowers are either *hermaphrodite* or *unisexual*, and the latter are divisible into *male* (or *staminate*) and *female* (or *pistillate*). They are also distinguished as *polypetalous, gamopetalous*, and *apetalous.* See COROLLA, and CALYX.

Flos Æ-ru'gĭ-nis.* "Flower of Verdigris." *Cupri acetas*, or acetate of copper:—sometimes called *distilled* or *crystallized verdigris.*

Flos'cu-lous. [Lat. **Flosculo'sus**; from *flos'culus*, a "floret."] Having many florets; flos'culose.

Flos'cu-lus.* [Diminutive of the Lat. *flos*, a "flower."] A little flower; a floret.

Flour. See FARINA, and POLLEN.

Flour, Wheat'en. [Lat. **Fari'na Trit'ici.**] The pulverized seeds of wheat from which the bran has been separated. Starch is by far the most abundant ingredient in flour, which also contains several phosphates and a nitrogenous substance called *gluten.* This is the most nutritive part of the flour; and it is the comparative abundance of its gluten that renders wheat flour superior to that of other cereals.

Flower. See FLOS.

Flŏw'er-Bud. An unopened flower.

Flowering Plants. See PHANEROGAMOUS.

Flowerless Plants. See CRYPTOGAMIA.

Flowers of Antimony, Sulphur, etc. See FLORES.

Flu'āte. [Lat. **Flu'as, a'tis.**] A combination of fluoric acid with a base.

Fluc-tu-ā'tion. [Lat. **Fluctua'tio, o'nis**; from *fluc'tuo, fluctua'tum*, to "rise in waves."] A movement like that of waves alternately rising and falling:—applied to the undulation of a fluid within the body, ascertained by the proper application of the fingers or the hand, or by *succussion.*

Flu'id. [Lat. **Flu'idus**; from *flu'o*, to "flow."] Having particles easily separated, yielding to the least pressure, and moving over one another in every direction. Fluids are divided into two classes, *liquid* and *aeriform.* The latter are called gases or *elastic fluids.* Every animal and plant is composed of solids and fluids.

Flu'id of Co-tun'nĭ-us. A thin gelatinous fluid found in the bony cavities of the labyrinth of the ear:—so called from the name of the anatomist who first distinctly described it. It has been also called *A'qua Labyrin'thi* ("Water of the Labyrinth"), and, by Breschet, the *perilymph.*

Flu-id'ĭ-tȳ. [Lat. **Fluid'itas, a'tis.**] The quality of being fluid; the state of matter in which its molecules glide upon one another freely and are not retarded by cohesion. The term is generally applied only to liquids. Fluidity is essential to life.

Flu'ĭ-drachm. [Lat. **Fluidrach'ma**; from *flu'idus*, "fluid," and *drach'ma*, a "drachm."] Sixty minims; a fluid drachm.

Flu-id-un'cia* (-un'she-a). [From the Lat. *flu'idus*, "fluid," and *un'cia*, an "ounce."] Eight fluidrachms; a fluid ounce.

Flu'ĭ-tans.* Floating on the surface of water:—applied to plants, leaves, or flowers.

Fluke. An intestinal worm. See DISTOMA.

Flu-o-bo'rāte. [Lat. **Fluobo'ras, a'tis.**] A combination of fluoboric acid with a base.

Flu-o-bor'ic. [Lat. **Fluobor'icus**; from *fluo'rium*, "fluorin," and *bo'rium*, "boron."] Composed of fluorin and boron:—applied to an acid.

Fluohydric Acid. See HYDROFLUORIC ACID.

Flu'or, o'ris.* [From the Lat. *flu'o*, to "flow."] A flowing, or flux. Also fluorin, a simple body, the existence of which is predicated on mere analogy. The term is sometimes applied to a diseased condition of the mucous secretion of the vagina. See LEUCORRHŒA.

Flu'or Al'bus.* "White Flux." See LEUCORRHŒA.

Flu'or Spar (so called from its assisting the fusion of earthy minerals in metallurgic operations), or **Flu'or-īte.** Derbyshire spar; properly, fluoride of calcium. A beautiful mineral, which occurs massive, and also in crystals of various forms and colors, blue, purple, green, yellow, etc. Its primary form is an octahedron.

Flu-o-ra'tus.* Having or containing fluorine; flu'orated. Hydrofluoric acid has been called *fluorated hydrogen.*

Flu-o-res'çence. The modification of light and change of color which appears at the surface of some solids and liquids in consequence of a change in the refrangibility of the different rays, or a property which certain bodies possess to render the ultra violet rays visible, or to diffuse a temporary glimmer (*lueur*) when the ultra violet rays of the spectrum are thrown on them. Among the fluorescent substances are fluor spar, the silicate of uranium, laurel leaves, and the sulphate of quinine.

Flu-or'ic. [Lat. **Fluor'icus.**] Belonging to fluorin.

Fluor'ic Aç'id. An acid obtained by treating fluor spar with sulphuric acid. Owing to its destructive properties, it has been termed *phthore* (from the Gr. *φθόριος*, "destructive"). See HYDROFLUORIC.

Flu'or-ide. A combination of fluorin with a base. Among the numerous compounds of this kind are fluor spar, cryolite, and fluorides of sodium, silicon, silver, potassium, etc.

Fluoride of Calcium. See FLUOR SPAR.

Flu'or-in, or **Flu'or-ĭne.** [Lat. **Fluo'rium.**] A non-metallic element which is widely distributed, occurring in nearly all rocks, in many waters, plants, and animals. It is found abundantly in fluor spar and cryolite. It belongs to the group which comprises chlorine and bromine, and is supposed to be a gas, but it has not been isolated or seen in a free state, because chemists have no transparent vessel that can resist its corrosive action. It forms compounds with many metals, and with hydrogen, boron, and silicon, but not with oxygen. It is an essential constituent of the human body. See FLUOR.

Fluorite. See FLUOR SPAR.

Flu-or'u-ret. [Lat. **Fluorure'tum**; from *fluo'rium.*] A combination of fluorin with a simple body.

Flush. The temporary redness and heat caused by accumulation of blood in the capillaries of the face.

Flu'vĭ-ạl, or **Flu'vĭ-ạ-tīle.** [Lat. **Fluviat'ilis**; from *flu'vius*, a "river."] Belonging to a river:—applied to plants which grow in running waters.

Flux. [Lat. **Flux'us**; from *flu'o, flux'um*, to "flow."] Any excessive discharge from the bowels or other organs:—applied in Chemistry to any substance used to promote the fusion of metals. See FLUX, CHEMICAL.

Flux, Black. See BLACK FLUX.

Flux, Chem'ĭ-cạl. A substance or mixture much employed to assist the fusion of minerals. Alkaline fluxes are generally used, which render the earthy mixtures fusible by converting them into glass.

Flux'ion. [Lat. **Flux'io, o'nis**; from *flu'o, flux'um*, to "flow."] The change of metals or other bodies from solid to fluid by the agency of heat; fusion.

Flux'us Cap-il-lo'rum.* "Flowing [or Passing Away] of the Hair." A term applied by Celsus to *alopecia*, or the falling off of the hair.

Fly-Pŏw'der. (Fr. *Poudre à Mouches*, pood'r å moosh'.) A black powder, formed by the exposure of metallic arsenic to a moist atmosphere till it becomes partly oxidized, employed for destroying flies.

Flying Blisters. See BLISTERS, FLYING.

Fo'cus,* plural **Fo'çi.** Literally, a "hearth" or "fireplace." A term applied in Astronomy to the two points (*fo'ci*) within the elliptical orbit of a planet round the sun. In Optics, the point of convergence of the rays of light after passing through a convex lens or being reflected from a concave mirror.

Fœcunditas.* See FECUNDITY.

Fœm-in'e-us.* [From the Lat. *fœm'ina*, a "woman."] Belonging to a female; feminine.

Fœ-nic'u-lum.* Fennel. A genus of plants of the order *Umbelliferæ.* Also the Pharmacopœial name (U.S. 1880) for the fruit of *Fœniculum vulgare.* According to the Pharmacopœia of 1870, it is the fruit of *Fœniculum dulce.* Fennel-seed is a grateful aromatic, and is much used as a carminative, and especially to correct the action of other medicines, as senna, rhubarb, etc.

Fœnic'ulum Dul'ce,* Fœnic'ulum Ger-man'ĭ-cum.* The sweet fennel.

Fœticide, fēt'ĭ-sīd. [Lat. **Fœtici'dium**; from *fœ'tus*, and *cæ'do*, to "kill."] The murder of the fœtus *in utero*; criminal abortion.

Fœ'tus,* or **Fe'tus.** (Fr. *Faix*, fā.) The child *in utero* from the fifth month of pregnancy till birth.

Foie, fwå. (Fr.) See LIVER.

Folia.* See FOLIUM.

Fo'lĭ-ạ Cĕr-e-bel'li.* [From the Lat. *fo'lium*, any sort of leaf.] A term applied to an assemblage of gray laminæ observed on the surface of the cerebellum.

Fo-lĭ-a'ceous. [Lat. **Folia'ceus**; from *fo'lium*, a "leaf."] Full of leaves; leafy; pertaining to leaves, or like leaves in texture or form:—applied to parts of plants, and to certain minerals.

Fo'lĭ-ạge. [From the same.] A collective term for the leaves of plants. Leaves in their natural form and natural state; those that perform the proper or ordinary function of leaves,—*i.e.*, to assimilate crude sap and prepare nutriment. But seed-leaves and bud-scales, or the leaves that protect buds, are not foliage. "The botanist recognizes the leaf under other forms than that of foliage. We may call foliage the *natural form* of leaves."—(GRAY.)

Fo'lĭ-ate. [Lat. **Folia'tus**; from *fo'lium*, a "leaf."] Clothed with leaves; leafy:—applied to plants.

Fo-lĭ-ā'tion. [Lat. **Folia'tio**, *o'nis*; from the same.] The putting forth of leaves; the arrangement of leaves in the bud; also the act of beating a metal into thin leaves.

Folie, fo'lē'. The French term for INSANITY, which see.

Folie Circulaire, fo'lē' sĕR'kü'lĕR'. A term applied by French psychological writers to a variety of insanity characterized by alternations of excitement and depression. The patient passes through an attack of mania, but when he appears to have recovered he sinks into melancholia, and thence emerges again to become maniacal and excited. The duration of each stage may vary from weeks to months: sometimes one state will follow the other immediately.

Fo-lif'er-ous. [Lat. **Foliif'erus**, or **Folif'erus**; from *fo'lium*, a "leaf," and *fe'ro*, to "bear."] Bearing or producing leaves:—applied to plants.

Fo-lĭ-ip'a-rous. [From the Lat. *fo'lium*, a "leaf," and *pa'rio*, to "produce."] Producing leaves only, as leaf-buds.

Fo'lĭ-o-late. Relating to or bearing leaflets.

Fo'lĭ-ole. [Lat. **Foli'olum**; diminutive of *fo'lium*, a "leaf."] A little leaf, or leaflet.

Fo'lĭ-ose. [From the Lat. *fo'lium*, a "leaf."] Leafy; abounding in leaves; covered closely with leaves:—applied to certain plants.

Fo'lĭ-um,* plural **Fo'lĭ-a.** [From the Gr. *φύλλον*, a "leaf."] The leaf of a plant. Also a thin plate of metal.

Fol'lĭ-cle. [Lat. **Follic'ulus**; diminutive of *fol'lis*, a "bag."] A little bag:—applied in Anatomy to a very small secretory cavity. In Botany, it denotes a simple pod opening by the inner suture, differing from the *legume*, which opens by both sutures.

Fol-lic'u-lar. [From the Lat. *follic'ulus*, a "follicle."] In Botany, resembling or belonging to a follicle.

Fol-lic'u-late. [Lat. **Follicula'tus**; from the same.] Having follicles.

Fol-lic'u-lose, or **Fol-lic'u-lous.** [Lat. **Folliculo'sus**; from *follic'ulus*, a "follicle."] Having numerous follicles:—applied to certain plants.

Folliculus.* See FOLLICLE.

Fol-lic'u-lus A'er-is.* "Little Bag of Air." The space at the broad end of an egg.

Fo-men-tā'tion. [Lat. **Fomenta'tio**, *o'nis*; from *fo'veo*, *fo'tum*, to "keep warm."] The application of any warm, soft, medicinal substance to some part of the body. The application to the surface of the body of flannel, cloth, or sponge, moistened with hot water, either pure or containing some medicinal substance in solution. The action of a simple fomentation is the same as that of a poultice, and it is superior to a poultice in lightness and cleanliness. By its warmth and moisture it tends to relax the muscular fibres of the skin and soften the cuticle, thus relieving tension and diminishing irritation.

Fo'mēs,* gen. **Fom'ĭ-tis.** [From the same.] Any porous substance capable of absorbing contagious effluvia, as woollen clothing, etc. See FOMITES.

Fom'ĭ-tēs,* the plural of the Lat. **Fo'mes.** A term applied to goods, clothing, or other materials imbued with contagion.

Fonction, fôNk'se-ôN'. The French term for FUNCTION, which see.

Fongosité, fôN'go'zĕ'tā'. The French term for FUNGOSITY, which see.

Fongueux, fôN'gŭh'. The French term for FUNGOUS, which see.

Fongus, fôN'güss'. The French term for FUNGUS, which see.

Fons,* gen. **Fon'tis.** The Latin for "fountain" or "spring." Hence the phrase *Aqua Fontis*, "water of (or from) a spring;" in other words, "spring-water."

Fons Pul-sat'ĭ-lis.* "Pulsating Fountain." The anterior fontanel, because for years after birth arterial pulsation may be there perceived. See FONTANEL.

Fontana (fon-tā'nă), **Canal of.** [So named in honor of Dr. *Fontana*, a distinguished Italian physiologist.] A canal situated at the junction of the cornea and sclerotica. It is sometimes called the *Ciliary Canal.*

Fon-ta-nĕl'. [Lat. **Fontanel'la**; diminutive of *fons*, a "fountain;" so named because the pulsating of the artery was imagined to resemble the bubbling of a fountain.] (Fr. *Fontanelle*, fôN'tă'nĕl'.) The quadrangular space between the frontal and two parietal bones in very young children. A smaller one, triangular, sometimes exists between the occipital and parietal bones.

Fon-ta'nus,* or **Fon-tĭ-na'lis.*** [From the Lat. *fons*, a "spring."] Growing in or near a spring of water.

Fon-tic'u-lus.* [Diminutive of the Lat. *fons*, a "fountain."] An issue, or artificial ulcer. See ISSUE.

Food. See ALIMENT, ALITURA, PABULUM, and DIET.

Foot. See PES.

Foot-Bath. See PEDILUVIUM.

Foot'-Jaws. The extremities of the last three pairs of feet in most *Crustacea.*

Foot-Stalk. See PEDICEL, PEDUNCLE, and PETIOLE.

Fo-ra'men,* gen. **Fo-ram'ĭ-nis**, nominative plural **Fo-ram'ĭ-na.** [From the Lat. *fo'ro*, to "bore a hole."] A hole, opening, aperture, or orifice.

Fora'men Cæ'cum.* "Blind Hole." The hole at the root of the spine of the frontal bone:—so called from its not perforating the bone or leading to any cavity. Also the designation of a little sulcus of the brain, situated between the *corpora pyramidalia* and the *pons Varolii.*

Fora'men Cæ'cum* (**of Morgagni,** morgăn'yē). A deep mucous follicle situated at the meeting of the *papillæ circumvallatæ* upon the middle of the root of the tongue.

Fora'men In-cĭ-si'vum.* The opening immediately behind the incisor teeth into the nasal fossa.

Fora'men Mag'num Oc-cip'ĭ-tis.* "Great Opening of the Occiput." The great opening at the under and fore part of the occipital bone, through which the spinal marrow passes, with its vessels and membranes.

Fora'men of Ma-ġen'die (or mȧ'zhŏn'dĕ'). An opening in the *pia mater*, where it passes over the fourth ventricle.

Fora'men of Mon-ro', Fora'men Commu'ne An-te'rĭ-us.* An opening under the arch of the fornix of the cerebrum, by which the lateral ventricles communicate with each other, with the third ventricle, and with the infundibulum.

Fora'men of Wins'low. An aperture situated behind the capsule of Glisson, first described by Winslow, and forming a communication between the large sac of the omentum and the cavity of the abdomen.

Fora'men O-va'le.* "Oval Opening." An opening situated in the partition which separates the right and left auricles in the fœtus. It is also called the *Foramen of Botal.* The same term is applied to an oval aperture communicating between the tympanum and the vestibule of the ear.

Fora'men Pneumat'icum* (nū-mat'ĭ-kŭm). "Pneumatic Foramen." A large aperture near one end of the long air-bones of birds, communicating with the interior.

Fora'men Ro-tun'dum.* "Round Opening." The round—or, more correctly, triangular—aperture of the internal ear. This and the *foramen ovale* are respectively synonymous with *Fenestra rotunda* and *Fenestra ovalis.*

Fora'men Su'pra-Or-bĭ-ta'rĭ-um.* "Supra-Orbital Opening." The supra-orbital hole or notch, situated on the ridge over which the eyebrow is placed. It gives passage to the superciliary artery.

Fora'men Ve-sa'lĭ-i.* "Foramen of Vesalius." An indistinct hole, situated between the *foramen rotundum* and *foramen ovale* of the sphenoid bone: it was particularly pointed out by Vesalius.

Fo-ram'ĭ-na.* The plural of FORAMEN, which see.

Fo-ram'ĭ-nāt-ed. [Lat. **Foramina'tus**; from *fora'men*, a "hole."] Pierced with small holes:—applied to the shells of certain *Protozoa.*

Fo-ram-ĭ-nif'er-a* [for etymology see next article], or **Rhiz'o-pods.** An order of *Protozoa*, forming calcareous shells mostly very minute and not visible to the naked eye. The animal is of the simplest structure possible, having no mouth, or stomach, or members. The shell is perforated by many minute orifices (*foramina*). These organisms are interesting to geologists, as they have contributed largely to the formation of limestone strata, and are found in all the formations, from the oldest to the newest. The chalk is mainly composed of their shells, some of which present beautiful forms.

Fo-ram-ĭ-nif'er-ous. [Lat. **Foraminif'erus**; from *fora'men*, a "hole," and *fe'ro*, to "bear."] Bearing or having foramina.

Fōrce. [From the Lat. *for'tis*, "strong;" low Lat. *for'tia*, "strength."] (Fr. *Force*, fɔrss.) Power; energy; the cause of motion; the efficient cause of all physical phenomena; that which causes, hinders, or arrests or modifies motion. The great natural forces are *attraction, electricity, heat,* and *light.* "The first great agent which the analysis of natural phenomena offers to our consideration, more frequently and prominently than any other, is force."—(SIR J. HERSCHEL.)

For'ceps,* gen. **For'çĭ-pis.** [As if *Fer'riceps;* from the Lat. *fer'rum*, "iron," and *ca'pio*, to "take."] Originally, a "pair of tongs or pincers:"—applied in Obstetrics to an instrument consisting of a pair of curved blades, for the purpose of grasping the head of the fœtus and bringing it through the passages, in certain cases of difficult labor:—in Surgery, to various surgical instruments, of diverse construction, for seizing hold of objects, etc.:—in Zoology, to the claws of certain *Crustacea.*

Forces of Medicines. See DYNAMICS.

For'cĭ-pate. [From the Lat. *for'ceps*, a "pair of pincers."] Forked like a pair of pincers:—applied to certain plants.

Fore'arm. [Lat. **Antibra'chium.**] The *cubitus*,—that portion of the arm between the elbow and wrist. In Ornithology, the second part of the anterior extremity which supports the wing.

Forehead. See FRONS, and SINCIPUT.

For'eign Bod'y. Any substance which is left in a wound and keeps up irritation, preventing its cure, as a bullet, a piece of broken glass, a splinter, a nail, etc.

Fo-ren'sic Med'ĭ-cĭne. Such parts of medicine as are connected with judicial inquiries. See MEDICAL JURISPRUDENCE.

Foreskin. See PREPUCE.

Forgetfulness. See AMNESIA.

Forked. See FURCATE.

Form. [Lat. **For'ma**; Gr. μορφή; Fr. *Forme*, fɔrm.] Shape; figure; contour; fashion; a model. It is one of the elements of beauty, and one of the general properties of matter. The form of a body depends on the situation of its several points in relation to a system of co-ordinate axes. Forms are the subjects of the science of Morphology.

For'māte, For'mĭ-āte. [Lat. **For'mas**, or **For'mias, a'tis.**] A combination of formic acid with a base.

For-mā'tion. [Lat. **Forma'tio**; from *for'ma*, a "form."] A term often used in Geology, and applied to a series of strata comprising those that belong to a single geological *age* or a single *period*, and which have a general similarity in their fossils. Thus, the *coal formation* comprises many strata of sandstone, shale, and limestone, besides the beds of coal. In its most extensive sense, the term is applied to all the rocks formed during an age, as, the *Silurian formation.* In Chemistry, a chemical act from which results the appearance of a simple or compound body, which

is set at liberty or produced either by decomposition or direct combination or by an indirect act.

For'mic. [Lat. **Formi'cus**; from *formi'ca*, the "ant."] A term applied to an acid obtained by distillation of ants and water. Formic acid can also be obtained from human blood, urine, oil of turpentine, and other vegetable products. It is a colorless liquid, having a density of 1.235, and a pungent, sour taste. It is corrosive, and when applied to soft skin produces violent pain. This acid diluted with water is said to be a good application to paralyzed limbs.

For-mi'ca.* Literally, an "ant." A genus of hymenopterous insects, presenting three sorts of individuals,—males and females, both having wings, and neuters, without wings. The genus comprises numerous species, widely distributed. The ant is remarkable for industry, ingenuity, and muscular strength.

Formi'ca Ru'fa.* The "red ant." An ant which contains an acid juice and oil supposed to possess aphrodisiac virtues.

For-mĭ-cā'tion. [Lat. **Formica'tio, o'nis**, a tingling like the stinging of ants; from *formi'ca*, an "ant."] (Fr. *Fourmillement*, foor'mĕl'mŏn'.) A sense of pricking or tingling on the surface of the body; an abnormal sensation of a creeping character, and resembling the crawling of ants on the surface.

For-miç'ic. The same as FORMIC.

For'mu-la.* [Diminutive of the Lat. *for'ma*, a "form."] (Fr. *Formule*, for'mül'.) A short form of prescription in practice, in place of the more full instruction in the Pharmacopœia. In Chemistry, *formula* is a concise mode of indicating by symbols the chemical constituents of a compound, or the results of chemical changes. The formula for common salt is NaCl. *Rational formula* is that which by a certain arrangement of symbols aims to represent the mode in which the elements are combined. For example, $CO^2.PbO$ indicates carbonic acid combined with protoxide of lead.

For'mўle, Per-ehlo'ride of, and **For'mў-lum Ehlo-ra'tum.** Names for chloroform.

For'nĭ-cate. [Lat. **Fornica'tus**; from *for'nix*, a "vault" (from *for'nicor*, to "be arched").] Arched; vaulted; overarched or arching over:—applied to parts of plants.

For-niç'ĭ-form. [Lat. **Fornicifor'mis**; from *for'nix*, a "vault."] Resembling an arch or vault; vaulted.

For'nix,* gen. **For'nĭ-cis.** An arch or vault. A white, fibrous, triangular substance of the brain beneath the *corpus callosum* and *septum lucidum*:—so called because it has a somewhat arched appearance:—also termed *Corpus psaloides*. In Botany, the term is applied to little arched scales in the throat of some corollas, as of Comfrey.

Fos'sa.* [From the Lat. *fo'dio, fos'sum*, to "dig."] Originally, a "ditch" or "fosse." A depression, or sinus. Also the *Pudendum muliebre*.

Fos'sa Hy-a-lo-i'de-a.* [See HYALOID.] The cup-like excavation of the vitreous humor, in which the crystalline lens is embedded.

Fos'sa In-nom-ĭ-na'ta.* "Unnamed Fossa." The space between the helix and the anthelix of the ear.

Fos'sa Lach-rў-ma'lis.* "Lachrymal Fossa." A depression in the frontal bone for the reception of the lachrymal gland.

Fos'sa Na-vic-u-la'ris.* "Navicular or Boat-Shaped Fossa." The superficial depression which separates the two roots of the anthelix; also called *Sca'pha*, or "little boat:"—applied also to the dilatation towards the extremity of the spongy portion of the urethra. Also the name of a small cavity immediately within the fourchette.

Fos'sa O-va'lis.* "Oval Fossa." The oval depression presented by the septum of the right auricle of the heart.

Fos'sa Pĭ-tu-ĭ-ta'rĭ-a.* "Pituitary Fossa." The *sella turcica*, or cavity in the sphenoid bone for receiving the pituitary body.

Fos'sa Sca-pho-i'dēs.* A term synonymous with FOSSA NAVICULARIS.

Fos'sa Sўl'vĭ-i.* "Fossa of Sylvius." A designation of the fifth ventricle of the brain.

Fos'sil. [Lat. **Fos'silis**; from *fo'dio, fos'sum*, to "dig."] (Fr. *Fossile*, fos'sĕl'.) That which is dug out of the earth:—applied to organic remains, animal and vegetable, found in the strata of the earth. A fossil found in a rock is a relic of some species that lived when that rock was forming. Fossils are the surest criterion for determining the identity of strata and their chronological order. "Identity of species of fossils proves approximately identity of age."—(DANA.) Remains of nearly forty thousand extinct species of animals have been gathered from the rocks.

Fos-sil-if'er-ous. [Lat. **Fossilif'erus**; from *fos'silis*, a "fossil," and *fe'ro*, to "bear."] Bearing, or containing, fossil specimens:—applied to certain rocks.

Fos-sil-ĭ-zā'tion. [Lat. **Fossiliza'tio, o'nis**; from *fos'silis*, a "fossil."] The process of converting into a fossil. Sometimes this consists in a superficial incrustation of the organism with mineral matter. The type of perfect fossilization occurs when the immediate or proximate principles of the elements are slowly decomposed and are replaced, molecule by molecule, by various mineral compounds, calcareous or silicious, so that the form, the volume, and the structure of the organism are preserved, but all or nearly all of the original substance is absent.

Fotus.* See FOMENTATION.

Fou, foo. The French term for INSANE, which see.

Fourchette, foor'shĕt'. (Fr.) [Lat. **Fur'cula.**] Literally, a "fork." The posterior commissure of the *labia majora pudendi*. In Comparative Anatomy, the prominent portion in the centre of the plantar surface of the horse's foot, shaped like the letter V, called in common language the "frog of the foot:"—applied also to the breast-bone ("merry-thought") of birds.

Fourmillement, foor'mĕl'mŏn'. The French term for FORMICATION, which see.

Fousel Oil. See FUSEL OIL.

Fo've-ate. [Lat. **Fovea'tus**; from *fo'vea*, a "pit," a "depression."] Having depressions or cavities; pitted:—applied to parts of plants.

Fo-ve'o-late, Fo-ve-o-lā'rĭ-ous. [Lat. **Foveola'tus, Foveola'rius**; from *fove'ola*, diminutive of *fo'vea*, a "pit."] Having little pits or depressions:—applied to parts of plants.

Fo-vil'la.* [Perhaps from the Lat. *fo'veo*, to "foster;" because it fosters or keeps alive the vital principle in the plant.] The fecundating liquor contained in the grains of pollen.

Fowler's Solution. See LIQUOR ARSENICALIS.

Fox'glove. The *Digitalis purpurea*.

Frac-tu'ra.* [From the Lat. *fran'go, frac'tum*, to "break."] Fracture. A genus of the order *Dialyses*, class *Locales*, of Cullen's nosology. In Surgery, the solution of continuity of a bone, generally by external force, but occasionally by the powerful action of muscles.

Frac'ture. See FRACTURA. In Mineralogy, the term is applied to the appearance of the fresh surface of a broken mineral. The *fracture* is one of the characters by which species are distinguished. The varieties of fracture are *conchoidal*, *even*, *uneven*, *earthy*, and *hackly*.

Frac'ture, Com'mĭ-nūt-ed. A fracture in which the bone is broken or crushed into several pieces.

Fracture, Compound. See COMPOUND FRACTURE.

Fracture, Sim'ple. A fracture in which the bone only is divided, without any external wound.

Fræ'na,* the plural of FRÆNUM, which see.

Fræ'na Ep-ĭ-glot'tĭ-dis.* "Curbs of the Epiglottis." Three folds of mucous membrane which unite the epiglottis of the os hyoides and the tongue.

Fræ'na of the Valvule of Bauhin. The name given by Morgagni to the rugæ or lines observed at the extremities of the lips of the valvule of Bauhin, or ileo-colic valve.

Fræn'u-lum.* [Diminutive of the Lat. *fræ'num*, a "bridle."] A "little bridle." Sometimes used for FRÆNUM.

Fræ'num,* plural **Fræ'na.** (Fr. *Frein*, frĂN.) Literally, a "bridle," or "curb." A part which performs the office of a check or curb.

Fræ'num Lab-ĭ-o'rum.* The fourchette, or lower commissure of the *labia majora pudendi*.

Fræ'num Lin'guæ.* "Bridle of the Tongue." A fold formed at the under surface of the tongue by the mucous membrane of the mouth. Infants are said to be *tongue-tied* when the frænum is very short, or is continued too far forward towards the tip of the tongue.

Fræ'num of the Un'der Lip. [Lat. **Fræ'num La'bii Inferio'ris.**] A fold of the mucous membrane of the mouth, formed opposite to the symphysis of the chin.

Fræ'num Præpu'tii* (pre-pu'she-i). A triangular fold connecting the prepuce with the under part of the glans penis.

Fra-ga'rĭ-a.* Strawberry. A genus of stemless perennial plants of the natural order *Rosaceæ*, comprising many species, natives of Europe, the United States, etc. The *Fragaria vesca*, which is commonly cultivated in gardens, is a native of Europe and North America. Its root is employed as an aperient and diuretic.

Fraga'ria Chi-len'sis.* The Chilian Strawberry, a native of Chili, Peru, and California. It is cultivated in France and other countries for its fruit or fleshy receptacle.

Fraga'ria E-la'tĭ-or.* The Hautbois, a species of strawberry, a native of Europe, and extensively cultivated. Its fruit has a musky flavor which many persons prefer.

Fraga'ria Vir-ĝin-ĭ-a'na.* The Scarlet or Wild Strawberry, a native of the United States. Many varieties of this species are cultivated in England and the United States. It is the original of the American Scarlet.

Fra-ĝil'ĭ-tas Os'sĭ-um.* A morbid "brittleness of the bones." See MOLLITIES OSSIUM.

Frag'ment. [Lat. **Fragmen'tum**; from *fran'go*, to "break."] A piece of a thing broken; a splinter or detached portion of a fractured bone.

Frā'grant. [Lat. **Fra'grans.**] Odorous; emitting a pleasant odor.

Frambœsia,* fram-bē'she-a. (Fr. *Framboise*, frŎM'bwåz', a "raspberry.") The yaws. A genus of the order *Impetigenes*, class *Cachexiæ*, of Cullen's nosology. Frambœsia is a contagious disease, occurring in the West Indies, Guiana, and some parts of Africa, characterized by tumors resembling raspberries. It is called by the natives of South America *pian* and *epian*.

Fran-cis-çe'a U-nĭ-flo'ra.* A plant of the order *Scrophulariaceæ*, a native of Brazil. Its root is bitter, emetic, and purgative, and, in large doses, poisonous.

Francoaceæ,* fran-ko-a'she-ē. [From *Franco'a*, one of the genera.] A small natural order of exogenous herbaceous plants, found in Chili. It comprises two genera.

Fran-ĝĭ-pan'. An extract of milk, for preparing artificial milk, made by evaporating to dryness skimmed milk, mixed with almonds and sugar.

Fran'gu-la.* "Buckthorn." A genus of shrubs of the order *Rhamnaceæ*. Also the Pharmacopœial name (U.S. 1880) for the bark of *Rham'nus fran'gula*, collected at least one year before being used. It is cathartic. In its fresh state it is very irritant to the gastro-intestinal mucous membrane.

Fran'gula Vul-ga'ris,* or **Rham'nus Fran'gula.*** A shrub, a native of Europe.

Frankeniaceæ,* fran-ke-ne-a'she-ē. [From *Franke'nia*, one of the genera.] A small natural order of exogenous plants, found in Europe, Africa, and Australia.

Frankincense. See OLIBANUM, and THUS.

Frank'in-cense, Com'mon. The *Abietis resina*, or Burgundy pitch.

Fra-se'ra.* A genus of plants of the order *Gentianaceæ*, comprising eight species, natives of the United States. Also the Pharmacopœial name (U.S. 1870) for the root of *Frasera Walteri*, or

American Columbo. It is a bitter tonic, and bears beautiful flowers.

Frase'ra Căr-o-li-nen'sis.* Another name for *Frasera Walteri.*

Frax'in, Frax'ĭne, or **Frax'ĭ-nĭne.** A glucoside extracted from the bark of *Fraxinus excelsior.* It crystallizes in prisms which are bitter and soluble in hot water and in alcohol. It has febrifugal properties.

Frax'ĭ-nus.* (Fr. *Frêne,* frăn.) The Ash-tree. A Linnæan genus of the class *Polygamia,* natural order *Oleaceæ.* It comprises many species, natives of Europe and the United States. See Ash.

Frax'inus Ex-cel'sĭ-or.* An ornamental tree, a native of Europe and Asia, noted for its graceful form and elegant foliage. It is one of the most beautiful of the genus. Its timber is very valuable.

Fraxinus Ornus.* See Ornus.

Frax'inus Ro-tun-dĭ-fo'lĭ-a.* A tree from which manna is said to be obtained.

Freckle. See Æstates, Ephelis, and Lentigo.

Free. In Botany, not united with any other parts of a different sort; not adhering to each other.

Freez'ing Mix'ture. A mixture by which artificial cold is produced.

Freez'ing Point. The point at which water freezes, being 32° above zero in Fahrenheit's thermometer: in Réaumur's and the Centigrade it is taken as zero.

Frein, frăn. The French term for Frænum, which see.

Frem'ĭ-tus.* [From the Lat. *frĕ'mo, frem'itum,* to "roar," to "fret," to "murmur."] An irregular, rapid, oscillating commotion of the muscular system.

Fre-mont'ĭ-a Cal-ĭ-for'nĭ-ca.* [Named in honor of J. C. *Frémont.*] A beautiful Californian shrub, of the order *Sterculiaceæ.* It bears yellow flowers. Its bark is used as a substitute for slippery elm.

French Ber'ries. The fruit of several species of *Rhamnus* (or Buckthorn), called by the French *Graines d'Avignon* (grăn dă'vĕn'yŏN'): they yield a yellow color.

French Pol'ish. Gum-lac dissolved in spirits of wine.

French Red, or **Rouge** (roozh). Genuine carmine, mixed with fine sifted starch powder, according to the shade required.

French White. The common designation of finely pulverized talc.

Frêne. See Fraxinus.

Fri-a-bil'ĭ-ty. [Lat. **Friabil'itas, a'tis;** from *fri'o,* to "crumble."] The quality of being easily reducible into small pieces.

Fri'ar's Bâl'sam. Another name for the *Tinctu'ra Benzo'ini Compos'ita,* formerly called *Bal'samum Traumat'icum.*

Fric'tion. [From the Lat. *fri'co, fric'tum,* to "rub."] A therapeutic agent of great power, by means of which the circulation is stimulated and medicinal applications enter the pores of the skin. Friction is surface-rubbing as distinguished from *shampooing* or *medical rubbing,* a process of manipulation by which deep pressure is made upon the muscles. *Friction* is an important term in Mechanics and Natural Philosophy. It is a means of producing heat and electricity with little or no consumption of material. Machinery is lubricated with oil to prevent friction, which causes a serious loss of power.

Friedrichshall, free'drĭks-hâl. The purgative mineral waters of this place, in Saxe-Meiningen, are celebrated for their medicinal effects in certain cases of liver and kidney diseases.

Friēs'land Green. Otherwise called **Brunsʹwick Green.** An ammoniaco-muriate of copper.

Friġ-ĭ-da'rĭ-um.* [From the Lat. *friġ'idus,* "cold."] Another name for the cold bath. See Bath.

Friġ'id Zone. The space between each Polar circle and the Pole.

Frig-o-rif'ic. [Lat. **Frigorif'icus;** from *fri'gus,* "cold," and *fa'cio,* to "make" or "cause."] Having power to make cold.

Fri'gus,* gen. **Frig'o-ris.** [From the Lat. *fri'geo,* to "be cold."] Cold; a trembling with cold. This term differs from *Algor,* which implies suffering or starving with cold.

Fringe. See Fimbria.

Fringe-Tree. See Chionanthus.

Fringed. Having the margin beset with slender appendages:—applied to flowers. See Fimbriate, Laciniatus, and Ciliate.

Frit, or **Fritt.** The mass produced by the materials of glass on calcination.

Frit-ĭl-la'rĭ-a Im-pe-rĭ-a'lis.* The Crown Imperial, a bulbous plant of the order *Liliaceæ,* a native of Asia, cultivated for ornament. Its bulb contains an acrid principle which is purgative and, in large dose, drastic.

Froissement, Bruit de, brwĕ dĕh frwâssʹmŏNʹ. "Sound of Rubbing." A French term applied to certain sounds of the lungs or heart.

Frond. [From the Lat. *frons, fron'dis,* a "leaf," or "green branch."] A term applied to the leaves of ferns and other cryptogamous plants, from their partaking at once of the nature of a leaf and of a branch.

Fron-dĕs'çence. [Lat. **Frondescen'tia;** from *frons, fron'dis,* a "leaf."] The development of the leaves, or fronds, of plants.

Fron-dif'er-ous. [Lat. **Frondif'erus;** from *frons, fron'dis,* a "leaf," and *fe'ro,* to "bear."] Bearing fronds or leaves.

Fron-dose'. [From the same.] Covered with leaves; leafy; also frond-bearing, or like a frond:—applied to plants.

Frons,* gen. **Fron'dis.** See Frond.

Frons,* gen. **Fron'tis.** The forehead; that part of the head between the eyebrows and the commencement of the hairy scalp.

Fron'tal. [Lat. **Fronta'lis;** from *frons,* the "forehead."] Belonging to the forehead.

Frost'-Bite. A state of numbness or torpefaction of a part of the body, caused by intense cold, which, unless relieved by proper remedies, is followed by the death of the part. In such cases it is very important that heat should not be applied suddenly. If a finger be frozen, the best remedy is to place it in water reduced almost to the freezing point, by which means the frost is extracted very slowly.

Frottement, frŏt'mŏn'. (Fr.) A term signifying "rubbing." See FROISSEMENT.

Frozen Sulphuric Acid. See GLACIAL SULPHURIC ACID.

Fruc-tif'er-ous. [Lat. **Fruc'tifer;** from *fruc'tus,* "fruit," and *fe'ro,* to "bear."] Bearing fruit:—applied to stems of plants and to a persistent calyx which enlarges after flowering. This is called a fruiting calyx, as in the *Physalis.*

Fruc-tĭ-fĭ-cā'tion. [Lat. **Fructifica'tio, o'nis;** from *fructifi'co, fructifica'tum,* to "make fruitful," to "bear fruit."] That part of a plant embracing the organs of reproduction,—*i.e.,* the flower, fruit, and seed; also the state of fruiting; the process by which fruits are developed.

Fru-gĭv'or-ous. [Lat. **Frugiv'orus;** from *frux, fru'gis,* "fruit," or "corn," and *vo'ro,* to "devour."] Eating or living on grains or seeds.

Fruit. [From the Lat. *fru'or, fruc'tus,* to "enjoy."] In Botany, the matured or fecundated ovary, with all its contents and appendages. The various forms of fruits are termed *pome, drupe, berry, nut, legume, cone,* etc. Fruits are also divisible into two classes,—*simple,* as the cherry, and *multiple,* as the raspberry.

Fruit-Stalk. See PEDUNCLE.

Fru-men-tā'ceous. [Lat. **Frumenta'ceus;** from *frumen'tum,* "wheat."] A term applied to all plants that resemble wheat or corn.

Fru-men'tum.* (Fr. *Froment,* frō'mŏn'.) All kinds of corn or grain for making bread, especially wheat.

Frust. = *Frustilla'tim.** "In small pieces."

Frus'tule. [Diminutive of the Lat. *frus'tum,* a "fragment."] A separable cellule which, united to similar cellules, forms certain microscopic plants of the class *Algæ.* The Diatoms have silicious *frustules,* or shells. See DIATOMS.

Frus'tu-lose. [From the same.] In Botany, consisting of small fragments.

Frus'tum.* That part of a pyramid or cone which remains when any part next the vertex is cut off by a plane parallel to the base.

Fru-tĕs'çence. [From the Lat. *fruc'tus,* "fruit."] The ripe or mature state of a fruit.

Fru-tĕs'çent. [From the Lat. *fru'tex,* a "shrub."] Somewhat shrubby; becoming shrubby.

Fru'tex,* gen. **Fru'tĭ-cis.** A shrub; a small perennial woody plant, branching near the ground. It differs from a tree only in size.

Fru-tĭ-cose'. [Lat. **Frutico'sus;** from *fru'tex,* a "shrub."] Like a shrub; shrubby.

Fru-tic'u-lose. [From the same.] Like a small shrub (*fruticulus*).

Ft. = *Fi'at,** or *Fi'ant.** "Let there be made."

Fucaceæ,* fu-ka'she-ē. [From the Lat. *fu'cus,* a kind of sea-weed.] Sea-weeds. A natural order of cryptogamous plants; an order of dark-spored *Algæ.*

Fuchsia,* fū'she-ạ. [Named after *Fuchs,* a German botanist.] A genus of ornamental shrubby plants (rarely trees) of the order *Onagraceæ.* It comprises numerous species, natives of Mexico, Peru, Chili, etc., cultivated for the beauty of their flowers. The *Fuchsia racemosa* has been employed as febrifuge and astringent.

Fu-çiv'or-ous. [Lat. **Fuciv'orus;** from *fu'cus,* a "sea-weed," and *vo'ro,* to "devour."] Living on sea-weed.

Fu'cus.* [From the Gr. φῦκος, "sea-wrack."] A Linnæan genus of the class *Cryptogamia,* natural order *Fucaceæ.*

Fu'cus Ve-sic-u-lo'sus.* The systematic name of bladder-fucus, sea-oak, or sea-wrack. The charcoal of this plant is called *Æthiops vegetabilis,* and has long had the reputation of a deobstruent, and has been given in goître and scrofulous swellings. The mucus contained in the vesicles has been used externally as a resolvent in scrofulous tumors. This *fucus* grows on the shores of Europe and North America. It is used for manure and as a source of kelp.

Fu'el. A material used for the generation of heat by its combustion in air. The term is properly applied to carbon and hydrogen, and the compounds which they form with each other. Among the varieties of fuel are coal, wood, peat, oils, and gases. Anthracite coal is considered the best of all fuels for the production of intense heat in the reduction and smelting of metals.

Fu-gā'cious. [Lat. **Fu'gax;** from *fu'ga,* "flight."] Fleeting; soon falling off or perishing:—applied to flowers, leaves, etc.

Ful'crum,* plural **Ful'cra.** A "stay," or "prop." In the plural, the various appendages or additional organs of a plant, as tendrils, prickles, stipules. In Natural Philosophy, the *fulcrum* is a fixed point on which a lever rests.

Ful-gu-rā'tion. [Lat. **Fulgura'tio, o'nis;** from *ful'gur,* "brightness," "lightning."] The electrical phenomenon of flashes of light in the atmosphere unaccompanied by thunder.

Fu-lĭg'ĭ-nous. [Lat. **Fuligino'sus;** from *fuli'go,* "soot."] Full of soot; sooty; smoky. In Botany, dirty brown or smoke-colored.

Fu-li'go,* gen. **Fu-lĭg'ĭ-nis.** The Latin term for "soot."

Fuli'go Lig'ni.* "Soot of Wood." Wood-soot is the condensed smoke of burning wood. Made into an ointment, it has been found an efficacious remedy in some cutaneous affections, such as tetter, *psora, porrigo favosa,* etc. See SOOT.

Ful'ler's Earth. A variety of clay, containing about twenty-five per cent. of alumina, and so named from its being used by fullers to remove the grease from cloth before the soap is applied.

Ful'mĭ-nāte. [Lat. **Ful'minas, a'tis.**] A combination of fulminic acid with a base. The fulminates are very explosive.

Ful'minate. [See FULMINATION.] To thunder; to explode.

Ful'mĭ-nāt-ing Gold. [Lat. **Au'rum Ful'minans.**] The aurate of ammonia, or ammoniuret of the peroxide of gold. It is produced by precipitating a solution of gold by ammonia.

Ful'minating Mer'cu-rў. A powder obtained by treating the nitrate of mercury with alcohol. It is employed in the manufacture of percussion-caps.

Ful'minating Sil'ver. [Lat. **Argen'tum Ful'minans.**] An argentate of ammonia, prepared by leaving oxide of silver for ten or twelve hours in contact with a strong solution of ammonia. It is in the form of a black powder which is extremely explosive.

Ful-mĭ-nā'tion. [Lat. **Fulmina'tio, o'*nis*;** from *ful'men*, "thunder," *ful'mino*, *fulmina'tum*, to "thunder."] A quick explosion, with noise, as of fulminating powder, or the combustion of inflammable gas with oxygen; detonation.

Ful-min'ic. [Lat. **Fulmin'icus.**] A term applied to an acid obtained from the fulminate of silver. It has not been isolated.

Ful'vous. [Lat. **Ful'vus.**] Tawny, dull yellow, or tan-colored.

Fu-ma'rĭ-a.* [From the Lat. *fu'mus*, "smoke."] Fumitory. A genus of herbaceous plants of the order *Fumariaceæ*, natives of Europe, etc. The *F. capreolata*, *F. parviflora*, and *F. spicata* have properties similar to those of *Fumaria officinalis*.

Fuma'ria Of-fĭç-ĭ-na'lis.* (Fr. *Fumeterre*, füm'taiʀ'.) Fumitory, a plant common in Europe, and cultivated in the United States. It is used as a tonic. In large doses it is diuretic and laxative. An infusion of the dried leaves has been recommended in leprous affections.

Fumariaceæ,* fu-ma-re-a'she-ē. [From *Fuma'ria*, one of the genera.] A natural order of exogenous herbaceous plants, found in many temperate climates. It includes the *Coryd'alis*, *Dicen'tra*, and some others which are cultivated for their beauty.

Fu-mĭ-gā'tion. [Lat. **Fumiga'tio, o'*nis*;** from *fu'migo*, *fumiga'tum*, to "perfume a place."] The employment of certain fumes for the purpose of counteracting contagious effluvia. A mode of employing certain medicinal agents which are capable of being volatilized by heat, the vapor being then allowed to escape into an apartment, or to come in contact with articles of clothing and other objects for purposes of disinfection, or being allowed to act upon the surface of the body as a whole, or on certain parts of it, for therapeutic purposes, local or general, on being absorbed. The chief agents which are thus used are sulphur and mercury.

Fumitory. See FUMARIA OFFICINALIS.

Fu'mous, or **Fu-mose'.** [From the Lat. *fu'mus*, "smoke."] Smoke-colored; gray changing to brown.

unc'tion. [Lat. **Func'tio, o'*nis*;** from *fun'gor*, *func'tus*, to "fulfil an office."] (Fr. *Fonction*, fôNk'se-ôN'.) A power, or faculty, by the exercise of which the vital phenomena are produced; the special office of an organ in the animal or vegetable economy.

Func'tion-al Dis-ease'. A disease in which the function or secretion of an organ is vitiated, but its structure is but little if at all changed.

Func'tions, Vi'tal. Functions immediately necessary to life,—viz., those of the brain, the heart, the lungs, etc.; whence these have been called the *tripod of life*.

Fun'da.* [Literally, a "sling."] A bandage composed of a fillet or long compress cleft at its extremities to about two inches of its middle. It is used in cases of fracture of the lower jaw.

Fun'da-ment. [Lat. **Fundamen'tum**; from *fun'dus*, the "bottom of a thing."] The anus.

Fun-da-men'tal. [From the same.] Essential; serving for or pertaining to the foundation. In Mineralogy, this term is applied to the forms of crystals from which all other forms are derived, and is synonymous with *primitive*. The number of fundamental forms is thirteen.

Fun'dus.* (Fr. *Fond*, fôN.) The base or bottom of any organ which has an external opening (considered as the top),—*e.g.*, the bladder, the uterus, etc.

Fun'dus Plan'tæ.* The collar, or place of junction of the root and stem, of a plant.

Fun-ga'lēs,* Fun'gals. A term intended to include under one head the *Fungi* and the *Lichens*, the latter of which are so closely allied to the former that it is sometimes difficult to tell to which division certain species may belong.

Fun'gāte. [Lat. **Fun'gas, a'*tis*.**] A combination of fungic acid with a base.

Fun'gāt-ing Tu'mor. A tumor consisting of fungus-like granulations.

Fun'ġi,* the plural of **Fun'gus,** a "mushroom." A large natural order of cryptogamous plants, of a very low organization. They grow on dead and decaying organic bodies, and infest living plants. They are of great importance to man, either for their useful or their mischievous qualities. Blight, mildew, and rust are caused by the ravages of microscopic fungi. The common mushroom and truffle are used as food. Many other fungi are dangerous poisons. The fungus called ergot is a valuable medicine for its specific action on the uterus. See PRIMALIA.

Fun-ġic'o-lus.* [From the Lat. *fun'gus*, a "mushroom," and *co'lo*, to "inhabit."] Living on or in mushrooms:—applied in the plural neuter (*Fungic'ola*) to a family of coleopterous insects.

Fun'ġĭ-form. [Lat. **Fungifor'mis**; from *fun'gus*, a "mushroom."] Resembling a mushroom. In Botany, cylindrical, and having a rounded, convex, overhanging extremity.

Fun'ġin. [Lat. **Fungi'na**; from *fun'gus*, a "mushroom."] The residual fleshy substance of fungi after being subjected to the action of alcohol and water.

Fun-ġi'nous. [From the same.] Of or belonging to a fungus.

Fun'goid. [Lat. **Fungoi'des**; from *fun'gus*, a "mushroom," and the Gr. εἶδος, a "form" or "resemblance."] Resembling a mushroom:—

applied to plants of the order *Fungi*. Also resembling the disease termed *fungus*.

Fun-gos'ĭ-tў. [Lat. **Fungos'itas.**] The quality of being like fungus; that is, a tendency to form fungous excrescences, as in the case of "proud flesh," as it is termed.

Fun'gous. [Lat. **Fungo'sus**; from *fun'gus*, a "mushroom."] (Fr. *Fongueux*, fôN'gŭh'.) Having fungi, or the disease termed *fungus*; resembling fungus. In Botany, of a rapid growth and soft texture.

Fun'gus.* [Gr. σπόγγος, or σφόγγος; Fr. *Fongus*, fôN'güss'.] One of a natural order of plants. (See FUNGI.) Also a redundant growth of flesh on an ulcer; proud flesh; any large, soft, spongy excrescence arising from diseased structure.

Fungus Cerebri.* See HERNIA CEREBRI, and ENCEPHALOCELE.

Fungus Disease of India. See MYCETOMA.

Fun'gus Hæm-ą-to'dēs.* [From the Gr. αἱματώδης, "bloody."] "Bleeding Fungus;" otherwise called *soft cancer*, *medullary sarcoma*, *spongoid inflammation*, etc. It is a cancerous affection of a very malignant character, spreading rapidly, and almost invariably fatal.

Fu-nic'u-lus.* [Diminutive of the Lat. *funis*, a "rope."] A botanical term applied to the stalk of a seed or ovule which it connects with the placenta:—also applied to the navel-string.

Fu'nis.* Literally, a "rope:"—generally applied to the *funis umbilicalis*, or navel-string.

Fu'nis Um-bil-ĭ-ca'lis.* [Fr. *Cordon ombilicale*, koR'dôN' ôM'bĕ'lĕ'kăl'.] The umbilical cord; the means of communication between the fœtus and the placenta. Its length is almost two feet. It consists of the umbilical arteries and vein, with the enveloping membranes, etc.

Fun'nel-Shaped, or **Fun'nel-Form.** Tubular below and expanding at the summit, like the corolla of the morning-glory. See INFUNDIBULIFORMIS.

Fur'cate. [Lat. **Furca'tus**; from *fur'ca*, a "fork."] Forked; dichotomous, or having long terminal lobes, like the prongs of a fork:—applied to parts of plants.

Furcula.* See FOURCHETTE.

Fur'fur, ur*is*.* [Perhaps from the Lat. *far*, "corn."] Bran, the husk or skin of wheat; also the diseased condition of the head called dandriff, or scurf, a species of *pityriasis*.

Fur'fur Trit'ĭ-ci.* "Bran of Wheat." A material employed for making bread for dyspeptics.

Fur-fur-ā'ceous. [Lat. **Furfura'ceus**; from *fur'fur*, "bran" or "dandriff."] Resembling bran or dandriff. Covered with fine scurf, like bran:—applied to certain plants.

Fur-fur-a'tio (fûr-fûr-a'she-o), **o'nis.*** [From the Lat. *fur'fur*, "dandriff."] The state of having *pityriasis*, or a scaliness of the skin.

Fur'nace. [Lat. **Fur'nus.**] A fireplace employed for pharmaceutical operations. Furnaces are termed *evaporatory* when employed to reduce substances into vapor by heat; *reverberatory*, when so constructed as to prevent the flame from rising; *forge-furnaces*, when the current of air is determined by bellows.

Furoncle, or **Froncle.** See FURUNCULUS.

Fu'ror U-te-ri'nus.* Another term for *Nymphomania*, or *Hysteromania*.

Fur'rowed. In Botany, marked by longitudinal grooves or channels, as the stems of the parsnip. See SULCATED.

Fu-run'cu-lus.* [Fr. *Furoncle*, fü'rôNkl'.] A boil, or inflammatory tumor; a blain.

Fu-sa'nus A-cu-mĭ-na'tus.* A small tree or shrub of the order *Santalaceæ*, a native of Australia. It bears an edible fruit.

Fus'cous. [Lat. **Fus'cus.**] Deep gray-brown, or grayish-brown.

Fu'sel Oil. [Lat. **Al'cohol Amyl'icum.**] An oily, poisonous liquid, of a highly disagreeable smell and nauseous taste, produced in the manufacture of potato spirit, and of ardent spirit obtained from the various kinds of grain. It is valuable in Pharmacy as the artificial source of valerianic acid.

Fu'si.* The plural of FUSUS, which see.

Fu-sĭ-bil'ĭ-tў. [Lat. **Fusibil'itas, a'tis.**] The capability of being fused by heat. The temperature required to fuse a substance is called the *melting point*. The term *fusible* is applied only to solids. Some, like quartz, can be fused only by the aid of a flux. Other solids cannot be melted, but are decomposed by heat.

Fu'si-ble. [Lat. **Fu'silis**; from *fun'do*, *fu'sum*, to "pour," to "melt."] Capable of being made fluid by the application of heat.

Fu'sĭ-form. [Lat. **Fusifor'mis**; from *fu'sus*, a "spindle."] Resembling a spindle; tapering to both ends:—applied to the roots and fibres of plants; also to parts of animals.

Fu'sion. [Lat. **Fu'sio, o'nis**; from *fun'do*, *fu'sum*, to "pour," to "melt."] The act of melting, or the state of being melted, by heat.

Fu'sion, A'que-ous. The liquefaction of salts which contain water of crystallization, on exposure to increased temperature.

Fu'sion, Dry. The liquefaction produced by heat after the water has been expelled.

Fu'sion, Ig'ne-ous. The melting of anhydrous salts by heat without undergoing any decomposition.

Fus'tic. A yellow dye-wood, consisting of two kinds: *Old fustic*, the product of the *Morus tinctoria*, or *Maclura tinctoria*, or Dyers' Mulberry, an American tree; and *Young fustic*, the *Rhus Cotinus*, or Venice Sumach, a shrub growing in Italy and the south of Europe.

Fu'sus,* plural **Fu'si.** Literally, a "spindle:"—applied in the plural to the papillæ through which, in the *Arachnides*, the delicate threads are spun or made to pass.

G.

G, or **Γ**, [probably an abbreviation of *γράμμα*, a "small weight," whence the Fr. *gramme*,] denoted, among Greek physicians, *Uncia*, or an ounce.

Gad'o-lin-īte. The name of a mineral, so called from the Swedish chemist Gadolin, who discovered it in the earth called *yttria*. It is a silicate containing barium, cerium, and lithium.

Gad'u-in. [Lat. **Gadui'na**; from *Ga'dus mor'rhua*, the "codfish."] A peculiar substance found in cod-liver oil.

Ga'dus.* A genus of fishes of the order *Jugulares*.

Ga'dus Mor'rhu-a.* The codfish, abounding in the northern seas, from the liver of which codfish oil is obtained.

Gal-ac-tæ'mĭ-a.* [From the Gr. *γάλα, γάλακτος*, "milk," and *αἷμα*, "blood."] A morbid condition of the blood in which it contains milk.

Ga-lac'ta-gŏgue. [Lat. **Galactago'gus**; from the Gr. *γάλα, γάλακτος*, "milk," and *ἄγω*, to "lead or bring away."] Causing the flow of milk.

Ga-lac'tĭ-a.* [From the Gr. *γάλα, γάλακτος*, "milk."] A genus in Good's nosology, embracing defective, excessive, or morbid secretion of the milk; mislactation.

Ga-lac'tic. The same as LACTIC, which see.

Ga-lac'tin. [Lat. **Galacti'na**; from the Gr. *γάλα, γάλακτος*, "milk."] The coagulating principle of milk.

Ga-lac-tir-rhœ'a.* [From the Gr. *γάλα*, "milk," and *ῥέω*, to "flow."] An excessive flow of milk.

Gal-ac-tĭs'che-sis.* [From the Gr. *γάλα*, "milk," and *ἰσχω*, to "restrain," to "hold in."] Retention or suppression of milk.

Ga-lac'to-çēle.* [From the Gr. *γάλα*, "milk," and *κήλη*, a "tumor."] A tumor or swelling containing a milky fluid.

Galactodendron.* See BROSIMUM.

Gal'ac-toid. [From the Gr. *γάλα*, "milk," and *εἶδος*, a "form" or "resemblance."] Resembling milk.

Gal-ac-to'ma.* The same as GALACTOCELE, which see.

Gal-ac-tom'e-ter. [Lat. **Galactom'etrum**; from the Gr. *γάλα*, "milk," and *μέτρον*, a "measure."] An instrument for measuring or ascertaining the quality of milk.

Gal-ac-toph'a-gous. [Lat. **Galactoph'agus**; from the Gr. *γάλα*, "milk," and *φάγω*, to "eat."] Living on milk. See LACTIVOROUS.

Gal'ac-toph-o-ri'tis.* Inflammation of the galactophorous or lactiferous ducts.

Gal-ac-toph'o-rous. [Lat. **Galactoph'orus**; from the Gr. *γάλα*, "milk," and *φέρω*, to "bear."] Milk-bearing; lactiferous.

Gal-ac-toph'ў-gus.* [From the Gr. *γάλα*, "milk," and *φεύγω*, to "put to flight."] A term applied to medicines which tend to arrest or prevent the secretion of milk.

Gal-ac'to-ple-ro'sis.* [From the Gr. *γάλα*, "milk," and *πλήρωσις*, "fulness," "abundance."] Abundance of milk.

Ga-lac'to-poi-et'ic. [Lat. **Galactopoiet'icus**; from the Gr. *γάλα*, "milk," and *ποιέω*, to "make."] Milk-making, or milk-producing.

Ga-lac-to-po'sĭ-a.* [From the Gr. *γάλα*, "milk," and *πίνω*, to "drink."] Milk diet.

Ga-lac-to-pўr'e-tus.* [From the Gr. *γάλα*, "milk," and *πυρετός*, "fever."] Milk fever.

Gal-ac-to'sis,* or **Ga-lac'to-poi-e'sis.*** [From the Gr. *γάλα*, "milk," and *ποιέω*, to "make," to "produce."] The production or secretion of milk.

Gal-ac-tu'rĭ-a.* [From the Gr. *γάλα*, "milk," and *οὖρον*, "urine."] The same as CHYLURIA, which see.

Ga-lan'gal,* or **Ga-lan'ga.*** The stimulant aromatic root of the *Alpin'ia galan'ga* or *Alpin'ia officina'rum*.

Ga-lan'thus.* [From the Gr. *γάλα*, "milk," and *ἄνθος*, a "flower."] A genus of bulbous plants of the order *Amaryllidaceæ*. The *Galan'thus niva'lis* (Snow-drop), a native of Europe, is cultivated for the beauty of its white flower, which blooms in March amidst the snow. Its bulb is reputed to be emetic and purgative.

Ga'lax A-phyl'la.* An evergreen herb of the order *Diapensiaceæ*, or *Galacineæ*, a native of Virginia, the Carolinas, etc. Its root is astringent.

Gal'ax-ў [from the Gr. *γάλα*, "milk"], or **Milk'ў Way.** A ring of nebulous or hazy light which appears to encircle the earth. The telescope reveals that it is composed of millions of stars, which are so small or so distant that we cannot see them singly by the naked eye. "A large majority of all the stars are clustered in or near the plane of the Milky Way."—(SHARPLESS.)

Gal'ba-num.* "Galbanum." The Pharmacopœial name (U.S. 1880) for a gum-resin obtained from *Fer'ula galbanif'lua*, and probably from other allied plants. According to the Pharmacopœia of 1870, it is a gum resin obtained from an undetermined plant. It is stimulant, expectorant, and antispasmodic. It has been used chiefly in chronic affections of the bronchial mucous membrane, amenorrhœa, and chronic rheumatism.

Gal'bu-lus.* A kind of cone, differing from the strobile only in being round and having the heads of the carpels much enlarged. The fruit of the juniper is a *galbulus*.

Gale, gāl. The French term for "itch." See PSORA.

Ga'le-a.* Literally, a "helmet." A form of headache extending all over the head. In Botany, the superior arched lip of ringent and personate corollas. In Surgery, a bandage for the head, somewhat like a helmet. Also a large vaulted membrane, movable, and covering the jaws of orthopterous and some other insects.

Ga'le-ate. [Lat. **Galea'tus**; from *ga'lea*, a "helmet."] Formed like a helmet; helmeted:—applied to parts of plants.

Ga-le'ga Vir-ġin-ĭ-a'na,* or **Te-phro'sĭ-a Virginia'na.*** A plant growing native in the United States, said to be diaphoretic and powerfully anthelmintic.

Ga-le'na. Lead-glance, the native sulphide of lead, occurring crystallized in cubes with a metallic lustre and gray color. It is the ore from which nearly all metallic lead is obtained.

Ga-len'ic. [Lat. **Galen'icus.**] After the manner of Galen, whose practice of medicine was remarkable for multiplying herbs and roots in the same composition.

Ga'len-īte. The systematic name of sulphide of lead, or galena.

Ga'len's Ban'dage. A term sometimes applied to the four-tailed bandage, or single split cloth.

Ga-le-op'sis La-da'num.* An herbaceous plant of the order *Labiatæ*, a native of Europe. It has been used in medicine.

Galeux, gȧ'luh'. The French term for PSORIC, which see.

Galiaceæ,* ga-le-a'she-ē. A synonyme of *Rubiaceæ*, a natural order of exogenous herbaceous plants, found in cold and temperate climates. It includes *Galium*.

Gal-ĭ-pe'a Cus-pa'rĭ-a.* The tree which, according to the London Pharmacopœia, produces the Angustura bark. It belongs to the order *Rutaceæ*.

Galipe'a Of-fiç-ĭ-na'lis.* The tree which, according to the United States Pharmacopœia of 1870, produces Angustura or Cusparia bark.

Găl'ĭ-pot. An earthen pot, painted and glazed, wherein ointments, etc., are kept. Also a resin obtained from the several species of *Pinus*.

Ga'lĭ-um.* Bedstraw. A genus of herbs of the order *Rubiaceæ*, comprising many species, natives of Europe and the United States.

Ga'lium Ap-a-ri'ne,* or **Cleav'ers.** An herbaceous plant of the order *Rubiaceæ*, a native of Europe. It grows spontaneously in the United States. It has been used as a remedy for dropsy, lepra, etc. Its juice is said to be aperient, diuretic, and antiscorbutic.

Ga'lium Cir-çæ'zans.* Wild Liquorice, a plant, a native of the United States. It is diuretic.

Ga'lium Lan-ce-o-la'tum.* Wild Liquorice, an herbaceous plant, a native of the United States.

Ga'lium Ve'rum.* Bedstraw, a plant, a native of Europe, which has been used in medicine as a remedy for epilepsy and hysteria. Its flowers are reputed to be antispasmodic.

Gâll. The bile, or secretion of the liver. See BILE.

Gall'-Blad'der. [Lat. **Vesi'ca Fel'lis**; Fr. *Vésicule du Fiel*, vā'zē'kül' dü fē'ĕl'.] A membranous reservoir containing the bile, situated on the lower surface of the right lobe of the liver.

Gall-Ducts. See CYSTIC DUCTS.

Gall-Nut. See GALLA.

Gall'-Sick'ness. The remittent fever (otherwise called **Wal'cheren Fe'ver**) produced by marsh miasmata in the Netherlands:—so named because accompanied with a vomiting of bile.

Gall'-Stone. A calculus formed in the gall-bladder.

Găl'la,* plural **Gal'læ.** "Nutgall." The Pharmacopœial name (U.S. 1880) for excrescences on *Quercus Lusitanica*, var. *infectoria*, caused by the punctures and deposited ova of *Cynips gallæ tinctoriæ*. According to the Pharmacopœia of 1870, a morbid excrescence on *Quercus infectoria*.

Galls are powerfully astringent. Although sometimes prescribed in chronic diarrhœa and similar complaints, they are chiefly used in external applications, such as lotions, gargles, ointments, etc.

Gal'læ,* the plural of GALLA, which see.

Găl'lāte. [Lat. **Gal'las, a'tis.**] A combination of gallic acid with a base.

Găl'lic. [Lat. **Gal'licus**; from *Gal'lia*, "Gaul."] Belonging to the French. See GALLICUS MORBUS.

Gal'lic, găl'ik, or gawl'ik. [Lat. **Gal'licus**; from *gal'la*, a "gall-nut."] Belonging to galls:—applied to an acid found in astringent vegetable substances, but very abundantly in the gall-nut. It is used in medicine as an astringent. See ACIDUM GALLICUM.

Gal-lic'o-læ.* [From the Lat. *gal'la*, a "gall," and *co'lo*, to "inhabit."] Literally, "inhabiters of the gall-nut." A tribe of hymenopterous insects, or *Diploleparіæ*, which produce those excrescences on plants called *galls*. Latreille comprehends all the insects of this tribe in one genus,—viz., *Cynips*. See GALLA.

Găl'lĭ-cus Mor'bus.* "French Disease." Another name for SYPHILIS, which see.

Găl-lĭ-nā'ceous. [Lat. **Gallina'ceus**; from *gal'lus*, a "cock," or *galli'na*, a "hen."] Resembling the domestic hen. See GALLINÆ.

Gallinadæ.* See GALLINÆ.

Găl-li'næ* (the plural of *galli'na*, a "hen"), or **Găl-lĭ-na'ceous Birds.** A family of birds so named from their affinity to the domestic hen. It includes the turkey, the grouse, the pheasant, the quail, etc.

Gallinaginis Caput.* See CAPUT GALLINAGINIS.

Găl-lĭ-na'go, *ĭnis.* [Probably from the Lat. *gal'lus*, a "cock."] The Latin name for the woodcock.

Găl'lĭ-um.* An element, a rare metal discovered by Lecoq in 1875 in zinc-blende. It is white or whitish, and seems to be nearly related to zinc. Specific gravity, 5.95. The name is derived from

the Latin *Gallus* (a cock), and *Gallia* (France), in allusion to the name and country of its discoverer. It melts at 84° F., and is said to be the most fusible of all the metals.

Găl-van'ic. [Lat. **Galvan'icus.**] Pertaining to galvanism.

Galvan'ic Bat'ter-y or **Trough.** An apparatus for accumulating galvanism, consisting of plates of zinc and copper alternately fastened together and cemented into a wooden or earthenware trough, so as to form a number of cells: the trough is then filled with diluted acid.

Galvan'ic Mox'a. A term applied by Fabré Palaprat to the employment of voltaic electricity as a therapeutical agent for producing the cauterizing effects of the moxa.

Găl'van-išm. [Lat. **Galvanis'mus**; from Professor *Galvani*, of Bologna, who first observed the manifestations of this fluid or principle.] A form of electricity usually developed or produced by the mutual action of various metals and chemical agents upon each other. The additional discoveries of Volta led to the term *voltaism*, or *voltaic electricity*, and its effect on the muscles of animals newly killed suggested the term *animal electricity*.

Gal-van-ĭ-zā'tion. An operation by which a positive metal is placed in permanent contact with a negative metal to prevent the oxidation of the latter. By this method iron is covered with a coat of zinc, which preserves it from rust. It is then called *galvanized iron*.

Gal-va'no-Cau-ter-ĭ-zā'tion. Cauterization by galvanic electricity.

Gal-va-nom'e-ter. [Lat. **Galvanom'etrum**; from Eng. *galvanism*, and the Gr. *μέτρον*, a "measure."] An instrument for ascertaining the nature and degree of excitement produced by galvanic action.

Gal-van-o-plas'tics. [From *Galvani*, and the Gr. *πλάσσω*, to "form."] An operation by which an object is covered with a coat or layer of metal precipitated from its saline solution by means of an electric current.

Gal-van'o-scope. [Lat. **Galvanos'copus**; from Eng. *galvanism*, and the Gr. *σκοπέω*, to "observe."] An instrument capable of exhibiting galvanic phenomena. The term has been applied by M. Hall to a frog properly prepared and placed under certain conditions for experiment.

Gambir, or **Gambier,** găm-beer'. The Malay name of an astringent extract procured from the *Nau'clea Gambir* (or *Unca'ria Gambir*), a plant of the order *Rubiaceæ*, a native of Malacca. The substance called *square catechu*, and *terra japonica*, is the produce of this plant. See CATECHU.

Gamboge. See GAMBOGIA.

Gam-boge', A-mer'ĭ-can. A secretion similar to gamboge, yielded by several species of *Vismia*.

Gam-bo'ğĭ-a.* The Pharmacopœial name (U.S. 1870) for gamboge, or camboge, the concrete juice or gum-resin of the *Garcinia morella*, var. *pedicellata*, a tree of the order *Clusiaceæ*, a native of Cambodia. Gamboge is a powerful hydragogue cathartic, and as such is often given in dropsy. It is also recommended as a remedy for the tape-worm. In large doses its action is extremely violent, and has sometimes proved fatal. It is a valuable pigment, the color of which is a pure and brilliant yellow. See CAMBOGIA.

Gam-o-ğen'e-sis.* [From the Gr. *γάμος*, "marriage" or "sexual union," and *γένω*, to "be born."] Reproduction from sexual union, as that which prevails among the higher kinds of animals.

Gam-o-pet'a-lous. [Lat. **Gamopet'alus**; from the Gr. *γάμος*, "marriage" or "union," and *πέταλον*, a "petal."] Having petals joined together by the borders. The same as MONOPETALOUS.

Gam-o-phyl'lous. [From the Gr. *γάμος*, "union," and *φύλλον*, a "leaf."] Formed of united leaves:—applied to an involucre.

Gam-o-sep'a-lous. [Lat. **Gamosep'alus**; from *γάμος*, "marriage" or "union," and the Lat. *sep'alum*, a "sepal."] Having sepals joined together by their borders. The same as MONOSEPALOUS.

Gang'lĭ-form. [Lat. **Ganglifor'mis**; from *gan'glion*.] Of the nature, likeness, or appearance of a ganglion:—applied to a plexus.

Gan-glĭ-o'ma.* [Literally, the "tumor of a ganglion." See -OMA.] A tumor of the glands, more especially of the lymphatic ganglions.

Gan'glĭ-on. [Lat. **Gan'glion**; Gr. *γαγγλίον*, a "knot."] An enlargement in the course of a nerve, resembling a knot. Also a collection of vesicular neurine which serves as a centre of nervous power to certain fibres connected with it. Also a genus of the order *Tumores*, class *Locales*, of Cullen's nosology. The term is applied in Surgery to an encysted tumor occurring on a tendon or aponeurosis, sometimes on the knee, or on the back of the hand or foot.

Gan'glion Im'par.* A small ganglion on the coccyx.

Ganglion of Gasser. See GASSERIAN GANGLION.

Ganglion of Meckel. See MECKEL, GANGLION OF.

Gan-glĭ-on'ic. [Lat. **Ganglion'icus**; from *gan'glion*.] Pertaining to a ganglion, or to ganglions; consisting of ganglions.

GANGLION'IC SYS'TEM, or GANGLION'IC NER'VOUS SYS'TEM. A name applied to the trisplanchnic (or great sympathetic) nerve, with its system of ganglia, constituting, according to Bichat, the nervous system of organic life. See ORGANIC.

Gan-glĭ-on'ĭ-ca.* [From the Gr. *γαγγλίον*, a "nerve-knot."] A class of medicinal agents which affect the sensibility or muscular motion of parts supplied by the ganglionic or sympathetic system of nerves.

Gangræna.* See GANGRENE.

Gan-græ'na O'ris.* "Gangrene of the Mouth." A name for *Stomacace*, *Cancrum Oris*, or canker of the mouth.

Gan-græ-no'sis.* [From the Gr. *γάγγραινα*, "gangrene."] The condition of being, or becoming, gangrenous.

Gan'grēne. [Lat. **Gangræ'na**; Gr. *γάγγραινα*, from *γραίνω*, or *γράω*, to "gnaw," to "consume."]

(Fr. *Gangrène*, gŏN'grĀn'.) The state of incipient mortification. It is sometimes termed *hot mortification*. (See next article.) In Botany, a disease ending in putrid decay.

Gan'grene, Hot. [Lat. **Gangræ'na Cal'ida.**] A name applied by some writers to that form of mortification which is preceded or accompanied by inflammation,—in other words, to gangrene proper; while they term that which is unattended by inflammation *cold gangrene*.

Gan'grene, Hu'mid. [Lat. **Gangræ'na Hu'mida.**] A term applied to that form of mortification in which the affected part contains more or less of decomposed or other fluids. In *dry gangrene* (*Gangræ'na Sic'ca*) these fluids are not present, or are present only in very small quantity. The latter form, being frequently found to affect old people, has been sometimes called *Gangræna Senilis*.

Gangue, gangg. [From the Ger. *Gang*, a "going," a "way;" also a "vein" containing ore.] A term used by miners to denote the rock which envelops a metallic ore. A vein often consists for the most part of the rock called the gangue. The usual gangue in metallic veins is either quartz, calc-spar, or heavy spar.

Gaping. See PANDICULATIO.

Găr'an-cĭne. [From *Garance*, gă'rŏNss', the French name of "madder."] The coloring-matter of madder, mixed with the carbonized residue resulting from the action of the oil of vitriol on the woody fibre and other constituents of madder. It is a brownish or puce-colored powder used in dyeing.

Gar-cin'ĭ-a.* [Named after Dr. *Garcin*.] A Linnæan genus of the class *Dodecandria*, natural order *Guttiferæ* or *Clusiaceæ*. It comprises several species, natives of Siam, India, and the Malay Archipelago.

Garcin'ia Cam-bo'ġĭ-a,* or **Garcin'ia Cambo-ġĭ-o-i'dēs.*** A plant considered to afford the best gamboge. See CAMBOGIA, and GAMBOGIA.

Garcin'ia Han-bu'rĭ-i.* A tree, a native of Siam, affording the officinal gamboge according to the Pharmacopœia of 1880.

Garcin'ia Man-go-sta'na.* A tree found in the Malay Archipelago, Java, etc., bearing a delicious fruit called *mangosteen*, which is about as large as an orange, and of a spherical form. The fruit and the bark are used in medicine.

Garcin'ia Mo-rel'la.* A name of the tree that produces gum gamboge. It is a native of Siam and Cambodia.

Gar-de'nĭ-a.* [Named in honor of Alexander *Garden*.] A genus of ornamental shrubs or trees of the order *Rubiaceæ*, natives of China, South Africa, India, etc. It comprises several species prized for the beauty and fragrance of the flowers. Other species yield fragrant resins and good timber.

Garde'nia Cam-pan-u-la'ta.* A tree or shrub of India, the fruit of which is cathartic.

Garde'nia Flor'ĭ-da.* Cape Jessamine. A shrub, a native of China, cultivated in Europe and the United States. It bears large white flowers which are beautiful and very fragrant.

Garde'nia Gran-dĭ-flo'ra.* A Chinese tree or shrub, the fruit of which is employed to dye the yellow robes of the mandarins. It yields a tinctorial glucoside called *crocin*, which is bright red and is soluble in water and alcohol.

Garde'nia Gum-mif'er-a,* and **Garde'nia Lu'cĭ-da.*** Species of shrubs or trees, natives of India. They yield a fragrant resin somewhat like elemi.

Gar'diner's Al-ĭ-men'ta-rў Prep-a-rā'tion. A nutritious article, consisting of very finely-ground rice-meal.

Garg. = *Gargaris'ma.** A "gargle."

Gar-ga-ris'ma, a*tis,* **Gar-ga-ris'mum,*** **Gar-ga-ris'mus.*** [From the Gr. *γαργαρίζω*, to "wash the throat."] A wash for the throat; a gargle.

Gargle. See GARGARISMA.

Gar'lic. The common English name of the plant *Al'lium sati'vum*. Its bulbous root or roots constitute what are termed the *cloves* of garlic.

Gar'net. [Fr. *Grenat*, gRĕh-nă'.] A precious stone, a compound of the silicates of alumina, lime, iron, etc. It has a vitreous lustre. Its primary form is a dodecahedron. Garnet is a species comprising varieties called *almandine*, *essonite*, or cinnamon-stone, *pyrope*, *colophonite*, etc. The *almandine*, or precious garnet, is of a deep-red color.

Gar'rot. (Fr., a "stick," a "kind of lever.") A cylindrical piece of wood, or ivory, for tightening circular bandages.

Garryaceæ,* gar-re-a'she-ē. [From *Gar'rya*, one of the genera.] A small natural order of exogenous shrubs, found in North America. Gray includes the *Garrya* under *Cornaceæ*.

Gar'rў-a Fre-mon'tĭ-i.* A shrub of the order *Cornaceæ*, a native of California. It is said that a new alkaloid, called *garryine*, has been found in it.

Ga'rum.* A sauce or pickle made by the Romans from the *γάρος*, a small fish. It resembled the modern anchovy sauce in nature and use.

Gas, gass. [From the Anglo-Saxon *gast*, "breath," "wind," "spirit."] (Fr. *Gaz*.) An aeriform, elastic fluid.

Gaseous, gaz'e-ŭs. [Lat. **Gaseo'sus.**] Belonging to gas; of the nature of gas.

Gaseous Pulse. See PULSE.

Găs'ĭ-form. [Lat. **Gasifor'mis.**] Having the form or nature of gas.

Gas-om'e-ter. [Lat. **Gasom'etrum**; from Eng. *gas*, and the Gr. *μέτρον*, a "measure."] A measurer of gas:—usually applied, however, to a reservoir for containing gas.

Gas-se'rĭ-an Gan'glĭ-on. The semilunar ganglion; a ganglion of the fifth pair of nerves, first discovered by Gasser.

Gas'ter. [Gr. *γαστήρ*.] The Greek name for the stomach.

Gas-ter-an-ġem-phrax'is.* [From the Gr. *γαστήρ*, the "stomach," *ἄγγος*, a "vessel," and *ἔμφραξις*, an "obstruction."] Congestion of the blood-vessels of the stomach.

Gas-ter-hўs-ter-ot'o-mў. [From the Gr.

γαστήρ, the "belly," *ὑστέρα*, the "uterus," and *τομή*, the "act of cutting."] A term for the Cæsarean operation.

Gas-tĕr'ic. The same as GASTRIC, which see.

Gasteropodə,* or **Gasteropods.** See next article.

Gas-ter-op'o-dus.* [From the Gr. *γαστήρ*, the "belly," or "stomach," and *πούς*, a "foot."] Gasterop'odous:—applied in the plural neuter (*Gasterop'oda*) to a class of mollusks which crawl by means of a fleshy disk on their belly. The common snail belongs to this class.

Gas-ter-os'to-mus.* [From the Gr. *γαστήρ*, the "stomach," and *στόμα*, a "mouth."] Gasteros'tomous; having a mouth in the belly, or stomach:—applied to a species of *Tænia*, or tapeworm.

Gas-træ'mĭ-a.* [From the Gr. *γαστήρ*, the "stomach," and *αἷμα*, "blood."] Congestion of the veins of the stomach, and, so, nearly synonymous with GASTERANGEMPHRAXIS.

Gas-trăl'ğĭ-a.* [From the Gr. *γαστήρ*, the "stomach," and *ἄλγος*, "pain."] Pain in the stomach; gastral'gy:—also called *Gastrodynia* and *Cardialgia*. It is a pain in the stomach occurring in various gastric disorders. It is a common symptom of atonic dyspepsia, occurring in nervous or hysterical persons, and is relieved by stimulants, and by the escape of flatus. The most severe gastralgia is that accompanying ulceration of the stomach. In this disorder it is referred to one spot, and is also often felt in the back. The pain in ulceration is usually absent when the stomach is empty, but comes on from two to ten minutes after the ingestion of food.

Gas-trel-co'sis.* [From the Gr. *γαστήρ*, the "stomach," and *ἑλκόω*, to "ulcerate."] Ulceration of the stomach.

Gas-tren-çeph-a-lo'ma, a*tis*.* [From the Gr. *γαστήρ*, the "stomach," and the Lat. *encephalo'ma*, a "tumor of brain-like substance."] A brain-like fungus of the stomach.

Gas-tren-çeph-a-lo'sis.* The formation and progress of *gastrencephaloma*.

Gas-tren'ehў-ta.* [From the Gr. *γαστήρ*, the "stomach," and *ἐγχέω*, to "pour in."] A stomach-syringe, or stomach-pump.

Gas'tric. [Lat. **Gas'tricus**; from the Gr. *γαστήρ*, the "stomach."] (Fr. *Gastrique*, gȧs'trēk'.) Belonging to the stomach.

Gas'tric Fe'ver. A name given by some to *bilious* fever, which was thought to depend on gastric derangement. It is the *Meningo-gastric* of Pinel. A popular name for a febrile condition attended by prominent gastric symptoms; also for typhoid fever.

Gas'tric Juice. [Lat. **Suc'cus Gas'tricus.**] (Fr. *Suc gastrique*, sük gȧs'trēk'.) The juice secreted in the stomach, by the action of which on the food, digestion is carried on. It is a compound or mixture of numerous substances, among which are phosphates and other inorganic salts, pepsin, and a free acid regarded by some as lactic, by others as hydrochloric It is stated by some who are regarded as high authority that about twelve pounds of gastric juice are produced in one person in twenty-four hours.

Gas'trĭ-cism. [Lat. **Gastricis'mus**; from the Gr. *γαστήρ*, the "stomach."] A term for gastric affections in general, but usually applied to the theory that all diseases are caused by the accumulation of impurities in the stomach and bowels, suggesting their removal by vomiting and purging.

Gas-tric'o-la.* [From the Gr. *γαστήρ*, the "stomach," and the Lat. *co'lo*, to "inhabit."] Literally, an "inhabitant of the stomach:"—applied to those *Œstridæ* (the common bott, for example) the larvæ of which are found in the intestines of various animals.

Gas-tril'o-quus.* [From the Gr. *γαστήρ*, the "stomach," and the Lat. *lo'quor*, to "speak."] The same as VENTRILOQUOUS, which see.

Gas-tri'tis, i*dis*.* [From the Gr. *γαστήρ*, the "stomach."] (Fr. *Gastrite*, gȧs'trēt'.) Inflammation of the mucous membrane of the stomach. A genus of the order *Phlegmasiæ*, class *Pyrexiæ*, of Cullen's nosology. It occurs under two forms, *catarrhal* and *erythematous* gastritis, and is in some cases *acute*, in others *chronic*. Vomiting is one of the most characteristic signs of the acute disease. The other symptoms are headache, pain in the epigastrium, lack of appetite, and offensive breath. The most common causes are errors in diet, and an immoderate use of spirituous liquors.

Gas'tro-çēle.* [From the Gr. *γαστήρ*, the "stomach," and *κήλη*, a "tumor."] Hernia in which a portion of the stomach is protruded; *hernia ventriculi*.

Gas-tro-ehoʻlĭ-a.* [From the Gr. *γαστήρ*, the "stomach," and *χολή*, "bile."] Bilious disease of the stomach.

Gas-tro-ehoʻlo'sis.* [From the same.] Gastric bilious fever.

Gas-troc-ne'mĭ-us.* [From the Gr. *γαστήρ*, the "stomach," or "belly," and *κνήμη*, the "leg."] (Fr. *Gastrocnémien*, gȧs'trok'nā'me-ăN'.) Literally, "belonging to the belly [or calf] of the leg." The name of a muscle constituting the chief part of the calf of the leg.

Gas-tro-col'ĭ-ca.* [From the Gr. *γαστήρ*, the "stomach," and the Lat. *col'ica*, the "belly-ache."] Severe colic-like pain in the stomach:—sometimes applied to neuralgia of the stomach.

Gas-tro'dēs.* [From the Gr. *γαστήρ*, the "stomach."] A term used in Comparative Anatomy and Botany, and applied to that which has many swellings like the belly, or conjoined with a belly.

Gas-tro-dўn'ĭ-a.* [From the Gr. *γαστήρ*, the "stomach," and *ὀδύνη*, "pain."] Spasmodic pain in the stomach. See GASTRALGIA.

Gas-tro-en-ter-i'tis.* [From the Gr. *γαστήρ*, the "stomach," and *ἔντερον*, an "intestine."] Inflammation of the gastro-intestinal mucous membrane.

Gas-tro-ep-ĭ-plo'ic. [From the Gr. *γαστήρ*, the "stomach," and *ἐπίπλοον*, the "omentum."] Belonging to the stomach and omentum, as applied to a branch of the hepatic artery, lymphatic glands of the abdomen, etc.

Gas'troid. [Lat. **Gastroi'des**; from the Gr. *γαστήρ*, the "stomach," and *εἶδος*, a "form" or "resemblance."] Resembling the belly, or stomach:—applied to parts of animals and plants.

Gas-trol'ĭ-thus.* [From the Gr. *γαστήρ*, the "stomach," and *λίθος*, a "stone."] A calculus in the stomach; a gas'trolith.

Gas-trol'o-ġў. [Lat. **Gastrolo'gia**; from the Gr. *γαστήρ*, the "stomach," and *λόγος*, a "discourse."] A dissertation on the stomach, its structure, function, etc.; also the science of the stomach.

Gastromalacia,* gas-tro-ma-la'she-a. [From the Gr. *γαστήρ*, the "stomach," and *μαλακός*, "soft."] Softening of the stomach,—a disease occurring in infants, and usually preceded by hydrocephalus, acute exanthematous disease, or some disease of the respiratory organs.

Gas-tron'o-mў. [From the Gr. *γαστήρ*, the "stomach," and *νόμος*, a "law."] The science or the art of good living, or epicurism.

Gas-tron'o-sos,* or **Gas-tron'o-sus.*** [From the Gr. *γαστήρ*, the "stomach," and *νόσος*, a "disease."] Disorder of the stomach.

Gas'tro-pa-răl'ў-sis.* [From the Gr. *γαστήρ*, the "stomach," and the Lat. *paral'ysis*.] Paralysis of the stomach.

Gas-tro-path'ic. [Lat. **Gastropath'icus**.] Belonging to gastropathy.

Gas-trop'a-thў. [Lat. **Gastropathi'a**; from the Gr. *γαστήρ*, the "stomach," and *πάθος*, "affection," or "disease."] Disease of the stomach.

Gas'tro-pe'rĭ-o-dўn'ĭ-a.* [From the Gr. *γαστήρ*, the "stomach," *περίοδος*, a "period," and *ὀδύνη*, "pain."] A disease said to be peculiar to India, attended with severe neuralgic pains, returning at intervals. So distressing are the paroxysms that they are supposed to be produced by the terrible weapon of Siva, the deity of destruction.

Gastropodus.* See GASTEROPODUS.

Gas-tror'rha-ġў. [Lat. **Gastrorrha'gia**; from the Gr. *γαστήρ*, the "stomach," and *ῥήγνυμι*, to "break" or "burst," to "break through."] Escape of the contents of the stomach through a lesion of its several coats; also the oozing of blood from its internal surface.

Gas-tror'rha-phў. [Lat. **Gastror'rhaphe**, or **Gastrorrha'phia**; from the Gr. *γαστήρ*, the "stomach," or "belly," and *ῥαφή*, a "suture."] The sewing of wounds which penetrate through the belly.

Gas-tror-rhœ'a.* [From the Gr. *γαστήρ*, the "stomach," or "belly," and *ῥέω*, to "flow."] Undue increase of the secretion of the mucous glands of the stomach; also a flux from the belly.

Gas-tros'co-pў. [Lat. **Gastrosco'pia**; from the Gr. *γαστήρ*, the "belly," and *σκοπέω*, to "examine."] Examination of the abdomen.

Gas-tro'sis.* [From the Gr. *γαστήρ*, the "stomach."] A name given by Alibert to a family including all diseases of the stomach.

Gas-tro-splen'ic O-men'ta. A term applied to the laminæ of the peritoneum which are comprised between the spleen and the stomach. See OMENTUM.

Gas-tros'to-mў. [Lat. **Gastrosto'mia**; from the Gr. *γαστήρ*, the "stomach," and *στόμα*, an "orifice."] The operation of forming an artificial opening into the stomach.

Gas-tro-tom'ic. [Lat. **Gastrotom'icus**.] Belonging to gastrotomy.

Gas-trot'o-mў. [Lat. **Gastroto'mia**; from the Gr. *γαστήρ*, the "stomach," or "belly," and *τέμνω*, to "cut."] The operation of cutting open the abdomen, as in the Cæsarean section; also cutting through the stomach itself.

Gas-trў-păl'ġĭ-a.* [From the Gr. *γαστήρ*, the "stomach," *ὑπο*, "under," "in a slight degree," and *ἄλγος*, "pain."] Slight or gentle pains in the stomach.

Gas-trў-per-neū'rĭ-a.* [From the Gr. *γαστήρ*, the "stomach," *ὑπέρ*, "over," "excessive," and *νεῦρον*, a "nerve."] Excessive or morbid activity of the nerves of the stomach.

Gas-trў-per-pa-thi'a.* [From the Gr. *γαστήρ*, the "stomach," *ὑπέρ*, "above," "excessive," and *πάθος*, "disease."] Severe affection of the stomach.

Gas-trў-po-pa-thi'a.* [From the Gr. *γαστήρ*, the "stomach," *ὑπο*, "under," and *πάθος*, "disease."] Slight affection of the stomach.

Gâteau Fébrile, gă'to' fā'brĕl'. The French term for AGUE CAKE, which see.

Gath'er-ing. The same as ABSCESS, and SUPPURATION.

Gaul-the'rĭ-a.* [Named after Dr. *Gaulthier*.] A large genus of evergreen shrubs of the order *Ericaceæ*, natives of America, Asia, Tasmania, etc. It comprises many species which bear edible fruits. The *Gaultheria Shallon*, a small shrub, a native of Oregon, bears purple berries of an agreeable flavor. Also the Pharmacopœial name (U.S. 1870, 1880) for the leaves of *Gaulthe'ria procum'bens*. It is stimulant, aromatic, and astringent. It may be used with advantage in some forms of chronic diarrhœa.

Gaulthe'ria Leū-co-car'pa.* A plant which is found on the volcanic mountains of Java, and affords an oil like the oil of wintergreen.

Gaulthe'ria Pro-cum'bens.* Wintergreen, or Teaberry, a native of the United States. It bears bright red berry-like fruits which are edible and have a spicy, aromatic flavor. See OLEUM GAULTHERIÆ.

Gaul-thĕr'ic Aç'id. The heavy oil of partridge-berry, or *Gaultheria procumbens*, formerly a constituent of the commercial *oil of wintergreen*. It combines with bases and forms salts called gaultherates.

Gayacine. See GUAIACIN.

Gay-lus-sac'çĭ-a.* [Named after the French chemist *Gay-Lussac*.] A genus of shrubs of the order *Ericaceæ*, natives of the United States, comprising several species called Huckleberry. *Gaylussac'cia resino'sa* is the common huckleberry of the Northern States. Its leaves and root are astringent.

Gaylussac'çia Fron-do'sa.* Blue Tangle, or Dangleberry, a shrub, a native of the Middle and Southern United States. Its fruit is sweet and edible.

Gaz. See GAS.

Gaziform. See GASIFORM.

Gazometer. See GASOMETER.

Ge'ine, or **Ge'ic Ac'id.** [From the Gr. *γέα*, "earth," *γήινος*, "earthy."] A name given by Berzelius to *humus*, or vegetable mould, the result of the decomposition of vegetable substances.

Gel-a-tig'en-ous. [From the Lat. *gelat'ina*, "gelatin," and the Gr. *γεννάω*, to "produce."] Yielding gelatin, or forming the gelatinous structures of the body.

Gĕl'a-tin, or **Gĕl'a-tine.** [Lat. **Gelat'ina**; from *ge'lo, gela'tum*, to "congeal," to "harden."] Jelly, a substance obtained from bone, cartilage, sinew, ligament, skin, cellular tissue, and serous membrane by long-continued boiling in water. The glue and isinglass of commerce are forms of gelatin. It is soluble in hot water and insoluble in cold. It is used as food, and for various other purposes.

Gel'atin Cap'sules. Capsules prepared from a concentrated solution of gelatin and filled with medicines. When swallowed, the capsules dissolve in the gastro-intestinal juices, and the nauseous taste of the medicine is avoided.

Gelatin, Sugar of. See GLYCICOLL.

Ge-lat'i-ni-form'. [Lat. **Gelatinifor'mis**; from *gelat'ina*, "gelatin," and *for'ma*, a "form."] Resembling gelatin:—applied to cancer; also to a fibre.

Ge-lat-i-no'sus.* [From the Lat. *gelat'ina*, "gelatin."] Gelat'inous; like gelatin, or full of gelatin:—applied in the plural masculine (*Gelatino'si*) to an order of *Polypi*.

Ge-lat'i-nous. [Lat. **Gelatino'sus.**] Like gelatin; composed of gelatin.

Gelat'inous Tis'sues. Tissues which yield to boiling water a substance which, on cooling, forms a jelly, or may be called gelatin. They are chiefly found in the cellular membrane, the membranes in general, the tendons, ligaments, bones, cartilages, etc.

Gelatio (je-la'she-o), ***o'nis.**** [From the Lat. *ge'lo, gela'tum*, to "freeze."] Literally, a "freezing:"—sometimes applied to the rigid state of the body in catalepsy.

Gel. Quâv. = *Gelat'inâ quâ'vis.** "In any kind of jelly."

Gel'se-mine, or **Gel-se'mi-a.*** A powerful alkaloid obtained from the *Gelsemium sempervirens*. It is a colorless, inodorous solid, of an intensely bitter taste, sparingly soluble in water, but freely soluble in ether. It is poisonous.

Gel-se'mi-um.* A genus of plants of the order *Loganiaceæ*.

Gelse'mium.* "Gelsemium." Yellow Jessamine. The Pharmacopœial name (U.S. 1870, 1880) for the rhizome and rootlets of *Gelsemium sempervirens*. It is a nervous and arterial sedative. It has been prescribed in intermittent, remittent, typhoid, and yellow fevers, dysentery, rheumatism, etc.

Gelse'mium Nit'i-dum.* Another name for GELSEMIUM SEMPERVIRENS.

Gelse'mium Sem-per-vi'rens.* Yellow Jessamine, an evergreen woody climber, a native of the Southern United States. It bears a profusion of beautiful and fragrant yellow flowers. It is a poisonous plant.

Gem. See GEMMA.

Gemelli.* See GEMELLUS.

Ge-mel-li-flo'rus.* [From the Lat. *gemel'lus*, "double" or "twin," and *flos*, a "flower."] Gemelliflo'rate; having flowers disposed two and two.

Ge-mel'lus,* plural **Ge-mel'li.** [Diminutive of the Lat. *gem'inus*, "double."] A term applied to the *gastrocnemius externus* muscle, because it has a double origin.

Gem'i-nate. [From the Lat. *gem'ini*, "twin."] In Botany, twin; in pairs; united in pairs.

Gemini.* See GEMINUS.

Gem'i-ni-flo'rus.* Having flowers growing in pairs. See GEMELLIFLORUS.

Gem'i-nus,* plural **Gem'i-ni.** "Double," or "twin:"—applied to certain parts of plants when in pairs; applied also to the *gemelli* muscles, and to leaves, etc.

Gem'ma.* A bud which contains the rudiments of a plant in a latent state till the season favors its evolution. Also a precious stone; a gem.

Gem-ma'ceous. [Lat. **Gemma'ceus**; from *gem'ma*, a "bud."] Belonging to buds; having buds:—applied to plants.

Gem-ma'tion. [Lat. **Gemma'tio, *o'nis***; from *gem'ma*, a "bud."] The state or process of budding; the arrangement of leaves or petals in a bud.

Gem-mif'er-ous. [Lat. **Gemmif'erus**; from *gem'ma*, a "bud" or "gem," and *fe'ro*, to "bear."] Bearing buds, or containing gems:—applied to plants; also to gravel containing gems.

Gem-mi-fi-ca'tion. [Lat. **Gemmifica'tio, *o'nis***; from *gem'ma*, a "bud," and *fa'cio*, to "make."] The manner in which the bud or gem is developed. Also synonymous with RAMIFICATION.

Gem-mi-flo'rus.* [From the Lat. *gem'ma*, a "bud," and *flos*, a "flower."] Gemmiflo'rate; having flowers like buds, like the closed gentian.

Gem-mi-for'mis.* [From the Lat. *gem'ma*, a "bud," and *for'ma*, a "form."] Gem'miform; bud- or gem-like:—applied to flowers.

Gem-mip'ar-ous. [Lat. **Gemmip'arus**; from *gem'ma*, a "bud," and *pa'rio*, to "bring forth."] A term applied to the multiplication of the species by *buds*, or *gemmules*, arising from germs, as exemplified in the vegetable kingdom and in many of the *Infusoria*.

Gem-mu-lā'tion. [Lat. **Gemmula'tio, *o'nis***; from *gem'mula*, a "little bud."] A kind of reproduction consisting in simple growth and development without the agency of sexes. See GEMMIPAROUS.

Gem'mule. [Lat. **Gem'mula**; diminutive of *gem'ma*, a "bud."] The rudiment of the stem; a plumule; also a small bud.

Ge'na,* plural **Ge'næ.** [From the Gr. *γέννς*, the "cheek-bone."] (Fr. *Joue*, zhoo.) The cheek, or cheeks, forming the lateral walls of the mouth. They are composed chiefly of muscular tissue, lined internally with a mucous membrane.

Gencives, zhŏN'sĕv'. The French term for the "gums." See GINGIVA.

Gen-da-rus'sa Vul-ga'ris,* or **Jus-tĭ'cĭ-a Gendarus'sa.*** A shrub of the order *Acanthaceæ*, a native of India. Its leaves are emetic, and its root is astringent.

Gen-e-an'thro-pў. [From the Gr. *γενεά*, "race," also "birth," and *ἄνθρωπος*, a "man."] The same as ANTHROPOGENY.

Gen'er-a,* the plural of GENUS, which see.

Gen'er-al. [Lat. **Genera'lis**; from *ge'nus, gen'eris*, a "kind."] Relating to a whole genus, order, or class; opposed to *partial* or *special;* common, but not universal; not restricted or limited to anything in particular.

Gen'eral Prac-tĭ'tion-er. A term applied to those practitioners in England and Wales who do not profess to advise as *pure* physicians or to act as *pure* surgeons, but perform in their daily vocation the duties of both, with those of the obstetrician in addition.

Gen'er-al-ĭ-zā'tion. [See GENERAL.] The act of generalizing, or including in general propositions,—a process employed in Logic.

Gen-er-ā'tion. [Lat. **Genera'tio, o'nis;** from *gen'ero, genera'tum*, to "beget."] The act of reproducing; reproduction; production of a new being more or less similar to that from which it derives its origin,—a function common to all organized beings.

Generation, Fissiparous. See FISSIPAROUS GENERATION.

Genera'tion, Or'gans of. In woman, the external are the *mons veneris, labia, perineum, clitoris*, and *nymphæ;* the internal, the *vagina, uterus, ovaria*, and *Fallopian tubes;* in man, the *penis, testes, vesiculæ seminales, vasa deferentia*, and *prostate gland.*

Ge-nĕr'ic. [Lat. **Gener'icus**, from *ge'nus.*] Pertaining or relating to a genus. The *generic name* is the proper name of the genus; and the *generic character* is that which distinguishes one genus from another.

Ge-ne'sĭ-al. [Lat. **Genesia'lis**; from the Gr. *γένεσις*, "origin," "generation."] Belonging to generation.

Ge-nes'ĭ-cus.* Belonging to genesis.

Gen'e-sis.* [From the Gr. *γένω*, to "be born."] Birth, origin, or generation.

Genêt des Teinturiers. See GENISTA TINCTORIA.

Ge-net'ĭ-ca.* [See GENETICUS.] The name of a class in Dr. Good's nosology, comprising diseases connected with the sexual function.

Ge-net'ĭ-cus.* [From the Gr. *γένεσις*, "generation," or *γεννάω*, to "beget."] Genet'ic; belonging to the procreative function.

Ge-ne'va.* [From *Gene'va*, where first made.] (Fr. *Genièvre*, zhęh-ne-åvr' or zh'ne-åvr'.) Gin distilled from malt or rye and afterwards subjected to the same process with juniper-berries. A spurious kind, from turpentine and cardamom-seeds, with very few, if any, juniper-berries, is largely consumed in the English metropolis, etc., as *British gin.*

Ge-nic'u-late. [Lat. **Genicula'tus**; from *genic'ulum.*] Bent abruptly like a joint, or like the knee:—applied to the stems of many grasses.

Ge-nic'u-lum.* [Diminutive of the Lat. *ge'nu*, the "knee."] A small knot or joint; a little knee.

Ge'nĭ-o-. [From the Gr. *γένειον*, the "chin."] A prefix denoting attachment to, or connection with, the chin.

Ge'nĭ-o-glos'sus.* [From the Gr. *γένειον*, the "chin," and *γλῶσσα*, the "tongue."] A muscle connecting the inner and lower part of the chin-bone with the *os hyoides* and tongue.

Ge-nĭ-o-hy-o-i'dēs.* [From the Lat. *ge'nio*, and *hyoi'des.*] A muscle extending from the lower part of the chin-bone to the anterior part of the *os hyoides.* It is also written *Genio-hyoi'deus.*

Ge'nĭ-o-plas'tў. [From the Gr. *γένειον*, the "chin," and *πλάσσω*, to "form."] A name for the operation for restoring the chin.

Ge-ni'pa.* A genus of trees of the order *Rubiaceæ*, natives of the tropical parts of South America. Several of the species bear edible fruits. The *Genipa Americana* produces an agreeable fruit called *Genipap*, which is as large as an orange.

Ge-nis'ta.* A genus of shrubs of the order *Leguminosæ*, comprising over one hundred species, natives of Europe, Western Asia, etc. Among them is the *Planta Genista*, from which the Plantagenet sovereigns derived that name.

Genis'ta Jun'ce-a.* Spanish Broom. A synonyme of the *Spartium junceum.* It is purgative.

Genis'ta Pur'gans.* A plant, a native of Europe, having emetic and cathartic properties.

Genis'ta Sco-pa'rĭ-a.* A plant, a native of France. Its seeds and flowering tops are diuretic and purgative.

Genis'ta Tinc-to'rĭ-a.* (Fr. *Genêt des Teinturiers*, zhęh-nå' (or zh'nå) då tåN'tü're-å'.) "Dyers' Broom." A shrub cultivated in Europe and the United States, and sometimes used in medicine. It is a native of Europe.

Gen'ĭ-tal. [Lat. **Genita'lis**; from *gig'no, gen'itum*, to "beget."] Belonging to generation.

Gen-ĭ-tals. [Lat. **Genita'lia**, plural neuter of *genita'lis;* from the same.] The organs or parts contributing to generation in the male or female. See GENERATION, ORGANS OF.

Gen'ĭ-to-. [From the Lat. *genita'lia.*] A prefix denoting connection with the genital organs.

Gen'ĭ-to-Cru'ral. The name of a nerve proceeding from the first lumbar, and dividing into an *internal branch*, which accompanies the spermatic cord, and an *external*, which is distributed into filaments at the crural arch.

Gen'ito-Spi'nal Cen'tre. A term applied to a part of the lumbar portion of the spinal cord,

the nerves from which are distributed to the bladder, uterus, etc.

Genito-Urinary. See UROGENITAL.

Genneticus.* See GENETICUS.

Genou. See GENU.

Genre. The French for GENUS.

Gentian. See GENTIANA LUTEA.

Gentiana,* jen-she-a′na. [From *Gen′tius*, King of Illyria.] A Linnæan genus of plants of the class *Pentandria*, natural order *Gentianaceæ*. It comprises about one hundred and eighty species, many of which bear beautiful flowers and have tonic properties. Blue is the predominant color of the flowers. Also the Pharmacopœial name (U.S. 1870, 1880) of the root of *Gentiana lutea*. Gentian is an excellent bitter tonic, and is particularly adapted to cases of simple debility of the digestive organs.

Gentia′na Am-a-rel′la,* or **Gentia′na German′ĭ-ca.*** A plant, a native of Germany. It is a bitter tonic, and is used as a substitute for *Gentiana lutea*.

Gentia′na Cat-es-bæ′i.* Blue Gentian. The Pharmacopœial name (U.S. 1870) for the root of *Gentiana Catesbæi*.

Gentia′na Chi-ray′ta,* or **O-phe′lĭ-a Chi-ra′ta.*** A plant, a native of India, which is used in medicine as an antiperiodic. See CHIRETTA, and CHIRATA.

Gentia′na Crĭ-ni′ta.* Fringed Gentian, an herbaceous plant, a native of New York, Pennsylvania, etc. It is one of the most beautiful of the genus. Its flower is large, and bright blue, or azure. Its root is a tonic medicine.

Gentia′na Cru-cĭ-a′ta.* A plant, a native of Europe, which possesses bitter and tonic properties, and has been used in medicine.

Gentia′na Lu′te-a,* **Gentia′na Ru′bra.*** The gentian-plant, a native of Europe. It bears handsome yellow flowers.

Gentia′na Pan-no′nĭ-ca.* A plant, a native of Austria, which has been used as a tonic. The roots of *Gentiana punctata* and *G. purpurea*, natives of Europe, are said to be often mixed with the officinal gentian.

Gentia′na Quin-que-flo′ra.* The systematic name of the Five-Flowered Gentian. It is a native of the United States. Its medicinal virtues are similar to those of the other gentians.

Gentia′na Ra′dix.* "Gentian Root." See GENTIANA LUTEA.

Gentia′na Sa-po-na′rĭ-a.* Soapwort Gentian, a native of Virginia, Pennsylvania, etc. Its root is tonic.

Gentianaceæ,* jen-she-a-na′she-ē. [From *Gentia′na*, one of the genera.] A natural order of exogenous monopetalous herbaceous plants, found in nearly all parts of the world. Their characteristic property is intense bitterness, which resides in the root, stem, leaf, etc., and renders them tonic, stomachic, and febrifugal. The gentian-root is an example. Many species are prized for their beauty. It comprises, besides other genera, the *Ophelia*, *Sabbatia*, *Halenia*, *Frasera*, *Menyanthes*, *Chironia*, *Obolaria*, and *Lisianthus*.

Gen-tĭ-a-nā′ceous. [Lat. **Gentiana′ceus.**] Resembling the gentian-plant. See GENTIANACEÆ.

Gen-tĭ-a′næ Lu′te-æ Ra′dix.* "Root of Gentiana Lutea." See GENTIANA.

Gentianin, jen′she-a-nin. [Lat. **Gentiani′na.**] The bitter principle of the plant *Gentiana lutea*.

Gentianius,* or **Gentianus.*** See GENTIANACEOUS.

Ge′nu,* plural **Gen′u-a.** (Fr. *Genou*, zhẹh-noo′.) The knee; the articulation of the leg with the thigh.

Gen′u-a,* the plural of the Lat. *ge′nu*, the "knee."

Gen′ua Văl′ga.* [From the Lat. *val′gus*, "crooked," or "bowed."] "Bowed or Crooked Knees." The deformity vulgarly called *knock-knees*.

Ge′nus, gen. **Gen′er-is.*** [From the Gr. *γένος*, a "family," "race," or "class."] (Fr. *Genre*, zhŏNr.) A group of nearly-related species; a group or assemblage of species subordinate to a class or order.

Ge-nў-an-trăl′gĭ-a.* [From the Gr. *γέννς*, the "jaw," also "chin," *ἄντρον*, the "antrum," and *ἄλγος*, "pain."] Pain in the antrum Highmoreanum.

Ge-nў-an-tri′tis.* Inflammation of the antrum Highmoreanum. See next article.

Ge-nў-an′trum.* [From the Gr. *γέννς*, the "jaw," and *ἄντρον*, the "antrum."] A name for the antrum Highmorianum.

Ge-o-cen′tric. [Lat. **Geocen′tricus;** from the Gr. *γῆ*, or *γέα*, the "earth," and *κεντρικός*, "centric."] Having the earth for the centre:—applied to the place in which any heavenly body, as seen from the earth, appears.

Ge′ode. [Lat. **Geo′des;** from the Gr. *γῆ*, or *γέα*, the "earth."] Belonging to earth; earthy:—applied in Mineralogy to a cavity lined with crystals, or to a rounded stone or concretion having such a cavity which is lined with crystals and sometimes contains a nodule of stone.

Ge-od′e-sў. [Lat. **Geodæ′sia;** from *γῆ*, or *γέα*, the "earth," and *δαίω*, to "divide."] That science by which the extent and figure of the earth (or of a portion of its surface) are ascertained. The science of surveying on a grand scale by triangulation, in order to ascertain the figure and dimensions of an area, and also to determine its latitude and longitude, or its situation on the surface of the globe.

Geoffræa,* jof-frē′a, or **Geoffroya,*** zho-froi′a. [Named after Dr. *Geoffroy*, a French naturalist.] A Linnæan genus of the class *Diadelphia*, natural order *Leguminosæ*.

Geoffræ′a In-er′mis.* The systematic name of the cabbage-tree:—also called *Andi′ra inermis*. It is a native of tropical America.

Geoffræ′a (or **Geoffroy′a**) **Su-per′ba.*** An ornamental tree, a native of Brazil, bearing yellow flowers and an edible fruit. Its wood is hard and valuable.

Geoffræ′a Ver-mif′u-ga.* A tree, a native of South America. Its fruit is reputed to be vermifuge.

Geoffroy'a Su-rĭ-nam-en'sis,* or **An-di'ra Re-tu'sa.*** A tree of Surinam, having a bitter bark which is used as a vermifuge.

Ge-o-gen'ĭ-cus.* Belonging to geogony; geogen'ic.

Geogeny. See GEOGONY.

Ge-og-nos'tic. [Lat. **Geognos'ticus.**] Belonging to geognosy.

Ge-og'no-sy. [Lat. **Geogno'sia**; from the Gr. *γῆ*, or *γέα*, the "earth," and *γνῶσις*, "knowledge."] The knowledge or science of the structure of the globe. It may be regarded as essentially the same as GEOLOGY, which see.

Ge-og'o-ny, or **Ge-og'e-ny.** [Lat. **Geoge'nia**; from the Gr. *γῆ*, or *γέα*, the "earth," and *γένω*, to "be born."] The doctrine of the formation of the earth.

Ge-o-graph'ĭ-cal Bot'a-ny, or **Bo-tan'ĭ-cal Ge-og'ra-phy.** The science or study of the geographical distribution of plants. Each continent has its characteristic types of plants.

Ge-og'ra-phy. [Lat. **Geogra'phia**; from the Gr. *γῆ*, or *γέα*, the "earth," and *γράφω*, to "write."] A description of the earth, its mountains, seas, rivers, parts, limits, and all other remarkable things belonging to it. It comprises three great departments,—*Mathematical, Physical,* and *Political* Geography.

Ge-ol'o-gy. [Lat. **Geolo'gia**; from the Gr. *γῆ*, or *γέα*, the "earth," and *λόγος*, a "discourse."] That science which treats of the structure or formation of the earth, the rocks, strata, etc., of which it is composed, the records of its former state, the history of its progress, the series of changes through which it has passed, and the causes of events in its inorganic history. It is a historical science, for "it had its beginning and essence in the idea that rocks were made through secondary causes."—(DANA.) It is distinguished from Mineralogy by treating of mineral substances in the aggregate, while Mineralogy is chiefly confined to the consideration of particular species.

Ge-o-met'ric, Ge-o-met'rĭ-cal. [Lat. **Geomet'ricus.**] Belonging to geometry.

Ge-om'e-try. [Lat. **Geome'tria**; from the Gr. *γῆ*, or *γέα*, the "earth," and *μετρέω*, to "measure."] Originally, the art of measuring the earth, or any distance or dimensions on it:—now applied to the science of quantity and extension, irrespective of matter; the science which treats of volumes, surfaces, lines, and angles, their relations, properties, and measurement.

Ge-on'o-my. [Lat. **Geono'mia**; from the Gr. *γῆ*, or *γέα*, the "earth," and *νόμος*, a "law."] That branch of general Physics which treats of the laws regulating the changes that have taken place, or are now taking place, in the structure of the earth, or in the atmosphere.

Ge-oph'ĭ-lus.* [From the Gr. *γῆ*, or *γέα*, the "earth," and *φιλέω*, to "love."] Earth-loving:—applied as a specific name to plants that grow on the earth, to distinguish them from others of the same genus or order growing on trees, etc.:—also applied in the plural neuter (*Geoph'ila*) to a division of *Gasteropoda* that live upon the land.

Geor'gĭ-a Bark. The bark of the *Pinckneya pubens,* an American plant, used as a substitute for cinchona.

Ge-ra'nĭ-a,* the plural of **Ge-ra'nĭ-um,** forming the Jussieuan name of a natural order of plants. See GERANIACEÆ.

Geraniaceæ,* je-ra-ne-a'she-ē, or **Ge-ra'nĭ-a.*** A natural order of exogenous plants, including the *Geranium, Oxalis,* and *Pelargonium.* They are mostly herbs. An astringent principle and an aromatic or resinous flavor characterize this order.

Ge-ra'nĭ-um.* "Cranesbill." The Pharmacopœial name (U.S. 1870, 1880) for the rhizome of *Gera'nium macula'tum,* a native of the United States. It is astringent, and is useful in diarrhœa, chronic dysentery, and cholera infantum.

Gera'nium Ro-ber-tĭ-a'num.* Herb Robert, a plant, a native of the United States and Europe. It has been used as an antispasmodic.

Ge-rat'ĭ-cus.* [From the Gr. *γῆρας*, "old age."] Belonging to old age:—applied in the plural (*Gerat'ici*) to an order of diseases.

Germ. [Lat. **Ger'men,** gen. **Ger'minis.**] The first principle of anything that has life, whether animal or vegetable. A growing point; a young bud:—applied in Botany to the embryo of a germinating seed, the exact point from which the life and organization of the future plant are to spring.

Germ The'o-rў of Dis-ease'. The theory which attributes disease to minute microscopic fungi, or bacteria, or unicellular bodies that float in the air and are developed in fermenting liquids and unhealthy tissues. Some pathologists favor the opinion that bacteria and allied organisms are the causes of all communicable or contagious diseases. Bacteria swarm in all putrefying solutions and mixtures of organic matter. It is well known that the air is always and everywhere filled with infinite numbers of microscopic spores of fungi.

Germander. See TEUCRIUM.

Ger'man Sil'ver (called by the Chinese **Pack-fong**). The white alloy of nickel, formed by fusing together one hundred parts of copper, sixty of zinc, and forty of nickel.

Ger'man Tin'der. (Fr. *Amadou,* ă'mă'doo'.) A substance prepared from the *Polyp'orus fomenta'rius* and *P. ignia'rius,* by cutting the fungi into slices, beating them, and soaking them in a solution of nitre.

Ger'men,* gen. **Ger'mĭ-nis.** The rudiment of the young fruit and seed of vegetables at the base of the pistil; also the same as GERM, which see.

Germinal Membrane. See BLASTODERM.

Ger-mĭ-nā'tion. [Lat. **Germina'tio, o'nis,** from *ger'mino, germina'tum,* to "bud."] The act of sprouting; the development of an embryo or plantlet. The conditions favorable to germination are heat or proper temperature, moisture, and darkness. Germination is connected with the absorption of oxygen and the formation of carbonic acid.

Ger-min'a-tĭve. [Lat. **Germinati'vus**; from the same.] Having power to bud, or develop.

Ger-o-co'mĭ-a.* [From the Gr. *γέρας*, "old age," and *κομέω*, to "care for."] That department of hygiene which treats of the regimen and medical attention proper for old age.

Gérofle. The same as GIROFLE.

Ger-on-to'ge-ous. [From the Gr. *γέρων*, "old," and *γῆ*, the "earth."] Of or belonging to the Old World:—applied to plants.

Ger-on-tox'on.* [From the Gr. *γέρων*, *γέροντος*, an "old man," and *τόξον*, a "bow."] The same as ARCUS SENILIS, which see.

Gesneraceæ,* jes-ner-a'she-ē. [From *Gesne'ra*, or *Gesne'ria*, one of the genera.] A natural order of exogenous plants (shrubs or herbs) found in India, South America, etc. It includes the *Achim'enes* and *Gloxin'ia*, which are cultivated for their showy flowers.

Ges-tā'tion. [Lat. **Gesta'tio, o'nis**; from *ges'to*, *gesta'tum*, to "carry often," to "carry about" (from *ge'ro*, *ges'tum*, to "carry").] The condition of a pregnant female; pregnancy; gravidity, or uterine gestation:—also applied to a species of exercise without bodily exertion, as swinging, riding in a carriage, or sailing.

Ges-tic-u-lā'tion. The act of making gestures,—a symptom in certain diseases.

Ge-thȳl'lis Spi-ra'lis.* A plant of the order *Amaryllidaceæ*, a native of South Africa, bearing a fragrant fruit, which is used in medicine.

Ge'um.* A Linnæan genus of the class *Icosandria*, natural order *Rosaceæ*. Also the Pharmacopœial name (U.S. 1870) for the root of *Ge'um rivā'le* (Water Avens). It is astringent.

Ge'um Ri-va'le.* The systematic name of Water (or Purple) Avens, an herbaceous plant, a native of Europe and the United States. It bears purplish-orange flowers. Its root is tonic and powerfully astringent, and may be used with advantage in diarrhœa, chronic or passive hemorrhages, and leucorrhœa.

Ge'um Ur-ba'num.* The herb Avens, or Bennet, a native of England.

Ge'um Vir-ġin-ĭ-a'num.* An herbaceous plant, a native of the United States. Its root is astringent.

Geyser, gī'sẹr. A name given to hot springs of volcanic origin, and first applied to a famous spring in Iceland,—the Great Geyser. There are remarkable geysers in the National Park, Wyoming Territory. One of these throws up a stream of water over two hundred feet high.

G. G. G. = *Gum'mi Gut'tæ Gam'biæ.** "Gamboge."

Gib'bĭ-for'mis.* [From the Lat. *gib'bus*, a "hump on the back."] Resembling a hump; gib'biform.

Gib-bos'ĭ-tȳ. [Lat. **Gibbos'itas, a'tis**; from *gib'bus*, "crooked," or "bossed."] The state of being irregularly swelled or bunched; crookedness.

Gib'bous, or **Gib'bose.** [Lat. **Gib'bus**; from the Gr. *γῦβος*, the "hump on a camel's back."] Convex; more tumid on one side than on the other.

Giddiness. See VERTIGO.

Ġil-le'nĭ-a.* A genus of perennial herbaceous plants of the order *Rosaceæ*, comprising two species. Also the Pharmacopœial name (U.S. 1870) for the root of *Gille'nia trifolia'ta* and of *Gille'nia stipula'cea*, natives of the United States. Gillenia is a mild and efficient emetic.

Gilliesiaceæ,* jil-le-se-a'she-ē. [From *Gillie'sia*, one of the genera.] A small natural order of endogenous and bulbous plants, found in Chili.

Ġil'lĭ-flŏw'er, or **Ġil'lȳ-flŏw'er.** The popular name of several species of *Matthiola*.

Gills. [Latinized Greek **Bran'chiæ.**] The organs of respiration in fishes. See BRANCHIÆ.

Ġil'vus.* Dull yellow with a mixture of gray and red.

Ġimbernat's (jim-bẹr-nats'; Sp. pron. HĕmbĕR-nät') **Lig'a-ment.** The broad, thin, triangular insertion of Poupart's ligament.

Gin. See GENEVA.

Ġin'ġer. The root of *Zingiber officinale*, a native of India and China.

Ġin-ġī'va.* [Derived, according to some, from the Lat. *gig'no*, to "beget," because they seem to produce the teeth.] (Fr. *Gencive*, zhŏN'sēv'.) The gum; the highly vascular, fleshy substance covering the alveoli and necks of the teeth.

Ġin'ġĭ-val. [Lat. **Gingiva'lis**; from *gingi'va*, the "gum."] Pertaining to the gums. The *gingival line* is a reddish line or streak on the edge of the gums, sometimes occurring in phthisis and other diseases, or in pregnancy.

Ġin-ġĭ-vi'tis, *i'dis.** [From the Lat. *gingi'va*, the "gum."] Inflammation of the gums.

Ging'ko, or **Gink'go.** The Japanese name of the *Gingko biloba*, or *Salisburia Adiantifolia*, a tree of the order *Coniferæ*, a native of Japan. It is planted for ornament in the United States. Gingkosic acid is obtained from its fruit, which also contains citric acid.

Ġin'glȳ-moid. [Lat. **Ginglymoi'des**; from the Gr. *γιγγλυμός*, a "hinge," and *εἶδος*, a "form" or "resemblance."] Resembling a hinge; hinge-like:—applied to certain joints of animals.

Ġin'glȳ-mus.* [Gr. *γιγγλυμός*.] A species of diarthrosis; a hinge-like articulation, in which the bones move upon each other in two directions only,—viz., forward and backward. Examples occur in the elbow, the wrist, the knee, the ankle, the lower jaw, etc.

Ġin'seng. [A Chinese word, signifying, it is said, the "power of man;" so called because it is supposed to increase virility.] The Chinese name of the root of the *Ara'lia* or *Pa'nax quinquefo'lium*. Asiatic ginseng is the root of *Panax Schinseng*. Ginseng is reputed to be tonic and stimulant. See PANAX.

Ġĭ-răffe'. The *Camelopardа'lis Giraf'fa*, a ruminant animal of the order *Ungulata*, a native of Africa, which feeds chiefly on the leaves of trees. It is the tallest animal in the world.

Girofle, zhē'rofl'. A French term for the "clove." See EUGENIA.

Giz'zard. [Lat. **Ventric'ulus Callo'sus.**] The proper stomach of birds.

Gla-bel'la.* [Diminutive of the Lat. *gla'bra*, the feminine of *gla'ber*, "smooth."] The small space between the eyebrows and immediately above a line from one to the other:—also called *Intercilium*.

Gla-bel'lar. [Lat. **Glabella'ris.**] Belonging to the glabella. Also the same as ANTINIAL.

Gla'brate. In Botany, becoming glabrous with age, or almost glabrous.

Gla'brous. [Lat. **Gla'ber**; from the Gr. γλαφυρός, "smooth."] Without hair or pubescence; smooth:—applied to many plants.

Glace, glăss. The French term for "ice." See GLACIES.

Glacial, glā'she-al. [Lat. **Glacia'lis**; from *gla'cies*, "ice."] Pertaining to ice; like ice; icy. The term is often applied to acids existing in a crystalline form like ice.

Gla'cial A-cet'ic Aç'id. The strongest acetic acid which can be procured. It exists in a *crystallized* state under 50° Fahrenheit, and contains 79 per cent. of real acid. See ACIDUM ACETICUM GLACIALE.

Gla'cial Phos-phor'ic Aç'id. [Lat. **Aç'idum Phosphor'icum Glacia'le.**] A colorless, transparent, glass-like substance, soluble in water and in alcohol, sometimes used as a tonic and refrigerant.

Glăç'ĭ-er. [From the Lat. *gla'cies*, "ice."] A field or vast accumulation of ice, descending by gravity along a valley from a mountain covered with perpetual snow. Glaciers are masses or streams of ice, sometimes nearly five thousand feet deep, fed by the snows that fall on high mountains. They extend far below the snow-line (or limit of perpetual snow), and some reach the zone of forests and invade the cultivated valleys. They are powerful agents in widening and deepening valleys, and are believed to have performed an important part in geological history.

Glacies,* gla'she-ēz. [From the Lat. *gelas'co*, to "freeze."] The Latin term for "ice," or congealed water.

Glad'ĭ-ate. [Lat. **Gladia'tus**; from *gla'dius*, a "sword."] Sword-like; ensiform.

Gla-di'o-lus.* [Diminutive of the Lat *gla'dius*, a "sword;" alluding to the shape of the leaves.] A genus of bulbous plants of the order *Iridaceæ*, comprising several species which are cultivated for the beauty of their flowers. The root of the *Gladi'olus commu'nis*, a native of Europe, has been used in medicine as a maturative and aphrodisiac.

Gla'dĭ-us Pis-to-rĭ-en'sis.* A "Pistorian Sword-Knife." A bistoury:—so called because the town of Pistoia (Lat. *Pistoria*) was once famous for their manufacture. See BISTOURY.

Glaire, or **Glair.** The white of an egg. Also a colorless or whitish mucus, like the white of an egg, secreted by mucous membranes affected with catarrh, and differing from the mucosity of the normal state by its consistence and its greater viscosity. It is an abnormal product of mucous excretion, and is an effect, and not a cause, of disease.

Glair'in, or **Glair'ine.** [Lat. **Glairi'na.**] A peculiar vegetable or animal substance, somewhat resembling dried albumen (or *glaire*), produced at the sulphureous spring of Aix, in Savoy.

Glance. A name given to certain minerals which have a metallic or pseudo-metallic lustre, as glance coal, etc.

Gland. [Lat. **Glans, Glan'dis**; from *glans*, an "acorn."] An organ consisting of blood-vessels, absorbents, and nerves, for secreting or separating some particular fluid from the blood. Also the bulbous extremity of the penis and clitoris. In Botany, the term is applied to small cellular organs which secrete oily, aromatic, or other products. They are sometimes sunk in the rind, as in the orange; sometimes raised on hairs (*glandular hairs*), as in the sundew.

Gland, Pain of. See ADENALGIA.

Glan-dā'ceous. Yellowish brown; the color of an acorn.

Glanders. See FARCY.

Glan'dĭ-form. [Lat. **Glandifor'mis.**] Formed or shaped like a gland:—applied to tissues and other anatomical organs. The same as ADENIFORM and ADENOID.

Glan'du-la.* [Diminutive of the Lat. *glans.*] A little gland; a glan'dule.

Glandula Prostata Muliebris.* See CORPUS GLANDULOSUM.

Glan'du-læ Ag-gre-ga'tæ,* or **Glan'dulæ Con-gre-ga'tæ.*** "Aggregated or Clustered Glandules." See PEYER'S GLANDS.

Glan'dulæ An-tĭ-pros-tat'ĭ-çæ.* The antiprostatic glandules or glands.

Glandulæ Brunneri.* See BRUNNER'S GLANDS.

Glandulæ Cowperi.* See GLANDULÆ ANTIPROSTATICÆ.

Glandulæ Meibomii.* See MEIBOMIAN GLANDS.

Glandulæ Myrtiformes.* See CARUNCULÆ MYRTIFORMES.

Glandulæ Nabothi,* Glandulæ Nabothianæ.* See NABOTH'S GLANDS.

Glandulæ Odoriferæ.* See TYSONI GLANDULÆ.

Glandulæ Pacchioniæ.* See PACCHIONIÆ GLANDULÆ.

Glandulæ Solitariæ.* See BRUNNER'S GLANDS.

Glandulæ Tysoni.* See TYSONI GLANDULÆ.

Glan'du-lar. [Lat. **Glandula'rius**; from *glan'dula.*] Pertaining to, or like, a gland, in appearance, function, or structure:—applied to plants, etc. Also furnished with glands.

Glan'dular-His'pid. In Botany, pubescent with hairs that are tipped with glands.

Glan-du-lif'er-ous.* [From the Lat. *glan'dula*, a "little gland," and *fe'ro*, to "bear."] Bearing glands, or furnished with glandular hairs:—applied to certain plants.

Glan'du-lous, or **Glan'du-lose.** [Lat. **Glandulo'sus**; from *glan'dula*, a "little gland."]

Having little elevations like glands. In Botany, the same as GLANDULAR.

Glans.* In Botany, an inferior indehiscent fruit, as an acorn. See GLAND.

Glans Cli-tor'ĭ-dis.* A term applied to the extremity of the clitoris.

Glans Pe'nis.* The nut-like head of the *mem'brum vir'ile.*

Gla're-ose. [From the Lat. *gla'rea*, "gravel."] Growing in gravelly places :—applied to plants.

Glaserian Fissure, or **Fissure of Glaserius.** See FISSURA GLASERII.

Glass. [Gr. *ὕαλος*; Lat. **Vi'trum**; Fr. *Verre*, vaiR, and *Glace*, glăss.] An artificial substance, fusible at a high temperature, hard and brittle when cold, insoluble in water and in the acids, except hydrofluoric acid. It is formed by the combination of a fusible alkaline silicate (of potash or soda) with one or several infusible silicates (of lime, magnesia, iron, chrome, etc.). *Crown glass* is composed of silica, 62.8; lime, 12.5; potash, 22; and alumina, 2.6. *Flint glass* contains silica, 38.2; oxide of lead, 43.5; potash, 11.7; and alumina, 2. Microscopes and achromatic lenses are made of crown and flint glass.

Glass. See CYATHUS.

Glass, Sol'u-ble. A substance formed by combining potash or soda with silicic acid or silica, without any third ingredient. It presents the usual vitreous aspect, but is easily dissolved in water. It is employed as a kind of paint for paper, cloth, wood, etc., to prevent or retard their inflammation on the contact of an ignited body.

Glau'ber's Salts. [Named from *Glauber*, a German chemist.] See SODII SULPHAS.

Glau-cĕs'çent. [From the Gr. *γλαυκός*, "blue-green."] Slightly glaucous or bluish gray; sea-green or dull green :—applied to parts of plants.

Glau'cĭ-um Lu'te-um.* The Horn Poppy, a plant of the order *Papaveraceæ*, a native of Europe, but cultivated in the United States. It bears yellow flowers, and has an acrid, poisonous juice, which contains an alkaloid called *glaucine.*

Glau-co'ma, a*tis.* [From the Gr. *γλαυκός*, "blue-green," also "light gray."] Dimness or defect of vision from opacity of the vitreous humor. The term is properly applied to all the conditions which are produced by heightened tension or increased fluid-pressure within the eye-ball.

Glau-co-mat'ĭ-cus.* Pertaining to glaucoma.

Glau-com'a-tous, or **Glau-com'a-tose.** [Lat. **Glaucomato'des, Glaucomato'sus**; from *glauco'ma.*] Having glaucoma, or like glaucoma; green.

Glau-co'sis.* Another name for GLAUCOMA, which see.

Glau'cous. [Lat. **Glau'cus**; from the Gr. *γλαυκός*, a "blue-green" or "light gray."] Light gray; silvery; pale bluish or greenish white :—applied to leaves or fruits covered with a whitish bloom which is easily rubbed off, as the cabbage-leaf or the plum.

Gle-cho'ma Hed-e-ra'ce-a,* or **Nep'e-ta Glecho'ma.*** The Ground Ivy, an herb of the order *Labiatæ*, a native of Europe. It is said to be tonic.

Gle-dits'çhĭ-a.* [Named after *Gleditsch*, a botanist.] A genus of trees of the order *Leguminosæ.* The *Gledits'chia triacan'thos* (Honey Locust) is an ornamental tree, a native of the United States. It is armed with thorns, and is used for hedges.

Gleet. [From the Anglo-Saxon *glidan*, to "glide," to "flow down gently."] A thin matter issuing out of ulcers, but generally applied to a result of gonorrhœal disease.

Gle'noid. [Lat. **Glenoi'des**; from the Gr. *γλήνη*, a "cavity," and *εἶδος*, a "form" or "resemblance."] In Anatomy, resembling a pit or cavity.

Gleucose. See GLUCOSE.

Gli'a-din. [Lat. **Gliadi'na**; from the Gr. *γλία*, "glue."] One of the constituents of vegetable gluten.

Gli-o'ma,* plural **Gli-o'ma-ta.** [From the Gr. *γλία*, "glue."] A term applied to growths originating in the connective tissue of the brain. See NEUROGLIA.

Glis'son, Cap'sule of. [Lat. **Cap'sula Glisso'nii.**] A thin, strong sheath of peritoneum surrounding the vessels of the liver, and entering the transverse fissure, throughout the entire organ.

Glo'bate. [Lat. **Globa'tus**; from *glo'bus*, a "ball."] Shaped like a ball.

Glo'bose. [Lat. **Globo'sus**; from *glo'bus*, a "ball."] Round like a ball; globular; forming nearly a true sphere :—applied to fruits, seeds, etc.

Glob'u-lar. [Lat. **Globula'ris**; from *glo'bus*, a "globe."] Like a globe, or nearly spherical :—applied to various objects in Botany and Mineralogy.

Globulariaceæ,* glob-u-la-rĭ-a'she-ē. [From *Globula'ria*, one of the genera.] A small natural order of exogenous plants (herbaceous or shrubby), natives of Europe and Western Asia. The *Globularia Alypum* is used in medicine as a purgative.

Glob'u-lăr'ĭne. A bitter substance, soluble in alcohol, extracted from the *Globularia.* It is a glucoside, and has been used in medicine.

Glob'ule. [Lat. **Glob'ulus**; diminutive of *glo'bus*, a "globe."] A term applied to such particles of matter as are of a globular or spherical figure, like the globules of the blood, or of milk.

Glob'u-lin, or **Glob'u-lĭne.** [Lat. **Globuli'na**; from *glob'ulus*, a "globule."] The colorless substance which remains after the red coloring-matter has been removed from the globules of the blood. In Botany, elementary cells; starch grains.

Glob'u-lism. [From the Lat. *glob'ulus*, a "little globe," or "pill."] A name for homœopathy.

Glo'bus Hys-tĕr'ĭ-cus.* "Hysterical Ball." A sensation as if a ball were ascending in the throat, caused by a portion of air arising in the œsophagus and prevented from escaping by spasm.

Glo'bus Ma'jor.* The head of the epididymis.

Glo'bus Mi'nor.* The lower enlargement of the epididymis.

Glo-chid'ĭ-ate, Glo'chin-ate. [Lat. **Glochidia'tus, Glochina'tus**; from the Gr. γλωχίς, the "point of a dart."] A botanical term signifying "barbed," bent back at the point, like the barb of a fish-hook.

Glom'er-ate. [Lat. **Glomera'tus**; from *glom'ero, glomera'tum*, to "wind on a ball" (from *glo'mus*, a "clue," or "ball").] Crowded together; congregated. In Botany, densely clustered in small heaps. The term is also applied to glands formed of a clue, as it were, of sanguineous vessels having an excretory duct but no cavity.

Glom'er-ule. [Lat. **Glomer'ulus**; diminutive of *glo'mus*, a "clue of thread."] A botanical term signifying a small, dense, roundish cluster.

Glo'no-in. A synonyme for nitro-glycerin.

Glo-rĭ-o'sa Su-per'ba,* or **Me-thon'ĭ-ca Super'ba.*** A plant of the order *Liliaceæ*, a native of India, cultivated for the beauty of its flowers. It is a narcotic poison, and contains a poisonous bitter principle called *superbine*.

Glos'sa.* [Gr. γλῶσσα.] The tongue; the chief organ of taste. See TONGUE.

Glos'sa-gra.* [From the Gr. γλῶσσα, the "tongue," and ἄγρα, a "seizure."] Violent pain in the tongue:—nearly the same as GLOSSALGIA.

Glos-săl'gĭ-a.* [From the Gr. γλῶσσα, the "tongue," and ἄλγος, "pain."] Pain in the tongue. See GLOSSAGRA.

Glos-săl'gĭ-cus.* Belonging to glossalgia; glossal'gic.

Glos-san'thrax, a*cis*.* [From the Gr. γλῶσσα, the "tongue," and ἄνθραξ, a "burning coal."] Carbuncle of the tongue,—of rare occurrence in human beings, but not unfrequent in some domestic animals.

Glos'sa-rў. [From the Gr. γλῶσσα, the "tongue."] A dictionary or vocabulary of difficult, technical, or antiquated words or terms. A dictionary of the terms used in describing plants is called a *glossary*.

Glos-sep-ĭ-glot'tĭ-cus.* [From the Gr. γλῶσσα, the "tongue," and the Lat. *epiglot'tis*.] Glossepiglot'tic; belonging to the tongue and epiglottis:—applied to a ligament.

Glos-sit'ĭ-cus.* Glossit'ic; belonging to glossitis.

Glos-si'tis, i*dis*.* [From the Gr. γλῶσσα, the "tongue."] Inflammation of the tongue.

Glos-so-cat'o-chus.* [From the Gr. γλῶσσα, the "tongue," and κατέχω, to "hold down."] An instrument for depressing the tongue.

Glos'so-çēle.* [From the Gr. γλῶσσα, the "tongue," and κήλη, a "tumor."] Extrusion, or a hypertrophied condition of the tongue, causing it to be partially projected.

Glos-soc'o-mum.* [From the Gr. γλῶσσα, the "tongue," and κομέω, to "take care of."] Formerly, a case for the tongue of a hautboy; but, metaphorically, a kind of long box or case for containing a fractured leg.

Glos-sog'ra-phў. [Lat. **Glossogra'phia**; from the Gr. γλῶσσα, the "tongue," and γράφω, to "write."] A description of the tongue.

Glos-so-hў'al. [Lat. **Glossohya'lis**; from the Gr. γλῶσσα, the "tongue," and the Lat. *hyoi'des*, "hyoid."] A term applied by Geoffroy St.-Hilaire to the posterior *cornua* of the hyoid bone, and by Owen to the *os linguale* in birds and fishes.

Glos-so-i'dēs.* [From the Gr. γλῶσσα, the "tongue," and εἶδος, a "form" or "resemblance."] Resembling the tongue; glos'soid:—applied to parts of plants and animals.

Glos-sol'o-ġў. [Lat. **Glossolo'gia**; from the Gr. γλῶσσα, the "tongue," and λόγος, a "discourse."] A treatise on the powers and functions of the tongue; the science of the tongue. Also used nearly synonymously with TERMINOLOGY. The department of Botany in which technical terms are explained.

Glos-sol'ў-sis.* [From the Gr. γλῶσσα, the "tongue," and λύσις, a "solution."] Paralysis of the tongue. See GLOSSOPLEGIA.

Glos-so-man-ti'a.* [From the Gr. γλῶσσα, the "tongue," and μαντεία, a "divination."] Prognosis from the state of the tongue. See GLOSSOSCOPIA.

Glosso-Pharyngeal. See GLOSSO-PHARYNGEUS.

Glos'so-Phăr-ўn-ġe'al Nerves. Another name for the eighth pair.

Glos'so-Phăr-ўn-ġe'us.* [From the Gr. γλῶσσα, the "tongue," and φάρυγξ, the "pharynx."] Belonging to the tongue and pharynx:—a synonyme of the *constrictor superior* of the pharynx, from its origin in the root of the tongue and its insertion into the pharynx.

Glos-so-ple'ġĭ-a.* [From the Gr. γλῶσσα, the "tongue," and πληγή, a "stroke."] Paralysis of the tongue; glos'soplegy.

Glos-sop-to'sis.* [From the Gr. γλῶσσα, the "tongue," and πτῶσις, a "falling."] A falling or lengthening of the tongue.

Glos-sor-rha'ġĭ-a.* [From the Gr. γλῶσσα, the "tongue," and ῥήγνυμι, to "burst forth."] An incomplete term, intended to mean hemorrhage from the tongue.

Glos-sor-rha'phĭ-a.* [From the Gr. γλῶσσα, the "tongue," and ῥαφή, a "suture."] The suture, or sewing up, of a wound of the tongue.

Glos-sos-co'pĭ-a.* [From the Gr. γλῶσσα, the "tongue," and σκοπέω, to "examine."] Glossos'copy; examination of the tongue, as a principal means of diagnosis.

Glos-so-staph-ў-li'nus.* [From the Gr. γλῶσσα, the "tongue," and σταφυλή, the "uvula."] A designation of the *constrictor isthmi faucium*, from its origin in the tongue and its insertion into the uvula.

Glos-sos-te-re'sis.* [From the Gr. γλῶσσα, the "tongue," and στερέω, to "deprive."] Excision or extirpation of the tongue.

Glos-sot'o-mў. [Lat. **Glossoto'mia**; from the Gr. γλῶσσα, the "tongue," and τέμνω, to cut."] Dissection of the tongue; also amputation of the tongue.

Glos-sy'per-tro'phĭ-a.* [From the Gr. *γλῶσσα*, the "tongue," and the Lat. *hypertro'phia*, "hypertrophy."] Hypertrophy of the tongue; glossyper'trophy.

Glot-tĭ-do-spas'mus.* [From the Lat. *glot'tis*, and *spas'mus*, a "spasm."] Spasm of the glottis.

Glot'tis, *i'dis.** [Gr. *γλωττίς*, the "mouthpiece of a flute."] The aperture of the larynx.

Glot-ti'tis.* Inflammation of the glottis.

Glu-çi'na,* or **Glu'çĭne.** [From the Gr. *γλυκύς*, "sweet."] One of the primitive earths. It is an oxide of glucinium.

Glu-çin'ĭ-ŭm,* or **Glu-çi'num.*** The metallic base of glucina; also called *Beryllium*. It is a white, malleable metal, which occurs in the emerald. Its specific gravity is 2.1. It is soluble in sulphuric and hydrochloric acids.

Glucohæmia.* See GLYCOHÆMIA.

Glu'cose. [From the Gr. *γλυκύς*, "sweet."] A term applied to a group of sugars which are similar in chemical composition, and of which grape-sugar is the type. The glucoses are thus classified: 1, *ordinary glucose*, or *dextrose;* 2, *lævulose;* 3, *maltose;* 4, *mannitose;* 5, *galactose;* 6, *inosite;* 7, *sorbin;* 8, *eucalyn*. The last three are fermentable only under peculiar conditions. The others ferment readily when in contact with yeast. In a more limited signification, the term is applied to lævulose and dextrose, or ordinary glucose, which exist together in acid fruits of various kinds, in honey, and in diabetic urine. Ordinary glucose is crystallizable with difficulty, and it is soluble in all proportions in boiling water. It is less soluble in cold water and alcohol than cane-sugar, and is inferior to it in sweetness. One part of cane-sugar sweetens as much as two of glucose. The saccharine ingredients in the syrup obtained from sorghum consist almost entirely of glucose. The largest proportion of glucose used in the arts is made by boiling starch with dilute sulphuric acid. Glucose is extensively used in the manufacture of beer and confectionery, and on the table as a substitute for the syrup of cane-sugar. It is called *dextrose* because it turns the plane of the polarization of light to the right hand.

Glu'co-sīde. [Fr. *Glycoside*, glĕ'ko'zĕd'.] A term applied to vegetable principles which occur in various plants, and which when treated with dilute acids yield glucose and another characteristic substance which differs in each case according to the plant operated on. Among the glucosides are *amygdalin*, *salicin*, *elaterin*, and *solanin*.

Glu-co-su'rĭ-a.* [From Eng. *glucose*, and the Gr. *οὖρον*, "urine."] A term applied to the urine in *diabetes mellitus*.

Glue. [Lat. **Glu'ten**, or **Glu'tinum**; Gr. *γλία*, "paste," or "glue."] A jelly obtained by boiling the parings of hides and other offal.

Glu-mā'ceous. [Lat. **Gluma'ceus**; from *glu'ma*, a "glume."] Having glumes; like a glume; chaff-like:—applied to a division of endogenous plants comprising the *Cyperaceæ* and *Gramineæ*.

Glu-ma'lēs.* An alliance of endogenous plants, comprising the Grasses, Sedges, and a few minor groups.

Glume. [Lat. **Glu'ma**; from *glu'bo*, to "pull off bark," to "peel."] The husk or chaff of grasses,—particularly the outer husk or bract of each spikelet.

Glu'melle. [Lat. **Glumel'la.**] A name of the inner husks or *paleæ* of grasses.

Glumous. See GLUMACEOUS.

Glu-tæ'us.* [From the Gr. *γλουτός*, the "buttock."] (Fr. *Fessier*, fĕs'se-ā'.) The name of three muscles forming the greater part of the fleshy mass beneath the ischia. They are termed the *glutæus maximus*, the *glutæus medius*, and the *glutæus minimus*. Belonging to the buttock: glute'al.

Glu'ten,* gen. **Glu'tĭ-nis.** Glue:—usually applied to vegetable gluten, or the residue after the farina of wheat has been deprived of its starch. It is a ductile, tenacious, or viscid gray mass or paste, which contains nitrogen, and is very nutritious. It is not soluble in water or alcohol. It is a *ferment*, and has the property of making dough or paste rise. It is capable of turning starch into dextrin, and dextrin into sugar. Gluten occurs in nearly all plants, in the living cells, as a thin jelly or a delicate mucilaginous lining.

Glu'ten, An'ĭ-mal. The same as GELATIN, which see.

Gluten, Vegetable. See GLUTEN.

Glu'tin, or **Glu'tĭne.** [Lat. **Gluti'na**; from *glu'ten*, "glue."] A distinct form of gelatin obtained from common glue, of which it forms the chief ingredient.

Glutineux. See GLUTINOUS.

Glu'tĭ-nose. Covered with a sticky exudation:—applied to parts of plants.

Glu'tin-ous, or **Glu'tĭ-nose.** [Lat. **Glutino'sus**; Fr. *Glutineux*, glü'tē'nuh'.] Having the properties of gluten; gluey; adhesive.

Glutinum.* See GLUE.

Glu-ti'tis, *i'dis.** [From the Gr. *γλουτός*, the "buttock."] Inflammation of the buttocks, or of the *glutæi* muscles.

Glў'ç'er-id, or **Glў'ç'er-īde.** A compound of glycerin with a fatty acid.

Glў'ç'er-in, or **Glў'ç'er-ĭne** [Lat. **Glўçer'ina**; from the Gr. *γλυκύς*, "sweet"], or **Pro'pen-ўl.** A yellowish, transparent, syrup-like fluid, without smell, and of a sweet taste, obtained from the refuse in the manufacture of soap, etc. It exists in palm oil and in fat bodies generally. It is useful in medicine, chemistry, and the arts, and is an important ingredient in cosmetics, ointments, pomades, and toilet-soaps. Its solvent power is remarkable, and it is a valuable excipient, or vehicle, of other medicines. Glycerin is soluble in all proportions in water and alcohol, but insoluble in chloroform, ether, benzol, and the fixed oils. It dissolves bromine, the iodide of iron, the iodide of sulphur, the chlorides of potassium, sodium, and zinc, tannin, sugar, gum, and the alkaloids. Being liquid, uncrystallizable, and unalterable in the air, it is well adapted for the preservation of animal and vegetable substances. It is antiseptic, and not liable to become rancid. It is sometimes administered internally as a laxative and alterative. It has come into extensive use as an external

remedy. Its emollient virtues and undrying property adapt it to the treatment of skin diseases, such as eczema, herpes, lepra, lichen, psoriasis, and prurigo. It is a good substitute for cerate in the dressing of wounds and the treatment of chapped skin and excoriated surfaces.

Glŷç-er-i'na.* The Pharmacopœial name (U.S. 1870) for GLYCERIN, which see.

Glŷç-er-i'num.* "Glycerin." The Pharmacopœial name (U.S. 1880) for a thick, sweet liquid, soluble in water and alcohol, obtained by the decomposition of fats or fixed oils, and containing not less than 95 per cent. of absolute glycerin. Its specific gravity should not be less than 1.250. See GLYCERIN.

Glŷç-er-i'ta.* "Glycerites." A term applied to solutions of various substances in glycerin. The Pharmacopœial name (U.S. 1870) for a class of preparations containing glycerin as the solvent.

Glŷç-er-i'tum Açĭ-di Car-bol'ĭ-ci.* "Glycerite of Carbolic Acid." The Pharmacopœial name (U.S. 1870) for a preparation made thus: Take of carbolic acid, two troyounces; glycerin, half a pint. Rub them together in a mortar until the acid is dissolved. Its medical properties are similar to those of carbolic acid.

Glyceri'tum Ac'idi Gal-lĭ'ci.* "Glycerite of Gallic Acid." The Pharmacopœial name (U.S. 1870) for a preparation made thus: Take of gallic acid, two troyounces; glycerin, half a pint. Rub them together in a mortar; then transfer to a glass or porcelain capsule, and heat gently until the acid is dissolved. It is astringent.

Glyceri'tum Ac'idi Tan'nĭ-ci.* "Glycerite of Tannic Acid." The Pharmacopœial name (U.S. 1870) for a preparation made from two troyounces of tannic acid and half a pint of glycerin. Rub them together in a mortar; then transfer to a glass or porcelain capsule, and heat gently until the acid is dissolved. It may be used internally and externally for most of the purposes to which tannic acid is applied.

Glyceri'tum Am'ў-li.* "Glycerite of Starch." The Pharmacopœial name (U.S. 1880) for a preparation made from ten parts of starch and ninety parts of glycerin. The process is to rub them together in a mortar until they are intimately mixed; then transfer the mixture to a porcelain capsule and apply a heat gradually raised to 140° C. (284° F.), and not exceeding 144° C. (291° F.), stirring constantly until the starch granules are completely dissolved. It is emollient and demulcent.

Glyceri'tum Pi'cis Liq'uĭ-dæ.* "Glycerite of Tar." The Pharmacopœial name (U.S. 1870) for a preparation made from a troyounce of tar, two troyounces of carbonate of magnesium in fine powder, four fluidounces of glycerin, two fluidounces of alcohol, and ten fluidounces of water. Having mixed the glycerin, alcohol, and water, rub the tar in a mortar, first with the carbonate of magnesium, and then with six fluidounces of the mixed liquids, gradually added, and strain with expression. Rub the residue in like manner with half the remaining liquid, and strain as before. Repeat the process again with the remaining liquid. Put the residue into a percolator, add gradually the expressed liquids, previously mixed, and afterwards a sufficient quantity of water to make the liquid which passes measure a pint.

Glyceri'tum So'dĭ-i Bo-ra'tis.* "Glycerite of Borate of Sodium." The Pharmacopœial name (U.S. 1870) for a preparation made as follows: Take of borate of sodium, two troyounces; glycerin, half a pint. Rub them together in a mortar until the borate of sodium is dissolved.

Glyçeri'tum Vi-tel'li.* "Glycerite of Yolk of Egg." The Pharmacopœial name (U.S. 1880) for a preparation made of fresh yolk of egg, forty-five parts, and glycerin, fifty-five parts, to make one hundred parts. Rub the yolk of egg with the glycerin, gradually added, until they are thoroughly mixed. It is useful as a vehicle for the administration of cod-liver oil, and as a basis of emulsion.

Glyceryl, Hydrate of. See GLYCERIN.

Glŷç'ĭ-coll. [Lat. **Glŷcicol'la**; from the Gr. *γλυκύς*, "sweet," and *κόλλα*, "glue."] Sugar of gelatin, obtained by boiling gluten in an excess of caustic alkali.

Glycocholic. See TAUROCHOLIC.

Glŷc'o-ġen. [From Eng. *glu'cose*, and the Gr. *γεννάω*, to "produce."] Literally, "producing glucose." A peculiar substance in the tissue of the liver, which may be changed into glucose.

Gly'co-hæ'mĭ-a.* [From the Gr. *γλυκύς*, "sweet," and *αἷμα*, "blood."] A morbid condition in which the blood contains saccharine matter.

Gly'col. A generic name of a group of compounds which are also called *diatomic alcohols*, to indicate that they have a capacity of saturation double that of ordinary alcohol and other monatomic alcohols. Like the latter, the glycols furnish ethers, aldehydes, and acids.

Glycyphlœum.* See CHRYSOPHYLLUM.

Glŷç'ŷr-rhĭ'za.* [From the Gr. *γλυκύς*, "sweet," and *ῥίζα*, a "root."] The Pharmacopœial name (U.S. 1870, 1880) for the root of *Glycyrrhiza glabra*, or liquorice-root. It is an excellent demulcent.

Glycyrrhi'za Gla'bra.* The liquorice-plant.

Glŷç'ŷr-rhĭ'zin. [Lat. **Glycyrrhizi'na.**] The saccharine juice of the *Glycyrrhiza*, or liquorice-plant.

Glyç'ŷr-rhĭ-zi'num Am-mo-nĭ-a'tum.* "Ammoniated Glycyrrhizin." The Pharmacopœial name (U.S. 1880) for a preparation in the form of dark-brown or brownish-red scales, inodorous, of a very sweet taste, and soluble in water and alcohol. It appears to possess the medical properties of liquorice, and may be used as a substitute for it in mixtures that are neither acid nor alkaline.

Glў-phog'ra-phў. [Lat. **Glyphogra'phia**; from the Gr. *γλυφή*, a "carving" or "graving," and *γράφω*, to "draw," to "paint."] A new kind of engraved drawing, by which prints are produced in colors from the printing-press.

Glyster. See CLYSTER, and ENEMA.

Gme-li'na.* [Named after *Gmelin*, a German botanist.] A genus of trees or shrubs of the order *Verbenaceæ*, natives of India. The bark and roots of *Gmelina Asiatica* are used in medicine by the Cingalese.

Gna-pha'lĭ-um.* [From the Gr. *γνάφαλον*, a "lock of wool."] A genus of herbaceous plants of the order *Compositæ*, comprising several American species called *Cudweed* and *Everlasting*. The *Gnapha'lium polyceph'alum* (common Everlasting) is a fragrant medicinal herb.

Gnapha'lium Di-oi'cum.* An herbaceous plant, a native of Europe, reputed to be pectoral.

Gnaphalium Margaritaceum.* See ANTENNARIA MARGARITACEA.

Gnathalgia* (na-thăl'je-a). [From the Gr. *γνάθος*, the "jaw," or "cheek," and *ἄλγος*, "pain."] Pain of the jaw or of the cheek.

Gna-thit'ĭ-cus.* Belonging to gnathitis.

Gna-thi'tis, i*dis.* [From the Gr. *γνάθος*, the "jaw," or "cheek."] Internal inflammation of the cheek or maxilla.

Gnath-o-neū-răl'ğĭ-a.* [From the Gr. *γνάθος*, the "jaw," or "cheek," *νεῦρον*, a "nerve," and *ἄλγος*, "pain."] Pain of a nerve of the cheek or maxilla; maxillary neuralgia.

Gnath-o-plas'tic. [Lat. **Gnathoplas'ticus.**] Belonging to gnathoplasty.

Gnath'o-plas-tў. [Lat. **Gnathoplas'tia**; from the Gr. *γνάθος*, the "jaw," or "cheek," and *πλάσσω*, to "form."] Operation for repairing any deficiency of the cheek by appropriating a sufficient portion of the sound parts contiguous.

Gneiss, nīs. A metamorphic or Azoic rock, an aggregate of felspar, mica, and quartz. It is nearly the same as granite, but with the mica more or less distinctly in layers, so that it has a stratified appearance.

Gnetaceæ,* ne-ta'she-ē. A natural order of plants (Gymnogens), found in the temperate parts of Europe, Asia, and South America. It includes *Gne'tum* and one other genus.

Gōad'bў's So-lu'tion. A preparation for preserving animal substances, made with bay-salt, corrosive sublimate or arsenious acid, and water.

Gob'let-Shaped. The same as CRATERIFORM:—applied to certain flowers.

God'frey's Cor'dĭ-al. A quack medicine, composed of an infusion of sassafras, coriander, caraway, and anise-seeds, treacle, and laudanum.

Goitre, goi'tẹr. [Fr. *Goître*, gwā'tr, probably from the Lat. *gut'tur*, the "throat."] A Swiss term for BRONCHOCELE, which see. A simple hypertrophy or cystic, fibroid, or fibro-cystic enlargement of the thyroid gland. It prevails in the Alps of Savoy and Switzerland, in Styria, etc. When it has arisen without being inherited, the cause in most cases can be traced to impurity in the potable water. What this impurity is, has not yet been satisfactorily determined.

Gold. [Lat. **Au'rum**; Fr. *Or*, OR.] A splendid yellow metal, of great malleability and ductility. It is found generally native, either massive, or disseminated in threads through a rock, or in grains among the sands of rivers. Gold is remarkable for resisting under all circumstances the action of the air and of the ordinary acids. It is, however, dissolved by chlorine and by nitro-hydrochloric acid, forming a chloride of gold. The specific gravity of gold is 19.3, it being, next to platinum, iridium, and osmium, the heaviest of all metals. It is worth about two hundred and fifty dollars per pound in all countries. It has qualities which render it an excellent material for money and the best standard of value, which it is recognized to be by all civilized nations.

Gold'en Club. The popular name of ORONTIUM, which see.

Gold'en Rod. The popular name of several species of *Solidago*.

Gold'en Seal. A popular name for HYDRASTIS.

Gold-Leaf E-lec-trom'e-ter. An instrument for detecting the presence of electricity by the divergence of two slips of gold-leaf.

Gombo. See GUMBO.

Gomme, gom. The French term for GUM, which see.

Gom-phi'a-sis.* [From the Gr. *γομφίος*, a "molar tooth."] A disease of the teeth, more especially of the molars; looseness of the teeth.

Gom-pho-car'pus.* [From the Gr. *γόμφος*, a "nail," and *καρπός*, "fruit."] A genus of the order *Asclepiadaceæ*, comprising about fifty species of shrubs or herbs, natives of Africa, Arabia, etc. The leaves of *Gomphocar'pus fruticō'sus* of Syria are used for adulterating senna.

Gomphocar'pus Cris'pus.* A plant, a native of Africa. It is bitter and diuretic.

Gom-pho'sis.* [From the Gr. *γομφόω*, to "drive in a nail."] A variety of *synarthrosis*, in which one bone is fixed in another like a nail in wood, or as the teeth in their sockets.

Gom-phre'na.* A genus of herbaceous plants or undershrubs of the order *Amaranthaceæ*, comprising many species, natives of tropical America, India, etc. Several of them are used in domestic medicine by the Brazilians. The *Gomphrena globosa* (Globe Amaranth), a native of India, is cultivated for ornament.

Go-mu'ti Palm. A name of the *Saguerus saccharifer*, a valuable palm-tree found in Anam and the Malay Archipelago. It affords sago, palm wine, sugar, and a fibre called *coir*.

Gon-a-cra'tĭ-a.* [From the Gr. *γονή*, "semen," and *ἀκρατής*, "impotent," or "incontinent."] *Gonorrhœa* in its proper signification, being the same as *Spermatorrhœa*, arising from debility induced by excess.

Gon'a-gra.* [From the Gr. *γόνυ*, the "knee," and *ἄγρα*, a "seizure."] Gout in the knee or knee-joint.

Go-năl'ğĭ-a.* The same as GONYALGIA, which see.

Gon-ar-thri'tis, i*dis.* [From the Gr. *γόνυ*, the "knee," and *ἄρθρον*, a "joint."] Inflammation of the knee-joint; also of the knee.

Gon-ar-throc'a-çē.* [From the Gr. *γόνυ*, the "knee," *ἄρθρον*, a "joint," and *κάκη*, "evil," or "disease."] A cancerous or ulcerated condition of the knee-joint.

Gon-e-çўs'tis.* [From the Gr. *γονή*, "semen," and *κύστις*, a "bladder."] A term applied in the plural (*Gonecys'tides*) to the seminal vesicles.

Gon-e-poi-e'sis.* [From the Gr. *γονή*, "semen," and *ποιέω*, to "make."] The secretion of the semen.

Gon-e-poi-et'ic. [Lat. **Gonepoiet'icus.**] Belonging to gonepoiesis.

Gonflement, gôNfl'môN'. The French term for "swelling." See TUMEFACTION.

Gong-Met'al. An alloy of eighty parts of copper and twenty parts of tin.

Gon'gŷle. [Lat. **Gongy'lus;** Gr. *γογγύλος*, "round."] A round, hard, deciduous body, connected with the reproduction of certain sea-weeds: —also applied to the spores of certain fungi.

Gon'gў-lus.* [Gr. *γογγύλος*, "round."] Round; globular; gon'gylous.

Go-nĭ-om'e-ter. [Lat. **Goniom'etrum;** from the Gr. *γωνία*, an "angle," and *μέτρον*, a "measure."] An instrument for measuring the angles of crystals.

Go-noc'a-cē.* [From the Gr. *γόνυ*, the "knee," and *κάκη*, an "evil."] White swelling of the knee.

Gon'o-çēle.* [From the Gr. *γονή*, "semen," and *κήλη*, a "tumor."] Effusion of semen out of the ruptured seminal vesicles into the cellular texture; also a swelling of the testicle and spermatic cord, from supposed retention of the semen.

Go'noid. [Lat. **Gonoi'des;** from the Gr. *γονή*, "semen," and *εἶδος*, a "form" or "resemblance."] Resembling the semen.

Go-nol'o-bus.* [From the Gr. *γωνία*, an "angle," and *λοβός*, a "pod."] A genus of the order *Asclepiadaceæ*, comprising many species of twining herbs (or shrubs), natives of North America.

Gonol'obus Con-du-ran'go.* A shrubby plant, a native of South America. Its root has been used as a remedy for cancer.

Gonol'obus Mac-ro-phўl'lus,* or **Gonol'obus Ob-li'quus.*** A plant, a native of Pennsylvania, Virginia, etc. Its root is cathartic. It bears a dull-purple flower.

Gon'o-phore. [Lat. **Gonoph'orus;** from the Gr. *γόνος*, "seed," "offspring," and *φέρω*, to "bear."] In Botany, a prolongation of the receptacle which proceeds from the bottom of the calyx and sustains the stamens and pistil.

Gon-o-phў-se'ma, a*tis.** [From the Gr. *γόνυ*, the "knee," and *φύσημα*, an "inflation."] A term applied nearly in the same manner as GONOCACE, GONYOCELE, GONYONCUS, which see.

Gonopoesis.* See GONEPOIESIS.

Gon'or-rho-bleph'ar-rhœ'a.* [From the Gr. *γονόρροια*, a "flow of semen," *βλέφαρον*, the "eyelid," and *ῥέω*, to "flow."] Gonorrhœal inflammation, and discharge of purulent matter from the eye and eyelids. See OPHTHALMIA.

Gonorrhœa,* gon-or-rē'a. [From the Gr. *γονή*, "semen," and *ῥέω*, to "flow."] Involuntary discharge of semen without copulation. The same as SPERMATORRHŒA:—applied, however (erroneously, if we regard the etymology), to a discharge of purulent infectious matter from the urethra of males, and from the vagina, labia, nymphæ, clitoris, frequently the mouth and neck of the uterus, and sometimes the urethra, of females. A genus of the order *Apocenoses*, class *Locales*, of Cullen's nosology.

Gonorrhœa Bal'a-ni.* [From the Lat. *bal'anus*, the "glans penis."] A purulent discharge from the surface of the entire *glans penis*, which is then in a highly inflamed and raw state.

Gonorrhœa Dormientium.* See SPERMATORRHŒA DORMIENTIUM.

Gon-or-rhœ'al. [Lat. **Gonorrho'icus.**] Belonging to gonorrhœa.

Gon'or-rho-pros'ta-ti'tis, i*dis.** Inflammation of the prostate gland produced by gonorrhœa.

Go-nos'ehe-o-çēle.* [From the Gr. *γονή*, "semen," *ὄσχεον*, the "scrotum," and *κήλη*, a "tumor."] Swelling of the testicle, or epididymis, from accumulation of the semen; spermatocele.

Gon-o-sper'mous. [Lat. **Gonosper'mus;** from the Gr. *γωνία*, an "angle," and *σπέρμα*, a "seed."] Having angular seeds.

Gon-os'tro-ma, a*tis.** [From the Gr. *γόνος*, "offspring," and *στρῶμα*, a "stratum," or "bed."] A gon'ostrome. The germinal layer or bed in the ovule of *Mammalia;* the *stratum proligerum* of Baer.

Go'nў-ăl'ğĭ-a.* [From the Gr. *γόνυ*, the "knee," and *ἄλγος*, "pain."] Pain in the knee.

Go'nў-o-cam'psis.* [From the Gr. *γόνυ*, the "knee," and *κάμψις*, a "curvature."] Curvature of the knees.

Go'nў-o-çēle.* [From the Gr. *γόνυ*, the "knee," and *κήλη*, a "tumor."] White swelling, or what has been called hernia of the knee.

Go'nў-on'cus.* [From the Gr. *γόνυ*, the "knee," and *ὄγκος*, a "tumor."] Swelling, or tumor, of the knee. See GONYOCELE, and HYDRARTHRUS.

Gon-ў-ty'le.* [From the Gr. *γόνυ*, the "knee," and *τύλη*, a "callus."] Callus, or a hard thick skin, of the knee.

Goodeniaceæ,* goo-de-ne-a'she-ē. [From *Goode'nia*, one of the genera.] A natural order of exogenous plants, mostly herbaceous, found in Australia.

Good-ye'ra Pu-bĕs'cens.* A plant of the order *Orchidaceæ*, a native of Pennsylvania and other States. It bears handsome white flowers.

Goose'ber-rў. The popular name of several species of *Ribes*. When not fully ripe, the juice of this fruit is extremely sour: the acid is mostly citric.

Goose-Skin. See CUTIS ANSERINA.

Gor'dĭ-us,* called also **Se'ta E-qui'na,*** or "horse-hair." The horse-hair worm of the old writers. It is supposed to occasion an intestinal disease, occurring among the peasantry of Lapland from drinking water containing this worm; and a cuticular disease when it is lodged under the skin, constituting the *morbus pilaris* of Horst, and the *malis a crinonibus* of Sauvages.

Gordius Medinensis.* See GUINEA-WORM.

Gor'get. An instrument for the operation of lithotomy, formed like a knife, with a beak which fits the groove in the staff.

Go-ril'la. [Gr. *γορίλλα*.] The *Troglodytes gorilla*, or *Gorilla Savagei*, a hideous quadrumanous animal, a native of Western Africa, of

arboreal and frugivorous or omnivorous habits, and well organized for climbing. It has no tail. Its stature is about five feet. It is very ferocious and formidable.

Gos-syp'ĭ-i Ra-di'cis Cor'tex.* "Cotton-Root Bark." The Pharmacopœial name (U.S. 1870, 1880) for the bark of the root of *Gossypium herbaceum* and of other species of *Gossypium*. It has been used as an emmenagogue.

Gossyp'ii Ra'dix.* "Root of Gossypium." The Latin name for the root of *Gossypium herbaceum* and other species of *Gossypium*.

Gos-sŭp'ĭ-um.* [Lat. **Gossip'ion.**] "Cotton." A Linnæan genus of cotton-producing plants, class *Monadelphia*, natural order *Malvaceæ*. The number of species of *Gossypium* is very uncertain. In consequence of the changes produced by cultivation, it is difficult to determine which are distinct species. Also the Pharmacopœial name (U.S. 1870, 1880) for the hairs of the seed of *Gossypium herbaceum*, and of other species of *Gossypium*, freed from impurities and deprived of fatty matter.

Gossyp'ium Herba'ceum* (her-ba'she-ŭm). The systematic name of the cotton-plant. It is a perennial herb, a native of India, where it is extensively cultivated. It is also cultivated in the Southern United States.

Gou-a'nĭ-a.* A genus of climbing shrubs of the order *Rhamnaceæ*, comprising more than twenty species, natives of tropical America and Asia.

Goua'nia Do-min-ġen'sis.* A plant, a native of Brazil and the West Indies, said to possess febrifugal properties. Its flexible stems are chewed as an agreeable stomachic.

Goulard's (goo'lardz') **Ce'rate.** The *Ceratum Plumbi Subacetatis*. It received its name from Goulard (Fr. pron. goo'laR'), a Frenchman, by whom it was introduced to the notice of the public. Its refrigerant properties often render it a most useful and grateful application to blistered surfaces indisposed to heal, also to burns, excoriations, and cutaneous eruptions, especially if attended with much heat or irritation of the surface.

Goulard's' Ex'tract. The *Liquor Plumbi Subacetatis*.

Gōurd. [Lat. **Cucur'bita.**] The fruit of the *Cucurbita Pepo;* also the plant itself.

Gourd, Bit'ter. The *Cucumis Colocynthis*, plant and fruit.

Gourd Fam'ĭ-lў. A synonyme for the order *Cucurbitaceæ*.

Gout. [From the Lat. *gut'ta;* Fr. *Goutte*, goot, a "drop;" so named from the idea that the disease was produced by a morbid fluid gradually distilling into the part.] Arthritis, characterized by pain in the joints, chiefly of the great toe, or of the feet and hands; also termed PODAGRA, which see.

Gout'-Stone. The *Cal'culus arthrit'icus*, or *Cal'culus podag'ricus*. A stony concretion deposited in the affected part in gout.

Goutte. See GOUT.

Gr. = *Gra'num,** or *Gra'na.** A "grain," or "grains."

Graa'fĭ-an (grā'fe-ạn) **Fol'lĭ-cles** [Lat. **Follic'uli Graafia'ni**] or **Graa'fian Ves'ĭ-cles** [Lat. **Vesic'ulæ Graafia'næ**]. A term applied to small spherical bodies found in the stroma of the ovary. They consist of two coats or layers. The interior, immediately enclosing the ovum, is termed the *ovisac*.

Graç'ĭ-lis.* "Slender." A term applied to a slender muscle of the thigh, and to a process of the malleus, an ossicle of the ear. In Botany, slender; long and narrow.

Grad'u-ate. [From the Lat. *gra'dus*, a "degree."] In Medicine, a person who has obtained a professional degree,—usually the degree of doctor.

Grad'u-āt-ed Com'press. A compress formed of a number of circular pieces of cotton cloth, progressively decreasing in size, the whole forming a sort of pyramid, the apex of which can be applied on the precise point wished, in cases of wounded arteries, etc.

Grain. [Lat. **Gra'num;** Fr. *Graine*, grạn.] Literally, "a grain or seed of wheat, barley," etc. In Pharmacy, the twentieth part of a scruple, or sixtieth of a drachm. Also a minute particle, as a grain of sand. The term grain is applied to the fibres of wood and other fibrous substances, and to the seeds of cereal plants.

Graines d'Avignon. See FRENCH BERRIES.

Grains of Paradise. See AMOMUM GRANA PARADISI.

Graisse, grạss. The French term for "fat." See ADEPS.

Gral'læ,* gen. **Gral-la'rum** (used only in the plural). (Literally, "stilts.") Another term for GRALLATORES.

Gral-la-to'rēs.* [The plural of the Lat. *gralla'tor*, "one who goes on stilts."] The name of an order of waders, or wading birds, having long legs and bills, by which they wade and catch their prey in the water, as the crane, heron, ibis, and stork:—also termed *Grallæ*, *Grallatoriæ*, and *Grallidæ*.

Gral-la-to'rĭ-us.* [From the Lat. *gral'læ*, "stilts."] Belonging to stilts or crutches:—sometimes applied in the plural feminine (*Grallato'riæ*) to an order of birds. See GRALLATORES.

Gra'men Ca-ni'num.* The *Triticum repens*, couch-grass, or dog's-grass.

Gram'ĭ-na,* the plural of the Lat. *gra'men*, "grass," forming the Jussieuan name of a natural order of plants. See GRAMINACEÆ.

Graminaceæ,* gram-ĭ-na'she-ē, or **Gra-min'-e-æ.*** [From the Lat. *gra'men*, "grass."] An important natural order of endogenous plants, very widely distributed. It includes the grasses, wheat, maize, and various other kinds of cultivated cereals, the sugar-cane, and the bamboo. Their habits are gregarious or social. Some tropical species assume the form of trees and attain the height of fifty feet or more. Sugar is a general product of this order, and silex is found in the cuticle of many species. The order com-

prises about four thousand species, more remarkable for utility than for the beauty of their flowers.

Gram-ĭ-nā'ceous, Gra-min'e-ous. [Lat. **Gramina'ceus, Gramin'eus**; from *gra'men*, "grass."] Belonging to grass; grass-like.

Gramineæ.* See GRAMINACEÆ.

Gramineous. See GRAMINACEOUS.

Gram-ĭ-nic'o-lus.* [From the Lat. *gra'men*, "grass," and *co'lo*, to "inhabit."] Growing among grass, as *Agaricus graminicola*, etc.

Gram-ĭ-nĭ-fo'lĭ-ous. [Lat. **Graminifo'lius**; from *gra'men*, "grass," and *fo'lium*, a "leaf."] Having leaves like those of grass.

Gram'ĭ-nĭ-form. [Lat. **Graminifor'mis**; from *gra'men*, "grass."] Resembling grass:—applied to certain plants or leaves.

Gram-ĭ-niv'or-ous. [Lat. **Graminiv'orus**; from *gra'men*, "grass," and *vo'ro*, to "devour."] Feeding upon grass.

Gram-ĭ-nol'o-ğy. [Lat. **Graminolo'gia**; from *gra'men*, "grass," and the Gr. λόγος, a "discourse."] A treatise on the grasses; the science of grasses.

Gram'ma, a*tis.** [From the Gr. γράμμα, a "letter," a "note" or "point" in music, and, hence, a scruple, the smallest of Roman weights.] A scruple; the twenty-fourth part of an ounce. See SCRUPULUS.

Gram'mē.* [From the Gr. γραμμή, a "letter," or "line."] Another name for the iris, because it has the appearance of minute lines drawn upon it. See IRIS.

Gramme, grăm. A French weight, equal to 15.434 grains troy.

Gram'mĭ-cus.* [From the Gr. γράμμα, a "letter."] A term applied to a plant when the spots on its surface present the form and appearance of letters.

Gra'na,* the plural of GRANUM, which see.

Grana Paradisi.* See AMOMUM GRANA PARADISI.

Gra'na Se-ca'lis De-ğen-er-a'ti.* "Seeds of Degenerate [or Diseased] Rye." See ERGOT.

Gra'na Tig'lĭ-i.* The seeds of the *Croton Tiglium*.

Granadia.* See GRANADIN.

Gran-a-dil'la.* A name for the *Passiflora edulis* and the *Passiflora quadrangularis*, or for their fruits.

Gran'a-din, or **Gran'a-dĭne.** [Lat. **Granadi'na, Grana'dia.**] A white, crystalline, volatile, and exceedingly sweet substance, neither alkaline nor acid, obtained from the root of the pomegranate (*Pu'nica grana'tum*), and now decided to be mannite:—written also *Granatin*.

Granataceæ,* gran-a-ta'she-ē. [From the Lat. *grana'tum*, a "pomegranate."] A small natural order of exogenous trees, natives of Northern Africa and Western Asia. It comprises the *Pu'nica grana'tum*. Some botanists refer these trees to the order *Myrtaceæ*.

Gra-na'ti Fruc'tûs Cor'tex.* "Rind of the Pomegranate Fruit." The Pharmacopœial name (U.S. 1870) for the rind of the fruit of the *Pu'nica grana'tum*, a small tree of the order *Granataceæ* or *Myrtaceæ*, a native of Persia, Algeria, etc. It is astringent.

Grana'ti Ra-di'cis Cor'tex.* "Bark of Pomegranate Root." The Pharmacopœial name (U.S. 1870) for the bark of the root of the *Pu'nica grana'tum*.

Granatin. See GRANADIN.

Gra-na'tum.* "Pomegranate." The Pharmacopœial name (U.S. 1880) of the bark of the root of the *Pu'nica grana'tum*, which occurs in thin quills or fragments from two to four inches long. It is a vermifuge, and is reputed very efficacious in tænia.

Gran-dĭ-den-ta'tus.* [From the Lat. *gran'dis*, "large," and *dens*, a "tooth."] Having large teeth or indentations; grandiden'tate:—applied to leaves.

Gran-dĭ-flo'rus.* [From the Lat. *gran'dis*, "large," and *flos*, a "flower."] Having large flowers; grandiflo'rate.

Gran-dĭ-fo'lĭ-us.* [From the Lat. *gran'dis*, "large," and *fo'lium*, a "leaf."] Having large leaves; grandifo'liate.

Gran'dĭ-nēs,* the plural of the Lat. *gran'do*, a "hailstone." A term applied by Wesser to tubercles as they become enlarged.

Gran-dĭ-no'sus.* [From the Lat. *gran'do*, *gran'dinis*, "hail."] Literally, "full of hail;" also "resembling a hailstone:"—applied to the *os cuboides*, from its irregular form.

Gran'do,* gen. **Gran'dĭ-nis.** "Hail, or Hailstone." A small, hard tumor on the eyelid, supposed to resemble a hailstone. See CHALAZA.

Gra-nif'er-ous. [Lat. **Gran'ifer**; from *gra'num*, a "grain," and *fe'ro*, to "bear."] Bearing or producing grain:—applied to certain plants.

Gran'ite. [Lat. **Grani'tes**; from *gra'num*, a "grain."] A crystalline rock, consisting essentially of quartz, felspar, and mica. The early geologists regarded granite as the primitive and fundamental rock of the earth's crust; but it is now referred to various geological ages. Granite is one of the most valuable materials for building, and some varieties of it are remarkable for extreme durability. It is the strongest and most durable of all the building-stones in common use.

Gra-nit'ic. [Lat. **Granit'icus.**] Belonging to granite.

Gra-nit'ĭ-cus.* Growing in a granitic soil:—applied to certain plants.

Gra-niv'or-ous. [Lat. **Graniv'orus**; from *gra'num*, a "grain," and *vo'ro*, to "devour."] Eating grain,—*i.e.*, seeds of cereal plants.

Gran'u-lar. [Lat. **Granula'ris**; from *gran'ulum*, a "little grain."] (Fr. *Granuleux*, grā'nü'luh'.) In the form of grains; of the nature or appearance of granulations; composed of grains.

Gran'u-late, or **Gran'u-lar.** Divided into little knobs or knots resembling grains, as the roots of *Saxifraga granulata*.

Gran'u-lāt-ed. [Lat. **Granula'tus**; from the same.] Divided into grains; granular.

Gran-u-lā'tion. [Lat. **Granula'tio, o'nis**; from the same.] The division of metallic sub-

stances into small particles, or grains, to facilitate their combination with other substances. The metal is melted, poured through a sieve, and received in a vessel of water. Also the process by which little grain-like, fleshy bodies form on ulcers and suppurating wounds, filling up the cavities, and bringing nearer together and uniting their sides. In Medical Pathology, granulation is nearly synonymous with tubercle in its isolated form, or the formation of small, round, firm, shining tumors.

Gran'ule. [Lat. **Gran'ulum**; the diminutive of *gra'num*, a "grain."] A little grain; a small particle.

Granuleux. See GRANULAR.

Gran'u-lĭ-cau'lis.* [From the Lat. *gran'ulum*, a "little grain," and *cau'lis*, a "stem."] Having stem and branches covered with little tubercles.

Gran-u-lif'er-ous. [Lat. **Granu'lifer**; from *gran'ulum*, a "little grain," and *fe'ro*, to "bear."] Bearing granules, as the shell of the *Mitra granulifera*.

Gran'u-lĭ-form. [Lat. **Granulifor'mis**; from *gran'ulum*, a "little grain."] Resembling little grains.

Gran-u-los'ĭ-tў. [Lat. **Granulos'itas, a'tis**; from the same.] A mass of small tubercles, like granules.

Gran'u-lous. [Lat. **Granulo'sus**; from the same.] Having granules; full of granules.

Gra'num,* plural **Gra'na.** A grain; a small seed of any kind. Also the sixtieth part of a drachm, or the twentieth part of a scruple.

Grape. [Lat. **U'va**; Fr. *Grappe*, grăp.] The fruit of several species of *Vitis*, climbing shrubs of the order *Vitaceæ*. The cultivated grapes of the Old World are varieties of the *Vitis vinifera*, which affords important products,—namely, grapes, raisins, wine, brandy, and vinegar.

Grape'-Cure. A system of medical treatment in which the patient is confined wholly or chiefly to the use of grapes for both meat and drink.

Grape-Sugar. See GLUCOSE.

Graph'ic Meth'od. A method of studying diseases of the heart by means of an instrument, such, for example, as the SPHYGMOGRAPH, which see.

Graph-ĭ-o-ĭ'dēs.* [From the Gr. γραφίς, a "style" or "writing-instrument," and εἶδος, a "form" or "resemblance."] Resembling a style; styloid:—applied to the styloid process of the temporal bone.

Graph'ite. [From the Gr. γράφω, to "write," and λίθος, a "stone;" from its use in making pencils.] Plumbago, a mineral which is improperly called black lead and is essentially pure carbon. It usually occurs massive or foliated. It has a metallic lustre. As it is practically infusible, it is used largely for the manufacture of crucibles. It is stated that the purest Ceylon graphite contains 99 per cent. of carbon. It is not affected by acids.

Grass. [Lat. **Gra'men.**] A general name for plants of the order *Graminaceæ*.

Grass Cloth. See BOHMERIA NIVEA.

Grass-Green. Clear lively green without mixture.

Grass Oil of Na'mur. A volatile oil procured, according to Boyle, from the *Andropogon Calamus aromaticus*. It is sometimes incorrectly called *Oil of Spikenard*.

Grasses. See GRAMINACEÆ.

Gratiola (grash'e-o-la) **Of-fiç-ĭ-na'lis.*** The systematic name of the hedge-hyssop, a plant of the order *Scrophulariaceæ*, a native of Europe. It is a drastic cathartic and emetic, possessing also diuretic properties. It is employed in Europe as a remedy for dropsy, jaundice, etc.

Gra-ve'do, d'inis.* [From the Lat. *gra'vis*, "heavy."] Literally, "heaviness." A term for *coryza*:—so called, probably, from the sense of weight or oppression experienced in a severe catarrh.

Grav'el. [Lat. **Lithi'asis**; Fr. *Gravelle*, grȧ'vĕl', from *gravier*, grȧ'vē-ȧ', "gravel" or "coarse sand."] A popular term applied either to calculous matter formed in the kidneys, passing off in the urine, or to small distinct calculi or concretions. It is distinguished from *stone in the bladder* by being of smaller size. Gravel may be composed of lithic acid and its compounds, oxalate of lime, phosphate of lime, or the triple phosphate of lime, magnesia, and ammonia. The most common form of gravel is the lithic acid. See CALCULUS.

Gravelle. See GRAVEL.

Grav'e-o-lens.* Strong-scented; having a smell which is unpleasant because of its intensity or strength:—applied as a specific name to certain plants.

Grave'-Wax. Adipocere.

Grav'id U'ter-us. [Lat. **U'terus Grav'idus.**] The womb in the impregnated state, or during gestation.

Gra-vid'ĭ-tў. [Lat. **Gravid'itas, a'tis**; from *grav'idus*, "pregnant."] The condition of a woman who is pregnant; gestation; pregnancy.

Grav-ĭ-gra'dĭ-us.* [From the Lat. *gra'vis*, "heavy," and *gra'dior*, to "march."] Walking with a heavy tread:—applied in the plural neuter (*Gravigradia*) to an order of Mammals, as the elephant, etc.

Gra-vim'e-ter. [Lat. **Gravim'etrum**; from *gra'vis*, "heavy," and the Gr. μέτρον, a "measure."] An instrument for ascertaining the specific gravity of bodies.

Grav-ĭ-tā'tion. [Lat. **Gravita'tio, o'nis**; from *grav'itas*, "weight."] That power or tendency by which all material bodies are drawn towards each other, or by which a stone or other body on the surface of the earth is drawn towards the centre. The attraction or centripetal force which operates on masses at considerable distances is called the *attraction of gravitation*.

Grav'ĭ-tў. [Lat. **Grav'itas, a'tis**; from *gra'vis*, "heavy."] The cause or power by which bodies naturally tend towards the centre of the earth; weight.

Gravity, Centre of. See CENTRE OF GRAVITY.

Grav'ity, Spe-cif'ic. The comparative density (or gravity) of one body considered in relation to another assumed as the standard. In measuring the specific gravity of liquids or solids,

water is usually taken as the standard of comparison, being reckoned as a unit; in measuring gases, common air or hydrogen is assumed as the standard.

Great Sympathetic Nerve. See TRISPLANCHNIC NERVE.

Gre'cĭ-an Wâ'ter. A solution of nitrate of silver disguised, for dyeing the hair black.

Green. [Lat. **Vir'idis**; Fr. *Vert*, vaiR, fem. *Verde*, vaiRd.] A secondary color produced by the union of blue and yellow. Applied to timber, the term signifies unseasoned; full of sap:—applied to fruits, it signifies unripe or fresh.

Green Gage. A delicious variety of plum, the color of which is a yellowish green.

Green Heart. See BEBEERU, and NECTANDRA.

Green'house. A glass structure in which exotics and tender plants are cultivated and protected from cold and inclement weather by artificial heat. The plants are grown in pots placed on shelves. When a high temperature is maintained, the structure is called a *hot-house*.

Green Milk. See COLOSTRUM.

Green Sickness. See CHLOROSIS.

Green Vit'rĭ-ol. The sulphate of iron.

Green Wâ'ters. Popularly, the *lochia*, when of a dark, dirty-greenish aspect.

Gre-ga'rĭ-ous. [Lat. **Grega'rius**; from *grex, gre'gis*, a "flock."] Living or going in flocks or herds:—applied to social animals and plants.

Grenadia.* See GRANADIN.

Grev-il-le'a.* The handsomest and most extensive genus of the order *Proteaceæ*. It comprises numerous species of trees and shrubs, natives of Australia. The *G. robusta* (Silk Oak) is a large tree, one hundred feet high. The *G. Chrysodendron* bears yellow flowers in spikes one foot long and extremely beautiful.

Grĭ'as Cau-lĭ-flo'ra.* A tree of the order *Barringtoniaceæ*, found in Jamaica. It bears an edible fruit called Anchovy Pear. It is cultivated in Europe for its magnificent foliage.

Grif'fith's Mix'ture, otherwise called **Mis-tu'ra Fer'ri Com-pos'ĭ-ta*** ("Compound Mixture of Iron"). A preparation composed chiefly of myrrh, carbonate of potash, sulphate of iron, and spirit of lavender. It is used as a tonic in dyspepsia, chlorosis, and similar affections.

Grin-de'lĭ-a.* The Pharmacopœial name (U.S. 1880) for the leaves and flowering tops of *Grindelia robusta*. It is a valuable remedy for asthma and bronchitis, and is antispasmodic.

Grinde'lia Hir-su'tu-la.* A composite plant, a native of California. It is an antidote for the poison of *Rhus obtusifolia* or *Rhus diversiloba*.

Grinde'lia Ro-bus'ta.* A plant of the order *Compositæ*, a native of the Pacific section of the United States.

Grippe, grĭp or grĕp. The French name for INFLUENZA, which see.

Groats, grawts. The decorticated grains of the common oat.

Gro'cer's Itch. The *Ec'zema impetigino'des* of some writers. See ACARUS SACCHARI.

Groin. See INGUEN.

Grooved. See SULCATED.

Grossesse, gRo'sĕss'. The French term for PREGNANCY, which see.

Grossulaceæ,* gros-u-la'she-ē, or **Gros-su-la-rĭ-a'ce-æ.*** [From the Lat. *gros'sula*, a "gooseberry," *grossula'ria*, a "gooseberry-bush."] A natural order of exogenous shrubs, found in the temperate parts of Europe, Asia, and America. It includes the currant and the gooseberry; but Gray and other botanists refer these to the order *Saxifragaceæ*.

Gros'su-lĭne. [From the Lat. *gros'sula*, a "gooseberry."] The name given by Guibourt to a peculiar principle procured from gooseberries and other acid fruits, forming the basis of jelly.

Grot'to (or **Grot'ta**) **del Ca'ne** (kå'nå). "Dog's Grotto." A grotto near Naples, in which carbonic acid gas rises about eighteen inches above the surface of the ground, so that it affects dogs and other small animals.

Ground-Nut. See ARACHIS HYPOGÆA.

Group. (Fr. *Groupe*, groop.) A collection; an assemblage of objects or organisms connected by certain analogies or affinities.

Grow'ing Point. The soft centre of a bud over which the nascent leaves are formed.

Growth. [Lat. **Incremen'tum**; Fr. *Croissance*, kRwå'sŏNss'.] Increase or augmentation of the body in all its parts, without reference to the peculiar structure or function, and, so, distinct from, though nearly connected with, *Development*.

Grub. The larva of insects; also a sort of maggot hatched from the egg of the beetle (*Scarabæ'us*).

Gru'mous, or **Gru'mose.** [Lat. **Grumo'sus**; from *gru'mus*, a "clot."] Thickened; clotted; curdled. In Botany, formed of closely-clustered grains.

Gru'mus.* A clot of milk, or of blood; a curd.

Gru'tum,* or **Gru'tum Mil'ĭ-um.*** A small white tubercle of the skin, resembling a millet-seed.

Grÿl'lus Ver-ru-çĭv'o-rus.* [From the Lat. *verru'ca*, a "wart," and *vo'ro*, to "eat."] The wart-eating grasshopper of Sweden, which is caught for the purpose, as it is said, of biting off the excrescence, when it also discharges a corrosive liquor on the wound.

Gtt. = *Gut'ta*,* a "drop," or *Gut'tæ*,* "drops."

Guaco, gwå'ko. A name given in Central and South America to several plants regarded as efficacious against the bites of venomous serpents, especially to the *Mikania Guaco*. Internally, guaco has been employed as a febrifuge and tæniafuge. The leaves are the part used. Another sort of guaco is obtained from the *Aristolochia Guaco*.

Guaiac, gwī'ak or gwâ'ak. The same as GUAIACI RESINA, which see.

Guaiacanæ,* gwī-a-ka'nē. The Jussieuan name of a natural order of plants. See EBENACEÆ.

Guai'aci (gwī'ạ-si) **Lig'num.*** "Wood of Guaiacum." The Pharmacopœial name (U.S. 1880) for the heart-wood of the *Guai'acum officina'le* and of *Guaiacum sanc'tum*, popularly called *Lig'num Vi'tæ* ("Wood of Life"), in allusion to its great medicinal virtues. According to the Pharmacopœia of 1870, "the heart-wood of *Guaiacum officinale*." It is a stimulant diaphoretic, and is principally used in cases of secondary syphilis and other diseases dependent on a vitiated condition of the system.

Guai'aci Re-si'na.* "Resin of Guaiacum." Guaiac. The Pharmacopœial name (U.S. 1870, 1880) for the resin of the wood of the *Guai'acum officina'le*. It is alterative and stimulant, and is much used as a remedy in rheumatism.

Guaiacin, or **Guaiacine,** gwī'ạ-sin. A resinoid principle found in guaiac. It differs from most other resins by being converted by nitric acid into oxalic acid, instead of artificial tannin.

Guaiacum,* gwī'ạ-kŭm or gwā'ạ-kŭm. [Sp. *Guaiaco*, gwā-yā'ko.] The Guaiac-tree. A Linnæan genus of the class *Decandria*, natural order *Rutaceæ* or *Zygophyllaceæ*. It comprises several species of trees, natives of South America and the West Indies, noted for the hardness of their wood and for the resin they secrete. The *G. sanctum* is a native of Cuba and of other West Indian islands.

Guai'acum Lig'num.* A Latin name for the wood of the *Guaiacum officinale*.

Guai'acum Of-fiç-ī-na'le.* The tree which yields guaiacum. It is a native of the West Indies, and is an ornamental tree, with handsome blue flowers.

Guano, gwā'no. [Said to be derived from the Peruvian *Huanu*, hwā'noo, "dung."] A species of manure, rich in ammonia, much employed on account of its great strength as a fertilizer. It is the excrement of sea-fowl, usually deposited on small islands and cliffs near the coast. In some places it is found in such enormous beds as could only be produced by the accumulation of thousands of years. Guano has been used with benefit, internally and externally, as a remedy in different forms of lepra.

Gua-ra'na.* "Guarana." The Pharmacopœial name (U.S. 1880) for a dry paste prepared from the crushed or ground seeds of *Paullinia sorbilis*. It is tonic, and is used as a remedy for migraine and other diseases. In Brazil, Costa Rica, etc., it is used as a nervous stimulant and as a material for making a refreshing beverage. Its active principle (*guaranine*) is nearly identical with caffeine or theine.

Guarana.* See PAULLINIA SORBILIS.

Gua're-a.* A genus of trees of the order *Meliaceæ*, comprising several species, natives of Cuba, Brazil, etc. They possess powerful cathartic and emetic properties. Among them are *Guarea cathartica* and *G. purgans*. The bark of *G. spicæflora* is bitter, astringent, and anthelmintic.

Guava, gwā'va. The fruit of several species of *Psidium*, trees or shrubs of the order *Myrtaceæ*, natives of the East and West Indies. The *Psidium pomiferum* and *Psidium pyriferum* are cultivated in many warm climates, and produce important edible fruits, of which good jelly is made.

Gu-ber-nac'u-lum.* [From the Lat. *guber'no*, *guberna'tum*, to "guide," to "govern."] Something which guides or directs. See next article.

Gubernac'ulum Tes'tis.* A fibro-vascular cord between the testicle and scrotum in the fœtus:—so named because it is supposed to guide the testicle in its descent from the abdomen.

Gui-bour'tĭ-a Co-pal-lif'er-a.* A tree of the order *Leguminosæ*, a native of Guinea and Senegambia, affording a variety of gum copal.

Gui-lan-di'na.* A genus of trees or shrubs of the order *Leguminosæ*, natives of Asia and Africa. The seeds of *G. Bonduc* and *G. Bonducella*, natives of Asia, are used as tonic and febrifuge by the Hindoos.

Guĭn'ea (gĭn'e) **Grains.** Another name for Malaguetta pepper. See AMOMUM GRANA PARADISI.

Guinea Pepper. See CAPSICUM ANNUUM.

Guin'ea Worm, otherwise called **Ma'lis Fila'rĭ-æ*** (which is equivalent to "skein worm," so called because it is wound off like a skein of thread). A worm found chiefly in the East and West Indies. It is said to be frequently twelve feet long, and about the thickness of a horse-hair: it burrows under the cuticle, and "may be felt under the skin, and traced by the fingers like the string of a violin. . . . It should be drawn out with great caution, by means of a piece of silk tied round its head; for if, by being too much strained, the animal break, the part remaining under the skin will grow with double vigor, and often occasion a fatal inflammation."—GOOD.

Guin'ea-hen Weed. The vulgar name of the *Petive'ria allia'cea*, an extremely acrid plant, used in Jamaica as a sialagogue.

Guizotia Oleifera.* See POLYMNIA ABYSSINICA.

Gul, gŏŏl. A Persian word signifying a "rose."

Gul, Attar. See ATTAR OF ROSES.

Gu'la.* The œsophagus, or gullet; popularly, the throat.

Gum. = *Gum'mi.** "Gum."

Gum. [Lat. **Gum'mi**; Fr. *Gomme*, gom.] The mucilage of vegetables:—a term applied to many concrete vegetable juices that are inodorous and not resinous or oily. They are used in Pharmacy as material for troches and pills. They are also used in the manufacture of confectionery and mucilage.

Gum Arabic. See GUMMI ACACIÆ.

Gum'bo or **Gom'bo,** or **O'kra.** A name of the *Hibis'cus esculen'tus*, a plant of the order *Malvaceæ*. It is cultivated in the Southern States for its mucilaginous pods, which are edible and are used in soup.

Gum'-Boil. [Lat. **Paru'lis.**] Inflammation, abscess, or boil of the gums.

Gum E-las'tic. A term for CAOUTCHOUC.

Gum Ju'nĭ-per. A concrete resin which exudes in white tears from the *Junip'erus commu'-*

nis. It has been called *sandarach*, and, hence, confounded with the *σανδαράχη* of Aristotle, which was a sulphuret of arsenic. Reduced to powder it is called *pounce*, which prevents ink from sinking into paper from which the exterior coating of size has been scraped away.

Gum Lac. See LACCA.

Gum of the Teeth. See GINGIVA.

Gum, Rank Red. The popular name for *Stroph'ulus confer'tus.*

Gum Rash. Red Gum. A genus of cutaneous diseases. See STROPHULUS.

Gum, Red. The common name for *Stroph'ulus intertinc'tus.*

Gum-Res'in. [Lat. **Gum'mi-Resi'na.**] The concrete milky juice of certain plants, consisting of resin, essential oil, gum, and extractive vegetable matter,—as aloes, ammoniac, asafetida, euphorbium, gamboge, myrrh, scammony, etc. The gum-resins are used in medicine as stimulants.

Gum'-Tree. A popular name of the *Eucalyptus.* The *Nyssa multiflora* is called Sour Gum, and the *Liquidambar* is called Sweet Gum.

Gum, White. The common name for *Stroph'ulus al'bidus.* See STROPHULUS.

Gum'ma.* A soft tumor, so named from the resemblance of its contents to gum.

Gum'mi Aca'ciæ* (ą-ka'she-ē). A name for gum arabic, obtained from the *Acacia vera* and other species of *Acacia.*

Gummi Rubrum Gambiense.* See KINO.

Gum'mi Scor-pĭ-o'nis,* Gum'mi Sen'e-gą,* Gum'mi Sen-e-gą-len'sē,* Gum'mi The-ba'ĭ-cum.* Names for gum arabic.

Gun-Cot'ton. An explosive substance, prepared by steeping cotton freed from all impurities in a mixture of sulphuric and nitric acids, and then washing it carefully and drying it. It is principally used for the manufacture of COLLODION, which see.

Gun'jah. The dried plant *Cannabis Indica.*

Gun-ne'ra Chi-len'sis.* A plant of the order *Araliaceæ* or *Onagraceæ*, a native of Chili. Its root and leaves are astringent, and are used in diarrhœa.

Gun'pŏw-der. A mixture of five parts of nitre, one part of sulphur, and one part of charcoal, finely powdered and very accurately blended. The grains are smoothed by friction, and are then said to be glazed.

Gurg'ling. A physical sign heard on auscultation of the chest or abdomen in certain conditions, due to the movement of gas and fluid within a cavity, whether normal or abnormal.

Gur'jun Bâl'sam. A balsam obtained from the *Dipterocarpus lævis*, a tree found in Pegu and Farther India.

Gus-tā'tion. [Lat. **Gusta'tio**; from *gus'to, gusta'tum*, to "taste."] The act of tasting; the exercise of taste, a complex organic operation, comprising—1, the exercise of the sense of touch by the lips and tongue; 2, the general sensation of temperature; 3, the general sensation of muscular exercise; 4, the special sensation of savor, causing the appreciation of a molecular or intimate quality of the substance.

Gus'ta-to-rў, Gus'ta-tĭve. [Lat. **Gustato'rius, Gustati'vus**; from *gus'to, gusta'tum*, to "taste."] Belonging to the sense of taste.

Gus'tatory Nerve. The lingual branch of the deep portion of the inferior maxillary, or third branch of the fifth pair of nerves.

Gus-ta'vĭ-a Bra-sil-i-a'na.* A tree or shrub of the order *Barringtoniaceæ*, a native of Brazil, bearing a fruit which is emetic. Its root is acrid, aromatic, and bitter.

Gus'tus.* [From the Gr. *γεύομαι*, to "taste."] The sense of taste.

Gutt. = *Gut'tæ.** "Drops."

Gutt. quibusd. = *Gut'tis quibus'dam.** "With a few drops."

Gut'ta.* [Fr. *Goutte*, goot, a "drop."] A minim, or the sixtieth part of a fluidrachm.

Gut'ta A-nod'ў-na.* "Anodyne Drop." A solution of acetate of morphia.

Gutta Nigra.* See BLACK DROP.

Gut'ta O-pa'ca.* "Opaque Drop." The disease called cataract, as distinguished from GUTTA SERENA, which see.

Gut'ta-Per'cha.* A name applied to the concrete milky juice of the *Isonandra gutta* and *Dichopsis gutta*, trees which are found in Malacca, Borneo, etc., and belong to the order *Sapotaceæ.* It is a hydro-carbon. At ordinary temperatures it is tough, as tenacious as leather, and inelastic. When softened by heat (hot water) it may be moulded into any desired form, which it retains on cooling. It is used for coating submarine telegraph-wires, for water-pipes, mouldings, etc. It is soluble in benzole, chloroform, and oil of turpentine, but insoluble in water. It may be vulcanized in the same way as caoutchouc. Gutta-percha is a non-conductor of electricity and of caloric. Its malleability or plasticity, joined to the power of supporting a certain elevation of temperature without alteration of form, renders it very useful in Medicine and Surgery. Also the Pharmacopœial name (U.S. 1870, 1880) for the concrete exudation of *Isonandra gutta.* Specific gravity, 0.9791. It is used in Surgery to preserve limbs and joints in fixed positions. For this purpose bands two or three inches wide having been softened in hot water are applied, and when they harden form a firm case for the limb. It is also used for the formation of catheters and other tubes, splints, bougies, specula, stethoscopes, pessaries, etc.

Gutta Rosacea,* or **Gutta Rosea.*** See ACNE ROSACEA.

Gut'ta Se-re'na.* "Drop Serene." A name for *amaurosis*, in which, the disease being in the retina, and not in the lens or humors of the eye, this organ appears clear and natural.

Guttat. = *Gutta'tim.** "By drops."

Gut'tate. [Lat. **Gutta'tus**; from *gut'ta*, a "drop."] Spotted as if by drops of something colored:—applied to parts of plants.

Gut-ta'tim.* [From the Lat. *gut'ta*, a "drop."] In prescriptions, "drop by drop."

Gut'tĭ-fer.* Resin-producing. See GUTTIFEROUS.

Gut-tif'er-æ.* [See GUTTIFEROUS.] The Jussieuan name of a natural order of plants. See CLUSIACEÆ.

Guttiferal. See next article.

Gut'tĭ-fe-ra'lēs,* or **Gut-tif'er-ąls.** A term applied by Lindley to an alliance or division of plants (or trees) comprising those which produce resin. (See GUTTIFEROUS.) The Guttiferal alliance comprises, among others, the important natural orders *Clusiaceæ* and *Dipteraceæ*.

Gut-tif'er-ous. [Lat. **Gut'tifer,** or **Guttif'erus**; from *gut'ta*, a "drop," and *fe'ro*, to "bear."] Literally, "drop-bearing,"—that is, "resin-producing:"—applied to a natural division of plants.

Gut'tur, ur*is*.* The throat; also the larynx or trachea. See GULA.

Ġўm-nan'thus.* [From the Gr. *γυμνός*, "naked," and *ἄνθος*, a "flower."] Having naked flowers; gymnan'thous.

Gymnasium,* jim-nā'zhe-ŭm. [Gr. *γυμνάσιον*; from *γυμνός*, "naked."] The place where the ancient *athletæ* and others exercised themselves:—so named because, previously to the exercises, they stripped themselves naked.

Ġўm-nas'tic. [Lat. **Gymnas'ticus**; Gr. *γυμναστικός*; see preceding article.] Belonging to gymnastics. See next article.

Ġўm-nas'tics. [Lat. **Gymnas'tica,** or **Gymnas'tice.**] The science or system by which the health is promoted and the strength of the body developed by the regular practice of active exercises. The part of hygiene which treats of the exercises of the body and of their influence on the economy. Exercises are divided into three classes: 1, *gentle*, as ordinary walking; 2, *moderate*, as rapid walking, hunting, playing ball; 3, *violent*, as running, fencing, swimming, wrestling.

Ġўm-no-blas'tus.* [From the Gr. *γυμνός*, "naked," and *βλαστός*, a "germ."] Having a naked germ:—applied to flowers.

Ġўm-no-car'pous. [Lat. **Gymnocar'pus**; from the Gr. *γυμνός*, "naked," and *καρπός*, "fruit," or "seed."] Having naked seed or fruit; naked-fruited.

Ġym-noc'lą-dus.* [From the Gr. *γυμνός*, "naked," and *κλάδος*, a "branch."] A genus of trees of the order *Leguminosæ*, consisting of a single species, the *Gymnoc'ladus Canaden'sis* (Kentucky Coffee-Tree), a native of the United States. It is an ornamental tree, the seeds of which are used as a substitute for coffee.

Ġўm'no-ġens. [Lat. **Gymnoġ'enæ**; from the Gr. *γυμνός*, "naked," and *γένω*, to "be born," to "grow."] A synonyme of *Gymnospermæ*, a division or group of exogenous plants, which have no ovary, style, or stigma, but are so constructed that the pollen falls immediately upon the naked ovules.

Ġўm-no-sper'mæ.* [From the Gr. *γυμνός*, "naked," and *σπέρμα*, a "seed."] A sub-class of exogenous plants having naked seeds, *i.e.*, seeds not enclosed in an ovary or pericarp. Such plants are called *Gymnospermous*. They are represented in the Northern United States only by the order *Coniferæ*.

Ġўm-no-sper'mĭ-ą.* The name of a Linnæan order. See GYMNOSPERMIUS.

Ġўm-no-sper'mĭ-us.* [From the Gr. *γυμνός*, "naked," and *σπέρμα*, a "seed."] Gymnosper'mious, or gymnosper'mous; having naked seeds:—applied to a Linnæan order of the class *Didynamia*.

Ġўm'no-sperms. [See GYMNOSPERMIUS.] A term applied in the same manner as GYMNOGENS, which see.

Ġўm-nos'tŏ-mus.* [From the Gr. *γυμνός*, "naked," and *στόμα*, a "mouth."] Gymnos'tomous:—applied in the plural masculine (*Gymnos'tomi*) to a division of Mosses in which the orifice of the urn is naked.

Ġўn-æ'çĭ-um.* [Gr. *γυναικεῖον*, the part of a dwelling reserved for women; from *γυνή*, gen. *γυναικός*, a "woman."] A name for the pistils of a flower taken all together; the innermost floral verticil formed by a single carpel or several carpels.

Ġўn-an'drĭ-ą.* The name of a Linnæan class. See GYNANDRIOUS.

Ġўn-an'drĭ-ous, or **Ġўn-an'drous.** [Lat. **Gynan'drius**; from the Gr. *γυνή*, a "woman," or "female," and *ἀνήρ, ἀνδρός*, a "man," or "male."] Having the male and female portions of the flower united:—applied to a Linnæan class, the stamens of which grow upon the pistil.

Ġўn-an'drus.* [From the same.] A name for a hermaphrodite. See GYNANTHROPUS.

Ġўn-an'thro-pus.* [From the Gr. *γυνή*, a "woman," or "female," and *ἄνθρωπος*, a "human being," a "man."] A word used to denote a kind of hermaphrodite. It is badly formed, because, while *γυνή* is distinctively female, *ἄνθρωπος* is both male and female. See GYNANDRUS.

Gynaphore. See GYNOPHORE.

Ġўn-ą-tre'sĭ-ą.* [From the Gr. *γυνή*, a "woman," or "female," *α*, negative, and *τίτρημι*, to "perforate."] The condition of a female in whom the external parts of generation are imperforate.

Ġўn-e-co-loġ'ĭ-cąl. [Lat. **Gynæcoloġ'icus.**] Belonging to gynecology.

Ġўn-e-col'o-ġў. [Lat. **Gynæcolo'gia**; from the Gr. *γυνή, γυναικός*, a "woman," and *λόγος*, a "discourse."] A treatise on woman, and the peculiarities of her constitution as compared with man; the science which treats of the female constitution:—written also *Gynæcology*.

Ġў-ni'ą-cus.* [From the Gr. *γυνή*, a "woman."] Pertaining to women:—applied in the plural (*Gyni'aci*) to an order of diseases.

Ġў-nob'ą-sis,* **Ġўn'o-base.** [From the Gr. *γυνή*, a "woman," or "female," and *βάσις*, a "base."] The base of a style or pistil; a particular receptacle or support of the pistils or of the carpels of a compound ovary of a plant.

Ġўn-o-car'dĭ-ą O-do-ra'tą.* The Chaulmoo'gra, a handsome tree of the order *Pangiaceæ*, a native of India, said to be the only known species of the genus. It bears large yellow fragrant flowers, and a pulpy fruit, which has been used as a remedy for elephantiasis. This fruit yields a

fixed oil, *Chaulmoogra oil*, which contains gynocardic acid and other acids. The oil has been used with success in true leprosy and in constitutional syphilis.

Gy̆n'o-phore. [Lat. **Gynoph'orum**; from the Gr. *γυνή*, a "woman," or "female," and *φέρω* or *φορέω*, to "bear."] Literally, "that which bears the female" portion of the plant; a stalk raising the pistil above the stamens.

Gy̆p'sum.* [Gr. *γύψος*.] The sulphate of lime, or *plaster of Paris*. When pure and crystallized, it is pellucid as glass, and has a pearly lustre. It comprises varieties called *selenite*, *satin-spar*, and *alabaster*.

Gy'rans.* [From the Lat. *gy'ro*, *gyra'tum*, to "turn about."] Turning about; rotating itself; gy'rant:—applied to certain plants. See DESMODIUM GYRANS.

Gy̆'rate. [Lat. **Gyra'tus**; from *gy'ro*, to "turn about."] Literally, "turned about." Coiled in a circle:—applied to parts of plants. The same as CIRCINATE.

Gy̆-rā'tion. [Lat. **Gyra'tio**, **o'nis**; from *gy'ro*, *gyra'tum*, to "turn about."] The sensation of dizziness. The act of turning round a fixed centre. The rotatory motion of the liquid contained in the cellules of various plants.

Gy̆r-en-çeph'a-lus.* [From the Gr. *γυρεύω*, to "wind," and *ἐγκέφαλος*, the "brain."] Gyrenceph'alous:—applied by Owen to a sub-class of Mammals, having the brain convoluted, but in less degree than in man.

Gy'ri.* [The plural of the Lat. *gy'rus*, a "circuit."] The spiral cavities of the internal ear:—also applied to the convolutions of the brain.

Gy̆'rose', or **Gy̆'rous.** [Lat. **Gyro'sus**; from the Gr. *γῦρος*, a "circle."] Having circles, or full of circles. In Botany, strongly bent to and fro.

H.

H. = *Ho'ra.** "Hour." Hence **H. S.** = *Ho'râ som'ni*,* "at the hour of sleep,"—in other words, "at bedtime."

Hab-e-na'rĭ-a.* A synonyme of PLATANTHERA, which see.

Hab'it. [Lat. **Hab'itus**; from *ha'beo*, *hab'itum*, to "have," to "have one's self," or to "be."] (Fr. *Habitude*, ȧ'bè'tüd'.) Temperament, or diathesis. Also a power of doing anything acquired by frequent repetition of the same action. Also an organic disposition which results from this repetition, and which enables or prepares the animal economy to support or resist the influence of climate, of poisons, etc. In Botany, the general aspect of a plant, or its mode of growth. See DIATHESIS, and HEXIS.

Hab'ĭ-tat.* [From the Lat. *hab'ito*, to "inhabit" or "dwell."] Literally, "it dwells." The situation in which a plant grows in a wild state:—applied to a place where a plant best grows or where an animal is generally found.

Hab'ĭ-tude. [Lat. **Habitu'do.**] Customary mode of life; an aptitude to repeat certain acts. Nearly the same as HABIT.

Hab-ro-ma'nĭ-a.* [From the Gr. *ἁβρός*, "light," or "gay," and *μανία*, "madness."] Insanity or delirium in which the patient is cheerful or merry. Compare AMŒNOMANIA.

Habzelia.* See UNONA.

Hack'lў. A term used in Mineralogy, and applied to the fracture when the surface is rough with elevations which are sharp or jagged, as in broken iron.

Hæ'ma,* gen. **Hæm'a-tos.** [Gr. *αἷμα*.] Another term for "blood."

Hæm'a-çel-ĭ-no'sis.* [From the Gr. *αἷμα*, "blood," *κήλις*, a "spot," and *νοσός*, a "disease."] Blood-spot disease:—the name given by Royer to *purpura*.

Hæmacyanina.* See HÆMATOCYANINA.

Hæm'a-dўn-a-mom'e-ter. [Lat. **Hæmadynamom'etrum**; from the Gr. *αἷμα*, "blood," *δύναμις*, "power," and *μέτρον*, a "measure."] An instrument for ascertaining the force of the circulation of the blood.

Hæmagogue, hĕm'a-gog. [Lat. **Hæmago'gus**; from the Gr. *αἷμα*, "blood," and *ἄγω*, to "carry away," to "expel."] A term applied to medicines favoring the access of the catamenia, or the hemorrhoidal discharge.

Hæ'mal, or **He'mal.** [Lat. **Hæma'lis**; from the Gr. *αἷμα*, "blood."] Relating to blood, or to the blood-vessels.

Hæ'mal Arch. A name applied to the arch formed by the sternum and ribs with the vertebræ, because it protects or encloses the most important portion of the vascular system.

Hæ'mal Ax'is. A name applied by Owen to the central organ and large trunks of the vascular system.

Hæ'mal Spine. Another name for the sternum:—used by Owen for the homologue of the sternum and ensiform cartilage, or (in the abdomen) for the *linea alba*.

Hæm'a-leū-çi'na.* [From the Gr. *αἷμα*, "blood," and *λευκός*, "white"] The buffy coat, or fibrin, of the blood; hæmaleu'cin.

Hæm-a-lo'pĭ-a.* [From the Gr. *αἷμα*, "blood," and *ὤψ*, *ὠπός*, the "eye."] A disease of the eye, in which every object appears of a blood-color; hæm'alopy.

Hæ-man'thus.* [From the Gr. *αἷμα*, "blood," and *ἄνθος*, a "flower."] The Blood-Flower. A genus of plants of the natural order *Amaryllida-*

ceæ, mostly natives of South Africa. The Hottentots are said to dip their arrow-heads in the juice of one species, on account of its poisonous properties.

Hæ-man'thus Coc-cin'e-us.* A beautiful bulbous plant of South Africa. Its bulb is diuretic.

Hæ-maph'e-in (or hem-a-fe'in). [Lat. **Hæmaphæi'na**; from the Gr. *αἷμα*, "blood," and *φαιός*, "of a fawn color."] The substance which gives the pale amber color to urine.

Hæm'a-poi-ĕt'ic. [From the Gr. *αἷμα*, "blood," and *ποιέω*, to "make" or "produce."] A term applied to such parts as assist in the formation of the blood, as the liver, the lungs, etc.

Hæm-a-poph'ў-sis.* [From the Gr. *αἷμα*, "blood," and the Lat. *apoph'ysis*.] A term applied by Owen, in Comparative Anatomy, to the laminæ of a vertebra, which form an irregular canal, lodging the *hæmal axis;* also the homologue of the cartilage of a rib, or its sternal portion, named in reference to the *hæmal arch*.

Hæ-mas-the-no'sis.* [From the Gr. *αἷμα*, "blood," and *ἀσθένεια*, "debility."] Poverty, or deterioration, of the blood.

Hæm'a-tan-a-go'ġē.* [From the Gr. *αἷμα*, "blood," and *ἀναγωγή*, a "raising" or "bringing up."] A raising, or vomiting, of blood. See HÆMATEMESIS.

Hæm'a-tan-ġĭ-on'o-sos,* or **Hæm'a-tan-ġĭ-on'o-sus.*** [From the Gr. *αἷμα*, "blood," *ἀγγεῖον*, a "vessel," and *νόσος*, a "disease."] Disease of the blood-vessels.

Hæm'a-tan-ġĭ-o'sis.* The same as HÆMATANGIONOSOS.

Hæm'a-ta-po'rĭ-a.* [From the Gr. *αἷμα*, "blood," and *ἀπορία*, "defect."] The same as ANÆMIA.

Hæm'a-ta-por'ĭ-cus.* Belonging to hæmataporia; hæmatapor'ic.

Hæm'a-tap-or-rho'sis.* [From the Gr. *αἷμα*, "blood," *ἀπό*, "from," and *ὀρρός*, "serum."] The separation of serum from the blood, as in the profuse discharges of cholera.

Hæm'a-ta-pos'ta-sis.* [From the Gr. *αἷμα*, "blood," and *ἀπόστασις*, a "departure."] Metastasis, or transposition of the blood to another part.

Hæm'a-ta-pos-tat'ĭ-cus.* Belonging to hæmatapostasis; hæmatapostat'ic.

Hæm'a-ta-pos-te'ma.* [From the Gr. *αἷμα*, "blood," and *ἀπόστημα*, an "abscess."] An abscess containing blood.

Hæm'a-te-læ'um.* [From the Gr. *αἷμα*, "blood," and *ἔλαιον*, "oil."] A concrete oil existing in the blood.

Hæm-a-tem'e-sis.* [From the Gr. *αἷμα*, "blood," and *ἐμέω*, to "vomit."] Vomiting of blood. (See HÆMATANAGOGE.) Hemorrhage into the stomach may arise—1, from the laying open of an artery; 2, from venous or capillary congestion of the mucous membrane; 3, from causes affecting the blood itself, so that it tends to transude through the vessels under pressure of the circulation. The most frequent cause of hæmatemesis is an ulcer of the stomach.

Hæm'a-te-met'ĭ-cus.* Belonging to hæmatemesis; hæmatemet'ic.

Hæm'a-tep-a-go'ġē.* [From the Gr. *αἷμα*, "blood," and *ἐπαγωγή*, an "attack" or "invasion."] Congestion of blood in a part.

Hæmatexostosis.* See OSTEO-SARCOMA.

Hæm-a-ther'mus.* [From the Gr. *αἷμα*, "blood," and *θέρμη*, "heat."] Having warm blood; hæmather'mous.

Hæm'at-hĭ-dro'sis.* [From the Gr. *αἷμα*, "blood," and *ἱδρωσις*, a "sweating."] An oozing of blood-colored perspiration.

Hæmathorax.* See HÆMATOTHORAX.

Hæm-a-ti'a-sis.* [From the Gr. *αἷμα*, "blood."] The same as HÆMATONOSUS.

Hæ-mat'ĭ-ca.* [From the Lat. *hæmat'icus*, "relating to the blood, or system of blood-vessels."] A name applied by Dr. Good to a class of his nosology, comprising diseases of the sanguineous function. *Hæmatica* is also used to denote medicines which are supposed to modify in some way the condition of the blood. See HÆMATINICA.

Hæ-mat'ĭ-cus.* [From the Gr. *αἷμα*, "blood."] Hæmat'ic; relating to the blood. Also dull red with a slight mixture of brown:—applied to plants.

Hæm'a-tin, or **Hæm'a-tĭne.** [Lat. **Hæmati'na**; from the Gr. *αἷμα*, "blood."] The coloring-matter of the blood; sometimes, though improperly, termed *globulin*. Hæmatin is ferruginous, has a metallic lustre, and is insoluble in water, alcohol, or ether. It is soluble in ammonia, in the alkalies, and in a mixture of alcohol with sulphuric acid. It is combined in the blood with several albuminoid substances to form *hæmoglobin*. The term is also applied to the coloring-matter of logwood, from its resemblance to blood.

Hæm-a-tin'ĭ-ca.* [The plural neuter of the Lat. *hæmatin'icus*, "belonging to hæmatin."] A class of the *Hæmatica* which augment the amount of hæmatin in the blood. They consist chiefly, if not exclusively, of iron and its compounds.

Hæm'a-tin-u'rĭ-a.* [From the Lat. *hæmati'na*, and the Gr. *οὖρον*, "urine."] A term denoting urine which contains the red coloring-matter of the blood without the red corpuscles.

Hæm-a-tis'che-sis.* [From the Gr. *αἷμα*, "blood," and *ἴσχω*, another form of *ἔχω*, to "hold," to "restrain."] Stoppage of discharges of blood.

Hæm-a-tisth'mus.* [From the Gr. *αἷμα*, "blood," and *ἰσθμός*, the "fauces."] Hemorrhage from the fauces.

Hæm'a-tīte, or **Hem'a-tīte.** [Lat. **Hæmati'tes**; from the Gr. *αἷμα*, "blood."] The blood-stone; a species of iron ore:—also called *specular iron ore*. It is a sesquioxide of iron, which occurs in beautiful crystals having a very splendent lustre, also massive, pulverulent, and earthy. This species comprises varieties called *red hematite*, *red ochre*, *red chalk*, etc.

Hæm-a-ti'tis, *idis.** [From the Gr. *αἷμα*, "blood."] Inflammation of the blood.

Hæm'a-to-car'pus.* [From the Gr. *αἷμα*, "blood," and *καρπός*, "fruit."] Having fruit spotted with red; hæmatocar'pous.

Hæm'a-to-çēle.* [From the Gr. *αἷμα*, "blood," and *κήλη*, a "tumor."] A sanguineous tumor. Enlargement of the scrotum, from blood being within one or other of its tunics.

Hæm'atocele, Pel'vic. A term used to denote an extravasation of blood into the peritoneal cavity between the rectum and the uterus. It is sometimes called *ovarian apoplexy*.

Hæm'a-to-çeph'a-lus.* [From the Gr. *αἷμα*, "blood," and *κεφαλή*, the "head."] A monster-fœtus in which effusion of blood into the cerebral hemispheres has produced a marked deformity.

Hæm'a-to-ehe'zĭ-a.* [From the Gr. *αἷμα*, "blood," and *χέζω*, to "evacuate the bowels."] A bloody stool.

Hæm'a-to-çœ'lĭ-a.* [From the Gr. *αἷμα*, "blood," and *κοιλία*, the "belly."] Effusion or escape of blood into the peritoneal cavity.

Hæm'a-to-col'pus.* [From the Gr. *αἷμα*, "blood," and *κόλπος*, a "sinus," sometimes the "vagina."] Effusion of blood into the vagina; also a collection of blood, or of menstrual secretion, there.

Hæm'a-to-Crȳs'tal-lin. [From the Gr. *αἷμα*, "blood," and *κρύσταλλος*, "ice," "crystal."] The same as HÆMOGLOBIN, which see.

Hæm'a-to-çy'a-nin.* [From the Gr. *αἷμα*, "blood," and *κύανος*, "blue."] The blue coloring-matter of the blood; hæmatocy'anin.

Hæm'a-to-çȳs'tis.* [From the Gr. *αἷμα*, "blood," and *κίστις*, a "bladder."] A cyst containing blood. Also effusion of blood into the urinary bladder. Also encysted hæmatoma; a hæm'atocyst.

Hæm-a-to'dēs.* [Gr. *αἱματώδης*; from *αἷμα*, "blood."] Full of blood; hæm'atose.

Hæmatodes Fungus.* See FUNGUS HÆMATODES.

Hæmatodynamometer. See HÆMADYNAMOMETER.

Hæmatogenesis.* See HÆMATOSIS.

Hæm'a-to-glob-u-li'na.* The same as GLOBULIN.

Hæm-a-tog'ra-phȳ. [Lat. **Hæmatogra'phia**; from the Gr. *αἷμα*, "blood," and *γράφω*, to "write."] A description of the blood, its nature and quality.

Hæm'a-toid. [Lat. **Hæmatoi'des** or **Hæmato'des**; from the Gr. *αἷμα*, "blood," and *εἶδος*, a "form" or "resemblance."] Resembling blood:—applied in Pathology to fungus and tumors.

Hæm-a-toi'din. [Lat. **Hæmatoidi'na**; from *hæmati'na*, "hæmatin."] A red crystalline body produced spontaneously from hæmatin during the drying of blood. It is insoluble in water, alcohol, and ether.

Hæm-a-tol'o-gȳ. [Lat. **Hæmatolo'gia**; from the Gr. *αἷμα*, "blood," and *λόγος*, a discourse."] (Fr. *Hématologie*, ā'mā'to'lo'zhē'.) The history of the nature and constitution of the blood; the science of the blood.

Hæm'a-to-lȳt'ĭ-ca.* [From the Gr. *αἷμα*, "blood," and *λύω*, to "dissolve," to "weaken."] A term applied by some writers to a class of remedies which impoverish the blood. See SPANÆMIA, and SPANÆMICA.

Hæm-a-to'ma, a*tis.* [From the Gr. *αἱματόω*, to "turn into blood."] (Fr. *Hématome*, ā'mā'tom'.) A bloody tumor; a hæm'atome. A peculiar form of bloody tumor, or a collection of extravasated blood that has undergone certain changes. It is observed more especially in connection with the ear, the scalp, and the meninges.

Hæmato'ma Au'ris.* An affection of the ear which occurs almost exclusively in the insane, and consists in the effusion of blood or bloody serum between the cartilage and its perichondrium, to such an extent as to form a distinct tumor.

Hæm'a-to-ma-to'sus.* Having hæmatoma; hæmatom'atous.

Hæm'a-to-met-aeh'ȳ-sis.* [From the Gr. *αἷμα*, "blood," *μετά*, "beyond," and *χύσις*, an "effusion."] Transfusion of blood.

Hæm-a-tom'e-ter. [Lat. **Hæmatom'etrum**; from the Gr. *αἷμα*, "blood," and *μέτρον*, a "measure."] An instrument for measuring the force of blood.

Hæm'a-to-me'tra.* [From the Gr. *αἷμα*, "blood," and *μήτρα*, the "womb."] A filling of the womb with blood.

Hæm'a-to-me'trĭ-a.* [From the Gr. *αἷμα*, "blood," and *μετρέω*, to "measure."] The measuring of the force of the blood in its course; hæmatom'etry.

Hæm-a-tom'pha-lo-çēle.* [From the Gr. *αἷμα*, "blood," *ὀμφαλός*, the "navel," and *κήλη*, a "tumor."] A tumor at the navel, turgid with blood.

Hæm-a-tom'ȳ-çēs, e'tis.* [From the Gr. *αἷμα*, "blood," and *μύκης*, a "fungus."] *Fungus hæmatodes*, or bloody fungus. See FUNGUS HÆMATODES.

Hæm-a-ton'o-sos,* or **Hæm-a-ton'o-sus.*** [From the Gr. *αἷμα*, "blood," and *νόσος*, "disease."] Disease of the blood.

Hæm'a-to-pe-de'sis.* [From the Gr. *αἷμα*, "blood," and *πηδάω*, to "spring."] The passage or transudation of blood through the surface of the skin, or through any membrane:—essentially the same as DIAPEDESIS.

Hæm'a-to-pĕr'ĭ-car'dĭ-um.* [From the Gr. *αἷμα*, "blood," and the Lat. *pericar'dium*.] Effusion of blood into the pericardium.

Hæm'a-to-phĭl'ĭ-a,* or **Hæm-o-phil'ĭ-a.*** [From the Gr. *αἷμα*, "blood," and *φιλέω*, to "love," to "have a tendency to."] (Fr. *Hémophilie*, ā'mo'fē'lē'.) A constitutional tendency to spontaneous bleeding.

Hæm'a-to-pho'bĭ-a.* [From the Gr. *αἷμα*, "blood," and *φόβος*, "fear."] An inordinate fear or horror at the sight of blood.

Hæm'a-to-phȳl'lus.* [From the Gr. *αἷμα*, "blood," and *φύλλον*, a "leaf."] Having leaves tinged with a blood color; hæmatophyl'lous.

Hæm'a-to-pla'nĭ-a.* [From the Gr. *αἷμα*, "blood," and *πλάνη*, a "wandering."] A hemorrhage which seems to have wandered from its proper or original place; a vicarious hemorrhage, or one which occurs in a new part of the system,

thus relieving the tendency to hemorrhage in another part.

Hæm′a-to-plas′ma, a*tis*.* [From the Gr. *αἷμα*, "blood," and *πλάσμα*, a "formation."] The plastic principle of the blood.

Hæm′a-to-poi-e′sis.* [From the Gr. *αἷμα*, "blood," and *ποίησις*, a "making."] Assimilation of the chyle to blood. The same as HÆMATOSIS.

Hæm′a-to-poi-et′ĭ-cus.* Belonging to hæmatopoiesis; hæmatopoiet′ic.

Hæm′a-top-ty′sĭ-a,* **Hæm-a-top′tў-sis.*** The same as HÆMOPTYSIS.

Hæm-a-tor′rha-ehis.* [From the Gr. *αἷμα*, "blood," and *ῥάχις*, the "spine."] Effusion of blood into the spine, or into the theca of the spinal marrow.

Hæm′a-tor-rhœ′a.* [From the Gr. *αἷμα*, "blood," and *ῥέω*, to "flow."] A passive flowing of blood; hemorrhage.

Hæm′a-to-sal′pinx.* [From the Gr. *αἷμα*, "blood," and *σάλπιγξ*, a "trumpet," a "tube."] A bloody tumor of the Fallopian tube.

Hæmatosine. See HÆMATIN.

Hæm-a-to′sis.* [From the Gr. *αἷμα*, "blood," and the affix *-osis*.] Literally, the production of blood; more usually, the transformation of chyle and venous blood into arterial blood. Also a flux of blood.

Hæm′a-to-spil′ĭ-a.* [From the Gr. *αἷμα*, "blood," and *σπῖλος*, a "spot."] A name for *Purpura hæmorrhagica*.

Hæm′a-to-spon-go′sis.* The formation or growth of hæmatospongus.

Hæm′a-to-spon′gus.* [From the Gr. *αἷμα*, "blood," and *σπόγγος*, a "sponge."] *Fungus hæmatodes*, or bloody fungus. See FUNGUS HÆMATODES.

Hæm′a-to-stat′ĭ-ca.* [From the Gr. *αἷμα*, "blood," and *στατικός*, "belonging to statics;" also "causing to stand or stop."] The doctrine or science of the motion of the blood in living bodies:—also applied to remedies employed to arrest the flow of blood.

Hæm′a-to-sўm′pho-re′sis,* or **Hæm′a-to-sўn′a-go′gē.*** [From the Gr. *αἷμα*, "blood," and *συμφόρησις*, or *συναγωγή*, an "assembling together," a "collection."] Congestion of blood. See HÆMATEPAGOGE.

Hæmatothorax.* See HÆMOTHORAX.

Hæm′a-to-tox′ic, Hæm-a-tox′ic. [**Hæmatotox′icus, Hæmatox′icus**; from the Gr. *αἷμα*, "blood," and *τοξικός*, "poison."] Belonging to a vitiated state of the blood.

Hæm′a-tox-i′na,* **Hæm′a-tox-ў-li′na,*** or **Hæm-a-tox′ў-lin.*** The coloring-matter of logwood. It occurs in yellow crystals, soluble in boiling water, alcohol, and ether.

Hæm-a-tox′ў-lon.* [From the Gr. *αἷμα*, "blood," and *ξύλον*, "wood."] Logwood. A Linnæan genus of the class *Decandria*, natural order *Leguminosæ*. Also the Pharmacopœial name (1870, 1880) of the heart-wood of *Hæmatoxylon Campechianum*, otherwise called *Hæmatoxyli Lignum* ("Wood of Hæmatoxylon.") It is a mild astringent, and is occasionally used with advantage in chronic dysentery and chronic diarrhœa.

Hæmatox′ylon Cam-pe-chĭ-a′num.* The logwood-tree. It is a native of Yucatan.

Hæm-a-tox′ў-lum.* A Pharmacopœial name of logwood.

Hæm′a-to-zo′on.* [From the Gr. *αἷμα*, "blood," and *ζῷον*, an "animal."] An animalcule discovered in the blood.

Hæm′a-tu-re′sis,* or **Hæm-a-tu′rĭ-a.*** [From the Gr. *αἷμα*, "blood," and *οὖρον*, the "urine."] A disease in which blood is discharged with urine.

Hæm-a-tu′rĭ-cus.* Belonging to hæmaturia; hæmatu′ric.

Hæm-ĭ-dro′sis.* [From the Gr. *αἷμα*, "blood," and *ἱδρώς*, "sweat."] Bloody sweat; the oozing of blood through the pores of the skin. The same as HÆMATHIDROSIS.

Hæ′min, or **Hæ′mĭne.** [Lat. **Hæmi′na**; from the Gr. *αἷμα*, "blood."] A crystalline substance obtained from dried blood by the action of dry salt and glacial acetic acid at a boiling temperature. It occurs in flat rhombic plates, which are remarkable for their insensibility to reagents, not being affected by strong mineral acids.

Hæmodoraceæ,* hem′o-do-ra′she-ē. [From *Hæmado′rum*, one of the genera.] A natural order of endogenous herbaceous plants found in Australia, the United States, etc. It comprises the *Al′etris farino′sa* (Colic Root), a native of New Jersey, and the *Lachnan′thes tincto′ria* (Red Root).

Hæm′o-dro-mom′e-ter. [From the Gr. *αἷμα*, "blood," *δρόμος*, a "running," a "course," and *μέτρον*, a "measure."] An instrument for measuring the movement of the blood.

Hæm′o-dў-nam′ics. [From the Gr. *αἷμα*, "blood," and *δύναμις*, "power," "force."] The science which treats of the forces concerned in the movements of the blood.

Hæm-o-glo′bin, or **Hæm′a-to-glob′u-lin.** [From the Gr. *αἷμα*, "blood," and the Lat. *glo′bus*, a "globe" or "globule."] An extremely complex substance, occurring in crystals, which forms the principal part of the red globules or corpuscles of the blood. It is a compound of two bodies, the one a proteid called *globulin*, and the other a nitrogenous derivative called *hæmatin*. The most important property of hæmoglobin is its affinity for oxygen, by absorbing which it becomes a bright red. It becomes a dark red under the influence of carbonic acid.

Hæmometer. See HÆMATOMETER.

Hæmopathia.* See HÆMATONOSUS.

Hæm′o-pĕr-ĭ-to-næ′um.* Effusion of blood into the cavity of the peritoneum.

Hæm-o-pex′ĭ-a.* [From the Gr. *αἷμα*, "blood," and *πῆξις*, a "freezing," "coagulation."] A morbidly increased coagulability of the blood. In the plural (*Hæmopex′iæ*), the name of an order of diseases in which this condition prevails.

Hæm-oph-thal'mĭ-a.* [From the Gr. *αἷμα*, "blood," and *ὀφθαλμός*, the "eye."] An effusion of blood into the eye; a blood-shot eye.

Hæm-oph-thal'mus.* [From the Gr. *αἷμα*, "blood," and *ὀφθαλμός*, the "eye."] Effusion of blood into the chambers of the eye.

Hæm-o-proc'tos,* or **Hæm-o-proc'tus.*** [From the Gr. *αἷμα*, "blood," and *πρωκτός*, the "anus."] Discharge of blood from the bowels.

Hæm-op'tĭ-cus.* Belonging to hæmoptöe or hæmoptysis; hæmop'tic.

Hæmoptoicus.* See HÆMOPTICUS.

Hæm-op'tў-sis,* or **Hæm-op'to-e.*** [From the Gr. *αἷμα*, "blood," and *πτύω*, to "spit."] (Fr. *Hémoptysie*, ā'mop'tē'zē'.) A spitting of blood; hemorrhage from the lungs. A genus of the order *Hæmorrhagiæ*, class *Pyrexiæ*, of Cullen's nosology.

Hæmorrhage. See HÆMORRHAGIA.

Hæm-or-rha'gĭ-a.* [From the Gr. *αἷμα*, "blood," and *ῥήγνυμι*, to "burst."] (Fr. *Hémorrhagie*, ā'mo'rā'zhē'.) Hem'orrhage, or hem'orrhagy. A bursting forth of blood, from whatever cause. The escape of blood from any part of the circulation, and its discharge from the body. In the plural, an order of the class *Pyrexiæ* of Cullen's nosology.

Hæm-or-rhag'ĭ-cus.* Belonging to hemorrhage; hemorrhag'ic.

Hæm-or-rhin'ĭ-a.* [From the Gr. *αἷμα*, "blood," and *ῥίν*, the "nose."] The same as EPISTAXIS.

Hæm-or-rhœ'a.* The same as HÆMATORRHŒA, which see.

Hæmorrhœ'a Pe-te-chĭ-a'lis.* [See PETECHIÆ.] A term which has been applied to a chronic form of *purpura*.

Hæm-or-rho'ĭ-cus.* Belonging to hæmorrhœa; hæmorrho'ic.

Hæm'or-rhoid. [Lat. **Hæmor'rhois, i***des*; from the Gr. *αἷμα*, "blood," and *ῥέω*, to "flow."] Literally, a "hemorrhage," and originally used in this sense in general, but now restricted to the piles. These are termed *open* when they discharge blood, and *blind* when there is no discharge. They are round, painful, erectile tumors, around or within the anus, often caused by sedentary habits, costiveness, violent efforts at stool, etc. All circumstances which determine blood to the rectum, or which impede its return from the pelvis, tend to produce this disease. The remedies are rest, a horizontal posture, temperance, active exercise in the open air, poultices, cold lotions, astringents, etc. A genus of the order *Hæmorrhagiæ*, class *Pyrexiæ*, of Cullen's nosology.

Hæm-or-rhoi'dal. [Lat. **Hæmorrhoida'lis**; from *hæmorrhöi'des*, "piles."] Belonging to hæmorrhoids, or piles.

Hæm'or-rho-i'de-us.* The same as HÆMORRHOIDAL.

Hæm-o-spa'sĭ-a.* [From the Gr. *αἷμα*, "blood," and *σπάω*, to "draw to."] The forming of a vacuum usually over a considerable surface of the body, being an extension of the principle of dry cupping. See HÆMOSPASTIC SYSTEM.

Hæm-o-spas'tic. [From the same.] Drawing or attracting the blood.

Hæmospas'tic Sys'tem. A system of medicine introduced by Dr. Junod, of Paris. He employs a pneumatic apparatus of peculiar construction, in which the arm or leg is so placed as to attract the blood to the extremities, without diminishing the mass of this liquid.

Hæm-o-sta'sĭ-a,* **Hæ-mos'ta-sis.*** [From the Gr. *αἷμα*, "blood," and *στάσις*, a "standing."] A stoppage, or stagnation, of the blood:—also applied to any operation for stopping blood.

Hæm-o-stat'ic. [Lat. **Hæmostat'icus.**] Belonging to hæmostasia, or hæmostasis:—also applied to means employed for stanching or arresting hemorrhage; styptic. *Hæmostatics* are internal remedies and local applications which arrest hemorrhage. The chief hæmostatics are the ligature, pressure, rest, cold, the actual cautery, astringents, and the whole class of styptic drugs.

Hæmostatica.* See HÆMATOSTATICA.

Hæm'o-tach-om'e-ter. [From the Gr. *αἷμα*, "blood," *τάχος*, "swiftness," and *μέτρον*, a "measure."] An instrument for measuring the velocity of the blood. It is sometimes called a *Tachometer*. The measurement of the velocity of the blood is termed *Hæmotachom'etry* (Lat. *Hæmotachome'tria*).

Hæm-o-tex'ĭ-a,* **Hæm-o-tex'is.*** [From the Gr. *αἷμα*, "blood," and *τῆξις*, a "liquefaction."] Dissolution or liquefaction of the blood.

Hæm-o-tho'rax, a'cis,* or **Hæm'a-to-tho'rax.*** [From the Gr. *αἷμα*, "blood," and *θώραξ*, the "chest."] The escape of blood into the thorax, through a wound or otherwise.

Hæmotoxicus.* See HÆMATOTOXICUS.

Hæm-ot'ro-phў. [From the Gr. *αἷμα*, "blood," and *τροφή*, "nourishment."] An excess of sanguineous nutriment, as distinguished from hypertrophy and hyperæmia.

Ha-ge'nĭ-a Ab-ўs-sin'ĭ-ca.* Another name for the *Brayera anthelmintica*.

Hail. An aqueous vapor or moisture precipitated in a solid form, and consisting of spherical or rounded concretions of ice, called hailstones. Hail-storms generally occur in spring or early summer, and are often accompanied by lightning. They are usually confined to a limited or moderate area, or deposit the hail in narrow belts, in which they cause great devastation.

Hair. [Lat. **Capil'lus,** and **Pi'lus**; Gr. *θρίξ*; Fr. *Poil*, pwȧl.] A substance like horn, growing from the skin of animals, in nearly cylindrical filaments. In Botany, *hairs* are hair-like projections or appendages of the surface of plants.

Hair'-Dyes. [Lat. **Tinctu'ræ Capillo'rum.**] The basis of most of the powders, pastes, and liquids sold under this name is either lead or silver. To these are sometimes added litharge, slaked lime, and starch.

Hair, Mor'bid. See TRICHOSIS.

Hair'-Point-ed. Terminating in a very fine, weak point:—applied to parts of plants.

Hair'-Shaped. In Botany, capillary; nearly the same as *filiform*, but more slender.

Hair'ў. Beset with hairs; covered with short, weak, thin hairs:—applied to many plants.

Hair'y Scalp. That part of the integument of the head which is covered with hairs.

Halberd-Shaped. See HASTATE.

Haleine. See HALITUS.

Half-Breed, Half-Caste. Terms applied to the offspring of parents who belong to different races.

Haligraphia.* See HALOGRAPHIA.

Hal'ĭ-hoo'. [A corruption of *Holy hood.*] A Scotch term for the *caul*, which was formerly carefully preserved by the superstitious, on account of the many virtues attributed to it.

Hal'ĭ-tus.* [From the Lat. *ha'lo, hala'tum*, to "breathe" or "breathe out," to "exhale."] (Fr. *Haleine*, ă'lăn'.) Vapor, or breath.

Hal'itus of the Blood. The vapor which arises from the blood when newly drawn from the body.

Hal-lu-cĭ-nā'tion. [Lat. **Hallucina'tio, o'nis;** from *hallu'cinor, hallucina'tus*, to "mistake."] Mental error, or morbid delusion. A false perception of an organ of sense for which there is no external cause or origin,—as when a man in total darkness thinks he sees an object. Hallucinations of all the senses occur, the most frequent being those of sight and hearing. They indicate a disorder of the brain.

Hal'lus,* **Hal'lux,*** and **Hal'lex.*** Names for the great toe.

Ha'lo, o'nis.* [From the Gr. *ἅλως*, a "circle."] The circle which surrounds the sun, moon, or stars when their rays are refracted in their passage through a mist. The *areola*, or brownish circle, around the female nipple. Also the red margin, or *areola*, around pustules.

Hal'o-ġen, or **Hal'o-ġene.** [From the Gr. *ἅλς*, "salt," and *γεννάω*, to "produce."] A term employed by Berzelius to denote electro-negative bodies, as chlorine, bromine, iodine, fluorine, and cyanogen, which form salts by combining with metals.

Ha-log'ra-phў. [Lat. **Halogra'phia;** from the Gr. *ἅλς*, "salt," and *γράφω*, to "write."] A description of salts.

Hā'loid. [Lat. **Haloi'des;** from the Gr. *ἅλς*, "salt," and *εἶδος*, a "form" or "resemblance."] A term applied to salts compounded of the metals with chlorine, iodine, or bromine, because similar in nature or composition to common salt.

Ha-lol'o-ġў. [Lat. **Halolo'gia;** from the Gr. *ἅλς*, "salt," and *λόγος*, a "discourse."] A treatise on the salts.

Ha-lom'e-ter. [Lat. **Halom'etrum;** from the Gr. *ἅλς*, "salt," and *μέτρον*, a "measure."] An instrument for measuring the form, angles, etc., of salts.

Ha-loph'ĭ-lous. [Lat. **Haloph'ilus;** from the Gr. *ἅλς*, "salt," and *φιλέω*, to "love."] Delighting in a soil impregnated with salt:—applied to plants.

Hal'o-phўtes. [Lat. **Haloph'yta**, plural of *haloph'yton;* from the Gr. *ἅλς*, "salt," and *φύτον*, a "plant."] A term applied to certain plants which inhabit salt marshes and by combustion yield barilla, as *Salsola*, *Salicornia*, and *Chenopodium.*

Halophyton,* or **Halophytum.*** See preceding article.

Haloragaceæ,* ha-lor-a-ga'she-ē, or **Ha-lor-a'ġe-æ.*** [From *Halor'agis*, one of the genera.] A natural order of exogenous plants, found in damp places, ditches, etc.

Hăl'ter,* gen. **Hăl-te'ris.** [From the Gr. *ἁλτήρ*, an instrument anciently used in gymnastic exercise.] A term applied in the nominative plural (*Halte'res*) to two small movable bodies which are situated or hang above the wings in the *Diptera.*

Hal'ur-ġў. [Lat. **Halur'gia;** from the Gr. *ἅλς*, "salt," and *ἔργον*, a "work."] The process of forming, extracting, or producing salts.

Halved. In Botany, one-sided, or appearing as if one half of the body were cut away. The same as DIMIDIATE.

Hamamelidaceæ,* ham-a-mel-e-da'she-ē, or **Hamamelaceæ,** ham-a-mel-a'she-ē. [From *Hamame'lis*, one of the genera.] A natural order of exogenous trees and shrubs, found in Asia, North America, and Africa. It includes the Witch-Hazel.

Ham-a-me'lis.* [From the Gr. *ἅμα*, "like to," and *μηλίς*, an "apple-tree."] A Linnæan genus of the class *Tetrandria*, comprising several species of shrubs, natives of China and North America. The *Hamame'lis Virgin'ica* (Witch-Hazel) is a native of the United States. Also the Pharmacopœial name (U.S. 1880) for the leaves of the *Hamamelis Virginica*, collected in autumn. This drug is said to be astringent. "We have no certain knowledge of its medical properties." —(U.S. DISPENSATORY.)

Hā'mate. [Lat. **Hama'tus;** from *ha'mus*, a "hook."] In Botany, having a hook, or hooked.

Ham'ĭ-form. [Lat. **Hamifor'mis;** from *ha'mus*, a "hook," and *for'ma*, a "form."] Resembling a hook:—applied to parts of plants.

Ham'mer-Toe. A term applied to a permanent flexion of the second toe, which makes an angle upwards.

Hā'mose. [Lat. **Hamo'sus;** from *ha'mus*, a "hook."] Having a hooked appearance. The same as HAMATE.

Ham'string, Out'er. The *biceps flexor cruris* muscle.

Ham'u-lose, or **Ham'u-lous.** [Lat. **Hamulo'sus;** from *ham'ulus*, a "little hook."] Having little hooks, or covered with little hooks:—applied to parts of plants.

Ham'u-lus.* [Diminutive of the Lat. *ha'mus*, a "hook."] A little hook:—applied to the hook-like portion of the pterygoid process of the sphenoid bone, or to any similar object.

Hanche, hŏNsh. The French term for "hip." See COXA.

Han-cor'nĭ-a Spe-cĭ-o'sa.* A small tree of the order *Apocynaceæ*, a native of Brazil, where it is called *Mangaba* or *Mangava.* It bears a delicious fruit, and yields a milky juice resembling that which produces caoutchouc.

Hand. [Lat. **Ma'nus**; Fr. *Main*, mǎN.] The organ of prehension in man, extending from the wrist to the extremities of the fingers. It consists of three parts, the WRIST (or *Carpus*), the METACARPUS, and the FINGERS, which will be noticed under their respective heads. In Ornithology, the term denotes the third portion of the anterior extremity which supports the wing, having one finger, and vestiges of two others.

Handful. See MANIPULUS, and PUGILLUS.

Hang'ing. [Lat. **Suspen'sio, o'nis.**] Suspension by the neck, causing *asphyxia suffocationis.*

Hap-lo-car'dĭ-ac. [From the Gr. *ἁπλοος*, "without fold," "simple," or "single," and *καρδία*, a "heart."] Having a single heart:—applied to fishes, etc., as distinguished from Mammals, which have a double heart, and are hence termed *diplocardiac.*

Hap-toğ'en-ous, or **Hap'to-ġen.** [From the Gr. *ἅπτομαι*, to "touch," and *γεννάω*, to "produce."] A term applied to the pellicle formed around fatty matter when brought into contact with albumen.

Hap-tot'ĭ-ca.* [From the same.] The doctrine (or science) of the phenomena of touch, or sensation.

Har-de'ri Glan'du-la.* "Gland of Harder." A gland in ruminant and pachydermatous quadrupeds, and in birds, near the inner angle of the eye.

Hardhack. See SPIRÆA TOMENTOSA.

Hard'ness. Firmness; solidity; that disposition of a solid which renders it difficult to displace its parts or particles among themselves. It is an important physical property, and a distinctive character of minerals. Diamond is the hardest of all minerals. See SCALE OF HARDNESS.

Hare'-Lip. [Lat. **La'bium Lepori'num**; Fr. *Bec de Lièvre*, bĕk dẹh le-e̊vr'.] A congenital cleft, or division, of one or both lips, most frequently the upper. It is sometimes double.

Hargne, harñ. A French term for HERNIA, which see.

Haricot, hă'rĕ'ko'. A name for the seeds of the *Phase'olus vulga'ris*, and of other species of kidney-bean.

Har'ma-lane, or **Har'ma-line.** A beautiful coloring-substance obtained from the seed of the harmel-plant (*Peganum harmala*), which grows wild in the salt steppes of the Crimea. It is an alkaloid.

Har-mat'tan. A wind of the Guinea coast, which blows exceptionally three or four times a year, and continues a few days. Its temperature is about 85° F. in the shade, and 104° in the sun. Its presence causes the cessation of endemic fevers and contagious diseases.

Har'mo-nў. [Lat. **Harmo'nia**; from the Gr. *ἁρμόζω*, to "adapt."] A variety of *synarthrosis*, denoting a simple joining together, as the nasal and other bones of the face. In Physiology, the accordance or adjustment which exists between the divers functions.

Har. pil. sum. iij. = *Ha'rum pilula'rum sumantur tres.** "Let three of these pills be taken."

Har-tigh'se-a Spec-tab'ĭ-lis.* A tree of the order *Meliaceæ*, a native of New Zealand. Its leaves are bitter, and are used as a substitute for hops and as a stomachic medicine.

Harts'horn. The horn of certain kinds of the hart, or stag. The substance *Cornu Cervi.* The popular name for *Liquor Ammoniæ*, or *Ammoniæ Aqua.*

Harts'horn, Salt of. A synonyme of the Carbonate of Ammonia, or Smelling-Salt. It is a white crystalline mass, of a pungent odor and taste, and soluble in water. It is stimulant, diaphoretic, and antispasmodic.

Har'vest Bug. The *Ac'arus autumna'lis*, a variety of the tick insect which infests the skin in the autumn, producing intolerable itching, succeeded by glossy wheals. It is also called the *wheal-worm.*

Hashîsh, or **Haschisch,** hă-sheesh'. A preparation of *Cannabis Indica*, or Indian hemp, used as an intoxicating drug by the Arabs, and generally throughout Syria. It is made by boiling the leaves and flowers of the plant with water and fresh butter. See BHANG.

Has'tate. [Lat. **Hasta'tus**; from *has'ta*, a "spear."] Like a spear, or halberd; furnished with a spreading lobe on each side at the base:—applied to leaves, etc.

Has-tĭ-fo'lĭ-ous. [Lat. **Hastifo'lius**; from *has'ta*, a "spear," and *fo'lium*, a "leaf."] Having hastate leaves.

Has-tĭ-for'mis.* [From the Lat. *has'ta*, a "spear," and *for'ma*, a "form."] In Botany, resembling a spear; hastate.

Has'tĭle. [From the Lat. *has'ta*, a "spear."] The same as HASTATE.

Haunch. [Lat. **Cox'a**; Fr. *Hanche*, hǒNsh.] The region formed by the lateral parts of the pelvis and the hip-joint; the hip.

Haust. = *Haus'tus.** A "draught."

Haus'tus.* [From the Lat. *hau'rio, haus'tum*, to "drink greedily."] A liquid preparation forming one dose, generally about two ounces in quantity; a draught.

Hautbois. See FRAGARIA ELATIOR.

Haut Mal, hō măl. A French term for epilepsy in its full development,—that is, accompanied with convulsions. See EPILEPSY.

Ha-ve'ri Glan'du-læ.* "Glands of Havers." See next article.

Haversian (ha-ver'she-an) **Glands.** The name of the fatty bodies which are found in connection with most of the joints, and in general lying behind the synovial fringes. Havers supposed them to be the agents of the synovial secretion, and called them *glandulæ mucilaginosæ.* Weitbrecht called them *adipo-glandulosæ.*

Haver'sian Tubes or **Ca-năls'.** A term given, from the name of their discoverer, to a very complicated apparatus of minute canals, found in the substance of bone, and containing medullary matter. The central canal, as well as the separate cells, may be regarded as enlargements of them.

Hawk-Weed. See HIERACIUM.

Hawthorn. See CRATÆGUS.

Hay Fe'ver, or **Hay Asth'ma.** A catarrhal affection of the mucous membrane of the eyes, nose, mouth, pharynx, larynx, and bronchi, accompanied by dyspnœa, induced by the action of the pollen of various plants, chiefly of the *Graminaceæ*: prevalent during the hay-harvest in summer. The pollen of the *Papaveraceæ*, *Violaceæ*, *Cruciferæ*, *Fumariaceæ*, *Umbelliferæ*, *Geraniaceæ*, *Rosaceæ*, and *Compositæ* also induce this disease. The symptoms are violent fits of sneezing and running from the eyes and nose, with occasional pain in the head and in the frontal sinuses; then the submucous tissue of the nares swells, and both nostrils become blocked and impervious to the air.

Ha'zel-Nut. The popular name of the *Corylus Americana*. See CORYLUS.

Hb. = *Her'ba.** "The plant."

H. d. or **decub.** = *Ho'râ decu'bitûs.** "At going to bed."

Hĕad. [Lat. **Ca'put**; Gr. *κεφαλή*; Fr. *Tête*, tăt.] In higher animals, that portion which contains the brain, with the chief organs of sense, as sight, hearing, etc., as well as the mouth and organs of mastication. In lower animals, it contains the mouth, or opening to the stomach, and the principal organs of sense when these exist. The human head is distinguished into *cranium* and *face*. The term "head" is often applied to the upper end of a long bone, to the origin of a muscle, to the beginning of a part, or to any round protuberance which can be supposed to resemble a head. In Botany, a head is a dense, sessile cluster, or roundish cluster, of flowers,—the same as CAPITULUM.

Head'ache. [Lat. **Cephalal'gia.**] Pain in the head, differently denominated according to the part affected, or its cause. Pain in the head is very variable in its nature, and is produced by many causes. It is present at some period or other in the course of most acute and many chronic diseases. It presents many varieties. It may be slight or most intense, superficial or deep-seated. It may be more or less confined to particular parts, as the forehead, the temples, the occiput, or the vertex, or it may be generally diffused. The principal varieties of headache are—1, *structural headache*, depending on disease within the cranium; 2, *congestive headache*; 3, *nervous* or *sick headache*, or megrim; 4, *toxæmic headache*, which attends fevers and inflammatory disorders.

Hĕad'ing. A preparation of equal parts of alum and green vitriol, used in brewing.

Hĕalth. [Lat. **San'itas.**] The proper disposition and condition of the several parts of the body for performing their functions without impediment or sensation of weariness.

Hĕalth'ў Pus. The pus discharged from abscesses the result of phlegmonous inflammation, or from wounds and ulcers in the healing state; laudable pus.

Hear'ing. [Lat. **Audi'tus**; Fr. *Ouïe*, oo'ē'.] That sense by which sounds are distinguished, the organ of which is the ear.

Hearing, Morbid. See PARACUSIS.

Heart. [Lat. **Cor, Cor'dis**; Gr. *καρδία*; Fr. *Cœur*, kur.] A hollow muscular viscus situated between the lungs, but more under the left one, and enclosed in the pericardium; from which proceeds the circulation of the blood. In man and in other Mammals it is double,—that is, it consists of two parts, the right ventricle and auricle for the pulmonic circulation, and the left ventricle and auricle for the general or systemic circulation.

Heart'-Burn. The popular name for CARDIALGIA.

Heart'-Clot. A synonyme for THROMBUS, which see.

Heart, Ir'rĭ-ta-ble. A condition of the heart characterized by palpitation, pain, a frequent pulse, and shortness of breath.

Heart'-Shaped. The same as CORDATE:—applied to leaves, etc.

Heart-Wood. See DURAMEN.

Heat. (Fr. *Chaleur*, shă'lur'.) In a general sense, the same as CALORIC. Heat in a mild form is necessary to the life of plants and animals. In the latter, the needful temperature is in part furnished by the respiratory apparatus. Heat is also one of the most important agents the chemist or pharmacist can command for effecting both chemical union and decomposition, according to the manner in which it is applied, or the character of the substance submitted to its action. The primary effect of external heat, applied *locally* to the animal body, is that of an excitant or stimulant. Heat is employed in the treatment of disease as a general or local stimulant, a local depressant, a caustic, or a counter-irritant, and that in the form either of *dry* or of *moist* heat. The latter tends to relax the tissues, thus removing the tension and pain due to inflammation. Moist heat is employed in the form of a vapor-bath or fomentation. See FOMENTATION.

Heat, Ab'so-lūte. The whole quantity of caloric existing in a body; absolute caloric.

Heat, Animal. See CALOR ANIMALIS.

Heat, Latent. See CALORIC, LATENT.

Heat, Prick'lў. A common term for the *Lichen tropicus*.

Heat, Sensible. See CALORIC, FREE.

Heat-Spots. See ÆSTATES.

Heath Fam'ĭ-lў. A synonyme for the ERICACEÆ, which see.

Heavy Spar. See BARYTA.

Hebd. = *Hebdom'ada.** "A week."

He'be.* [Gr. *ἥβη*, "down," or "incipient beard;" hence, "youth."] Youth, or the goddess of Youth, fabled by the ancients to have been cup-bearer to Jupiter.

He-be-an'thus.* [From the Gr. *ἥβη*, "youth," "down," and *ἄνθος*, a "flower."] Having tomentose corols; hebean'thous.

Heb-e-car'pus.* [From the Gr. *ἥβη*, "youth," "down," and *καρπός*, "fruit."] Having pubescent fruits; hebecar'pous.

He-bec'la-dus.* [From the Gr. *ἥβη*, "youth," "down," and *κλάδος*, a "branch."] Having pubescent branches; hebec'ladous.

He-beġ'ў-nus.* [From the Gr. *ἥβη*, "youth," "down," and *γυνή*, a "woman," or "female."] Having pubescent ovaries; hebeġ'ynous.

Heb-e-pet'a-lus.* [From the Gr. *ἥβη*, "youth," "down," and *πέταλον*, a "petal."] Having pubescent petals; hebepet'alous.

He-be-phre'nĭ-a.* [From the Gr. *ἥβη*, "youth," "puberty," and *φρηνῖτις*, "frenzy."] A mental affection, sometimes called the insanity of pubescence, peculiar to the young at that period when they are attaining to puberty. It is usually attended with depression of spirits, which may be extreme, even sometimes tempting the sufferer to commit suicide.

He-bet'ĭ-cus.* [From the Gr. *ἥβη*, "youth," or "puberty."] Belonging to puberty; youthful; hebet'ic.

Heb'e-tude. [Lat. **Hebetu'do, dĭnis.**] Dulness, or insensibility; inability to use the mental faculties; the first degree or stage of stupor.

Heb-ra-den'dron Cam-bo-ġĭ-o-i'dēs.* A guttiferous plant, which yields a kind of gamboge not distinguishable from that of Siam.

Hec-a-to-phўl'lus.* [From the Gr. *ἑκατόν*, a "hundred," and *φύλλον*, a "leaf."] Having leaves composed of a hundred (or a great number of) folioles; hecatophyl'lous.

Hec'tic. [Lat. **Hec'ticus**; from the Gr. *ἕξις*, "habit."] (Fr. *Hectique*, ĕk'tĕk', or *Étique*, ā'tĕk'.) Belonging to habit or state of body, as distinguished from diseases which are the result of miasma or contagion.

Hec'tic Fe'ver. [Lat. **Fe'bris Hec'tica**; Fr. *Fièvre Hectique*, fe-ȧvʀ' ĕk'tĕk'.] A slow, insidious fever, idiopathic or symptomatic,—the latter arising in consequence of some incurable local disease. It commonly accompanies pulmonary consumption. It occurs in association with some wasting and exhausting disease, especially when this is accompanied by a profuse and constant drain from the system, and when there is chronic suppuration with an abundant discharge of pus. Fever of a hectic type sometimes occurs in cases of acute inflammation.

Hec-tĭ-co-pўr'e-tos,* or **Hec-tĭ-cop'ў-ra.*** [From the Gr. *ἕξις*, "habit," and *πῦρ*, or *πυρετός*, a "fever."] Hectic fever.

Hec'to-grămme. [Lat. **Hectogram'ma, a*tis*;** from the Gr. *ἑκατόν*, a "hundred," and the Fr. *gramme.*] 100 grammes; equal to 3 oz. 8 dr. 2.152 gr. avoirdupois.

Hectolitre, hĕk'to-lē'tẹr (Fr. pron. ĕk'to'lĕtr'). [From the Gr. *ἑκατόν*, a "hundred," and the Fr. *li'tre.*] 100 litres; equal to 3.5377 English cubic feet, or 22 imperial gallons, or 2¾ imperial bushels.

Hectometre, hĕk'to-mē'tẹr. (Fr. *Hectomètre*, ĕk'to'mȧtr'.) [From the Gr. *ἑκατόν*, a "hundred," and the Fr. *mètre.*] 100 metres; or 109 yards, 1 foot, 1 inch.

He-de-o'ma.* A genus of herbs of the order *Labiatæ*. Also the Pharmacopœial name (U.S. 1870, 1880) for the leaves and tops of the *Hedeoma pulegioides*, or American Pennyroyal. Pennyroyal is a stimulant aromatic and emmenagogue.

Hedeo'ma Pu-le-ġĭ-o-i'dēs.* The systematic name of the plant Pennyroyal. It is a plant of the order *Labiatæ*, a native of the United States. See preceding article.

Hed'e-ra He'lix.* (Fr. *Lierre*, le-aiʀ'.) The systematic name of the ivy, an evergreen, woody, climbing plant of the order *Araliaceæ*, a native of Europe. Ivy berries are said to be purgative. The fresh leaves are used for dressing issues, and in the form of a decoction have been recommended in sanious ulcers, tetter, and itch. Dried and powdered, they have been employed in the atrophy of children and complaints of the lungs.

Hed-e-rā'ceous. [Lat. **Hedera'ceus**; from *Hed'era*, the "ivy."] Resembling the *Hedera*, or ivy.

Hed'er-ĭne. A resinous juice which exudes from old ivy plants in warm countries. It has a vitreous fracture or lustre, and a peculiar odor when heated. It can be pulverized into an orange-yellow powder. It has been employed as a stimulant and emmenagogue.

Hedge-Hys'sop. The common name for the *Gratiola officinalis.*

Hed-wĭġ'ĭ-a Bal-sam-if-er-a.* A tree of the order *Amyridaceæ* or *Terebinthaceæ*, a native of the West Indies. It yields a liquid resin which is reputed proper to promote the cicatrization of wounds.

He-dў-os'mum.* A genus of fragrant shrubs of the order *Chloranthaceæ* or *Piperaceæ*, natives of Brazil and other parts of tropical America. *H. arborescens* and *H. nutans* are employed in Jamaica as antispasmodic.

Hedyos'mum Bon-plan-dĭ-a'num.* A shrub, a native of Brazil, used as a remedy for pernicious fevers.

Hei'mĭ-a Sal-ĭ-çĭ-fo'lĭ-a.* A shrub of the order *Lythraceæ*, a native of Mexico and Texas. The Mexicans consider it a remedy for venereal diseases.

Hel-coc'a-çē.* [From the Gr. *ἕλκος*, an "ulcer," and *κάκη*, "corruption."] Malignant ulcer.

Hel-co'dēs.* [From the Gr. *ἕλκος*, an "ulcer."] Having ulcers, or full of ulcers.

Hel-çœ-de'ma, a*tis.* [From the Gr. *ἕλκος*, an "ulcer," and *οἴδημα*, a "tumor."] Œdematous ulceration.

Hel'coid. [Lat. **Helcoi'des**; from the Gr. *ἕλκος*, an "ulcer," and *εἶδος*, a "form" or "resemblance."] Resembling an ulcer.

Hel-col'o-ġў. [Lat. **Helcolo'gia**; from the Gr. *ἕλκος*, an "ulcer," and *λόγος*, a "discourse."] A history of ulcers; that branch of medicine which treats of ulcers.

Hel-co-me'nĭ-a.* [From the Gr. *ἕλκος*, an "ulcer," and *μήν*, a "month."] Metastasis of the catamenia to an ulcer; a sort of vicarious menstruation.

Hel-coph-thăl'mĭ-a.* [From the Gr. *ἕλκος*, an "ulcer," and *ὀφθαλμός*, the "eye."] Ulcerous ophthalmia.

Hel'co-plas'tў. [From the Gr. *ἕλκος*, an "ulcer" or "sore," and *πλάσσω*, to "form."] The operation of grafting or transplanting (so to speak) on an ulcer a piece of healthy skin from another part of the body.

Hel-co'sis.* [From the Gr. ἕλκος, an "ulcer."] The progress of ulceration.

Hel-çyd'rĭ-on.* [Gr. ἑλκύδριον, a "little ulcer."] A superficial ulcer on the cornea.

Hel'e-nin, or **Hel'e-nĭne.** Elecampane Camphor, a volatile crystalline solid, obtained from the *Inu'la Hele'nium.*

He-le'nĭ-um.* A genus of plants of the order *Compositæ*, comprising several species, natives of the United States. The *Hele'nium autumna'le*, or Sneeze-Weed, is a sternutatory.

He-lĭ-am'pho-ra Nu'tans.* A curious herbaceous plant of the order *Sarraceniaceæ*, a native of Guiana. The petiole of its leaf is in the form of a pitcher. It is the only species of the genus.

He-lĭ-an'the-mum.* Frostweed, or Frostwort. The Pharmacopœial name (U.S. 1870) for the herb of the *Helianthemum Canadense*, a plant of the order *Cistaceæ*, found in many of the United States. It appears to possess tonic and astringent properties.

He-lĭ-an'thus An'nu-us.* The common Sunflower, a plant of the order *Compositæ*, a native of tropical America. It is cultivated in Europe and the United States for the oil which is obtained from its seeds. This is a good oil for burning in lamps.

He-lich'rў-sum.* [From the Gr. ἥλιος, the "sun," and χρυσός, "gold."] Immortelle. A genus of herbaceous plants of the order *Compositæ*, comprising many species, natives of Southern Africa and Australia. They have a radiate scarious involucre, which is very conspicuous and retains its elegant form and brilliant color when dried. The *H. orientale*, a native of Africa, bearing yellow flowers, is one of the plants which the French call *Immortelle.*

Hel'ĭ-çĭne. [Lat. **Helici'nus**; from the Gr. ἕλιξ, a "coil."] Like a coil or spiral. The helicine arteries (*arte'riæ helici'næ*) are minute arteries resembling in form the tendrils of a vine, and penetrating the *corpus spongiosum* of the penis.

Hel-ĭ-co'dēs.* [From the Gr. ἕλιξ, a "coil," or anything spiral.] Full of windings; helicose:—applied to a tunic of the spermatic cord.

Hel'ĭ-coid. [Lat. **Helicoi'des**; from the Gr. ἕλιξ, a "coil," and εἶδος, a "form" or "resemblance."] Resembling that which is spiral; coiled like a helix or snail-shell:—applied to parts of plants.

Hel'ĭ-co-tre'ma.* [From the Gr. ἕλιξ, a "coil," and τρῆμα, a "hole."] The foramen by which the scalæ of the internal ear communicate.

He-lic'u-lus.* [Diminutive of the Lat. *he'lix* or the Gr. ἕλιξ, a "coil."] A term applied in the plural (*Helic'uli*) to the spiral vessels of plants; a hel'icule.

He-lĭ-o-çen'tric. [Lat. **Heliocen'tricus**; from the Gr. ἥλιος, the "sun," and κεντρικός, "centric."] Having the sun for the centre, or point of observation.

He-lĭ-o-i'dēs.* [From the Gr. ἥλιος, the "sun," and εἶδος, a "form" or "resemblance."] Resembling the sun; he'lioid.

He-lĭ-om'e-ter. [Lat. **Heliom'etrum**; from the Gr. ἥλιος, the "sun," and μέτρον, a "measure."] An instrument for measuring the apparent diameter of the sun.

He'lĭ-o-scope. [Lat. **Heliosco'pium**; from the Gr. ἥλιος, the "sun," and σκοπέω, to "observe."] An instrument for observing the sun.

He'lĭ-o-stat.* [From the Gr. ἥλιος, the "sun," and ἵστημι, to "stand," to "cause to stand still."] An instrument by which the sunbeam can, by clock-work, be steadily directed to one spot during the whole of its diurnal period.

He-lĭ-o-tro'pĭ-ous. [Lat. **Heliotro'pius**; from the Gr. ἥλιος, the "sun," and τρέπω, to "turn."] A term applied to plants the flowers of which turn constantly towards the sun.

He'lĭ-o-tro-pis'mus.* [From the Gr. ἥλιος, the "sun," and τρέπω, to "turn."] That faculty by which certain plants constantly turn their flowers to the sun; heliot'ropism.

He-lĭ-o-tro'pĭ-um.* [From the same.] A genus of plants of the natural order *Boraginaceæ*, comprising many species, the popular name of which is *Heliotrope.* The *Heliotro'pium Peruvia'num*, a native of Peru, is cultivated for its vanilla-scented flowers. The *Heliotro'pium Europæ'um* is said to have aperient properties.

Heliotro'pium In'dĭ-cum.* A plant, a native of India, employed by the Hindoos as a remedy for headache.

He'lix, ic'es.* [Gr. ἕλιξ; from εἰλέω, or εἰλίσσω, to "wind about."] Literally, a "coil," or anything spiral. The outer border of the *pinna*, or external ear. Also the snail, a genus of *Mollusca*, order *Pulmonea.*

Hel-le-bo-rā'ceous. [Lat. **Helleborā'ceus.**] Having an arrangement of parts as in *Helleborus.*

Hel'le-bore. A plant. See HELLEBORUS.

Hellebore, American. See VERATRUM VIRIDE.

Hel-le-bo're-us.* Belonging to hellebore.

Hel-leb'o-rin, or **Hel-leb'o-rĭne.** An acrid oil, said to contain the acrid principle of the *Helleborus niger*, Black Hellebore, or Christmas rose.

Hel-leb'o-rus.* [Gr. ἑλλέβορος.] Black Hellebore. A Linnæan genus of the class *Polyandria*, natural order *Ranunculaceæ*, comprising several species, natives of Europe and Central Asia. Also the Pharmacopœial name (U.S. 1870) for the root of *Helleborus niger.* Hellebore is a drastic hydragogue cathartic: it also possesses diuretic and emmenagogue properties.

Helleb'orus Al'bus.* A Pharmacopœial name of white hellebore root. See VERATRUM ALBUM.

Helleb'orus Fœt'ĭ-dus.* "Fetid Hellebore." Bear's-Foot, an exotic plant, the leaves of which have been extolled as a remedy for the *Ascaris lumbricoides.* It is very acrid, powerfully emetic and cathartic, and, in large doses, is dangerous. A decoction of the leaves is an efficacious anthelmintic, and has been prescribed in asthma and hysteria.

Helleb'orus Ni'ger,* Helleb'orus Of-fiç-ĭ-na'lis.* Systematic names of Black Hellebore,

or *Melampodium*. It is a native of Europe, and is called Christmas Rose because it blooms in winter.

Helleb'orus O-rĭ-en-ta'lis.* "Oriental Hellebore," a native of Greece and the island of Anticyra, and probably the "hellebore" of the ancient authors. The root was formerly extolled in mania, epilepsy, and dropsy. It is still used in the Levant.

Hel'met. [Lat. **Ga'lea.**] In Botany, the upper sepal of Monk's-hood, or the upper lip of a ringent corolla, as that of *Lamium*.

Hel-min'thą-gŏgue. [Lat. **Helminthago'gus**; from ἕλμινς, ἕλμινθος, a "worm," and ἄγω, to "carry or drive away."] The same as ANTHELMINTIC.

Hel-min'thēs.* [From the Gr. ἕλμινς, ἕλμινθος, a "worm."] A class or division in Zoology, including the various kinds of worms.

Hel-min-thi'a-sis,* or **Hel-min'thĭ-a.*** [From the Gr. ἕλμινς, ἕλμινθος, a "worm."] The breeding of worms, or *larvæ*, in any part of the body. The condition of system on which the development of worms, in any part of the body, depends.

Hel-min'thic. [Lat. **Helmin'thicus**; from the Gr. ἕλμινς, ἕλμινθος, a "worm."] Belonging to worms:—a synonyme for *anthelminthic*.

Hel-min-tho'dēs.* [From the Gr. ἕλμινς, a "worm."] Having worms, or full of worms.

Hel-min'thoid. [Lat. **Helminthoi'des**; from the Gr. ἕλμινς, a "worm," and εἶδος, a "form" or "resemblance."] Resembling a worm.

Hel-min-thol'o-ġў. [Lat. **Helmintholo'gia**; from the Gr. ἕλμινς, a "worm," and λόγος, a "discourse."] A treatise on worms,—particularly intestinal worms; that branch of medicine which treats of intestinal worms.

Hel-min-thoph'thĭ-sis.* [From the Gr. ἕλμινς, a "worm," and φθίσις, a "wasting away."] *Tabes verminosa*, or wasting from the presence of intestinal worms.

Hel-min-thop'ў-rą.* [From the Gr. ἕλμινς, a "worm," and πῦρ, or πυρετός, a "fever."] Worm-fever.

He-lo'bĭ-us.* [From the Gr. ἕλος, a "marsh," a "pool," and βίος, "life."] Living in marshes; aquatic:—applied to plants.

He-lo'dēs.* [From the Gr. ἕλος, a "marsh," a "pool."] Full of moisture:—applied to a fever with profuse sweating; also to marsh fever.

He-lo'nĭ-as.* A genus of plants of the order *Liliaceæ*, mostly natives of the United States. *Helonias bullata* is a rare and local plant, a native of New Jersey and Virginia. It bears beautiful flowers.

Helo'nias Di-oi'cą,* or **Cha-mæ-lir'ĭ-um Lu'te-um.*** Blazing Star, or Devil's Bit, a perennial bulbous plant, a native of New York, Pennsylvania, and many other States. It is tonic, and has been employed with success in atony of the generative organs and leucorrhœa.

Helo'nias Of-fĭç-ĭ-na'lis.* A synonyme for *Asagræa officinalis*.

He-lop'ў-rą.* [From the Gr. ἕλος, a "marsh," and πυρετός, a "fever."] Marsh or swamp fever.

He'los.* [Gr. ἦλος; Lat. **Cla'vus**, a "nail."] A name given to the tumor formed by *prolapsus* (or *procidentia*) *iridis*, supposed to resemble a nail.

He-lo'sis.* [From the Gr. εἴλω,[1] to "turn"?] The eversion or turning out of the eyelids:—applied also to convulsions of the muscles of the eye.

Helwingiaceæ,* hel-win-je-a'she-ē. A natural order of exogenous shrubs, which appears to be composed of a single genus, *Helwin'gia*, found in Japan. Some botanists place this genus in the order *Araliaceæ*.

Hemacyanin, or **Hematocyanin.** See HÆMATOCYANINA.

Hemal. See HÆMAL.

Hémaproctie, ā'mā'prok'tē'. [From the Gr. αἷμα, "blood," and πρωκτός, the "anus."] A French term for PILES, which see.

Hematic. See HÆMATIC.

Hematite. See HÆMATITE.

Hem-e-rą-lo'pĭ-ą.* [From the Gr. ἡμέρα, a "day," and ὤψ, the "eye."] A defect of vision by which objects are seen only in broad daylight; day-sight; night-blindness:—also applied to a disorder of vision in which objects cannot be seen well or without pain by daylight.

Hem-e-rą-pho'nĭ-ą.* [From the Gr. ἡμέρα, a "day," *a*, priv., and φωνή, the "voice."] Loss of voice during the day.

Hem-e-rod'ro-mus.* [From the Gr. ἡμέρα, a "day," and δρόμος, a "course."] A term applied to a fever which runs its course in a day. The same as EPHEMERA.

Hem-e-rot-ў-phlo'sis.* [From the Gr. ἡμέρα, a "day," and τύφλωσις, "blindness."] Day-blindness, or *nyctalopia*.

Hem-ĭ-an-æs-the'sĭ-ą.* [From the Gr. ἡμισυς, "half," and the Lat. *anæsthe'sia*: see ANÆSTHESIA.] Paralysis in which there is loss of sensation on one side of the body.

Hem-ĭ-an-ăl-ġe'sĭ-ą.* [From the Gr. ἡμισυς, "half," *αν*, priv., and ἄλγος, "pain."] Insensibility to painful impressions in one half of the body.

Hem-ĭ-an-op'sĭ-ą.* [From the Gr. ἡμισυς, "half," ἀν (for ἀνά), "each," and ὄψις, "sight."] Literally, "half-sight." An affection characterized by blindness of one lateral half of each eye.

Hem-ĭ-car'pus.* [From the Gr. ἡμισυς, "half," and καρπός, "fruit."] Each portion of a fruit which naturally separates itself into halves. The term *hemicarp* is applied to one of the two carpels of an umbelliferous plant.

Hem-ĭ-çeph'ą-lus.* [From the Gr. ἡμισυς, "half," and κεφαλή, a "head."] A monster-fœtus with half a head.

Hem-ĭ-cho-re'ą.* [From the Gr. ἡμισυς, "half," and the Lat. *chore'a*.] A form of chorea which affects only one side of the patient.

[1] A very unsatisfactory etymology. *Helosis* cannot properly be derived from εἴλω.

Hem-ĭ-cra'nĭ-a.* [From the Gr. *ἡμισυς*, "half," and *κρανίον*, the "head."] (Fr. *Migraine*, mè'grăn'.) A severe pain, generally hysterical, nervous, or bilious, affecting one half or side of the head; a megrim.

Hem-ĭ-cran'ĭ-cus.* Belonging to hemicrania.

Hem-ĭ-des'mus In'dĭ-cus.* An asclepiadaceous plant, the root of which is used in India under the name of *Country Sarsaparilla*. It has been called Indian or Scented Sarsaparilla. It is diuretic and tonic, and is used as a substitute for sarsaparilla.

Hem-ĭ-dī-a-pho-re'sis.* [From the Gr. *ἡμισυς*, "half," and the Lat. *diaphore'sis*.] A perspiration which affects only one half of the body.

Hem-ĭ-he'dral, or **Hem-ĭ-ed'ric.** [From the Gr. *ἡμισυς*, "half," and *ἕδρα*, a "base."] Having half faces or facets. Crystals having half the number of planes required by the general law of symmetry are called *hemihedral*.

Hem-ĭ-o-păl'gĭ-a.* [From the Gr. *ἡμισυς*, "half," *ὤψ*, the "eye," and *ἄλγος*, "pain."] Hemicranic pain of the eye.

Hem-ĭ-o'pĭ-a,* or **Hem-ĭ-op'sis.*** [From the Gr. *ἡμισυς*, "half," and *ὄπτομαι*, to "see."] Disordered vision in which the patient sees only the half of an object.

Hem-ĭ-pho'nĭ-a.* [From the Gr. *ἡμισυς*, "half," implying imperfection, and *φωνή*, "voice."] Great weakness of the voice, such as occurs in some diseases.

Hem-ĭ-ple'gĭ-a,* Hem-ĭ-plex'ĭ-a.* [From the Gr. *ἡμισυς*, "half," and *πλήσσω*, to "strike."] Paralysis affecting one half or side of the body; *paralysis hemiplegica*.

Hem-ĭ-pleg'ic. [Lat. **Hemipleg'icus.**] Belonging to hemiplegia.

Hemiplexicus.* See HEMIPLEGIA.

He-mip'ter-a.* [See HEMIPTERUS.] An order of insects which have one half of their wings thick and coriaceous and the other half membranous, as the bug, tick, etc.

Hem-ip'ter-o-lo'gĭ-a.* [From the Gr. *ἡμισυς*, "half," *πτέρον*, a "wing," and *λόγος*, a "discourse."] A treatise on the *Hemiptera*.

Hem-ip'ter-ous. [Lat. **Hemip'terus**; from the Gr. *ἡμισυς*, "half," and *πτέρον*, a "wing."] Half-winged:—applied to an order of insects. See HEMIPTERA.

Hem'ĭ-sphere. [From the Gr. *ἡμισυς*, a "half," and *σφαῖρα*, a "sphere."] The half of a sphere:—applied to a half of the earth or terrestrial globe. The equator divides the earth into two parts,—the Northern and Southern Hemispheres. The term is applied in Anatomy to the two parts which constitute the upper portion of the cerebrum. They are separated by the *falx cerebri*.

Hem-ĭ-spher'ĭ-cal. [From the same.] Having the form of a hemisphere.

He-mit'rĭ-chous. [From the Gr. *ἡμισυς*, "half," and *θρίξ*, "hair."] In Botany, half covered with hair.

He-mit'ro-pous. [Lat. **Hemit'ropus**; from the Gr. *ἡμισυς*, "half," and *τρέπω*, to "turn."] A term applied to a crystal formed of two parts or halves regularly united, but as if the superior had undergone a revolution upon the inferior. In Botany, *hemitropous* or *hemitropal* is nearly the same as AMPHITROPOUS, which see.

Hem'lock. The *Conium maculatum*.

Hem'lock, or **Hem'lock Spruce.** The popular name of the *A'bies Canaden'sis*.

Hem'lock Pitch. The *Pix Canadensis*.

Hemoglobin. See HÆMOGLOBIN.

Hémoptysie, ā'mop'tē'zē'. The French term for HÆMOPTYSIS, which see.

Hemorrhage. See HÆMORRHAGE.

Hémorrhagie, ā'mo'rā'zhē'. The French term for HÆMORRHAGIA, which see.

Hémorrhoïdes, ā'mo'ro'ĕd'. A French term for PILES, which see.

Hemp. See CANNABIS.

Hemp'-Seed Cal'cu-lus. The name of some varieties of the mulberry calculus, which are remarkably smooth and pale-colored, resembling hemp-seed.

Hen'bane. [Lat. **Hyoscy'amus.**] A powerful narcotic plant, said to be poisonous to the domestic fowl. See HYOSCYAMUS.

Hen'bane, Black. The *Hyoscyamus niger*.

Hen-Blind'ness. Inability to see except by daylight:—so termed because hens are said to be subject to it.

Hen-dec'a-gon. [Lat. **Hendecago'num**; from the Gr. *ἑνδεκα*, "eleven," and *γωνία*, an "angle."] A figure having eleven equal angles and sides.

Henne, hĕn'nẹh, or **Hen'na.** A substance procured in Egypt, India, Persia, and Syria from the *Lawso'nia iner'mis*, with which the women stain their fingers and feet. Also used for dyeing skins of a reddish color. The leaves of the plant constitute the henna of commerce. It is astringent, and is used in medicine internally and locally as a remedy in jaundice and leprosy. A water distilled from the flowers is employed as a perfume.

Hensloviaceæ,* hen-slo-ve-a'she-ē. [From *Henslo'via*, the only genus.] A small natural order of exogenous trees, natives of India.

He'par,* gen. **Hep'a-tis.** [From the Gr. *ἧπαρ*, *ἥπατος*, the "liver."] The liver, or organ which secretes the bile. (See LIVER.) The term *hepar*, or "liver," was formerly applied to the combinations of sulphur with alkalies, from their liver-like appearance.

He'par An-tĭ-mo'nĭ-i.* "Liver of Antimony." An oxysulphuret of antimony.

He'par Cal'cis,* called also **Cal'cis Sulphu-re'tum.*** A crude bisulphuret of calcium, recommended as an external application to *Crusta lactea*.

He'par Sul'phu-ris.* "Liver of Sulphur." The old Pharmaceutical name of a liver-brown sulphuret of potash.

Hep-a-tăl'gĭ-a.* [From the Gr. *ἧπαρ*, the "liver," and *ἄλγος*, "pain."] Pain affecting the liver. See HEPATODYNIA.

Hep-a-taux'e.* [From the Gr. *ἡπαρ*, the "liver," and *αὐξη*, "increase."] Enlargement of the liver.

Hep-a-tem-phrax'is.* [From the Gr. *ἡπαρ*, the "liver," and *ἔμφραξις*, "obstruction."] Obstruction of the liver.

Hep-at-hæm-or-rha'ğĭ-a.* [From the Gr. *ἡπαρ*, the "liver," and *αἱμορῥαγία*, an "eruption of blood."] Hemorrhage from the liver.

Hep-at-hel-co'sis.* [From the Gr. *ἡπαρ*, the "liver," and *ἕλκωσις*, "ulceration."] Ulceration of the liver.

He-pat'ic. [Lat. **Hepat'icus**; from the Gr. *ἡπαρ*, *ἡπατος*, the "liver."] Belonging to the liver:—applied to vessels, ducts, etc.

Hepat'ic Air. Another name for sulphuretted hydrogen gas:—so called, it would seem, because commonly produced by the action of hydrochloric acid on the *Hepar antimonii*.

Hepat'ic Flux. Bilious Flux. The name given in the East to a variety of dysentery, in which there is a frequent flow of bilious fluid from the bowels.

He-pat'ĭ-ca.* [From the Lat. *hepat'icus*, "belonging to the liver."] Liverwort. A genus of plants belonging to the Linnæan class *Polyandria*, natural order *Ranunculaceæ*, so named on account of a fancied resemblance to the liver in the shape of its leaves. Also the Pharmacopœial name (U.S. 1870) for the leaves of the *Hepat'ica America'na* or *tril'oba*. It is a mild demulcent tonic.

Hepat'ica Tril'o-ba.* The systematic name of Liver-leaf, an apetalous, herbaceous plant, a native of Europe and the Northern United States. It bears beautiful blue flowers in early spring.

He-pat'ĭ-çæ.* A natural order of flowerless plants, related to Mosses, found in damp, shady places.

He-pat'ĭ-co-col'ĭ-cus.* [From the Lat. *hepat'icus*, "hepatic," and *col'icus*, "of the colon."] Belonging to the liver and colon.

He-pat'ĭ-co-re-na'lis.* [From the Lat. *hepat'icus*, "hepatic," and *rena'lis*, "of the kidney."] Belonging to the liver and kidney.

He-pat'ĭ-cus.* Dull brown with a little yellow. See HEPATIC.

Hep-a-tir-rhœ'a.* [From the Gr. *ἡπαρ*, the "liver," and *ῥέω*, to "flow."] A purging, with bilious evacuations. See HEPATORRHŒA.

Hépatite. See HEPATITIS.

Hep-a-tit'ĭ-cus.* Belonging to hepatitis.

Hep-a-ti'tis, i'dis.* [From the Gr. *ἡπαρ*, the "liver."] (Fr. *Hépatite*, ā'pā'tēt'.) Inflammation of the liver. A genus of the order *Phlegmasiæ*, class *Pyrexiæ*, of Cullen's nosology. It is most prevalent in hot climates. The chief causes of it are exposure to heat and to changes of temperature, irregular habits, and spirit-drinking.

Hep-a-tĭ-zā'tion. [Lat. **Hepatiza'tio, o'nis**; from the Gr. *ἡπαρ*, the "liver."] A change of structure in the lungs, or other tissue, into a liver-like substance.

Hepatiza'tion, Gray. A term applied in pneumonia to the stage of purulent infiltration into the substance of the lungs.

Hepatiza'tion, Red. A term applied in pneumonia to the first stage of consolidation of the substance of the lungs.

Hep'a-to-çēle.* [From the Gr. *ἡπαρ*, the "liver," and *κήλη*, a "tumor."] Hernia in which a part of the liver protrudes through the abdominal parietes.

Hep'a-to-çÿs'tic. [From the Gr. *ἡπαρ*, the "liver," and *κύστις*, the "bladder."] Pertaining to the liver and gall-bladder.

Hep-a-to-dÿn'ĭ-a.* [From the Gr. *ἡπαρ*, the "liver," and *ὀδύνη*, "pain."] Chronic pain in the liver. Nearly the same as HEPATALGIA.

Hep-a-to-gas'tric. [From the Gr. *ἡπαρ*, the "liver," and *γαστήρ*, the "stomach."] A term applied to the smaller omentum, which passes from the liver to the stomach.

Hep-a-tog'ra-phÿ. [Lat. **Hepatogra'phia**; from the Gr. *ἡπαρ*, the "liver," and *γράφω*, to "write."] A description of the liver, its attachments, functions, etc.

Hep-a-tol'ĭ-thus.* [From the Gr. *ἡπαρ*, the "liver," and *λίθος*, a "stone."] Calculus or concretion in the liver.

Hep-a-tol'o-ğÿ. [Lat. **Hepatolo'gia**; from the Gr. *ἡπαρ*, the "liver," and *λόγος*, a "discourse."] A treatise on the liver; the science which treats of the anatomy, functions, and diseases of the liver.

Hep-a-ton'cus.* [From the Gr. *ἡπαρ*, the "liver," and *ὀγκός*, a "swelling."] Chronic hepatitis, or swelling of the liver.

Hep-a-to-phleg'mon, or **Hep-a-to-phleg'mo-ne.*** [From the Gr. *ἡπαρ*, the "liver," and *φλεγμονή*, "inflammation."] The same as HEPATITIS.

Hep-a-toph'thĭ-sis,* or **Hep-a-toph'tho-e.*** [From the Gr. *ἡπαρ*, the "liver," and *φθίσις*, "consumption," or *φθόη*, a "wasting."] Consumption, decay, or wasting, of the liver.

Hep-a-toph-tho'ĭ-cus.* Of, or belonging to, hepatophthöe.

Hep-a-to-phy'ma.* [From the Gr. *ἡπαρ*, the "liver," and *φῦμα*, a "suppurating tumor."] A suppuration of the liver.

Hep-a-tor-rha'ğĭ-a.* [From the Gr. *ἡπαρ*, the "liver," and *ῥήγνυμι*, to "burst forth."] A discharge (of blood) from the liver.

Hep-a-tor-rhex'is.* [From the Gr. *ἡπαρ*, the "liver," and *ῥῆξις*, a "rupture."] Rupture of the liver.

Hep-a-tor-rhœ'a.* [From the Gr. *ἡπαρ*, the "liver," and *ῥέω*, to "flow."] A flow of blood from the liver.

Hep-a-to-to'mĭ-a,* or **Hep-a-tot'o-mÿ.** [From the Gr. *ἡπαρ*, the "liver," and *τέμνω*, to "cut."] Dissection of the liver, or cutting into the liver.

Hep'ta-gon. [Lat. **Heptago'num**; from the Gr. *ἑπτά*, "seven," and *γωνία*, an "angle."] A plane figure having seven equal angles and sides.

Hep-ta-ğÿn'ĭ-ous. [Lat. **Heptagyn'ius**; from the Gr. *ἑπτά*, "seven," and *γυνή*, a "woman," or "female."] Having seven pistils.

Hep-tam'er-ous. [From the Gr. *ἑπτά*, "seven," and *μέρος*, a "part."] Having seven of each part or organ:—applied to a flower that has seven stamens, seven petals, etc.

Hep-tăn'drĭ-a.* [From the Gr. *ἑπτά*, "seven," and *ἀνήρ, ἀνδρός*, a "man," or "male."] The seventh Linnæan class of plants, including those which have seven stamens in each flower.

Hep-tan'drĭ-ous, or **Hep-tan'drous.** [Lat. **Heptan'drius**; from the same.] Having seven stamens.

Hep-ta-pet'a-lous. [Lat. **Heptapet'alus**; from the Gr. *ἑπτά*, "seven," and *πέταλον*, a "petal."] Having seven petals.

Hep-ta-phyl'lous. [Lat. **Heptaphyl'lus**; from the Gr. *ἑπτά*, "seven," and *φύλλον*, a "leaf."] Having seven leaves:—also applied to a leaf composed of seven leaflets.

Hep-ta-pleū'rus.* [From the Gr. *ἑπτά*, "seven," and *πλευρόν*, a "rib."] Having seven ribs.

Hep-ta-sep'a-lus.* [From the Gr. *ἑπτά*, "seven," and the Lat. *sep'alum*, a "sepal."] Having seven sepals; heptasep'alous.

Hep-ta-sper'mous. [Lat. **Heptasper'mus**; from the Gr. *ἑπτά*, "seven," and *σπέρμα*, a "seed."] Having seven seeds.

Hĕr-a-cle'um.* [Named in honor of Ἡρακλῆς, Hercules.] Cow Parsnip. A genus of plants of the order *Umbelliferæ*, comprising many species, natives of India, Europe, and America.

Heracle'um La-na'tum.* A perennial, strong-scented plant, a native of the United States. Its root has been prescribed for epilepsy. It appears to be somewhat stimulant and carminative.

Heracle'um Sphon-dȳl'ĭ-um.* An acrid plant, a native of Europe. Its root is reputed to be tonic. Its root and fruit have been used (in lotion) for the itch.

Her'ba.* (Fr. *Herbe*, ĕʀb.) An herb. A plant with a soft and succulent stalk, which dies to the root every year. A plant of which the stem does not become woody and persistent.

Her-ba'ceous. [Lat. **Herba'ceus**; from *her'ba*, an "herb."] Having soft stalks, and perishing to the root each year; not woody; of a tender consistence; of the nature of an herb.

Herb'age. [From the same.] A term applied to herbs taken collectively; grass; pasture.

Herb'al-ist, or **Herb'o-rist.** One who deals in plants, or one who is skilled in herbs.

Her-ba'rĭ-um.* [From the Lat. *her'ba*, an "herb," and *-arium*, a Latin termination denoting a repository, or the place where anything is kept. See OVARIUM.] (Fr. *Herbier*, ĕʀ'bĕ-ā'.) A collection of dried specimens of plants systematically arranged; a *hortus siccus.*

Herbe. See HERBA.

Herbier. See HERBARIUM.

Her-biv'o-ra.* (Fr. *Herbivores*, ĕʀ'bĕ'vᴏʀ'.) A term applied to animals of the order *Ungulata.* See HERBIVOROUS.

Her-biv'or-ous. [Lat. **Herbiv'orus**; from *her'ba*, an "herb," and *vo'ro*, to "devour."] Feeding on herbs or grass.

Héréditaire. See HEREDITARY.

He-red'ĭ-ta-rȳ. [Lat. **Hæredita'rius**; from *hæ'res, hære'dis*, an "heir."] (Fr. *Héréditaire*, ā'rā'dē'tĕʀ'.) Derived by inheritance; transmitted from parent to offspring.

He-red'ĭ-tȳ. [See preceding article.] (Fr. *Hérédité*, ā'rā'de'tā'.) A term used to denote the principle or law according to which animals or plants inherit the characteristics of the parents or ancestors from which they are sprung. Not only is a tendency to disease, but diseases themselves are often transmitted from a parent to his offspring.

Her-maph'ro-dīte. [Lat. **Hermaphrodi'tus**; Hermaphroditus was fabled to be the son of *Her'mes* (or Mercury) and *Aphrodi'te* (or Venus), and to have united both sexes in one person.] One in whom either the male organs of generation are too slightly, or the female too highly, developed, in either case approaching in size and resemblance those of the opposite sex. In Botany, the term denotes a flower which contains stamens and pistils within the same blossom.

Her-maph-ro-dit'ic. [Lat. **Hermaphrodit'icus.**] Belonging to a hermaphrodite.

Her-met'ic, or **Her-met'ĭ-cal.** [Lat. **Hermet'icus**; from Ἑρμῆς, Mercury, who is said to have invented chemistry.] Belonging to chemistry.

Hermet'ic Seal. The closing of the end of a glass vessel or tube while in a state of fusion. When a tube or vessel is closed by fusion, so that not even the most volatile substance can pass in or out, it is *hermetically* sealed.

Her-mo-dac'tȳ-lus.* The ancient name of a plant supposed to be colchicum. *Hermodactyl* is the name of a bulb or root which is sold in the shops of Europe. Some botanists think it is the *Colchicum variegatum*, and others affirm it to be the *Iris tuberosa.* This drug is seldom used. It is amylaceous, and is nearly without action on the system.

Her-nan'dĭ-a.* A genus of exogenous trees, the station of which in the natural system is regarded as doubtful. They have apetalous and monœcious flowers, and are nearly related to the *Lauraceæ.* The genus comprises several species, natives of the East and West Indies. The bark and seed of *Hernandia sonora* are purgative, and the juice of the leaves is a powerful depilatory.

Her'nĭ-a.* [From the Gr. *ἔρνος* or *ἔρνος*, a "branch," or something given off.] (Fr. *Hargne*, ăʀñ, or *Hernie*, ĕʀ'nē'.) In popular language, a "rupture;" a tumor formed by the protrusion of any of the viscera of the abdomen beyond its parietes; also displacement of any part from its normal cavity. A genus of the order *Ectopiæ*, class *Locales*, of Cullen's nosology.

HER'NIA CER'EBRI.* "Hernia of the Brain." Protrusion of the substance of the brain through the fontanels, or through an opening made by a fracture, a trephine, etc.

HER'NIA, CONGEN'ITAL. [Lat. *Her'nia Congen'ita.*] Hernia existing at birth.

HER'NIA CRURA'LIS.* "Crural Hernia." Femoral hernia, or a protrusion under Poupart's ligament. The passage through which the hernia descends is variously called the *crural*, or *femoral ring*, and *crural canal.*

HER'NIA HUMORA'LIS.* "Humoral Hernia." A term applied to acute inflammation of the testicle, or swelled testicle. See ORCHITIS.

HER'NIA, IN'GUINAL. [Lat. *Her'nia Inguina'lis.*] Bubonocele, or hernia at the groin. It is *incomplete*, or *oblique*, when it does not protrude through the abdominal ring, and *complete*, or *direct*, when it passes out at that opening.

HER'NIA, UMBIL'ICAL. [Lat. *Her'nia Umbilica'lis.*] Omphalocele, or exomphalos. Hernia of the bowels at the umbilicus.

HER'NIA VARICO'SA.* "Varicose Hernia." Another name for *Circocele.*

Herniaire. See HERNIAL.

Her'nĭ-al. (Fr. *Herniaire*, ĕR'nè'ĕR', *Hernié*, ĕR'nè'ā', or *Hernieux*, ĕR'ne-uh'.) Belonging to hernia.

Hernie. See HERNIA.

Hernie Ombilicale. See HERNIA, UMBILICAL.

Hernié. See HERNIAL.

Hernieux. See HERNIAL.

Her-nĭ-ot'o-mў. [Lat. **Hernioto'mia**; from *her'nia*, and the Gr. *τέμνω*, to "cut."] The operation for strangulated hernia.

He-ro'ic. [Lat. **Hero'icus**; from the Gr. *ἥρως*, a "hero."] A term applied to certain remedies, from their potency or severity.

Her'pēs, e'tis.* [From the Gr. *ἕρπω*, to "creep."] *Serpigo*, or Tetter, a skin disease in which little itchy vesicles increase, spread, and cluster together, terminating in furfuraceous scales. A genus of the order *Dialyses*, class *Locales*, of Cullen's nosology.

Her'pes Cir-cĭ-na'tus.* Ringworm:—also called *Herpes serpigo.*

Her'pes Ex'e-dens.* "Corroding Herpes." A species of herpes in which there is a rapid spreading of the disease.

Her'pes La-bĭ-a'lis.* "Herpes of the Lip." A form of herpes attacking the lips: it is occasionally diffused on the velum and palate.

Her'pes Ser-pi'go.* *Herpes circinatus*, or ringworm.

Her'pes Zos'ter.* [See ZOSTER.] Herpes spreading across the waist, or thorax, like a sash or sword-belt:—commonly called *shingles.*

Her-pet'ic. [Lat. **Herpet'icus.**] Belonging to *herpes*, or tetter.

Her-pet-ĭ-for'mis.* [From the Lat. *her'pes*, "tetter" or "cutaneous eruption," and *for'ma*, a "form."] Having the appearance of *herpes.*

Her'pe-tism. [From the Lat. *her'pes*, "tetter."] A constitutional tendency to *herpes* or similar affections.

Her-pe-tog'rą-phў. [Lat. **Herpetogra'phia**; from *her'pes*, "tetter," and the Gr. *γράφω*, to "describe."] A description of *herpes.*

Her-pe-tol'o-ġў. [Lat. **Herpetolo'gia**; from the Gr. *ἑρπετος*, a "reptile," and *λόγος*, a "discourse."] The study or science of reptiles, their habits, nature, etc. Also a dissertation on herpetic diseases. See HERPETIC.

Hes-per-id'e-æ.* A name given by Linnæus to a natural order comprising *Citrus*, *Garcinia*, and *Styrax.* It has also been applied to the *Aurantiaceæ.*

Hes-per'ĭ-dēs.* [From the Lat. *Hes'perus*, the "evening star."] Another name for the order *Aurantiaceæ.*

Hes-pĕr'ĭ-din. [From the Lat. *hesperid'ium*, the "orange."] A peculiar crystallizable substance obtained from unripe oranges. It is a glucoside, soluble in boiling water and hot alcohol.

Hes-per-id'ĭ-um.* A many-celled, superior, indehiscent fruit, pulpy within, and covered with a separable rind, as an orange.

Hestern. = *Hester'nus.** "Of yesterday."

Het'er-ą-can'thus.* [From the Gr. *ἕτερος*, "other," "different," and *ἄκανθα*, a "thorn."] Having different spines, or spinous stipules, one of which is straight, the other hooked.

Het'er-ą-del'phĭ-ą.* [From the Gr. *ἕτερος*, "other," "different," and *ἀδελφός*, a "brother."] A term applied to the union of the body of two fœtuses. In these cases, one fœtus generally attains its perfect growth; the other remains undeveloped or acephalous, maintaining a parasitic life upon its brother.

Het'er-ą-de'nĭ-ą,* or **Het'er-o-de'nĭ-ą.*** [From the Gr. *ἕτερος*, "different," and *ἀδήν*, a "gland."] A heterologous formation of glandular substance.

Het-er-an'drus.* [From the Gr. *ἕτερος*, "different," and *ἀνήρ*, *ἀνδρός*, a "man," or "male."] Having stamens or anthers of different form.

Het-er-an'thus.* [From the Gr. *ἕτερος*, "different," and *ἄνθος*, a "flower."] Having different flowers, or having flowers not arranged in the same manner.

Het'er-o-car'pous. [Lat. **Heterocar'pus**; from the Gr. *ἕτερος*, "different," and *καρπός*, "fruit."] Bearing different fruits; bearing fruits of two sorts or shapes, as the *Amphicarpæa.*

Het'er-o-çeph'ą-lus.* [From the Gr. *ἕτερος*, "different," and *κεφαλή*, the "head."] A monster-fœtus with two unequal heads. In Botany, bearing on the same plant heads of entirely male flowers and others entirely female.

Het-er-o-ehro'nĭ-ą.* [From the Gr. *ἕτερος*, "different," and *χρόνος*, "time."] A deviation from the normal condition of a part, consisting in the development of some mass or tissue at a time when, according to the laws of health, it ought not to have been developed.

Het'er-o-clīte. [Lat. **Heteroc'litus**; from the Gr. *ἕτερος*, "different," and *κλίνω*, to "incline."] Literally, "anomalous," or "irregular:"—applied to plants which have the sexes separated.

Het'er-o-ga'mĭ-us,* **Het-er-og'ą-mus.*** [From the Gr. *ἕτερος*, "different," and *γάμος*, a "marriage."] Heterogamous; bearing two sorts of flowers as to the stamens and pistils:—applied to some *Compositæ* in which the disk-florets are perfect and the ray-florets are neutral or have pistils but no stamens, as the Aster and Coreopsis.

Heterogangliata.* See ZOOLOGY.

Het'er-o-ġe'ne-ous. [Lat. **Heteroge'neus**; from the Gr. *ἕτερος*, "different," and *γένος*, a "kind."] Of different or opposite kinds; dissimilar in nature:—the reverse of *homogeneous.*

Het'er-o-gen'e-sis.* [From the Gr. ἕτερος, "other," "different," and γένεσις, "generation."] The doctrine that organized beings may, under certain conditions, be produced essentially different from the parent:—also applied to any anomalous organic production.

Het-er-oġ'e-nȳ. The same as HETEROGENESIS.

Het'er-o-la'lĭ-a.* [From the Gr. ἕτερος, "different," and λαλία, "speech."] A defect in speech. See HETEROPHONIA.

Het-er-ol'o-bus.* [From the Gr. ἕτερος, "different," and λόβος, a "lobe."] A term applied to plants, or parts of plants, having unequal lobes.

Het-er-ol'o-gous. [Lat. **Heterol'ogus**; from the Gr. ἕτερος, "different," and λόγος, a "discourse," "proportion," or "relation."] A term applied to any morbid product, whether fluid or solid, which is different in composition or structure from the normal fluids or solids of the body.

Het-er-om'e-rus.* [From the Gr. ἕτερος, "different," and μέρος, a "part," or "portion."] Having, or consisting of, different portions. See ISOMEROUS.

Het-er-o-me'trĭ-a.* [From the Gr. ἕτερος, "different," and μέτρον, a "measure."] A variation from the normal condition of a part with respect to the "measure" or quantity of material which it contains.

Het'er-o-mor'phous. [Lat. **Heteromor'phus**; from the Gr. ἕτερος, "different," and μορφή, "form."] Differing in form, shape, or external appearance. In Botany, of two or more shapes. See ISOMORPHOUS.

Het'er-o-ne'mus.* [From the Gr. ἕτερος, "different," and νῆμα, a "thread," or "filament."] Having unequal filaments.

Het-er-op'a-thy. [Lat. **Heteropathi'a**; from the Gr. ἕτερος, "different," and πάθος, "affection."] That mode of treating diseases by which a morbid condition is removed by inducing a different or opposite condition to supplant it,—such, for example, as resorting to cold water or refrigerating medicines to get rid of fever. The opposite of *Homœopathy*, and, so, essentially the same as *Allopathy*.

Het'er-o-pet'a-lus.* [From the Gr. ἕτερος, "different," and πέταλον, a "petal."] Having dissimilar or unequal petals.

Het'er-o-pho'nĭ-a.* [From the Gr. ἕτερος, "different," and φωνή, the "voice."] An abnormal state of the voice.

Het'er-o-phyl'lous. [From the Gr. ἕτερος, "different," and φύλλον, a "leaf."] Having leaves of different forms.

Het'er-o-pla'sĭ-a.* [From the Gr. ἕτερος, "different," and πλάσις, "formation," or "structure."] The increase of a part by the addition of structural elements different from those of its normal condition.

Het-er-op'o-dus.* [From the Gr. ἕτερος, "different," and πούς, a "foot."] Having feet different (from the other orders):—applied in the plural neuter (*Heteropʹoda*) to an order of *Mollusca Gasteropoda*.

Het-er-op'te-rus.* [From the Gr. ἕτερος, "different," and πτερόν, a "wing."] A term applied in the plural neuter (*Heteropʹtera*) to a section of *Hemiptera* in which the elytra are membranous only at the extremity.

Het'er-o-rhȳn'chus,* **Het-er-o-ros'tris.*** [From the Gr. ἕτερος, "different," and ῥύγχος, a "beak," and the Lat. *rosʹtrum*, a "beak."] Having different beaks, or beaks of different forms:—applied to birds.

Het'er-o-stem'o-nus.* [From the Gr. ἕτερος, "different," and στέμων, a "stamen."] Having dissimilar stamens.

Het-er-ot'ro-pous. [Lat. **Heterot'ropus**; from the Gr. ἕτερος, "different," and τρόπος, "manner."] The same as AMPHITROPOUS.

Het'er-o-tȳp'ĭ-a.* [From the Gr. ἕτερος, "different," and τύπος, a "type."] A variation from the normal condition by the production of a mass in a part differing in type from the remaining structure of the part.

Heū-ċhe'ra.* Alum-Root. A genus of perennial herbs of the order *Saxifragaceæ*, comprising several species, natives of the United States. Also the Pharmacopœial name (U.S. 1870) for the rhizome of *Heuchera Americana*. It is astringent.

Heuche'ra A-mer-ĭ-ca'na.* Alum-Root, an herbaceous plant, a native of New York, Ohio, Pennsylvania, etc.

Heuche'ra Cortu'sa.* Another name for HEUCHERA AMERICANA.

Heuche'ra Pu-bes'cens.* An herb, a native of Virginia and Kentucky. Its root is astringent.

Heu-de-lo'tĭ-a Af-rĭ-ca'na.* A tree, a native of Senegal, from which African bdellium is supposed to be obtained.

He-ve'a.* A genus of trees of the order *Euphorbiaceæ*, comprising many species, natives of Brazil and Guiana. Caoutchouc is obtained from them.

Hex'a-gon. [Lat. **Hexago'num**; from the Gr. ἕξ, "six," and γωνία, an "angle."] A plane figure having six equal angles and sides.

Hex-ag'o-nal. [Lat. **Hexag'onus.**] Belonging to a hexagon; having six sides; six-angled.

Hexag'onal Sys'tem. A term applied in Crystallography to a system of crystallization. It comprises crystals which are in the form of six-sided prisms, having three lateral axes, which intersect at angles of 60°, and one vertical axis, at right angles to the plane of the lateral axes. This system includes the rhombohedron, which is one of its primary forms.

Hex-aġ'ȳn-ous, or **Hex-a-ġȳn'ĭ-ous.** [Lat. **Hexagyn'ius**; from the Gr. ἕξ, "six," and γυνή, a "woman," or "female."] Having six pistils:—applied to a Linnæan order.

Hex-a-he'dral. [Lat. **Hexahe'drus.**] Belonging to a hexahedron.

Hex-a-he'dron. [Lat. **Hexahe'drum**; from the Gr. ἕξ, "six," and ἕδρα, a "base."] A regular solid figure bounded by six equal sides; a cube.

Hex-am'er-ous. [From the Gr. ἓξ, "six," and *μέρος*, a "part."] Constructed on the number six; having six in each set or whorl,—*i.e.*, six petals, six stamens, etc.

Hex-an'drĭ-a.* [From the Gr. ἓξ, "six," and *ἀνήρ, ἀνδρός*, a "man," or "male."] The sixth class of the Linnæan system of plants, including those which have six equal stamens in each flower.

Hex-an'drous, or **Hex-an'drĭ-ous.** [Lat. **Hexan'drius.**] Having six equal stamens. See HEXANDRIA.

Hex-an'gu-lar. [Lat. **Hexangula'ris;** from the Gr. ἓξ, "six," and the Lat. *an'gulus*, an "angle."] Having six angles.

Hex-a-pet'a-lous. [Lat. **Hexapet'alus;** from the Gr. ἓξ, "six," and *πέταλον*, a "petal."] Having six petals.

Hex-a-phyl'lous. [Lat. **Hexaphyl'lus;** from the Gr. ἓξ, "six," and *φύλλον*, a "leaf."] Having six leaves:—applied to a pinnate leaf with six leaflets.

Hex-ap'o-dus.* [From the Gr. ἓξ, "six," and *πούς*, a "foot."] Having six feet:—applied particularly to insects.

Hex-ap'ter-ous. [Lat. **Hexap'terus;** from the Gr. ἓξ, "six," and *πτέρον*, a "wing."] Provided with six wings.

Hex-a-sep'a-lus.* [From the Gr. ἓξ, "six," and the Lat. *sep'alum*, a "sepal."] Composed of six sepals.

Hex-a-sper'mus.* [From the Gr. ἓξ, "six," and *σπέρμα*, a "seed."] Having six seeds.

Hex-a-stem'o-nus.* [From the Gr. ἓξ, "six," and *στήμων*, a "stamen."] Having six stamens. See HEXANDROUS.

Hex'is.* [Gr. ἕξις; from *ἔχω*, to "have," to "have one's self," or to "be."] The same as *habit* of body. See DIATHESIS.

Hi-a'tus.* [From the Lat. *hi'o, hia'tum*, to "gape."] A foramen; an aperture; a yawning.

Hia'tus Fal-lo'pĭ-i.* [From the Lat. *hia'tus*, an "opening."] An opening in the tympanum, named from Fallopius.

Hi-ber-nac'u-lum.* [From the Lat. *hiber'na*, "winter quarters."] A bud or bulb; a winter bud that is formed in summer, lies dormant during winter, and grows in the next spring.

Hi-ber'nal. [Lat. **Hiber'nus.**] Of or belonging to winter:—applied to plants that bloom or vegetate in winter.

Hi'ber-nāt-ing. [Lat. **Hiber'nans;** from *hiber'no, hiberna'tum*, to "winter."] Passing the winter in a torpid state:—applied to certain animals.

Hi-ber-nā'tion. [Lat. **Hiberna'tio;** from the same.] The state of torpidity in which certain animals pass the winter without food, while several vital functions are nearly suspended. Among the animals that hibernate are bears, bats, and several rodents and insectivora.

Hi-bis'cus.* A genus of the order *Malvaceæ*, comprising many species of shrubs or herbs, natives of China, India, the United States, etc. They possess mucilaginous properties, and bear showy flowers.

Hibiscus Esculentus.* See GUMBO.

Hibiscus Moschatus.* See ABELMOSCHUS.

Hiccough, Hiccup. See SINGULTUS.

Hick'o-ry. The popular name of several species of trees of the genus *Ca'rya*, order *Juglandaceæ*, natives of the United States. The *Ca'rya alba, Ca'rya microcar'pa, Ca'rya sulca'ta*, and *Ca'rya tomento'sa* bear edible nuts. The wood of these is good fuel, and is excellent for handspikes, canes, axe-handles, etc.

Hid'den Seiz'ure. A term used by M. Hall for such a paroxysm in convulsive diseases as may have been unobserved because occurring in the night, or away from the patient's home and friends, or limited to the deeply-seated muscles.

Hĭ-dro'a.* [From the Gr. *ἱδρώς*, "sweat."] The term given by Sauvages and Vogel to *eczema*, or heat-eruption.

Hĭ-dro'dēs.* [From the Gr. *ἱδρώς*, "sweat."] Full of sweat; sweaty.

Hĭ-dron'o-sus.* [From the Gr. *ἱδρώς*, "sweat," and *νόσος*, a "disease."] See ANGLICUS SUDOR.

Hĭ-drop-e-de'sis.* [From the Gr. *ἱδρώς*, "sweat," and *πήδησις*, a "spring."] Excessive sweating.

Hidropyretus.* See HYDRONOSUS.

Hid-ror-rhœ'a.* [From the Gr. *ἱδρώς*, "sweat," and *ῥέω*, to "flow."] Profuse sweating.

Hĭ-dro'sis.* [From the Gr. *ἱδρώς, ἱδρῶτος*, "sweat."] The condition of sweating.

Hĭ-drot'ic. [Lat. **Hidrot'icus;** from the same.] Causing sweat; sudorific; diaphoretic.

Hĭ-drot-o-pœ'ĭa.* **Hĭ-drot-o-poi-e'sis.*** [From the Gr. *ἱδρώς*, "sweat," and *ποιέω*, to "make."] Excretion of the sweat.

Hi-e-ra'cĭ-um.* [From the Gr. *ἱέραξ*, a "hawk."] Hawkweed. A genus of herbs of the order *Compositæ*, comprising numerous species, natives of the United States and Europe.

Hiera'cium Pil-o-sel'la.* An herb, a native of England, having a bitter lactescent juice.

Hiera'cium Ve-no'sum.* Rattlesnake Weed, a plant indigenous in the northern and eastern parts of the United States. It is reputed to be astringent.

Hi-er-an'o-sos.* [From the Gr. *ἱερός*, "holy," and *νόσος*, "disease."] *Mor'bus Sa'cer.* An ancient term for "epilepsy."

Hi'er-a Pi'cra.* [From the Gr. *ἱερός*, "holy," and *πικρός*, "bitter."] A name applied to *Pulvis Aloes cum Canellâ.*

Hi'e-ro-glyph'ĭ-ca.* [From the Gr. *ἱερός*, "holy," and *γλύφω*, to "carve."] Hieroglyphics; originally sculpture-writing, consisting of figures of animals, plants, etc., used by the ancient Egyptians. A name given to the signs employed in medicine.

High-mo-rĭ-a'num An'trum.* A cavity in the superior maxillary bone, described by Highmore:—otherwise called the *Antrum maxillæ*, or *Antrum maxillare.*

Hi'lar. Belonging to the hilum.

Hi-lif'er-us.* [From the Lat. *hi'lum*, and *fe'ro*, to "bear."] Having *hila*.

Hilon. See HILUM.

Hi'lum,* plural **Hi'la.** Sometimes improperly written **Hi'lus.** (Fr. *Hilon*, ē'lôN'.) The point of attachment of a seed; the scar or mark on a seed at its point of attachment to the funiculus or placenta.

Hi'lus Li-e-na'lis.* [From the Lat. *li'en*, the "spleen."] The concave part of the spleen.

Hi'lus Re-na'lis.* [From the Lat. *ren*, the "kidney."] The concave part of the kidney.

Hip. See COXA.

Hip-Bath. See SEMICUPIUM.

Hip-Ber'ries. The ripe fruit of the *Rosa canina*.

Hip-Joint Disease. See COXALGIA.

Hip'-Tree. The *Rosa canina*.

Hip-pĭ-a'ter. [From the Gr. ἵππος, a "horse," and ἰατρός, a "physician."] A farrier; a horse-doctor.

Hip-po-cam'pus.* [From the Gr. ἱππόκαμπος, a small marine animal with a head closely resembling that of a horse.] The small animal named the sea-horse.

Hippocam'pus Ma'jor,* called also **Cor'nu Am-mo'nis.*** A large white curved body in the inferior cornu of the lateral ventricles of the brain.

Hippocam'pus Mi'nor.* A small eminence of white substance in the posterior cornu of the lateral ventricles of the brain.

Hippocastanaceæ,* hip-po-kas-ta-na'she-ē, or **Hippocastaneæ,*** hip-po-kas-ta'ne-ē. [From the Lat. *Hippocas'tanum*, the specific name of the "horse-chestnut."] A name given by some botanists to a natural order of plants. See SAPINDACEÆ.

Hip'po-co-ry'za.* [From the Gr. ἵππος, a "horse," and κορύζα, "inflammation of the mucous membrane of the nostrils."] A term applied to coryza in horses, such as occurs in farcy or glanders; also to the same affection in cattle, etc. It is also termed *Hippomyxa*. See FARCY.

Hippocrateaceæ,* hip-po-kra-te-a'she-ē. [From *Hippocra'tea*, one of the genera.] A small natural order of exogenous shrubs, mostly natives of South America, and mostly tropical. The *Hippocra'tea como'sa* bears an edible fruit.

Hip-poc'ra-tēs' Sleeve. [Lat. **Man'ica Hippoc'ratis.**] A name given to a conical-shaped strainer of linen or flannel.

Hip-po-crat'ic. [Lat. **Hippocrat'icus.**] Belonging to Hippocrates.

Hippocratic Countenance. See FACIES HIPPOCRATICA.

Hippocraticeæ,* hip-po-kra-tish'e-ē. The Jussieuan name of a natural order of plants. See HIPPOCRATEACEÆ.

Hip-po-crep'ĭ-form. [From the Gr. ἵππος, a "horse," and κρηπίς, a "sort of shoe," and the Lat. *for'ma*, "form."] Horseshoe-shaped.

Hip-po-cre'pis Co-mo'sa.* A low trailing plant of the order *Leguminosæ*, a native of Europe. It is said to be astringent.

Hip'po-lith. [Lat. **Hippol'ithus**; from the Gr. ἵππος, a "horse," and λίθος, a "stone."] The *Bezoar equinum*, a concretion in the gall-bladder or intestines of the horse.

Hip-pol'o-ġў. [Lat. **Hippolo'gia**; from the Gr. ἵππος, a "horse," and λόγος, a "discourse."] A term for a dissertation on the horse; the science which treats of the horse.

Hip-pom'a-nē [from the Lat. *Hippom'anes*; see next article] **Man-cĭ-nel'la.*** The Manchineel, a tree of the order *Euphorbiaceæ*, a native of the West Indies, Venezuela, etc. It has a milky juice, which is very poisonous. It is the only species of the genus.

Hip-pom'a-nēs.* [From the Gr. ἵππος, a "horse" or "mare," and μανία, "madness."] A plant supposed to excite sexual desire in mares.

Hip-po-mўx'a.* [From the Gr. ἵππος, a "horse," and μύξα, "mucus."] The same as HIPPOCORYZA, which see.

Hip'po-no-sol'o-ġў. [Lat. **Hipponosolo'gia.**] The same as HIPPOPATHOLOGY, which see.

Hip'po-path-o-loġ'ĭ-cal. [Lat. **Hippopathologi'cus.**] Belonging to hippopathology.

Hip'po-pa-thol'o-ġў. [Lat. **Hippopathol'ogia**; from the Gr. ἵππος, a "horse," πάθος, an "affection" or "disease," and λόγος, a "discourse."] That branch of general medicine which treats of the diseases of the horse.

Hip-poph'a-ġў. [From the Gr. ἵππος, a "horse," and φάγω, to "eat."] The act or custom of feeding on horse-flesh, as people have often been compelled to do in the scarcity caused by a siege. Horse-flesh is neither unwholesome nor, it is said, very unpalatable, though rather coarse. People who feed on horse-flesh are said to be *equivorous* (from the Lat. *e'quus*, a "horse," and *vo'ro*, to "devour").

Hip-pos-te-ol'o-ġў. [Lat. **Hipposteolo'gia**; from the Gr. ἵππος, a "horse," and ὀστεολογία, a "treatise upon bones."] A treatise on the bones of the horse; that branch of Comparative Anatomy which treats of the skeleton of the horse.

Hip-pot'o-mў. [Lat. **Hippoto'mia**; from the Gr. ἵππος, a "horse," and τέμνω, to "cut."] The anatomy, or dissection, of the horse.

Hip-pu'rāte. [Lat. **Hippu'ras, a'tis.**] A combination of hippuric acid with a base.

Hip-pu'ric. [Lat. **Hippu'ricus**; from the Gr. ἵππος, a "horse," and οὖρον, "urine."] A term applied to an acid found plentifully in the urine of the horse and cow, and in that of the *Graminivora* generally.

Hip-pu'ris.* [From the Gr. ἵππος, a "horse," and οὐρά, a "tail."] A genus of aquatic plants of the order *Haloragaceæ*. The *Hippu'ris vulga'ris* (Mare's Tail) is a native of the United States. It is astringent.

Hip'pus.* [Gr. ἵππος, a "horse," also an affection of the eyelids.] A disease of the eyelid, in which there is a constant tendency to wink:—so called, it is said, because the lid goes up and down like a man on horseback.

Hip'pus Pu-pil'læ.* "Hippus of the Pupil." A tremulous condition of the iris, attended with alternate contractions and dilatations of the pupil.

Hir'cāte. [Lat. **Hir'cas, a'tis.**] A combination of hircic acid with a base.

Hir'çic, or **Hir-çin'ic.** [Lat. **Hircin'icus.**] A term applied to an acid obtained from the fat of the goat.

Hir'çin, or **Hir'çĭne.** [Lat. **Hirci'na**; from *hir'cus*, the "male goat."] A peculiar substance found in the fat of the goat, and on which its strong odor depends. It yields by saponification the *hircic*, or *hircinic*, acid.

Hir-çis'mus.* [From the Lat. *hir'cus*, a "male goat."] The strong odor peculiar to the human axilla, which resembles that of the male goat.

Hir'sute. [Lat. **Hirsu'tus.**] Hairy with stiffish hairs; rough; shaggy:—applied to certain plants.

Hirsuties,* hir-su'she-ēz. [From the Lat. *hirsu'tus*, "hairy."] A disease in which hair grows in morbid excess or on a part where it is unnatural.

Hir-tĭ-flo'rus.* [From the Lat. *hir'tus*, "hairy," and *flos*, a "flower."] Having hairy flowers.

Hir'tus.* [Contraction of *hirsu'tus*, "hairy," or "shaggy."] Rough-haired; hairy; covered with long stiff hairs:—nearly the same as *hirsute*:—applied to many plants.

Hirud. = *Hiru'do,** or *hiru'dines.** A "leech, or leeches."

Hĭ-ru-dĭ-for'mis.* [From the Lat. *hiru'do*, a "horse-leech," and *for'ma*, a "form."] Resembling the leech:—applied by Latreille, in the neuter plural (*Hirudifor'mia*), to an order of animals.

Hĭ-ru'do, d*inis.* [From the Lat. *hau'rio*, to "draw" or "draw out."] A genus of worms, or worm-like animals, belonging to the class *Anellata* (or *Anellides*). A Pharmacopœial name of the *Sanguisuga medicinalis* (Fr. *Sangsue*, sôn'-sü'), the *Hirudo medicinalis*.

Hiru'do Me-diç-ĭ-na'lis.* The European leech, an animal much employed for local depletion. It will draw nearly half an ounce of blood. The American leech, or *Hiru'do deco'ra*, does not make so deep an incision as the European, and draws less blood.

Hi-run'do.* A genus of birds, comprising several species of swallows and martins. The edible birds'-nests of the *Hirun'do esculen'ta* of the Malay Archipelago are highly prized by the Chinese.

His'pid. [Lat. **His'pidus.**] Having bristles; bristly; beset with stiff or rigid spreading bristle-like hairs:—applied to certain plants.

His-pid-u-la'tus.* [From the Lat. *hispid'ulus*, the diminutive of *his'pidus*, "rough," "bristly."] In a slight degree rough.

His-pĭd-u-lo'sus.* [From the same.] Hispid'ulous; having stiff hairs.

His'to-Ȼhem'is-trў. [From the Gr. *ἱστός*, a "web," or "tissue," and the Eng. *chemistry*.] The chemistry of the organic tissues.

His-toch'ў-mў. The same as HISTO-CHEMISTRY, which see.

His-to-di-ăl'ў-sis.* [From the Gr. *ἱστός*, a "web," or "tissue," and *διάλυσις*, a "dissolution."] A resolution of organic texture.

His'to-di-ạ-lўt'ĭ-cus.* Belonging to histodialysis.

His-to-ġe-net'ic. [Lat. **Histogenet'icus.**] Belonging to histogeny; promoting the formation of organic textures.

His-toġ'e-nў. [Lat. **Histogen'esis**; from the Gr. *ἱστός*, a "web," or "tissue," and *γένω*, to "be born."] The origin or formation of organic tissue.

His-to-graph'ĭ-cus.* Belonging to histography.

His-tog'rạ-phў. [Lat. **Histogra'phia**; from the Gr. *ἱστός*, a "web," or "tissue," and *γράφω*, to "write."] A description of the organic tissues.

His'toid. [From the Gr. *ἱστός*, a "tissue," and *εἶδος*, a "form" or "resemblance."] A term applied to tumors the substance of which resembles the normal tissues of the body.

His-to-loġ'ĭ-cạl. [Lat. **Histoloġ'icus.**] Belonging to histology.

His-tol'o-ġў. [Lat. **Histolo'gia**; from the Gr. *ἱστός*, a "web," or "tissue," and *λόγος*, a "discourse."] The science or doctrine of the minute structure and composition of the different tissues of organized bodies. It is divided into three parts—*Human Histology*, which treats of the tissues of man; *Comparative Histology*, which treats of the tissues of the lower animals; and *Vegetable Histology*, which treats of the tissues of plants.

His-tol'ў-sis.* [From the Gr. *ἱστός*, a "tissue," and *λύσις*, a "solution."] A term denoting the decay and dissolution of the organic tissues and of the blood.

His-ton'o-mў. [Lat. **Histono'mia**; from the Gr. *ἱστός*, a "web," or "tissue," and *νόμος*, a "law."] The history of the laws which regulate the formation and arrangement of organic tissues.

His-tot'o-mў. [Lat. **Histoto'mia**; from the Gr. *ἱστός*, a "web," or "tissue," and *τέμνω*, to "cut."] Dissection of organic tissues.

His-trĭ-on'ic. [From the Lat. *his'trio*, a "play-actor."] A term applied by German writers to affections of the muscles of expression inducing spasms and paralysis.

Hive Syr'up. A syrup prepared as a remedy for croup. See SYRUPUS SCILLÆ COMPOSITUS.

Hives, hīvz. A popular name for the croup. It is also applied to different species of rash.

Hoarhound. See MARRUBIUM.

Hoarseness. See RAUCEDO.

Hoar'ў. Grayish white; the same as CANESCENT. See INCANOUS.

Hodġ'kin's Dis-ease'. [From Dr. *Hodgkin*, an eminent physician of London.] A peculiar disease characterized by great enlargement of the lymphatic glands, accompanied by a morbid deposit in the spleen.

Hoff'mann's An'o-dyne Liq'uor. [Lat. **Hoffman'ni Liq'uor Anod'ynus.**] See SPIRITUS ÆTHERIS COMPOSITUS.

Hog's Lard. See ADEPS SUILLUS, and AXUNGIA PORCINA.

Hol-ĭ-gar'na Lon-ġĭ-fo'lĭ-a.* A tree of the order *Anacardiaceæ*, a native of the East Indies. The fruit and bark contain an acrid juice, and are used in medicine.

Holly. See ILEX.

Hol-o-blas'tic. [From the Gr. ὅλος, "whole," and βλαστός, a "germ."] A term applied to the ova of certain animals, in which the whole (or very nearly the whole) of the yolk goes to the formation of the germ, scarcely any part being nutritive.

Hol-o-car'pus.* [From the Gr. ὅλος, "whole," or "entire," and καρπός, "fruit."] Having entire fruit-capsules.

Hol-o-pet'a-lus.* [From the Gr. ὅλος, "whole," or "entire," and πέταλον, a "petal."] Having entire petals.

Holosericeous, hol-o-se-rish'ŭs. Silky; so covered with hairs that it feels soft to the touch:—applied to certain plants.

Hol-o-thu'rĭ-a.* [From the Gr. ὅλος, "whole," and θύρα, a "door," a "mouth."] Holothures. A genus of marine animals of the order *Holothuroidea*, class *Echinodermata*. They have a cylindrical or vermiform body, and a mouth surrounded by a circlet of tentacles. Several of the species are used as food. The *Holothu'ria edu'lis*, trepang, or *Biche-de-mer*, is highly prized by the Chinese as a delicacy. Another edible species is the *H. tubulosa*, found in the Mediterranean.

Homaliaceæ,* ho-ma-le-a'she-ē. [From *Homa'lium*, one of the genera.] A natural order of exogenous trees and shrubs, all of which are tropical.

Ho-mat'ro-pĭne, or **Ho-ma-tro'pĭ-a.*** [Apparently from the Gr. ὁμός, the "same," or ὅμοιος, "similar," and the Eng. *atropine*.] The name of an alkaloid obtained from tropine, but similar to atropine (*atropina*) in its action on the system.

Hom'berg's Phos'pho-rus. Hydrochlorate of lime, which, on being reduced by heat to a vitreous mass, Homberg found to emit a phosphoric light when struck by a hard body.

Hom'berg's Pў-roph'o-rus. A mixture of alum and brown sugar, which takes fire on exposure to the air.

Ho-me'rĭ-a.* A genus of plants of the order *Iridaceæ*, natives of South Africa. They bear showy flowers.

Home'ria Col-li'na.* A South African plant, the bulb of which is a narcotic poison, causing speedy death.

Home-Sickness. See NOSTALGIA.

Hom'ĭ-cīde. [Lat. **Homici'dium**; from the Lat. *ho'mo*, "man," and *cæ'do*, to "kill."] The killing of a man, woman, or child by accident, in distinction from that done in malice, with set purpose; manslaughter, chance-medley, etc.

Homo.* See MAN.

Ho'mo-. [From the Gr. ὁμός, "equal," "same."] A prefix denoting equality or sameness.

Ho-mœ-o-mor'phus.* [From the Gr. ὅμοιος, "like," and μορφή, "form."] Having a similar form.

Ho-mœ-o-path'ic. [Lat. **Homœopath'icus.**] Belonging to homœopathy.

Homœopathie. See HOMŒOPATHY.

Ho-mœ-op'a-thў. [Lat. **Homœopathi'a**; from the Gr. ὅμοιος, "like," and πάθος, "disease."] (Fr. *Homœopathie*, o'mă'o'pă'tè'.) A doctrine propounded by Hahnemann, professing to cure diseases by the action of infinitesimal doses of medicines of a quality to excite in the healthy a disease similar to that which is to be cured.

Ho-mœ-o-pla'sĭ-a.* [From the Gr. ὅμοιος, "like," and πλάσσω, to "form."] The formation of accidental tissues like the normal:—the opposite of *heteroplasia*.

Ho-mœ-o'sis.* [From the Gr. ὁμοιόω, to "make like," to "assimilate."] The elaboration of nutriment so as to adapt it to assimilation.

Ho-mog'a-mous. [From the Gr. ὅμοιος, "like," and γάμος, "marriage."] A term applied to heads or clusters of *Compositæ* when all the florets are of the same kind,—*i.e.*, alike in sexual character, and all hermaphrodite.

Homogangliata.* See ZOOLOGY.

Hom-o-ġe-ne'ĭ-tў. [Lat. **Homogene'itas, a'tis.**] Homogeneousness.

Hom-o-ġe'ne-ous. [Lat. **Homoge'neus**; from the Gr. ὁμός, "equal," "same," and γένος, a "kind."] Of the same kind or quality throughout; uniform in nature:—the reverse of *heterogeneous*. A rock is homogeneous when all parts of it are similar in nature and texture.

Ho-mol'o-gous. [Lat. **Homol'ogus**; from the Gr. ὁμός, "equal," "same," and λόγος, a "discourse," also "relation," "analogy," "ratio," or "proportion."] A term applied to things of the same essential nature, however different in form or name, in different animal bodies. See HOMOLOGY.

Homologue, hom'o-log. [Lat. **Homol'ogum**; from the same.] A term applied to a part of an animal which answers to a corresponding part in a different animal, or to a different portion of the same animal. See next article.

Ho-mol'o-ġў [Lat. **Homolo'gia**; from the same], **Doc'trine of.** That branch of anatomical science which investigates the correspondence of parts and of plan in the construction of animals.

1. *Special Homology* relates to the correspondence of parts in different animals. Thus, the wing of a bird is the homologue of the arm in a man, or of the fore-leg of a horse.

2. *Serial Homology* relates to the correspondence of parts in the same animal. Thus, the wing of a bird is the homologue, in one segment of its body, of the leg of the bird in another segment.

3. *General Homology* relates to correspondences of parts viewed with reference to the ideal archetype of the vertebrate skeleton. Thus, the arm is the *diverging appendage* of its segment; the supra-occipital bone is the *neural spine*; the ex-occipital bone, or condyloid part of the occipital bone, in the human subject, is the *neur-apophysis*.

Hom-o-mor'phous. [Lat. **Homomor'phus**; from the Gr. ὁμός, "equal," "same," and μορφή, "form."] Having the same form; uniform; all of one shape:—applied to parts of plants. See HETEROMORPHOUS.

Ho-mon'ŷ-mous [from the Gr. *ὁμός*, "same," and *ὄνομα*, a "name"], and **Ho-mo-tŷ'pal** [see HOMOTYPE]. These terms denote, in Anatomy, a correlation of parts: the frontal bone is the *homonyme* or *homotype* of the supra-occipital bone; the humerus, of the femur, etc. It is the aim of *Serial Homology* to determine homonymous or homotypal relations. See HOMOLOGY.

Hom-o-pet'a-lus.* [From the Gr. *ὁμός*, "equal," "same," and *πέταλον*, a "petal."] A term applied to flowers in which the petals are alike.

Hom-o-phŷl'lus.* [From the Gr. *ὁμός*, "equal," "same," and *φύλλον*, a "leaf."] Having leaves or leaflets all alike.

Ho-mop'ter-ous. [Lat. **Homop'terus**; from the Gr. *ὁμός*, "equal," "same," and *πτέρον*, a "wing."] A term applied to a section of hemipterous insects having *elytra* of the same consistence throughout, and almost similar to the wings.

Ho-mot'ro-pous, or **Ho-mot'ro-pal.** [Lat. **Homot'ropus**; from the Gr. *ὁμός*, "equal," "same," and *τρέπω*, to "turn."] Curved with the seed:—applied to the embryo when it has the same direction as the seed.

Hom'o-typ. [Lat. **Homot'ypus**; from the Gr. *ὁμός*, "equal," "same," and *τύπος*, "form," or "character."] A term employed by Owen for a repeated part in the segments of the same skeleton.

Hone, or **Oil'-Stone.** A fine-grained mineral used to give a fine edge to steel blades. Silicious slate and other minerals are used for this purpose. One of the best hones is made of *novaculite*.

Hon'ey, hŭn'ĭ. [Lat. **Mel, Mel'lis.**] A sweet substance collected from the nectaries of flowers by the *A'pis mellif'ica*, or honey-bee. It is demulcent and aperient, and is used in medicine; also as a condiment.

Hon'ey-Dew. A sweetish substance secreted and deposited upon the leaves of plants by the *Aphides*, a genus of small insects popularly called plant-lice.

Hon'ey-suck'le. The popular name of several species of *Lonicera*.

Hood. [Lat. **Cucul'lus.**] A botanical term applied to a body shaped like a helmet or cowl or a cornet of paper. The same as GALEA. *Hooded* signifies hood-shaped; cucullate.

Hooked. The same as HAMATE:—applied to parts of plants.

Hoop'er's Pills. A nostrum which has been extensively used as a purgative and emmenagogue. See PILULÆ ALOES ET MYRRHÆ.

Hooping-Cough. See PERTUSSIS.

Hop. The *Humulus Lupulus;* also the *bracteæ*, or floral leaves, of the same. It is a twining perennial plant, indigenous in the United States and in Europe. The fruiting calyx is sprinkled with yellow resinous grains (*lupulin*), in which the aroma and bitterness of the hop reside. See HUMULUS.

Hop'-Tree. The *Pte'lea trifolia'ta*, an ornamental shrub of the order *Rutaceæ*, a native of the Middle and Southern United States. The fruit is very bitter, and is used as a substitute for hops. The leaves are anthelmintic. The bark of the root is tonic, and is said to be a remedy for dyspepsia and gastro-intestinal irritation.

Hope's Cam'phor Mix'ture. A mixture of camphor-water with nitrous acid and laudanum, used in diarrhœa and dysentery.

Hôpital, ō'pē'tăl'. The French term for HOSPITAL, which see.

Hoquet, ho'kā'. The French term for "hiccup." See SINGULTUS.

Hor-de-ā'ceous. [Lat. **Hordea'ceus**; from *hor'deum*, "barley."] Of the nature of barley; resembling barley.

Hor'de-i Dis'ti-chi Sem-ĭ-na.* "Seeds of the Hordeum Distichon." See HORDEUM.

Hor'dei Sem'ĭ-na.* "Seeds of Barley." Pearl Barley; the grains of the *Hordeum distichon*, or common barley, deprived of the husk or skin. This is the proper form of barley for medicinal use. By decoction it forms a drink admirably adapted to febrile and inflammatory diseases. See HORDEUM.

Hor'de-ĭ-for'mis.* [From the Lat. *hor'deum*, "barley."] Formed like barley:—applied to certain plants, etc.

Hor'de-in. [Lat. **Hordei'na**; from *hor'deum*, "barley."] A peculiar substance found in barley, allied to starch, but constituting a distinct substance.

Hor-de'o-lum.* [Diminutive of the Lat. *hor'deum*, "barley."] A small, highly-inflammatory tumor on the edge of the eyelid; popularly, a stye.

Hor'de-um.* Barley. A Linnæan genus of the class *Triandria*, natural order *Graminaceæ*. Also the Pharmacopœial name (U.S. 1870) for the decorticated seeds of *Hor'deum dis'tichon*, or barley.

Hor'deum Dis'tĭ-chon.* The French barley-plant.

Hor'deum Vul-ga're.* The Scotch, or common, barley-plant.

Hore'hound. The *Marrubium vulgare*, a plant of the order *Labiatæ*, a native of Europe.

Hore'hound Tea. A tea prepared by infusing an ounce of the *Marrubium vulgare*, or white horehound, in a pint of boiling water.

Hor. interm.=*Ho'ris interme'diis.** "At the intermediate hours" between what has been ordered at stated times.

Ho-rī'zon. [From the Gr. *ὁρίζων*, the present participle of *ὁρίζω*, to "bound."] The great circle where the earth and sky appear to meet, forming the boundary to our sight.

Hor-ĭ-zon'tal. [Lat. **Horizonta'lis.**] Parallel with the horizon; on a level.

Horn. In Botany, a spur or some similar appendage. See CORNU.

Horn'blende. A mineral which consists chiefly of silica, magnesia, and oxide of iron, and crystallizes according to the monoclinic system. It comprises varieties called *actinolite, tremolite, asbestos*, etc. It is an essential constituent of syenite, trap, and other rocks.

Horn'-Pock. A name given by some writers to a form of variola in which the pimples are imperfectly suppurating, ichorous, or horny, and semi-transparent.

Hor'nus.* "Of this year." In Botany, applied to anything produced the same or present year. Thus, *rami horni* are branches not a year old.

Horn'ỹ. [Lat. **Cor'neus.**] Hard and close in texture, but not brittle, as the albumen of coffee and the seed of the date.

Hor'rĭ-dus.* [See next article.] Shivering with cold:—applied to a fever, etc.

Hor-rĭ-pĭ-lā'tion. [Lat. **Horripila'tio, o'nis;** from *hor'reo*, to "have one's hair stand on end," to "shiver," to "shudder," and *pi'lus*, the "hair."] A sensation of chilliness and creeping, or as if each hair were stiff and erect, in different parts of the body. It is often a symptom of the approach of fever.

Hor'ror, o'ris.* [From the Lat. *hor'reo*, to "shake from cold," to "shudder."] A shivering or cold fit.

Horse'-Chest'nut. The fruit of the *Æs'culus Hippocas'tanum.*

Horse'mint. The common name of the *Monar'da puncta'ta.*

Horse'rad-ish. The common name of the *Cochlea'ria Armora'cia*, or *Nastur'tium Armora'cia.*

Horse'weed. A popular name of the *Erigeron Canadense.*

Hor-ten'sis.* [From the Lat. *hor'tus*, a "garden."] Of or belonging to a garden:—applied to plants, as the *Anemone hortensis.*

Hor'tĭ-a Bra-sil-ĭ-a'na.* A Brazilian shrub of the order *Rutaceæ.* Its bark is said to be febrifuge.

Hor-tic'o-lus.* [From the Lat. *hor'tus*, a "garden," and *co'lo*, to "inhabit."] Growing in a garden:—applied to certain plants.

Hor'tĭ-cul-ture. [From the Lat. *hor'tus*, a "garden," and *cultu'ra*, "cultivation."] The cultivation of flowers, fruits, and culinary vegetables in gardens and orchards; the art of cultivating gardens.

Hor'tus Sic'cus.* Literally, a "dry garden." A *herbarium*, or collection of dried plants.

Hor. un. spatio = *Ho'ræ uni'us spa'tio.** "In the space of an hour," or "at the end of an hour."

Hos'pĭ-tal. [Lat. **Hospita'lium**; from *hos'pes*, a "host;" also a "guest."] (Fr. *Hôpital*, ō'pĕ'tăl'.) Originally, a place for exercising hospitality towards strangers or the sick and poor. A charitable establishment for the relief of the sick, and for their lodgment and maintenance during treatment; an infirmary.

Hos'pital Fe'ver. [Lat. **Fe'bris Nosocomia'lis.**] A fever peculiar to the inmates of a hospital, from their condition and circumstances. See NOSOCOMIUM.

Hos'pital Gan'grēne. [Lat. **Gangræ'na Nosocomia'lis.**] A severe and peculiar species of humid gangrene, combined with phagedenic ulceration of a highly infectious nature.

Hos'pĭ-tal-ism. A term used to designate the hygienic evils which the system of large hospital edifices involves; or a general morbid condition of the hospital or its atmosphere, productive of disease.

Hōst. [From the Lat. *hos'pes*, a "host."] An animal or plant which is infested by a parasite is called its *host.*

Hôtel-Dieu, ō'tĕl' de-u̯h'. "House, or hotel, of God," because it was originally a religious house,—that is, under the care of some one of the religious orders. A French term applied to the principal hospital of a city.

Hot-House. See GREENHOUSE.

Houblon, hoo'blôN'. The French term for the "hop." See HUMULUS.

Hour'-Glass Con-trac'tion. An irregular and transverse contraction of the uterus, in which it assumes the form of an hour-glass. It occurs soon after delivery, in which case the placenta is often retained (held back) by the contraction.

Ho-ve'nĭ-a Dul'cis.* A tree of the order *Rhamnaceæ*, a native of China and Japan. It has a pulpy peduncle, which is sweet and edible.

How-ar'dĭ-a Feb-rif'u-ga.* A tree or shrub of the order *Cinchonaceæ*, a native of tropical America. Its bark is a bitter tonic.

H. S., or **Hor. som.** = *Ho'râ som'ni.** "At the hour of sleep;" that is, "just before going to sleep."

Huckleberry. See GAYLUSSACCIA, and VACCINIUM.

Hu-go'nĭ-a Mys'tax.* A shrub of the order *Linaceæ* (or *Oxalidaceæ*, according to some botanists), a native of India. It is said to be anthelmintic, diuretic, and sudorific. Its root is used as a remedy for the bite of snakes.

Huile, wēl. The French term for "oil." See OLEUM, and OIL.

Hum'bold-tīte. A mineral consisting of oxalate of lime, and forming the basis of a urinary calculus.

Hu-mec'tant. [Lat. **Humec'tans**; from *humec'to, humecta'tum*, to "make moist."] Rendering moist; moistening. Nearly the same as DILUENT.

Hu-mec-tā'tion. [Lat. **Humecta'tio, o'nis;** from the same.] The act or process of making moist.

Hu'me-ral. [Lat. **Humera'lis**; from *hu'merus*, the "arm," or "shoulder."] Belonging to the humerus; brachial.

Hu'me-rus,* gen. **Hu'me-ri.** [From the Gr. ὦμος, the "shoulder."] (Fr. *Épaule*, ā'pōl'.) Originally, the "shoulder." In Anatomy, the *brachium*, or arm proper, from the shoulder to the elbow; also the long bone, or *os humeri* itself. In Ornithology, the first portion of the superior extremity supporting the wing.

Hume's Test. A test for arsenious acid, consisting of the ammonio-nitrate of silver. If solutions of these substances be mixed, a yellow arsenite of silver is precipitated, and nitrate of ammonia remains in solution.

Humeur Aqueuse, ü′mur′ ȧ′kuz′. The French term for AQUEOUS HUMOR, which see.

Hu′mic. [Lat. **Hu′micus;** from *hu′mus*, the "ground."] Pertaining to the ground, or earth. The same as GEIC:—applied to an acid found in vegetable mould, or *humus*.

Hu′mid. [Lat. **Hu′midus.**] Moist; damp:—applied to air impregnated with aqueous vapor, and to a body on whose surface there is water not collected in drops.

Hu-mid′ĭ-tȳ. [Lat. **Humid′itas;** from the same.] Moisture; the state of being humid.

Hu′mĭ-fuse. [Lat. **Humifu′sus;** from *hu′mus*, the "ground," and *fu′sus*, "spread," or "lying along."] A botanical term which signifies "spread over the surface of the ground."

Hu′mĭ-lis.* [From the Lat. *hu′mus*, the "ground."] Mean; humble; dwarfish:—applied to plants which grow close to the ground, and to those which are much inferior in stature to their congeners.

Humiriaceæ,* hu-mĭr-e-a′she-ē. A small natural order of exogenous trees and shrubs, which are found in the tropical parts of America. It includes the *Humir′ium*, which produces balsam of Umiri, resembling copaiva in properties.

Hu-mĭr′ĭ-um Bal-sa-mif′e-rum.* A tree of Guiana, yielding a balsamic juice or resin which is used as a remedy for tænia.

Humir′ium Flo-rĭ-bun′dum.* A small tree, a native of Brazil, yielding the balsam of Umiri. Its bark is esteemed as a perfume.

Hu′mor. [Lat. **Hu′mor, o′ris.**] Moisture, or sap; any fluid of the body other than the blood.

Humor, Aqueous. See AQUEOUS HUMOR.

Humor, Vitreous. See VITREOUS HUMOR.

Hu′mor-al. [Lat. **Humora′lis;** from *hu′mor*, "moisture," or "humor."] Belonging to the humors of the body.

Hu′moral Pa-thol′o-ġў, or **Hu′mor-ĭsm.** A system in medicine which attributed all diseases to morbid changes in the *humors*, or fluid parts of the body, without assigning any influence to the state of the solids.

Hu-mor′ic. [Lat. **Humor′icus;** from *hu′mor*, "moisture," or "humor."] A term applied to the sound produced by percussion on the stomach when distended with air and fluid.

Hu′mor-ĭsm. A medical theory which maintains that all diseases are due to a depraved condition of the humors of the body. See HUMORAL PATHOLOGY.

Hump. (Fr. *Bosse*, boss.) A prominence or protuberance formed by the deviation of the bones of the trunk, often by the curvature of the spine. A person affected with this deformity is called *hump-backed*.

Hu′mu-lin. [Lat. **Humuli′na.**] The narcotic principle of the *Hu′mulus Lu′pulus*.

Hu′mu-lus.* Hops. The Pharmacopœial name (U.S. 1870, 1880) for the strobiles of *Humulus Lupulus*. Hops are tonic and narcotic.

Hu′mulus Lu′pu-lus.* (Fr. *Houblon*, hoo′-blôn′.) The systematic name of the Hop, which is both a tonic and hypnotic. It is a perennial twining plant of the order *Urticaceæ*, and is the only species of the genus. See HOP.

Hu′mus.* Vegetable mould; woody fibre in a state of decay.

Hunger. See FAMES.

Hunyadi (hŏŏn-yȧ′dee) **Wat′er.** A purgative mineral water brought from Hungary, and named from the locality where it is obtained.

Hu′ra Bra-sil-ĭ-en′sis.* A Brazilian tree of the natural order *Euphorbiaceæ*. It has an acrid milky juice. An extract of its bark is a remedy for leprosy.

Hu′ra Crep′ĭ-tans.* The Sand-Box Tree, a tree indigenous in Colombia and the West Indies, and cultivated in many tropical countries. It bears a curious hard-shelled fruit, about the size of an orange, which, when ripe, bursts with a loud, sharp crack, like the report of a pistol. It contains a poisonous milky juice. This juice and the seeds are emetic and cathartic, and capable of acting as a violent poison.

Husk. See GLUME, INVOLUCRE, and SILIQUA.

Hux′ham's (hŭx′ȧmz) **Tinc′ture of Bark.** The same as TINCTURA CINCHONÆ COMPOSITA, which see.

Hȳ′a-çinth, or **Jā′çinth.** [Gr. *ὑάκινθος*; Lat. **Hyacin′thus.**] A precious stone of a violet color. In Mineralogy, the term is applied to transparent red crystals of zircon. These are valuable gems.

Hy-a-çin′thus.* Hyacinth. A genus of bulbous plants of the order *Liliaceæ*, generally cultivated for the beauty and fragrance of the flowers. The common hyacinth (*Hyacinthus orientalis*) is a native of Asia or the Levant.

Hy′a-line. Glassy; transparent, or nearly so.

Hy-a-li′nus.* [From the Gr. *ὕαλος*, "glass."] Transparent, like glass; hy′aline.

Hy′a-lĭ-pen′nis.* [From the Gr. *ὕαλος*, "glass," and the Lat. *pen′na*, a "wing."] The same as HYALOPTERUS.

Hyalitis, *i′dis.** See HYALOIDITIS.

Hy′a-lo-dec′rў-sis.* [From the Gr. *ὑαλώδης*, "glassy," and *ἔκρυσις*, a "flowing out."] Escape of part of the vitreous humor of the eye.

Hy-a-lo′de-o-ma-la′cĭ-a* (-ma-la′she-a). [From the Gr. *ὑαλώδης*, "glassy," and *μαλακία*, "softness."] A softening of the vitreous humor or body.

Hy-a-lo′de-o-mal-a-co′sis.* The progress of hyalodeomalacia.

Hy-a-lo′dēs,* or **Hy-a-lo-ĭ′dēs.*** [From the Gr. *ὕαλος*, "glass."] Glassy.

Hȳ′a-loid. [Lat. **Hyaloi′des;** from the Gr. *ὕαλος*, "glass," and *εἶδος*, a "form" or "resemblance."] Resembling glass; transparent:—applied in Anatomy to a humor and a membrane.

Hy′aloid Mem′brane. [Lat. **Membra′na Hyaloi′des.**] The extremely delicate membrane of the eye whose numerous cells contain the vitreous humor.

Hy-a-loi-dī′tis, *i′dis.** [From the Lat. *hyaloi′des*, "hyaloid."] Inflammation of the hyaloid membrane.

Hy-ạ-lop'te-rus.* [From the Gr. *ὕαλος*, "glass," and *πτέρον*, a "wing."] A term applied to insects having transparent wings; hyalop'terous.

Hy-ạ-lo-sper'mus.* [From the Gr. *ὕαλος*, "glass," and *σπέρμα*, a "seed."] Having transparent seeds; hyalosper'mous.

Hybernaculum.* See HIBERNACULUM.

Hybernal. See HIBERNAL.

Hybernating. See HIBERNATING.

Hybernation. See HIBERNATION.

Hȳ'brid. [Lat. **Hyb'rida**, or **Hy'bris**, *idos*; from the Gr. *ὕβρις*, "mongrel."] (Fr. *Métis*, mā'tēss'.) The offspring of two different species of animals or plants; a cross-breed between two allied species. As an adjective it signifies "mongrel."

Hy-brĭ-dā'tion. [From the same.] The production of hybrid plants. This is sometimes effected naturally between two plants of different species or varieties which grow near together and bloom at the same time. It can be effected artificially by applying the pollen of one species to the pistil of a plant of another species. It does not succeed between subjects of different orders, and it is difficult between plants of different genera.

Hydarthrosis.* See HYDRARTHROSIS.

Hydarthrus.* See HYDRARTHRUS.

Hȳ-dat'id. [Lat. **Hyd'atis**, *idis*; from the Gr. *ὑδατίς*, a "watery vesicle" (from *ὕδωρ*, "water").] (Fr. *Hydatide*, ē'dā'tēd'; Ger. *Blasenwurm*, blā'zen-wo͝orm',—*i.e.*, literally, "bladder-worm."] A small vesicular tumor containing a watery fluid; usually a genus of *Entozoa*, enclosed in a capsular membrane or cyst. "It appears that the formation of all true hydatids, whether developed in mankind or in animals, results from the ingestion of tape-worm eggs."—(QUAIN.) See AQUULA.

Hy-dat'ĭ-do-çēle.* [From the Lat. *hyd'atis*, and the Gr. *κήλη*, a "tumor."] Properly a tumor containing hydatids:—commonly applied to a tumor of the scrotum containing hydatids. Called also *Hydatidoscheocele*. See OSCHEOCELE.

Hydatidodes.* See HYDATIDOSUS.

Hȳ-dat-ĭ-do-ĭ'dēs.* [From the Lat. *hyd'atis*, a "hydatid," and the Gr. *εἶδος*, a "form" or "resemblance."] Resembling a hydatid.

Hȳ-dat-ĭ-do'ma.* A tumor consisting of hydatids, or caused by hydatids.

Hȳ-dat-ĭ-do'sis.* [From the Lat. *hyd'atis*, a "vesicle," or "hydatid."] The formation of hydatidoma.

Hȳ-dat-ĭ-do'sus.* [From the Lat. *hyd'atis*, a "vesicle," or "hydatid."] Having hydatids; full of hydatids.

Hȳ-dat-ĭ-for'mis.* [From the Lat. *hyd'atis*, a "vesicle," or "hydatid."] Having the appearance of a hydatid; hydat'iform.

Hȳd-ạ-tig'e-nus.* [From the Gr. *ὑδατίς*, a "vesicle," and *γένω*, to "be born."] Proceeding from a hydatid.

Hydatis.* See HYDATID.

Hȳd-ạ-to-ġen'e-sis.* [From the Gr. *ὕδωρ*, gen. *ὕδατος*, "water," and *γένεσις*, "origin," "birth."] A term for the formation of water, or of a watery fluid, in the body.

Hy'dạ-toid. [From the Gr. *ὑδατίς*, a "vesicle," a "hydatid," and *εἶδος*, a "form" or resemblance."] Resembling a hydatid; also like water, watery.

Hȳd-ạ-ton'cus.* [From the Gr. *ὕδωρ*, gen. *ὕδατος*, "water," and *ὀγκός*, a "tumor."] A watery swelling.

Hyderoncus.* See HYDATONCUS.

Hy'de-ros,* or **Hy'de-rus.*** [From the Gr. *ὕδωρ*, "water."] Literally, "water-flux:"—a name given by the Greeks to diabetes.

Hyd-no-car'pus Ven-e-na'ṭa,* or **Hydnocar'pus In-e'brĭ-ans.*** A tree of the order *Pangiaceæ*, a native of India and Ceylon. Its fruit is very poisonous. An oil obtained from its seeds is used by the native doctors as a remedy for leprosy.

Hȳ'drạ.* [From the Gr. *ὕδωρ*, "water."] A polypus, destitute of brain, viscera, or lungs, found in brooks and pools in temperate countries.

Hȳ-draç'id. [Lat. **Hydraç'idus**; from the Gr. *ὕδωρ*, "water," and the Lat. *ac'idum*, an "acid."] An acid resulting from the union of a simple body (other than oxygen) or of a compound not oxidized, with hydrogen considered as an acidifying principle:—applied to acids containing hydrogen.

Hy'drạ-de-ni'tis, *idis.** [From the Lat. *hy'draden*, a "lymphatic gland."] Inflammation of a lymphatic gland. See LYMPHADENITIS.

Hy-dræ'mạ,* or **Hy-dræ'mĭ-ạ.*** [From the Gr. *ὕδωρ*, "water," and *αἷμα*, "blood."] A state of the blood in which the serum is transparent, with a small quantity of coloring-matter.

Hȳ'drạ-gŏgue. [Lat. **Hydrago'gus**; from the Gr. *ὕδωρ*, "water," and *ἀγω*, to "bring or drive away."] A term applied to medicines which increase the secretions, and so tend to remove water from the system.

Hy-dram'nĭ-os.* [From the Gr. *ὕδωρ*, "water," and the Lat. *am'nios*.] A term applied to an excessive quantity of the *liquor amnii*.

Hy-dran'ġe-ạ.* [Etymology uncertain or unsatisfactory.] A genus of shrubs of the order *Saxifragaceæ*, natives of China, the United States, etc.

Hydran'gea Ar-bo-rĕs'çens.* Wild Hydrangea, a shrub, a native of the Middle and Southern United States. Its leaves are said to be tonic and diuretic. Its root has been used as a remedy for gravel or calculus of the bladder.

Hydrangeaceæ,* hi-dran-je-a'she-ē. [From *Hydran'gea*, one of the genera.] A natural order of exogenous shrubs, found in China, Japan, and America, and referred by Gray to the order *Saxifragaceæ*.

Hy-dran-ġe-i'tis, *idis.** [From the Lat. *hydrangi'on*, a "lymphatic vessel" (from the Gr. *ὕδωρ*, "water" or "lymph," and *ἀγγεῖον*, a "vessel").] Inflammation of the lymphatic vessels.

Hy-dran-ġĭ-o-gra'phĭ-ạ.* [From the Lat. *hydrangi'on*, a "lymphatic vessel," and the Gr. *γράφω*, to "write."] A term for a description of the lymphatic vessels, their situation, function, etc.

Hy-dran-ǧĭ-o-to′mĭ-a.* [From the Lat. *hydrangi′on*, a "lymphatic vessel," and the Gr. τέμνω, to "cut."] Dissection of the lymphatic vessels.

Hy-drar′ǧy-ri Bi-ehlor′ī-dum.* The *Mercurius Sublimatus Corrosivus*, or corrosive sublimate. See HYDRARGYRI CHLORIDUM CORROSIVUM.

Hydrar′gyri Ehlor′ī-dum.* The submuriate of mercury. See HYDRARGYRI CHLORIDUM MITE.

Hydrar′gyri Chlor′idum Cor-ro-si′vum.* "Corrosive Chloride of Mercury." The Pharmacopœial name (U.S. 1870, 1880) for corrosive sublimate, usually occurring in the form of heavy, colorless, rhombic crystals, or crystalline masses, permanent in the air, odorless, having an acrid and persistent metallic taste. They are fusible by heat, sublime without residue, and are entirely soluble in water, alcohol, and ether. Except in very minute doses, corrosive sublimate, if taken internally, is a dangerous poison. It is sometimes applied externally, as a stimulant and escharotic, to indolent or malignant ulcers. Albumen forms an insoluble and comparatively harmless compound with corrosive sublimate. Hence, in cases of poisoning from this substance, the white of eggs beaten up with water affords an excellent antidote. In case eggs cannot be procured, copious draughts of milk, or wheat flour mixed with water, may de substituted. See POISONS.

Hydrar′gyri Chlor′idum Mi′te.* "Mild Chloride of Mercury." The Pharmacopœial name (U.S. 1870, 1880) for the substance popularly known as *calomel*. It occurs in the form of a white, impalpable powder, which is permanent in the air, tasteless and inodorous, wholly volatilizable by heat, and insoluble in water, alcohol, and ether. Calomel is esteemed the most valuable of all mercurial preparations. In minute doses it is an excellent alterative; in larger ones it is a purgative and anthelmintic. It possesses this great advantage, that in small doses it is not liable to be rejected by the most irritable stomach. But unhappily, like other mercurials, it acts unequally on different constitutions; so that the prudent physician will always be on his guard against salivation and other more serious results from its too free use,—more especially if he be not thoroughly acquainted with the constitutional peculiarities of his patient. Even a very moderate and cautious exhibition of this remedy has sometimes been followed by the most terrible and fatal effects.

Hydrar′gyri Çy-an′ī-dum.* "Cyanide of Mercury." The Pharmacopœial name (U.S. 1870, 1880) for a very poisonous compound of cyanogen and mercury. It is in colorless or white prismatic crystals, becoming dark-colored on exposure to light, odorless, having a bitter, metallic taste, and wholly soluble in water. It is sometimes given in very minute doses in syphilis.

Hydrar′gyri I-od′ī-dum Ru′brum.* "Red Iodide of Mercury." The Pharmacopœial name (U.S. 1870, 1880) for mercuric iodide, a substance containing mercury and iodine, a scarlet-red, crystalline powder, permanent in the air, odorless and tasteless, almost insoluble in water, but soluble in fifteen parts of boiling alcohol. The red iodide of mercury is a powerful and irritant poison. It is highly recommended, in very minute doses, as a remedy in rheumatism dependent on syphilitic taint.

Hydrar′gyri Iod′idum Vĭr′ĭ-de.* "Green Iodide of Mercury." The Pharmacopœial name (U.S. 1870, 1880) for mercurous iodide, a dull-green or greenish-yellow powder, becoming more yellow by exposure to air and darker by exposure to light, odorless and tasteless, almost insoluble in water, and wholly soluble in alcohol or ether. Its properties are similar to those of the preceding preparation, but it is less active. It has been given in scrofula and scrofulous syphilis.

Hydrar′gyri Ox′ī-dum Fla′vum.* "Yellow Oxide of Mercury." The Pharmacopœial name (U.S. 1870, 1880) for yellow mercuric oxide, a light-orange-yellow, heavy, impalpable powder, permanent in the air, and turning darker on exposure to light, odorless and tasteless, insoluble in water or alcohol, but wholly soluble in nitric or hydrochloric acid. It is largely used by oculists throughout the world. Its amorphous character renders it peculiarly adapted for diseases of the eye.

Hydrar′gyri Ox′idum Ru′brum.* "Red Oxide of Mercury." The Pharmacopœial name (U.S. 1870, 1880) for Red Precipitate, or red mercuric oxide. It is in heavy orange-red, crystalline scales, or a crystalline powder, permanent in the air, odorless and tasteless, insoluble in water or alcohol, but wholly soluble in nitric or hydrochloric acid. As an external application it is used, in the form of ointment and in powder, as a stimulant and escharotic; but it has been supplanted to a great extent by the yellow oxide.

Hydrar′gyri Sub-mu′rĭ-as.* "Submuriate of Mercury." See HYDRARGYRI CHLORIDUM MITE.

Hydrar′gyri Sub-sul′phas Fla′vus.* "Yellow Subsulphate of Mercury." The Pharmacopœial name (U.S. 1870, 1880) for Turpeth Mineral, a heavy lemon-yellow powder, permanent in the air, odorless and almost tasteless, insoluble in water or alcohol, but soluble in nitric or hydrochloric acid. It is alterative and powerfully emetic and errhine.

Hydrar′gyri Sul′phī-dum Ru′brum.* "Red Sulphide of Mercury." (Formerly called the *Red Sulphuret of Mercury*.) The Pharmacopœial name (U.S. 1880) for CINNABAR (which see). It is at present only employed by fumigation, as a rapid sialagogue, in syphilitic affections.

Hydrar′gyri Sul-phu-re′tum Ni′grum.* "Black Sulphuret of Mercury." See ÆTHIOPS MINERAL.

Hydrar′gyri Sulphure′tum Ru′brum.* "Red Sulphuret of Mercury." The Pharmacopœial name (U.S. 1870) for cinnabar, a substance occurring in brilliant crystalline masses of a deep-red color and fibrous texture. It is entirely volatilized by heat.

Hydrargyri Unguentum.* See UNGUENTUM HYDRARGYRI.

Hy-drar-ǧyr′ī-a.* [From the Lat. *hydrar′gyrum*, "mercury."] An erythematous redness sometimes produced by an overuse of mercury;

also applied to any morbid effects arising from its abuse as a medicine.

Hy-drar-ġŷ-ri'a-sis.* [From the Gr. *ὑδράργυρος*, "mercury."] The effect arising from the administration of mercury; mercurialism. See HYDRARGYROSIS.

Hȳ-drar-ġŷr'ic. [Lat. **Hydrargyr'icus.**] Belonging to *hydrargyrum*, or mercury

Hy-drar-ġŷ-ro'sis.* The same as HYDRARGYRIASIS, which see.

Hy-drar'ġŷ-rum,* gen. **Hy-drar'ġŷ-ri.** [From the Gr. *ὕδωρ*, "water," or "liquid," and *ἄργυρος*, "silver."] (Fr. *Mercure*, mĕR'kür', or *Vif Argent*, vĕf ȧR'zhȯN'.) Literally, "liquid silver." The Latin name for quicksilver, or mercury. See MERCURY.

Hydrar'gyrum.* "Mercury," or Quicksilver. The Pharmacopœial name (U.S. 1870, 1880) for a shining, silver-white metal, liquid at temperatures above —40° C. (—40° F.), odorless and tasteless, and insoluble in ordinary solvents, but soluble in nitric acid without residue. See MERCURY.

Hydrar'gyrum Am-mo-nĭ-a'tum.* "Ammoniated Mercury." The Pharmacopœial name (U.S. 1870, 1880) for White Precipitate, a compound formed by precipitating a solution of chloride of mercury with water of ammonia. It occurs in white powder or pulverulent masses. It is very poisonous, and is used in medicine only as an external application.

Hydrar'gyrum cum Cre'tâ.* "Mercury with Chalk." The Pharmacopœial name (U.S. 1870, 1880) for a mixture composed of thirty-eight parts of mercury, twelve parts of sugar of milk in fine powder, and fifty parts of prepared chalk. It is used as a mild mercurial alterative for children.

Hȳd-rar-thro'sis.* The morbid diathesis indicated by the occurrence of hydrarthrus.

Hȳ-drar'thrus.* [From the Gr. *ὕδωρ*, "water," and *ἄρθρον*, a "joint."] The disease known as white swelling:—sometimes called *Spina Ventosa*. A genus of the order *Tumores*, class *Locales*, of Cullen's nosology.

Hy-dras'tis.* Golden Seal, or Yellow Root. The Pharmacopœial name (U.S. 1870, 1880) for the rhizome and rootlets of *Hydrastis Canadensis*. It is tonic, and has been used as a laxative and alterative, and as a remedy for dyspepsia and scrofula.

Hydras'tis Can-a-den'sis.* A perennial herbaceous plant of the order *Ranunculaceæ*, a native of the United States. Among its popular names are *Puccoon* and *Golden Seal*. It is the only species of the genus.

Hy-dra-tā'tion. [See next article.] The act of combining water with a substance.

Hȳ'drāte. [Lat. **Hy'dras, a'tis;** from the Gr. *ὕδωρ*, "water."] A combination of water with an oxide; a chemical compound formed by the union of a metallic oxide (and other compounds) with water, which performs the part of an acid, or of an acid with water, which then performs the part of a base; a hydro-oxide.

Hydrate of Chloral. See CHLORAL.

Hȳ'drāt-ed. [Lat. **Hydra'tus;** from *hy'dras*, a "hydrate."] A term applied to substances combined with water.

Hȳ-drau'lic. [Lat. **Hydrau'licus;** from the Gr. *ὕδωρ*, "water," and *αὐλικός*, "belonging to a pipe."] Pertaining to fluids in motion; belonging to the conveyance of water through pipes.

Hȳ-drau'lics. [Lat. **Hydrau'lica;** from the same.] The art of constructing engines to convey or raise water through pipes; a branch of hydrodynamics; that branch of Natural Philosophy which treats of the motions of liquids and the laws by which they are regulated.

Hy-dren-çeph-a-li'tis, i*dis.* [From the Lat. *hydrenceph'alus.*] Hydrocephalus with inflammation.

Hy-dren-çe-phal'o-çēle.* [From the Gr. *ὕδωρ*, "water," and the Lat. *encephal'ocele*, "tumor of the head."] Hydrocephalic tumor or hernia.

Hy-dren-çeph'a-lus.* [From the Gr. *ὕδωρ*, "water," and *ἐγκέφαλος*, "within the head."] Water in the head:—the same as HYDROCEPHALUS.

Hȳ-drī'o-dāte. [Lat. **Hydri'odas, a'tis.**] A combination of hydriodic acid with a base.

Hȳ-drĭ-od'ic. [Lat. **Hydriod'icus;** from the Gr. *ὕδωρ*, "water," and the Lat. *iod'inum*, "iodine."] Belonging to water and iodine:—applied to an acid.

Hydriodic Ether. See IODIDE OF ETHYL.

Hy-dro-a'rĭ-um.* [From the Gr. *ὕδωρ*, "water," and *ὠάριον*, an "ovule," also the "ovary"?] Dropsy of the ovary.

Hȳ-dro-bro'māte. [Lat. **Hydrobro'mas, a'tis.**] A combination of hydrobromic acid with a base.

Hȳ-dro-brom'ic. [Lat. **Hydrobrom'icus.**] Belonging to a combination of hydrogen and bromine:—applied to an acid. See ACIDUM HYDROBROMICUM.

Hydrobrom'ic E'ther. A volatile anæsthetic liquid formed by distilling four parts of bromide of potassium in powder with a mixture of one part of alcohol and two parts of sulphuric acid.

Hȳ'dro-Car'bon. [From the Eng. *hy'drogen*, and the Lat. *car'bo*, "coal."] A compound of carbon and hydrogen:—applied to an important class of compounds, many of which occur ready formed in nature. The hydro-carbons are the simplest of all organic compounds. Among them are anthracene, benzol, caoutchouc, ethylene, gutta-percha, and most of the essential oils.

Hȳ-dro-car'bo-nāte. [Lat. **Hydrocarbo'nas, a'tis.**] A combination of a carbonate with a hydrate, or of a carbonate and water.

Hȳ-dro-car'bu-ret. [Lat. **Hydrocarbure'tum.**] A combination of hydrogen and carbon with another body.

Hy-dro-cau'lis.* [From the Gr. *ὕδωρ*, "water," and the Lat. *cau'lis*, a "stem."] A knotty stem with sheathed leaves which float on the water.

Hȳ'dro-çēle.* [From the Gr. *ὕδωρ*, "water," and *κήλη*, a "tumor."] Dropsy of the testicle.

Water, or other fluid, in the membranes of the scrotum, the coats of the testicle, or the cellular texture of the spermatic cord. A genus of the order *Intumescentiæ*, class *Cachexiæ*, of Cullen's nosology.

Hy'dro-çe-no'sis.* [From the Gr. *ὑδωρ*, "water," and *κένωσις*, an "evacuation."] An evacuation of water, as in dropsy, either by paracentesis or by hydragogue medicines.

Hydrocéphale. See HYDROCEPHALUS.

Hy'dro-çe-phăl'ĭ-cus.* Belonging to hydrocephalus.

Hydrocephalitis.* See HYDRENCEPHALITIS.

Hy'dro-çeph'ą-lo-çen-te'sis.* [From the Lat. *hydroceph'alus*, and the Gr. *κέντησις*, a "puncturing."] The operation of puncturing the head in hydrocephalus.

Hȳ-dro-çeph'ą-loid. [Lat. **Hydrocephaloi'des**; from *hydroceph'alus*, and the Gr. *εἶδος*, a "form" or "resemblance."] Resembling hydrocephalus.

Hy-dro-çeph'ą-lus.* [From the Gr. *ὑδωρ*, "water," and *κεφαλή*, the "head."] (Fr. *Hydrocéphale*, ē'drŏ'sā'fāl'.) Literally, "water in the head." Dropsy of the brain. A genus of the order *Intumescentiæ*, class *Cachexiæ*, of Cullen's nosology. This disease almost always occurs in young children. It may be congenital, and is sometimes far developed during uterine life. It is occasionally caused by scrofulous tumors pressing upon the blood-vessels of the brain and thus interrupting the circulation. The prognosis is nearly always unfavorable.

Hydrocharidaceæ,* hi-dro-kăr-ĭ-da'she-ē. [From *Hydroch'aris*, one of the genera.] A natural order of endogenous aquatic plants, natives of fresh water, in Europe, India, and North America. It includes the *Vallisneria spiralis*.

Hydrocharides,* hi-dro-kăr'e-dēz. The Jussieuan name of a natural order of plants. See HYDROCHARIDACEÆ.

Hȳ-dro-ehlo'rāte. [Lat. **Hydrochlo'ras, a'tis.**] A combination of hydrochloric acid with a base.

Hȳ-dro-ehlor'ic. [Lat. **Hydrochlor'icus.**] Belonging to hydrogen or chlorine:—applied to an acid formerly termed *Muriatic Acid*. This acid, when pure, is a colorless gas which has a suffocating odor, destroys animal life, and extinguishes flame. It is a compound of chlorine and hydrogen. The hydrochloric acid of Pharmacy and commerce is an aqueous solution of the gas. It is a colorless, corrosive, and poisonous liquid. When concentrated as highly as possible, its density is 1.21. See ACIDUM HYDROCHLORICUM.

Hȳ-dro-ehlo'rĭne. [Lat. **Hydrochlori'na.**] A compound of hydrogen and chlorine.

Hy-dro-ehol-e-çȳs'tis, i*dis.* [From the Gr. *ὑδωρ*, "water," *χολή*, "bile," and *κύστις*, a "bag," "cyst," or "bladder."] Dropsy of the gall-bladder.

Hy-dro-ehol-e-çȳs-ti'tis, i*dis.* [From the Lat. *hydrocholecys'tis*.] Dropsy of the gall-bladder, with inflammation.

Hy-dro-çir'so-çēle. [From the Gr. *ὑδωρ*, "water," *κιρσός*, a "varix," and *κήλη*, a "tumor."] Hydrocele, with varicose veins, of the spermatic cord.

Hy-dro-çœ'lĭ-ą.* [From the Gr. *ὑδωρ*, "water," and *κοιλία*, the "belly."] The same as ASCITES, which see.

Hy-dro-cor'mus.* [From the Gr. *ὑδωρ*, "water," and *κορμός*, a "trunk."] A stem or stalk that is horizontal and floats on the water.

Hy-dro-cot'ȳ-lē A-sĭ-at'ĭ-cą.* [From the Gr. *ὑδωρ*, "water," and *κοτύλη*, a "cup."] A plant of the order *Umbelliferæ*, a native of India and South Africa. It is used in medicine as a remedy for elephantiasis (of the Greeks) and for various cutaneous diseases.

Hy-dro-cra'nĭ-ą.* [From the Gr. *ὑδωρ*, "water," and *κρανίον*, the "head."] The same as HYDROCEPHALUS, which see.

Hȳ-dro-çȳ'ą-nāte. [Lat. **Hydrocy'anas, a'tis.**] A combination of hydrocyanic acid with a base.

Hȳ'dro-çȳ-an'ic. [Lat. **Hycrocyan'icus**; Fr. *Cyanhydrique*, sē'ā'nē'drēk'.] Belonging to hydrogen and cyanogen:—applied to an acid also termed *Prussic Acid* (which see), a compound of cyanogen with hydrogen. The anhydrous acid is a colorless, inflammable, and extremely volatile liquid, boiling at 80° F. Its specific gravity as a liquid is 0.6969, and as a vapor, 0.942. Its vapor is so deleterious that the least portion of it cannot be inhaled without the greatest danger. The anhydrous acid diluted with nine times its weight of water constitutes the medicinal acid. See ACIDUM HYDROCYANICUM DILUTUM.

Hy-dro-çȳs'tis, i*dis.* [From the Gr. *ὑδωρ*, "water," and *κύστις*, a "vesicle."] A hydatid or hy'drocyst.

Hy-dro-der'mą, a*tis.* [From the Gr. *ὑδωρ*, "water," and *δέρμα*, the "skin."] A term applied in nearly the same manner as ANASARCA, which see.

Hy-dro'dēs.* [From the Gr. *ὑδωρ*, "water."] Full of water; hy'drous.

Hȳ-dro-dȳ-nam'ic. [Lat. **Hydrodynam'icus**; from the Gr. *ὑδωρ*, "water," and *δύναμις*, "power."] Belonging to the power of water or other fluids.

Hȳ-dro-dȳ-nam'ics. [Lat. **Hydrodynam'ica**; from the same.] The science which applies the principles of dynamics to determine the conditions of motion or rest in fluid bodies, especially liquids. It is usually divided into two branches, *hydrostatics* and *hydraulics*.—(BRANDE.)

Hy-drœ-de'mą, a*tis.* [From the Gr. *ὑδωρ*, "water," and *οἴδημα*, a "swelling."] Watery œdema.

Hydroëncephalus.* See HYDRENCEPHALUS.

Hȳ-dro-flu'āte. [Lat. **Hydrof'luas, a'tis.**] A combination of hydrofluoric acid with a base.

Hȳ-dro-flu-or'ic [Lat. **Hydrofluor'icus**], or **Flu-or-hȳ'dric.** Belonging to hydrogen and fluorine:—applied to an acid, also termed *Fluoric*. The anhydrous acid is a colorless gas, and one of the most dangerous substances known to chemists. The aqueous acid is extremely corrosive, and is used for etching glass.

Hȳ'dro-ġen. [Lat. **Hydroge'nium**; from the Gr. *ὑδωρ*, "water," and *γεννάω*, to "produce."]

(Fr. *Hydrogène*, ē'drŏ'zhĕn'.) An element which is the lightest ascertained substance; a gas forming one of the constituents of water; inflammable air. It is colorless, inodorous, and tasteless. It is inflammable, but will not support combustion. It combines with chlorine and fluorine to form acids, with nitrogen to form ammonia, and with carbon to form many hydro-carbons. In 1878, M. Pictet, of Geneva, reduced hydrogen to a liquid state by pressure joined with a great reduction of temperature.

Hȳ'dro-ĝen-āt-ed. [Lat. **Hydrogena'tus.**] Having hydrogen in combination.

Hydrogène. The French term for HYDROGEN, which see.

Hȳ-dro-ĝe-nif'er-ous. [Lat. **Hydrogenif'erus**; from *hydroge'nium*, "hydrogen," and *fe'ro*, to "bear."] Containing hydrogen.

Hȳ-drog'no-sȳ. [Lat. **Hydrogno'sia**; from the Gr. *ὕδωρ*, "water," and *γνῶσις*, "knowledge."] A history of the waters of the terrestrial globe.

Hȳ-drog'ra-phȳ. [Lat. **Hydrogra'phia**; from the Gr. *ὕδωρ*, "water," and *γράφω*, to "write."] The measurement and description of the waters distributed on the earth's surface, particularly with reference to the course and magnitude of rivers, the bearings of the coasts, the depths, currents, and other circumstances required to be known for the purposes of navigation. It comprises marine surveying, the construction of marine charts, etc.

Hy-dro-hæ'mĭ-a.* [From the Gr. *ὕδωρ*, "water," and *αἷμα*, the "blood."] Wateriness, or a poor state, of the blood; hydrohemy.

Hȳ-dro-hæm'ic, or **Hȳ-dro-hem'ic.** [Lat. **Hydrohæm'icus.**] Belonging to hydrohæmia, or an impoverished condition of the blood.

Hy-dro-hȳs'te-ra.* [From the Gr. *ὕδωρ*, "water," and *ὑστέρα*, the "womb."] The same as HYDROMETRA.

Hȳ-drol'o-ĝȳ. [Lat. **Hydrolo'gia**; from the Gr. *ὕδωρ*, "water," and *λόγος*, a "discourse."] The science which treats of water, its properties, uses, etc.

Hy-dro-ma'nĭ-a.* [From the Gr. *ὕδορ*, "water," and *μανία*, "madness."] A rage for water:—applied to a form of madness in which the patient has a strong propensity to commit suicide by drowning.

Hȳ'dro-mel. [Lat. **Hydrom'eli**; from the Gr. *ὕδωρ*, "water," and *μέλι*, "honey."] Water impregnated with honey. It is laxative.

Hy'dro-men'in-ĝi'tis, i*dis.* [From the Gr. *ὑδρωψ*, "dropsy," and the Lat. *meningi'tis.*] Dropsy complicated with inflammation of the membranes of the brain. See MENINGITIS.

Hȳ-drom'e-ter. [Lat. **Hydrom'etrum**; from the Gr. *ὕδωρ*, "water," and *μέτρον*, a "measure."] An instrument for ascertaining the specific gravity of fluids. See AREOMETER.

Hy-dro-me'tra.* [From the Gr. *ὑδρωψ*, "dropsy," and *μήτρα*, the "womb."] Dropsy of the uterus, or womb. A genus of the order *Intumescentiæ*, class *Cachexiæ*, of Cullen's nosology.

Hy-drom'pha-lon,* or **Hy-drom'pha-lum.*** [From the Gr. *ὕδρωψ*, "dropsy," and *ὀμφαλός*, the "navel."] A tumor of the umbilicus containing water.

Hy-dron'e-phros,* or **Hy-dron'e-phrus.*** [From the Gr. *ὕδωρ*, "water," and *νεφρός*, the "kidney."] Dropsy of the kidney. See next article.

Hy-dro-ne-phro'sis.* [Etymology the same.] (Fr. *Hydronéphrose*, ē'drŏ'nā'frōz'.) Dropsy of the kidney or kidneys, usually caused by obstruction of the ureter from the pressure of some tumor, or by the impaction of calculi.

Hy-dron'o-sos,* or **Hy-dron'o-sus.*** [From the Gr. *ὕδωρ*, "water," and *νόσος*, "disease."] Water-disease; dropsy:—incorrectly put for the *Anglicus Sudor*, or sweating sickness.

Hȳ-dro-path'ic. [Lat. **Hydropath'icus.**] Belonging to hydropathy.

Hȳ-drop'a-thȳ. [Lat. **Hydropathi'a**; from the Gr. *ὕδωρ*, "water," and *πάθος*, "disease."] A system of treating diseases by the plentiful use, internal and external, of water, mostly cold or tepid.

Hy-dro-pe-de'sis.* [From the Gr. *ὕδωρ*, "water," and *πηδάω*, to "spring or rush forth."] Excessive perspiration.

Hy-dro-pel-tid'e-æ.* [From *Hydropel'tis*, a name of one of the genera (from the Gr. *ὕδωρ*, "water," and *πέλτη*, a "kind of small shield," because the leaves are shaped like a shield).] A synonyme of a natural order of aquatic plants called "Water-Shields." See CABOMBACEÆ.

Hy-dro-pel'tis Pur-pu're-a,* or **Bra-se'nĭ-a Pel-ta'ta.*** Water-Shield, an aquatic plant of the order *Nymphæaceæ* or *Cabombaceæ*. It is a native of Japan, Australia, India, and the United States. Its leaves are astringent.

Hy-dro-pĕr-ĭ-car'dĭ-um.* [From the Gr. *ὑδρωψ*, "dropsy," and the Lat. *pericar'dium.*] Dropsy of the pericardium.

Hy-dro-pĕr-ĭ-to-næ'um.* [From the Gr. *ὑδρωψ*, "dropsy," and the Lat. *peritonæ'um.*] The same as ASCITES.

Hy-dro-phal'lus.* [From the Gr. *ὕδωρ*, "water," and *φαλλός*, an Oriental term for the "penis."] A dropsical swelling of the penis.

Hȳ'dro-phāne. [From the Gr. *ὕδωρ*, "water," and *φαίνομαι*, to "appear."] A variety of opal which becomes translucent when immersed in pure water.

Hy-dro-phi-mo'sis.* [From the Gr. *ὕδωρ*, "water," and *φίμωσις*, a "constriction."] Phimosis with, or consequent upon, œdema of the prepuce.

Hy-dro-pho'bĭ-a.* [From the Gr. *ὕδωρ*, "water," and *φόβος*, "fear;" because a dread or horror of water is one of its symptoms.] Also called **Ra'bĭ-ēs*** and **Lys'sa.*** (Fr. *Rage*, răzh; Ger. *Hundswuth*, hŏŏnts'wōōt.) Madness caused by the bite of a rabid dog or other animal,—usually attended with violent spasms if the patient attempts to swallow water or other liquids. This disease never occurs spontaneously in man, but is always the result of inoculation with the poison

of a rabid animal. It is estimated that in nine cases out of ten it is derived from dogs; sometimes it is contracted from cats, and sometimes (but very rarely) from foxes or wolves. It has been observed that inoculation is more apt to take place from a bite on an uncovered part of the body, as, for example, on the hands or face, than from a bite inflicted through the clothes. The period of incubation is generally longer than that of other specific diseases. It may be stated to be, on an average, six or seven weeks; but it is extremely variable. In some instances it has extended, it is said, to twelve months. Even when no preventive measures are adopted, it is estimated that at least one-half of those bitten by a rabid animal escape hydrophobia. If proper measures are promptly resorted to, a very much larger portion will escape the disease. When a person has been bitten by a rabid, or even a suspicious, animal, a tight ligature should, if practicable, be applied above the wounded part, with a view to arrest the circulation. The wound should be washed and allowed to bleed freely: it should then be cauterized as speedily as possible. A free excision of the part affected should, when practicable, be made. When a person has actually been attacked by hydrophobia, the prognosis must always be unfavorable. Cases of recovery are extremely rare. The more seldom and less violent the spasms, the greater is the ground to hope. A genus of the order *Spasmi*, class *Neuroses*, of Cullen's nosology. See LYSSA, and RABIES.

Hȳ-dro-phob'ic. [Lat. **Hydrophob'icus.**] Belonging to hydrophobia.

Hȳ-droph-thăl'mȳ. [Lat. **Hydrophthal'mia**; from the Gr. *ὑδρωψ*, "dropsy," and *ὀφθαλμός*, the "eye."] Dropsy of the eye; also anasarcous swelling of the eyelid; *Oculus Elephantinus.*

Hydrophyllaceæ,* hi-dro-fil-la'she-ē. [From *Hydrophyl'lum*, one of the genera.] A small natural order of exogenous herbaceous plants, mostly natives of America. Some of them are natives of India and South Africa.

Hy-dro-phȳl'le-us.* [From the Gr. *ὑδωρ*, "water," and *φύλλον*, a "leaf."] A term applied in the plural feminine (*Hydrophyl'leæ*) to a family of plants having for their type the *Hydrophyllum.*

Hy-dro-phȳs'o-çēle.* [From the Gr. *ὑδωρ*, "water," *φύσα*, "flatus," and *κήλη*, a "tumor."] Hernia the sac of which contains fluid and air.

Hy-dro-phȳs-o-me'tra.* [From the Gr. *ὑδωρ*, "water," *φύσα*, "flatus," and *μήτρα*, the "womb."] Accumulation of serum and gas in the womb.

Hȳ'dro-phȳte. [Lat. **Hydroph'yton**; from the Gr. *ὑδωρ*, "water," and *φυτόν*, a "plant."] A plant which grows in water.

Hȳ-dro-phȳ-tog'ra-phȳ. [Lat. **Hydrophytogra'phia**; from *hydroph'yton*, a "hydrophyte," and the Gr. *γράφω*, to "write."] A description of *Hydrophyta*, or water-plants.

Hȳ-dro-phȳ-tol'o-ġȳ. [Lat. **Hydrophytolo'gia**; from *hydroph'yton*, a "hydrophyte," and the Gr. *λόγος*, a "discourse."] A treatise on water-plants.

Hȳ-drop'ic. [Lat. **Hydrop'icus**; Fr. *Hydropique*, ē'dRo'pēk'.] Belonging to *hydrops*, or dropsy.

Hydropisie. See HYDROPS.

Hy'dro-pneū'mo-tho'rax.* The complication of pneumothorax with dropsical effusion.

Hy-dro-po-ï'dēs.* [From the Gr. *ὑδρωψ*, "dropsy," and *εἶδος*, a "form" or "resemblance."] Resembling dropsy.

Hy'drops,* gen. **Hy-dro'pis.** [Gr. *ὑδρωψ*, from *ὕδωρ*, "water."] (Fr. *Hydropisie*, ē'dRo'pē'zē'.) Dropsy. An unnatural or morbid collection of serous fluid in the cellular tissue or in any of the cavities of the body. When this fluid is diffused through the entire cellular tissue of the body, the disease is termed *General Dropsy*, or ANASARCA; if contained in the abdomen, it is called ASCITES; if in the head, HYDROCEPHALUS,—of which a notice will be found in their alphabetical places. See DROPSY.

Hy'drops Ar-tic'u-li.* "Dropsy of a Joint." A disease generally occurring in the knee-joint, in which the synovial membrane is filled with a fluid less glairy, and thinner, than the natural synovia.

Hy'drops Sic'cus.* "Dry Dropsy." An absurd term for *tympanites.*

Hydropyretus.* See HYDRONOSUS.

Hy-dror'chis.* [From the Gr. *ὑδωρ*, "water," and *ὄρχις*, a "testicle."] Dropsy of the testicle.

Hy-dror-rha-chi'tis, *idis,** or **Hy-dror'rha-chis.*** [From the Gr. *ὑδωρ*, "water," and *ῥάχις*, the "vertebral column."] Dropsy of the spine. A genus of the order *Intumescentiæ*, class *Cachexiæ*, of Cullen's nosology. See RHACHIOCHYSIS.

Hy-dro-săl'pinx.* [From the Gr. *ὑδωρ*, "water," and *σάλπιγξ*, a "tube."] Dropsy of the Fallopian tube.

Hy-dro-sar'ca.* [From the Gr. *ὑδωρ*, "water," and *σάρξ*, "flesh." The same as ANASARCA.

Hy-dros'ta-sis.* [From the Gr. *ὑδωρ*, "water," and *στάσις*, a "standing."] The equilibrium, weight, or pressure of water or other liquid bodies.

Hȳ-dro-stat'ic. [Lat. **Hydrostat'icus**; from the Gr. *ὑδωρ*, "water," and *στατική*, the "science of weights."] Belonging to the weight, pressure, or equilibrium of liquid bodies.

Hydrostat'ic Bed. Otherwise called a **Water Bed.** A kind of bed or trough, capable of holding water, and covered with water-proof cloth; or a bed-tick made of water-proof cloth and filled with water. The great advantage of such a bed is that it presses equally on every part of the lower surface of the body, and that it is always ready for use without being shaken up.

Hydrostat'ic Test. The putting the lungs of a dead child in water, to ascertain, by their *floating* or *sinking*, whether it has been born alive.

Hȳ-dro-stat'ics. [Lat. **Hydrostat'ica**; from the same.] That science which explains the properties of the equilibrium and pressure of liquids, or which treats of the mechanical properties of liquids in a state of rest.

Hȳ-dro-sul'phu-ret. [Lat. **Hydrosulphure'tum**; from the Gr. *ὕδωρ*, "water," and the Eng. *sul'phur*.] A combination of sulphuretted hydrogen with a base.

Hy-dro-sul-phu'ric Aç'id. Sulphuretted hydrogen gas.

Hy-dro-tho'rax, a'cis.* [From the Gr. *ὕδωρ*, "water," and *θόραξ*, the "chest."] (Fr. *Hydropisie de Poitrine*, ē'drŏ'pē'zē' dĕh pwă'trĕn'.) Dropsy of the chest. A genus of the order *Intumescentiæ*, class *Cachexiæ*, of Cullen's nosology.

Hydrous. See HYDRODES.

Hydrovarium.* See HYDROARIUM.

Hy-dro-zo'on,* Hy-dro-zo'um.* [From the Gr. *ὕδωρ*, "water," and *ζῶον*, an "animal."] A term applied in the plural (*Hydrozo'a*) to certain animals, including the *Mollusca* and *Zoophyta*, to which water is indispensable.

Hȳ'dru-ret. [Lat. **Hydrure'tum**; from the Gr. *ὕδωρ*, "water."] A combination of hydrogen with a metal or an inflammable substance.

Hȳ-dru-ret'ted. [Lat. **Hydrure'tus**; from the Gr. *ὕδωρ*, "water."] Containing hydrogen.

Hȳ-e'mal. [Lat. **Hyema'lis**; from *hy'ems*, "winter."] Of or belonging to winter:—applied to plants that bloom in winter.

Hy'e-to-gra'phĭ-ą.* [From the Gr. *ὑετός*, "rain," and *γράφω*, to "write."] An account or description of rain, and the quantity fallen within a given period.

Hȳ-e-tom'e-ter. [Lat. **Hyetom'etrum**; from the Gr. *ὑετός*, "rain," and *μέτρον*, a "measure."] An instrument for ascertaining the quantity of rain that falls in a given period.

Hy-ġe'ĭą,* or **Hy-ġĭ-e'ĭą.*** [Gr. *Ὑγίεια*, "health;" also the goddess of Health; from *ὑγιής*, "sound," "healthy."] See HYGIENE.

Hy-ġĭ-as'tĭ-cą.* [From the Lat. *hygias'ticus*, "relating to health."] The science of health, its conditions and relations.

Hy-ġĭ-as'tĭ-cus.* [From the Gr. *ὑγίεια*, "health."] Relating to health.

Hy-ġĭ-eī-o-co-mi'um.* [From the Gr. *ὑγίεια*, "health," and *κομέω*, to "take care of."] A house or residence for the convalescent.

Hȳ'ġĭ-ēne. [From the Gr. *ὑγίεια*, "health."] That department of Medicine which has for its direct object the preservation of health, or the prevention of disease. The study of the sanitary relations of man with the exterior world, and of the means to make these relations contribute to the viability of the individual and the species.

Hȳ-ġĭ-ĕn'ic. [Lat. **Hygien'icus**; Fr. *Hygiénique*, ē'zhē'ā'nĕk'.] Belonging to hygiene.

Hȳ'ġĭ-en'ist. [From the Gr. *ὑγίεια*, "health."] A physician who studies or practises hygiene, or writes on that subject.

Hȳ-ġĭ-ol'o-ġȳ, or **Hȳ-ġe-ol'o-ġȳ.** [Lat. **Hygeiolo'gia**, or **Hygieiolo'gia**; from the Gr. *ὑγίεια*, "health," and *λόγος*, a "discourse."] The doctrine or consideration of health; the science of health.

Hy-gre-ehe'mą, a*tis.* [From the Gr. *ὑγρός*, "moist," and *ἦχημα*, a "sound."] The sound of fluid heard by means of the stethoscope, or by percussion.

Hȳ-grol'o-ġȳ. [Lat. **Hygrolo'gia**; from the Gr. *ὑγρός*, "moist," and *λόγος*, a "discourse."] A treatise on fluids or humors.

Hy-gro'mą, a*tis.* [From the Gr. *ὑγρός*, "moist."] A tumor containing serum or other fluid, not pus.

Hȳ-grom'ą-tous. [Lat. **Hygromato'sus.**] Having hygroma.

Hȳ-grom'e-ter. [Lat. **Hygrom'etrum**; from the Gr. *ὑγρός*, "moist," and *μέτρον*, a "measure."] An instrument for ascertaining the degree of moisture in atmospheric air.

Hȳ-gro-met'ric. [Lat. **Hygromet'ricus.**] Belonging to hygrometry.

Hȳ-grom'e-trȳ. [Lat. **Hygrome'tria**; from the Gr. *ὑγρός*, "moist," and *μετρέω*, to "measure."] The art of measuring or ascertaining the degree of moisture in atmospheric air.

Hȳ'gro-scope. [From the Gr. *ὑγρός*, "moist," and *σκοπέω*, to "observe" or "examine."] An instrument for ascertaining the degree of moisture in the air, or in any substance:—nearly synonymous with HYGROMETER.

Hȳ-gro-sco-pĭç'ĭ-tȳ. [Lat. **Hygroscopiç'itas, a'tis**; from the same.] The property by which vegetable tissues absorb or discharge moisture according to circumstances, or the property of extending or shrinking on the application or removal of water.

Hȳ-gros'co-pȳ. [Lat. **Hygrosco'pia**; from the same.] Nearly synonymous with HYGROMETRY.

Hy-log-no'sĭ-ą.* [From the Gr. *ὕλη*, "material," or "matter," and *γνῶσις*, "knowledge."] A knowledge of the properties of matter.

Hȳ-lol'o-ġȳ. [Lat. **Hylolo'gia**; from the Gr. *ὕλη*, "material," or "matter," and *λόγος*, a "discourse."] The doctrine or science of matter.

Hy'men,* gen. **Hy'me-nis.** [From the Gr. *ὑμήν*, a "thin membrane."] Any membrane:—usually applied to a thin membrane, of a circular, semilunar, or irregular form, extending across the vagina at its entrance.

Hy-me-næ'ą.* [From *Hy'men*, the god of Marriage.] A genus of trees of the order *Leguminosæ*:—so named because each leaf is composed of a pair of leaflets. The *Hymenæa Courbaril*, a native of Brazil, Guiana, etc., is a large timber-tree, which yields a valuable resin called *animé*. This tree grows to an enormous size, twenty feet in diameter at the top of a buttress which supports the base and has a much greater diameter. Some specimens of it are supposed to be about two thousand years old. Several species of *Hymenæa* afford gum copal.

Hymenæ'a Ver-ru-co'są.* A tree, a native of Madagascar, affording a resinous substance called *Oriental animé*, or *Madagascar copal*.

Hy-men'ĭ-cus.* Belonging to the hymen; hymen'ic.

Hy-me-ni'tis, i*dis.* [From the Lat. *hy'men*, a "membrane."] Inflammation of the hymen.

Hy-me'nĭ-um.* [From the Lat. *hy'men*, a "membrane."] The dilated exposed membrane

of gymnocarpous mushrooms in which the seed is contained.

Hy-me-no'dēs.* Having a membranous texture:—applied to parts of plants.

Hy-me-nog'ra-phy. [Lat. **Hymenogra'phia**; from the Gr. *ὑμήν*, a "membrane," and *γράφω*, to "write."] A description of the membranes of animal bodies.

Hy-me-nol'o-gy. [Lat. **Hymenolo'gia**; from the Gr. *ὑμήν*, a "membrane," and *λόγος*, a "discourse."] A treatise on the membranes; the science of the membranes.

Hy'me-no-ma-la'cĭ-a* (-ma-la'she-a). [From the Gr. *ὑμήν*, a "membrane," and *μαλακός*, "soft."] Morbid softening of the (serous) membranes.

Hy-me-nop'ter-ous. [Lat. **Hymenop'terus**; from the Gr. *ὑμήν*, a "membrane," and *πτερόν*, a "wing."] Having membranous wings: applied in the neuter plural (*Hymenop'tera*) to an order of insects including the bee, the wasp, and the ant.

Hy-men-or'rha-phy. [From the Lat. *hy'men*, and the Gr. *ῥαφή*, a "suture."] A form of elytrorrhaphy in which the operation is performed on the hymen in its natural situation.

Hy-me-not'o-my. [Lat. **Hymenoto'mia**; from the Gr. *ὑμήν*, a "membrane," and *τέμνω*, to "cut."] Dissection of membranes.

Hy'o-. A prefix denoting connection with the *os hyoides*.

Hy-o-glos'sus.* [From *hy'o-*, and the Gr. *γλῶσσα*, the "tongue."] A large muscle of the neck, connecting the *os hyoides* with the tongue.

Hȳ'oid. [Lat. **Hyoi'des**; from *υ*, a Greek letter, and *εἶδος*, a "form" or "resemblance."] Resembling the Greek letter *υ*:—applied to a bone of the neck.

Hy-os-çy'a-mi Fo'lĭ-a.* "Henbane Leaves." The Pharmacopœial name (U.S. 1870) for the leaves of the *Hyoscy'amus ni'ger*. See HYOSCYAMUS.

Hyoscy'ami Se'men.* "Henbane Seed." The Pharmacopœial name (U.S. 1870) for the seed of the *Hyoscy'amus ni'ger*.

Hȳ-os-çy'a-min, or **Hȳ-os-cy'a-mĭne.** A vegetable alkali obtained from the *Hyoscy'amus ni'ger*. It is soluble in alcohol and ether. It dilates the pupil like atropine.

Hy-os-çy-a-mi'næ Sul'phas.* "Sulphate of Hyoscyamine." The Pharmacopœial name (U.S. 1880) for the neutral sulphate of an alkaloid prepared from hyoscyamus, called *hyoscyamin*. Its medical properties are those of hyoscyamus.

Hy-os-çy'a-mus.* [From the Gr. *ὗς*, a "sow," and *κύαμος*, a "bean."] (Fr. *Jusquiame*, zhüs'ke-ăm'.) A Linnæan genus of the class *Pentandria*, natural order *Solanaceæ*. Also the Pharmacopoeial name (U.S. 1880) for the leaves of *Hyoscyamus niger*, collected from plants of the second year's growth. Hyoscyamus (including both leaves and seeds) is a narcotic, and is much used as an anodyne and soporific. It possesses this great advantage over opium, that it has no tendency to constipate the bowels.

Hyoscy'amus Ni'ger.* The Black Henbane. It is a native of Europe.

Hyp-. [From the Gr. *ὑπό*, "under."] A prefix denoting a slight degree.

Hȳp-ăl'gĭ-a.* [From *hyp-*, and the Gr. *ἄλγος*, "pain."] Slight pain.

Hȳp-ăl'gĭ-cus.* Belonging to hypalgia; hypal'gic.

Hy'per (*ὑπέρ*). A Greek preposition signifying "above," "beyond," and, hence, "excessive" (*i.e.*, implying excess); as *hyper-carbonate*, a carbonate with an excess of carbonic acid, now called a *bicarbonate; hypercatharsis*, excessive catharsis or purging, etc.

Hy-per-a-cu'sis.* [From the Gr. *ὑπέρ*, "over," "excessive," and *ἀκουσις*, "hearing."] Morbid acuteness or exaltation of the sense of hearing.

Hy'per-ad'e-no'ma, a'tis.* [From the Gr. *ὑπέρ*, "over," "excessive," and *ἀδήν*, a "gland."] An enlarged, or hypertrophied, gland.

Hy'per-ad'e-no'sis.* [From the same.] The progress, or gradual advancing, of hyperadenoma.

Hy-per-æ'mĭ-a.* [From the Gr. *ὑπέρ*, "over," "excessive," and *αἷμα*, "blood."] (Fr. *Hypérémie*, ē'pā'rā'mē'.) Excess of blood in any part.

Hy-per-æs-the'sis.* [From the Gr. *ὑπέρ*, "over," "excessive," and the Lat. *æsthe'sis*, "sensibility."] Morbid increase of sensibility.

Hy-per-æs-thet'ĭ-cus.* Belonging to hyperæsthesis; hyperæsthet'ic.

Hy-per-an'the-ra Mo-rin'ga.* A synonyme of the *Moringa Pterygosperma*.

Hy-per-a'phĭ-a.* [From the Gr. *ὑπέρ*, "over," "excessive," and *ἁφή*, "touch," or "tact."] Over-tension, or excessive sensibility, of touch.

Hy-per-aph'ĭ-cus.* Belonging to hyperaphia; hyperaph'ic.

Hy-per-as-the'nĭ-a.* [From the Gr. *ὑπέρ*, "over," "excessive," and the Lat. *asthe'nia*, "loss of strength."] Excessive debility.

Hy-per-as-then'ĭ-cus.* Belonging to hyperasthenia.

Hȳ-per-bo're-an. [Lat. **Hyperbo'reus**; from the Gr. *ὑπέρ*, "above" or "beyond," and *βορέας*, the "north wind."] Dwelling in the far northern parts of the globe:—applied to plants and animals.

Hy-per-car'dĭ-a.* [From the Gr. *ὑπέρ*, "over," "excessive," and *καρδία*, the "heart."] A name for hypertrophy of the heart.

Hy-per-ca-thar'sis.* [From the Gr. *ὑπέρ*, "over" or "excessive," and the Lat. *cathar'sis*, "purgation."] Excessive purging.

Hy-per-ca-thar'tĭ-cus.* Belonging to hypercatharsis; hypercathar'tic.

Hȳ-per-çĭ-ne'sis.* Increased irritability of the muscles, producing spasm.

Hȳ-per'crĭ-sis.* A crisis of unusual severity.

Hy-per-cro'max, a'cis.* [From the Gr. *ὑπέρ*, "over," "on," and *κρώμαξ*, a "heap of stones," also a "lump."] The small carnosity on the white of the eye.

Hy-per-çy-e'ma, a*tis*,* or **Hy-per-çy-e'-sis.*** [From the Gr. *ὑπέρ*, "over," "excessive," and *κύησις*, "uterine gestation."] Superfœtation.

Hy-per-çy-et'ĭ-cus.* Belonging to hypercyesis.

Hy-per-dў-na'mĭ-a.* [From the Gr. *ὑπέρ*, "over," "excessive," and the Lat. *dyna'mia*, "vital force."] Excessive *dynamia*, or vital force.

Hy-per-dў-nam'ĭ-cus.* Belonging to hyperdynamia; hyperdynam'ic.

Hy-per-em'e-sis.* [From the Gr. *ὑπέρ*, "over," "excessive," and the Lat. *em'esis*, "vomiting."] Excessive vomiting.

Hў'per-e-met'ic. [Lat. **Hyperemet'icus.**] Belonging to hyperemesis.

Hypérémie. See HYPERÆMIA.

Hў-per-en'er-ġў. [Lat. **Hyperener'gia**; from the Gr. *ὑπέρ*, "over," "excessive," and *ἐνέργεια*, "action."] Increased action or energy.

Hy-per-ġen'e-sis.* [From the Gr. *ὑπέρ*, "over," "excessive," and *γένω*, to "be born."] A congenital excess, or redundancy, of parts.

Hў-per-ġe-net'ic. [Lat. **Hypergenet'icus.**] Belonging to hypergenesis.

Hyperhæmia.* See HYPERÆMIA.

Hy'per-hĭ-dro'sis.* [From the Gr. *ὑπέρ*, "excessive," and *ἱδρώς*, "sweat."] A term applied by Swediaur to morbidly profuse perspiration. It is also termed EPHIDROSIS.

Hy-pĕr'ĭ-cạ,* the plural of **Hyper'icum**, forming the Jussieuan name of a natural order of plants. See HYPERICACEÆ.

Hypericaceæ,* hi-pĕr-e-ka'she-ē. A natural order of exogenous plants, found in nearly all parts of the world. It includes the *Hypericum* (St. John's wort), *Ascyrum*, *Elodea* or *Elodes*, and *Vismia*. Some of the species are astringent and are used as tonics.

Hy-per'ĭ-cum.* A genus of herbs or shrubs of the order *Hypericaceæ*, comprising many species, natives of the United States, Europe, etc.

Hyper'icum Per-fo-ra'tum.* St. John's Wort, a common weed in the United States. It has an acrid juice, and is astringent.

Hy-per-ĭ-no'sis.* [From the Gr. *ὑπέρ*, "over," "excessive," and *ἰς*, *ἰνός*, the "fibre of flesh."] A form of diseased blood, consisting in excess of fibrin.

Hў-per-ĭ-not'ic. [Lat. **Hyperinot'icus.**] Belonging to hyperinosis.

Hy'per-me-tro'pĭ-a.* [From the Gr. *ὑπέρ*, "over," "beyond," *μέτρον*, "measure" or "moderation," and *ὤψ*, the "eye."] An excessive hyperopia, or that which is beyond measure.

Hў-per-me-trop'ic. Pertaining to hypermetropia.

Hy-per-ner'vĭ-a,* Hy-per-neū'rĭ-a.* [From the Gr. *ὑπέρ*, "over," "excessive," and *νεῦρον*, a "nerve."] Excessive nervous excitability.

Hy-per-o'pĭ-a.* [From the Gr. *ὑπέρ*, "over," "beyond," and *ὤψ*, the "eye."] A kind of vision in which the focus falls behind or beyond the retina; while in myopia (near-sightedness) the focus is formed in front of the retina. See PRESBYOPIA.

Hy-per-op'sĭ-a.* [From the Gr. *ὑπέρ*, "over," "excessive," and *ὄψις*, "vision."] Extremely acute vision.

Hy-per-os'mĭ-a.* [From the Gr. *ὑπέρ*, "over," "excessive," and *ὀσμή*, "odor."] A keen sense of smell, or excessive odor.

Hy'per-os-phre'sis.* [From the Gr. *ὑπέρ*, "over," "excessive," and *ὀσφρησις*, the "faculty of smelling."] A morbidly acute sense of smell. See HYPEROSMIA.

Hy-per-os-to'sis.* [From the Gr. *ὑπέρ*, "over" or "excessive," and *ὀστέον*, a "bone."] Enlargement of a bone or its membranous covering.

Hy-per-pla'sĭ-a.* [From the Gr. *ὑπέρ*, "over," "excessive," and *πλάσις*, "formation" or "structure."] The increase of a part by an increase in the number of its individual structural elements. See HYPERTROPHY.

Hy-perp-nœ'a.* [From the Gr. *ὑπέρ*, "excessive," and *πνοιή*, "breathing."] Excessive or hard breathing.

Hyperpresbyopia,* or **Hyperpresbytia.*** See PRESBYOPIA.

Hў-per-troph'ic. [Lat. **Hypertroph'icus.**] Belonging to hypertrophy.

Hў-per'tro-phў. [Lat. **Hypertro'phia**; from the Gr. *ὑπέρ*, "over" or "excessive," and *τρέφω*, to "nourish."] Excessive growth, thickening, or enlargement of any organ. In a more restricted sense it signifies the increase of a part by the increase in bulk of its individual structural elements. In Botany, an excessive development of one part of a plant, to the deterioration of others. See HYPERPLASIA.

Hў-phæ'mạ, a*tis.* [From the Gr. *ὑπό*, "under," and *αἷμα*, "blood."] A deficiency of blood; also suggillation.

Hy-phæ'nē The-baĭ-cạ.* The systematic name of the Doum Palm, or Gingerbread-Tree, a native of Egypt, Nubia, and Abyssinia. It bears a fibrous edible fruit which tastes like gingerbread.

Hy-phom'ў-çēs.* [From the Gr. *ὑφος*, a "web," and *μύκης*, a "fungus."] A term applied in the plural (*Hyphomyce'tes*) to one of the two great classes of morbific fungi. The name denotes entireness (as if woven tightly together), in contradistinction to the other class, *Schizomyce'tes*. See SCHIZOMYCES, and PATHOGENESIS.

Hўp-ĭ-no'sis.* [From the Gr. *ὑπό*, "under," implying deficiency, and *ἰς*, *ἰνός*, the "fibre of flesh."] A form of diseased blood, consisting in deficiency of fibrin.

Hўp-ĭ-not'ic. [Lat. **Hypinot'icus.**] Belonging to hypinosis.

Hўp-næs-thē'sis.* [From the Gr. *ὕπνος*, "sleep," and *αἴσθησις*, "sense," or "feeling."] Dulled sensibility; drowsiness.

Hўp'nĭ-cus.* [From the Gr. *ὕπνος*, "sleep."] Belonging to sleep; hypnic:—applied in the neuter plural (*Hyp'nica*) to medicines or agents affecting sleep, either by inducing it or preventing it.

Hўp-no'dēs.* [From the Gr. *ὕπνος*, "sleep."] Sleepy, or full of sleep.

Hўp-no'dĭ-a.* [From the Lat. *hypno'des*, "sleepy."] Same as HYPNÆSTHESIS, which see.

Hŷp-nol'o-ġў. [Lat. **Hypnolo'gia**; from the Gr. *ὑπνος*, "sleep," and *λόγος*, a "discourse."] The doctrine or science of sleep, its proper period of indulgence, duration, regulation, etc.

Hŷp-not'ic. [Lat. **Hypnot'icus**; from the Gr. *ὑπνος*, "sleep."] Having power to induce sleep; somnif'erous. Among the principal hypnotics are chloral, opium, bromide of potassium, and narceine.

Hŷp'no-tiśm. [Lat. **Hypnotis'mus**; from the Gr. *ὑπνος*, "sleep."] A term denoting a state of sleep:—sometimes used for MESMERISM.

Hŷp-no-ty'phus.* [From the Gr. *ὑπνος*, "sleep," and the Lat. *ty'phus*.] Typhus with morbid drowsiness.

Hy'po (*ὑπό*). A Greek particle signifying "under," "beneath," sometimes "in" or "behind." It often implies *diminution* or *deficiency*.

Hŷp-o-æ'mą Scor-bu'tĭ-cum.* [From the Gr. *ὑπό*, "under," "in," or "within," and *αἷμα*, "blood."] A scorbutic, blood-shot appearance of the eye.

Hŷp-o-branch'ĭ-ąl. [Lat. **Hypobranchia'lis**; from the Gr. *ὑπό*, "under," and *βράγχια*, the "gills."] A term applied by Owen to the homologues of the lateral lingual bones in fishes, etc.

Hypocalycius,* hĭp'o-ką-lish'e-us. [From the Gr. *ὑπό*, "under," and the Lat. *ca'lyx*.] Situated under the calyx.

Hŷp-o-cą-thar'sis.* [From the Gr. *ὑπό*, "under," and *καθαίρω*, to "purge."] A slight purging.

Hȳ-po-ehlo'rīte of Cal'cĭ-um. Another name for chloride of lime.

Hŷp-o-ehon'drĭ-ą,* the plural of the Lat. HYPOCHONDRIUM, which see.

Hŷp-o-ehon'drĭ-ac. [Lat. **Hypochondri'acus**; from the Gr. *ὑπό*, "under," and *χονδρός*, a "cartilage."] (Fr. *Hypocondriaque*, ẽ'po'kõN'drẽ'ãk'.) Belonging to the *hypochondria*, or spaces beneath the cartilages of the false ribs:—also applied to one affected with *hypochondriasis*.

Hŷp-o-ehon-drī'ą-çiśm. [Lat. **Hypochondriacis'mus**; from *hypochon'drium*.] Hypochondriac disease.

Hŷp-o-ehon-dri'ą-sis.* [From the Lat. *hypochon'drium*, the supposed seat of the disease.] (Fr. *Hypocondrie*, ẽ'po'kõN'drẽ'.) Vapors; low spirits. A genus of the order *Adynamiæ*, class *Neuroses*, of Cullen's nosology. Hypochondriasis is almost invariably connected with dyspepsia, and is doubtless often produced by it; though some physiologists consider the seat of the disease to be in the brain. According to others, it is a disease of the nervous system, a form of mental unsoundness closely allied to melancholia, of which it often forms the initiatory stage. It is characterized by a morbid anxiety relative to the state of physical health. The patient imagines that he suffers from various diseases of which he is not really a subject.

Hŷp-o-ehon'drĭ-um,* plural **Hŷp-o-ehon'drĭ-ą.** [From the Gr. *ὑπό*, "under," and *χονδρός*, a "cartilage."] The *regio hypochondriaca*, or space beneath the cartilages of the false ribs on either side.

Hypocondrie. See HYPOCHONDRIASIS.

Hy-po-cra'nĭ-um.* [From the Gr. *ὑπό*, "under," and *κρανίον*, the "skull."] A collection of pus between the skull and the *dura mater*.

Hŷp-o-cra-tĕr'ĭ-form. The same as HYPOCRATERIMORPHOUS.

Hŷp-o-cra-tĕr-ĭ-mor'phous. [From the Gr. *ὑποκρατήριον*, the "support of a bowl or cup," a "salver," and *μορφή*, "form."] Salver-shaped:—applied to flowers.

Hypodermatic. See HYPODERMIC.

Hŷp-o-der'mic. [Lat. **Hypoder'micus**; from the Gr. *ὑπό*, "under," and *δέρμα*, the "skin."] A term for the application of medicines under the skin.

Hypoder'mic In-jec'tion. The introduction of remedial agents into the system by subcutaneous injection. This is one of the most active and reliable of our therapeutic resources. The remedy is thrown into the subcutaneous cellular tissue by means of a sharp-pointed hollow needle attached to a carefully-graduated glass syringe. The little puncture must be made as rapidly as possible, and care must be taken to avoid the neighborhood of important structures. The solution employed must be small in quantity and bland in quality, and must be slowly introduced. The drugs most commonly used in the hypodermic method are morphia, atropia, ergotin, and quinine.

Hŷp-og'ą-lą.* [From the Gr. *ὑπό*, "under," "in," or "within," and *γάλα*, "milk."] The effusion of a milk-like fluid into the chambers of the eye.

Hŷp-o-gas-trăl'ġĭ-ą.* [From the Lat. *hypogas'trium*, and the Gr. *ἄλγος*, "pain."] Pain in the hypogastrium.

Hŷp-o-gas'tric. [Lat. **Hypogas'tricus.**] Belonging to the hypogastrium.

Hypogas'tric Plex'us. A plexus on the sides and back part of the rectum and lower and back part of the bladder, formed by the inferior mesenteric plexus and the sacral.

Hŷp-o-gas-trĭ-o-to'mĭ-ą.* [From the Lat. *hypogas'trium*, and the Gr. *τέμνω*, to "cut."] Dissection of the hypogastric region.

Hŷp-o-gas-tri'tis, i*dis.* [From the Gr. *ὑπό*, "under," "in a slight degree," and the Lat. *gastri'tis*, "inflammation of the stomach."] Slight inflammation of the stomach.

Hŷp-o-gas'trĭ-um.* [From the Gr. *ὑπό*, "under," and *γαστήρ*, the "stomach."] The abdominal space above the pubes and below the line of the anterior superior spinous processes of the iliac bones.

Hŷp-o-gas'tro-çēle.* [From the Gr. *ὑπό*, "under," *γαστήρ*, the "stomach," and *κήλη*, a "tumor."] Hernia in the hypogastric region.

Hŷp-o-gas-tror-rha'ġĭ-ą.* [From the Gr. *ὑπό*, "under," "in a slight degree," and the Lat. *gastrorrha'gia*.] Literally, a "slight discharge [of any kind] from the stomach," but usually applied to a slight hemorrhage from the stomach.

Hŷp-o-gas-tror-rhex'is.* [From the Lat. *hypogas'trium*, and the Gr. *ῥῆξις*, a "rupture."] Rupture of the abdomen, with laceration of the peritoneum.

Hŷp-o-gas-tror-rhœ'a.* [From the Gr. *ὑπό*, "under," "in a slight degree," and the Lat. *gastrorrhœ'a*, a "discharge from the stomach."] A slight flow of mucus from the stomach.

Hŷp-o-ġe'an, or Hŷp-o-ġæ'ous. [Lat. **Hypoge'us**; from the Gr. *ὑπό*, "under," and *γῆ*, or *γέα*, the "earth."] Produced under ground, as the fruit of the *Ar'achis hypogæ'a*. Situated, growing, or remaining under ground.

Hŷp-o-ġe-o-car'pus.* [From the Gr. *ὑπό*, "under," *γῆ*, or *γέα*, the "earth," and *καρπός*, "fruit."] Having fruit under the surface of the earth.

Hŷp-o-glos'sal. [Lat. **Hypoglos'sus**; see next article.] Situated on the under part of the tongue.

Hŷp-o-glos'sĭ-um,* or **Hŷp-o-glos'sis, i*dis.*** [From the Gr. *ὑπό*, "under," and *γλῶσσα*, the "tongue."] The under surface of the tongue. See PAR NONUM.

Hŷp-o-glot'tis, i*dis.* [From the Gr. *ὑπό*, "under," and *γλῶττα*, the "tongue."] The inferior part of the tongue adhering to the lower jaw.

Hŷp-o-ġŷn'ĭ-cus.* [From the Gr. *ὑπό*, "under," and *γυνή*, a "woman," or "female."] A term applied to the insertion of stamens, petals, etc., when the point of attachment is under the ovary; hypogynic:—essentially the same as HYPOGYNOUS.

Hŷp-oġ'ŷ-nous. [Lat. **Hypoġ'ynus**; from the same.] Growing or inserted under the pistil, and free, as the stamens, calyx, and corolla of some plants.

Hŷp-o-hæ'mĭ-a.* [From the Gr. *ὑπό*, "under," and *αἷμα*, "blood."] Deficiency or loss of blood.

Hŷp-o-hæm'ic. [Lat. **Hypohæm'icus.**] Belonging to hypohæmia.

Hŷ-pom'en-ous. In Botany, free; not adherent; arising from below an organ without adhering to it.

Hy-po-me-tro'pĭ-a.* [From the Gr. *ὑπό*, "under," *μέτρον*, a "measure," and *ὤψ*, the "eye."] Myopia. The reverse of HYPERMETROPIA, which see.

Hŷp-o-ner'vĭ-a,* or **Hŷp-o-neū'rĭ-a.*** [From the Gr. *ὑπό*, "under," and *νεῦρον*, a "nerve."] Morbidly slight, or diminished, nervous power.

Hŷ-po-nī'trīte. [Lat. **Hyponi'tris, i'*tis.*] A combination of hyponitrous acid with a base.

Hŷp-o-pe-ta'le-us,* or **Hŷp-o-pet'a-lus.*** [From the Gr. *ὑπό*, "under," and *πέταλον*, a "petal."] A term applied in the plural feminine (*Hypopeta'leæ*) to dicotyledonous, polypetalous plants in which the stamens or petals are hypogynous.

Hŷ-po-phos'phīte. [Lat. **Hypophos'phis, i'*tis.*] A combination of hypophosphorous acid with a base. The hypophosphites of iron, lime, potash, and soda are used medicinally, and are officinal. See FERRI HYPOPHOSPHIS, CALCII HYPOPHOSPHIS.

Hŷp-o-phyl'lous. [Lat. **Hypophyl'lus**; from the Gr. *ὑπό*, "under," and *φύλλον*, a "leaf."] Growing on the lower side of a leaf.

Hŷ-po'pў-um.* [From the Gr. *ὑπό*, "under," and *πύον*, "pus."] An accumulation of a puriform fluid under the cornea, or in either chamber of the eye.

Hŷp-o-spa'dĭ-a.* [From the Gr. *ὑπό*, "under," and *σπάω*, to "draw," to "tap" or "open."] An unnatural perforation of the penis, the extremity of the urethra terminating on the under part of it.

Hŷp-o-spa-di'a-sis.* [From the Lat. *hypospa'dia.*] The state of hypospadia.

Hŷp-o-sta-min'e-us.* [From the Lat. *hy'po-*, "under," and *sta'men.*] A term applied in the plural feminine (*Hypostamin'eæ*) to dicotyledonous, apetalous plants in which the stamens are hypogynous.

Hŷp-os'ta-sis.* [From the Gr. *ὑφίστημι*, to "lay down," to "deposit."] The subsidence of sediment in liquids, or of blood in the body after death, by gravitation of the fluids, but, more particularly, of the urine in health and disease. In Botany, the suspensor of an embryo.

Hȳ-po-stat'ic. [Lat. **Hypostat'icus**; from the Gr. *ὑπό*, "under," and *στάσις*, "standing," "stagnation."] Relating to, or caused by, standing or stagnation.

Hŷp-os-the'nĭ-a.* [From the Gr. *ὑπό*, "under," and *σθένος*, "strength."] A state of weakness, or a reduction of strength.

Hŷp-os-then'ic. [Lat. **Hyposthen'icus.**] Belonging to hyposthenia.

Hȳ-po-sul'phāte. [Lat. **Hyposul'phas, a'*tis.*] A combination of hyposulphuric acid with a base.

Hȳ-po-sul'phīte. A combination of hyposulphurous acid with a base.

Hȳ-pot'e-nuse, or Hȳ-poth'e-nuse. [Gr. *ὑποτείνουσα*, the present participle feminine of *ὑποτείνω*, to "subtend."] That side of a right-angled triangle which subtends the right angle.

Hȳ-poth'e-sis,* plural **Hy-poth'e-sēs.** [Gr. *ὑπόθεσις*; Fr. *Hypothèse*, ĕ'po'tĕz'.] A supposition not demonstrated experimentally, and a consequence drawn from this supposition. A doctrine founded on theory. Hypotheses afford us motives for searching into analogies, and have often an eminent use. "A facility in framing them, if attended with an equal facility in laying them aside when they have served their turn, is one of the most valuable qualities a philosopher can possess."—(SIR J. HERSCHEL.)

Hŷp-o-tўm'pa-nic. [Lat. **Hypotympan'icus**; from the Gr. *ὑπό*, "under," and the Lat. *tympan'icus*, "tympanic."] A term applied by Owen to the inferior subdivision of the tympanic pedicle which supports the mandible in fishes.

Hypoxidaceæ,* hi-pox-e-da'she-ē. [From *Hypox'is*, one of the genera.] A small natural order of endogenous plants (herbs), natives of India, Australia, South Africa, and America.

Hy-po-zo'ĭ-cus.* [From the Gr. *ὑπό*, "under," and *ζῶον*, an "animal."] A term applied to an order of rock formations inferior to all those in which are found the traces of organic bodies.

Hŷp-sĭ-lo-i'dēs.* [From Υ, "upsilon," a

Greek letter, and *εἶδος*, a "form" or "resemblance."] The same as HYOIDES.

Hȳp-so-met'rĭ-cal. [Lat. **Hypsomet'ricus.**] Belonging to hypsometry.

Hȳp-som'e-trȳ. [Lat. **Hypsome'tria**; from the Gr. *ὕψος*, "height," and *μετρέω*, to "measure."] The art of measuring the relative height of a place, or of a portion of terrestrial ground. The branch of Geodesy which relates to the measurement of the absolute or relative heights of places on the surface of the earth.

Hȳs'so-pin. [Lat. **Hyssopi'na**; from *hyssop'us*, the "hyssop-plant."] A salifiable base, said to have been discovered in the hyssop.

Hȳs-so'pus Of-fĭç-ĭ-na'lis.* The common Hyssop, a plant of the order *Labiatæ*, a native of Europe. It is an aromatic stimulant.

Hȳs'te-ra.* [From the Gr. *ὑστέρα*, the "womb" or "uterus."] The uterus, or womb; also the vulva.

Hȳs-te-răl'ġic. [Lat. **Hysteral'gicus.**] Belonging to hysteralgia.

Hȳs-te-răl'ġȳ. [Lat. **Hysteral'gia**; from the Gr. *ὑστέρα*, the "womb," and *ἄλγος*, "pain."] Pain in the womb, from whatever cause.

Hȳs-ter-an'drĭ-us.* [From the Gr. *ὕστερον*, "beyond," "more than," and *ἀνήρ, ἀνδρός*, a "man," or "male."] A term applied in the plural neuter (*Hysteran'dria*) to a class of plants having more than twenty stamens.—(E. LITTRÉ.)

Hȳs-ter-a-tre'sĭ-a.* [From the Gr. *ὑστέρα*, the "womb," and the Lat. *atre'sia*, "occlusion."] Occlusion of the womb, or an impervious condition of its opening.

Hȳs-ter-el-co'sis.* [From the Gr. *ὑστέρα*, the "womb," and *ἕλκος*, an "ulcer."] Ulceration of the womb.

Hȳs-ter-em-phȳ-se'ma, a*tis.* [From the Gr. *ὑστέρα*, the "womb," and the Lat. *emphyse'ma*, a "windy swelling."] The same as *Physometra*, or the presence of air in the womb.

Hȳs-te'rĭ-a.* [From the Gr. *ὑστέρα*, the "womb."] (Fr. *Hystérie*, ès'tà'rĕ'.) Termed also **Pas'sĭ-o Hȳs-tĕr'ĭ-ca*** (Fr. *Passion hystérique*, pȧ'se-ôN' ès'tà'rèk'). Hysterics, an affection attacking in paroxysms or fits, usually preceded by dejection, anxiety, tears, difficult breathing, sickness, and palpitation of the heart. A genus of the order *Spasmi*, class *Neuroses*, of Cullen's nosology.

Hȳs-tĕr'ĭ-cal, Hȳs-tĕr'ic. [Lat. **Hyster'icus.**] Belonging to hysteria.

Hystérie. See HYSTERIA.

Hȳs-te-rī'tis, i*dis.* [From the Gr. *ὑστέρα*, the "womb."] Inflammation of the womb. A genus of the order *Phlegmasiæ*, class *Pyrexiæ*, of Cullen's nosology. See METRITIS, and UTERITIS.

Hȳs'te-ro-car'çĭ-no'ma, a*tis.* [From the Gr. *ὑστέρα*, the "womb," and the Lat. *carcino'ma*, "cancer."] Cancer of the womb. See METROCARCINOMA.

Hȳs'te-ro-cat'a-lep'sis.* [From the Gr. *ὑστέρα*, the "womb," and the Lat. *catalep'sis*, "catalepsy."] Cataleptic hysteria.

Hȳs'te-ro-çēle.* [From the Gr. *ὑστέρα*, the "womb," and *κήλη*, a "tumor."] Hernia in which the uterus, or womb, is protruded.

Hȳs'te-ro-col'ĭ-ca.* [From the Gr. *ὑστέρα*, the "womb," and the Lat. *col'ica*, "colic."] Pains in the womb, like those of colic; uterine colic.

Hys'te-ro-çy-e'sis.* [From the Gr. *ὑστέρα*, the "womb," and *κυέω*, to "conceive."] Pregnancy.

Hȳs'te-ro-dȳn'ĭ-a.* [From the Gr. *ὑστέρα*, the "womb," and *ὀδύνη*, "pain."] Pain of the womb. The same as HYSTERALGIA.

Hȳs'ter-œ-de'ma, a*tis.* [From the Gr. *ὑστέρα*, the "womb," and the Lat. *œde'ma*, a "swelling."] Enlargement of the substance of the womb.

Hȳs'ter-oid. [From the Lat. *hyste'ria*, and the Gr. *εἶδος*, a "form" or "resemblance."] Resembling hysteria.

Hȳs'te-ro-lĭ-thi'a-sis.* [From the Gr. *ὑστέρα*, the "womb," and the Lat. *lithi'asis*, the "generation of calculus."] The formation of calculus in the womb.

Hȳs-te-rol'ĭ-thus.* [From the Gr. *ὑστέρα*, the "womb," and *λίθος*, a "stone."] Stone, or calculus, in the womb; a hysterolith.

Hȳs-te-rol'o-ġȳ. [Lat. **Hysterolo'gia**; from the Gr. *ὑστέρα*, the "womb," and *λόγος*, a "discourse."] A treatise on the womb, its functions, etc.

Hȳs-ter-o'ma.* [From the Gr. *ὑστέρα*, the "womb," and the termination *-oma*.] A fibrous tumor of the womb, similar in structure to the normal uterine tissue.

Hȳs'te-ro-mal-a-co'ma, a*tis.* [From the Gr. *ὑστέρα*, the "womb," and *μαλακός*, "soft."] Softening of the womb.

Hȳs'te-ro-mal-a-co'sis.* The formation or progress of hysteromalacoma, or softening of the womb.

Hȳs'te-ro-ma'nĭ-a.* [From the Gr. *ὑστέρα*, the "womb," and *μανία*, "madness."] Another term for *Furor uterinus*, or NYMPHOMANIA, which see.

Hȳs-te-rom'e-ter. [Lat. **Hysterom'etrum**; from the Gr. *ὑστέρα*, the "womb," and *μέτρον*, a "measure."] An instrument or means of ascertaining the size of the uterus, or womb.

Hȳs-te-roph'ȳ-tal. [From the Gr. *ὑστέρα*, the "womb" or "matrix," and *φυτόν*, a "plant."] Living on a matrix either of dead or of living organic matter:—applied to *Fungi*.

Hȳs'te-ro-phȳte. [From the same.] A name for a fungus.

Hȳs'te-ror-rha'ġĭ-a.* [From the Gr. *ὑστέρα*, the "womb," and *ῥήγνυμι*, to "burst forth."] The same as METRORRHAGIA.

Hȳs'te-ror-rhex'is.* [From the Gr. *ὑστέρα*, the "womb," and *ῥῆξις*, a "rupture."] Rupture of the uterus, or womb.

Hȳs'te-ror-rhœ'a.* [From the Gr. *ὑστέρα*, the "womb," and *ῥέω*, to "flow."] The same as METRORRHŒA.

Hȳs'te-ro-seĭr'rhus.* [From the Gr. *ὑστέρα*, the "womb," and *σκιῤῥός*, a "hard tumor."] Scirrhus, or incipient cancer, of the womb.

Hŷs'te-ro-spas'mus.* [From the Gr. *ὑστέρα*, the "womb," and *σπασμός*, a "convulsion."] Spasm of the uterus, or womb; also hysterical spasm.

Hŷs'te-ro-tome. [Lat. **Hysterot'omus**; from the Gr. *ὑστέρα*, the "womb," and *τέμνω*, to "cut."] An instrument for dividing the neck of the womb.

Hŷs-te-rot'o-mў. [Lat. **Hysteroto'mia**; from the same.] The *Cæsarean operation*, or cutting into the womb to extract the child, in cases where, from malformation or other cause, natural delivery is impracticable. See CÆSAREAN OPERATION.

Hŷs'te-ro-tris'mus.* [From the Gr. *ὑστέρα*, the "womb," and *τρίζω*, to "squeak," to "creak," to "jar."] A term applied to violent spasmodic contractions of the womb.

Hystriasis.* See HYSTRICIASIS.

Hŷs-trĭ-çi'ą-sis.* [From the Gr. *ὕστριξ*, a "hedgehog."] A rare disease of the hairs, in which they stand erect like the spines or prickles of the hedgehog.

I.

I-am-ą-tol'o-ġў. [Lat. **Iamatolo'gia**; from the Gr. *ἴαμα*, a "remedy," and *λόγος*, a "discourse."] That branch of therapeutics which treats of remedies.

I-an'thĭ-nus.* [From the Gr. *ἴον*, a "violet," and *ἄνθος*, a "flower."] Pure blue stained with red so as to be intermediate between the two colors.

I-at-rą-lip'tic Meth'od. [From *iatro-*, and the Gr. *ἀλείφω*, to "anoint."] The application of medicines to the skin, aided by friction.

I-ą-treū-so-lo'ġĭ-ą.* [From the Gr. *ἰατρεύω*, to "cure," and *λόγος*, a "discourse."] A term applied to general therapeutics.

I-ą-trī'ą.* [Gr. *ἰάτρεια*; from *ἰατρός*, a "physician."] The art of healing or curing; also a cure.

Iatro-. A prefix signifying connection with the healing art.

I-ą-trol'o-ġў. [Lat. **Iatrolo'gia**; from the prefix *iatro-*, and the Gr. *λόγος*, a "discourse."] A treatise on medicine or on physicians; also the science of medicine, or the healing art.

Iatropha. See JATROPHA.

Iatrophate. The same as JATROPHATE.

I-be'ris A-ma'ra.* Bitter Candytuft, an herbaceous plant, a native of Europe, belonging to the order *Cruciferæ*. Its seeds are used as remedies for dropsy, hypertrophy, etc.

I-bo'ga. A name given by the people of Gaboon to a species of *Strychnos*, which is poisonous in large doses and is a nervous stimulant in small doses.

-Ic. A terminal syllable, generally denoting the acid compounds which have most oxygen,—as nitr*ic*, sulphur*ic*, etc.,—which are thus distinguished from those ending in *-ous*, sulphur*ous*, etc., implying a smaller proportion of oxygen.

Ice. See GLACIES. Ice or iced water is used as a refrigerant in fever.

Ice-Plant. See MESEMBRYANTHEMUM.

Ice Pōul'tice. A bladder containing pounded ice, to be applied to hernial tumors.

Ice'land Moss. The *Li'chen Islan'dicus*, or *Cetra'ria Islan'dica*.

Ice'land Spar. One of the purest varieties of calcareous spar, or crystallized carbonate of lime. It is transparent, and shows well the phenomena of double refraction.

I'ċhor, o'ris.* [From the Gr. *ἰχώρ*, "serum," or "pus."] A thin aqueous and acrid discharge from a wound, sore, or diseased surface.

Iċh-or-æ'mĭ-ą,* or **Iċh-or-hæ'mĭ-ą.*** [From the Gr. *ἰχώρ*, "pus, or sanious fluid," and *αἷμα*, "blood."] A term denoting the poisoning of the blood from the absorption of sanious matter.

Iċh-o-ro-i'dēs.* [From the Gr. *ἰχώρ*, "serum," or "pus," and *εἶδος*, a "form" or "resemblance."] Resembling ichor, or pus.

Iċh'or-ous. [Lat. **Ichoro'sus**; from *i'chor*, "serum," or "pus."] Having ichor; of the nature of ichor.

Iċh-thў-i'tēs.* [From the Gr. *ἰχθύς*, a "fish," and *λίθος*, a "stone."] The same as ICHTHYOLITE, which see.

Iċh-thy'ĭ-us.* [From the Gr. *ἰχθύς*, a "fish," and *ἰός*, "poison."] The same as ICHTHYOTOXICUM.

Iċh-thў-o-col'ą.* [From the Gr. *ἰχθύς*, a "fish," and *κόλλα*, "glue."] Isinglass; fish-glue. The Pharmacopœial name (U.S. 1870, 1880) for the swimming-bladder of the *Acipenser Huso* and other species of sturgeon. It is chiefly composed of gelatin, and has no peculiar medical properties. It is employed for clarifying liquors.

Iċh-thў-og'rą-phў. [Lat. **Ichthyogra'phia**; from the Gr. *ἰχθύς*, a "fish," and *γράφω*, to "write."] A description of fishes.

Iċh-thў-o-i'dēs.* [From the Gr. *ἰχθύς*, a "fish," and *εἶδος*, a "form" or "resemblance."] Resembling a fish; ichthyoid:—applied to certain Batrachians.

Iċh'thў-o-līte. [From the Gr. *ἰχθύς*, a "fish," and *λίθος*, a "stone."] A term applied to petrified fish, or the fossil remains of fish.

Iċh-thў-o-log'ĭ-cal. [Lat. **Ichthyolog'icus.**] Belonging to ichthyology.

Iċh-thў-ol'o-ġў. [Lat. **Ichthyolo'gia**; from the Gr. *ἰχθύς*, a "fish," and *λόγος*, a "discourse."] A treatise on the nature and habits of fishes; also

the science which treats of fishes, their classification, structure, etc.

Ieh-thy-oph'a-gous. [Lat. **Ichthyoph'agus**; from the Gr. *ἰχθύς*, a "fish," and *φάγω*, to "eat."] Fish-eating; piscivorous.

Ieh-thy-o-sau'rus.* [From the Gr. *ἰχθύς*, a "fish," and *σαῦρος*, a "lizard."] A genus of extinct marine animals, which combined the characters of saurian reptiles and of fishes with some of the peculiarities of Cetaceous Mammalia.

Ieh-thy-o'sis.* [From the Gr. *ἰχθύα*, the "scale, or scaly skin, of a fish."] A disease in which the skin becomes thickened, hard, and rough, with a tendency to scaliness; the fish-skin disease.

Ieh-thy-ot'o-my. [Lat. **Ichthyoto'mia**; from the Gr. *ἰχθύς*, a "fish," and *τέμνω*, to "cut."] Dissection of fishes.

Ieh'thy-o-tox'i-cum.* [From the Gr. *ἰχθύς*, a "fish," and *τοξικόν*, a "poison."] A morbid and poisonous product sometimes found in fish.

I-çi'ca.* A genus of trees of the natural order *Amyridaceæ*, comprising numerous species, mostly natives of tropical parts of South America. They abound in balsamic or resinous juice. The balsam obtained from the *Icica heptaphylla*, a native of Guiana, is used as a medicine. The Brazilian elemi is supposed to be derived from *Icica icicariba*, called also *Amyris ambrosiaca*.

Ici'ca Ar-a-cou-chi'ni.* A tree found in the tropical part of South America. A resin called *alouchi* is obtained from it.

Ici'ca Ca-ran'na.* A tree of Colombia, yielding a resinous substance called *Gum Caranna*, which has a balsamic odor.

Ici'ca Het-er-o-phyl'la.* A tree, a native of tropical South America, affording the *Balsam of Acouchi*, which is employed as a vulnerary.

I-co'nēs.* Pictorial representations of plants.

I-con-o-graph'ic. [Lat. **Iconograph'icus.**] Belonging to iconography.

I-co-nog'ra-phy. [Lat. **Iconogra'phia**; from the Gr. *εἰκών*, an "image," and *γράφω*, to "write."] A description by images, or figures; a description of pictures, statues, etc.

I-co-san'dri-a.* [From the Gr. *εἴκοσι*, "twenty," and *ἀνήρ*, a "man," or "male."] The twelfth Linnæan class of plants, including those which have twenty or more unconnected stamens inserted on the calyx.

I-co-san'dri-ous, or **I-co-san'drous.** [Lat. **Icosan'drius**; from the same.] Having twenty stamens or more. According to Gray, this term signifies having twelve or more stamens inserted on the calyx.

I'co-si-go'nus.* [From the Gr. *εἴκοσι*, "twenty," and *γωνία*, an "angle."] Having twenty angles.

I'co-si-he'dral. [Lat. **Icosihe'drus.**] Belonging to an icosihedron.

I'co-si-he'dron, or **I'co-sa-he'dron.** [Lat. **Icosihe'drum**; from the Gr. *εἴκοσι*, "twenty," and *ἕδρα*, a "base."] A solid figure bounded by twenty equilateral and equal triangles. It is one of the five regular solids.

I'co-si-tet-ra-he'dral. [Lat. **Icositetrahe'drus.**] Belonging to an icositetrahedron; twenty-four-sided.

I'co-si-tet-ra-he'dron. [Lat. **Icositetrahe'drum**; from the Gr. *εἴκοσι*, "twenty," *τέτρα*, "four," and *ἕδρα*, a "base."] A solid figure of twenty-four equal sides or faces.

Ictère. See ICTERUS.

Ic-ter-ep-a-ti'tis, i*dis.* [From the Lat. *ic'terus*, "jaundice," and *hepatī'tis*, "inflammation of the liver."] Hepatitis and jaundice, or icteric hepatitis.

Ic-tĕr'ic. [Lat. **Icter'icus.**] Belonging to icterus.

Ic-ter-o'dēs.* [From the Lat. *ic'terus*, "jaundice."] Like jaundice, or having a yellow color resembling jaundice:—sometimes applied to the yellow fever.

Ic'ter-oid. [Lat. **Icteroi'des**; from *ic'terus*, "jaundice," and the Gr. *εἶδος*, a "form" or "resemblance."] Resembling icterus.

Ic-ter-oph'thi-sis.* [From the Lat. *ic'terus*, "jaundice," and *phthi'sis*, "consumption."] *Tabes icterica*, or phthisis with jaundice.

Ic'ter-us.* [Gr. *ἴκτερος*.] (Fr. *Ictère*, ĕk'tair', or *Jaunisse*, zhō'nĕss', *i.e.*, "yellowness."] Jaundice,—characterized by yellowness of the skin, eyes, tissues, and secretions generally, from impregnation with bile-pigment. A genus of the order *Impetigines*, class *Cachexiæ*, of Cullen's nosology. All cases of icterus may be referred to one of two classes: 1, cases in which there is a mechanical impediment to the flow of bile into the duodenum, and where the bile is in consequence retained in the biliary passages and thence absorbed into the blood; 2, cases in which there is no impediment to the flow of bile from the liver into the bowel. Jaundice, properly speaking, is not a disease, but a symptom of many different diseases.

Ic'tus So'lis.* "Stroke of the Sun." The same as COUP DE SOLEIL, which see.

-Idæ. A terminal employed (in imitation of the classical patronymic) to denote a family or group exhibiting some points of likeness to the type: as, *Leporidæ*, the family of the *Lepus*, or hare, etc.

-Idæus, or **Ideus.** A terminal applied to objects belonging to, or connected with, others, which are designated by terms ending in *-oid* or *-ides*: as, *Arytænoidæus*, the muscle between or belonging to the *Arytenoid* (*Arytenoides*) cartilage, etc. The terminations *-ideus* and *-idæus* are sometimes equivalent to *-ides* or *-oid*: thus, *Ligamentum coracoideum* is the same as *Ligamentum coracoides* (the "coracoid ligament").

-Ide. A terminal affixed to oxygen, chlorine, fluorine, and iodine when combined with each other, or with simple combustibles, or metals, in proportions not forming an acid.

I-de'al-ism. [Lat. **Idealis'mus**; from the Gr. *ἰδέα*, an "idea," a "thought."] A system of metaphysics in which no real existence is attributed to anything except to thought or mind.

I-de-ā'tion. A distinct mental representation of an object. Some forms of insanity, in which

the mental disease shows itself in unfounded or morbid fancies, are termed *ideational.*

I-den'tĭ-cạl. [From the Lat. *i'dem,* the same.] The very same; exactly similar.

I-den'tĭ-tў. [Lat. **Iden'titas, a'tis;** from *i'dem,* the "same."] Absolute or essential sameness of two apparently different things, as, for example, that of the electric spark and lightning. The term is used to denote unity with persistence and continuity, and is especially predicable of substance, essence, and personality. "Man's identity is personal identity, and is essentially different from the identity of the plant, etc."—(W. T. HARRIS.)

Iden'tity, Per'son-ạl. In Legal Medicine it is sometimes important to determine whether one is actually the individual that he represents himself to be. This question is chiefly to be decided by physical marks.

I-de-og'rạ-phў. [Lat. **Ideogra'phia;** from the Gr. *ἰδέα,* an "idea," and *γράφω,* to "write."] A description or definition of ideas.

I-de-ol'o-ġў. [Lat. **Ideolo'gia;** from the Gr. *ἰδέα,* an "idea," and *λόγος,* a "discourse."] The doctrine or science of thought or of the mind; the philosophy of the origin and development of ideas.

I-de'o-Mo'tor.* A term applied by some physiologists to unconscious muscular movements resulting from the mind being wholly absorbed in some dominant idea.

-Ides. An affix of many words. See -OID.

Id'ĭ-o-cў. [For etymology see IDIOT.] (Fr. *Démence innée,* dā'mŏNss' ĕ'nā', *Idiotisme,* ē'dē'o'tēsm'; Ger. *Blödsinn,* blöt'sin.) A term usually applied to an extreme form of dementia occurring in children, and due, for the most part, to a congenital defect. Although idiocy in its popular use denotes almost complete imbecility, it properly includes various degrees of this infirmity. In some instances it would seem to be merely an arrested development of the mental faculties, which by proper treatment and training may sometimes be improved to an astonishing extent. See IDIOTISM, and AMENTIA.

Id'ĭ-o-e-lec'tric. [From the Gr. *ἴδιος,* "one's own," "peculiar," and the Eng. *elec'tric.*] Literally, "having electricity of its [or their] own." A term applied to bodies, such as amber, resin, or glass, which, when rubbed, acquire electricity without any communication with another electrified body.

Id-ĭ-o-path'ic. [Lat. **Idiopath'icus.**] Relating to idiopathy; opposed to *sympathetic,* or *symptomatic,* or *traumatic:*—applied to a morbid condition which arises primarily, and not in consequence of some other disease or an injury.

Id-ĭ-op'ạ-thў. [Lat. **Idiopathi'a;** from the Gr. *ἴδιος,* "one's own," "peculiar," or "private," and *πάθος,* "affection," or "disease."] A disease arising spontaneously, not from another; an affection the opposite of *sympathy.*

Id-ĭ-o-sўn-cra-sў. [Lat. **Idiosyncra'sia;** from the Gr. *ἴδιος,* "one's own," "peculiar," or "private," and *σύγκρασις,* a "mixing or tempering together," and, hence, "temperament," or "constitution."] The disposition or habit of body peculiar to an individual. Also any peculiar and not obviously correlated reactions against external influences exhibited by any individual. It should not be confounded with "constitution" or "temperament." Commonly, any single peculiarity of a person is spoken of as "an idiosyncrasy," so that one person may manifest several idiosyncrasies, and these may be mental or physical, permanent or temporary.

Id-ĭ-o-sўn-crat'ic. [Lat. **Idiosyncrat'icus.**] Belonging to idiosyncrasy.

Id'ĭ-ot. [Lat. **Idio'ta;** from the Gr. *ἰδιώτης,* "private," because unfit for intercourse with the world.] One who is silly, or without understanding; a fool.

Id-ĭ-o-ti'ạ.* [Gr. *ἰδιωτεία.*] Literally, "a state of privacy or obscurity." A state of idiotism. See IDIOT.

Id-ĭ-ot'ic. [Lat. **Idiot'icus.**] Like an idiot.

Id'ĭ-ot-iśm. [Lat. **Idiotis'mus;** from the Gr. *ἰδιώτης,* "private."] The state or condition of an idiot; idiocy.

Id'rĭ-ạ-lin. [Lat. **Idriali'na;** from *Id'ria,* the seat of the famous quicksilver-mines of Illyria.] A fossil fatty substance found in mercury-mines.

Idrosis.* See HIDROSIS.

If, ĕf. The French term for the "yew." See TAXUS.

Ig-ạ-su'rĭ-ạ,* or **Ig-ạ-su'rĭne.** [See next article.] An alkaloid found in the different species of *Strychnos.* It is poisonous, and more soluble than brucine.

Ig-ạ-su'ric. [Lat. **Igasu'ricus;** said to be derived from *Igasur,* the Malay name for St. Ignatius's bean.] Of or belonging to the *Faba Sancti Ignatii* (the seed of the *Strychnos Ignatii*).

Igasu'ric Aç'id. [Lat. **Igasu'ricum Aç'idum.**] An acid, somewhat resembling the malic, existing in the *Strychnos Ignatii* and *Strychnos Nux-vomica.*

Ignatia,* ig-na'she-ạ. The Pharmacopœial name (U.S. 1870, 1880) for the seed of *Strychnos Ignatii,* often called the Bean of St. Ignatius. It is poisonous, and has essentially the same medical properties as nux vomica.

Igna'tia A-ma'rạ,* or **Stryċh'nos Igna'tii*** (ig-na'she-i). The systematic name of a plant which produces the bean of St. Ignatius. It is a native of the Philippine Islands.

Ignes Fatui.* See IGNIS FATUUS.

Ig'ne-us.* [From the Lat. *ig'nis,* "fire."] Fiery red or very lively scarlet.

Ig'nis.* Fire; the evolution of light and heat which attends combustion.

Ig'nis Ac-tu-a'lis.* "Actual Fire." See ACTUAL CAUTERY.

Ig'nis Fat'u-us,* plural **Ig'nēs Fat'u-i.** "Vain or Foolish Fire:" so called, probably, because it makes fools of those who pursue it. The luminous appearance of flame frequently seen in the night in marshy places, and popularly called *Jack with the lantern,* or *Will o' the Wisp.*

It is produced by phosphorus evolved from decaying vegetable matter.

Ig'nis Potentia'lis* (po-ten-she-a'lis). "Potential Fire." A name for the potential cautery.

Ig'nis Sa'cer.* "Sacred Fire." The same as ERYSIPELAS, which see.

Ig'nis Sanc'ti An-to'nĭ-i.* "St. Anthony's Fire." A name for *erysipelas.*

Ig'nis Vo-lat'ĭ-cus.* Literally, "flying fire." A term for *erysipelas*:—so called on account of the transitory character of some of its forms.

Ig-nĭ'tion. [From the Lat. *ig'nis*, "fire."] The state of being heated so as to resemble fire,—in other words, so as to emit heat and light like a burning body.

Ileac Passion. See ILIAC PASSION.

Il-e-i'tis, i*dis*.* [From the Lat. *il'eum.*] Inflammation of the ileum or ilium.

Ileo-. A prefix denoting connection with, or relation to, the ileum or ilium.

Il'eo-Cæ'cal Valve. The inferior semilunar fold of mucous membrane which secures against any matter re-entering the ileum from the cæcum.

Il'eo-Col'ic Valve. The superior semilunar fold of mucous membrane which secures the ileum against regurgitation from the colon.

Il'e-um,* or **Il'ĭ-um.*** [From the Gr. *εἰλέω*, to "turn about," from the numerous turns or convolutions which it makes.] The third or last portion of the small intestine, ending at the valve of the cæcum.

Il'e-us.* [Gr. *εἰλεός.*] The same as ILIAC PASSION, which see.

I'lex,* gen. **Il'ĭ-cis.** A genus of trees or shrubs of the natural order *Aquifoliaceæ*, comprising numerous species, natives of the United States, Europe, etc. Some of them are ornamental evergreens, bearing beautiful berries.

I'lex Aq-uĭ-fo'lĭ-um.* (Fr. *Houx*, hoo.) The systematic name of the common European Holly, the leaves of which have been reputed as tonic, astringent, and antiseptic.

I'lex Cas-si'nē,* or **I'lex Vom-ĭ-to'rĭ-a.*** An evergreen shrub, a native of the Southern United States. Its leaves are emetic.

I'lex O-pa'ca.* The systematic name of the American Holly, a small evergreen tree, a native of the Atlantic section of the United States. It bears bright red berries. Its medical properties are similar to those of the European Holly.

Ilex Paraguaiensis.* See PARAGUAY TEA.

Il'ĭ-a.* [The nominative plural of *il'e*; from the Gr. *εἰλέω*, to "turn" or "twist," to "roll up."] The flanks, which enclose the small intestines; also the small intestines themselves. See ILEUM.

Il'ĭ-ac. [Lat. **Ili'acus**; Fr. *Iliaque*, ē'lē'āk'.] Belonging to the flanks.

Il'iac Ar'te-ries. [Lat. **Arte'riæ Ili'acæ.**] These are termed the *common iliac* arteries immediately after they are given off by the aorta. They afterwards divide into the *external iliac* and the *internal iliac*, or *hypogastric*, arteries.

Il'iac Fos'sa. [Lat. **Fos'sa Ili'aca.**] A broad and shallow cavity at the upper part of the inner surface of the *os iliacum.* It is also called the *internal iliac fossa.*

Il'iac Fos'sa, Ex-ter'nal. A fossa or depression on the external surface of the *os iliacum.*

Il'iac Pas'sion. [Lat. **Pas'sio Ili'aca**; from *il'ia.*] A disease characterized by severe griping pain, vomiting of fecal matter, and costiveness, with retraction and spasm of the abdominal muscles. See OCCLUSION, INTESTINAL.

Il'iac Re'gion. The side of the abdomen, between the ribs and the hips.

Iliacum Os.* See OS ILIACUM.

Il-ĭ-a-del'phus.* [From the Lat. *il'e*, the "flank," and the Gr. *ἀδελφός*, a "brother."] A term applied to monsters which are double above and united at and below the pelvis.

Iliaque. See ILIAC.

Il'ĭ-cin, or **Il'ĭ-cine.** [Lat. **Ilici'na.**] An active principle obtained from the ilex, and recommended as a febrifuge.

Il'ĭ-um,* plural **Il'ĭ-a.** The haunch-bone; the upper portion of the *os innominatum*: in the fœtus it is distinct from the other parts:—also written *Ilion.* See ILIA.

Illacrymatio (il-lak-re-ma'she-o), **o'nis.*** [From the Lat. *illac'rymo*, *illacryma'tum*, to "weep greatly or involuntarily."] Excessive involuntary weeping:—sometimes synonymous with EPIPHORA.

Illecebraceæ,* il-le-se-bra'she-ē. [From *Illece'brum*, one of the genera.] A small natural order of exogenous plants (herbs or shrubs), found in Europe and Africa.

Il-le-git'ĭ-mate. [From the Lat. *in*, negative, and *legit'imus*, "lawful."] Contrary to law:—usually applied to children born out of lawful wedlock.

Il-liç'ĭ-um.* A genus of evergreen shrubs and low trees of the order *Magnoliaceæ*, natives of China, Japan, and the United States. The leaves exhale, when bruised, an odor of aniseseed. The fruit resembles a star, consisting of a number of monospermous cells or carpels arranged around a central axis. Also the Pharmacopœial name (U.S. 1880) for the fruit of *Illicium anisatum.* It is used principally as a source of the oil of anise.

Illiç'ium An-ĭ-sa'tum.* A small evergreen tree of the order *Magnoliaceæ*, a native of China and Japan. It produces seeds or pods called *Star Anise*, which are employed for flavoring liquors.

Illiç'ium Flor-ĭ-da'num.* Florida Anise-Tree, an evergreen shrub growing in Florida. Its bark, leaves, etc., have a spicy odor and taste like anise. It bears purple flowers.

Illiç'ium Re-lig'-ĭ-o'sum.* A small tree, a native of Japan, held sacred by the Japanese, who burn its fragrant bark as incense. Its leaves and fruit are poisonous.

Il-lu'mĭ-nism. [Fr. *Illuminisme*, ē'lü'mē'nēsm'; from the Lat. *lu'men*, "light."] A cerebral excitation, with ecstasy or loquacity, during which the subject imagines that he sees or converses with supernatural beings.

Il-lu'sion. [Lat. **Illu'sio, o'*nis*;** from *illu'do, illu'sum*, to "mock" or "deceive."] A deception, false appearance, or mockery; an hallucination.

Il-me'nĭ-um.* A metal, announced in 1846 by Hermann in the ores of the Ilmen Mountains. Its existence is contested.

Im. A Latin particle. See IN.

Im'ăġe. [From the Lat. *ima'go*, a "resemblance," "picture," or "image."] An idea; a picture of the imagination. In Optics, the spectrum or picture of an object, formed by the reflection or refraction of the rays of light from its various points. Optical images form an essential part of the process or function of vision.

Im'age of Purkinje (pooR-keen'yå). A term applied to images produced in the eye, not *upon* the retina by external objects, but *within* the retina itself by the blood-vessels of that membrane.

Im-ăġ-ĭ-nā'tion. [From the Lat. *ima'go, imag'inis*, an "image."] The creative and inventive faculty of the mind; the faculty which produces original thoughts, or new combinations of ideas.

I-ma'go,* gen. **I-maġ'ĭ-nis.** [From the Lat. *im'itor*, to "imitate," to "copy."] Literally, an "image," "picture," or "portrait:"—applied to the perfect insect, which has undergone all its metamorphoses. The origin of this appellation would seem to be that, as a portrait is not merely the first rude outline of the artist, but the perfect elaboration of his idea, so, after the several preparatory stages of the egg, the *larva*, and the *pupa* (or *chrysalis*), the *imago* is the full and final elaboration of nature's idea respecting the insect.

Im'be-cĭle. [Lat. **Imbecil'lis.**] Feeble; weak:—generally applied to a weakness of the mental faculties.

Im-be-çil'ĭ-tў. [From the same.] Feebleness of mind; debility.

Im-ber'bis.* Having no beard or hair:—applied to certain plants.

Im-bībe'. [From the Lat. *in*, "in," and *bi'bo, bib'itum*, to "drink."] To drink in; to absorb.

Im-bĭ-bĭ'tion. [Lat. **Imbibi'tio, o'*nis*;** from the same.] The act of drinking in or sucking up moisture; the penetration of a liquid among the molecules of a solid body.

Im'brĭ-cate, or **Im'brĭ-cāt-ed.** [Lat. **Imbrica'tus;** from *im'brico, imbrica'tum*, to "cover with tiles" (from *im'brex*, a "roof-tile").] Having an appearance of tiles successively overlapping one another; placed over one another like tiles or shingles on a roof:—applied to parts of plants.

Im'brĭ-cāt-ing. [Lat. **Im'bricans;** from the same.] A term applied to the folioles of a compound leaf when, during the *sleep* of the plant, they apply themselves along the petiole, which they entirely conceal, covering one another like tiles on a house-top, directed from the base to the summit.

Im'brĭ-ca-tĭve. [Lat. **Imbricati'vus;** from the same.] See IMBRICATING.

Im-mar'ġĭ-nate. [Lat. **Immargina'tus;** from *in*, priv., and *mar'go*, a "border."] Having no marked border; destitute of a rim or border:—applied to parts of plants.

Im-me'dĭ-ate, Im-me-dĭ-a'tus.* [From the Lat. *in*, negative, and *me'dium*, "something between, or intervening."] (Fr. *Immédiat*, ĕ'mā'-de-ā'.) Literally, "with nothing intervening." In Botany, proceeding directly from a part without the intervention of another part.

Im-mersed'. [Lat. **Immer'sus;** from *immer'go, immer'sum*, to "plunge under, or into, water."] Beneath the surface of water; growing wholly under water:—applied to plants.

Im-mer'sion. [Lat. **Immer'sio;** from the same.] The act of plunging a body in a liquid.

Im-mob'ĭ-lis.* [From the Lat. *in*, priv., and *mo'veo*, to "move."] Immobile; immovable; not having a free motion on the part which bears it:—applied to anthers wholly attached to the filament.

Im-mo-bĭ-lĭ-zā'tion. [From the same.] The act of rendering a part immovable, of preventing all possibility of movement in this part. It is especially fractured bones and morbid articulations that are immobilized.

Im-mor'tal Flŏw'er. (Fr. *Immortelle*, ĕ'moR'-tĕl'.) A name given to several species of *Antennaria, Helichrysum*, and *Gnaphalium*, in which the scales of the involucre are colored, dry, and scarious.

Im-mu'nĭ-tў. [Lat. **Immu'nitas;** from *immu'nis*, "exempt," "free from duty."] Exemption; a condition which causes that certain persons escape from a prevailing disease.

Im-pact'ed. [Lat. **Impac'tus;** from *impin'go, impac'tum*, to "drive or dash against," to "drive in."] A term used in reference to the head of the child when fixed in the pelvic cavity.

Im-pac'tion. [From the same.] A fracture of the skull into several pieces, of which some project outward and some are directed inward.

Im-pal'pa-ble. [From the Lat. *in*, "not," and *pal'po*, to "feel," to "stroke."] Incapable of being felt; so fine as not to be perceived by the touch: as, *impalpable* powder. The structure of a mineral is termed *impalpable* if no grains can be detected with the eye, as chalcedony.

Im'par, ar*is.* [From the Lat. *in*, negative, and *par*, "equal."] Odd; not even; unequal. See GANGLION IMPAR.

Im-par-ĭ-ner-va'tus.* [From the Lat. *im'par*, "unequal," and *ner'vus*, a "nerve."] Having unequal nervures; impariner'vate:—applied to leaves.

Im-par-ĭ-pen'nate. [Lat. **Imparipenna'tus;** from *pen'na*, a "feather" or "quill."] The same as IMPARIPINNATE.

Im-par-ĭ-pin'nate. [Lat. **Imparipinna'tus;** from *im'par*, "unequal," and *pin'na*, a "feather," a "wing."] Unequally pinnate; having an unequal number of leaflets; pinnate with a single leaflet at the apex, as the Ash and the Rose.

Im-pa'tĭ-ens.* A genus of herbaceous plants of the natural order *Geraniaceæ*, comprising several species, natives of the United States. Their popular names are *Balsam, Touch-me-not*, and *Jewel-Weed.*

Impa'tiens No'li-Me-Tan'ge-re.* The systematic name of the Touch-me-not, a native of Europe. It is emetic, cathartic, and diuretic.

Im-pen-e-tra-bil'ĭ-tў. [Lat. **Impenetrabil'itas, a'tis;** from *in*, negative, and *pen'etro*, to "pierce," to "penetrate," to "enter into."] A property of matter, by which no portion of it can occupy the same place at the same time with another portion. It is one of the essential properties of matter.

Im-per-a-to'rĭ-a Os-tru'thĭ-um,* or **Peūced'a-num Ostru'thium.*** Masterwort, a plant of the order *Umbelliferæ*, a native of Europe. Its root is bitter, tonic, and stimulant.

Im-per'fect. [Lat. **Imperfec'tus;** from *in*, negative, and *perfi'cio, perfec'tum*, to "finish."] Incomplete:—applied to flowers which want either anthers or pistils.

Im-per-fo-lĭ-a'tus.* [From the Lat. *in*, negative, and *perfolia'tus*, "pierced through the leaves."] Having leaves that are not perfoliate.

Im-per'fo-rate. [Lat. **Imperfora'tus;** from *in*, negative, and *per'foro, perfora'tum*, to "bore through."] Abnormally occluded:—applied to the anus, vagina, etc.

Im-per-fo-ra'tion. [From the same.] Permanent and abnormal occlusion of canals or apertures which naturally ought to be open. It is always a congenital malformation.

Im-pe'rĭ-al. A cooling beverage prepared by mixing half an ounce each of cream of tartar and fresh lemon-peel, bruised, with four ounces of white sugar and three pints of boiling water.

Im-pe-tĭg'ĭ-nous. [Lat. **Impetigino'des, Impetigino'sus;** from *impeti'go.*] Having impetigo.

Im-pe-ti'go,* gen. **Im-pe-tĭg'ĭ-nis.** [From the Lat. *im'peto*, to "invade."] (Fr. *Dartre*, dȧrtr.) A skin-disease marked by small, irregularly circumscribed pustules, chiefly on the extremities, slightly elevated, and terminating in a laminated scab, unaccompanied by fever, and not contagious; humid or running tetter.

Im-pe-tĭ-o-la'ris.* [From the Lat. *in*, priv., and *peti'olus*, a "petiole."] Having no petiole.

Im-plan-ta'tus.* [From the Lat. *in*, "in," and *plan'to, planta'tum*, to "set," to "plant."] Implanted:—applied to certain diseases. (See ENTHETIC.) The term is also applied to crystals attached by one of their ends to a rock.

Im-plex'ous. In Botany, entangled; interlaced.

Im-plĭ-ca'tus.* [From the Lat. *in*, "in," or "into," and *pli'co, plica'tum*, to "fold," or "wrap."] The same as COMPLICATED, which see.

Im-plu'vĭ-um.* [From the Lat. *in*, "upon," and *plu'via*, "rain."] A shower-bath.

Im-pon-der-a-bil'ĭ-tў. [Lat. **Imponderabil'itas, a'tis.**] The quality of being imponderable.

Im-pon'der-a-ble. [Lat. **Imponderab'ilis;** from *in*, negative, and *pon'dero*, to "weigh."] Incapable of being weighed:—applied to light, heat, electricity, magnetism, etc.

Im-pos'thume. [Probably a corruption of the Lat. *aposte'ma.*] Another term for an abscess. See ABSCESS.

Im'po-tence, Im'po-ten-cў. [Lat. **Impoten'tia;** from *in*, negative, and *pos'sum*, to "be able."] (Fr. *Impuissance*, ȧm'pwè'sȯnss'.) Weakness; want of power, especially of virile power; inability to perform the act of coition. See ADYNAMIA, ANAPHRODISIA, and STERILITY.

Im'po-tent. [Lat. **Im'potens;** from the same.] Incapable of procreating or impregnating.

Im-preg-nā'tion. [Lat. **Impregna'tio, o'nis;** from the Low Latin *impreg'no, impregna'tum*, to "make fruitful," to "make pregnant."] The act of making, or state of being, pregnant; fecundation. In Botany, the fertilization of the ovary by the pollen.

Impregnation, Diseases affecting the. See CARPOTICUS.

Im-pres-sĭ-bil'ĭ-tў. [For etymology see next article.] Susceptibility; the property which organized substance possesses of being modified molecularly by certain agents, such as miasma, poisons, etc.

Im-pres'sion. [Lat. **Impres'sio;** from *im'primo, impres'sum*, to "print," to "imprint."] The act of imprinting; a mark made by pressure; an indentation; an effect on the nervous system arising from a communication between an external object and an organ of sense.

Im-pu'ber, er*is.** [From the Lat. *in*, negative, and *pu'ber*, "of ripe age."] Without hair on the pubes; not arrived at adult age.

Impuissance. See IMPOTENCE.

Im'pulse. [From the Lat. *impel'lo, impul'sum*, to "impel."] Motion produced by suddenly communicated force; incentive; influence of appetite or passion on a person; an inclination which impels a person to do something.

Im-pul'sion. [From the same.] The act of impelling; a motion suddenly communicated from one body to another; impulse.

Im-pus-tu-la'tus.* [From the Lat. *in*, negative, and *pustula'tus*, "having pustules."] Having no red spots; impus'tulate.

I'mus Ven'ter.* "Lowest Belly." The lowest part of the abdomen, between the umbilicus and the pudenda.

In. A Latin particle signifying "in," "within," "into," "on," "against." It is often negative, and sometimes intensive. Before *b, m*, and *p* the *n* is changed to *m*,—*e.g.*, *imbibe* for *inbibe*, *immobilis* for *inmobilis*, *impotent* for *inpotent*, etc.

In-æ-qual-ĭ-fo'lĭ-us.* [From the Lat. *inæqua'lis*, "unequal," and *fo'lium*, a "leaf."] Having unequal leaves.

In-æ-quĭ-lat'er-al. Unequal-sided, as the leaf of a Begonia. See INEQUILATERAL.

In-al-bu-mĭ-na'tus.* [From the Lat. *in*, priv., and *albu'men.*] A term applied to the embryo of plants not having albumen.

In-an-a-ġen'e-sis.* [From the Gr. *ἰς, ἰνός*, a "fibre," and the Lat. *anagen'esis*, "regenera-

tion."] Muscular regeneration, or reproduction of muscular fibre.

In-a-naph'ŷ-sis.* [From the Gr. *ἰς, ἰνός*, a "fibre," and the Lat. *anaph'ysis*, "renewed growth."] Similar to INANAGENESIS.

In-an'ĭ-mate. [From the Lat. *in*, negative, and *an'ima*, "life."] Lifeless:—applied to bodies that were never endowed with life or have lost it.

In-a'nis.* Empty; not containing anything.

In-a-nĭ'tion. [Lat. **Inani'tio, o'nis;** from *ina'nio, inani'tum*, to "empty" (from *ina'nis*, "empty").] Exhaustion or emptiness of the body, its viscera, or its vessels, from want of food; starvation. The result of total abstinence from food is a gradual diminution of the weight of the body, as the person or animal lives at the expense and by the combustion of its own tissues.

In-an-the-ra'tus.* [From the Lat. *in*, priv., and *anthe'ra*, an "anther."] A term applied to the filaments of stamens when they do not bear anthers.

In-an-ther-if'er-us.* [From the Lat. *in*, priv., *anthe'ra*, an "anther," and *fe'ro*, to "bear."] The same as INANTHERATUS, which see.

In-ap-pen-dic-u-la'tus.* [From the Lat. *in*, priv., and *appen'dix*, an "addition."] Having no appendices:—applied mostly to plants.

In-ap'pe-ten-cy. [Lat. **Inappeten'tia**; from *in*, negative, and *ap'peto*, to "desire."] A want or loss of appetite. The same as ANOREXIA.

In-ar-tic'u-late. [Lat. **Inarticula'tus**; from *in*, priv., and *articula'tus*, "articulated."] Having no articulation; inarticulated. Also not having distinct utterance.

In-cal-ŷ-ca'tus.* [From the Lat. *in*, priv., and *ca'lyx*.] Without a calyx.

In-can-dĕs'çence. [Lat. **Incandescen'tia**; from *incandes'co*, to "grow very hot."] The bright appearance presented by solids and liquids when heated to a sufficient degree; white heat; the glowing whiteness of intensely heated bodies.

In-can-dĕs'çent. [Lat. **Incandes'cens**; from the same.] A term applied to a body heated till its surface becomes white and brilliant.

In-cą-nĕs'çent. [From the Lat. *incanes'co*, to "grow hoary or gray."] Having a hoary or gray aspect, caused by the presence of hairs:—applied to leaves, etc.

In-cā'nous. [Lat. **Inca'nus**; from *in*, intensive, and *ca'nus*, "hoary."] Hoary; covered with a white down:—applied to the stems, leaves, etc., of plants.

In-can-tā'tion. [From the Lat. *incan'to, incanta'tum*, to "charm."] A mode of curing disease by charms, etc.

In-car'cer-āt-ed. [Lat. **Incarcera'tus**; from *in*, "in," and *car'cer*, a "prison."] A term applied to the portion of bowel or other substance confined by the stricture in strangulated hernia.

Incarceration. See STRANGULATION.

In-car-nā'tion. [From the Lat. *in*, "in" or "upon," and *ca'ro, car'nis*, "flesh."] Growth of flesh or granulations; production of flesh.

In-car-na'tus.* [From the same.] Flesh-colored; carnation-tinted.

In'cense. [From the Lat. *incen'do, incen'sum*, to "burn."] Perfume exhaled by fire in worship. Also frankincense,—*i.e.*, olibanum.

In-cer-nic'u-lum.* [From the Lat. *incer'no*, to "sift" or "strain."] The pelvis of the kidney into which the urine is strained from the *papillæ renis*.

In'cĭ-dence. [Lat. **Inciden'tia**; from *in'cido*, to "fall upon."] A term for the direction in which one body strikes upon another.

In'cidence, An'gle of. The angle formed by the line in which a body or ray of light moves, and the straight line perpendicular to the plane against which the body or ray strikes.

Incidentia,* in-se-den'she-ą. [From the Lat. *inci'do*, to "cut in."] A name formerly given to medicines which were supposed to consist of sharp particles, as acids and salts.

In-cin-er-ā'tion. [Lat. **Incinera'tio, o'nis;** from *incin'ero, incinera'tum*, to "burn to ashes."] The act of reducing animal or vegetable matter to ashes.

In-cīsed'. [Lat. **Inci'sus.**] Cut irregularly and sharply; cut or gashed; cut rather deeply.

Incised'-Sĕr'rate. [Lat. **Inci'so-Serra'tus.**] Having deeply-slashed serratures:—applied to leaves.

In-cis'ion. [Lat. **Inci'sio, o'nis;** from *inci'do, inci'sum*, to "cut into," to "cut."] The cutting into the integuments or flesh with an instrument; a methodical division of soft parts with a cutting instrument.

In-cĭ-si'vus.* [From the same.] Belonging to the incisor teeth.

In-ci'sor,* plural **In-cĭ-so'rēs.** [From the same.] The four front teeth of both jaws, which have sharp, cutting edges.

In-ci'to-Mo'tor. A term which may be defined as the reverse of EXCITO-MOTOR, which see. In the latter case the excitement originating in the extremities of the nerves is carried to the spinal marrow and *reflected* to the part excited or moved. In the former the excitement originates in the nervous centres and is conveyed thence directly to the muscles.

In-cli'nate, or **In-clined'.** [For etymology see next article.] Bent towards each other, or towards something different:—applied to parts of plants.

In-clĭ-nā'tion. [Lat. **Inclina'tio, o'nis;** from *incli'no, inclina'tum*, to "bend towards" an object, to "incline."] The state of a body or vessel placed obliquely. The angle made by two planes or two lines, or by a plane and a line; or the angle which they would make if they were extended until they met. Also a tendency of the mind; a propensity.

In-clined' Plane. A plane surface inclined at an angle of less than 90° to the horizontal line. The *inclined plane* is one of the mechanical powers or simple machines.

In-clīn'ing. [See INCLINATION.] Falling back considerably from the horizontal line:—applied to parts of plants.

In-clūd'ed. [From the Lat. *in*, "in," and *clau'do*, to "close" or "shut."] Enclosed:—ap-

plied to a part of a flower which does not project beyond another, but is wholly contained in a cavity.

In-co-he'rence. [From the Lat. *in*, negative, and *cohæ're*o, to "stick together," to "cohere."] Want of connection; want of dependence of one part on another.

In-com-bus'tĭ-ble. [From the Lat. *in*, negative, and *combu'ro*, *combus'tum*, to "burn."] Not subject to combustion; that cannot be consumed by fire.

In-com-pat-ĭ-bil'ĭ-tў. [See next article.] The quality of being incompatible. The exclusion of certain diseases by the prevalence of other diseases. Thus, it has been asserted that phthisis and intermittent fevers are exclusive of each other, so that the former does not prevail where the latter prevails.

In-com-pat'ĭ-ble. [From the Lat. *in*, negative, and *compa'tior*, to "suffer together."] Literally, "that cannot be suffered [or allowed] together:"—applied to substances which act chemically on each other and therefore cannot with propriety be prescribed together.

In-com-plete'. [From the Lat. *in*, negative, and *com'pleo*, *comple'tum*, to "fulfil," to "finish."] A term applied to a flower which wants a calyx or corolla.

In-com-pres-sĭ-bil'ĭ-tў. [Lat. **Incompressibil'itas, a'tis**; from *in*, negative, and *com'primo*, *compres'sum*, to "press together."] Incapability of being compressed.

In-com-pres'sĭ-ble. [From the same.] A term applied to a body whose volume cannot be diminished by pressure. No body is absolutely incompressible. Liquids are less compressible than solids or gases.

In-con-spic'u-ous. [From the Lat. *in*, negative, and *conspic'uus*, "easy to be seen."] Small in size; not readily observed.

In-con'tĭ-nence. [Lat. **Incontinen'tia**; from *in*, negative, and *conti'neo*, to "contain."] Inability to retain the natural evacuations.

In-cor-po-rā'tion. [Lat. **Incorpora'tio, o'nis**; from *in*, "into," and *cor'pus*, a "body."] The mixing of particles of different bodies together so that they appear to be formed into one body or into a uniform substance.

Incrassantia,* in-kras-san'she-ạ. [The neuter plural of the Lat. *incras'sans*, the present participle of *incras'so*, *incrassa'tum*, to "make thick."] A term applied to medicines supposed to have the power of thickening the humors or the blood when too thin.

In-cras'sāt-ed, or **In-cras'sate.** [From the same.] In Botany, thickened; thickened towards the summit.

In'cre-ment. [Lat. **Incremen'tum**; from *incres'co*, to "increase."] Augmentation; increase; growth.

In-crus-tā'tion. [Lat. **Incrusta'tio, o'nis**, from *incrus'to*, *incrusta'tum*, to "rough-cast," to "incrust."] The act or process of forming a crust. Also a coating of mineral matter; a crust or deposit of stony molecules on bodies plunged or bathed in water charged with calcareous salts.

In-crust'ed, or **In-crus'tate.** A term applied to seeds which grow so firmly to their pericarp as to appear to have but one integument.

In-cu-bā'tion. [Lat. **Incuba'tio, o'nis**; from *in'cubo*, *incuba'tum*, to "lie upon," to "sit on," as eggs.] The act or process by which most birds hatch their eggs. Also the period between the implanting of a disease, or subjection to its causes, and its development.

Incubator. See COUVEUSE.

In'cu-bus.* [From the Lat. *in'cubo*, to "lie or sit upon."] (Fr. *Cauchemar*, kōsh'mȧR'.) The nightmare. See EPHIALTES.

In'cubus Vigilan'tium* (vij-e-lan'she-ŭm). See DAY-MARE.

In-cum'bent. [From the Lat. *incum'bo*, to "lie or lean upon."] Leaning or lying upon or against:—applied to anthers which lie on the inner side of the filaments, etc. The cotyledons are *incumbent* when the back of one of them lies against the radicle.

In-cu'ra-ble. Not susceptible of cure:—applied to patients, and also to diseases.

In-cur'vate. [Lat. **Incurva'tus, Incur'vus**; from *incur'vo*, *incurva'tum*, to "bend," to "curve."] Bent, or curved, inwards; incurved.

In-cur-vā'tion. [Lat. **Incurva'tio, o'nis**; from the same.] A bowing or bending:—applied to the back, etc.

In-curved'. [From the same.] In Botany, gradually curving inwards. The same as INCURVATE.

In'cus,* gen. **In-cu'dis.** (Fr. *Enclume*, ôN'klüm'.) Literally, an "anvil." The largest of the ossicles of the internal ear:—so named from its fancied resemblance to a smith's anvil.

Ind. = *In di'es.** "From day to day," or "daily."

In-def'ĭ-nĭte. [From the Lat. *in*, negative, and *defi'nio*, *defini'tum*, to "limit," to "define."] Either not uniform in number or too many to be readily counted:—applied to petals, stamens, etc.

In-de-his'çent. [Lat. **Indehis'cens**; from *in*, negative, and *dehis'co*, to "gape open."] A term applied to a pericarp that does not open spontaneously when ripe; not opening naturally.

In'dex,* gen. **In'dĭ-cis.** [From the Lat. *in'dico*, to "point out," to "show."] A term applied to the forefinger, because it is used for pointing.

In'dĭ-ạn Ar'row-Root. The root of the *Maranta arundinacea*.

In'dian Corn. The *Zea Mays*, or maize-plant. Many varieties of this cereal are cultivated in the United States. It is a very nutritious and wholesome food, but is deficient in gluten. The quantity of maize raised in the United States is greater than that of any other grain.

Indian Cucumber. See MEDEOLA.

In'dian Hemp. The *Cannabis Indica*.

Indian Mallow. See ABUTILON.

In'dian Pink. The *Spigelia Marilandica*.

Indian Pipe. See MONOTROPA UNIFLORA.

In'dian Rub'ber. A name for caoutchouc.

Indian Sarsaparilla. See HEMIDESMUS INDICUS.

In'dian To-bac'co. The *Lobelia inflata.*

In-dĭ-a'na Ra'dix.* A name for ipecacuanha.

In'dĭ-can. A yellow amorphous substance or principle obtained from *Isatis tinctoria* and other plants which furnish indigo. It contains nitrogen, and is soluble in alcohol, ether, and water. It sometimes exists in normal urine and in sweat.

In-dĭ-cā'tion. [Lat. **Indica'tio, o'nis;** from *in'dico, indica'tum,* to "point out."] That which indicates or points out what ought to be done by the practitioner.

In-dĭ-ca'tor, o'ris.* [From the same.] A muscle of the forefinger. Also termed *Extensor Indicis.* See INDEX.

In'dĭ-cus Mor'bus.* "Indian Disease." A name for the venereal disease:—so called because it was believed to have been first brought to Europe from the West Indies (or the neighboring coast of America) by the Spaniards.

In-dĭg'en-ous. [Lat. **Indĭg'enus;** from *in'du,* for *in,* "in," and *ge'no,* an ancient form of *gig'no,* to "beget," "to "produce."] Native to a country; originally produced in a country or place; aboriginal.

In-dĭ-gest'ĭ-ble. [For etymology see next article.] Difficult to digest, or that cannot be digested.

In-dĭ-ges'tion. [Lat. **Indiges'tio, o'nis;** from *in,* negative, and *dig'ero, diges'tum,* to "set in order," to "digest."] The disease *dyspepsia.*

In-dĭg-ĭ-tā'tion. [Lat. **Indigita'tio, o'nis;** from *in,* "into," and *dĭg'itus,* a "finger."] The passing or thrusting of one part of the intestines into another,—the part which enters being compared to a finger. See INTUSSUSCEPTION.

In-dig-na-bun'dus.* [From the Lat. *indig'nor,* to "be indignant."] Literally, "angry:"—a name given to the *rectus externus* (a muscle of the eye), from the expression of anger or scorn which the action of this muscle imparts.

In'dĭ-go. [A corruption of *In'dico,* the Portuguese and Spanish for "Indian" (Lat. *In'dicum*): so called because it was originally procured exclusively from India.] A blue coloring-matter extracted from the *Indigofera tinctoria,* the anil or indigo-plant, the *Isatis tinctoria,* the *Galega tinctoria,* and other species of plants.

In-dĭ-gof'er-a A'nil.* Another name for the *Indigofera tinctoria.*

Indigof'era Tinc-to'rĭ-a.* The principal plant which yields indigo. It belongs to the natural order *Leguminosæ.* It is cultivated in the East and West Indies.

In-dĭ-gof'er-us.* [From the Eng. *in'digo,* and *fe'ro,* to "bear."] Bearing or producing indigo:—applied to plants.

In'dĭ-go-tāte. [Lat. **Indig'otas, a'tis.**] A combination of indigotic acid with a base.

In-di-got'ĭ-cus.* A very deep blue.

In-dig'o-tin. [Lat. **Indigoti'na.**] The coloring-principle of indigo. It is a blue, volatile, crystallized substance, insoluble in water or alcohol.

In-dis-po-si'tion. The state of being ill or slightly diseased.

In'dĭ-um.* [Named from the indigo-blue line it presents in the spectrum.] A rare metal discovered in blende. It is soft and ductile, and of a bluish silvery color. Specific gravity, about 7.4.

In-dĭ-vid'u-al. [See INDIVIDUALITY.] (Fr. *Individu,* ăN'dĕ'vĕ'dü'.) A single person, organism, or being; a being that cannot be divided without the destruction of one or both parts.

In-dĭ-vid-u-al'ĭ-ty. [From the Lat. *in,* negative, and *divid'uus,* "divisible or divided."] Separate existence; the totality of properties or qualities which distinguish one individual from another of the same species.

In'do-lent. [Lat. **In'dolens;** from *in,* negative, and *do'leo,* to "be in pain," to "suffer."] Nearly free from pain; giving little or no pain:—applied to tumors.

In'do-lēs.* The natural disposition or character.

In-duced' or **In-duc'tive E-lec-triç'ĭ-tў.** Electricity generated by induction, whether magnetic or voltaic. Also called FARADISM. See next article.

In-duc'tion. [Lat. **Induc'tio, o'nis;** from *in-du'co, induc'tum,* to "lead into or on."] The act or process of inferring or establishing a general proppsition from several particular ones; also the proposition thus established. In Electricity, *Induction* is a general term used to denote the mutual or reciprocal action of the electric fluids in adjacent but electrically separated bodies, and is sometimes described as "action at a distance." It is the influence which an electrified body, without the transfer of any part of its charge, exerts through a non-conducting medium upon an adjacent body, whereby the latter, if insulated, is rendered electro-polar. The effects thus produced are called *inductive* or *induced* electricity, or *faradism.* Induction performs an important part in almost all electric phenomena. It is by induction that a piece of steel becomes a temporary magnet when a current of electricity passes near or round it.

In-duc'tive. [From the same.] Capable of leading to; inferring, or persuading by induction.

In-du-men'tum.* [From the Lat. *in'duo,* to "put on," to "cover."] Any hairiness or downy covering of plants.

In-du'plĭ-cate. [From the Lat. *in,* "in" or "inwards," and *du'plico, duplica'tum,* to "double."] A term applied to valvate æstivation, in which the margins of the leaves are inflexed or turned inwards.

In'du-rate, or In'du-rāt-ed. [Lat. **Indura'tus;** from *indu'ro, indura'tum,* to "harden."] Made hard; hardened.

In-du-rā'tion. [Lat. **Indura'tio, o'nis;** from the same.] (Fr. *Endurcissement,* ðN'dür'sès'mðN'.) The state or process of hardening of the tissues from any cause; the hardening of any part from the effect of disease.

In-du-sĭ-a'tus.* Having an indusium.

In-du'sĭ-um.* [From the Lat. *in'duo, indu'tum,* to "put on," to "cover."] The proper

covering of the fruit-dots of ferns; any peculiar membranous covering:—applied to the *amnion*, because it covers the fœtus.

In-du'vĭ-al. [Lat. **Induvia'lis**; from the same.] A term applied to a calyx when it is persistent and covers the fruit, as that of the *Physalis alkekengi*.

In-du'vĭ-ate. [Lat. **Induvia'tus**; from the same.] Covered by *induvia*:—applied to fruits.

In-du'vĭ-um,* plural **In-du'vĭ-ą.** [From the Lat. *in'duo*, to "cover."] A term applied to the whole perianth, or every accessory part of the flower which persists and covers the fruit after maturity of the ovary.

In-e'brĭ-ant. [From the Lat. *in*, intensive, and *e'brius*, "drunk."] Intoxicating.

Inée. See STROPHANTHUS HISPIDUS.

In-em'brў-o-nate. [Lat. **Inembryona'tus**; from *in*, negative, and *em'bryo*.] Having no embryo, germ, or *corculum*.

In-e-quĭ-lat'er-al. [Lat. **Inæquilat'erus**; from *in*, negative or priv., *æ'quus*, "equal," and *la'tus*, a "side."] Having unequal sides, as the leaves of certain plants.

In-er'mis.* [From the Lat. *in*, priv., and *ar'ma*, "arms."] Without spines or prickles; unarmed:—applied to certain plants.

In-ert'. [Lat. **In'ers.**] Inactive; slothful; indolent; sluggish; destitute of motility.

Inertia,* in-er'she-ą. [From the Lat. *in'ers*, "slothful."] A term used to denote the principle or law of the material world that all bodies are absolutely indifferent to a state of rest or motion, and would continue forever at rest, or persevere in the same uniform and rectilinear motion, unless disturbed by the action of some extrinsic force. —(BRANDE.)

Inf. = *Infu'sum*,* an "infusion;" also *Infun'de*,* "pour in."

In'fąn-cў. [Lat. **Infan'tia**; see INFANT.] (Fr. *Enfance*, ɴ'fɔ̃ɴss'.) Early childhood,—usually reckoned from birth to the seventh year. See ÆTAS.

In'fant. [Lat. **In'fans**; from *in*, negative, and *fans*, "speaking."] (Fr. *Enfant*, ɔ̃ɴ'fɔ̃ɴ'.) Originally, a child so young as to be unable to speak; now applied somewhat indefinitely to any young child. See INFANCY.

In-fan'tĭ-cīde. [Lat. **Infantici'da**; from *in'fans*, a "child," or "infant," and *cæ'do*, to "kill."] One who kills, murders, or destroys an infant.

Infan'ticide. [Lat. **Infanticid'ium**; from the same.] Child-murder, distinguished into that which is perpetrated by omission, and that by commission.

In-farc'tion. [Lat. **Infarc'tio, o'*nis*;** from *infar'cio*, *infarc'tum*, to "fill in," or "stuff in."] An obstruction caused by overloaded vessels:—also applied to a sense of oppression, fulness, or stuffing of the chest.

In-farc'tus.* [From the same.] Obstruction of the vessels from excessive fulness.

Infarc'tus, Hem-or-rhag'ic. A morbid condition caused by hyperæmia, or by capillary embolism, resulting in local extravasation.

In-fec'tion. [Lat. **Infec'tio, o'*nis*;** from *infi'cio*, *infec'tum*, to "infect."] The communication of a disease by personal contact with the sick, or by means of effluvia arising from the body of the sick; contagion. The transmission of disease from one individual to another of the same species, or from one animal to another of a different class. The term is sometimes used as synonymous with the *contagium* or agent by which a communicable disease is conveyed.

In-fec'tious. [From the same.] Contagious; corrupting; that may be easily communicated; capable of transmitting disease:—applied to diseases that are capable of transmission from one person to another by contact, or of being conveyed through the atmosphere.

Infecundity. See STERILITY.

In-fe'rĭ-or. Growing below some other organ. A term applied in Botany to the calyx when it is free, and to the ovary when it is adnate to the tube of the calyx. The *inferior planets* are those whose orbits are inside the orbit of the earth,—*i.e.*, Venus and Mercury.

Infe'rior Lon-gĭ-tu'dĭ-nal Si'nus. A vein of the *dura mater*, running along the lower margin of the *falx cerebri*.

In'fe-ro-bran-chĭ-a'tus.* [From the Lat. *in'ferus*, "beneath," and *bran'chiæ*, "gills."] Applied in the plural neuter (*Inferobranchia'ta*) to an order of *Mollusca Gasteropoda* having the branchiæ on both sides of the body under the border of the mantle.

In-fil'trāt-ed. [Lat. **Infiltra'tus**; from *in*, "into," and *fil'trum*, a "strainer."] Strained through; filtered:—applied to an organ or part in the state of filtration.

In-fil-trā'tion. [Lat. **Infiltra'tio, o'*nis*;** from the same.] A straining of fluid substances into the *areolæ* or cellular tissue of a structure:—also applied to the diffusion of any solid or fluid morbid product in the midst of tissue-elements, such as is seen in calcareous, albuminoid, fatty, and tubercular infiltration.

In-fin-ĭ-tes'ĭ-mal. [Lat. **Infinites'imus**; from *in*, negative, and *fini'tus*, "limited."] Infinitely small.

Infirmary. See HOSPITAL.

In-firm'ĭ-tў. [Lat. **Infirm'itas**; from *in*, negative, and *fir'mus*, "firm," "strong."] Debility; any disease which has become habitual or chronic; an unsound state of body.

In-flamed'. [Lat. **Inflamma'tus**; from *inflam'mo*, *inflamma'tum*, to "set on fire," to "inflame."] (Fr. *Enflammé*, ɔ̃ɴ'flă'mā'.) In a state of inflammation.

In-flam'ma-ble. [Lat. **Inflammab'ilis**; from the same.] Burning with flame and rapid combustion when touched with fire:—applied to gases or substances that are easily set on fire.

Inflammable Air. See HYDROGEN.

In-flam-mā'tion. [Lat. **Inflamma'tio, o'*nis*;** from the same.] A state of disease characterized by redness, pain, heat, and swelling, attended or not with fever:—termed also *Phlogosis*. Inflammation is a series of changes in a part identical with those which are produced in the same part

by injury caused by a chemical or physical irritant. It is often expressed by the terminal *-itis* added to the name of the organ or part affected: as, *bronchitis*, inflammation of the bronchia; *tonsillitis*, inflammation of the tonsils. See PHLEGMASIA, and PHLOGOSIS.

In-flam'ma-to-ry. [Lat. **Inflammato'rius**; from the same.] Belonging to inflammation; phlogistic; tending to inflame:—applied to fevers.

Inflam'matory Crust. The *buffy coat* of the blood.

Inflam'matory Fe'ver. The state of fever called *synocha*.

In-flāt'ed. [Lat. **Infla'tus**; from *in*, "in," and *flo*, *fla'tum*, to "blow."] Turgid and bladdery; thin, membranous, and swelled:—applied to pods and other parts of plants.

Inflatio.* See EMPHYSEMA.

In-flexed', or **In-flect'ed.** [Lat. **Inflex'us**; from *in*, "in," or "inwards," and *flec'to*, *flex'um*, to "bend"]. Abruptly bent inwards:—applied to parts of plants.

In-flo-rĕs'cence. [Lat. **Inflorescen'tia**; from *inflores'co*, to "blossom."] A mode of flowering; the arrangement of flowers on the stem or branch; the particular manner of flowering. The principal modes or forms of inflorescence are the *spike*, *raceme*, *corymb*, *umbel*, *cyme*, and *panicle*. When the primary axis is terminated by a flower, the inflorescence is *definite* or *determinate*, as in a cyme. The inflorescence is *indefinite* or *indeterminate* when the flowers all arise from axillary buds, as in the raceme and corymb.

In'flu-ence. [From the Lat. *in*, "on," and *flu'o*, to "flow," as any fluid, or as a spiritual essence.] A moral or spiritual power exerted upon some object; a power not directly perceptible to the senses, but perceived only in its effects; the action which a person or body exercises on another person or body.

In-flu-en'za. An Italian word signifying "influence;" because the disease seems to reside in, or be dependent upon, some atmospheric influence. (Fr. *Grippe*, grĕp or grip.) An epidemic disease characterized by the suddenness of its attack, general depression, great heaviness over the eyes, and by a peculiarly distressing fever.

In-fra-ax'il-la-ry. [From the Lat. *in'fra*, "beneath," and *axil'la*, "axil."] Situated beneath the axil.

In-fra-max-il-la'ris.* [From the Lat. *in'fra*, "beneath," and *maxil'la*, the "jaw."] Situated under the jaw; infra-maxillary.

In-fra-or'bĭ-tar, or **In-fra-or'bĭ-ta-ry.** [Lat. **Infraorbita'rius**, or **Infraorbita'ris**; from *in'fra*, "beneath," "below," and *or'bita*, the "orbit."] Situated beneath the orbit of the eye.

In-fra-scap'u-lar. [Lat. **Infrascapula'ris**; from *in'fra*, "beneath," "below," and *scap'ula*, the "shoulder-blade."] Below the shoulder-blade.

In-fra-spī'nate. [Lat. **Infraspina'tus**; from *in'fra*, "beneath," "below," and *spi'na*, a "spine."] Below a spinous process:—applied to a muscle.

In-fun-dib'u-lar, or **In-fun-dib'u-lĭ-form.** [Lat. **Infundibulifor'mis**; from *infundib'ulum*, a "funnel."] Shaped like a funnel:—applied to certain flowers, as the morning-glory.

In-fun-dib'u-lum,* plural **In-fun-dib'u-la.** [From the Lat. *infun'do*, *infu'sum*, to "pour in."] (Fr. *Entonnoir*, ŏN'ton'wȧR'.) A funnel:—applied to the canal leading from the third ventricle of the brain to the pituitary gland; also, in the plural, to three small tubes in the kidney, of a funnel-like shape.

In-fu'sa,* the plural of INFUSUM, which see.

In-fu'sĭ-ble. [From the Lat. *in*, "not," and *fun'do*, *fu'sum*, to "pour," to "pour out," to "melt."] Incapable of being fused. In Mineralogy, not fusible by means of the simple blowpipe. Infusible minerals are called *refractory*.

In-fu'sion. [Lat. **Infu'sio**, *o'nis*, or **Infu'sum**; from *in*, "in" or "upon," and *fun'do*, *fu'sum*, to "pour."] Literally, a "pouring in or upon." The act of steeping some substance in cold or hot water, for the purpose of obtaining a solution of its soluble principle; also the name of such solution. See INFUSUM.

Infusoria.* See next article.

In-fu-so'rĭ-us.* [See INFUSION.] Belonging to infusions; infu'sory. The term is applied in the plural neuter (*Infuso'ria*) to a class of *Radiata*, or *Protozoa*, so extremely minute as to be invisible to the naked eye, found in infusions of various substances, and in stagnant water. They are developed more quickly and abundantly in water which holds organic substances in suspension or solution. The term is also applied to microscopic plants, called *Bacteria* and *Diatoms*. See ANIMALCULE.

In-fu'sum,* plural **In-fu'sa.** [From the Lat. *in*, "upon," and *fun'do*, *fu'sum*, to "pour."] "Infusion." An aqueous pharmaceutical preparation made by treating a drug with water, either cold or hot, but without boiling.

Infu'sum An-gus-tu'ræ.* "Infusion of Angustura." The Pharmacopœial name (U.S. 1870) for a preparation made as follows: Take of Angustura, in moderately coarse powder, half a troyounce; water, a sufficient quantity. Moisten the powder with two fluidrachms of water, pack it firmly in a conical percolator, and gradually pour water upon it, until the filtered liquid measures a pint. This infusion may also be prepared by macerating the Angustura in a pint of boiling water, for two hours, in a covered vessel, and straining.

Infu'sum An-them'ĭ-dis.* "Infusion of Chamomile." The Pharmacopœial name (U.S. 1870) for an infusion made as follows: Take of chamomile, half a troyounce; boiling water, a pint. Macerate for ten minutes in a covered vessel, and strain. As a tonic, it is given cold. To assist the operation of emetic medicines it should be administered in the tepid state.

Infu'sum Bray-e'ræ.* "Infusion of Brayera." The Pharmacopœial name (U.S. 1880) for a preparation made as follows: Take six parts of brayera, in No. 20 powder, and one hundred parts of boiling water. Pour the boiling water upon

the brayera, and let it macerate in a covered vessel until cool.

Infu'sum Ca-lum'bæ.* "Infusion of Columbo." The Pharmacopœial name (U.S. 1870) for an infusion prepared in the same manner as the INFUSUM ANGUSTURÆ, only substituting Columbo for Angustura.

Infu'sum Cap'sĭ-çĭ.* "Infusion of Capsicum." The Pharmacopœial name (U.S. 1870) for an infusion made as follows: Take of capsicum, in coarse powder, half a troyounce; boiling water, a pint. Macerate for two hours in a covered vessel, and strain.

Infu'sum Căr-ў-o-phўl'li.* "Infusion of Cloves." The Pharmacopœial name (U.S. 1870) for an infusion made as follows: Take of cloves, bruised, one hundred and twenty grains; boiling water, a pint. Macerate for two hours in a covered vessel, and strain.

Infu'sum Cin-cho'næ.* "Infusion of Cinchona." The Pharmacopœial name (U.S. 1880) for a preparation made from six parts of cinchona, in No. 40 powder, one part of aromatic sulphuric acid, and water, a sufficient quantity. This is an efficient preparation, having all the virtues of cinchona itself.

Infu'sum Cincho'næ Fla'væ.* "Infusion of Yellow Cinchona." The Pharmacopœial name (U.S. 1870) for a preparation made as follows: Take of yellow cinchona, in moderately fine powder, a troyounce; aromatic sulphuric acid, a fluidrachm; water, a sufficient quantity. Mix the acid with a pint of water; then moisten the powder with half a fluidounce of the mixture, and, having packed it firmly in a conical glass percolator, gradually pour upon it the remainder of the mixture, and afterwards water, until the filtered liquid measures a pint.

Infu'sum Cincho'næ Ru'bræ.* "Infusion of Red Cinchona." The Pharmacopœial name (U.S. 1870) for an infusion prepared exactly as the preceding, only substituting the red for the yellow cinchona.

Infu'sum Dĭg-ĭ-ta'lis.* "Infusion of Digitalis." The Pharmacopœial name (U.S. 1880) for a preparation made as follows: Take of digitalis, in No. 20 powder, three parts; of cinnamon, in No. 20 powder, three parts; of boiling water, one hundred and eighty-five parts; of alcohol, fifteen parts; of water, a sufficient quantity. Pour the boiling water upon the mixed powders, and macerate for two hours in a covered vessel; then strain, and add the alcohol. According to the Pharmacopœia of 1870, it is prepared as follows: Take of digitalis, in coarse powder, sixty grains; tincture of cinnamon, a fluidounce; boiling water, half a pint. Macerate the digitalis with the water for two hours in a covered vessel, and strain; then add the tincture of cinnamon, and mix.

Infu'sum Eu-pa-to'rĭ-i.* "Infusion of Thoroughwort, or Boneset." The Pharmacopœial name (U.S. 1870) for an infusion made as follows: Take of thoroughwort, a troyounce; boiling water, a pint. Macerate for two hours in a covered vessel, and strain.

Infu'sum Gentia'næ (jen-she-a'nē) **Compos'ĭ-tum.*** "Compound Infusion of Gentian." The Pharmacopœial name (U.S. 1870) for an infusion made as follows: Take of gentian, in moderately coarse powder, half a troyounce; bitter orange-peel, in moderately coarse powder, coriander, in moderately coarse powder, each sixty grains; alcohol, two fluidounces; water, a sufficient quantity. Mix the alcohol with fourteen fluidounces of water, and, having moistened the mixed powders with three fluidrachms of the menstruum, pack them firmly in a conical percolator, and gradually pour upon them, first the remainder of the menstruum, and afterwards water, until the filtered liquid measures a pint.

Infu'sum Ju-nip'er-i.* "Infusion of Juniper." The Pharmacopœial name (U.S. 1870) for an infusion made as follows: Take of juniper, bruised, a troyounce; boiling water, a pint. Macerate for an hour in a covered vessel, and strain.

Infu'sum Pi'cis Liq'uĭ-dæ.* "Infusion of *Liquid Pitch*, or *Tar*." Tar-water. The Pharmacopœial name (U.S. 1870) for an infusion made as follows: Take of tar, a pint; water, four pints. Mix them, and shake the mixture frequently during twenty-four hours; then pour off the infusion, and filter through paper.

Infu'sum Pru'ni Vir-ġin-ĭ-a'næ.* "Infusion of Wild Cherry." The Pharmacopœial name (U.S. 1880) for a preparation made from four parts of wild cherry, in No. 40 powder, and water a sufficient quantity to make one hundred parts. Moisten the powder with six parts of water, and macerate for one hour; then pack it firmly in a conical glass percolator, and gradually pour water upon it until the infusion weighs one hundred parts. According to the Pharmacopœia of 1870, it is prepared as follows: Take of wild cherry bark, in fine powder, half a troyounce; water, a sufficient quantity. Moisten the powder with six fluidrachms of water, let it stand for an hour, pack it firmly in a conical glass percolator, and gradually pour water upon it until the filtered liquid measures a pint.

Infu'sum Quas'siæ* (kwŏsh'e-ē). "Infusion of Quassia." The Pharmacopœial name (U.S. 1870) for a preparation made as follows: Take of quassia, rasped, one hundred and twenty grains; water, a pint. Macerate for twelve hours in a covered vessel, and strain.

Infu'sum Sen'næ.* "Infusion of Senna." The Pharmacopœial name (U.S. 1870) for a preparation made as follows: Take of senna, a troyounce; coriander, bruised, sixty grains; boiling water, a pint. Macerate for an hour in a covered vessel, and strain.

Infu'sum Sen'næ Com-pos'ĭ-tum.* "Compound Infusion of Senna." The Pharmacopœial name (U.S. 1880) for a preparation made from six parts of senna, twelve parts of manna, twelve parts of sulphate of magnesium, two parts of fennel, bruised, one hundred parts of boiling water, and a sufficient quantity of water to make one hundred parts. Pour the boiling water on the solid ingredients, and macerate in a covered vessel until cool. Then strain, and add enough water through the strainer to make the infusion weigh one hundred parts. This infusion is the Black Draught of English Pharmacy, and is an

excellent form of administering these cathartics in a liquid state.

Infu'sum Ser-pen-ta'rĭ-æ.* "Infusion of Serpentaria, or Snake-root." The Pharmacopœial name (U.S. 1870) for an infusion prepared in the same manner as the INFUSUM ANGUSTURÆ, only substituting Serpentaria for Angustura.

Infu'sum Spi-ġe'lĭ-æ.* "Infusion of Spigelia." The Pharmacopœial name (U.S. 1870) for a preparation made as follows: Take of spigelia, half a troyounce; boiling water, a pint. Macerate for two hours in a covered vessel, and strain.

Infu'sum Ta-rax'a-çi.* "Infusion of Dandelion." The Pharmacopœial name (U.S. 1870) for a preparation made as follows: Take of dandelion, bruised, two troyounces; boiling water, a pint. Macerate for two hours in a covered vessel, and strain.

Infu'sum Va-le-rĭ-a'næ.* "Infusion of Valerian." Prepared in the same manner as the INFUSUM ANGUSTURÆ.

Infu'sum Zin-ġib'er-is.* "Infusion of Ginger." The Pharmacopœial name (U.S. 1870) for a preparation made as follows: Take of ginger, bruised, half a troyounce; boiling water, a pint. Macerate for two hours in a covered vessel, and strain.

In'ga.* A genus of the order *Leguminosæ*, comprising nearly one hundred and fifty species of trees and shrubs, natives of Brazil, Guiana, Jamaica, etc. Several species furnish a tonic astringent bark called *Barbatimao*. Among these is the *Inga Barbatimao*.

In'ga Spec-tab'ĭ-lis.* The systematic name of the *Guavo Real*, a tree cultivated in Colombia and Panama for its edible pulpy pods, which are two feet or more long and three inches broad. It bears showy white flowers.

In'ga Ve'ra.* A tree of the order *Leguminosæ*, a native of Jamaica. It bears falcate pods, which possess purgative properties.

In-ġes'tus.* [From the Lat. *in'gero, inges'tum*, to "carry in."] A term applied in the plural neuter (*Inges'ta*) to the aliments taken into the body by the mouth.

In-glu'vĭ-ēs.* [Perhaps from the Lat. *in*, "in," and *gu'la*, the "throat."] The craw, or crop, of birds.

In'glu-vin. [From the Lat. *inglu'vies.*] The name of a preparation obtained from the gizzard of chickens.

In-gras'sĭ-as, Wings of. Two portions of the symmetrical halves of the sphenoid bone, termed the large and small wings.

In-grav-ĭ-dā'tion. [Lat. **Ingravida'tio, o'nis**; from *in*, intensive, and *grav'ido, gravida'tum*, to "impregnate."] Impregnation; being with young.

In-gre'dĭ-ent. [Lat. **Ingre'diens**; from *ingre'dior*, to "enter in."] Any substance which enters into the composition of a compound body, or of a medicine.

In'guen,* gen. **In'guĭ-nis.** The lower and lateral part of the abdomen, just above the thigh; the groin.

In'guĭ-nal. [Lat. **Inguina'lis**; from *in'guen.*] Belonging to the groin.

Inguinal Canal, Inguinal Ring. See SPERMATIC CANAL.

Inguinal Hernia. See BUBONOCELE.

In'guinal Lig'a-ment. The same as POUPART'S LIGAMENT, which see.

Ingulatio (in-gu-la'she-o), **o'nis.*** [From the Lat. *in*, "into," and *gu'la*, the "throat."] The introducing or putting anything into the throat; ingula'tion.

In-habĭ-tĭve-ness. [From the Lat. *inhab'ito*, to "dwell in."] A term used by phrenologists to indicate the propensity, observed to be much stronger in some men and some animals than in others, to remain in the place in which they have long resided, or to be attached to their home simply because they have become accustomed to it.

In-ha-lā'tion. [Lat. **Inhala'tio, o'nis**; from *inha'lo, inhala'tum*, to "breathe in."] Originally, a drawing of the air into the lungs:—usually applied to the inspiring of medicated or poisonous fumes with the breath.

In-hā'ler. [From the same.] A name applied to an apparatus constructed for the convenient inhalation of medicinal vapors,—sometimes resorted to in pulmonary affections.

In-hē'rent. [Lat. **Inhæ'rens**, the present participle of *inhæ'reo*, to "stick fast in."] Implanted by nature; innate; permanent; intrinsic. An inherent property of a body is one that is inseparable from it.

In-hĭb'ĭ-to-rў. [From the Lat. *inhib'eo*, to "restrain."] A term applied to certain nerves whose office seems to be to repress the action of the muscles to which they are distributed. Thus, a branch of the vagus going off near the thyroid cartilage is believed to be a depressor nerve of the heart, so that when it is excited the beatings of the heart are less frequent.

In-hu-mā'tion. [Lat. **Inhuma'tio**; from *in*, "in," and *hu'mus*, "ground."] Burial; interment; sepulture of the dead.

In'ĭ-ad. A term applied the same as INIAL used adverbially.

In'ĭ-al. [From the Gr. *ἰνίον*, the "occiput."] Belonging to the occiput; looking to the occiput:—used by Dr. Barclay in reference to the aspects of the head.

In-i'tis, i'dis.* [From the Gr. *ἰς, ἰνός*, "fibre."] Inflammation of muscular fibre or substance:—applied by Feuerstein to rheumatism.

Inj. enem. = *Injicia'tur ene'ma.** "Let a clyster be given."

Inject. = *Injec'tio.** An "injection."

In-jec'tion. [Lat. **Injec'tio, o'nis**; from *inji'cio, injec'tum*, to "throw into."] Any medicated liquor thrown into a natural or preternatural cavity by means of a syringe or an injection-bag: when intended for the rectum, it is termed an *enema*, or *clyster*. In Anatomy, the term injection is applied to the filling of the vessels of any part of the body with some bright or highly colored substance, in order to exhibit their form or

number to better advantage. Thus, a mercurial injection is often used for the minute vessels or capillaries, as, from its perfect fluidity, it readily penetrates the smallest passages, while its metallic brilliancy enables the minutest vascular ramifications to be clearly seen. But a resinous compound — colored red or blue according as the design is to represent the arteries or veins — is perhaps most generally used.

Injection, Hypodermic. See HYPODERMIC INJECTION.

Ink. [Lat. **Atramen'tum**; Fr. *Encre*, ŏNkr.] A liquid used in writing and printing. Black ink is usually composed of nutgalls, sulphate of iron, gum arabic, and water. It is an aqueous solution of the tannate of iron, to which alum is sometimes added as a mordant.

In-Knees. A vulgar name for the deformity termed *Genua valga*.

In-nāte'. [From the Lat. *in*, "in" or "on," and *nas'cor*, *na'tus*, to "be born."] Literally, "inborn," or "produced upon." Adhering to the apex of a thing:—applied to anthers which are attached by their base to the apex of the filament.

In-ner-vā'tion. [Lat. **Innerva'tio, o'nis**; from *in*, "into" or "to," and *ner'vus*, a "nerve," or "strength."] That vital process by which nervous energy is communicated to any part.

In-ner'vis.* [From the Lat. *in*, priv., and *ner'vus*, a "nerve."] A term applied to cotyledons and leaves when the nervures, enveloped by the parenchyma, are not seen externally, and seem not to exist.

Innominata Artery. See ARTERIA INNOMINATA.

In-nom-ĭ-na'tus.* [From the Lat. *in*, priv., and *no'men*, a "name."] Having no name; unnamed.

In-no-vā'tion. [Lat. **Innova'tio**; from *in'novo*, *innova'tum*, to "make new" or "innovate."] In Botany, an incomplete young shoot, especially in Mosses.

In-nu-trĭ'tion. [Lat. **Innutri'tio, o'nis**; from *in*, priv., and *nu'trio*, *nutri'tum*, to "nourish."] Want of nourishment.

In-o-car'pus.* [From the Gr. *ἰς*, *ἰνός*, a "fibre," and *καρπός*, "fruit."] Having fibrous fruit, as the *Inocar'pus edu'lis*, a tree of the order *Leguminosæ*, a native of the East Indian Archipelago.

In-o-chon-dri'tis, i*dis.* [From the Gr. *ἰς*, *ἰνός*, a "fibre," and *χόνδρος*, a "cartilage."] Inflammation of tendons and cartilages.

In-oc-u-lā'tion. [Lat. **Inocula'tio, o'nis**; from *inoc'ulo*, *inocula'tum*, to "ingraft."] The insertion of virus into any part of the body in order to communicate a disease. Either an operative procedure or an accidental occurrence by means of which morbid materials are brought into direct contact with the minute vessels of the skin or of a mucous membrane, or with those of the subcutaneous or submucous tissue.

In-o'dor-ous. [From the Lat. *in*, negative, and *o'dor*, "smell."] Destitute of smell or odor.

In-o-gen'e-sis.* [From the Gr. *ἰς*, *ἰνός*, a "fibre," and *γένω*, to "be born."] The production of fibre.

In-o'ma, a*tis.* [From the Gr. *ἰς*, *ἰνός*, a "fibre."] A fibrous tumor.

Inonction. A French term for INUNCTION, which see.

In-o-pol'ў-pus.* [From the Gr. *ἰς*, *ἰνός*, a "fibre," and the Lat. *pol'ypus*, a "tumor."] A fibrous polypus; a sort of fibrous tumor.

In-or-gan'ic. [Lat. **Inorgan'icus**; from *in*, priv., and *or'ganum*, an "organ."] Destitute of organs:—applied to minerals as distinguished from animals and vegetables.

In-os'cu-lāt-ing. [From the Lat. *in*, "into," and *os'culum*, a "little mouth."] Opening into each other; anastomosing, as the tubes of some plants. See INOSCULATION.

In-os-cu-lā'tion. [Lat. **Inoscula'tio, o'nis**; from the same.] The junction or interunion of different branches of arteries or veins, or of extremities of arteries with the origins of veins.

In'o-site. [From the Gr. *ἰς*, *ἰνός*, a "muscle."] The name of a kind of sugar said to be found only in muscle.

In pulm. = *In pulmen'to.** "In gruel."

Inquest. See INQUISITIO.

In'quest, Cor'o-ner's. An inquisition appointed by a coroner in a case of sudden death, by summoning a jury to make inquiry, upon examination of the body, respecting the cause of death, etc.

In-quĭ-sĭ'tion. [Lat. **Inquisi'tio, o'nis**; from *inqui'ro*, *inquisi'tum*, to "search into," to "inquire."] An inquiry or inquest of jurors, in causes civil and criminal, on proof made of the fact on either side, as in cases of the lunacy of criminals, etc.

In-sal-ĭ-fī'a-ble. [Lat. **Insalifiab'ilis**; from *in*, priv., and *salifiab'ilis*, "capable of being formed into a salt."] A term applied to oxides which are not acids, nor capable of neutralizing acids.

In-sal-ĭ-vā-tion. [Lat. **Insaliva'tio, o'nis**; from *in*, "by," and *saliva'tio*, a "filling with saliva."] The process of mixing the saliva with the food in the act of mastication.

In-sa-lu'brĭ-ous. [From the Lat. *in*, negative, and *salu'bris*, "healthy."] Unhealthy; tending to cause disease.

In-sa-lu'brĭ-tў. [From the same.] The quality of that which injures health or promotes disease.

In-sāne'. [Lat. **Insa'nus**; from *in*, negative, and *sa'nus*, "sane" or "sound."] (Fr. *Fou*, foo.) Mad; wanting intellect; deranged in mind.

In-săn'ĭ-tў. [Lat. **Insa'nia, Insan'itas, a'tis**; from the same.] (Fr. *Folie*, fo'le'; Ger. *Geisteskrankheit*, gīs'tes-krănk'hīt, *i.e.*, "sickness of the mind.") Deranged intellect; madness, or lunacy. Insanity takes many forms, and may be due to a multitude of different causes. The most important predisposing cause is a tendency inherited from one's parents or ancestors. When this tendency exists, any unusual excitement or strain upon the mind may develop the disease; which, indeed, may occur when it seems impossible to trace it to any exciting cause. Sometimes the disorder may pass over one generation

and return in the third: thus, a grandparent may be afflicted with the disease, from which his children seem to be exempt, though his grandchildren may become its victims.

As a general rule, insanity is most likely to occur in those whose minds, from whatever cause, are subjected to intense or long-continued excitement: it is scarcely necessary to remark that the more susceptible the mind is to any kind of excitement, the more liable, other things being equal, it is to be affected with insanity. Hence we find that men in a rude or uncivilized state seldom suffer from this disease.

Intemperance is a prolific cause of insanity. The disease arising from this source is noticed under the head of ALCOHOLISM. Some writers classify the different forms of insanity,—1, as those caused by mental *exaltation;* 2, those arising from mental *depression;* and 3, those due to mental *weakness.* The first includes the various forms of insanity as this term is popularly understood; the second, the different forms of MELANCHOLIA; and the third, the affections known as DEMENTIA and IMBECILITY, or IDIOCY (which are noticed under their respective heads).

Insatiable Appetite. See BULIMIA.

In'sect. [See INSECTUS.] A name applied to an articulated animal having six legs and a body divided into three parts, head, thorax, and abdomen: as the common fly, the bee, the ant, the locust, etc. Insects are the highest class of the *Articulata*, or *Arthropoda*, and are the subjects of the science of Entomology.

In-sec'ta,* the plural of the Lat. **In-sec'tum,** an "insect."

In-sec-tif'er-us.* [From the Lat. *insec'tum,* an "insect," and *fe'ro,* to "bear."] A term applied to amber (*succinum*) when it contains insects embedded in its substance.

In-sec-tiv'or-ous. [Lat. **Insectiv'orus;** from *insec'ta,* "insects," and *vo'ro,* to "devour."] Insect-devouring:—applied in the plural neuter (*Insectiv'ora*) to a family of *Mammalia*, including the hedgehog, mole, and shrew; also to plants that capture and devour insects, as the *Dionæa*, *Drosera*, and *Darlingtonia.*

In-sec-tol'o-ġy. [Lat. **Insectolo'gia;** from *insec'tum,* an "insect," and the Gr. λόγος, a "discourse."] A treatise upon insects. The same as ENTOMOLOGY.

In-sec'tum.* [I.e., *An'imal* **insec'tum,** an "incised animal."] A small animal of a particular description. See INSECT.

In-sec'tus.* [From the Lat. *in'seco, insec'tum,* to "cut into."] Incised:—applied in the plural neuter (*Insec'ta*) to a class of *Articulata.* See INSECTUM.

In-sen-sĭ-bil'ĭ-tў. Loss or absence of feeling; the state of being insensible; loss of consciousness.

In-sert'ed. [From the Lat. *in'sero, inser'tum,* to "insert."] In Botany, fixed upon, or growing out of; having a point of attachment. See INSERTION.

In-ser'tion. [Lat. **Inser'tio,** o'*nis;* from *in'sero, inser'tum,* to "implant," to "insert," to "set in."] The attachment of muscle to a bone; also the entrance of a nerve into a muscle or organ. Also the place or the mode of junction of leaves with the stem, etc.; the point or mode of attachment of an organ to its support.

In-ses-so'rēs.* [From the Lat. *insi'deo, inses'sum,* to "sit upon," to "perch."] "Perchers:"—a name applied somewhat loosely to various orders or divisions of birds. C. Bonaparte includes under this term the *Pas'seres, Scanso'res,* and *Accip'itres.*

In'sĭ-dens, en'tis.* [From the Lat. *insi'deo,* to "sit upon."] Sitting upon; resting, or floating on, the surface:—applied formerly to matters supernatant on the urine.

In-sid'ĭ-ous. [From the Lat. *insid'iæ,* an "ambush," a "snare."] Treacherous; crafty:—in Pathology, applied to a disease which does not appear so dangerous or serious as it really is.

In-sĭp'id. [Lat. **Insip'idus;** from *in,* priv., and *sap'idus,* "savory."] Tasteless; vapid; destitute of flavor.

In Si'tu* (ablative of *si'tus,* "situation"). In its natural position or situation.

In-so-lā'tion. [Lat. **Insola'tio,** o'*nis;* from *inso'lo, insola'tum,* to "dry in the sun," to "expose to the sun."] Exposure to the sun to promote the action of one substance upon another; blanching; bleaching. Exposure to the sun as a cause of disease. Also a method of treatment which consists in exposing the patient to the rays of the sun.

Insoluble, or **Insolubility.** See SOLUBILITY.

In-som'nĭ-a.* [From the Lat. *in,* priv., and *som'nus,* "sleep."] Want of sleep; wakefulness; privation of sleep. See AGRYPNIA, and PERVIGILIUM.

In-spec'tion. [Lat. **Inspec'tio,** o'*nis;* from *inspi'cio, inspec'tum,* to "observe" or "examine," to "behold."] Examination by the eye. See EXPLORATION.

In-spĭ-rā'tion. [Lat. **Inspira'tio,** o'*nis;* from *in,* "in," and *spi'ro, spira'tum,* to "breathe."] The act of drawing in the breath.

In-spi'rą-to-rў. [From the same.] A term applied to muscles which by their contraction increase the dimensions of the chest and thus produce inspiration.

Inspissantia,* in-spis-san'she-a. [From the Lat. *in,* intensive, and *spis'so, spissa'tum,* to "thicken."] Agents which augment the density of the plasma, or colorless portion of the blood.

In'spis-sāt-ed. [Lat. **Inspissa'tus;** from the same.] Made thick by evaporation of the thinner parts:—applied to vegetable juices.

In-stil-lā'tion. [From the Lat. *in,* "into," and *stil'lo, stilla'tum,* to "drop."] The method of applying remedies to a part in the form of drops. It is chiefly employed in connection with the eyes. The term is also applied to infusing gradually (as it were drop by drop) some influence into the mind.

In'stinct. [Lat. **Instinc'tus;** from *instin'guo, instinc'tum,* to "move," or "excite."] That power or impulse by which animals are moved, independently of instruction or experience, to perform such acts as are necessary for the preser-

vation of the individual or the race. "Instinct," says Littré, "is a mode of cerebral activity which prompts to perform an act without having a notion of its purpose or end; and to employ means always the same, without ever seeking to get others, or to know the relation between them and its end."

In-stinc'tive. [From the same.] Prompted by instinct; relating to or caused by instinct.

In'stĭ-tūte. [From the Lat. *instit'uo*, to "establish," to "teach."] A principle. The name "Institutes of Medicine" is applied to a book designed to teach the essential principles of medical science.

In'stru-ment. [Lat. **Instrumen'tum**; from *in'struo*, to "provide with," to "furnish."] Any mechanical appliance, tool, or agent used in manipulations or operations.

In-suf-flā'tion. [Lat. **Insuffla'tio, o'nis**; from *in*, "into," and *suf'flo*, *suffla'tum*, to "blow."] The act of blowing into any cavity, or hollow part, by mechanical means, or otherwise.

In'su-la Çer'e-bri.* The "Island of the Brain." A name applied to the intermediate lobe of the brain.

In'su-lāt-ed. [Lat. **Insula'tus**; from *in'sula*, an "island."] Surrounded by non-conductors:—also, in Entomology, applied to discoid *areolæ* of the wing which are without connection with others. See INSULATION.

In-su-lā'tion. [Lat. **Insula'tio, o'nis**; from the same.] The state of being insulated, detached, or separated from surrounding bodies (as an island is detached or separated from the main land):—applied in electrical experiments to the state of a body surrounded by non-conductors.

In'su-lāt-or. [From the same.] A non-conductor; a body that does not readily transmit electricity. Among the insulators are glass, gutta-percha, amber, wax, silk, resin, sulphur, and dry air.

In'te-ġer.* Entire; having no marginal or other division:—applied to leaves of plants.

In'te-gra Va-gi'na.* A sheathing petiole (of a plant) which forms a continuous tube, not slit on one side, as in sedges.

In'te-grant. [Lat. **In'tegrans**; from *in'tegro*, to "make whole," to "complete" or "perfect;" hence, to constitute an essential part of anything.] A term applied to the atoms of simple bodies; also to the smaller particles into which a mineral may be divided without its nature undergoing alteration.

In-teg-rĭ-fo'lĭ-us.* [From the Lat. *in'teger*, "entire," and *fo'lium*, a "leaf."] Having entire leaves:—applied as the specific name of many plants.

In-teg-u-men'ta Flo-ra'lĭ-a.* The calyx and corolla, or floral envelopes.

In-teg'u-ments. [From the Lat. *in'tego*, to "cover."] (Fr. *Tĕgument*, tā'gü'mŏN'.) The cuticle, *rete mucosum*, *cutis*, and adipose tissue, together forming the covering of every part of the body except the nails,—therefore termed *common integuments*. The covering of seeds, etc. See TEGUMENT.

In'tel-lect. [Lat. **Intellec'tus**; from *intel'ligo*, *intellec'tum*, to "understand."] The mind; the understanding; the thinking principle.

Intellect, Diseases affecting the. See PHRENICA.

In-tem'per-ance. [Lat. **Intemperan'tia**; see TEMPERANCE.] Inebriety; the immoderate use of food and drink; excessive indulgence of appetite.

In-tense'. [Lat. **Inten'sus**; from *inten'do*, *inten'sum*, to "stretch" or "put to the utmost stretch," as the string of a harp or bow.] Literally, "kept on the stretch," or "put to the utmost stretch:" thus, we say "intense application." Hence the term signifies carried or raised to the highest degree. Applied to heat, cold, pain, etc.

In-ten'sĭ-tў. [From the same.] High degree of power or activity; the quality of being intense.

In-ten'tion. [From the same.] Literally, stretching, or directing, the mind to some object. Hence, the object which one proposes; a design or purpose. In Surgery, a wound is said to heal by the *first intention* when it cicatrizes without suppuration.

In-ter-ar-tic'u-lar. [Lat. **Interarticula'ris**; from *in'ter*, "between," and *artic'ulus*, a "joint."] Situated between the joints:—applied to cartilages.

In-ter-cal'a-rў. [Lat. **Intercala'ris, Intercala'rius**; from *in'ter*, "between," and *cal* (from the Sanscrit *kâlă*, "time"), an ancient root, signifying a "time" or a "portion of time"?] A term applied to a day inserted in the calendar every fourth year, called *leap-year*; also to any time between the paroxysms of periodical diseases.

In-ter-cel'lu-lar. [Lat. **Intercellula'ris**; from *in'ter*, "between," and *cel'lula*, a "little cell."] Between the cellules of animal or vegetable tissue.

In-ter-cil'ĭ-um.* [Probably a contraction of *intersupercil'ium*, "between the eyebrows."] The space between the eyebrows; the *glabella*.

In-ter-cla-vic'u-lar. [Lat. **Interclavicula'ris**; from *in'ter*, "between," and *clavic'ula*, the "collar-bone."] Between the clavicles:—applied to a ligament.

In-ter-cos'tal. [Lat. **Intercosta'lis**; from *in'ter*, "between," and *cos'ta*, a "rib."] Between the ribs:—applied to arteries and muscles.

In-ter-cur'rent. [Lat. **Intercur'rens, en'tis**; from *in'ter*, "between," and *cur'ro*, to "run."] Occurring or running between:—applied to diseases which occur sporadically during the prevalence of epidemic or endemic diseases.

In-ter'cus, u'tis.* [From the Lat. *in'ter*, "between," and *cu'tis*, the "skin."] Between the skin and the flesh:—applied to dropsy of the cellular tissue.

In-ter-cu-ta'ne-us.* [From the same.] The same as SUBCUTANEUS.

In-ter-fe'rence. [From the Lat. *in'ter*, "between," and *fe'rio*, to "strike;" hence, to "interfere" signifies, properly, to "come between" in a hostile or authoritative manner.] Intervention;

intermeddling. In Optics, applied by Young to certain phenomena produced by the reflection of light on surfaces, which result from the encounter of luminous rays or coincidence of vibrations in certain conditions. In consequence of this coincidence, the luminous effects are destroyed, or their intensity is doubled. As the vibrations of two musical sounds arriving at once at the ear affect the sense with an impression of sound or silence according as they conspire or oppose each other's effects, so two rays of light setting out from the same origin at the same instant, and arriving at the same place by different routes, strengthen or destroy each other's effects, produce intense light or darkness, according to the difference in length of the routes described by them. "This principle," says Sir John Herschel, "regarded as a physical law, has hardly its equal for beauty, simplicity, and extent of application in the whole circle of Science."

In-ter-fo-lĭ-ā'ceous. [Lat. **Interfolia'ceus**; from *in'ter*, "between," and *fo'lium*, a "leaf."] A term applied to flowers growing between each couple of opposite leaves.

In-ter-lob'u-lar. [Lat. **Interlobula'ris**; from *in'ter*, "between," and *lob'ulus*, a "little lobe."] Between lobes or lobules; situated in the tissue between the lobules of any organ, as *interlobular emphysema*, in which air occupies the parts between the lobules of the lungs.

In-ter-max'il-la-rў. [Lat. **Intermaxilla'ris**; from *in'ter*, "between," and *maxil'la*, a "jaw."] A term applied to a small osseous piece between the maxillary bones.

In-ter-me'dĭ-ate. [Lat. **Interme'dius.**] Half-way between one thing and another. In Botany, standing between two bodies in a different row, as petals when they are alternate with sepals.

In-ter-mis'sion. [Lat. **Intermis'sio, o'nis**; from *intermit'to*, to "leave off for a time," to "discontinue."] An interruption; intermediate pause; a temporary cessation:—applied to fevers, etc.

In-ter-mit'tence. [From the same.] Intermission. The *law of intermittence* or *intermission* is a term used to denote the fact that every organ of animal life acts only in an intermittent manner; that an alternation of activity and repose is essential to animal life. Each organ of sense, fatigued by long-continued sensation, becomes temporarily unfitted to perceive new sensations, and each muscle which has been long or violently contracted needs relaxation to prepare it for new contractions.

In-ter-mit'tent. [Lat. **Intermit'tens, en'tis**; from the same.] A term applied to a disease which disappears and returns again and again at regular or uncertain periods, or to a temporary cessation or suspension either of a function—for example, of the action of the heart, when the pulse is said to intermit—or of a disease, such as ague.

Intermit'tent Fe'ver. [Lat. **Fe'bris Intermit'tens**; Fr. *Fièvre intermittente*, fe-âvr' ăN-tĕR'mè'tôNT'.] A generic term applied to all fevers in which the paroxysm intermits and returns,—usually at nearly regular intervals. Dr. Good employs *An'etus* (from the Gr. *ανίημι*, to "send or let back," to "unstring," as a bow; hence to "relax," to "intermit") as the systematic name of this genus, which includes three principal species, viz., (1) *Quotid'ian* (*quotidia'nus*), the paroxysms of which return every day; (2) *Ter'tian* (*tertia'nus*), in which the disease returns every third day,—that is, on alternate days; (3) *Quar'tan* (*quarta'nus*), in which it returns every fourth day, thus leaving two days between the paroxysms. A more particular notice of these different forms of intermittent will be found under their alphabetical heads. To the above species may be added a fourth, termed *Erratic* (*errat'icus*), in which the fever occurs at irregular intervals.

In-ter'nal. [Lat. **Inter'nus**, "within."] Interior; inward; situated in the inside: opposite to *external*:—applied to diseases that are not superficial.

Inter'nal Cap'sule. A term applied to a narrow band of white matter situated between the lenticular nucleus and the optic thalamus of the brain.

In'ter-node. [Lat. **Interno'dium**, or **Interno'dius**; from *in'ter*, "between," and *no'dus*, a "joint."] A term applied to the phalanges of the hand, being between the joints formed by their united extremities. In Botany, the space between two joints, or nodes, of a stem.

In-ter-oc'u-lar. [Lat. **Interocula'ris**; from *in'ter*, "between," and *oc'ulus*, the "eye."] Between the eyes:—applied to the antennæ of certain insects.

In-ter-o-per'cu-lar. [Lat. **Interopercula'ris.**] Belonging to the *interoperculum*.

In-ter-o-per'cu-lum.* [From the Lat. *in'ter*, "between," and *oper'culum*, a "lid."] A bony formation which, with the *operculum* and *suboperculum*, between which it lies, composes a sort of lid for the great opening of the gills of fishes.

In-ter-os'se-ous. [Lat. **Interos'seus**; from *in'ter*, "between," and *os*, a "bone."] (Fr. *Interosseux*, ăN'tă'ro'sŭh'.) Situated between bones:—applied to arteries and ligaments.

Interosseux. See INTEROSSEOUS.

In-ter-pa-ri'e-tal. [Lat. **Interparieta'lis**; from *in'ter*, "between," and *parieta'lis*, "parietal."] A term applied to a cranial bone between the parietal, frontal, and superior occipital bones in the *Mammifera*.

In-ter-pet'ĭ-o-lar. [From the Lat. *in'ter*, "between," and *peti'olus* or *pet'iolus*, a "petiole."] A term applied to stipules at the base of a petiole, situated between two opposite leaves.

In-ter-pleū-rĭ-cos-ta'lis.* [From the Lat. *in'ter*, "between," *pleu'ra*, a "serous membrane lining the cavity of the thorax," and *cos'ta*, a "rib."] A term applied to the internal intercostal muscles.

In-ter-pos-ĭ-ti'vus.* [From the Lat. *in'ter*, "between," and *po'no, pos'itum*, to "place."] That which is situated between:—applied to stamens situated between the divisions of a simple perianth.

In-ter-rupt'ed. [Lat. **Interrup'tus**; from *in'ter*, "between," and *rum'po*, *rup'tum*, to "break."] Separated by intervals; having the continuity broken.

In-ter-rup'te-Pin-na'tus.* [From the Lat. *interrup'tus*, "interrupted," and *pinna'tus*, "pinnate."] Interruptedly-pinnate; having small pinnate leaflets, intermixed with larger ones.

In-ter-scap'u-lar. [Lat. **Interscapula'ris**; from *in'ter*, "between," and *scap'ula*, the "shoulder-blade."] Between the shoulder-blades: as, the *interscapular* region.

In-ter-sec'tion. [Lat. **Intersec'tio, o'nis**; from *in'ter*, "between" or "across," and *sec'tio*, a "cutting."] A "cutting across," or crossing, of two lines or objects, or the point at which two lines cross each other. See CHIASMA.

In-ter-spī'nal. [Lat. **Interspina'lis**; from *in'ter*, "between," and *spi'na*, a "spine."] Between spines or spinous processes.

In'ter-stĭce. [Lat. **Intersti'tium**; from *in'ter*, "between," and *sto*, to "stand."] The slight separation between organs or parts of organs; the minute interval which separates the molecules of bodies.

Interstitial, in-ter-stish'al. [Lat. **Interstitia'lis**; from the same.] Situated between; pertaining to interstices. A term applied in Physiology to the tissue which exists between the proper elements of any structure, namely, some form of connective tissue.

INTERSTI'TIAL ABSORP'TION, also termed INTER'NAL ABSORP'TION. The absorption, in cases of abscess, of textures between the cyst and the skin, by which the cyst gradually approaches the surface:—also applied to the process by which the effete materials of the various organs and tissue are removed.

In-ter-trans'verse, or **In-ter-trans-ver'sal.** [Lat. **Intertransversa'lis**; from *in'ter*, "between," and *transver'sus*, "transverse."] Between the transverse processes of the vertebræ.

In-ter-tri'go, ġ'inis.* [From the Lat. *in'ter*, "between," and *te'ro*, *tri'tum*, to "rub" or "wear."] An excoriation, or galling, of the skin about the anus, axilla, or other part of the body, with inflammation and moisture.

In'ter-val. [Lat. **Interval'lum**; from *in'ter*, "between," and *val'lum*, a "fence" or "wall."] Originally, the space between two fences or boundary-lines. The distance which separates two points of space or two points of time.

In-ter-val'var, or **In'ter-valved.** [Lat. **Intervalva'ris,** or **Interval'vis**; from *in'ter*, "between," and *val'va*, a "valve."] Between valves:—applied to a partition which separates the valves of a pericarp.

In-ter-ve'nĭ-um.* [From the Lat. *in'ter*, "between," and *ve'na*, a "vein."] The space or area of parenchyma between the veins of a leaf.

In-ter-ver'te-bral. [Lat. **Intervertebra'lis**; from *in'ter*, "between," and *ver'tebra.*] Between the vertebræ:—applied to cartilages and ganglions.

In-tes'tĭ-nal. [Lat. **Intestina'lis**; from *intesti'num*, an "intestine."] (Fr. *Entérique*, ŏN'tā'rēk'.) Belonging to the intestines:—applied to fevers, fistulas, entozoa, etc.

Intes'tinal Juice. A transparent, limpid liquid, of aromatic odor and alkaline reaction, secreted by the glands of Lieberkühn in the small and large intestines. It is heavier than water, and is coagulable by heat. Its action on aliments is not well elucidated.

In-tes'tĭne, or **In-tes'tĭnes.** [Lat. **Intesti'num**, plural **Intesti'na**; from *in'tus*, "within."] The long membranous tube continuing from the stomach to the anus, in the cavity of the abdomen; the bowels, or entrails.

In'tĭ-ma.* [From the Lat. *in'timus*, "innermost."] The inner coat of the blood-vessels. See next article.

In'tima Tu'nĭ-ca Va-so'rum.* The "innermost coat of the vessels." The name of the inner surface of the blood-vessels.

In-to-nā'tion. [Lat. **Intona'tio, o'nis**; from *in'tono*, *intona'tum*, to "thunder."] The same as BORBORYGMUS, which see.

In-tor'tion, or **In-tor'sion.** [Lat. **Intor'tio** or **Intor'sio, o'nis**; from *intor'queo*, *intor'tum* or *intor'sum*, to "twist," to "twine."] The phenomenon presented by certain plants twining their flexible stalks around others for support.

In-tor'tus.* [From the same.] Twisted upon itself:—applied to parts of plants.

In-tox-ĭ-cā'tion. [Lat. **Intoxica'tio, o'nis**; from *in*, "into," and *tox'icum*, a "poison."] Literally, the "infusing of poison into" the system:—applied to the effects of alcoholic liquors or narcotic substances used in excess; ebriety. See TEMULENCE.

Intoxication, ăN'tox'e'kā'se-ŏN'. [For etymology see preceding article.] A French term usually employed to denote malarial poisoning,—*e.g.*, *Intoxication des Marais* (dā mă'rā'), "poisoning from marshes;" *Intoxication tellurique* (tĕ'lü'rēk'), "earth-poisoning," or "poisoning from the soil."

In-tra-fo-lĭ-ā'ceous. [Lat. **Intrafolia'ceus**; from *in'tra*, "within," and *fo'lium*, a "leaf."] Situated between the leaf or petiole and the stem, as certain stipules.

In-tra-mar'ġĭ-nal. [Lat. **Intramargina'lis**; from *in'tra*, "within," and *mar'go*, a "border."] Situated within the margin.

In-tra'rĭ-us.* [From the Lat. *in'tra*, "inward."] Turned inwards,—that is, toward the centre of a flower.

In-tra-ver'te-brāt-ed. [Lat. **Intravertebra'tus**; from *in'tra*, "within," and *vertebra'tus*, "vertebrated," or "having vertebræ."] A term applied to animals having their osseous system within the body. The same as *vertebrated* in its ordinary acceptation.

In'trĭ-cate. [Lat. **Intrica'tus**; from *intri'co*, *intrica'tum*, to "entangle."] Entangled; complicated:—applied to parts of plants, etc.

In-trĭ-ca-tu'ra.* [From the Lat. *intri'co*, *intrica'tum*, to "entangle."] An entangling or matting of the hair. (See PLICA.) Also the same as CHIASMA.

In-trin'sic. [Lat. **Intrin'secus.**] Internal; inherent; inborn; genuine; essential:—applied to the internal muscles of certain organs.

In-tro-duced′. [From the Lat. *in′tro*, "into," and *du′co, duc′tum*, to "lead."] A term applied to plants that are naturalized or cultivated, or adventive, in a country of which they are not natives.

In-tro-flexed′. [From the Lat. *in′tro*, "inwards," and *flec′to, flex′um*, to "bend."] Bent strongly inwards :—applied to parts of plants.

In-tro′ĭ-tus.* [From the Lat. *in′tro*, "inwards," and *e′o, i′tum*, to "go."] Entrance. Hence the term *introitus* (or *apertura*) *pelvis superior* is applied to the upper or abdominal strait of the pelvis.

In-trorse′. [Lat. **Intror′sus.**] Turned inwards, towards the axis or pistil, as some anthers.

Introsusception. See INTUSSUSCEPTION, and INVAGINATION.

In-tu-mĕs′çence. [Lat. **Intumescen′tia ;** from *intumes′co*, to "swell."] A swelling; an increase in volume of the tissue of any part or organ :—applied in the plural (*Intumescen′tiæ*) to an order of the class *Cachexiæ* of Cullen's nosology.

In-tus-sus-çep′tion. [Lat. **Intussuscep′tio, o′nis ;** from *in′tus*, "within," and *suscip′io, suscep′tum*, to "receive."] The taking of nourishment into the interior as a principal part of the process of nutrition of plants and animals. Also a condition in which a portion of intestine has passed, for some length, within another portion (as a small tube might slide into a larger one), thereby obstructing the passage of their contents and causing serious disease; indigitation; invagination.

In′u-la.* [A corruption of *Hele′nium.*] A Linnæan genus of the class *Syngenesiæ*, natural order *Asteraceæ* (or *Compositæ*). Also the Pharmacopœial name (U.S. 1870, 1880) for the root of *Inula Helenium* (Elecampane). It is tonic and gently stimulant.

In′ula He-le′nĭ-um.* The plant Elecampane.

In′u-lin, or **In′u-lĭne.** [Lat. **Inuli′na.**] A vegetable product discovered in the *Inula Helenium*, or Elecampane. It is a peculiar principle, isomeric with starch, and has been found in the root of chicory. It is soluble in boiling water, and is deposited unchanged from the solution when the liquor cools.

In-unc′tion. [Lat. **Inunc′tio, o′nis ;** from *in*, "into," "upon," and *un′guo, unc′tum*, to "anoint."] (Fr. *Onction*, ôNk′se-ôN′, or *Inonction*, ĕ′nôNk′se-ôN′.) The act of rubbing in ointment, or simply of anointing. This is a method of applying certain substances to the cutaneous surface, the object being to promote their absorption. Inunction implies more or less friction, the substance employed being rubbed with the hand into some part of the skin. The rubbing must be performed gently, and it may be aided by heat. The preparations which are employed for inunction include glycerin, liniments, oils, ointments, and compounds made of vaseline, etc.

In-un′dāt-ed. [Lat. **Inunda′tus ;** from *in-un′do, inunda′tum*, to "overflow."] Flooded; sometimes covered with water, sometimes dry :—applied to plants which in certain seasons live under water.

In-us′tion. [Lat. **Inus′tio, o′nis ;** from *in*, "in," and *u′ro, us′tum*, to "burn."] A term applied to the burning operation of the cautery.

In-vaġ-ĭ-nā′tion. [Lat. **Invagina′tio, o′nis ;** from *invagi′no, invagina′tum*, to "sheathe."] Another term for INTUSSUSCEPTION. Also an operation for hernia, in which, after reduction, the skin is thrust by the finger of the operator into the canal, so as to form a *cul-de-sac* open externally, retained by means of sutures, etc., till inflammation and adhesion ensue, with the view of obliterating the canal.

In′va-lid. [Lat. **Inval′idus ;** from *in*, negative, and *val′idus*, "strong."] A term applied to those suffering from sickness or debility.

In-vā′sion. [Lat. **Inva′sio, o′nis ;** from *inva′do, inva′sum*, to "invade," to "seize."] The first development of the phenomena of a disease; access :—used to express the manner in which a disease commences. The mode of onset or invasion of an illness is often an important factor in forming a diagnosis as to its nature.

In-ver-mĭ-nā′tion. [From the Lat. *in*, "within," and *ver′mino, vermina′tum*, to "have worms."] The diseased condition caused by the presence of *Entozo′a*, or worms, in the intestinal canal.

In-verse′, or **In-vert′ed.** [From the Lat. *inver′to, inver′sum*, to "turn inward."] Turned upside down; reversed. In Botany, this term is used where the apex is in the direction opposite to that of the organ with which it is compared.

In-verse′lў. [From the same.] In a contrary position; end for end; upside down.

In-ver′te-brāte. [Lat. **Invertebra′tus ;** from *in*, negative, and *vertebra′tus*, "vertebrated."] Having no vertebræ :—applied to animals, in the plural neuter (*Invertebra′ta*), in contradistinction to the *Vertebrata*.

In-vol′u-cel. [Lat. **Involucel′lum ;** diminutive of *involu′crum.*] A secondary or partial involucre.

In-vo-lu′cral. [Lat. **Involucra′lis ;** from *involu′crum*, an "involucre."] Belonging to an involucre.

In-vo-lu′crāt-ed, or **In-vo-lu′crate.** [Lat. **Involucra′tus ;** from the same.] Having an involucre.

In′vo-lu-cre. [Lat. **Involu′crum ;** from *invol′vo, involu′tum*, to "wrap up."] A membrane covering any part. A set of bracts surrounding a flower-cluster, or a whorl of bracts situated at the base of an umbel or a capitulum. Sometimes it forms a kind of outer calyx to each flower, as in the Mallow.

In-vo-lu′crĭ-form. [Lat. **Involucrifor′mis ;** from the same.] Resembling an involucre.

In-vol′un-tą-rў. [From the Lat. *in*, "against," and *volun′tas*, "will."] Compulsory; performed without volition; independent of the action of one's will.

In′vo-lūt-ed, or **In′vo-lute.** [Lat. **Involu′tus ;** from *in*, "inward," and *vol′vo, volu′tum*, to "roll."] Rolled inwards from the edges :—applied to leaves in vernation.

In-vo-lu-tĭ-fo'lĭ-ous. [Lat. **Involutifo'lius**; from *involu'tus*, "folded in," and *fo'lium*, a "leaf."] Having leaves folded inward from summit to base.

I'o-dāte. [Lat. **I'odas, a'tis.**] A combination of iodic acid with a base.

I'o-date of Cal'cĭ-um. A salt which exists in sea-water and is said to be a valuable antiseptic. It has been used medicinally in febrile diseases.

I'odate of Po-tas'sĭ-um. A salt which has been proposed as a substitute for chlorate of potassium. It produces the same curative effects more quickly, more energetically, and in smaller doses. It is said to be especially beneficial in diphtheria and gangrenous stomatitis.

I'o-dāt-ed. [Lat. **Ioda'tus**; from the Lat. *io'dium*, "iodine."] Containing iodine.

Iode. See IODINIUM.

I-o'dēs.* [From the Gr. *ἰός*, "verdigris," "poison."] Full of verdigris; also poisonous.

I-od'ic. [Lat. **Iod'icus**; from the Lat. *io'dium*, "iodine."] Belonging to iodine:—applied to an acid, also termed *oxyodic*.

I-od'ĭ-ca.* [The neuter plural of *iod'icus*; see IODIC.] A class of pharmaceutical remedies, consisting of preparations of iodine.

I'o-dīde. [Lat. **Iod'idum**; from *io'dium*, "iodine."] A combination of iodine with a simple body. The iodides of iron, lead, mercury, potassium, and sulphur are officinal.

I'odide of Ba'rĭ-um. A salt which crystallizes in small, colorless needles, very soluble in water. It has been employed as an alterative in scrofulous affections and morbid growths.

I'odide of Eth'ȳl, or **Hȳ-drĭ-od'ic E'ther.** A colorless liquid obtained by the action of hydriodic acid on alcohol. It is not inflammable, is insoluble in water, and has a pungent taste and ethereal odor. It appears to be an antispasmodic and general stimulant. It acts also as a powerful anæsthetic when sufficiently long inhaled. It is commended as a remedy for phthisis and chronic bronchitis.

Iodide of Lead. See PLUMBI IODIDUM.

Iodide of Potassium. See POTASSII IODIDUM.

Iodina.* See IODINIUM.

Iodine. See IODINIUM.

I-o-din'ĭ-um;* also written **I-o'dum,*** **I-o'dĭ-um,*** **I-od'ĭ-na,*** and **I-od'ĭ-num.*** [From the Gr. *ἰώδης*, "violet-colored."] (Fr. *Iode*, ē'od'.) "Iodine." The Pharmacopœial name (U.S. 1870) for a simple body obtained from certain sea-weeds, and from sponge. Iodine operates as a general excitant of the vital actions, especially of the absorbent and glandular systems. It is much employed as a remedy in scrofula, in nearly all the forms of this disease. In over-doses it is an irritant poison. A serious objection to its extensive employment as a medicine arises from its operating very unequally on different persons. A dose which would act very moderately in a large majority of cases will sometimes produce, in certain constitutions, the most distressing symptoms, such as extreme restlessness, nausea, palpitations, vomiting and purging, violent cramps, etc., attended with permanently injurious effects on the system. The physician should, therefore, unless he is thoroughly acquainted with the idiosyncrasy of his patient, commence the use of this remedy with great caution: after observing its effects, he may gradually increase the dose, if it should seem advisable to do so. See IODUM.

I'o-dism. [Lat. **Iodis'mus**; from *io'dium*, "iodine."] The derangement of the system produced by the continued administration of iodine and its salts. Its effects are similar to those of bromism.

Iodium.* See IODINIUM.

Iodoform. See IODOFORMUM.

I-od-o-for'mum.* [From the Lat. *io'dum*, "iodine," and *formyle*.] "Iod'oform." The Pharmacopœial name (U.S. 1870, 1880) for a volatile compound of carbon, hydrogen, and iodine, which is in the form of small, yellow, lustrous crystals, of a peculiar, almost insuppressible odor. It is soluble in alcohol and ether. Its properties are anæsthetic and antiseptic. Externally, it is much used in the form of ointment as a stimulant anæsthetic application to painful or irritable ulcers, and to cancer. It is not much used internally.

I-o-dog-no'sis.* [From the Lat. *io'dium*, "iodine," and the Gr. *γιγνώσκω*, to "know."] A knowledge of the properties of iodine.

I-o-dom'e-the.* [From the Lat. *io'dium*, "iodine," and the Gr. *μέθη*, "drunkenness."] The nervous state induced by too free use of iodine. See IODISM.

I-o-doph'thĭ-sis.* [From the Lat. *io'dium*, "iodine," and *phthi'sis*, a "wasting."] *Tabes*, or wasting, caused by the abuse, or excessive use, of iodine. See IODISM.

I'o-dous. [Lat. **Iodo'sus**; from *io'dium*, "iodine."] Belonging to iodine:—applied to an acid.

I-o'dum.* [From the Gr. *ἰώδης*, "violet-colored."] (Fr. *Iode*, ē'od'.) The Pharmacopœial name (U.S. 1880) of iodine, a non-metallic element. Specific gravity, 4.94. It is a crystalline solid, with a color and lustre like those of graphite. It has a distinctive odor, and a sharp, acrid taste. It is a volatile substance, and evaporates even at common temperatures. In this state it is said to be the heaviest of all vapors or gases, its gravity compared with air being 8.7. It is freely soluble in alcohol and ether, and sparingly soluble in water. Iodine resembles chlorine in chemical habitudes, and is one of the monad elements. It combines with hydrogen to form hydriodic acid.

I-od'u-ret. [Lat. **Iodure'tum**; from *io'dium*, "iodine."] A combination of iodine with a simple body.

I-o-nid'ĭ-um.* A genus of plants of the order *Violaceæ*, comprising many species, natives of subtropical parts of South America. The root of *Ionidium microphyllum* is a powerful emetic and purgative. Other species of this genus have emetic properties. The root of *Ionidium Ipecacuanha* is called White Ipecacuanha.

Ionid'ium Brev-ĭ-cau'le.* A plant, indigenous in South America. Its root is emetic.

Ionid'ium Mar-cuc'ci or **Mar-cu'tĭ-i*** and **Ionid'ium Par-vĭ-flo'rum.*** The systematic names of two South American plants, supposed to be the source of *cuichunchulli*, which is highly commended as a remedy for elephantiasis. It is said to be diaphoretic and diuretic, and, in large doses, emetic.

I-on'thus.* [From the Gr. *ἰονθος*, "down."] The down, or soft hair, which precedes the beard. Also a pimple on the face, resembling, or identical with, *Acne*.

I-op'ter-us.* [From the Gr. *ἰον*, a "violet," and *πτερόν*, a "wing."] Having wings of a violet color; iop'terous:—applied to certain insects.

Ip'e-cac. The popular name of ipecacuanha.

Ip-e-cac-u-an'ha.* [This word is said to signify *vomiting-root*.] "Ipecac." A name given to several and very different species of plants. The Pharmacopœial name (U.S. 1870, 1880) of the root of *Cephaëlis Ipecacuanha*, otherwise called *Ipecacuanha Radix* ("Root of Ipecacuanha"). Ipecacuanha in small doses is a diaphoretic and expectorant; in large doses it is an emetic. A moderate dose sometimes acts on the bowels.

I-po-mœ'a.* [From the Gr. *ἰψ*, a "worm," and *ὁμοιος*, "like."] A Linnæan genus of the class *Pentandria*, natural order *Convolvulaceæ*. It comprises, besides other species, the *Ipomœ'a purpu'rea*, or Morning Glory. Many or all of the species are purgative.

Ipomœ'a Ba-ta'tas.* A systematic name of the Sweet Potato.

Ipomœ'a Bat-a-to-i'dēs.* A twining plant, a native of South America. It has a purgative root.

Ipomœ'a Çœ-ru'le-a,* or **Phar'bĭ-tis Nil.*** A plant, a native of India, the seeds of which are purgative.

Ipomœ'a Ja-la'pa,* Ipomœ'a Pur'ga.* Names for the jalap-plant.

Ipomœ'a Pan-du-ra'ta.* The Wild Potato Vine, or Man of the Earth, a trailing plant, a native of the Atlantic section of the United States. Its root is said to act like rhubarb. According to Dr. Gray, its root often weighs from ten to twenty pounds.

Ipomœ'a Tur'pe-thum.* A plant, a native of India, which produces a resin called *turpeth*, used as a purgative.

I-răl'gĭ-a.* [From the Lat. *i'ris*, and the Gr. *ἀλγος*, "pain."] Pain of the iris; iral'gy.

Ir-ĭ-an-kis'trĭ-um,* Ir-ĭ-an-kis'tron.* [From the Lat. *i'ris*, and the Gr. *ἀγκιστρον*, a "fish-hook."] An instrument, hook-shaped, used in the operation for artificial pupil by separation.

Iridaceæ,* ĭr-e-da'she-ē, or **Ir'ĭ-dēs.*** A natural order of endogenous herbaceous plants, including the *Iris*, *Crocus*, *Pardanthus*, and *Gladiolus*, which are prized for their beauty. Saffron is procured from the *Crocus sativa*.

Ir-ĭ-dæ'mĭ-a.* [From the Lat. *i'ris*, *ir'idis*, the "iris," and the Gr. *αἱμα*, "blood."] Hemorrhage from the iris.

Iridalgia.* See IRALGIA.

Ir-ĭ-da'tio, o'nis.* [From the Lat. *i'ris*, *ir'idis*, the "rainbow."] The property of producing the appearance of the colors of the rainbow; irida'tion.

Ir-ĭ-daux-e'sis.* [From the Lat. *i'ris*, the "iris" of the eye, and the Gr. *αὔξησις*, "increase."] Thickening or growth of the iris by the exudation of fibrin into its substance.

Ir-ĭ-dec'to-mus.* [From the Lat. *i'ris*, and the Gr. *ἐκτέμνω*, to "cut out."] An instrument or kind of knife used for the operation of iridectomy; an iridec'tome.

Ir-ĭ-dec'to-mў. [Lat. **Iridecto'mia**; from the same.] The operation of removing or cutting out a portion of the iris. See CORECTOMIA.

Ir-ĭ-dec-tro'pĭ-um.* [From the Lat. *i'ris*, and *ectro'pium*, "eversion."] Eversion of a portion of the iris; iridec'tropy.

Ir-ĭ-den-tro'pĭ-um.* [From the Lat. *i'ris*, and *entro'pium*, "inversion."] Inversion of a portion of the iris.

Ir-ĭ-de-re'mĭ-a.* [From the Lat. *i'ris*, and the Gr. *ἐρημία*, "destitution," "deficiency."] Defect, or imperfect condition, of the iris.

Irides,* ĭr'e-dēz, the plural of the Lat. **I'ris**, forming the Jussieuan name of a natural order of plants. See IRIDACEÆ.

Ir-ĭ-dĕs'çent. [From the Lat. *i'ris*, the "rainbow."] A term applied to minerals exhibiting the colors of the rainbow.

I-rid'e-sis.* [From the Gr. *ἰρις*, *ἰριδος*, the "iris" of the eye, and *δέω*, to "bind."] An operation for artificial pupil, which consists in binding with a thread a portion of the iris, so as to strangulate it.

I-rid'ĭ-um.* [From the Lat. *i'ris*, the "rainbow."] A rare metal, named in allusion to the variety of colors exhibited by its solutions. It is extremely hard, and the most infusible of all known metals. Specific gravity, about 22. It was discovered in 1803, associated with the ore of platinum. Pure iridium is not acted on by acids or by aqua regia. It is used to make nibs of gold pens. It can be fused in the flame of the oxy-hydrogen blow-pipe. An alloy of iridium and platinum is the material used for the international standard of length and weight. It is almost indestructible.

Ir-ĭ-do-a-vŭl'sion. [From the Lat. *i'ris*, and *avel'lo*, *avul'sum*, to "tear away."] A term applied to the total removal of the iris and tearing it away from its periphery.

Ir'ĭ-do-çēle.* [From the Lat. *i'ris*, and the Gr. *κήλη*, a "tumor."] Hernia in which a portion of the iris is protruded.

Ir'ĭ-do-cho-roi-di'tis.* Inflammation of the iris and choroid coat of the eye.

Ir'ĭ-do-çĭ-ne'sis.* [From the Lat. *i'ris*, and the Gr. *κίνησις*, "motion."] The movement of the iris, its contraction and expansion.

Ir'ĭ-do-çў-cli'tis.* [From the Gr. *ἰρις*, the "iris," and *κύκλος*, a "circle."] Inflammation of the iris and ciliary circle of the eye.

Ir'ĭ-do-di-al'ў-sis.* [From the Lat. *i'ris*, and the Gr. *διάλυσις*, a "separation."] The oper-

ation for artificial pupil by separation. See CORECTODIALYSIS.

Ir-ĭ-do-do-ne'sis.* [From the Lat. *i'ris*, and the Gr. *δόνησις*, an "agitation."] Trembling or agitation of the iris.

Iridomalacia,* ĭr'e-do-ma-la'she-a. [From the Lat. *i'ris*, and the Gr. *μαλακία*, "softness."] Softening of the iris.

Ir-ĭ-don'cus.* [From the Lat. *i'ris*, and the Gr. *ὀγκός*, a "tumor."] Tumor or swelling of the iris; a tumid iris.

Ir-ĭ-do-pĕr-ĭ-phă-çi'tis.* [From the Gr. *ἶρις*, the "iris," *περί*, "about," and *φακός*, a "lentil," also a "lens."] Inflammation of the capsule of the lens of the eye.

Ir-ĭ-do-pla'nĭ-a.* [From the Lat. *i'ris*, and the Gr. *πλανάω*, to "wander."] The same as IRIDODONESIS, which see.

Ir-ĭ-dor'rha-gas.* [From the Gr. *ἶρις*, the "iris," and *ῥαγάς*, a "fissure."] Fissure of the iris.

Ir-ĭ-dos'mĭne. A native alloy of iridium and osmium, which occurs in small grains and scales of a steel-gray color and metallic lustre, also in hexagonal prisms. Specific gravity, from 19.5 to 21. It is as hard as quartz, and is well adapted for the nibs of gold pens.

Ir-ĭ-dot'o-mў. [Lat. **Iridoto'mia**; from *i'ris*, and the Gr. *τέμνω*, to "cut."] The operation for artificial pupil by incision. See CORECTOMIA.

Ir-ĭ-dot'ro-mus.* [From the Lat. *i'ris*, and the Gr. *τρόμος*, a "trembling."] The same as IRIDODONESIS, which see.

I'ris,* gen. **Ir-ĭ-dis.** Originally, a "rainbow." A delicate circular membrane of the eye, floating in the aqueous humor, suspended vertically behind the cornea, and perforated to form the pupil. It received its name from the variety of its colors. Also the name of a plant.

I'ris.* A genus of perennial plants of the order *Irida'ceæ*, comprising many species, natives of Europe, the United States, etc. Their roots are generally cathartic and emetic. Also the Pharmacopœial name (U.S. 1880) for the rhizome and rootlets of *I'ris versic'olor*. It is cathartic and diuretic.

I'ris Flor-en-ti'na.* "Florentine Orris." The Pharmacopœial name (U.S. 1870) for the rhizome of the *Iris Florentina*. It is cathartic, and, in large doses, emetic. It is valued chiefly for its agreeable odor. It is a native of Europe.

I'ris Fœ-tĭ-dis'sĭ-ma.* A perennial plant, a native of Europe, possessing cathartic and emetic properties. It has been recommended as a remedy for dropsy.

I'ris Ger-man'ĭ-ca.* The systematic name of the Flower de Luce, which is cultivated for its showy flowers. Its root is acrid and cathartic.

I'ris Pseū'do-A-co'rus.* Yellow Iris, a European plant, sometimes cultivated for the beauty of its flowers. Its root is purgative.

I'ris Ver-sic'o-lor.* Blue Flag. The Pharmacopœial name (U.S. 1870) for the rhizome of the *Iris versicolor*. It is a native of New Jersey, Pennsylvania, etc. It is emetic and cathartic.

Ir-ĭ-sā'tion. [Lat. **Irisa'tio, o'nis**; from *i'ris*, the "rainbow."] The effect of the decomposition of light by the prism, observed in many bodies, shells, and insects, caused by the particular arrangement of the molecules on their surface by fissures, etc.

I'rish Moss. The *Chondrus crispus*.

I-rit'ĭ-cus.* Belonging to iritis; irit'ic.

I-ri'tis.* Inflammation of the iris.

I'ron. [Lat. **Fer'rum**; Gr. *σίδηρος*; Fr. *Fer*, faiR; Ger. *Eisen*, ī'zen.] The strongest, most common, and most useful of the metals. Some of its compounds afford medicines of great value. Combined with a small quantity of carbon, thus forming steel, it possesses great hardness. Iron has the rare property of capability of being welded. Specific gravity, about 7.7. It is one of the elements which are essential constituents of the human body. Pure iron is a very rare substance. The metal which is commonly called iron is a compound of iron and carbon.

Iron Filings. See FERRI RAMENTA.

Iron Wire. See FERRI FILUM.

Ir-rā-dĭ-ā'tion. [Lat. **Irradia'tio, o'nis**; from *irra'dio, irradia'tum*, to "shine upon."] The phenomenon of the apparent enlargement of a body strongly illuminated, as a fixed star. Also illumination.

Ir-re-du'cĭ-ble. [From the Lat. *in*, negative, and *redu'co, reduc'tum*, to "reduce."] (Fr. *Irréductible*, ĕ'rā'dük'tĕbl'.) A term applied to fractures, luxations, hernia, etc., when they cannot be reduced.

Irréductible. See IRREDUCIBLE.

Ir-reg'u-lar. [From the Lat. *in*, negative, and *reg'ula*, a "rule."] Deviating from rule; abnormal:—applied to the pulse when the beats are separated by unequal intervals, and to functions when they are disturbed with respect to time, as the bowels, and menstruation; also to flowers the petals of which are unlike in form or size.

Ir-rĭ-gā'tion. [From the Lat. *ir'rigo, irriga'tum*, to "water."] The continual application of a lotion by dropping water on an affected part.

Ir-rĭ-ta-bil'ĭ-tў. [Lat. **Irritabil'itas, a'tis**; from *irri'to, irrita'tum*, to "provoke," to "excite."] A property peculiar to muscular substance, by which it contracts on the application of a stimulus. In Medicine, the term denotes undue excitability of an organ or tissue from disease or disorder.

Ir'rĭ-ta-ble. [Lat. **Irritab'ilis**; from the same.] Endued with irritability; easily irritated. In Physiology, capable of feeling a stimulus and of responding to it.

Ir'rĭ-tant. [From the same.] That which causes irritation, pain, inflammation, and tension, either by mechanical or chemical action. The terms *irritants* and *counter-irritants* are applied to remedies used in diseases. (See COUNTER-IRRITATION.) Alkalies, strong acids, caustic salts, croton oil, and other acrid vegetable substances are irritants.

Ir-rĭ-tā'tion. [From the same.] The excessive action of any stimulus, causing a morbid in-

crease in the circulation or sensibility. Also the state of a part which is irritated.

Ir'rĭ-tā-tĭve Fe'ver. That violent derangement of the system excited by great irritation, as from wounds, ulcers, etc.

Ir-vin'gĭ-a.* A genus of trees of the order *Simarubaceæ* or *Burseraceæ*, comprising several species, natives of tropical Africa. Some of them bear edible fruits.

Irvingia Barteri.* See MANGIFERA GABONENSIS.

Is-a-del'phus.* [From the Gr. *ἴσος*, "equal," and *ἀδελφός*, a "brother."] Having diadelphous stamens forming two equal packets; isadel'phous.

Is-an-the'rus.* [From the Gr. *ἴσος*, "equal," and the Lat. *anthe'ra*, an "anther."] Having anthers equal or alike; isanthe'rous.

I-san'thus.* [From the Gr. *ἴσος*, "equal," and *ἄνθος*, a "flower."] Having regular flowers; having the teguments of all their flowers alike; isan'thous.

Isan'thus.* A genus of plants of the order *Labiatæ*:—so called because, unlike the other *Labiatæ*, their corolla is almost regular.

Is'a-tis Tinc-to'rĭ-a.* Woad, an herbaceous plant of the order *Cruciferæ*, a native of Europe, from which an inferior kind of indigo is procured.

Is-ehæ'mĭ-a.* [From the Gr. *ἴσχω*, to "restrain," to "suppress," and *αἷμα*, "blood."] A term applied to a morbid suppression of a normal flow of blood, as in the case of the catamenia.

Is-ehĭ-ad'ic. The same as ISCHIATIC, which see.

Ischiadocele.* See ISCHIOCELE.

Is-ehi'a-gra.* [From the Gr. *ἰσχίον*, the "haunch," and *ἄγρα*, a "seizure."] Gout in the haunch; also sciatica.

Is-ehĭ-ăl'gĭ-a.* [From the Gr. *ἰσχίον*, the "hip," and *ἄλγος*, "pain."] Is'chialgy; pain in the ischium.

Is'ehi-as, a'dis.* [From the Gr. *ἰσχίον*, the "hip."] Gout, or a rheumatic affection, of the hip-joint.

Is-ehĭ-at'ic. [Lat. **Ischiat'icus.**] Belonging to the ischium.

Is-ehĭ-a-ti'tis.* Inflammation of the ischiatic nerve.

Ischiatocele.* See ISCHIOCELE.

Is-ehĭ-dro'sis.* [From the Gr. *ἴσχω*, to "suppress," and *ἱδρώς*, "sweat."] Deficiency, or suppression, of sweat, or of transpiration.

Is-ehĭ-drot'ĭ-cus.* Belonging to ischidrosis.

Is'ehĭ-o-. [From the Gr. *ἰσχίον*, the "hip."] A prefix denoting connection with the ischium, or with the hip-joint.

Is'ehĭ-o-çēle.* [From the Gr. *ἰσχίον*, the "hip," and *κήλη*, a "tumor."] Hernia at the ischiadic foramen. It is very rare.

Ischion.* See ISCHIUM.

Is'ehĭ-o-neū-răl'gĭ-a.* [From the Lat. *is'chium*, the "hip," and *neural'gia*, "pain of a nerve."] Ischiatic neuralgy; sciatica.

Is-ehĭ-oph'thĭ-sis.* [From the Gr. *ἰσχίον*, the "hip," and *φθίσις*, a "wasting."] Literally, "consumption, or wasting, of the hip-joint." Hip-joint disease. See COXARUM MORBUS.

Is'ehĭ-um.* [From the Gr. *ἰσχίς*, the "loin."] (Fr. *Os de l'Assiette*, ō d'lă'se-ĕt'.) The posterior and inferior bone of the pelvis, distinct and separate in the fœtus or infant; or the corresponding part of the *os innomina'tum* in the adult.

Is-ehu'rĭ-a.* [From the Gr. *ἴσχω*, to "suppress," and *οὖρον*, "urine."] Retention or stoppage of the urine. A genus of the order *Epischeses*, class *Locales*, of Cullen's nosology.

Is-ehu-rĭ-oph-thăl'mĭ-a.* [From the Lat. *ischu'ria*, and *ophthal'mia*, "inflammation of the eyes."] Ophthalmia from suppression of the urine.

I-ser'tĭ-a.* A genus of shrubs or small trees of the order *Rubiaceæ*, natives of Central America, bearing handsome scarlet flowers. The bark of *Isertia coccinea* is reputed to be febrifuge. Its leaves have been used as tonic and astringent.

I'sin-glass. [Probably a corruption of the Ger. *Hausenblase*, hŏw'zẹn-blā'zẹh, or hŏw'zẹn-blās; from *hause*, a "sturgeon," and *blase*, a "bladder."] Fish-glue, prepared chiefly from the air-bladder of the sturgeon. See ICHTHYOCOLLA.

I-soch'ro-nous, or **I-soch'ro-nal.** [Lat. **Isoch'ronus**; from the Gr. *ἴσος*, "equal," and *χρόνος*, "time."] Enduring an equal space of time, or performed in equal times, as the vibrations of a pendulum.

I-soch'ro-us.* [From the Gr. *ἴσος*, "equal," and *χρόα*, "color of the skin."] Of uniform color; isoch'röous.

I-so-cli'nal, I-so-clin'ĭ-cal. [Lat. **Isoclin'icus**; from the Gr. *ἴσος*, "equal," and *κλίνω*, to "incline."] Of equal inclination.

I-sod'ro-mus.* [From the Gr. *ἴσος*, "equal," and *δρόμος*, a "course."] Similar to ISOCHRONUS, which see.

I-so-dȳ-nam'ic. [Lat. **Isodyn'amus**; from the Gr. *ἴσος*, "equal," and *δύναμις*, "power."] Having equal powers, or growing with equal force; isodyn'amous:—applied to a dicotyledonous embryo; also to a line passing through points of the earth where the magnetic influence is the same.

I-so-gon'ic. [Lat. **Isogon'icus**; from the Gr. *ἴσος*, "equal," and *γωνία*, an "angle."] Having equal angles.

Is'o-lāt-ed. [From the Italian *isola*, ē'so-lă, an "island."] The same as INSULATED, which see.

I-so-mĕr'ic. [From the Gr. *ἴσος*, "equal," and *μέρος*, a "part."] Composed of the same elements in the same proportions, but chemically and physically different, or consisting of the same elements, as the diamond and graphite, both being chemically pure carbon.

I-som'er-ism. [Lat. **Isomeris'mus**; from the same.] (Fr. *Isomérie*, ē'zo'mā'rē'.) The state of compounds that are isomeric; identity in respect to the quality and quantity of the constituents, with essential difference of chemical or physical properties.

I-som'er-ous. [From the same.] Equal in number. An isomerous flower is one in which all the parts are equal to each other in number.

Isomerus.* See ISOMERIC.

I-so-met'ric. [From the Gr. *ἴσος*, "equal," and *μέτρον*, a "measure."] A term synonymous with *monometric*, and denoting a system of crystallization in which all the axes are equal and cross one another at right angles, as a cube.

I-so-mor'phism. [Lat. **Isomorphis'mus.**] The state or arrangement of bodies that are isomorphous.

I-so-mor'phous. [Lat. **Isomor'phus**; from the Gr. *ἴσος*, "equal," and *μορφή*, "form."] Of the same form:—applied to substances which resemble each other in their crystalline forms, but differ in their component parts.

I'so-morphs. [See ISOMORPHOUS.] Substances whose crystalline forms belong to the same system of crystallization. Carbon, gold, silver, copper, tin, and other elements crystallize in identical monometric forms, and are *elemental isomorphs*.

Is-o-nan'dra.* A genus of trees of the order *Sapotaceæ*, comprising eleven species, natives of India, Ceylon, Borneo, and the Malay peninsula. They are lofty forest-trees.

Isonan'dra Gut'ta.* A large tree, a native of Borneo, Sumatra, and the Malay peninsula. It attains a height of about seventy feet, and a diameter of from three to five feet. The gutta-percha of commerce is the inspissated milky juice of this tree. The average quantity yielded by each tree (when cut down) is twenty pounds.

Is-o-path'ĭ-cus.* Belonging to isopathy; isopath'ic.

I-sop'a-thy. [Lat. **Isopathi'a**; from the Gr. *ἴσος*, "equal," "exactly like," or "the same," and *πάθος*, an "affection" or "disease."] A branch of Homœopathy which recommends the administration of virus as a remedy in the same disease by which it is produced. Thus, it is said that small-pox may be cured by minute doses of variolous matter, etc. The difference between Isopathy and Homœopathy, as the latter is commonly understood, is indicated by the etymology of the terms. Homœopathy aims to cure disease by inducing a condition of the system *similar* to that produced by the disease; Isopathy would combat disease by employing *the same* (that is, the disease itself) as a weapon.

I-so-pet'a-lous. [Lat. **Isopet'alus**; from the Gr. *ἴσος*, "equal," and *πέταλον*, a "petal."] Having equal petals.

I-sop'o-dous. [Lat. **Isop'odus**; from the Gr. *ἴσος*, "equal," and *πούς*, a "foot."] Equal-footed:—applied to certain *Crustacea*.

I-sos'çe-lēs.* [From the Gr. *ἴσος*, "equal," and *σκέλος*, a "leg."] Having equal legs or sides:—applied to a triangle.

I-so-stem'o-nous. [Lat. **Isostem'onis**; from the Gr. *ἴσος*, "equal," and *στήμων*, a "stamen."] Having stamens equal to the number of petals.

I-so-ther'mal, or **I-so-ther'mous.** [Lat. **Isother'mus**; from the Gr. *ἴσος*, "equal," and *θέρμη*, "heat."] Of the same degree of heat; of the same temperature. In Physical Geography, *isothermal lines* are lines passing on the surface of the earth through those points at which the mean annual temperature is the same. *Isothermal zones* are spaces on opposite sides of the equator having the same mean temperature and bounded by corresponding isothermal lines.

Is'sue. [Lat. **Fontic'ulus**; Fr. *Fonticule*, fôn'tē'kül'.] A small ulcer or sore produced by art, and kept open by inserting a pea or other small body, with a view to relieve irritation or morbid action in a neighboring part. (See REVULSION.) Also progeny; offspring; lineal descendants.

Isth'mĭ-cus.* [From the Lat. *isth'mus*, a "neck," or "narrow passage."] Belonging to the *isthmus faucium*, or to a neck of land.

Isth-mi'tis, i'dis.* [From the Lat. *isth'mus* fau'cium.] Inflammation of the *isthmus faucium*.

Isthmodes.* See ISTHMOIDES.

Isth-mo-dŷn'ĭ-a.* [From the Lat. *isth'mus* fau'cium, and the Gr. *ὀδύνη*, "pain."] Pain in the fauces.

Isth-mo-i'dēs.* [From the Lat. *isth'mus* fau'cium, and the Gr. *εἶδος*, a "form" or "resemblance."] Resembling the *isthmus faucium*; isth'moid.

Isth-mo-pa-thi'a.* [From the Lat. *isth'mus* fau'cium, and the Gr. *πάθος*, "disease."] Disease of the fauces.

Isth-mo-ple'ğĭ-a.* [From the Lat. *isth'mus* fau'cium, and the Gr. *πληγή*, a "stroke."] Paralysis of the *isthmus faucium*.

Isth-mop'ў-ra.* [From the Lat. *isth'mus* fau'cium, and the Gr. *πῦρ*, "fire."] Inflammation of the fauces.

Isth'mus.* [Gr. *ἰσθμός*, a "neck."] A term denoting a neck, or narrow passage: as, *isthmus faucium*,—literally, "the narrow passage of the fauces."

Itch. See SCABIES, PSORA, and PSORIASIS.

-Ite. A terminal denoting a salt from a combination of an acid the name of which ends in *-ous*.

I'ter.* A passage of communication between two or more parts.

I'TER AD INFUNDIB'ULUM.* "Passage to the Infundibulum." The passage of communication between the third ventricle of the brain and the infundibulum. It is also termed *fora'men commu'ne ante'rius*.

I'TER A PALA'TO AD AU'REM.* "Passage from the Palate to the Ear." The Eustachian tube.

I'TER A TER'TIO AD QUAR'TUM VENTRIC'ULUM.* "Passage from the Third to the Fourth Ventricle." See AQUEDUCT OF SYLVIUS.

Ith-ў-phўl'lus.* [From the Gr. *ἰθύς*, "straight," and *φύλλον*, a "leaf."] Having straight leaves.

-Itis. A terminal denoting inflammation of any organ or part indicated by the word to which it is added. Thus, *gastri'tis* [from the Gr. *γαστήρ*, the "stomach"] signifies "inflammation of the stomach;" *spleni'tis* [from the Gr. *σπλήν*, the "spleen"], inflammation of the spleen, etc.

Iulaceous. See JULACEOUS.

I-u'lus,* or **Ju'lus.*** A synonyme for AMENTUM.

Ivoire. See IVORY.

I'vo-rў. (Fr. *Ivoire*, ē'vwȧr'.) The bone-like matter of the tusks of the elephant and some other animals.

Ivory Black. See CARBON, ANIMAL.

Ivory Palm. See PHYTELEPHAS MACROCARPA.

Ivory, Vegetable. See PHYTELEPHAS MACROCARPA.

Ivresse. See TEMULENTIA.

Ivy. See HEDERA.

I'vў-Worts. Lindley's name for the *Araliaceæ*.

Ix-o'ra.* A genus of ornamental shrubs of the order *Rubiaceæ*, comprising several species, natives of India and tropical Africa. The *Ixora coccinea*, a native of India, is used in medicine. The *Ixora Indica* is astringent, and is used as a remedy for dysentery.

Ixo'ra Band-huc'ca.* A shrub, a native of India, employed as an astringent against diarrhœa and dysentery.

J.

Jaborandi, zhȧ-bo-rȧn'dee. The popular name of the *Pilocar'pus pennatifo'lius*, a native of Brazil. It is a powerful diaphoretic and sialagogue. It may be administered in the form of an infusion of the plant, or in that of the alkaloid, pilocarpine. See PILOCARPUS.

Jac-a-ran'da Pro-ce'ra.* A tree of the order *Bignoniaceæ*, a native of tropical America. It is said to be useful in syphilitic affections.

Jacinth. See HYACINTH.

Jacobi Membrana.* See MEMBRANA JACOBI.

Jac-tĭ-tā'tion. [Lat. **Jactita'tio, o'nis;** from *jac'tito, jactita'tum*, to "toss often."] The constant tossing from one position to another, the effect of restlessness in acute diseases.

Jaf'na Moss. A species of moss found in Ceylon, yielding a semi-opaque jelly, nutritious for invalids:—also called *Ceylon moss*.

Ja-la'pa.* [From *Jala'pa*, or *Xala'pa*, its native place.] "Jalap." The Pharmacopœial name (U.S. 1870, 1880) for the tuberous root of *Exogonium purga*, otherwise called the *Ipomœ'a Jala'pa*. Jalap is an active cathartic, producing copious watery discharges. It is usually given in connection with other medicines which assist or qualify its operation. Combined with the bitartrate of potash, it is much employed as a remedy in dropsy, in hip-disease, and in other scrofulous affections of the joints.

Jala'pa Al'ba.* "White Jalap." A name for the *Convolvulus Mechoacana*, or Mechoacan.

Jal'a-pin, or **Jal'a-pĭne.** [Lat. **Jalapi'na.**] The active principle of jalap.

Jamaica Bark. See BARK, CARIBEAN.

Ja-mai'ca Pep'per. The dried berries of the *Myrtus pimenta*.

Jamai'ca Spir'it. [Lat. **Spir'itus Jamaicen'sis.**] A name for rum.

Jam-bo'sa Vul-ga'ris,* or **Eu-ge'nĭ-a Jam'bos.*** A tree of the order *Myrtaceæ*, a native of India. It bears an edible fruit called Rose-Apple.

James's Pŏw'der. [Lat. **Pul'vis Jaco'bi;** from Dr. *James*, its inventor.] A febrifuge preparation for which the *Pulvis Antimonialis* is substituted.

Jan'ĭ-pha.* A synonyme for a genus of plants otherwise called *Manihot*.

Jan'ipha Man'ĭ-hot,* or **Jat'ro-pha Man'ihot.*** A plant from which tapioca and cassava bread are obtained.

Ja-pan' Earth. The substance termed *catechu*.

Jarret, zhȧ'rā'. The French term for POPLES, which see.

Jasmin. See JASMINUM.

Jasminaceæ,* jas-mĭ-na'she-ē. A natural order of exogenous shrubs, growing abundantly in tropical India. It includes the Jasmine (*Jas'minum*), which yields a fragrant oil. Many botanists include the *Jasminum* under the order *Oleaceæ*.

Jasmine, Yellow. See GELSEMIUM.

Jas-min'e-æ.* The Jussieuan name of a natural order of plants. See JASMINACEÆ.

Jas'mĭ-num.* A genus of shrubs or climbing plants of the order *Oleaceæ*, comprising numerous species, natives of China, India, Madeira, and other tropical or warm regions. Many of the species are cultivated for the beauty and fragrance of their flowers, and some are used medicinally. The bitter leaves of *Jas'minum floribun'dum* are employed in Abyssinia against the tape-worm.

Jas'minum Gran-dĭ-flo'rum.* A shrub, a native of India, cultivated for ornament. A fragrant essential oil is obtained from it.

Jas'minum Of-fĭç-ĭ-na'le.* (Fr. *Jasmin*, zhȧs'mȧN'.) Jessamine, a plant of the Linnæan class *Diandria*, natural order *Jasminaceæ* or *Oleaceæ*. The flowers, which are fragrant and white, yield an essential oil used as an external application in paralysis and rheumatism. It is cultivated in European and American gardens.

Jas'minum Sam'bac.* A plant, a native of India, cultivated in the United States for the beauty and fragrance of its white flowers. An essential oil is obtained from it.

Jas'per. [Lat. **Jas'pis.**] A silicious mineral, prized for its variegated colors. It is an opaque variety of quartz. It is used in jewelry.

Ja-te-o-rhi'za Pal-ma'ta,* or **Coc'cu-lus Pal-ma'tus.*** A plant of the order *Menispermaceæ*, a native of Mozambique. Its root is a valuable tonic. See COLUMBO.

Jat'ro-pha,* or **Jat'ro-pa.*** A Linnæan genus of the class *Monœcia*, natural order *Euphorbiaceæ*.

Jat'ropha Cur'cas.* A plant which grows in South America, the West Indies, and Western Africa. The oil obtained from the seeds is similar in its medicinal properties to croton oil, but is less powerful.

Jat'ropha Glau'ca.* A woody plant, a native of India. An oil obtained from its seeds is used as an external application for rheumatism.

Jatropha Manihot.* See JANIPHA MANIHOT, and MANIHOT.

Jat'ropha Mul-tif'i-da.* A shrub found in South America, bearing purgative fruits, which are dangerous on account of the energy of their action.

Jat'ro-phāte. [Lat. **Jat'rophas, a'tis.**] A combination of jatrophic acid with a base.

Jaun'dice. [From the French *jaunisse*, zhō'nēss', "yellowness," or the "yellows;" so named from its color.] See ICTERUS.

Jaunisse, zhō'nēss'. A French term for "jaundice." See ICTERUS.

Jaw. See MAXILLA.

Jecur.* See LIVER.

Jef-fer-so'nī-a Di-phyl'la.* Twin Leaf, an herbaceous plant of the order *Berberidaceæ*, a native of the Northern United States. The root is said to be emetic in large doses, and tonic and expectorant in small doses.

Je-ju'num.* [From the Lat. *jeju'nus*, "fasting," "jejune," "empty."] The second portion of the small intestine:—so named because it is usually found empty, or nearly so, in the dead body.

Jel'ly. The common name for gelatin.

Jequirity, zhā-kē-rē-tee', or je-kir'e-tee'. [This name appears to be of Brazilian (Portuguese) spelling.] A popular name for the seeds (or beans) of the *Abrus precatorius*, a plant or shrub of the natural order *Leguminosæ*, a native of India, but naturalized in other tropical countries. The infusion is much used, being applied externally as a remedy against chronic granular ophthalmia. It is strongly irritant to the eyes. It appears to act in nearly the same manner as burnt alum on proud flesh.

Je-ru'sa-lem Ar'ti-choke. The *Helianthus tuberosus*, a species of sunflower, the root of which resembles the artichoke in taste. The term *Jerusalem* as applied to artichoke is a curious corruption of the Italian term *gira-sole* (jee'rā so'lā), that is, *turn-sun* in English and *heliotrope* (ἡλιοτρόπιον) in Greek.—(HOBLYN.)

Jes'sa-mine. A popular name of several species of *Jasminum* which bear beautiful and fragrant flowers. Cape Jessamine is a synonyme of the *Gardenia*.

Jesu-it's Bark. A name for cinchona, because introduced into Europe by a Jesuit.

Jet. A black, bituminous substance, used for ornaments, vessels, etc.

Jeunesse, zhuh'nēss'. The French term for "youth," or ADOLESCENCE, which see.

Jewel-Weed. See IMPATIENS.

Joint. See ARTICULUS, and NODE.

Joint, Contraction of; Joint, Stiffened. See ANKYLOSIS.

Joint'ed, or **Ar-tic'u-lāt-ed.** In Botany, separate or separable at one or more places into pieces; also furnished with a distinct joint:—sometimes applied to bodies that appear as if they were jointed.

Joue, zhoo. The French word for "cheek." See GENA.

Ju'ba.* A loose panicle, such as is often found in grasses.

Ju'ga,* the plural of JUGUM, which see.

Jugale Os.* See OS MALÆ.

Ju-ga'lēs,* plural of the Lat. **Juga'lis.** A name of the superficial temporal, or zygomatic, nerves, given off from the facial.

Ju-ga'lis.* Belonging to the *os jugale*, or cheek-bone.

Juglandaceæ,* jug-lan-da'she-ē. A small natural order of exogenous trees, natives of the temperate parts of North America and Asia. It includes the Walnut (*Juglans*) and the Hickory (*Carya*). A valuable oil is obtained from some species of *Juglans*. The bark is purgative.

Jug'lans.* [From the Lat. **Jo'vis** *glans*,—*i.e.*, the "nut of Jove."] A genus of trees of the order *Juglandaceæ*, comprising several species, natives of Asia and the United States. Also the Pharmacopœial name (U.S. 1870, 1880) for the inner bark of the root of *Juglans cinerea*, collected in autumn. It is a mild cathartic, resembling rhubarb in its operation.

Jug'lans Ni'gra.* The systematic name of the Black Walnut, a native of the United States. It is a large tree, the wood of which is an excellent material for furniture and cabinet-work. It bears an edible fruit.

Jug'lans Re'gī-a.* The systematic name of a tree commonly called English Walnut. It is a native of Asia. It produces an edible nut and valuable timber. The leaves and the hull of the nut have been used in medicine.

Ju'gu-lar. [Lat. **Jugula'ris**; from *ju'gulum*, the "throat."] Belonging to the throat.

Ju'gular Veins. The large veins which run from the head down the sides of the neck, and are termed, according to their situation, *internal* or *external*.

Ju'gu-lum.* [From the Lat. *ju'gum*, a "yoke."] The throat, or fore-part of the neck.

Ju'gum,* plural **Ju'ga.** A Latin word, signifying originally a "yoke;" also a "ridge," or "hill." A term applied in Botany to the ridges, or ribs, on the fruit of umbelliferous plants.

Ju'jube. [Lat. **Juju'ba.**] The fruit of the *Rham'nus Zi'zyphus*, a native of the south of

Europe, from which a pectoral lozenge is prepared.

Jul. = *Jule'pus.** A "julep."

Ju-lā'ceous. [From the Lat. *ju'lus*, a "catkin."] Resembling a catkin.

Ju'lep. [Lat. **Jula'pium**, or **Jule'pus**; Arab. *Juleb*, a "sweet potion."] A liquid medicine of an agreeable taste. It is composed of distilled water and syrups.

Ju'lus.* A Latin term signifying "catkin."

Ju-men-to'sus.* [From the Lat. *jumen'tum*, a "beast of burden."] A term applied to the urine when of a strong rank odor.

Juncaceæ,* jung-ka'she-ē. A natural order of endogenous glumaceous plants, found chiefly in the colder parts of the world. It includes the common Rush (*Juncus*).

Jun-cā'ceous. [Lat. **Junca'ceus**; from *jun'cus*, a "rush."] Resembling the *Juncus*, or rush.

Juncaginaceæ,* jun-kaj-e-na'she-ē. [From *Junca'go*, one of the genera.] A natural order of endogenous aquatic plants, found in most parts of the world.

Jun'ce-us.* The same as JUNCACEOUS.

Jun'ci,* the plural of the Lat. *jun'cus*, a "rush," forming the Jussieuan name of a natural order of plants. See JUNCACEÆ.

Jun-çī-for'mis.* [From the Lat. *jun'cus*, a "rush."] Formed like a rush:—applied to certain plants.

Junc'ture. [Lat. **Junctu'ra**; from *jun'go*, *junc'tum*, to "join."] A junction; a crisis. In Botany, a joint or articulation.

Jungermanniaceæ,* jung-ẹr-man-ne-a'she-ē. [From *Jungerman'nia*, one of the genera.] A natural order of cryptogamic moss-like plants, found in damp, shady places.

Jun'gle. An East Indian name for a thicket, or a place covered with shrubs, reeds, and high grass, where a fever called *jungle fever* is often developed.

Ju'nĭ-per. The *Juniperus communis*.

Ju-nip'e-ri Cạ-cu'mĭ-nạ.* "Tops of Juniper." A Pharmacopœial name for the tops of the *Juniperus communis*.

Ju-nip'e-rus.* A Linnæan genus of the class *Diœcia*, natural order *Coniferæ*. The Pharmacopœial name (U.S. 1870, 1880) for the fruit of *Juniperus communis*. It is gently stimulant and diuretic.

Junip'erus Com-mu'nis.* (Fr. *Genèvrier*, zheh-nȧ'vʀe-ȧ'.) The juniper-tree, a native of Europe and the United States.

Junip'erus Sạ-bi'nạ.* (Fr. *Sabine*, sȧ'bĕn'.) The common savin-tree.

Junip'erus Vir-ġin-ĭ-a'nạ.* The systematic name of the Red Cedar, an evergreen tree, a native of the United States. Its wood is reddish, odorous, light, fine-grained, and durable. It is a good material for fence-posts, furniture, lead-pencils, etc.

Ju'pĭ-ter.* An ancient name for tin.

Ju-ras'sic. [Lat. **Juras'sicus**; from *Ju'ra.*] A term applied to the middle portion of the Mesozoic Age, and to the rocks formed during that period, including a group of oölitic rocks found in Mount Jura.

Jurisprudence, Medical. See MEDICAL JURISPRUDENCE.

Jus,* gen. **Ju'ris.** Broth or soup.

Jusquiame, zhüs'ke-ăm'. The French term for HYOSCYAMUS, which see.

Jussieuan, jŭs-sū'ạn. Belonging to Jussieu:—applied to a system of arranging plants according to their resemblance to each other, or what is termed the Natural Method.

Jus-tiç'ĭ-ạ.* A genus of plants (herbs or shrubs) of the order *Acanthaceæ*, natives of the tropical and subtropical parts of India and Africa. The *Justicia Ecbolium* is diuretic. Several other species are also used in medicine.

Justic'ia Ad-hạ-to'dạ.* The systematic name of an exotic plant used in medicine. Its root and leaves are said to be antispasmodic. The *Justicia echioides* is diuretic, and the *Justicia pectoralis* is commended as a remedy for a cough.

Justic'ia Pe-dun-cu-lo'sạ.* A synonyme of the *Dianthera Americana*, a native of the United States.

Juvantia,* ju-van'she-ạ. [Plural neuter of the Lat. *ju'vans*, present participle of *ju'vo*, to "help."] Helping, or aiding:—applied to medicines or applications which assuage pain, nervous distress, etc.

Ju-ven'tus,* gen. **Ju-ven-tu'tis.** [From the Lat. *ju'venis*, "young."] (Fr. *Jeunesse*, zhuh'nĕss'.) Youth. (See ADOLESCENCE.) A term applied by some writers to the third stage of life, between about the twenty-fifth and thirty-fifth years.

Jux-tạ-po-sĭ'tion. [From the Lat. *jux'ta*, "near to," and *po'no*, *pos'itum*, to "place."] The manner in which organs are placed with respect to each other.

K.

Kæmp-fe'rĭ-a Ro-tun'da.* A plant of the order *Zingiberaceæ*, a native of India or Ceylon. Its root is a stimulant aromatic, called *Zedoary*.

Kajeput. See CAJUPUTI OLEUM.

Ka'li.* [From the Arabic.] The vegetable alkali; potash.

Ka'li Pu'rum.* "Pure Potash." The *Potassa fusa*.

Ka-lig'en-ous. [Lat. **Kalig'enus**; from *ka'li*, an "alkali," "potash," and the Gr. *γεννάω*, to "generate."] A term applied to metals which form alkalies with oxygen.

Ka'lĭ-um.* [From the Lat. *ka'li*, "potash."] A synonymous term for potassium, the base of potash.

Kal'mĭ-a.* [Named in honor of *Kalm*, a Swedish botanist.] A genus of evergreen shrubs of the natural order *Ericaceæ*, comprising numerous species, five of which are natives of the United States.

Kal'mia An-gus-tĭ-fo'lĭ-a.* "Narrow-leaved Kalmia." Also called **Sheep Lau'rel.** A beautiful shrub, a native of New Jersey, etc. The leaves are said to be poisonous.

Kal'mia Glau'ca.* Pale Laurel, a shrub which grows in bogs in the Northern United States and bears lilac-purple flowers. Its medicinal properties are similar to those of *Kalmia latifolia*.

Kal'mia Lat-ĭ-fo'lĭ-a.* An ornamental evergreen shrub, a native of nearly all the United States (except the Pacific States). Its popular names are *Calico-Bush*, *Laurel*, *Mountain Laurel*, *Lambkill*, etc. Its leaves are poisonous, and are used in medicine.

Ka-ma'la.* "Kamala." (Formerly called *Rottlera*.) The Pharmacopœial name (U.S. 1880) for the glands and hairs from the capsules of the *Mallotus Philippinensis*. In full doses it is actively, and even violently, purgative. It is said to be very efficacious in the treatment of tænia.

Kā'o-lin, or **Kā'o-lĭne.** [Chinese, *Kao-ling*, kā'o-ling'.] China clay; a fine, pure clay, procured by levigation from the felspar of moulder-ing granite, and employed in the manufacture of porcelain. It is a hydrated silicate of alumina.

Kas'su'. A black astringent extract prepared from the seeds of the *Areca Catechu*.

Kat-a-to'nĭ-a.* [From the Gr. *κατάτονος* (literally, "stretching down"), "depressed."] A peculiar disease, often attended by great mental depression, with cataleptic symptoms.

Keel. See CARINA.

Keeled. Furnished with a keel, or sharp longitudinal ridge:—applied to parts of plants.

Kéloïde, kā'lo'ĕd'. [From the Gr. *κήλη*, a "tumor," and *εἶδος*, a "form" or "resemblance."] The French name for a disease resembling cancer, or scirrhus:—also termed *Cancroïde*, and *Scirrhoïde*.

Kelotomia.* See CELOTOMY.

Kelp. The crude soda obtained from the ashes of sea-weed in Holland and on the northern coast of France. It is used in the manufacture of glass and of soap.

Ken-o-pho'bĭ-a.* [From the Gr. *κενός*, "empty," and *φόβος*, "fear."] A morbid fear of empty spaces. The same as AGORAPHOBIA, which see.

Kĕr-a-ti'a-sis.* [From the Gr. *κέρας*, a "horn."] A horn-like excrescence on the temple or forehead.

Kĕr-a-ti'tis.* [From the Gr. *κέρας*, a "horn," also the "cornea."] Inflammation of the cornea.

Kĕr'a-to-de-i'tis.* [From the Gr. *κερατώδης*, the "cornea."] The same as CORNEITIS.

Kĕr'a-tome. [Lat. **Kerato'ma**, *atis*; from the Gr. *κέρας*, a "horn."] A horn-like tumor or swelling.

Ke-rat'o-nyx'is,* or **Çe-rat'o-nyx'is.*** [From the Gr. *κέρας*, gen. *κέρατος*, a "horn," or the "cornea," and *νύσσω*, to "puncture."] An operation for cataract, in which the crystalline lens is depressed by a needle passed through the cornea.

Ke-rat'o-plas'tic. [Lat. **Keratoplas'ticus.**] Belonging to keratoplasty.

Ker-at'o-plas'ty. [Lat. **Keratoplas'tia**; from the Gr. *κέρας*, a "horn," or the "cornea," and *πλάσσω*, to "form."] An operation by which the cornea of an animal has been excised and reapplied, or a new one from another animal put in its place:—also written *Ceratoplasty*, or *Ceratoplastica*.

Keratotome. See CERATOTOME.

Ke-rec'to-my. [Lat. **Kerecto'mia**; from the Gr. *κέρας*, a "horn," or the "cornea," and *ἐκτέμνω*, to "cut off."] The operation of excising the outward layers of the cornea, by which a clear aperture in the middle of a generally opaque cornea may be obtained.

Ker'mēs An'ĭ-mal, or **Ker'mes Ber'ry.** [Lat. **Coc'cus Il'icis.**] A name applied to insects found upon the *Quercus coccifera*, which grows in Southern Europe and in the Levant. They are in the form of round, reddish grains, about the size of peas, found adhering to the branches. They were formerly used for dyeing scarlet. *Kermes* is a Latin form of a word found in several Asiatic languages and signifying a little worm or insect.

Ker'mes Min'er-al. The precipitated sulphuret of antimony:—so named from its resemblance in color to the kermes insect.

Ker-me-si'nus.* Carmine-colored.

Ker'nel. The nucleus or seed of a nut; the edible substance contained in the shell of a nut; also the nucleus of an ovule or a seed. In some cases the kernel consists of the embryo and albumen; but in many seeds the kernel is all embryo.

Kĕr'o-sene. A name of refined petroleum or coal oil which is burned in lamps.

Ketchup. See CATSUP.

Kibe. See CHILBLAIN.

Kid'ney. [Lat. **Ren**, gen. **Re'nis.**] The kidneys are two glandular bodies situated in the lumbar region, consisting of an external or cortical, and an internal or tubular, substance. Their office is to secrete the urine, and thus to carry off the superfluous fluid matter from the system.

Kid'ney-Shaped. [Lat. **Renifor'mis.**] A term applied to a roundish or broadly cordate leaf, concave at the base.

Kiestein, or **Kiestin.** See KYESTEIN.

Ki-ġe'lĭ-a Pin-na'ta.* A tree of the order *Crescentiaceæ*, a native of Abyssinia, Nubia, Guinea, and Senegal. It is held sacred by the people of Nubia, and its fruits, which are two feet long, are used in medicine externally.

Kil'o-gram, or **Kil'o-gramme.** [From the Gr. *χίλιοι*, a "thousand," and the Fr. *gramme.*] A French weight of a thousand grammes, equal to 2.68 (or about $2\frac{2}{3}$) lbs. troy, or $2\frac{1}{5}$ lbs. avoirdupois.

Kilolitre, kĕ'lo-lĕtR', or kil'o-le'tẹr. [From the Gr. *χίλιοι*, a "thousand," and the Fr. *litre.*] A French measure of a thousand litres, equal to 35.3171 English cubic feet.

Kilometre, kil'o-me'tẹr. [From the Gr. *χίλιοι*, a "thousand," and the Fr. *mètre.*] (Fr. *Kilomètre*, kĕ'lo'mĕtR'.) A French measure of a thousand metres, or 4 furlongs, 213 yards, 1 foot, and 10.2 inches.

Ki'nạ-Ki'nạ.* A name for cinchona.

Ki'nāte. [Lat. **Ki'nas, a'tis.**] A combination of kinic acid with a base.

Kin-e-sip'ạ-thў. [Lat. **Kinesipathi'a**; from the Gr. *κινέω*, to "move," and *πάθος*, an "affection" or "disease."] A system of athletic exercises and feats of muscular strength, adopted as a means of curing disease. See MOVEMENT CURE.

Kin-e-sod'ic. [From the Gr. *κίνησις*, "motion," and *ὁδός*, a "way" or "road."] A term applied to the nervous substance believed to form the road (or means of conveyance) to motorial influences.

Kĭ-net'ic. [From the Gr. *κινέω*, to "move."] Motory.

King's E'vil. A name given to the scrofula, from the belief that it might be cured by the touch of royalty.

Kĭn'ic. [Lat. **Kin'icus.**] Called, also, **Cinchon'ic** and **Quin'ic.** A term applied to an acid obtained from cinchona.

Kinkina.* See KINA-KINA.

Ki'no.* "Kino." The Pharmacopœial name (U.S. 1870, 1880) for the inspissated juice of *Pterocarpus marsupium.* It is a powerful astringent. Kino is a name of various astringent gums. African Kino is the gum of *Pterocarpus erinaceus.* Botany Bay Kino is obtained from *Eucalyptus resinifera.* Butea Kino is the gum of *Butea frondosa.*

Kirsch-Wasser, kĕĕRsh-vȧs'sẹr. "Cherry Water." The German name of a liquor distilled from cherries, stones and all. It is sometimes called "the brandy of Switzerland."

Klep-to-ma'nĭ-ạ.* [From the Gr. *κλέπτω*, to "steal," and *μανία*, "madness."] A supposed species of moral insanity, actuating the subjects of it to pilfer and steal.

Knee. See GENU.

Knee-Jointed. See GENICULATE.

Knee-Pan. The patella.

Knee'-Pan-Shaped'. In Botany, broad, round, thick, convex on the lower surface, concave on the upper; patelliform.

Knit'ted. [Lat. **Connex'us.**] That stage in the union of fractured bones in which a certain degree of firmness is attained.

Knock-Knees. See GENUA VALGA.

Knot. [Lat. **No'dus**, a "knot."] A solid, inseparable joint; a node of a plant.

Knotted. See ARTICULATUS.

Ko'la Nuts. The seeds of the *Sterculia acuminata.* They are extensively used in Africa, and are chewed for their agreeable effects on the system.

Korectomia.* See CORECTOMIA.

Koumiss, or **Kumiss,** koo'mis. A nutritious drink in common use among the people of Tartary. It seems to be nothing more than mare's milk kept till it becomes sour. It is used for all complaints arising from weak digestion.

Kousso,* Koosso,* or Cusso,* koos'so. The flowers of the *Brayе'ra anthelmin'tica*, long used in Abyssinia, and more recently in Europe, as a remedy against *Tænia*, or tape-worm.

Krạ-me'rĭ-ạ.* An anomalous genus of undershrubs of the order *Polygalaceæ*, or *Leguminosæ*, natives of South America. Its station in the natural system is considered as doubtful. All or nearly all of the species are intensely astringent.

Krame'ria.* "Krameria," or Rhatany. The Pharmacopœial name (U.S. 1870, 1880) for the root of *Krameria triandra* and of *Krameria tomentosa.* It is generally tonic and powerfully astringent. It is useful in chronic diarrhœa, menorrhagia, and intermittent and putrid fevers. It is also styptic.

Krame'ria Ix-i'nạ.* False Rhatany, a plant, a native of Colombia and Guiana. It is a strong astringent, containing tannin. *Krameria tomentosa* is said to be a variety of *K. Ixina*, and has similar properties. It is a native of Brazil and Colombia.

Krame'ria Tri-an'drạ.* The systematic name of a plant used as an astringent, diuretic, and detergent. It belongs to the natural order *Polygalaceæ.* It is a native of Peru.

Kreasote. See CREASOTE.

Kreatin. See CREATIN.

Kreatinin. See CREATININ.

Kumiss. See KOUMISS.

Kyanite. See CYANITE.

Kȳ-ĕs'te-in, or **Kȳ-ĕs'te-ĭne** (frequently pronounced kī'ĕs-tīn), written also **Cyestein** and **Kiestein.** [From the Gr. *κύω* or *κνέω*, to "be pregnant," and *ἐσθής*, a "garment" or "covering," and, hence, used for "pellicle."] An albuminoid substance discovered floating as a pellicle on the urine of pregnant women,—not confined, however, to utero-gestation, but connected with the lacteal secretion. Taken in connection with other symptoms, it is considered a valuable aid in the diagnosis of pregnancy.

Kȳm-o-gra'phĭ-on.* [From the Gr. *κῦμα*, a "wave," and *γράφω*, to "write" or "describe."] A self-registering instrument for representing and recording the relation between the waves of the pulse and the undulations caused by respiration.

Kystotome. See CYSTOTOME.

L.

Labdanum,* or **Ladanum.*** See CISTUS CRETICUS.

La-bel'lum.* [Diminutive of the Lat. *la'bium*, a "lip."] The lip or lower petal of ringent, personate, or orchideous flowers.

La'bĭ-a,* gen. **La-bĭ-o'rum.** The plural of LABIUM, which see.

La'bia Pu-den'di.* The thick orifice of the vulva, or parts external to the *nymphæ*.

Lā'bĭ-al. [Lat. **Labia'lis.**] Belonging to the *labia*, or lips.

Labialis* (muscle). See ORBICULARIS ORIS.

La-bĭ-a'tæ,* or **Lamiaceæ,*** la-me-a'she-ē. A large natural order of monopetalous exogenous plants, mostly herbaceous, which abound in temperate regions. Their distinctive characters are square stems, opposite aromatic leaves, bilabiate corolla, didynamous or diandrous stamens, and a deeply four-lobed ovary. It includes Peppermint (*Mentha*), Lavender (*Lavandula*), and Sage (*Salvia*). Their aromatic qualities render many species valuable as carminative medicines.

Lā'bĭ-ate. [Lat. **Labia'tus**; from *la'bium*, a "lip."] Having two lips, as the snapdragon flower. The same as BILABIATE.

La-bĭ-at-ĭ-flo'rus.* [From the Lat. *la'bium*, a "lip," and *flos*, a "flower."] Having labiate flowers:—applied to *Compositæ* whose corolla is labiate.

Lab-ĭ-dom'e-ter. [Lat. **Labidom'etrum**; from the Gr. *λαβίς*, a "forceps," and *μέτρον*, a "measure."] An instrument for ascertaining the dimensions of the child's head in the pelvis, etc.

Labile, lā'bĕl'. [From the Lat. *la'bor*, to "glide," to "move gently along a smooth surface."] A French term used in electrotherapy to denote the character of the application to a diseased surface. When the poles are moved over the surface, the application is said to be *labile*; when they are kept in a fixed position, they are called *stabile*. See STABILE.

Lā'bĭ-ose. [From the Lat. *la'bium*, a "lip."] A term applied to a polypetalous corolla having the appearance of being labiate.

La'bĭ-um,* plural **La'bĭ-a.** [From the Gr. *λάπτω*, to "lap with the tongue," to "suck" or "sip."] (Fr. *Lèvre*, lĕvR.) The lip; but often applied to other parts from their resemblance to a lip. The lower lip of a labiate corolla. See LIP.

La'bium Lep-o-ri'num.* The malformation called *hare-lip*.

Lā'bor. [From the Lat. *labo'ro*, *labora'tum*, to "work," to "labor," to "be in distress."] The process of parturition, or childbirth. See PARTURITION.

La'bor, Com'plĭ-cāt-ed. That which is attended with some dangerous or troublesome accident or disease. See preceding article.

Labor, Morbid. See PARODYNIA.

Lab'o-ra-to-rȳ. [Lat. **Laborato'rium**; from *labo'ro*, *labora'tum*, to "work," to "labor."] (Fr. *Laboratoire*, lă'bo'ră'twăR'.) The place in which chemical operations are performed or pharmaceutical products are prepared. A place or building constructed for and devoted to analytical and experimental researches in chemistry, physical science, or metallurgy, and furnished with appliances and apparatus suitable for the same.

Lab'ra-dor-īte. A variety of felspar which is composed chiefly of silica, alumina, and lime. Many specimens have beautiful internal reflections, and display a change of colors when turned or viewed in different lights.

La'brum.* The lip, especially the upper lip, of insects. Also the brim of a vessel.

La-bur'num,* or **Gold'en Chain.** A popular name of the *Cyt'isus Labur'num*, or *Labur'num vulga're*, a low tree of the order *Leguminosæ*, a native of France, and cultivated for ornament. It bears long racemes of golden-yellow flowers. Its seeds are emetic and poisonous.

Lab'ȳ-rinth. [Lat. **Labyrin'thus**; from the Gr. *λαβύρινθος*, a "place having many windings."] That portion of the internal ear comprising the *cochlea*, *vestibulum*, and semicircular canals.

Lab-ȳ-rin'thĭ-form. [Lat. **Labyrinthifor'mis**; from *labyrin'thus*, a "labyrinth," and *for'ma*, "form."] Formed like a labyrinth; marked by sinuous, intricate lines:—applied to parts of plants.

Lab-ȳ-rin'tho-don.* [From the Gr. *λαβύρινθος*, a "labyrinth," and *ὀδούς*, a "tooth."] A genus of extinct, gigantic reptiles, characterized by remarkable complexity in the structure of the teeth.

Lac,* gen. **Lac'tis.** [From the Gr. *γάλα*, *γάλακτος*, "milk;" also the "sap" or "juice" of a plant.] (Fr. *Lait*, lā.) The Latin word for

"milk." Also the common name for a substance deposited by an insect on the branches of several kinds of trees in the East Indies,—namely, *Ficus religiosa*, *Croton lacciferum*, and *Ficus Indica*.

Lac'ca,* or **Gum Lac.** A resinous substance formed by an insect on several species of East Indian trees. It is supposed by some to be an exudation from the tree, caused by the puncture of an insect of the genus *Coccus*. It yields a fine red dye, and is used to make sealing-wax. When melted, it is called *Shell-lac*.

La'cer,* feminine **Laç'er-a,** neuter **Laç'er-um.** [From the Gr. λακίς, a "rent" or "cleft."] Torn; rent; lacerated:—applied as the specific name of certain plants, as *Habenaria lacera*.

Laç'er-ate. [Lat. **Lacera'tus**; for etymology see next article.] Divided into irregular segments, as if torn:—applied to parts of plants.

Laç-er-ā'tion. [Lat. **Lacera'tio, o'nis**; from *laç'ero*, *lacera'tum*, to "tear."] The act of tearing or rending.

La-cer'tĭ-dæ.* [From the Lat. *lacer'ta*, a "lizard."] A group of Saurians forming the second family in the Cuvierian system.

La-cer'tĭ-form. [Lat. **Lacertifor'mis**; from *lacer'ta*, a "lizard," and *for'ma*, "form."] Formed like a lizard.

Laç-er-tin'ĭ-dæ.* [From the Lat. *lacer'ta*, a "lizard."] A family of saurian reptiles.

La-cer-to-i'dēs.* [From the Lat. *lacer'ta*, a "lizard."] Resembling the lizard; lacer'toid:—applied to certain reptiles.

Laç'er-um Fo-ra'men,* plural **Laç'er-a Fo-ram'ĭ-na.** "Torn Opening." The name applied to two irregular openings, appearing as if they were torn, between the occipital and temporal bones.

Laeh-nan'thēs Tinc-to'rĭ-a.* The systematic name of Red Root, an indigenous plant of the order *Hæmodoraceæ*. Its root is astringent and tonic.

Laeh'rў-ma,* or **Lac'rў-ma.*** [Gr. δάκρυμα; from δάκρυω, to "weep."] (Fr. *Larme*, lȧrm.) The limpid secretion of the lachrymal gland. See TEAR.

Laeh'rў-mal. [Lat. **Lachryma'lis**, or **Lacryma'lis**; from *lach'ryma*, a "tear."] Belonging to the tears.

Lachrymal Bone. [Lat. **Os Lachryma'le.**] See UNGUIS OS.

Lachrymal Caruncle. See CARUNCULA LACHRYMALIS.

Lachrymal Duct. See DUCTUS AD NASUM.

Lach'rymal Gland. [Lat. **Glan'dula Lachryma'lis.**] The glomerate gland, situated above the external angle of the orbit, which secretes the tears.

La-cin-ĭ-a.* A slash; a deep taper-pointed incision; also a narrow lobe.

La-cin'ĭ-ate. [Lat. **Lacinia'tus**; from *lacin'ia*, a "fringe," or "rag."] Cut irregularly into narrow lobes (*laciniæ*); jagged; slashed:—applied to flowers and leaves.

La-cin-ĭ-flo'rus.* [From the Lat. *lacin'ia*, a "fringe," or "rag," and *flos*, a "flower."] Having fringed petals; laciniflo'rous.

La-cin-ĭ-fo-lĭ-a'tus.* [From the Lat. *lacin'ia*, a "fringe," or "rag," and *fo'lium*, a "leaf."] Having laciniated or fringed leaves.

La-cin'ĭ-form. [Lat. **Lacinifor'mis**; from *lacin'ia*, a "fringe," or "rag," and *for'ma*, "form."] Formed like a fringe:—applied to parts of plants.

La-cin-u-la'tus.* [From the Lat. *lacin'ula*, a "little fringe."] Fringed; having small, irregular divisions:—applied to plants.

La-cin-u-lo'sus.* [From the Lat. *lacin'ula*, a "little fringe."] Having, or full of, little fringes.

Lacis, lȧ'sē'. The French term for PLEXUS, which see.

Lacistemaceæ,* la-sis-te-ma'she-ē. [From *Lacistema*, one of the genera.] A small natural order of exogenous shrubs, natives of tropical America. The flowers of this order have each only one stamen.

Lac'mus.* Synonymous with LITMUS.

La-con'ĭ-cum.* [From the Lat. *Lacon'icus*, "belonging to Laconia," or Lacedæmon.] A name applied to a vapor-bath, from its having been much used by the ancient Lacedæmonians.

Lacryma.* See LACHRYMA.

Lact-ăl-bu'men.* [From the Lat. *lac*, "milk," and *albu'men*.] Literally, the "albumen of milk." Another name for CASEIN.

Lac'tāte. [Lat. **Lac'tas, a'tis.**] A combination of lactic acid with a base. The lactates are all soluble in water, and generally crystallize easily. Several of them are used in medicine. See FERRI LACTAS.

Lac'tate of Zinc. [Lat. **Zin'ci Lac'tas.**] A salt which is in the form of white crystalline plates, soluble in water and insoluble in alcohol. Its taste is highly saccharine, followed by a styptic after-taste. It is sometimes employed in epilepsy.

Lac-tā'tion. [Lat. **Lacta'tio, o'nis**; from *lac'to*, *lacta'tum*, to "suckle."] The act or the period of giving suck.

Lac'te-al. [Lat. **Lac'teus**; from *lac*, *lac'tis*, "milk."] (Fr. *Lacté*, lȧk'tȧ'.) Belonging to milk:—applied to certain vessels, because they absorb and convey a fluid (chyle) of a milky appearance.

Lac'te-als. [Lat. **Va'sa Chylif'era**, or **Va'sa Lac'tea.**] The chyliferous vessels. See LACTEAL.

Lac'te-in. [Lat. **Lactei'na**; from the same.] A substance obtained by the evaporation of milk, concentrating its essential qualities; solidified milk.

Lac'te-ous. [Lat. **Lac'teus**; from *lac*, *lac'tis*, "milk."] Milk-white; dull white, verging to blue.

Lac-tĕs'çence. [Lat. **Lactescen'tia**; from *lactes'co*, to "become like milk," to "have milk."] The quality of any liquid that is thick, white, and resembles milk.

Lac-tĕs'çent. [Lat. **Lactes'cens**; from the same.] Milky; resembling milk, or yielding a milky juice, as some plants.

Lac'tic. [Lat. **Lac'ticus**; from *lac*, *lac'tis*, "milk."] (Fr. *Lactique*, lăk'tĕk', or *Laiteux*, lą'tuh'.) A term applied to an acid obtained from milk,—also termed *Galactic Acid*.

Lac'tic Aç'id. [Lat. **Aç'idum Lac'ticum**.] A syrupy, nearly transparent liquid, of a pale wine color, having a slight, bland odor, and a very sour taste. Its specific gravity is 1.212. It is found in a number of animal secretions, and exists abundantly in the juice of flesh. It is usually obtained by decomposing the lactate of iron by alcohol. Lactic acid has been assigned a place in the U.S. Pharmacopœia of 1880. It has been used with advantage in some forms of dyspepsia. It is a constituent of gastric juice.

Lac-tif'er-ous. [Lat. **Lactif'erus**; from *lac*, *lac'tis*, "milk," and *fe'ro*, to "bear."] Producing or conveying milk:—applied to plants and to ducts in animals.

Lactif'erous Ducts. The milk-conveying ducts of the mammillary glands.

Lac-tĭ-flo'rus.* [From the Lat. *lac*, "milk," and *flos*, a "flower."] Having flowers white like milk; lactiflo'rous.

Lac-tif'u-gus.* [From the Lat. *lac*, "milk," and *fu'go*, to "drive away."] Lactifuge; preventing, or checking, the secretion of milk:—applied to medicines.

Lac'tin, or **Lac'tĭne.** [From the Lat. *lac*, "milk."] Sugar of milk.

Lac'tis,* the genitive of LAC, which see.

Lac-tiv'or-ous. [Lat. **Lactiv'orus**; from *lac*, "milk," and *vo'ro*, to "devour."] Milk-devouring, or living on milk.

Lac'to-çēle.* [From the Lat. *lac*, "milk," and the Gr. κήλη, a "tumor."] A collection of a milk-like fluid:—also termed *Galactocele*.

Lactometrum.* See GALACTOMETER.

Lac'to-scope. [Lat. **Lactos'copus**; from *lac*, "milk," and the Gr. σκοπέω, to "examine."] An instrument for ascertaining the quality and value of milk.

Lac'tose. [From the Lat. *lac*, *lac'tis*, "milk."] Sugar of milk.

Lac-tu'cą.* [From the Lat. *lac*, "milk;" named on account of its milky juice.] (Fr. *Laitue*, lą'tü'.) A Linnæan genus of the class *Syngenesia*, natural order *Compositæ*. It comprises many species of herbs, natives of Central Asia, Europe, and the United States.

Lactu'ca Są-ti'vą.* Garden Lettuce. It is sedative, and is used as a salad.

Lactu'ca Vĭ-ro'są.* ["Poisonous lettuce;" so called in allusion to its narcotic properties.] The strong-scented lettuce (termed also *Opium-lettuce*) from which lactucarium is obtained. It is a native of Europe.

Lac-tu-ca'rĭ-um.* "Lactucarium." [From the Lat. *lactu'ca*, "lettuce."] The Pharmacopœial name (U.S. 1870, 1880) for the concrete milk-juice of *Lactuca virosa*. It possesses in an inferior degree the anodyne and soporific properties of opium.

Lą-cu'ną,* plural **Lą-cu'næ.** [From the Lat. *la'cus*, a "lake" or "ditch."] Literally, a "ditch," "hole," or "chasm." A term applied in Anatomy to the excretory ducts of mucous glands; in Botany, to gaps, holes, deep depressions, or excavations on stems, leaves, etc.

Lacu'na Mag'ną.* "Large Lacuna." A small opening, or hollow larger than the rest, situated near the *fossa navicularis* of the male urethra.

Lą-cu'næ,* the plural of the Lat. LACUNA.

Lą-cu'nąr. [Lat. **Lacuna'ris**; from *lacu'næ*.] Having, or resembling, lacunæ.

Lacu'nar.* A Latin noun signifying an ornamented ceiling or roof.

Lacu'nar Or'bĭ-tæ.* "Roof of the Orbit." The roof of the orbit of the eye.

Lac-u-nose'. [Lat. **Lacuno'sus**; from *lacu'na*, a "gap" or "cavity."] Having lacunæ; full of depressions, gaps, or cavities:—applied to parts of plants.

La-cu-no'so-Ru'gose. Marked by deep, broad, irregular wrinkles, as the stone of the peach and the shell of the walnut.

La-cus'trĭne. [Lat. **Lacus'tris**; from *la'cus*, a "lake."] Belonging to a lake; growing in lakes, as many plants.

Ladanum.* See CISTUS CRETICUS.

La'dy's Slip'per. A popular name of *Cypripedium acaule* and other species of *Cypripedium*.

Læsio.* See LESION.

Læ'tĭ-ą A-pet'ą-lą.* A tree of the order *Flacourtiaceæ*, a native of tropical America. It yields a balsamic resin, which becomes white in contact with the air, like sandarach.

Lævigate. See LEVIGATE.

Lævigatio.* See LEVIGATION.

Læ'vis.* Smooth; free from asperities or hairs or any sort of unevenness:—applied to parts of plants.

Lą̆g-e-na'rĭ-ą Vul-ga'ris.* The Bottle-Gourd, or Calabash, a climbing plant of the order *Cucurbitaceæ*, a native of Africa and Asia, and cultivated in the United States. The hard rind of its fruit is used for vessels, dippers, etc.

La-ġen'ĭ-form. [Lat. **Lagenifor'mis**; from *lage'na*, a "bottle."] Having the form of a Florence flask, or of a gourd.

La-ger-strö'mĭ-ą.* A genus of plants of the order *Lythraceæ*, comprising several species of trees and shrubs, natives of tropical Asia. The *L. Indica* (Crape Myrtle), a native of India, is cultivated for the beauty of its wavy crisped flowers.

Lagerströ'mia Re-ġi'næ.* A magnificent timber-tree, a native of India and Burmah. Its wood, which is of a blood-red color, is used for boat-building. Its bark and leaves are used as purgatives, and its seeds are reputed to be narcotic.

Lag-ne'sis.* [From the Gr. λάγνης, "lustful."] Lust. The name of a genus in Good's nosology.

La-goon'. [Lat. **Lagu'na**; from *la'cus*, a "lake."] A shallow lake, or creek, mostly on

the margin of the sea, and communicating with the sea or a river; also a portion of tranquil water enclosed by certain islands of coral formation, called *atolls*.

Lag-oph-thăl'mĭ-a.* [From the Gr. λαγώς, a "hare," and ὀφθαλμός, the "eye."] A disease in which, from a defect in the upper eyelid, there is imperfect power of closing the eye:—so named, it is said, because this is the natural condition of the eye of the hare when asleep.

Lag-oph-thăl'mĭ-cus.* Belonging to lagophthalmia.

La-gop'o-dous. [Lat. **Lagop'odus**; from the Gr. λαγώς, a "hare," and πούς, a "foot."] A term applied to certain birds having the feet covered with soft hair or down.

La-go'pus, p'odis.* [From the same.] Hare-footed:—applied to the Grouse genus; also to the fox, and other animals; also, in Botany, to parts of plants closely covered with long hairs, as the rhizome of some ferns.

La-gos'to-ma.* [From the Gr. λαγώς, a "hare," and στόμα, a "mouth."] Another name for hare-lip.

Laine. The French for WOOL. See LANA.

Lait, lā. The French for MILK, which see.

Laiteux. See LACTIC.

Lake. A term applied to certain insoluble compounds,—pigments composed of aluminous earth and vegetable or animal coloring-matter, as carmine lake, madder lake. It appears to have been originally applied to *red* pigments only, and is perhaps a corruption of *lac*, a reddish resinous substance. See LAC.

Lal-lā'tion. [Lat. **Lalla'tio, o'nis.**] A term for the faulty pronunciation in which *l* is rendered unduly liquid or is substituted for an *r*.

Lamb-da-cis'mus.* [From *lamb'da*, the name of the Greek letter λ, or *l*.] The same as LALLATION, which see.

Lamb'doid, or **Lamb-doi'dal.** [From *lamb'da*, and the Gr. εἶδος, a "form" or "resemblance."] The same as LAMBDOIDES:—applied to a suture of the cranium.

Lamb-do-i'dēs.* [From the Gr. letter Λ, and εἶδος, a "form" or "resemblance."] Resembling the Greek letter Λ, or *lambda*.

Lambdoi'des Os.* The *os hyoides*, so called from its resembling the Greek letter Λ.

La-mel'la,* plural **La-mel'læ.** A thin plate. In Botany, a plate or thin part, such as is found at the end of many styles.

Lam'el-lar, or **Lam'el-late.** [Lat. **Lamella'ris**; from *lamel'la*, a "thin plate."] Composed of flat plates; having lamellæ; divided or dilated into thin plates:—applied to the structure of certain minerals; also to parts of plants.

La-mel-lĭ-bran'chĭ-ate. [Lat. **Lamellibranchia'tus,** or **Lamellibran'chius**; from *lamel'la*, a "thin plate," and the Gr. βράγχια, "gills."] Having the gills disposed symmetrically in large semicircular plates.

La-mel-lĭ-cor'nis.* [From the Lat. *lamel'la*, a "thin plate," and *cor'nu*, a "horn."] A term applied to insects having lamellar horns (or antennæ); lamellicornate.

Lam-el-lif'er-ous. [Lat. **Lamellif'erus**; from *lamel'la*, a "thin plate," and *fe'ro*, to "bear."] Bearing or having lamellæ:—applied to certain plants.

La-mel'lĭ-form. [Lat. **Lamellifor'mis**; from *lamel'la*, a "thin plate."] Formed of, or like, small plates.

Lam-el-lig'er-us.* [From the Lat. *lamel'la*, a "thin plate," and *ge'ro*, to "carry."] Lamellig'erous. The same as LAMELLIFEROUS.

La-mel'lĭ-pēs, e*dis.* [From the Lat. *lamel'la*, a "thin plate," and *pes*, a "foot."] Having flattened and lamelliform feet:—applied to a section of *Conchifera*.

Lam-el-lĭ-ros'trēs,* or **La-mel-lĭ-ros'trals.** [From the Lat. *lamel'la*, a "thin plate," and *ros'trum*, a "beak."] The name of a tribe of swimming birds, the fourth in the system of Cuvier, comprising those in which the margins of the beaks are furnished with numerous lamellæ or dental plates, arranged in a regular series, as in the swan, goose, and duck.

Lam'ĭ-na,* plural **Lam'ĭ-næ.** (Fr. *Lame*, lăm.) Any thin plate or layer of bone, membrane, or other substance. In Botany, the blade or expanded portion of a leaf or petal. In Mineralogy, the term is applied to the thin plates of minerals that have a lamellar structure.

Lam'ĭ-nāt-ed. [Lat. **Lamina'tus.**] A term applied to parts that consist of thin layers, or *laminæ*, lying closely upon each other:—in Mineralogy, applied to schistose rocks that may be easily divided into slabs or even layers.

Lam'ĭ-nāt-ing. [From the Lat. *lam'ina*, a "plate."] Separating into several plates or layers:—applied to parts of plants.

Lam'ĭ-nĭ-form. [Lat. **Laminifor'mis**; from *lam'ina*, a "thin plate," and *for'ma*, "form."] Flattened in the form of a thin plate.

La'mĭ-um Al'bum.* Dead Nettle, a plant of the order *Labiatæ*, a native of Europe. Its flowers are said to be astringent.

Lamp'black. A species of charcoal, of which the finest sort is produced by collecting the smoke from a lamp.

Lam-po-car'pus.* [From the Gr. λάμπω, to "shine," and καρπός, "fruit."] Having shining fruit; lampocarpous.

Lam-pro-pho'nĭ-a.* [From the Gr. λαμπρός, "bright," "clear," and φωνή, the "voice."] A clear and sonorous state of the voice.

Lam-pro-phyl'le-us.* [From the Gr. λαμπρός, "bright," "clear," and φύλλον, a "leaf."] In Botany, having smooth and bright leaves.

Lam'pro-pus.* [From the Gr. λαμπρός, "bright," "clear," and πούς, a "foot."] Having the *stipes*, or foot, of a bright appearance:—applied to plants.

Lamp'sa-na (or **Lap'sa-na**) **Com-mu'nis.*** Nipplewort, a plant of the order *Compositæ*, a native of Europe. Its leaves have been employed in diseases of the skin.

Lam'py-ris, i*dis.* [From the Gr. λάμπω, to "shine," and πῦρ, "fire."] The glow-worm.

Lam'pyris Noc-tĭ-lu'cạ.* The systematic name of the glow-worm.

La'nạ.* (Fr. *Laine*, lạn.) Wool; long, dense, matted hairs:—applied in Botany to a kind of pubescence which covers the surfaces of plants.

La'na Phil-o-soph'ĭ-cạ.* "Philosophical Wool." Flowers of zinc, or the snowy flakes of the white oxide of zinc which arise and float in the air from the combustion of that metal.

Lā'nate. [Lat. **Lana'tus**; from *la'na*, "wool."] Woolly; having a pubescence like wool:—applied to plants.

Lance-Lin'e-ar. Linear with a little of the lanceolate form:—applied to leaves, etc.

Lance-Ob'long. Oblong inclining to lanceolate, as the leaf of *Forsythia viridissima*.

Lance-O'vate. Ovate and gradually tapering towards the apex, as the leaf of the Persian Lilac.

Lance-O'void. Egg-shaped or terete, and swelling below, with a tapering apex.

Lance'-Shaped. The same as LANCEOLATE.

Lan-ce'o-lạ.* [Diminutive of the Lat. *lan'cea*, a "lance."] A little lance; a lancet, and, so, the same as LANCET, which see.

Lan'ce-o-late. [Lat. **Lanceola'tus**; from *lance'ola*, a "little lance."] Having the form of a little lance, or spear; tapering towards the apex; tapering to each end, as the leaf of the peach.

Lan'ceolate-Has'tate. Hastate with the principal lobe lanceolate, as the leaf of *Rumex acetosella* (Field Sorrel).

Lan'cet. [Lat. **Lancet'ta**; Fr. *Lancette*, lŏN'sĕt'.] A two-edged instrument for bleeding or other purposes.

Lan-cĭ-fo'lĭ-ous. [Lat. **Lancifo'lius**; from *lan'cea*, a "lance," and *fo'lium*, a "leaf."] Having lanceolate leaves or divisions of leaves.

Lan'cĭ-form. [Lat. **Lancifor'mis**; from *lan'cea*, a "lance," and *for'ma*, a "form."] Having the form of a lance or head of a lance:—applied to teeth, etc.

Lan'cĭ-nāt-ing. [Lat. **Lan'cinans, an'tis**; from *lan'cino*, to "thrust through," to "rend."] Piercing, as with a lance; lacerating:—applied to pain.

Langue, lŏNg. The French word for TONGUE, which see.

Lan'guor, o'r*is*.* A listless unwillingness to use exertion, with faintness. Languor, in Vegetable Pathology, denotes the condition of plants which from bad drainage, lack of water, etc., fall into premature decrepitude.

Lạ-nif'er-ous. [Lat. **Lanif'erus**; from *la'na*, "wool," and *fe'ro*, to "bear."] Bearing or producing wool:—applied to sheep and other animals.

Lan-ĭ-flo'rus.* [From the Lat. *la'na*, "wool," and *flos*, a "flower."] Having woolly flowers; laniflo'rous.

Lạ-nig'er-ous. [Lat. **Lan'iger**, or **Lanig'erus**; from *la'na*, "wool," and *ge'ro*, to "carry."] The same as LANIFEROUS.

La'nĭ-pēs, p'e*dis*.* [From the Lat. *la'na*, "wool," and *pes*, a "foot."] Having hairy petioles or feet.

Lạ-nose'. [From the Lat. *la'na*, "wool."] The same as LANATE, which see.

Lan-ta'nạ.* A genus of shrubby plants of the order *Verbenaceæ*, comprising several species, natives of tropical America, which are cultivated for ornament. *Lantana odorata* is said to be diuretic and diaphoretic.

Lanta'na Me-lis-sæ-fo'lĭ-ạ.* A plant, a native of South America. It is reputed to be diuretic and sudorific.

Lantanium.* See LANTHANUM.

Lantanum.* See LANTHANUM.

Lan'thạ-num,* **Lan'tạ-num,*** or **Lan-ta'nĭ-um.*** [From the Gr. *λανθάνω*, to "be concealed."] A rare metallic element, so named from its properties being concealed by those of cerium, with which it is found united. It also occurs in a beautiful mineral called *lanthanite*. Lanthanum combines with oxygen to form a heavy white oxide named *lanthana*.

Lạ-nu'gĭ-nous. [Lat. **Lanugino'sus**; from *lanu'go*, "down," or "soft hair."] Having soft hairs or down, cottony or woolly, as the leaves of the mullein.

Lạ-nu'go,* gen. **Lạ-nu'gĭ-nis.** [From the Lat. *la'na*, "wool."] Soft hairs, wool, or down.

Lan-u-lo'sus.* [From the Lat. *la'na*, "wool."] Having wool; full of wool.

Lap-ạ-ge'rĭ-ạ Ro'se-ạ.* A twining shrub or undershrub of the order *Philesiaceæ*, a native of Chili. It bears large red or rose-colored flowers of exquisite beauty. Its root is said to resemble in quality that of sarsaparilla. Professor J. H. Balfour considers it one of the most beautiful plants grown in modern greenhouses.

Lap'ạ-ro-çēle. [From the Gr. *λαπάρα*, the "flank," or "loins," and *κήλη*, a "tumor."] The same as LUMBAR HERNIA, which see.

Lap-ạ-rom-no-did'ў-mus.* [From the Gr. *λαπάρα*, the "flank," or "loins," *μόνος*, "single," and *δίδυμος*, "double."] A term applied in the plural (*Laparomnodid'ymi*) to twins born adhering together by the loins.

Lap-ạ-ro-sco'pĭ-ạ.* [From the Gr. *λαπάρα*, the "flank," or "loins," and *σκοπέω*, to "examine."] The examination of the loins, or side, by means of the stethoscope, pleximeter, etc.

Lap-ạ-rot'o-mus.* [See next article.] A name of the instrument for performing laparotomy; a lap'arotome.

Lap-ạ-rot'o-mў. [Lat. **Laparoto'mia**; from the Gr. *λαπάρα*, the "loins," and *τομή*, a "cutting."] Gastrotomy of the lumbar region.

Lap'ạ-rўs'te-ro-to'mĭ-ạ.* [From the Gr. *λαπάρα*, the "flank," or "loins," *ὑστέρα*, the "womb," and *τέμνω*, to "cut."] Cutting into the womb through the flank or abdomen.

Lap'ạ-thum.* [From the Gr. *λαπάζω*, to "carry off," to "empty;" because it is an aperient, or purgative.] The dock. See RUMEX.

Lap-ĭ-ci'dus.* [From the Lat. *la'pis*, a "stone," and *cæ'do*, to "cut," or "dig."] Dig-

ging into stone; embedded in rocks, etc.:—applied to animals and shells so found, as if they had dug their retreat there.

Lap'ĭ-dā-rў, or **Lap'ĭ-dist.** [From the Lat. *la'pis*, gen. *lap'idis*, a "stone."] One who cuts, polishes, and engraves gems; a dealer in gems or ornamental stones.

Lā-pid'e-ous. [Lat. **Lapid'eus**; from *la'pis*, a "stone."] Stony; belonging to stone:—applied to seeds or nuts.

Lap'ĭ-dēs,* the plural of LAPIS, which see.

Lapides Cancrorum.* See CANCRORUM LAPILLI.

Lap-ĭ-dĕs'çent. [Lat. **Lapides'cens, en'tis**; from *la'pis*, a "stone," and *-esco*, a Latin termination signifying to "grow."] Resembling a stone in hardness:—applied to parts of plants.

Lā-pid-ĭ-fĭ-cā'tion. [Lat. **Lapidifica'tio, o'nis**; from *la'pis*, a "stone," and *fa'cio*, to "make."] Conversion into stone; the process of changing to stone.

Lap'ĭ-dose. [From the Lat. *la'pis*, a "stone."] Growing in stony places:—applied to plants.

Lā-pil'li,* the plural of LAPILLUS, which see.

Lā-pil'lĭ-for'mis.* [From the Lat. *lapil'lus*, a "little stone."] Having the appearance of small stones; lapilliform.

Lap-il-lo'sus.* [From the same.] Having *lapilli*.

Lā-pil'lus,* plural **Lā-pil'li.** [Diminutive of the Lat. *la'pis*, a "stone."] A little stone. See CANCRORUM LAPILLI.

La'pis,* gen. **Lap'ĭ-dis.** [Gr. λᾶας, a "stone."] A Latin word signifying a "stone." The alchemists called by this term every fixed thing which does not evaporate, and hence even human blood was termed *La'pis anima'lis*.

Lapis Calaminaris.* See CALAMINA.

La'pis Căl-ca'rĭ-us.* The native carbonate of lime, or limestone.

La'pis Dĭ-vi'nus.* A substance composed of sulphate of copper, nitrate of potash, alum, and camphor, used as a collyrium, and named "divine" on account of its supposed virtues.

Lapis Infernalis.* See POTASSA FUSA.

La'pis Laz'u-li,* or **Ul-trā-mā-rīne'.** A beautiful blue mineral, which is used as a pigment and for the manufacture of ornamental articles. It is a silicate of lime and alumina. It occurs usually massive, and sometimes in crystals of the isometric system, which have a vitreous lustre. See ULTRAMARINE.

Lapis Philosophorum.* See PHILOSOPHER'S STONE.

Lap'pā.* Burdock. The Pharmacopœial name (U.S. 1870, 1880) for the root of *Lappa officinalis*. It is said to be diuretic and diaphoretic.

Lappaceus,* lap-pā'she-ŭs. [From the Lat. *lap'pa*, the "clitbur."] Curved at the extremity, like the *bracteæ* of the burdock; having the appearance of a *lappa* or bur,—that is, a round body covered with small hooks:—applied to parts of plants.

Lap'sā-nā (or **Lamp'sā-nā**) **Com-mu'nis.*** Nipplewort, a plant of the order *Compositæ*, a native of Europe. It is a lactescent bitter.

La'que-us Gut'tur-is.* Literally, "noose of the throat." A name applied to a malignant inflammation of the tonsils.

Larch-Tree. See LARIX.

Lardacé. See LARDACEOUS.

Lar-dā'ceous. [Lat. **Larda'ceus**; from *lar'dum*, "lard."] (Fr. *Lardacé*, lȧr'dȧ'sȧ'.) Resembling lard, or the fat of bacon.

Larda'ceous De-ġen-er-ā'tion, otherwise called **Wax'y Degenera'tion.** A term applied to certain organic alterations in the tissues, whereby these assume a translucent, wax-like appearance. One form of substance resulting from this change (found as a deposit between the proper elements of the tissues) has the remarkable property of becoming blue, like vegetable starch, by the simple action of iodine; whence Virchow applies to these altered structures the term *amyloid* (*i.e.*, "starch-like") *degeneration*. The tissues themselves participate in this peculiar change, and usually exhibit a blue or violet color, if the application of iodine be followed by a cautious addition of sulphuric acid.

Lar'de-us.* [From the Lat. *lar'dum*, the "fat of bacon," or "lard."] Belonging to lard.

Lar-diz-ā-bā-la'ce-æ.* A small natural order of exogenous twining shrubs, natives of China, Chili, etc. It comprises the *Lardizabala* and the *Akebia*. The *Lardizabala biternata*, a native of Chili, is an ornamental evergreen which bears purple flowers and an edible fruit.

Lar'dum.* The fat of bacon. See ADEPS SUILLUS.

La'rix.* The Larch. A genus of coniferous trees, having deciduous leaves, and comprising several species. The *Larix Americana*, American Larch, or Tamarack, is a native of the Northern United States and of British America.

La'rix Eū-ro-pæ'ā.* A name of the larch-tree from which Venice turpentine is procured.

Lark'spur. The popular name of several species of *Delphinium*.

Larme. See LACHRYMA.

Larmoiement, lȧr'mwȧ'mŏn'. [From the Fr. *larme*, a "tear."] A French term for EPIPHORA, which see.

Lar're-ā Mex-ĭ-ca'nā.* The systematic name of the Creasote Plant, an evergreen shrub of the order *Zygophyllaceæ*, a native of Arizona, Texas, Mexico, and New Mexico. It produces a resinous substance that has the odor of creasote and is used in medicine. Professor Stillman states that this shrub furnishes *shell-lac*.

Lar'va,* plural **Lar'væ.** A Latin word, signifying, originally, a "mask" or "spectre." A grub or larve:—applied in Entomology to the first condition of the metamorphosis of insects hatched from the egg:—so called because in this condition their real character seems to be masked.

Lar'val. [Lat. **Larva'lis**; from *lar'va*, a "mask," a "spectre."] Belonging to a mask or to larvæ:—applied to diseases in which the skin of the face is disfigured, as if covered by a mask.

Lar-vic'o-lus.* [From the Lat. *lar'va*, a "mask," and *co'lo*, to "inhabit."] A term applied to certain small insects existing in larvæ.

Lar'vĭ-form. [Lat. **Larvifor'mis.**] Formed like larvæ.

Lar-vip'ar-ous. [Lat. **Larvip'arus**; from *lar'væ*, and *pa'rio*, to "bring forth."] Producing larvæ in the place of eggs.

Laryngé. See LARYNGEAL.

Lăr-ŷn-ġe'ăl. [Lat. **Larynge'us**; from the Gr. *λάρυγξ*, the "larynx."] (Fr. *Laryngé*, lȧ'rȧN'-zhȧ', or *Laryngien*, lȧ'rȧN'zhe-ȧN'.) Belonging to the larynx.

Laryngien. See LARYNGEAL.

Lăr-ŷn-ġis'mus.* [From the Gr. *λαρυγγίζω*, to "vociferate."] Spasm of muscles closing the larynx.

Lăr-ŷn-ġi'tis, i*dis.* [From the Gr. *λάρυγξ*, the "larynx."] Inflammation of the larynx, of which there are several forms or varieties, *acute*, *chronic*, *tubercular*, *spasmodic*, and *œdematous*.

Lą-rŷn-go-gra'phĭ-ą.* [From the Gr. *λάρυγξ*, the "larynx," and *γράφω*, to "write."] A description of the larynx.

Lăr-ŷn-gol'o-ġў. [Lat. **Laryngolo'gia**; from the Gr. *λάρυγξ*, the "larynx," and *λόγος*, a "discourse."] A treatise on the larynx; the science of the larynx.

Lăr-ŷn-goph'o-nў, or **Lăr-ŷn-goph'o-nĭsm.** [Lat. **Laryngopho'nia**, or **Laryngophonis'mus**; from the Gr. *λάρυγξ*, the "larynx," and *φωνή*, the "voice."] The sound of the voice, heard by means of the stethoscope, within the larynx.

Lą-rŷn-goph-this'ĭ-cus.* Belonging to laryngophthisis.

Lăr-ŷn-goph'thĭ-sis.* [From the Gr. *λάρυγξ*, the "larynx," and *φθίσις*, a "wasting."] A disease of the larynx, connected with pulmonary consumption; laryngeal phthisis.

Lą-rŷn-gor-rhœ'ą.* [From the Gr. *λάρυγξ*, the "larynx," and *ῥέω*, to "flow."] A pituitous or serous flow from the larynx.

Lą-rŷn'go-scope. [From the Gr. *λάρυγξ*, the "larynx," and *σκοπέω*, to "view."] An instrument for inspecting the larynx, constructed on the same principle as the OPHTHALMOSCOPE, which see.

Lăr-ŷn-gos'co-pў. [See preceding article.] Inspection of the larynx.

Lą-rŷn-go-spas'mus.* [From the Gr. *λάρυγξ*, the "larynx," and *σπασμός*, a "spasm."] The same as LARYNGISMUS, which see.

Lą-rŷn-go-ste-no'sis.* [From the Gr. *λάρυγξ*, the "larynx," and *στένωσις*, a "contraction."] Contraction of the larynx.

Lăr-ŷn-got'o-mus.* [From the Gr. *λάρυγξ*, the "larynx," and *τέμνω*, to "cut."] An instrument for performing laryngotomy; a laryn'gotome.

Lăr-ŷn-got'o-mў. [Lat. **Laryngoto'mia**; from the same.] The operation of cutting into the larynx.

Lăr'ŷnx,* gen. **Lą-rŷn'ġis.** [Gr. *λάρυγξ*.] The upper part of the trachea, or windpipe; in a general sense, the organ of the voice.

Las-er-pit'ĭ-um.* A genus of plants of the order *Umbelliferæ*, mostly natives of Europe. The seeds and root of *Laserpitium Siler* have been employed as diuretic and vulnerary.

La-sĭ-an'thus.* [From the Gr. *λάσιος*, "hairy," and *ἄνθος*, a "flower."] Having hairy or rough flowers.

La-sĭ-o-car'pus.* [From the Gr. *λάσιος*, "hairy," and *καρπός*, "fruit."] Having hairy fruit.

La-sĭ-o-pe-ta'le-us.* [From the Gr. *λάσιος*, "hairy," and *πέταλον*, a "petal."] Having hairy petals.

La-sĭ-op'ter-us.* [From the Gr. *λάσιος*, "rough," or "hairy," and *πτερόν*, a "wing."] Having hairy wings, as the *Vespertil'io lasiop'terus*, a species of bat.

Lą-sĭ'o-pus.* [From the Gr. *λάσιος*, "hairy," and *πούς*, a "foot."] Having the stipes hairy.

La-sĭ-o-sper'mus.* [From the Gr. *λάσιος*, "hairy," and *σπέρμα*, a "seed."] Having hairy fruit or seed:—applied to certain plants.

La-sĭ-os'tą-chўs.* [From the Gr. *λάσιος*, "hairy," and *στάχυς*, an "ear of corn."] Having flowers in rough, hairy ears.

La'sĭ-pēs, p'e*dis.* The same as LASIOPUS.

La-sĭ-u'rus.* [From the Gr. *λάσιος*, "hairy," and *οὐρά*, a "tail."] Having hairy peduncles or tails.

Las'sĭ-tude. [Lat. **Lassitu'do, d*inis***; from *las'sus*, "weary," "tired."] Literally, "weariness," or "fatigue," but usually denoting a sensation of exhaustion and weakness independent of fatigue.

Lat. dol. = *Lat'eri dolen'ti.** "To the side affected."

Lā'tent. [Lat. **La'tens**; from *la'teo*, to "lie hid."] Lurking; concealed; lying hid; undeveloped:—applied to buds that survive long without growing. They often remain in a latent state for several years; and if the other buds happen to be killed, these older latent buds grow to supply their place.

Latent Heat. See CALORIC.

La'tent Pe'rĭ-od. That space of time during which certain diseases lurk in the system before their presence is manifested by symptoms.

Lat'er-ąl. [Lat. **Latera'lis**; from *la'tus*, *lat'eris*, the "side."] Belonging to the side; on the side, as distinguished from *medial*, *central*, or *terminal*:—applied to buds that are not terminal, but appear on the side of a stem. All buds are either terminal or lateral, which latter are termed also *axillary*.

Lat'eral Op-er-ā'tion. [Lat. **Opera'tio Latera'lis.**] One of the operations of lithotomy, being performed on the left side of the perineum.

Lat'eral Si'nus-es. Two veins of the *dura mater*; the right and left lateral sinuses running along the crucial spine of the occipital bone.

Lat-er-ĭ-flo'rus.* [From the Lat. *la'tus*, the "side," and *flos*, a "flower."] Having lateral flowers, as the *Scutellaria lateriflora*.

Lat-er-ĭ-fo'lĭ-ous. [Lat. **Laterifo'lius**; from *la'tus*, the "side," and *fo'lium*, a "leaf."] Growing at the side of a leaf.

Lat-er-ig'ra-dus.* [From the Lat. *la'tus*, the "side," and *gra'dior*, to "go," to "step."] Going or moving sideways:—applied to spiders and to certain *Crustacea*.

Lat-er-ĭ-ner'vus,* **Lat'er-ĭ-nerved.** [From the Lat. *la'tus*, the "side," and *ner'vus*, a "nerve."] A term applied to leaves in which the nervures diverge from the middle; also to straight-veined leaves, as in grasses.

Lat-e-rĭ'tious. [Lat. **Lateri'tius**; from *la'ter*, a "brick."] A term applied to a sediment like brick-dust in the urine; also to a brick-red color.

Lat-er-o-flex'ion. [Lat. **Lateroflex'io**; from *la'tus*, *lat'eris*, the "side," and *flec'to*, *flec'tum* or *flex'um*, to "bend."] A bending to one side.

Lat-er-o-ver'sion. [Lat. **Laterover'sio**; from *la'tus*, the "side," and *ver'to*, *ver'sum*, to "turn."] A turning to one side.

La'tex,* gen. **Lat'ĭ-cis.** A Latin term for "liquor" or "juice" in general:—applied to the proper juice, or vital fluid, of plants, especially milky juice, or a viscid fluid.

Lath'ў-rus.* A genus of herbs of the natural order *Leguminosæ*, comprising many species, natives of Europe, the United States, etc. Some of them are cultivated for their edible seeds. The *Lath'yrus odora'tus* (Sweet Pea) is cultivated for its showy, sweet-scented flowers.

Lathyrus Tuberosus.* See OROBUS TUBEROSA.

Lat-ĭ-cif'er-ous. [Lat. **Laticif'erus**; from *la'tex*, *lat'icis*, a "liquor" or "juice," and *fe'ro*, to "bear."] Producing or containing elaborated sap, or special juices of plants, as the *laticiferous tissue*.

Lat-ĭ-flo'rus.* [From the Lat. *la'tus*, "broad," and *flos*, a "flower."] Having broad flowers; latiflo'rous.

Lat-ĭ-fo'lĭ-ous. [Lat. **Latifo'lius**; from *la'tus*, "broad," and *fo'lium*, a "leaf."] Having broad leaves:—applied as the specific name of many plants.

La-tis'sĭ-mus.* [The superlative degree of *la'tus*, "broad."] The "broadest:"—applied to the *platysma myodes*, which is called the *latissimus colli* (the "broadest [muscle] of the neck"), and to the *aniscalptor* of Cowper, more frequently called the *latissimus dorsi* (the "broadest [muscle] of the back").

Lat'ĭ-tude. [Lat. **Latitu'do**; from *la'tus*, "broad."] Literally, "breadth." The distance of a heavenly body from the ecliptic, or of a place from the equator.

Lat'ticed. Crossing each other obliquely like net-work; cancellate. See CANCELLATUS.

Laudable Pus. See HEALTHY PUS.

Lau'da-num. [From the Lat. *lau'do*, to "praise."] The *Tinctu'ra O'pii*. It has the medical properties of opium, and is used for all the purposes to which opium itself is applied.

Lauraceæ,* lau-ra'she-ē. A natural order of exogenous trees, found in the cooler parts of the tropics, and in some temperate countries. It comprises about fifty genera and four hundred and fifty species of aromatic and fragrant trees, among which are the *Camphora* (Camphor), the *Cinnamomum* (Cinnamon), the *Laurus nobilis* (the True Laurel), the *Nectandra* (Bebeeru), the *Persea*, and the *Sassafras*. The species are generally tonic, stimulant, and aromatic. Camphor is an abundant product of this order.

Lau-rā'ceous. [Lat. **Laura'ceus.**] Resembling the *Laurus*.

Lau'rel. The genus *Laurus*. Laurel is a name often misapplied to many species of plants. The true laurel is *Laurus nobilis*. The tree called Common Laurel in England is the *Prunus Laurocerasus*. In the United States, laurel is a popular name for several species of *Kalmia*, *Magnolia*, and *Rhododendron*.

Lau'rel, Cher'rў. The *Prunus Laurocerasus*.

Lau-re'lĭ-a Sem-per-vi'rens.* An aromatic tree of the order *Atherospermaceæ*, a native of Chili. Its seeds are used as a spice in Peru.

Laurier. See LAURUS.

Lau'ro-cĕr'a-sus.* A Pharmacopœial name for the *Prunus Laurocerasus*.

Lau'rus.* (Fr. *Laurier*, lō're-ā'.) A Linnæan genus of the class *Enneandria*, natural order *Lauraceæ*.

Laurus Benzoin.* See LINDERA BENZOIN.

Lau'rus Cam'pho-ra.* The Linnæan name of the camphor-tree. See CAMPHORA OFFICINARUM.

Lau'rus Cas'sia* (kash'e-a). The systematic name of the *Cassia lignea* (or wild cinnamon-tree), the bark of which, according to some authorities, is called *Cassia lignea*, and the leaves *Folia malabathri*.

Lau'rus Cin-na-mo'mum.* A name of the cinnamon-tree.

Lau'rus Cu-lĭ-la'wan.* The systematic name of a species of laurel, the bark of which is called *Cortex Culilawan* and closely resembles cinnamon.

Lau'rus Nob'ĭ-lis.* The Bay-Laurel, or Sweet Bay. It is an aromatic evergreen tree, a native of Southern Europe and Asia. It is remarkable for the beauty of its foliage, which was used by the ancient Greeks and Romans to decorate the brows or heads of heroes and victors. Its fruit and leaves have a fragrant odor and a bitter, aromatic taste. They afford a fixed oil and a volatile oil which are used in medicine. This tree was called Daphne by the ancient Greeks.

Lau'rus Sas'sa-fras.* The sassafras-tree.

Lava, lä'va or läv'a. [Perhaps from the Lat. *la'vo*, to "wash," and hence to "run," as water."] A generic term for all mineral substances melted by volcanic fire and cast forth in the form of burning streams.

Lav-a-men'tum.* [From the Lat. *la'vo*, to "wash."] A clyster, or injection.

Lavande. See LAVANDULA.

La-van'du-la.* [From the Lat. *la'vo*, to "wash;" because it was much used in lotions.]

(Fr. *Lavande*, lȧ'vǒNd'.) Lavender. A Linnæan genus of the class *Didynamia*, natural order *Labiatæ*.

Lavan'dula.* "Lavender." The Pharmacopœial name (U.S. 1870, 1880) for the flowers of *Lavandula vera*. Lavender is an aromatic stimulant and tonic.

Lavan'dula Spi'ca.* The common lavender-plant. It is a native of Europe.

Lavan'dula Stoe'chas.* An aromatic plant, a native of Arabia or Europe. Its flowering tops form the base of the *sirop de stœchas*, which is reputed to be tonic and sudorific. The plant is used as an antispasmodic by the Arabs.

Lavan'dula Ve'ra.* The same as LAVANDULA SPICA.

Lav-a-te'ra.* A genus of shrubby plants of the order *Malvaceæ*, natives of the Levant and Mediterranean region. They are mucilaginous, and have been used as emollients.

Lavender. See LAVANDULA.

Lav'en-der Blue. Blue tinged with a little red and more gray.

Lav'ender Col'or. Pale blue with a slight mixture of gray.

Lavendula.* See LAVANDULA.

Lav-ĭ-pe'dĭ-um.* [From the Lat. *la'vo*, to "wash," and *pes*, *pe'dis*, a "foot."] A bath for the feet.

Law. [Gr. *νόμος*; Lat. **Lex**; Fr. *Loi*, lwȧ.] The constant and regular mode or order according to which an energy or agent acts or operates. The constant relations of similitude and sequence which connect the phenomena presented by the beings of the universe. A law of nature is a statement of what will happen in certain general contingencies,—an assurance that a certain cause will always produce the same effect. The knowledge of laws and principles is the most important part of science.

Law-so'nĭ-a.* A genus of shrubs of the order *Lythraceæ*, consisting of a single species, *Lawsonia inermis* or *alba*. See HENNA.

Lawso'nia In-er'mis.* The systematic name of the plant from which henna is obtained. It is a shrub found in India, Persia, Egypt, etc.

Lax. [Lat. **Lax'us**, "loose."] In Botany, loose in texture, or sparse; the opposite of *crowded*.

Lax-ā'tion. [Lat. **Laxa'tio**, **o'nis**; from *lax'o*, *laxa'tum*, to "loosen."] A loosening, or purgation.

Lax'a-tĭve. [Lat. **Laxati'vus**; from the same.] Slightly purgative. Laxatives are small doses of simple purgatives such as magnesia, olive oil, sulphur, cassia, honey, prunes, and tamarinds.

Lax-a'tor, o'ris.* [From the same.] A relaxer:—applied to muscles.

Laxa'tor Tym'pa-ni.* A muscle of the tympanum attached to the handle of the malleus.

Lax-ĭ-cos-ta'tus.* [From the Lat. *lax'us*, "loose," "free," and *cos'ta*, a "rib."] Furnished with solitary or distinct ribs.

Lax-ĭ-flo'rus.* [From the Lat. *lax'us*, "loose" or "free," and *flos*, a "flower."] Having loose or scattered flowers; laxiflo'rous.

Lax-ĭ-fo'lĭ-us.* [From the Lat. *lax'us*, "loose" or "free," and *fo'lium*, a "leaf."] Having leaves not crowded together; laxifo'lious.

Lax'ĭ-tў. [Lat. **Lax'itas**; from *lax'us*, "loose."] Looseness; want of tenseness; the state of a tissue which is loose or relaxed and lacks tone.

Lax'us.* Literally, "loose;" hence, spread out; diffused; lax:—applied to a condition of animal fibre.

Lay'er. In Geology, a single member or bed in a stratified rock. It may be thick or thin. See STRATUM.

Laz-a-ret'to. [Italian; from *Laz'arus*, the name of the beggar in the parable of Luke xvi.] A hospital for persons afflicted with contagious diseases; a building set apart for the performance of quarantine.

Laz'u-līte. A blue mineral which is a hydrous phosphate of alumina and magnesia.

Lb., or **Lib.** = *Li'bra.** A "pound."

Lĕad. [Lat. **Plum'bum**; Gr. *μόλυβδος*; Fr. *Plomb*, plǒN.] A soft, flexible, inelastic metal, of a bluish-gray color. It is ductile and malleable, but possesses very little tenacity. It has a bright metallic lustre when freshly cut, but quickly tarnishes on exposure to air. Its specific gravity is 11.38. It fuses at about 600°. The most important ore of lead is the sulphuret,—the *galena* of the mineralogists. For the compounds of lead, see PLUMBUM, PLUMBI, etc.

Lead-Col'ored. Slate-colored, with a slight metallic lustre.

Lead, Sugar of. See PLUMBI ACETAS.

Leadwort. See PLUMBAGO.

Lēaf. [Lat. **Fo'lium**, **Frons**.] An organ performing in plants the functions of respiration and assimilation. It consists of the *lamina* and petiole, and is the type of the other organs. (See TYPE.) The leaf is an expansion of the bark placed symmetrically with regard to other leaves. (See PHYLLOTAXY.) In an incomplete or modified state, it constitutes all the forms of the appendages of the axis. "We may regard leaves as contrivances for increasing the surface of that large part of the plant which is exposed to light and air."—(GRAY.) Leaves are variously denominated, according to their position, *primordial* or *seminal*, *radical*, *rameal*, and *floral*. All leaves are either simple or compound. The petals, sepals, and all other organs arising from the ascending axis are considered as modifications or transformations of a leaf. See FOLIAGE.

Leaf'-Buds. Buds which produce leaves (but no blossom) and develop into a leafy branch. They are called *normal*, or *axillary*, when produced at the axils; *adventitious*, when they occur in places not axillary.

Leaf'-Like. Foliaceous:—applied to an expansion resembling a leaf.

Leaf-Stalk. See PETIOLE.

Leaf'let. One of the divisions of a compound leaf. See FOLIOLE.

Leaf'ȳ. Foliose; furnished with leaves, or abounding in leaves.

Leanness. See EMACIATION.

Leather-Like, or **Leathery.** See CORIACEOUS.

Leatherwood. See DIRCA PALUSTRIS.

Lĕav'en. [Fr. *Levain*, lẹh'vĀN'.] A substance which causes fermentation in that with which it is mixed, and is used for raising bread or making it light. A common sort of leaven is the sour paste of wheat flour which has undergone a degree of fermentation.

Le-ca-no'ra.* A genus of Lichens, several species of which furnish coloring-matter (blue or purple). The *L. Tartarea* affords the cudbear of commerce. The *Lecanora esculenta*, found in Armenia and Algeria, is used as food. It is stated that it contains 66 per cent. of oxalate of lime.

Leç'ĭ-thĭne. [From the Gr. λέκιθος, the "yellow of egg."] A complex, neutral, definite, fat body which is found in the brain, in venous blood, and in eggs. It results from the union of neurine with phospho-glyceric acid and a fat acid.

Lec'tus.* A bed or couch.

Lecythidaceæ,* les-ith-e-da'she-ē. [From *Leç'ythis*, one of the genera.] A natural order of exogenous trees, found in South America. The well-known Brazil-nut is a product of this order. See BRAZIL-NUT.

Leç'ȳ-this.* A genus of trees of the order *Lecythidaceæ*, comprising many species, natives of Brazil, Venezuela, etc. The *Lecythis Zabucajo*, a native of Brazil, bears edible nuts called *sapucaia* nuts, which are said to be superior to the Brazil-nuts.

Ledoyen's (lẹh·dwä'yŏNz') **Dis-in-fect'ing Flu'id.** A solution of nitrate of lead in water.

Le'dum.* A genus of shrubs of the natural order *Ericaceæ*, natives of Europe and North America.

Le'dum Lat-ĭ-fo'lĭ-um.* Labrador Tea, a native of the Northern United States and Canada. Its leaves, which are covered with brown, rusty wool on the under surface, are reputed to be pectoral and tonic.

Le'dum Pa-lus'tre.* The systematic name of Marsh Tea, an evergreen shrub, a native of Europe, Canada, etc. Its leaves have a balsamic odor and aromatic taste, and afford an essential oil (Oil of Ledum). They are used in medicine.

Lee'a.* A genus of shrubby plants (rarely trees) of the order *Vitaceæ*, natives of tropical Asia and Africa. The root of *Leea sambucina*, a native of India, is employed as a remedy for colic.

Leech. See HIRUDO MEDICINALIS.

Leg'ume. [Lat. **Legu'men, Legu'minis;** from *le'go*, to "gather up."] (Fr. *Légume*, lā'güm'.) A solitary, simple, two-valved pod or pericarp, opening by both sutures, and bearing seeds on one suture only, as the pea-pod. The term legume is applied to the fruit of all plants of the order *Leguminosæ*, whatever their form, and whether they open or not.

Le-gu-mĭ-na'ris.* [From the Lat. *legu'men*, a "legume."] A term applied to the dehiscence of pericarps by a marginal suture; legu'minar.

Le-gu'mĭne. [From the same.] A vegetable proteid or albuminoid which abounds in the seeds of beans, peas, and other leguminous plants. It occurs in many other seeds and nuts. It is similar in chemical properties to caseine and gluten, and is a very nutritious food, containing much nitrogen and some phosphorus.

Le-gu'mĭ-nĭ-for'mis.* [From the Lat. *legu'men*, a "legume."] Having the form of a legume; leguminiform.

Le-gu-mĭ-no'sæ,* or **Fabaceæ,*** fa-ba'-she-ē. A large and important natural order of polypetalous exogenous plants, found in all parts of the world. It includes a variety of useful and beautiful species, some of which, as clover and lucern, are cultivated for cattle; others, as peas and beans, form part of the food of man. Indigo, liquorice, gum arabic, copaiba, the tamarind, rosewood, kino, and senna are products of this order, which comprises about seven thousand species. The properties of many species are tonic, purgative, or narcotic.

Le-gu'mĭ-nous. [Lat. **Legumino'sus**; from *legu'men*, a "legume."] Having legumes, or belonging to the order *Leguminosæ*.

Leīm'ma.* [Gr. λεῖμμα; from λείπω, to "leave."] The residue, or what is left of a thing.

Leī-o-car'pus.* [From the Gr. λεῖος, "smooth," and καρπός, "fruit."] Having smooth fruit, as the *Heylandia leiocarpa*, and *Panicum leiocarpum*.

Leī-o-çeph'a-lus.* [From the Gr. λεῖος, "smooth," and κεφαλή, the "head."] Having a smooth head, or hat:—applied to a species of mushroom.

Leī-o-phȳl'lus.* [From the Gr. λεῖος, "smooth," and φύλλον, a "leaf."] Having smooth leaves; smooth-leaved.

Leī-o-pi'lus.* [From the Gr. λεῖος, "smooth," and πῖλος, a "hat."] Having a smooth or glabrous hat:—used in the same manner as LEIOCEPHALUS.

Leī'o-pus, p'odis.* [From the Gr. λεῖος, "smooth," and πούς, a "foot."] Having a smooth stipes, as the *Helotium leiopus*.

Leī-o-sper'mus.* [From the Gr. λεῖος, "smooth," and σπέρμα, a "seed."] Having smooth seed, as the *Galium leiospermum*.

Leī-o-sta'chȳ-us.* [From the Gr. λεῖος, "smooth," and σταχύς, an "ear of corn."] Having smooth ears, the glumes which compose them being smooth and glabrous, as the *Trista'chya leiosta'chya*.

Leī-phæ'mĭ-a.* [From the Gr. λείπω, to "leave," also to "be wanting," and αἷμα, "blood."] Deficiency of blood, or poverty of blood.

Leī-po-thȳm'ĭ-a.* [From the Gr. λείπω, to "relinquish," to "fail," and θυμός, the "mind."] The sensation of sinking, or fainting; *deliquium animi;* syncope.

Lem'ma,* gen. **Lem'ma-tis.** [Gr. λέμμα; from λέπω, to "decorticate."] The *cortex*, or bark; the coat, or covering, of plants.

Lem'ma.* [Gr. *λῆμμα*; from *λαμβάνω*, to "receive," to "take."] Something assumed or taken for granted as the basis of an argument; also the demonstration of some premise, in order to render what follows more easy.

Lemnaceæ,* lem-na'she-ē, or **Pistiaceæ,*** pis-te-a'she-ē. A natural order of endogenous plants, often found in ditches. It includes the *Lemna* (Duckweed).

Lem'on. [Lat. **Li'mon, o'nis.**] The fruit of the *Citrus Limonum*, an evergreen tree, a native of Asia, and cultivated in nearly all warm countries. It is found growing wild in Northern India. It bears fragrant white flowers, tinged with purple on the outer surface. Lemons are imported into the United States from the West Indies and the Mediterranean. Lemon-juice is an excellent remedy or specific for the prevention and cure of scurvy. Lemons rapidly deteriorate on keeping, if exposed to the air. If they are covered with a varnish of shellac dissolved in alcohol, they continue sound for many months.

Lem-on-āde'. A beverage composed of lemon-juice diluted with water and sweetened.

Lem'on Scur'vy-Grass. The *Cochlea'ria officina'lis*, regarded as a powerful antiscorbutic.

Lem'on-Yel'low. The color of a ripe lemon. It is one of the fundamental colors of Mineralogy.

Lem'ons, Aç'id of. Citric acid.

Lem'ons, Salt of. Oxalic acid, with a small portion of potash.

Le-mu'rĭ-dæ.* A family of lemuroid animals, comprising the *Lemur*, *Indris*, *Loris*, and several other genera. They are considered either as a distinct sub-order of *Primates* or as forming a separate order. Some of the species are found only in Madagascar, and others are found in Africa.

Lem'u-ris.* [From the Lat. *lem'ures*, "ghosts," or "hobgoblins."] Lemurs. A genus of quadrumanous mammals, of the order *Primates*, comprising several species, natives of Madagascar. They are arboreal, and resemble monkeys, but approach the quadrupeds in having an elongated head with a sharp projecting muzzle. *Lemur* is the common name of a group including other genera of *Lemuridæ*.

Lenientia,* le-ne-en'she-a. [From the Lat. *le'nio*, to "allay."] Medicines which allay irritation.

Len'ĭ-tive. [Lat. **Leniti'vus**; from the same.] Assuaging; gently palliating. Lenitives protect mucous membranes or raw surfaces from the action of irritants. Glycerin and bland fixed oils are lenitive.

Len'itive E-lec'tu-a-rў. The *Confectio Sennæ Composita.*

Lens,* gen. **Len'tis.** [A "lentil;" because it is usually convex like a lentil.] A piece of glass, or transparent substance, formed so as, by its refraction, to converge or scatter the rays of light. Lenses are usually made of crown glass or flint glass. See EYE.

Lens-Shaped. See LENTICULAR.

Lentibulariaceæ,* len-tib-u-la-re-a'she-ē, or **Len-tib-u-la'çe-æ.*** [From *Lentibula'ria*, one of the genera.] A natural order of exogenous herbaceous plants, found in marshes and streams. They are most abundant in the tropics.

Len-tĭ-cel'la,* plural **Len-tĭ-cel'læ.** [From the Lat. *lens*, a "lentil."] A term applied to ruddy oval points upon the bark of the branches of trees. Also the same as LENTICULA, which see.

Len-tĭ-cel-la'tus.* Having *lenticellæ.*

Len-tic'u-la.* [Diminutive of the Lat. *lens*, a "lentil."] A smaller kind of lentil. Also an instrument for removing irregularities of bone from the edge of the perforation made in the cranium with the trephine.

Len-tic'u-lar. [Lat. **Lenticula'ris**; from *lens*, a "lentil."] Lens-shaped; double-convex: —applied to seeds, bones, and other parts of animals; also to minerals. Dana defines this term, "thin, with acute edges, something like a lens, except that the surface is not curved."

Lentic'ular Gan'glĭ-on. A small reddish body near the back part of the orbit of the eye, between the optic nerve and the external *rectus* muscle:—also termed *Ophthalmic ganglion.*

Lenticular Nucleus. See NUCLEUS LENTICULARIS.

Lentic'ular Pa-pil'læ. The papillæ situated at the posterior part of the tongue.

Len-tĭf'er-us.* [From the Lat. *lens*, a "lentil," and *fe'ro*, to "bear."] A term applied to flowers having receptacles in the form of lentils.

Len'tĭ-form. [Lat. **Lentifor'mis**; from *lens*, a "lentil," and *for'ma*, "form."] Formed like a lentil or lens.

Len-tiġ'er-us.* [From the Lat. *lens*, a "lentil," and *ge'ro*, to "carry."] Lentigerous. The same as LENTIFERUS.

Len-tiġ'ĭ-nose. [See next article.] Freckled or dusty-dotted, as the parts of some plants; covered with minute dots as if dusted.

Len-ti'go, ġ'inis.* [From the Lat. *lens*, a "lentil."] A cutaneous affection, chiefly of the face, in which there are spots of the color and size of the lentil-seed.

Len'til. The genus *Ervum*; the seed of ERVUM, which see.

Len-tis'cus.* A name for the *Pistacia lentiscus.*

Len'tor, o'ris.* [From the Lat. *len'tus*, "slow," "tough," "viscid."] Viscidity, or gluey consistence, of any fluid.

Le-o-no'tis Le-o-nu'rus.* A South African plant of the order *Labiatæ*, used as a cathartic.

Le-on-ti'a-sis.* [From the Gr. *λέων*, a "lion." ?] A name applied to the disease known as *Elephantiasis Græcorum*, and to other forms of leprosy.

Le-on'tĭ-cē Tha-lic-tro-i'dēs.* Another name for *Caulophyllum thalictroides.*

Le-on'to-don, on'tis.* [From the Gr. *λέων*, a "lion," and *ὀδούς*, a "tooth;" named from the tooth-like sections of the leaves.] A Linnæan genus of the class *Syngenesia*, natural order *Compositæ*, comprising several species, natives of Europe and Asia.

Leon'todon Ta-rax'a-cum.* The plant *Dandelion;* also called *Dens Leonis.* See TARAXACUM.

Le-o-nu'rus.* [From the Gr. λέων, a "lion," and οὐρά, a "tail."] Like the tail of a lion; leonu'rous:—applied to plants.

Leonu'rus Car-di'a-ca.* The systematic name of Motherwort, an exotic plant of the order *Labiatæ,* naturalized in the United States. It has been used in hysteria, etc.

Lĕop'ard's Bane. The common name for the plant *Arnica montana.*

Lep-an'thĭ-um.* The nectary or crown-like leaflets in the flowers of the *Asclepiadaceæ.*

Lep-ĭ-dan'the-us.* [From the Gr. λεπίς, λεπίδος, a "scale" or "husk," and ἄνθος, a "flower."] Having flowers like scales; squamiflorous.

Le-pid'ĭ-um.* [From the Gr. λεπίδιον, a "little scale."] Pepper-Grass. A genus of plants of the order *Cruciferæ,* comprising many species, natives of Europe, Asia, etc. Some of them are used in medicine.

Lepid'ium I-be'ris.* A plant which has been reputed to be lithontriptic. The leaves and root of *Lepidium latifolium* are said to be antiscorbutic and rubefacient.

Lepid'ium Sa-ti'vum.* Garden Cress or Pepper-Grass, cultivated for its leaves, which have a pungent taste and are used as a salad.

Lep-ĭ-do-den'dron.* [From the Gr. λεπίς, a "scale," and δένδρον, a "tree."] A genus of fossil trees found in coal-beds. They are sometimes several feet in diameter, and are covered with regular rhomboidal projections, like scales, arranged in spiral rows, extending around the tree from base to summit.

Lep-ĭ-do'dēs.* [From the Gr. λεπίς, a "scale."] Resembling scales; scaly.

Lep'ĭ-doid. [Lat. **Lepidoi'des;** from the Gr. λεπίς, a "scale," and εἶδος, a "form" or "resemblance."] Resembling a scale:—applied to a suture of the cranium.

Lep-ĭ-do-phyl'lous. [Lat. **Lepidophyl'lus;** from the Gr. λεπίς, a "scale," and φύλλον, a "leaf."] Having leaves in the form of scales, as many plants.

Lep-ĭ-do-plas'tus.* [From the Gr. λεπίς, a "scale," and πλάσσω, to "form."] Forming scales.

Lepidoptera.* See LEPIDOPTERUS.

Lep-ĭ-dop'ter-us.* [From the Gr. λεπίς, a "scale," and πτερόν, a "wing."] Lepidop'terous; having wings sprinkled, or partially covered, with scales:—applied in the plural neuter (*Lepidop'tera*) to an order of insects having four wings so covered. It includes the butterfly and what are popularly called "millers."

Lep-ĭ-do'sis.* [From the Gr. λεπίς, a "scale."] A name for ICHTHYOSIS, which see.

Lep'ĭ-dote. [Lat. **Lepido'tus;** Gr. λεπιδωτός, "covered with scales."] Furnished with scales; scaly, or scurfy; leprous:—applied to parts of plants.

Lep-o-ri'num La'bĭ-um,* **Lepori'num Ros'trum.*** The defect called hare-lip.

Lep'ra.* [Gr. λέπρα, "leprosy;" Fr. *Lèpre,* lᾶpR.] Leprosy. A disease of the skin distinguished by circular scaly patches. A genus of the order *Impetigenes,* class *Cachexiæ,* of Cullen's nosology. In Botany, a white mealy matter which exudes from or collects on the surface of some plants.

Lep'ra Ar'a-bum.* An epithet of *Elephantiasis Græcorum,* or tubercular elephantiasis.

Lèpre. See LEPRA.

Lépreux. See LEPROUS.

Lep-ri'a-sis.* [From the Gr. λεπρός, "rough."] The specific name for leprosy, or *Lepidosis lepriasis.*

Lep'rĭ-cus.* Belonging to lepra; lep'ric.

Lep-roph-thăl'mĭ-a.* [From the Gr. λέπρα, the "leprosy," and ὀφθαλμός, the "eye."] Leprous ophthalmia.

Lep-roph-thăl'mus.* [From the same.] The eye affected by leprophthalmy; also the patient laboring under that affection.

Lep-ro-sa'rĭ-um.* A hospital for the treatment of leprosy; a leper-house, or *domus leprosarius.*

Lep-ro-sa'rĭ-us.* [From the Gr. λέπρα, "leprosy."] Belonging to lepra.

Lep'rose. [From the Lat. *lep'ra,* "leprosy."] In Botany, having a scurfy appearance.

Lep-ro'sis.* [From the Gr. λέπρα, "leprosy."] The progress of leprosy.

Lep'ro-sy. According to Erasmus Wilson, *lepra* and *leprosy* are distinct from each other, and leprosy is synonymous with *elephantiasis:* "Leprosy, *elephantiasis Græcorum,* and *lepra Arabum* are synonymous terms." It is an endemic disease which prevails in Hindostan, China, the islands of the Indian Ocean, Africa, etc. Some pathologists consider it hereditary and non-contagious. See LEPRA.

Lep'rous. [Lat. **Lepro'sus;** from *lep'ra.*] (Fr. *Lépreux,* lᾶ'pRuh'.) Belonging to lepra; scaly.

Lep-ta-can'thus.* [From the Gr. λεπτός, "slender," and ἄκανθα, a "spine."] Having slender spines:—applied to certain plants.

Lep-tan'dra.* "Leptandra." The Pharmacopœial name (U.S. 1870, 1880) for the rhizome and rootlets of *Leptandra Virginica,* or *Veronica Virginica.* It is cathartic.

Leptan'dra Vir-ġin'ĭ-ca.* A synonyme of *Veronica Virginica.*

Lep-tan'drin. [Lat. **Leptandri'na.**] The active principle of *Leptandra Virginica.* It is regarded as an excellent cholagogue cathartic, and is extensively used as a substitute for mercury.

Lep-to-cau'lis.* [From the Gr. λεπτός, "slender," and καυλός, a "stem."] Having a slender stem.

Lep-to-çeph'a-lus.* [From the Gr. λεπτός, "slender," and κεφαλή, a "head."] Having a small head:—applied to plants or flowers.

Lep-toeh'ro-ạ,* or **Lep-toeh'ros.*** [From the Gr. λεπτός, "fine," or "slender," and χρόα, the "skin."] A fine, thin, soft, or delicate membrane.

Lep'to-don, on'tis.* [From the Gr. λεπτός, "fine," or "slender," and ὀδούς, a "tooth."] Having very small teeth:—applied to certain mosses.

Lep'to-men-in-ġi'tis.* [From the Gr. λεπτός, "thin," "delicate," and μῆνιγξ, a "membrane."] Inflammation of delicate membranes, as of the arachnoid.

Lep-to-pet'ạ-lus.* [From the Gr. λεπτός, "slender," and πέταλον, a "petal."] Having slender or narrow petals.

Lep-to-phyl'lus.* [From the Gr. λεπτός, "slender," and φύλλον, a "leaf."] Having slender leaves:—applied to plants.

Lep-top'o-dus.* [From the Gr. λεπτός, "slender," and πούς, a "foot."] Having a slender stipes, or foot.

Lep-to-rhi'zus.* [From the Gr. λεπτός, "slender," and ῥίζα, a "root."] Having slender roots.

Lep-to-sep'ạ-lus.* [From the Gr. λεπτός, "slender," and the Lat. *sep'alum*, a "sepal."] Having narrow, linear sepals.

Lep-to-sper'me-us.* Leptospermous:—applied in the plural feminine (*Leptosper'meæ*) to a tribe of *Myrtaceæ* having the *Leptospermum* for their type; leptosper'mous.

Lep-to-sper'mum Flạ-vĕs'çens.* A shrub or small tree of the order *Myrtaceæ*, a native of Australia. It has aromatic leaves, an infusion of which is used as a remedy for scurvy.

Leptosper'mum Lạ-niġ'er-um.* A tree of the order *Myrtaceæ*, a native of Tasmania. Its leaves have been used as a substitute for tea.

Lep-to-sper'mus.* [From the Gr. λεπτός, "slender," and σπέρμα, a "seed."] Having very small seeds; leptosper'mous.

Lep-to-sta'ehў-us.* [From the Gr. λεπτός, "slender," and στάχυς, an "ear of corn."] Having slender ears:—applied to plants.

Lep-to-sty'lus.* [From the Gr. λεπτός, "slender," and στῦλος, a "style."] Having a filiform style.

Lep'to-thrix,* or **Lep-tot'rĭ-ehus.*** [From the Gr. λεπτός, "delicate," and θρίξ, "hair."] One who has fine hair. The *Leptothrix buccalis* ("Leptothrix of the Mouth") is the name of a minute parasitic plant sometimes found in aphthous sores of the mouth.

Lep-to-trieh'ĭ-ạ.* [From the Gr. λεπτός, "slender," or "fine," and θρίξ, "hair."] Fineness or thinness of the hair.

Le'sion. [Lat. **Læ'sio, o'nis;** from *læ'do, læ'sum*, to "hurt."] Literally, an "injury." A vitiated or depressed condition of any organ or part:—applied in Surgery to a hurt, wound, or injury of a part. The use of the word has been extended to comprise all morbid organic changes affecting an organ or a tissue.

Le'sion of Nu-trĭ'tion. A term for those pathological alterations which originate in the capillary system, consisting in any excess or deficiency of the particles of blood in the process of assimilation and absorption, etc.

Le'thal. [Lat. **Letha'lis;** from *le'thum*, "death."] Belonging to death; mortal; fatal.

Le-thal'ĭ-tў. [Lat. **Lethal'itas, a'tis;** from *letha'lis*, "deadly."] The quality of being deadly or fatal; mortality.

Le-thar'ġic. [Lat. **Lethar'gicus.**] Belonging to a state of lethargy.

Leth'ạr-ġў. [Lat. **Lethar'gus;** from the Gr. λήθη, "forgetfulness."] A state of marked drowsiness, stupor, or sleep, which cannot be driven off.

Letter-Wood. See BROSIMUM AUBLETII.

Lettuce. See LACTUCA.

Lettuce Opium. See LACTUCARIUM.

Lettuce, Opium- or **Strong-scented.** See LACTUCA VIROSA.

Leucæmia.* See LEUCHÆMIA.

Leū-çæ-thĭ-o'pĭ-ạ.* [From the Gr. λευκός, "white," and αἰθίοψ, an "Ethiopian," or "negro."] The same as ALBINISM, which see.

Leū-çæ'thĭ-ops, op*is*.* [From the same.] See ALBINO.

Leū-can'thous. [Lat. **Leucan'thus;** from the Gr. λευκός, "white," and ἄνθος, a "flower."] White-flowered.

Leū'cē.* [Gr. λευκή, from λευκός, "white."] A term usually applied to a form of leprosy, but limited by some writers to the affection known as *Morphœa alba*. See MORPHŒA.

Leūc-hæ'mĭ-ạ,* or **Leū-kæ'mĭ-ạ.*** [From the Gr. λευκός, "white," and αἷμα, the "blood."] Literally, "white blood:"—applied by Virchow to a morbid condition of the blood in which there is a continued increase in the colorless corpuscles, so that in some cases the number of the colorless globules is almost equal to that of the red ones. See LEUCOCYTOSIS.

Leū'çin. [Lat. **Leuci'na;** from the Gr. λευκός, "white."] A white, crystalline substance obtained from beef-fibre, etc. It occurs in many living animal tissues, and is one of the products of incipient putrefaction of albuminoid or proteid substances.

Leū-çĭ-no'sis.* [Properly, the formation of LEUCIN, which see.] A term applied to a condition of the liver in which leucin is largely produced.

Leū-çi'tis, i*dis*.* [From the Gr. λευκός, "white."] The same as SCLEROTITIS, which see.

Leū-co-car'pus.* [From the Gr. λευκός, "white," and καρπός, "fruit."] Having white fruit; leucocar'pous.

Leū-co-çeph'ạ-lus.* [From the Gr. λευκός, "white," and κεφαλή, the "head."] Having white flowers joined together in capitules.

Leū'co-çўte. [From the Gr. λευκός, "white," and κύτος, a "cell."] A term used to denote the white or pale corpuscles in the blood. See BLOOD.

Leū-co-çў-thæ'mĭ-ạ.* [From the Gr. λευκός, "white," κύτος, a "cell," and αἷμα,

"blood."] Sometimes applied, like *leuchæmia*, to a state of the blood in which there is a superabundance of colorless corpuscles; more properly, fatty blood, in which there is a milky, opalescent appearance. A chronic disease in which there is a considerable and permanent increase in the number of the pale blood-corpuscles.

Leū-co-çyt-o-gen'e-sis.* A term applied to the production of leucocytes, or white corpuscles of the blood.

Leū-co-çy-to'sis.* [See LEUCOCYTE.] A term applied by Virchow to a morbid condition in which there is an increase in the colorless corpuscles of the blood, dependent (as he supposes) on an affection of the lymphatic glands. He considers *leukæmia* to be a "sort of permanent progressive *leucocytosis*;" and the latter, a "transitory process connected with fluctuating conditions in certain organs."

Leū-co-den'dron,* **Leū-co-den'drum.*** [From the Gr. λευκός, "white," and δένδρον, a "tree."] The specific name of the *Melaleuca Leucodendron*.

Leū-co'ĭ-um,* or **Leū-co'jum.*** Snowflake. A genus of bulbous plants of the order *Amaryllidaceæ*, comprising several species, natives of Europe. They bear handsome white flowers. The bulbs of *Leucoi'um æsti'vum* and *L. vernum* are acrid and emetic.

Leū'col, or **Leū'co-lĭne.** [From the Gr. λευκός, "white," and the Lat. *o'leum*, "oil."] A basic substance found in the naphtha of coal-gas. It is a colorless, heavy, oily liquid, of a bitter and caustic taste, soluble in alcohol and ether, but insoluble in water. It is an alkaloid isomeric with chinoline, and combines with acids to form salts.

Leū-co-lo'mus.* [From the Gr. λευκός, "white," and λῶμα, a "hem or border of a robe."] Bordered with white.

Leū-co'ma, a*tis.* [From the Gr. λευκός, "white."] A milky opacity of the cornea, the effect of an ulcer or wound, with loss of substance; the *pin and web*. See ALBUGO.

Leū-com-a-to'dēs.* Having leucoma; leucom'atous.

Leū-com-a-to-i'dēs.* [From the Lat. *leuco'ma*, and the Gr. εἶδος, a "form" or "resemblance."] Resembling leucoma; leucom'atoid.

Leū-com'ma, a*tis.* [From the Gr. λευκός, "white," and ὄμμα, "appearance."] A white opacity of the cornea.

Leū-co-no'tus.* [From the Gr. λευκός, "white," and νῶτος, the "back."] White on the under surface:—applied to leaves.

Leū-co-pa-thi'a.* [From the Gr. λευκός, "white," and πάθος, "disease."] A disease affecting negroes, by which they become white, and are termed *albinos*.

Leū-co-path'ĭ-cus.* Belonging to leucopathia.

Leū-co-phleg'ma-sy. [Lat. **Leucophlegma'sia**; from the Gr. λευκός, "white," and φλέγμα, "phlegm."] A dropsical tendency, denoted by a pale, tumid, and flabby condition of body.

Leū-co-phleg-mat'ic. [Lat. **Leucophlegmat'icus.**] Belonging to leucophlegmasy.

Leū-co-phleg-ma-to'dēs.* [From the Lat. *leucophlegma'sia.*] Having leucophlegmasy.

Leū-co-phleg-ma-to-i'dēs.* [From the Lat. *leucophlegma'sia*, and the Gr. εἶδος, a "form" or "resemblance."] Resembling leucophlegmasy.

Leū-co-phyl'lus,* less correctly **Leū-co-phyl-la'tus.*** [From the Gr. λευκός, "white," and φύλλον, a "leaf."] Having white leaves.

Leū-cop'ĭ-per, er*is.* [From the Gr. λευκός, "white," and πέπερι, "pepper."] The *Piper album*, or white pepper. See PIPER.

Leū-co-po'dĭ-us,* **Leū-cop'o-dus.*** [From the Gr. λευκός, "white," and πούς, a "foot."] Having a white stipes, or white petioles:—applied to plants.

Leū-cop'ter-us.* [From the Gr. λευκός, "white," and πτερόν, a "wing."] Having white wings; leucop'terous.

Leū'co-pus, p'odis.* The same as LEUCOPODIUS, which see.

Leū-cor-rhœ'a.* [From the Gr. λευκός, "white," and ῥέω, to "flow."] (Fr. *Leucorrhée*, lüh'ko'rā'.) A whitish mucous secretion of the vagina, arising from debility, or from inflammatory action; the whites:—also termed *Catarrhus vaginæ*, and *Fluor albus*.

Leū-cor-rho'ĭ-cus.* Belonging to leucorrhœa; leucorrho'ic.

Leū-co'sis.* The formation or progress of leucoma.

Leū-co-sper'mus.* [From the Gr. λευκός, "white," and σπέρμα, a "seed."] Having white fruit or seed; leucosper'mous.

Leū-cos'to-mus.* [From the Gr. λευκός, "white," and στόμα, a "mouth."] Having a white peristome, or white mouth:—applied to certain mosses.

Leū-cot'ĭ-cus.* Belonging to leucoma.

Leukæmia.* See LEUCHÆMIA.

Levain, lẹh-vân'. The French term for FERMENT, which see.

Le-va'tor, o'ris.* [From the Lat. *le'vo*, *leva'tum*, to "raise," to "lift up."] An elevator or lifter up:—applied to muscles.

Le'ver. [From the Lat. *le'vo*, to "lift up."] A mechanical power, consisting of a rod or bar resting upon a certain determinate point, termed its *fulcrum*, which, if the object be to gain *power*, should always be nearer to the resistance to be overcome than to the force applied; but when the object is to gain *time*, the fulcrum should be nearer to the force than to the resistance. See VECTIS.

Lev-ĭ-cos'tate. [Lat. **Lævicosta'tus**; from *læ'vis*, "smooth," and *cos'ta*, a "rib."] Having smooth ribs:—applied to certain leaves.

Lev-ĭ-fo'lĭ-ous. [Lat. **Lævifo'lius**; from *læ'vis*, "smooth," and *fo'lium*, a "leaf."] Having smooth leaves.

Lev'ĭ-gate. [Lat. **Læviga'tus**; from *lævigo*, *læviga'tum*, to "smooth."] Smoothly polished.

Lev-ĭ-gā'tion. [Lat. **Læviga'tio, o'nis;** from the same.] The process of rubbing down any hard substance to an impalpable powder, so that no roughness or grittiness is perceptible.

Lev'ĭ-pēde. [Lat. **Læv'ipes, p'edis;** from *læ'vis*, "smooth," and *pes*, a "foot."] Having smooth feet.

Le-vis'tĭ-cum Of-fĭç-ĭ-na'le,* or **Lĭ-gus'tĭ-cum Levis'ticum.*** The systematic name of Lovage, a plant of the order *Umbelliferæ*, a native of Europe. It has an aromatic odor and a warm pungent taste.

Lèvre, lâvr. The French term for "lip." See LABIUM, and LIP.

Lev'u-lose. [From the Lat. *læ'vum*, "left," because it has a left rotary power in reference to polarized light.] A sort of sugar isomeric with glucose, with which it occurs mixed in honey and certain fruits. It is deliquescent, syrupy, uncrystallizable, and soluble in water and alcohol. Its taste is sweeter or more saccharine than that of ordinary glucose.

Lew-is'ĭ-ạ Red-ĭ-vi'vạ.* Bitter Root Plant, a curious plant of the order *Mesembryaceæ*, a native of Oregon and Washington. It is a stemless perennial, bearing a solitary rose-colored flower. Its roots, which are composed almost entirely of starch, are bitter, but wholesome, and are eaten by Indians.

Lexipharmic. See ALEXIPHARMIC.

Ley. See LYE.

Leyden (lī'dẹn) **Bat'ter-ў.** A number of Leyden jars, connected externally by being placed on tinfoil, or other good conductor, and internally by a metallic rod or wire communicating with the internal coating of each jar.

Ley'den Jar. A glass jar or bottle, coated to within a short distance from the top with tinfoil, within and without, and having a rod with a ball at the top passing through the cork to the interior coating. It is used for accumulating electricity in larger quantity than in the prime conductor.

Lĭ-a'nạ,* or **Lĭ-ăne'.** [Fr. *Liane*, lẽ'ăn'.] A term applied to woody climbing or twining plants which abound in tropical forests and ascend to the tops of lofty trees, sometimes passing from tree to tree or hanging in the air. *Liane* is a general term, and does not specify any species or genus.

Lī-as'ic, or **Lī-as'sic.** [Lat. **Lias'sicus.**] A term applied to a group of strata of which the rock which forms the type has been named *Lias* by English geologists.

Lĭ-a'tris.* A genus of plants of the natural order *Compositæ*, comprising many species, natives of the United States.

Lia'tris O-do-rạ-tis'sĭ-mạ.* The systematic name of an herb called the Vanilla Plant, a native of the Southern United States. Its leaves when bruised exhale the odor of vanilla. It is said to contain a principle identical with *coumarin*.

Lia'tris Spĭ-ca'tạ.* The systematic name of Gay Feather, or Colic Root, a perennial plant, a native of the Middle and Southern United States. It bears showy purple flowers. Its root is reputed to be diuretic.

Li'ber.* In Botany, free: as when there is no cohesion between parts in contact with each other.

Li'ber.* The interior fibrous bark of exogenous plants. It serves to convey downwards the secretions elaborated in the leaves.

Lĭ-bid'ĭ-nis Se'dēs.* "The Seat of Venereal Desire." A term applied to the clitoris. See next article.

Lĭ-bi'do, d'inis.* [From the Lat. *li'beo*, to "please," or "like."] Venereal desire.

Li'brạ.* [From the Gr. λίτρα, a "silver coin," or a "pound."] A pound-weight.

Lĭ-ca'nĭ-ạ.* A genus of trees of the order *Chrysobalanaceæ*, comprising many species, natives of Brazil and Guiana. Several of them have a silicious bark, called *pottery bark*, the ashes of which are used by the natives for mixing with the clay employed in the manufacture of pottery-ware in order to render the ware proof against fire.

Lich'en. [Lat. **Li'chen, e'nis;** Gr. λειχήν.] A Linnæan genus of the class *Cryptogamia*. Also a disease consisting in extensive eruption of *papulæ*, usually terminating in scurf. See LICHENS.

Li'chen Ce-tra'rĭ-ạ.* Iceland Moss, or Liverwort, now called *Cetraria Islandica*.

Li'chen Is-lan'dĭ-cạ.* The same as LICHEN CETRARIA.

Li'chen Roc-çel'lạ.* The herb from which *litmus*, or *lacmus*, is obtained; the *Roccella tinctoria*.

Li'chen Sax-at'ĭ-lis.* The *Mus'cus cra'nii huma'ni*, a plant sometimes growing on the human skull.

Lieh'en-āte. [Lat. **Liehe'nas, a'tis.**] A combination of lichenic acid with a salifiable base.

Li-chen'ēs,* the plural of LICHEN, which see.

Lĭ-chen'ic. [Lat. **Lichen'icus.**] Belonging to lichens:—applied to an acid discovered in the *Cetraria Islandica*.

Li-chen-nic'o-lus.* [From the Lat. *li'chen*, and *co'lo*, to "inhabit."] That which grows upon lichens.

Li-chen-ĭ-for'mis.* [From the Lat. *li'chen*, and *for'ma*, "form."] Having the appearance of lichen; licheniform.

Lieh'e-nin, or **Lich'en Starch.** [Lat. **Licheni'na.**] A substance obtained from the *Lichen Islandica*. It resembles starch in general characters. It is insoluble in alcohol and cold water, but is soluble in boiling water.

Lieh-e-no-graph'ic. [Lat. **Lichenograph'icus.**] Belonging to lichenography.

Lieh-e-nog'rạ-phў. [Lat. **Lichenogra'phia**; from *li'chen*, and the Gr. γράφω, to "write."] A description of lichens.

Li-chen-o-i'dēs.* [From the Lat. *li'chen*, and the Gr. εἶδος, a "form" or "resemblance."] Resembling a lichen; lich'enoid.

Lieh-e-nol'o-gў. [Lat. **Lichenolo'gia**; from *li'chen*, and the Gr. λόγος, a "discourse."] The part of Botany devoted to lichens.

Lich'en-ous. [Lat. **Licheno'sus**; from *li'chen.*] Pertaining to lichens; resembling a lichen.

Lich'ens. A large tribe of cryptogamous plants, of the class called *Thallogens.* They are distinguished from *Fungi* by their not deriving nutriment from the substance on which they grow, and by their slow development and long endurance. They are mostly air-plants, but a few are constantly wet with spray or totally immersed. They abound on the trunks of trees, on old walls, on fences, and on rocks.

Lid. See OPERCULUM.

Lieberküh'nii (lee-bẹr-ku'ne-i) **Glan'du-læ.*** "Glands of Lieberkühn." See LIEBERKÜHN'S GLANDS.

Lieberkühn's (lee'bẹr-künz') **Glands** or **Fol'lĭ-cles.** [Lat. **Glan'dulæ** or **Cryp'tæ Lieberkühnia'næ.**] The minute tubular glands of the small intestine, first described by Lieberkühn.

Li'en,* gen. **Li-e'nis.** The organ or viscus of the abdominal cavity called the spleen.

Lienomalacia,* le-en-o-ma-la'she-a. [From the Lat. *li'en,* the "spleen," and *μαλακία,* a "softening."] Morbid softening of the spleen.

Lī'en-ter-ў. [Lat. **Liente'ria**; from the Gr. *λεῖος,* "smooth," and *ἔντερον,* an "intestine."] A species of diarrhœa in which the food passes rapidly through the bowels undigested.

Life. [Lat. **Vi'ta**; Gr. *βίος,* and *ζωή*; Fr. *Vie,* vē.] That mysterious principle existing in organized beings whereby they are endowed with certain powers or functions peculiar to themselves and not possessed by any form of inorganic matter. As soon as life has ceased in any animal (or plant), the matter of which this is composed, being no longer protected by the vital forces, is thenceforth subject to those laws of affinity which regulate the composition of inorganic bodies, and that combination of elements which was the result of life gives place to new combinations, formed in obedience to the laws of chemistry. Bichat defined life to be the "aggregate of those functions which resist death."

Life Ev-er-last'ing. A popular name of *Gnaphalium polycephalum.* An infusion of it is a popular remedy for dysentery and other diseases.

Lig'a-ment. [Lat. **Ligamen'tum**; from *li'go, liga'tum,* to "bind."] A peculiar, elastic, membranous substance, connecting the ends of movable bones. Ligaments are dense bundles of fibrous tissue, little extensible, difficult to break, which adhere by their extremities to bones or cartilages and thus serve as means of uniting articulations or osseous parts.

Lig-a-men'ta,* the plural of the Lat. *ligamen'tum.* See LIGAMENT.

Ligamen'ta Sub-fla'va.* "Yellowish Ligaments." Otherwise called **Yel'low Lig'aments.** The ligaments occupying the intervals between the vertebræ, which thus complete the back part of the spinal canal. They are composed of dense, yellow, elastic fibres.

Lig-a-men'tous. [Lat. **Ligamento'sus**; from *ligamen'tum,* a "ligament."] Of the nature of a ligament; belonging to a ligament.

Lig'a-ments, Vag'ĭ-nal. [Lat. **Ligamen'ta Vagina'lia.**] A term for the sheath-like ligaments of the flexor tendons of the fingers.

Ligamentum Coracoideum.* See CORACOID LIGAMENT.

Lĭ-gā'tion. [Lat. **Liga'tio, o'nis**; from *li'go, liga'tum,* to "bind."] The act of tying, or of applying a ligature, as to an artery, etc.

Lig'a-tūre. [Lat. **Ligatu'ra**; from the same.] A thread of silk, flax, or other suitable material, for tying arteries, or other parts.

Light. [Lat. **Lux**; Gr. *φῶς*; Fr. *Lumière,* lü'me-aiR'.] The medium of vision. One of the great fundamental powers of nature. The phenomena of light and vision are the subjects of the science of *Optics.* Light is distinguished into two kinds,—viz., natural light, proceeding from the sun and stars, and artificial light, proceeding from terrestrial bodies which burn or which are strongly heated. The phenomena of light may be referred to the following heads:

1. *Radiation,* the emission of light, or of caloric, in all directions, in the form of *radii,* or rays. A collection of such rays, passing nearly in the same direction, is termed a *pencil.* The *radiant point* is the point from which diverging rays proceed; the *focus,* the point to which converging rays are collected.

2. *Reflection,* the rebound of a ray of light, or of caloric, from a polished surface,—the angle of incidence being equal to the angle of reflection.

3. *Refraction,* the break of the natural course of a ray of light as it passes into a transparent substance, as glass or water: this is termed *ordinary refraction.* The production of colors in the ordinary refraction of light by a prism is perhaps the most remarkable of all optical facts. If a ray fall upon the surface of Iceland spar, or certain other substances, it will be split into two portions, making an angle with each other, and each pursuing its own separate course: this is called *double refraction,*—one of these rays following the same rule as if the substance were glass or water, the other undergoing *extraordinary refraction.*

It has been computed that light traverses 186,380 miles in a second. The undulatory theory of light is generally adopted by men of science. According to this theory, light is not a substance, but it is the effect of rapid vibrations of luminous bodies and of a subtile medium called *ether.*

Light'ning. [Lat. **Ful'gur**; Fr. *Éclair,* ā'klĕR'.] An electric phenomenon often followed by thunder. It is electric fluid in a state of intense activity. The identity of lightning with electricity was discovered by Dr. Franklin.

Light'ning, Ef-fects' of. These differ only in degree from those caused by the discharge of a Leyden jar. A person may be killed by lightning and a post-mortem examination may reveal no lesion whatever. The mode of death in these cases seems to be by the shock to the brain and nervous system. In other cases of death by lightning the bones have been broken and wounds inflicted in the flesh.

Lign-Al'oës. The fragrant wood of *Aloex'ylon Agal'lochum.*

Ligne, lēñ. The French term for "line." See LINEA.

Ligne Blanche, lēñ blôNsh. The French term for LINEA ALBA, which see.

Lig'ne-ous, or **Lig'nose.** [Lat. **Lig'neus**; from *lig'num*, "wood."] (Fr. *Ligneux*, lēn'yuh'.) Of the nature of wood; resembling wood; having a firm, woody texture; woody:—applied to plants.

Lig-nif'er-ous. [Lat. **Lignif'erus**; from *lig'num*, "wood," and *fe'ro*, to "bear."] Bearing wood.

Lig'nĭ-form. [Lat. **Lignifor'mis**; from *lig'num*, "wood," and *for'ma*, "form."] Resembling wood.

Lig'nin, or **Lig'nĭne.** [Lat. **Ligni'na**; from *lig'num*, "wood."] The woody fibre constituting the fibrous structure of vegetable substances, the most abundant principle in plants. The same as CELLULOSE.

Lig'nīte. [From the same.] A variety of coal, sometimes called *Brown Coal.* It has an empyreumatic odor when burned, and usually retains something of the texture of the original wood.

Lignose. See LIGNEOUS.

Lig'nous. [Lat. **Ligno'sus**; from *lig'num*, "wood."] Wooden, or like wood; woody.

Lig'num.* A Latin word signifying "wood," used in medicine chiefly in such phrases as *Lignum Quassiæ*, *Lignum Vitæ*, etc.

Lig'num Cam-pe-chĭ-a'num.* "Campeachy Wood." See HÆMATOXYLON.

Lig'num Col-u-bri'num.* "Snake Wood." Another name for the ARISTOLOCHIA SERPENTARIA, which see.

Lig'num In'dĭ-cum.* "Indian Wood." The wood of the *Hæmatoxylon Campechianum*, or logwood.

Lignum Quassiæ.* See QUASSIA.

Lig'num Rho'dĭ-um.* A name of rosewood.

Lig'num Vi'tæ.* "Wood of Life." The wood of the *Guaiacum officinale.* See GUAIACI LIGNUM.

Lig'u-la.* [As if *lin'gula*, diminutive of the Lat. *lin'gua*, a "tongue."] A little tongue. The tongue of the *Crustacea*, *Arachnides*, and *Insecta.*

Lig'u-late. [Lat. **Ligula'tus**; from *lig'ula*, a "little tongue," also a "strap."] Strap-shaped; narrow and moderately long, with parallel margins, or furnished with a ligule, like many composite flowers.

Lig'ule. [Lat. **Lig'ula**, a "little tongue," or "strap."] A strap-shaped corolla, found in many of the *Compositæ*; also the little membranous appendage at the summit of the leaf-sheaths of most grasses.

Lig-u-lif'er-us.* [From the Lat. *lig'ula*, a "little tongue," and *fe'ro*, to "bear."] Bearing ligules.

Lig-u-lĭ-flo'rus.* [From the Lat. *lig'ula*, a "little tongue," and *flos*, a "flower."] Having ligulate corollas, or having a capitulum or head composed exclusively of ligulate florets, as the Dandelion:—applied in the feminine plural (*Liguliflo'ræ*) to a sub-order of *Compositæ*, in which all the florets are ligulate and all perfect.

Lig-u-lĭ-fo'lĭ-us.* [From the Lat. *lig'ula*, a "little tongue," and *fo'lium*, a "leaf."] Having linear leaves.

Lig'u-lĭ-form. [Lat. **Ligulifor'mis**; from *lig'ula*, a "little tongue," and *for'ma*, "form."] Like a ligulate corolla.

Ligusticum.* See LEVISTICUM.

Li-gus'trum Vul-ga're.* The systematic name of the Privet, a shrub of the order *Oleaceæ*, a native of Europe, and naturalized in the United States. The leaves are astringent.

Lilac. See SYRINGA VULGARIS.

Li'lac (color). Pale dull violet mixed a little with white.

Lil'ĭ-a,* the plural of LILIUM, forming the Jussieuan name of a natural order of plants. See LILIACEÆ.

Liliaceæ,* lil-e-a'she-ē. [From *Lil'ium*, one of the genera.] A large natural order of endogenous plants, natives of many tropical and temperate regions. It includes the lily, tulip, hyacinth, asphodel, asparagus, onion, and other plants prized for beauty or utility. They are all perennial, and are characterized by regular hexamerous and hexandrous flowers (perianths), and a trilocular ovary free from the perianth. Among the products of this order are aloes, squill, and New Zealand flax. Several species are used as purgatives or emetics.

Lil-ĭ-ā'ceous. [Lat. **Lilia'ceus**; from *lil'ium*, a "lily."] Resembling the lily, or the *Liliaceæ*:—applied to plants.

Lil-ĭ-ĭ-flo'rus.* [From the Lat. *lil'ium*, a "lily," and *flos*, a "flower."] Having flowers resembling the lily.

Lil-ĭ-ĭ-for'mis.* [From the Lat. *lil'ium*, a "lily."] Having the form of a lily:—applied to certain plants.

Lil'ĭ-um.* The Lily. A Linnæan genus of the class *Hexandria*, natural order *Liliaceæ.* It comprises many species, natives of Palestine, Asia Minor, Persia, Japan, the United States, etc. They are all bulbous plants, and they are generally cultivated for the beauty of their flowers.

Lil'ium Can'dĭ-dum.* The Common White Lily, a native of Persia and adjacent countries. It is one of the most beautiful of the genus. The bulb and flowers have been used in medicine. The boiled bulb forms a good emollient cataplasm.

Lil'y. The popular name of many species of the genus *Lilium.* It forms part of the name of various other plants. Water-Lily is a synonyme of *Nymphæa*; Pond-Lily, of *Nuphar*; Day-Lily, of *Hemerocallis*; Blackberry-Lily, of *Pardanthus*; Calla Lily, of *Richardia.*

Lily of the Valley. See CONVALLARIA.

Lim. = *Limo'nes.** "Lemons."

Lima Bean. See PHASEOLUS LUNATUS.

Limaçon, lē'mȧ'sôN'. The French term for COCHLEA, which see.

Lim-a-tu'ra.* [From the Lat. *li'ma*, a "file."] The filings of a metal.

Limatu'ra Fer'ri.* "Filings of Iron," or "Iron Filings." A preparation used as a mild chalybeate.

Limb. [From the Anglo-Saxon *lim*, a "member," a "branch."] The branch of a tree; also one of the extremities of an animal, as a leg or an arm.

Limb. [From the Lat. *lim'bus*, a "border."] A term applied in Botany to the blade or lamina of a leaf, the expanded part of a petal, the summit of a gamosepalous calyx, or the upper spreading part of a gamopetalous corolla:—applied in Astronomy to the edge or border of the disk of the sun or moon or other heavenly body.

Lim'bate. [From the same.] Bordered; having one color surrounded by an edging of another.

Lim-bif'er-us.* [From the Lat. *lim'bus*, a "border," and *fe'ro*, to "bear."] Having a border, or margin:—applied to certain plants.

Līme. [Lat. **Calx, Cal'cis**; Fr. *Chaux*, shō.] Oxide of calcium; one of the primitive earths, abundant in nature, but always united to an acid, most frequently the carbonic. Quicklime combines chemically with water and forms a hydrate. This change, which is called *slaking*, is attended by the evolution of much heat. "The peculiar position of lime in the system of nature is that of a medium between the organic and inorganic world. It is made into shells, corals, and partly into bone by animals, and then turned over to the inorganic world to make rocks."—(DANA.)

Līme. [Lat. **Li'mon, o'nis.**] The fruit of the *Citrus Limetta*, or *Citrus Limonum*.

Lime, Chlo'ride of. A compound of chlorine and lime, much used as a disinfecting agent. For this purpose, one pound may be dissolved in, or mixed with, six gallons of water.

Lime'stone. [Lat. **La'pis Calca'reus.**] Carbonate of lime,—one of the most abundant and most important of stratified rocks.

Lime'-Tree. A synonyme of the Linden, a species of *Tilia*.

Lime-Water. See LIQUOR CALCIS.

Lim'ĭ-cus.* [From the Gr. λιμός, "hunger."] Belonging to hunger.

Lim-ĭ-for'mis.* [From the Lat. *li'ma*, a "file," and *for'ma*, "form."] Having the appearance of a file:—applied to certain plants.

Lim-no-me-phi'tis, ĭdis.* [From the Gr. λίμνη, a "stagnant pool," or "marsh," and the Lat. *mephi'tis*, a "pestilential exhalation," a "strong, heavy smell."] Marsh-miasm, or the effluvia arising from vegetable matter in a putrescent state, as in moist or marshy ground.

Lim-no-pol'ў-pus.* [From the Gr. λίμνη, a "stagnant pool," or "marsh," and πολύπους, a "polypus."] A term applied in the plural masculine (*Limnopol'ypi*) to a family of the *Pol'ypi brachios'toma*.

Li'mon,* gen. **Lĭ-mo'nis.** The Latin name for the fruit of the *Ci'trus Limo'num* and of the *Ci'trus med'ica*. See LEMON.

Lĭ-mo'nēs,* gen. **Lĭ-mo'num**, the plural of LIMON, which see.

Lĭ-mo'nĭ-a Aç-ĭ-dis'sĭ-ma.* A spiny shrub of the order *Aurantiaceæ*, a native of the East Indies. It bears an acid fruit, which is used medicinally by the Javanese.

Lĭ-mo'nis Cor'tex.* "Rind of Lemon," or "Lemon-Peel." The Pharmacopœial name (U.S. 1870, 1880) for the rind of the recent fruit of the *Citrus Limonum*.

Limo'nis Suc'cus.* "Lemon Juice." The Pharmacopœial name (U.S. 1870, 1880) for the freshly-expressed juice of the ripe fruit of the *Citrus Limonum*. It is a specific against scurvy, and is refrigerant. It has been employed with advantage in acute rheumatism.

Lim'o-nīte. A hydrous sesquioxide of iron, which is one of the most valuable ores of iron, containing, when pure, about 65 per cent. of pure or metallic iron. It usually occurs massive. Its color varies from dark brown to ochre-yellow. Of this species there are varieties called *Brown Hematite* and *Yellow Ochre*.

Lĭ-mo'num Cor'tex.* "Rind of Lemons." The Latin name for the fresh and dry exterior rind of the fruit of the *Citrus Limonum*. See LIMONIS CORTEX.

Li-moph'thĭ-sis.* [From the Gr. λιμός, "hunger," "famine," and φθίσις, a "wasting."] *Tabes*, or wasting, from privation of food.

Lim-op-so'ra.* [From the Gr. λιμός, "famine," and ψώρα, "scabies."] A kind of scabies which attacks man and the lower animals from long privation of food.

Li-mo'sis.* [From the Gr. λιμός, "famine."] Morbid appetite. A genus of diseases characterized by depraved, excessive, or defective appetite.

Lim-o-thĕr-a-pi'a.* [From the Gr. λιμός, "hunger," and φεραπεία, the "system of healing."] The treatment of disease by abstinence.

Lī'mous, or **Lĭ-mose'.** [Lat. **Limo'sus**; from *li'mus*, "mud," "clay," "slime."] A term applied to plants growing in muddy soils:—sometimes applied to soil or strata composed of mud, argillaceous marl, or sand, either separate or combined.

Lim'pid. [Lat. **Lim'pidus**; Fr. *Limpide*, lăm'pĕd'.] Clear; pure; transparent:—applied to liquids holding no body in suspension.

Linaceæ,* lĭ-na'she-ē. [From *Li'num*, one of the genera.] A small natural order of exogenous plants, natives of Europe, Africa, etc. They are herbs with regular and symmetrical flowers. The chief characters of this order are the tenacity of the fibres and the mucilage of the seeds. It includes *Linum* (flax).

Lin-a-go'gus.* [From the Gr. λίνον, a "flaxen thread," and ἄγω, to "lead."] An instrument used in the operation for vesico-vaginal fistula.

Lin-a-men'tum.* [From the Lat. *li'num*, "flax," also "linen."] Linen stuff, or linen rags. See LINT.

Lĭ-na'rĭ-a Vul-ga'ris,* or **An-tir-rhi'num Lĭ-na'rĭ-a.*** Toad Flax, an exotic herbaceous plant and weed, common in the United States. Its leaves are reputed to be diuretic and cathartic.

Linc'tus.* [From the Lat. *lin'go, linc'tum*, to "lick" or "lap."] A *looch* (or *lohoch*), or electuary; any medicine licked off the spoon because of its adhesive consistence.

Lin'den. A popular name of several species of *Tilia*, ornamental trees, natives of Europe and the United States.

Lin'den Fam'ĭ-lў. A name of the order *Tiliaceæ*.

Lin'de-ra Ben-zo'in,* or **Lau'rus Ben-zo'in.*** The Spice Bush, a shrub of the order *Lauraceæ*, a native of the United States. Its bark, berries, and leaves have a spicy flavor, and have been used in medicine. The bark has been used in intermittent fever.

Lind'ley-a Mes-pĭ-lo-i'dēs.* [Named after John *Lindley*, the English botanist.] An evergreen shrub or small tree of the order *Rosaceæ*, a native of Mexico. It bears large, white, fragrant flowers. It is the sole representative of the genus.

Line. See LINEA.

Lin'e-a,* plural **Lin'e-æ.** [From the Lat. *li'num*, a "thread."] A line, or thread; also the twelfth part of an inch. In Geometry, that which has length without breadth.

Lin'ea Al'ba.* (Fr. *Ligne blanche*, lĕñ blŏNsh.) "White Line." The central tendinous line extending from the ensiform cartilage to the pubes.

Lin'ea As'per-a.* "Rough Line." A rough prominence observed along the posterior surface of the femur.

Lin'ea In-nom-ĭ-na'ta.* Literally, the "unnamed line." An elevated line forming a part of the brim of the pelvis.

Lin'e-æ Al-bĭ-can'tēs.* "Whitish Lines." A term applied to certain shining reddish and whitish lines on the abdomen, extending from the groins and pubes to the navel, sometimes occurring in women during the first three or four days after delivery.

Lin'eæ Sem-ĭ-lu-na'rēs.* "Semilunar Lines." The lines which bound the exterior margin of the *recti* muscles of the abdomen.

Lin'eæ Trans-ver'sæ.* "Transverse Lines." The lines which cross the *recti* muscles:—also applied to some fibres which run across the raphé of the *corpus callosum*.

Lin'e-al. [Lat. **Linea'lis**; from *lin'ea*, a "line."] In a line; in a direct line from an ancestor.

Lin'e-a-ment. [Lat. **Lineamen'tum**; from *lin'ea*, a "line."] A feature; a delicate trait; one of the delicate characteristic lines of a human face.

Lin'e-ar. [Lat. **Linea'ris**; from *lin'ea*, a "line."] (Fr. *Linéaire*, lē'nā'ĕR'.) Disposed in lines; pertaining to, or in the form of, a line. In Botany, narrow, and much longer than broad, with parallel margins, as a leaf of grass.

Lin'ear-Lan'ce-o-late. Partaking of the linear and the lanceolate form, but more of the latter, as the leaf of *Salix viminalis* and *Quercus Phellos* (Willow Oak).

Lin-e-ar-ĭ-fo'lĭ-us.* [From the Lat. *linea'ris*, "linear," and *fo'lium*, a "leaf."] Having linear leaves.

Lin'e-ate. [Lat. **Linea'tus**; from *lin'ea*, a "line."] Marked with lines; streaked; marked with fine parallel lines:—applied to parts of plants.

Lin-e-at-ĭ-fo'lĭ-us.* [From the Lat. *linea'tus*, "linear," and *fo'lium*, a "leaf."] Having leaves of which the nervures run parallel from base to apex.

Lin'en. A textile fabric made of flax (*Li'num usitatis'simum*). It has been used as clothing by many nations from time immemorial.

Li-ne'o-la.* [Diminutive of the Lat. *lin'ea*, a "line."] A term applied to certain small white lines sometimes seen on the female breast.

Lin'e-o-late. [Lat. **Lineola'tus**; from *line'ola*, a "little line."] Marked with fine or obscure lines:—applied to plants.

Lin'gam. The Sanscrit term for *Phallus*, the symbol of reproduction. See PHALLUS.

Lin'gual. [Lat. **Lingua'lis**; from *lin'gua*, a "tongue."] Belonging to the tongue:—applied to muscles, nerves, etc.

Lin-guĭ-fo'lĭ-us.* [From the Lat. *lin'gua*, a "tongue," and *fo'lium*, a "leaf."] Having linguiform leaves.

Lin'guĭ-form. [Lat. **Linguifor'mis**; from *lin'gua*, a "tongue."] Tongue-shaped:—applied to parts of plants. See LINGULATE.

Lin'gu-la.* [Diminutive of the Lat. *lin'gua*, a "tongue."] A little tongue; a latchet.

Lin'gu-late. [Lat. **Lingula'tus**; from *lin'gula*, a "little tongue."] In Botany, having a little tongue; tongue-shaped.

Li'ni,* the genitive of LINUM, which see.

Li'ni Fa-ri'na.* "Meal of Flaxseed," or "Flaxseed Meal." The Pharmacopœial name (U.S. 1870) for the meal of the seeds of *Linum usitatissimum* deprived of their fixed oil by expression; lintseed meal. It furnishes the base of a good emollient poultice.

Li'ni Se'men.* "Seed of Flax." The Latin name for flaxseed, lintseed, or linseed. Flaxseed steeped in hot or warm water imparts to the liquid a bland mucilage, forming an excellent demulcent drink.

Li'ni Sem'ĭ-na.* "Seeds of Flax." The Latin name for the seeds of *Linum usitatissimum*.

Liniment. See LINIMENTUM.

Lin-ĭ-men'ta.* The plural of LINIMENTUM, which see.

Lin-ĭ-men'tum,* plural **Lin-ĭ-men'ta.** [From the Lat. *lin'io*, to "soothe."] A pharmaceutical preparation of such consistence as to render it conveniently applicable to the skin by gentle friction with the hand.

Linimen'tum Am-mo'nĭ-æ.* "Ammonia Liniment." The Pharmacopœial name (U.S. 1880) for a preparation made from thirty parts of water of ammonia and seventy parts of cotton-seed oil. It is an excellent rubefacient, frequently employed in inflammatory affections of the throat, in rheumatic pains, etc. According to the Pharmacopœia of 1870, it is prepared as follows: Take

of water of ammonia, a fluidounce; olive oil, two troyounces. Mix them.

Linimen'tum Bel-la-don'næ.* "Belladonna Liniment." The Pharmacopœial name (U.S. 1880) for a preparation made by dissolving five parts of camphor in ninety-five parts of fluid extract of belladonna.

Linimen'tum Căl'cis.* "Lime Liniment." The Pharmacopœial name (U.S. 1880) for a preparation made by mixing fifty parts of solution of lime with fifty parts of cotton-seed oil. It is very useful in recent burns and scalds. It is sometimes called *Carron Oil*. According to the Pharmacopœia of 1870, it is prepared as follows: Take of solution of lime, eight fluidounces; flaxseed oil, seven troyounces. Mix them.

Linimen'tum Cam'pho-ræ.* "Camphor Liniment." The Pharmacopœial name (U.S. 1880) for a preparation made by dissolving twenty parts of camphor in eighty parts of cotton-seed oil. This is employed as an anodyne embrocation in sprains, bruises, rheumatic or gouty affections of the joints, and other local pains. According to the Pharmacopœia of 1870, it is prepared as follows: Take of camphor, three troyounces; olive oil, twelve troyounces. Dissolve the camphor in the oil.

Linimen'tum Can-thăr'ĭ-dis.* "Cantharides Liniment." The Pharmacopœial name (U.S. 1880) for a preparation made from fifteen parts of cantharides in No. 60 powder and a sufficient quantity of oil of turpentine to make one hundred parts. Digest the cantharides with the one hundred parts of oil of turpentine in a closed vessel, by means of a water-bath, for three hours; then strain, and add enough oil of turpentine through the strainer to make the liniment weigh one hundred parts. It is a rubefacient and a powerful epispastic. According to the Pharmacopœia of 1870, it is prepared thus: Take of cantharides, in fine powder, a troyounce; oil of turpentine, half a pint. Digest the cantharides with the oil for three hours in a close vessel, by means of a water-bath, and strain.

Linimen'tum Chlo-ro-for'mi.* "Chloroform Liniment." The Pharmacopœial name (U.S. 1880) for a preparation made by mixing forty parts of commercial chloroform with sixty parts of soap liniment. This is an excellent local application and anodyne for painful affections. According to the Pharmacopœia of 1870, it is prepared as follows: Take of purified chloroform, three troyounces; olive oil, four troyounces. Mix them.

Linimen'tum Plum'bi Sub-aç-e-ta'tis.* "Liniment of Subacetate of Lead." The Pharmacopœial name (U.S. 1870, 1880) for a preparation made by mixing forty parts of solution of subacetate of lead with sixty parts of cotton-seed oil. This may be used as a sedative application in superficial inflammations. In the formula of 1870 olive oil was used instead of cotton-seed oil.

Linimen'tum Sa-po'nis.* "Soap Liniment." The Pharmacopœial name (U.S. 1880) for a preparation made as follows: Take of soap, in shavings, ten parts; camphor, five parts; oil of rosemary, one part; alcohol, seventy parts; water, a sufficient quantity to make one hundred parts. Digest the soap in fourteen parts of water until it is dissolved; dissolve the camphor and oil in the alcohol; mix the solutions, and filter through paper, adding enough water through the filter to make the liniment weigh one hundred parts. It is used as an anodyne and gently rubefacient embrocation in sprains, bruises, and rheumatic or gouty pains. According to the Pharmacopœia of 1870, it is prepared as follows: Take of soap, in shavings, four troyounces; camphor, two troyounces; oil of rosemary, half a fluidounce; water, six fluidounces; alcohol, two pints. Digest the soap in the water until it is dissolved; dissolve the camphor and oil in the alcohol; mix the solutions, and filter through paper.

Linimen'tum Sĭ-na'pis Com-pos'ĭ-tum.* "Compound Liniment of Mustard." The Pharmacopœial name (U.S. 1880) for a preparation made thus: Take of volatile oil of mustard, three parts; of extract of mezereum, two parts; of camphor, six parts; of castor oil, fifteen parts; and of alcohol, a sufficient quantity to make one hundred parts. Dissolve the extract of mezereum and the camphor in seventy parts of alcohol; then add the oil of mustard and the castor oil, and finally enough alcohol to make the product weigh one hundred parts. It is a rubefacient and a substitute for sinapisms.

Linimen'tum Tĕr-e-bin'thĭ-næ.* "Turpentine Liniment." The Pharmacopœial name (U.S. 1880) for a preparation made of resin cerate, sixty-five parts, and oil of turpentine, thirty-five parts. Add the oil to the cerate previously melted, and mix them thoroughly. It is said to be a good remedy for burns and scalds. According to the Pharmacopœia of 1870, it is prepared as follows: Take of resin cerate, twelve troyounces; oil of turpentine, half a pint. Add the oil to the cerate previously melted, and mix them.

Lin-næ'a Bo-re-a'lis.* [Named in honor of the great botanist *Linnæus*.] The systematic name of the Twin Flower, a trailing evergreen of the order *Caprifoliaceæ*. It is a native of the Northern United States and Sweden, and bears a pair of beautiful, delicate, and fragrant flowers. It is the only species of the genus, and was an especial favorite of Linnæus. The leaves are said to be diuretic and sudorific.

Lin-næ'an. Belonging to Linnæus, the naturalist. In Botany, the Linnæan, or sexual, system is founded on the number of stamens which determines the primary divisions, or Classes; the subdivisions, or Orders, generally depend on the number of pistils. The term is applied in a more general sense to a system of arranging the productions of the animal, vegetable, and mineral kingdoms laid down by Linnæus.

Lin-o'le-um.* [From the Lat. *li'num*, "flax," and *o'leum*, "oil."] A name for certain preparations of linseed oil, having physical properties similar to those of caoutchouc.

Lin-o-sper'mum.* [From the Gr. λίνον, "flax," and σπέρμα, "seed."] Linseed, or lintseed, afforded by the *Linum usitatissimum*. See LINI SEMEN.

Linseed. See LINTSEED.

Lint. [Lat. **Lin'teum**; from *li'num*, "flax."] (Fr. *Charpie*, shăr'pē'.) A soft material made by

scraping old linen cloth, and used as a dressing in all cases of wounds, ulcers, etc.

Lin-te-ĭ-for'mis.* [From the Lat. *lin'teum*, "lint," and *for'ma*, "form."] Having the appearance or texture of lint; lin'teiform.

Lint'seed. The seeds of *Linum usitatissimum*. See LINI SEMEN, or LINI SEMINA.

Li'num,* gen. **Li'ni.** [From the Gr. *λίνον*, "flax."] A Linnæan genus of the class *Pentandria*, natural order *Linaceæ*. Also the Pharmacopœial name (U.S. 1870, 1880) for the seed of the *Li'num usitatis'simum*. It is demulcent and emollient.

Li'num Aq-uĭ-li'num.* A plant, a native of Chili, employed as a febrifuge and stomachic.

Li'num Ca-thar'tĭ-cum.* The systematic name of the purging flax. It has been used in medicine.

Lip. (Fr. *Lèvre*, lȧvr.) One of the principal lobes of a bilabiate corolla or calyx; also the odd and peculiar petal of the *Orchidaceæ*. See LABIUM, and LABRUM.

Lip'a-ro-çēle.* [From the Gr. *λιπαρός*, "fat," and *κήλη*, a "tumor."] A fatty tumor in the scrotum.

Lip-a-ro'dēs.* [From the Gr. *λιπαρός*, "fat" or "obese."] Full of fat; obese.

Lip-a-ro-dȳsp-nœ'a.* [From the Gr. *λιπαρός*, "fat," and *δύσπνοια*, "difficult breathing."] Dyspnœa caused by obesity.

Lip-a-ro-i'dēs.* [From the Gr. *λιπαρός*, "fat," and *εἶδος*, a "form" or "resemblance."] Resembling fat.

Lip-a-rom'pha-lus.* [From the Gr. *λιπαρός*, "fat," and *ὀμφαλός*, the "navel."] A fatty tumor at the umbilicus.

Lip-a-ro-seir'rhus.* [From the Gr. *λιπαρός*, "fat," and *σκίῤῥος*, "incipient cancer."] A fatty, scirrhous tumor.

Liparotes.* See POLYSARCIA.

Lipocele.* See LIPAROCELE.

Lĭ-poġ'en-ous. [From the Gr. *λίπος*, "fat," and *γένω*, to "be born" or "produced."] Tending to the production of fat; also produced or developed in fat.

Lĭ-po'ma,* plural **Lĭ-pom'a-ta.** [From the Gr. *λίπος*, "fat."] A species of fatty tumor. A tumor formed by the local hypertrophy of the adipose tissue. It presents itself under the form of a soft, pasty, indolent, lobulated tumor.

Lĭ-pom-a-to'dēs.* [From the Lat. *lipo'ma*, a "fatty tumor."] Resembling lipoma; conjoined with lipoma.

Lĭ-pom-a-to-i'dēs.* [From the Lat. *lipo'ma*, a "fatty tumor," and the Gr. *εἶδος*, a "form" or "resemblance."] Resembling lipoma; lipom'atoid.

Lipomphalus.* See LIPAROMPHALUS.

Lip-o-seir'rhus.* [From the Gr. *λίπος*, "fat," and *σκίῤῥος*, "incipient cancer."] The same as LIPAROSCIRRHUS, which see.

Lĭ-po'sis.* [From the Gr. *λίπος*, "fat."] The progressive accumulation of fat.

Lip-o-sphўx'ĭ-a.* [From the Gr. *λείπω*, to "fail," and *σφύξις*, the "pulse."] Absence, or cessation, of the pulse.

Lipothymia.* See LEIPOTHYMIA.

Lip'pĭ-a.* A genus of herbs or shrubs of the order *Verbenaceæ*, comprising nearly one hundred species, natives of America. They generally contain an aromatic volatile oil.

Lip'pĭ-tude. [Lat. **Lippitu'do, d***inis;* from *lip'pus*, "blear-eyed."] A raw, tumid state of the margin of the eyelids, from which a puriform humor exudes.

Liq. = *Li'quor.** See LIQUOR.

Liquatio (le-kwa'she-o), **o'***nis.** [From the Lat. *li'quo*, *liqua'tum*, to "melt."] Strictly, the same as FUSION; also LIQUEFACTION. "Liquation is the slow fusion of an alloy, by which the more fusible metal flows out and leaves the rest behind."—(DANA.)

Liq-ue-fā'cients. [From the Lat. *liquefa'cio*, to "melt."] Agents which augment the secretions, arrest the solidifying and promote the liquefying processes of the animal economy.

Liq-ue-fac'tion. [Lat. **Liquefac'tio, o'***nis;* from *liquefa'cio*, *liquefac'tum*, to "make liquid."] The conversion of a solid or a gas into a liquid.

Liq'ue-fy. [From the Lat. *liq'uidus*, "liquid," and *fa'cio*, to "make."] To reduce or convert into a liquid state; to change a solid or a gas into a liquid. Nearly all gases have been liquefied by pressure and cold.

Liqueur, lē'kur'. (Fr.) A spirituous liquor composed of water, alcohol, sugar, and some aromatic infusion extracted from fruits, seeds, etc.

Liqueur d'Absinthe. See ABSINTHE.

Liq'uid. [Lat. **Liq'uidum**; from *liq'uidus*, "liquid," "moist."] Any substance, not aeriform, which is fluid, like water. A substance in which cohesion and mobility of molecules coexist and give rise to curious and intricate phenomena. See FLUID, and FLUIDITY.

Liq-uid-am'bar.* [From the Lat. *liq'uidus*, "liquid," and the Eng. *am'ber:* so called because the tree yields on incision a fluid, amber-like substance.] A genus of plants of the order *Hamamelaceæ*, comprising several species which afford a fragrant resin, called *storax*.

Liquidam'bar O-rĭ-en-ta'le.* The systematic name of a small tree, a native of Asia Minor, affording the drug called *liquid styrax*. See STYRAX.

Liquidam'bar Sty-ra-cif'lu-a.* The Sweet Gum, an ornamental tree, a native of the Middle and Southern United States. It affords a fragrant terebinthine juice or resin.

Liquiritia,* lik-we-rish'e-a. Liquorice. See GLYCYRRHIZA.

Li'quor,* gen. **Lĭ-quo'ris,** nominative plural **Lĭ-quo'rēs.** [From the Lat. *li'queo*, to "become liquid."] (Fr. *Liqueur*, lē'kur'.) A term applied to many liquids, particularly those composed chiefly of water or of alcohol. Also the Pharmacopœial name for an aqueous solution of a chemical substance generally solid, but sometimes gaseous.

Li'quor Aç'ĭ-di Ar-se-nĭ-o'si.* "Solution of Arsenious Acid." The Pharmacopœial name (U.S. 1880) for a preparation made from one part of arsenious acid, in small pieces, two parts of hydrochloric acid, and a sufficient quantity of distilled water to make one hundred parts. The medical properties of this solution are the same as those of Fowler's Solution.

Liquor Aluminis Compositus.* See BATES'S ALUM-WATER.

Li'quor Am-mo'nĭ-æ.* "Liquor of Ammonia." A solution of ammoniacal gas in water: —otherwise called *Aqua Ammoniæ* ("Water of Ammonia").

Li'quor Am-mo'nĭ-i Aç-e-ta'tis.* "Solution of Acetate of Ammonium." The Pharmacopœial name (U.S. 1870, 1880) for Spirit of Mindererus, made from one hundred parts of diluted acetic acid, and a sufficient quantity of carbonate of ammonium. Add the carbonate gradually to the diluted acetic acid until it is neutralized. It is a valuable diaphoretic, much employed in febrile diseases.

Li'quor Am'nĭ-i.* "Liquor of the Amnion." The watery fluid in which the fœtus is suspended. See AMNION.

Li'quor Ar-sen-ĭ-ca'lis.* "Arsenical Liquor." A Pharmacopœial preparation, also called *Fowler's Solution*, and *Tasteless Ague Drop*, consisting of arseniate of potash dissolved in water and flavored and colored by spirit of lavender. This has been recommended as a remedy in intermittents, and has been found very useful in lepra and other inveterate cutaneous affections.

Li'quor Ar-se'nĭ-i et Hy-drar'ğў-ri I-od'-ĭ-di.* "Solution of Iodide of Arsenic and Mercury." The Pharmacopœial name (U.S. 1870, 1880) for Donovan's Solution, made from one part of iodide of arsenic, one part of red iodide of mercury, and one hundred parts of water. It is useful as an alterative in various cutaneous diseases, such as psoriasis, porrigo, lepra, and lupus. The difference between the process of 1870 and that of 1880 is very trifling.

Li'quor Căl'cis,* otherwise called **A'qua Căl'cis.*** "Water of Lime," or "Lime-Water." A saturated solution of lime in water. It may be prepared by pouring upon some freshly-slaked lime a quantity of pure water. In a few hours the solution will become clear by the settling of such particles of lime as are not dissolved by the water. The solution, with the undissolved lime, should be kept in a well-stopped bottle; pour off the clear liquid as it is wanted for use. The U.S. Pharmacopœia directs the preparation to be made in the proportion of four ounces of lime to eight pints of water. But if the lime be in excess, no disadvantage can result: the superfluous portion will, in that case, simply remain undissolved.

Lime-water is antacid, tonic, and astringent. Mixed with an equal quantity of milk, which completely covers its offensive taste, it often proves an excellent remedy for nausea and vomiting dependent on irritability of the stomach. It may be employed with great advantage in dyspepsia accompanied with acidity of the stomach, as well as in some forms of diarrhœa, and in calculous affections attended with a superabundant secretion of uric acid. Externally, it is often used as a wash in porrigo and similar affections, and as an application to foul ulcers. *Liquor Calcis* is also the Pharmacopœial name (U.S. 1870, 1880) for lime-water, an aqueous solution containing about 0.15 per cent. of hydrate of calcium.

Li'quor Fer'ri Aç-e-ta'tis.* "Solution of Acetate of Iron." The Pharmacopœial name (U.S. 1880) for an aqueous solution of ferric acetate, containing 33 per cent. of the anhydrous salt. Acetate of iron is an excellent chalybeate. This strong solution is not, however, quite so well adapted for internal administration as the tincture of acetate of iron.

Li'quor Fer'ri Ċhlor'ĭ-di.* "Solution of Chloride of Iron." The Pharmacopœial name (U.S. 1870, 1880) for an aqueous solution (with some free hydrochloric acid) of ferric chloride, containing 37.8 per cent. of the anhydrous salt. The present officinal solution is a little stronger than that of 1870. It is styptic, and has proved very efficacious in arresting hemorrhages from cut surfaces or wounded vessels.

Li'quor Fer'ri Ci-tra'tis.* "Solution of Citrate of Iron." The Pharmacopœial name (U.S. 1870, 1880) for an aqueous solution of ferric citrate, containing about 35.5 per cent. of the anhydrous salt. It may be given for the general purposes of the ferruginous preparations.

Li'quor Fer'ri et Quĭ-nĭ'næ Citra'tis.* "Solution of Citrate of Iron and Quinine." The Pharmacopœial name (U.S. 1880) for an aqueous solution of ferric citrate, containing 6 per cent. of quinine. The medical virtues of this solution are those of the citrate of iron and quinine.

Li'quor Fer'ri Ni-tra'tis.* "Solution of Nitrate of Iron." The Pharmacopœial name (U.S. 1880) for an aqueous solution of ferric nitrate, containing about 6 per cent. of the anhydrous salt. Its virtues are those of a tonic and astringent. It is praised as a remedy in chronic diarrhœa in delicate and nervous women, and is considered particularly applicable to mucous diarrhœa attended with pain, but not to cases in which ulcerations of the intestines exist.

Li'quor Fer'ri Sub-sul-pha'tis.* "Solution of Subsulphate of Iron." The Pharmacopœial name (U.S. 1870, 1880) for Monsel's Solution, an aqueous solution of basic ferric sulphate, containing 43.7 per cent. of the salt. This is very efficacious as a styptic, and peculiarly adapted to cases of hemorrhage from incised wounds or surfaces in which it is very desirable to avoid irritation.

Li'quor Fer'ri Ter-sul-pha'tis.* "Solution of Tersulphate of Iron." The Pharmacopœial name (U.S. 1870, 1880) for an aqueous solution of normal ferric sulphate, containing 28.7 per cent. of the salt. This, though powerfully astringent, is too irritant for general use. It should always be kept on hand for the quick preparation of the antidote to arsenic.

Li'quor Gut'tæ-Per'chæ.* "Solution of Gutta-Percha." The Pharmacopœial name (U.S. 1870, 1880) for a preparation made from nine parts of gutta-percha, in thin slices, ninety-one parts of commercial chloroform, and ten parts of carbonate of lead. This is the most convenient

and effective preparation as a protective to the surface in slight cases of superficial inflammation and abrasion.

Li'quor Hy-drar'gy-ri Ni-tra'tis.* "Solution of Nitrate of Mercury." The Pharmacopœial name (U.S. 1880) for a liquid containing in solution about 50 per cent. of mercuric nitrate, with some free nitric acid. This is much used as a caustic application to malignant ulcerations and cancerous affections, lupus, chancres, etc.

Li'quor I-o'di Com-pos'ĭ-tus.* "Compound Solution of Iodine." The Pharmacopœial name (U.S. 1880) for Lugol's Solution, made from five parts of iodine, ten parts of iodide of potassium, and eighty-five parts of distilled water. Dissolve the iodine and iodide of potassium in the distilled water. The present formula differs in strength from that of 1870, which contained less iodine. See LUGOL'S SOLUTION.

Li'quor Mag-ne'sĭ-i Ci-tra'tis.* "Solution of Citrate of Magnesium." The Pharmacopœial name (U.S. 1870, 1880) for an aqueous solution made from citric acid and magnesia. It is a cooling cathartic, which operates mildly, and is extensively used.

Liquor Morgagni.* See MORGAGNI LIQUOR.

Li'quor Pep'sĭ-ni.* "Solution of Pepsin." The Pharmacopœial name (U.S. 1880) for a solution containing forty parts of saccharated pepsin, twelve parts of hydrochloric acid, four hundred parts of glycerin, and four hundred and forty-eight parts of water. Dissolve the saccharated pepsin in the water previously mixed with the hydrochloric acid, add the glycerin, let the mixture stand twenty-four hours, and filter. This solution, if in good condition, has all the remedial virtues of pepsin.

Li'quor Plum'bi Sub-aç-e-ta'tis.* "Solution of Subacetate of Lead." The Pharmacopœial name (U.S. 1870, 1880) for an aqueous liquid containing in solution about 25 per cent. of subacetate of lead. It is astringent and sedative, but is employed only as an external application. It is highly useful in inflammation from sprains, bruises, burns, blisters, etc. The present solution has a specific gravity of 1.228, and is slightly weaker than that of 1870, whose specific gravity was 1.267. It should always be diluted.

Li'quor Plum'bi Subaceta'tis Dĭ-lu'tus.* "Diluted Solution of Subacetate of Lead." The Pharmacopœial name (U.S. 1870, 1880) for Lead-Water, containing three parts of solution of subacetate of lead and ninety-seven parts of distilled water. Mix the solution of subacetate of lead with the distilled water previously boiled and cooled.

Li'quor Po-tas'sæ.* "Solution of Potassa." The Pharmacopœial name (U.S. 1870, 1880) for an aqueous solution of hydrate of potassium, containing about 5 per cent. of the hydrate. It is antacid, diuretic, and antilithic. It has been highly recommended in lepra and other cutaneous affections, and is said to have proved peculiarly useful in scrofula.

Li'quor Potas'sæ Ar-se-ni'tis.* "Liquor of the Arsenite of Potash." A former Pharmacopœial name for the LIQUOR ARSENICALIS, which see.

Li'quor Po-tas'sĭ-i Ar-se-ni'tis.* "Solution of Arsenite of Potassium." The Pharmacopœial name (U.S. 1870, 1880) for Fowler's Solution, made from one part of arsenious acid, one part of bicarbonate of potassium, three parts of compound tincture of lavender, and enough distilled water to make one hundred parts. (See LIQUOR ARSENICALIS.) This solution is stronger than that of 1870.

Li'quor Potas'sii Ci-tra'tis.* "Solution of Citrate of Potassium." The Pharmacopœial name (U.S. 1870, 1880) for an aqueous solution made from six parts of citric acid and eight parts of bicarbonate of potassium. It is an excellent refrigerant diaphoretic, adapted to nearly all cases of fever with a hot dry skin.

Li'quor San'guĭ-nis.* "Liquor of the Blood." The colorless fluid which holds the globules of the blood in suspension during life.

Li'quor Sil'ĭ-cum.* "Liquor of Flints." See GLASS, SOLUBLE.

Li'quor So'dæ.* "Solution of Soda." The Pharmacopœial name (U.S. 1870, 1880) for an aqueous solution of hydrate of sodium, containing about 5 per cent. of the hydrate. This solution is somewhat weaker than that officinal in 1870.

Li'quor So'dæ Chlo-ra'tæ.* "Solution of Chlorinated Soda." The Pharmacopœial name (U.S. 1880) for Labarraque's Solution, made by precipitating a solution of chlorinated lime with solution of sodium carbonate. It is stimulant, antiseptic, and resolvent. Internally it has been employed in diseases termed *putrid* or *malignant*, as typhus fever. As a local remedy it is useful in all affections attended with fetor, such as gangrenous, cancerous, scrofulous, and syphilitic ulcers, ozæna, mortification, etc.

Li'quor So'dĭ-i Ar-se-nĭ-a'tis.* "Solution of Arseniate of Sodium." The Pharmacopœial name (U.S. 1870, 1880) for an aqueous solution containing one part of arseniate of sodium deprived of its water of crystallization by a heat not exceeding 300° F., in ninety-nine parts of distilled water. This solution is somewhat stronger than that which was officinal in 1870. It is simply an officinal form for the administration of arseniate of sodium.

Li'quor So'dii Sil-ĭ-ca'tis.* "Solution of Silicate of Sodium." The Pharmacopœial name (U.S. 1880) for soluble glass, a semi-transparent, almost colorless, viscid liquid, having a sharp saline and alkaline taste. It is used solely by the surgeon in the preparation of mechanical dressings.

Li'quor Zin'çi Chlor'ĭ-di.* "Solution of Chloride of Zinc." The Pharmacopœial name (U.S. 1870, 1880) for an aqueous solution of chloride of zinc, containing about 50 per cent. of the salt. This solution is equivalent to Burnett's Disinfecting Fluid. It is a powerful disinfectant.

Lĭ-quo'rēs,* the plural of LIQUOR, which see.

Liquorice, lik'or-ĭss. [Lat. **Liquiri'tia.**] See GLYCYRRHIZA.

Lir-ĭ-o-den'dron.* [From the Gr. *λείριον*, a "lily," a "tulip"(?), and *δένδρον*, a "tree."] A Linnæan genus of the class *Polyandria*, natural order *Magnoliaceæ*. Also the Pharmacopœial

name (U.S. 1870) for the bark of *Liriodendron Tulipifera*. This tree is indigenous in nearly all the States east of the Mississippi. It is often called Poplar, but more properly Tulip-Tree. It is a beautiful tree, and a favorite ornament of European and American parks. It is said to be the only representative of the genus. The bark is a stimulant tonic.

Lis-ĭ-an'thus Prin'ceps.* A shrub of the order *Gentianaceæ*, a native of tropical America. It has long hanging flowers of a rich scarlet melting into yellow at either end and having an emerald-green five-lobed limb. Its flower is described as constituting the plant one of the noblest in existence.—(LINDLEY.)
